"Ban" number 1 was however lifted in 1840 for the marriage of the Queen's foster sister Ariiochau to Alexander Salmon and for others who were in favour at the Court.

The Request for the Protectorate was as follows :

*À M. l'Amiral Du Petit Thouars*

*Tahiti 9 Septembre 1842*

*Parce que nous ne pouvons continuer à gouverner par nous-mêmes dans le présent état de choses de manière à conserver la bonne harmonie avec les gouvernements étrangers sans nous exposer à perdre nos îles, notre liberté et notre autorité, nous, les sous signés, la Reine et les grands chefs de Tahiti, écrivons les présentes pour solliciter le Roi des Français de nous prendre sous sa protection aux conditions suivantes.*

- 1° La souveraineté de la Reine et son autorité et l'autorité des chefs sur leurs peuples seront garanties.*
- 2° Toutes les lois et règlements seront faits au nom de la Reine Pomaré et signés par elle.*
- 3° La possession des terres de la Reine et du peuple leur sera garantie. Ces terres leur resteront. Toutes les disputes relativement au droit de propriété ou des propriétaires des terres seront la juridiction spéciale des tribunaux du pays.*
- 4° Chacun sera libre dans l'exercice de son culte ou de sa religion.*
- 5° Les églises existant actuellement continueront d'être et les missionnaires anglais continueront leurs fonctions sans être molestés : il en sera de même pour tout autre culte, personne ne pourra être molesté ni contrarié dans sa croyance.*

*À ces conditions la Reine Pomaré et ses grands chefs demandent la protection du Roi des Français laissant entre ses mains ou aux soins du gouvernement français ou à la personne nommée par lui et avec l'approbation de la Reine Pomaré la direction de toutes les affaires avec les gouvernements étrangers de même que tout ce qui concerne les résidents étrangers, les règlements du port etc. et de prendre telle mesure qu'il pourra juger utile pour la conservation de la bonne harmonie et de la paix.*

*Signé : Pomaré*

*Paraita Régent : Otomi : Itoti : Tati.*

The reply as received was as follows :

*Louis-Philippe, roi des Français, à la Reine Pomaré, Salut !*

*Illustre et excellente princesse, notre contre-amiral Du Petit Thouars, commandeur de la Légion d'honneur et commandant-en-chef de nos forces navales dans l'Océan Pacifique, nous a rendu compte de la demande que, de concert avec les grands chefs principaux de vos îles, vous avez faite de placer votre personne et vos terres ainsi que la personne et les terres de tous les Tahtiens sous le protectorat de notre couronne, offrant de nous remettre la direction des affaires extérieures de vos États, les règlements de ports et autres mesures propres à assurer la paix dans cet archipel. Notre cœur s'est ouvert à votre voix et puisque d'accord avec les chefs de vos îles, vous ne pensez trouver repos et sûreté qu'à l'ombre de notre protection, nous voulons vous donner une preuve éclatante de notre royale bienveillance en acceptant votre offre.*

*Nous conférons tout pouvoir au gouverneur de nos établissements dans l'Océanie, le capitaine de vaisseau Bruat, pour s'entendre avec vous et avec les grands chefs. Il a toute notre confiance, écoutez le. Conservez vos terres et votre autorité intérieure sur vos sujets, et sous la garde de notre sceptre ami, assurez leur bonheur par la sagesse et la bonne foi.*

*De notre côté nous chercherons comme toujours les occasions de vous donner, ainsi qu'à tous les habitants de vos îles, des gages de la sincère affection que nous vous portons. Que la paix et la prospérité soient avec vous !*

*Donné en notre palais des Tuileries le vingt-cinquième jour du mois de mars de l'an de grâce 1843.*

*Signé : Louis-Philippe*

*Contre-signé : Guizot*

*Ministre et secrétaire d'État au département des affaires étrangères de S.M. le Roi des Français.*

## Cession of Matavai

Cession of Matavai

### Description of the above figures.

In the centre of the picture, on the shoulders of slaves are Tu the Younger (Pomare II) and his first wife Tetuanui. Below her stands Tu the Elder (the first Pomare). On his right (and behind) is Haapai his father. On Haapai's right is one of his daughters with Mouroa her husband. Below Haapai, half crouching, is the aged priest Mani Mani speaking for Tu and making offer of the land. Below him, in the foreground, sits Tetuanuireia, the second wife of Tu the Elder, and the mother of Tu the Younger. On the left hand of Tu the Younger (centre of picture) is Peter the Swede,<sup>142</sup> acting as interpreter. The woman just behind him is Itia the first wife of Tu the Elder, and on Peter's right, a little back, is Fareroa, Itia's paramour. The kneeling woman is Mrs Hassall.<sup>143</sup> On Itia's left, somewhat back, are two of the missionaries (names unknown). The younger man standing with hand in waistcoat, is William Wilson, nephew of Captain James Wilson, the Commander of the *Duff*, who stands beside him.<sup>144 145</sup> Just back of him is Jefferson.<sup>146</sup> The next missionary to him is unknown. Then come Mr and Mrs Henry<sup>147</sup> and seated on the ground is Paitia, the Sub-Chief of the District.<sup>148</sup>

<sup>142</sup> Peter Haggerstein or Hagersteine or Hagerstine or Hagerston, who had deserted from the "Daedalus", the storeship of Captain Vancouver, which arrived from Nootka on 15 February 1793.

<sup>143</sup> Elizabeth Hassall is holding her son, Samuel Otoo Hassall.

<sup>144</sup> William Wilson was also the first mate on the *Duff*.

<sup>145</sup> The boy standing in front of the Wilsons is Thomas Hassall.

<sup>146</sup> John Jefferson was then 36 and the oldest of the missionaries. He was an ordained minister and secretary of the mission, and was appointed magistrate in 1802 by the governor of New South Wales, Captain Philip Gidley King. He died on 25 September 1807 and was buried at Matavai in one of the graves found by WWB.

<sup>147</sup> William and Sarah Henry; she died on 28 July 1812 and was buried on Moorea in another of the graves found by WWB.

<sup>148</sup> The original was an engraving of the painting by [Robert A. Smirke \(1752–1845\)](#), which he did from a sketch by William Wilson. The engraving was given to WWB by the L.M.S., in recognition of his historical work, and was presented by WWB to the British Consulate at Papeete. See also *Light on Half-Forgotten Incident of Early Tahiti* in the July 1942 edition of the Pacific Islands Monthly, page 14, in Part VII.

## A Raw Deal

In 1843 upon the local notification of the acceptance by the French King of the Protectorate, the missionaries lost no time in declaring to Commandant Bruat that the lands and houses of the Protestant mission belonged to them “en propre”. He asked if they had titles to the same in their possession. They replied that they had no other title than the good faith of the donors who had had the intention to render the L.M.S. “proprieters in perpetuity”. A provisional registration was consented to by Bruat and for 8 years no question was raised as to ownership.

On March 18, 1851 the annual Tahitian Legislative Assembly met in Papeete. Orsmond was assigned by that Assembly as the Pastor for Papeete and was also assigned the Pastor’s residence. Howe,<sup>149</sup> the local L.M.S. Secretary, and one of the then depleted staff protested in the name of the Society that as Orsmond was no longer a member of the L.M.S. he could not use the house.

On March 28 the Commandant asked the Assembly still in session to pronounce on the following queries :

1. Did the Tahitians give absolutely the land on which the L.M.S. built their residences?
2. Are the Districts the owner today, having the right to dispose of them to the pastors of their choice?

By a majority of 106 to 1 the Assembly declared

1. That the Tahitians never gave the lands in perpetuity for either residences or church.
2. That the Districts are the sole owners of the lands, houses and churches and can dispose of them as they see fit.

Orsmond took possession of the Papeete parsonage.

This vote of 106 to 1 is explained by Pastor Howe — who had acted as a missionary for a full 10 years — in a letter — dated March 1848 — sent Home to the Directors reporting as to Bruat’s various demands upon themselves and their activities prior to this climax :

*“(Extract) We are not taken by surprise. They are what we have expected from our knowledge of the character of the people. We know that if they were ultimately subdued they would, as a body, fawn upon their conquerors and take almost whatever course might appear likely to please.”*

Long years before Howe his predecessors had made entry in their Journal : “*July 13. 1799. The Otaheiteans are perhaps as complete fawners and flatterers as any beneath the sun.*”

That the Cession of Matavai made by the first Pomare to the arrivals on the Duff in 1797 was no mere figure of speech or a mere gesture of welcome is evident from that same Journal. Matavai was to those present a Deed of Gift.

An entry over 4 years later — July 13, 1801 — when a public meeting was held between the first Pomare and Captain William Wilson of the Royal Admiral reads that the latter “*reminding him of his*

---

<sup>149</sup> Rev. William Howe

*having formally made over the District of Matavai to the missionaries and asking if we were still to consider it as ours he answered that we were and desired to know if we wished for the natives, the inhabitants, to remove out of it. We replied that we did not want that or their land but only a residence on it.”* Matavai to Pomare was no mere “loan”.

On March 6, 1816 when Nott and Hayward revisited Matavai for the first time since the flight of December 1808, he writes to Hassall at Sydney N.S.W. recalling that it was the 19<sup>th</sup> anniversary of their first landing together from the Duff. *“Our old neighbours likewise informed us that the ground where our houses and gardens formerly stood and the whole of the District from Taraa to Tapahi the boundaries should be ours if we would return to reside among them again.”*

This of Matavai but what of those other lands bestowed throughout Tahiti up to 1837 when the French came upon the scene and demanded lands at the cannon’s mouth, receiving equal acreage in every village of the island? The question of those “forced” gifts was not then or ever raised and while Protestant properties not actually required for Church and residence were sold to the general public for the enrichment of each such District, Catholic lands unneeded for those same purposes were left alone.

The entry in the Journal dealing with the open air meeting between Pomare and Captain James Wilson when the cession was first made is dated March 15, 1797 and was written by Jefferson as Secretary of the mission. The public meeting was preceded by a private one on the same day :

*“Pomare with his attendants called. On being asked for a portion of land to be granted for the Brethren’s use he answered, after consulting with his Privy Counsellor Iddeah, that the whole District of Mattavai should be given to us to do with it what we pleased, adding that Pyteah, the present Chief of the District, was a good old man, that it would be for our benefit to permit Pyteah to have his residence near our house and that he would be given orders to enforce obedience from the natives and bring us whatever we needed of the produce of the District.”*

There followed the next day an entry of the public meeting.

*“March 16. 1797. The Captain came ashore where Pomare had been awaiting his arrival to make a formal surrender of the District of Mattavai into our hands. This was done by Manne-Manne in a long speech which was interpreted by Peter the Swede and concluded by making a formal surrender of Mattavai into our hands, informing us that we might take what houses, trees, fruits, hogs, etc. as we thought proper.”*

Matavai to those present was surrendered, not loaned. It was formally “ceded” to the L.M.S.

There is however a further letter which for historical accuracy and perfect justice to those of later years must be recorded. It is another view of this “Cession”, “Surrender”, “Gift”, etc. penned by the same hand — Jefferson’s — to the Directors at Home.

Whatever was the definite intention of Pomare in March 1797 and in July 1801 and the Reports thereof recorded in their logs and reported to the L.M.S. on the arrival in London of the 2 Captains as Facts, this letter affects not only this particular Gift but all the other such cessions in Pagan days i.e. up to 1815. They were the gifts of Pagans, not Christians. The letter is dated December 12, 1804.

*“(Extract) The District of Mattavai which the Directors have hitherto supposed to be purchased (?) of Pomare by Captain Wilson, the inhabitants do not consider as belonging to us, nor any part of it except the small sandy spot we occupy with our dwellings and gardens, and even as to that, there are persons who claim the ground as theirs and have more than once mentioned it to us. It is true when*

*the Royal Admiral arrived and Pomare was reminded of what had taken place between him and Captain James Wilson concerning the District he asked if we wished that the people should go out of it. From what we have seen and heard we are certain that if the natives were removed from their lands to make room for us, it would occasion a great deal of murmuring if not a war."*

That for Matavai, a Pagan's gift.

Those given by Christian natives from 1815 onward would seem to have been given on an altogether different basis. They were free and willing gifts to their new found Faith. What they gave they intended to remain given without any thought of recall.

## **The Protestant Viewpoint of Tahiti's Troubles**

A Record of historical interest.

At the 52<sup>nd</sup> General Meeting of the Missionary Society held in Exeter Hall, London on May 14, 1846 it was

“Resolved, That this meeting while it deeply sympathizes with the Queen of Tahiti in her present state of exile and with her faithful people under their continued wrongs inflicted by the power of France, heartily rejoices and gives thanks to God that they have been graciously preserved from the baneful influence of Papacy, and for the greater part they continue to value and enjoy the doctrines and ordinances of the Gospel of Christ.”

Extract from the 52<sup>nd</sup> Report by the Directors :

The translation and revision of the Scriptures has occupied to a considerable amount of time the talents of our missionaries. Our brethren in Polynesia, alive to the perils that threaten their missions from the intrusion of Popish emissaries, are exerting themselves with unwearied diligence to prepare for the encounter by arming the people with the Sword of the Spirit which is the Word of God. The edition of the Tahitian Bible sent out by the British and Foreign Bible Society 8 years since was eagerly purchased by the islanders, and a return of funds was made nearly equal to the cost of the work, an occurrence rare if not unprecedented in the case of any foreign edition of the Scriptures ever printed by that Institution. This sacred Volume is highly prized by the Tahitians : and to the Christians in particular, who from the love of their country and their Queen have retreated to the mountain fastnesses, it is the solace and source of instruction.

In no part of the missionary field is the anti-protestant design of Catholic missions more striking and conclusive than in the islands of Polynesia. As this was the avowed object of M. Caret's first attempt on Tahiti so, almost without an exception, the zeal of Popery in the Pacific has been restricted to those islands where the natives have already been rescued from the abominations of idolatry and the horrors of savage life.

The martial power of France, which was degraded to force upon the Protestant Christians of Tahiti the pretensions of Popery, continues to oppress and pollute that island. The designs of Popery as it respects converts have thus far totally failed and not more than a sixth part of the population is brought into alliance with the invaders of their country. Of these it is notorious that the Chiefs who first betrayed the interests of their Queen are well paid pensioners of France : while the influence of French spirits and French vices has reduced that small portion of the islanders on whom it is exercised to the lowest stage of loathsome licentiousness.

The deeply injured Pomare continues to prefer freedom in exile to French oppression. At the date of the latest intelligence the Queen continued a refugee in the island of Raiatea. Here she has suffered not only great privation but continued anxiety and alarm, the French governor at Tahiti having claimed authority over the Society Islands and blockaded Raiatea in right of the powers assumed to be included in the Protectorate.

The British government has however strongly interposed for the preservation of the independence of that Group and as the evidence in support of their claim to independence is clear and unanswerable it may be hoped that French encroachment will be permitted to proceed

no further. (See *The Independence of the Leeward Islands*.) But in the meantime the actual privations of Pomare are calculated to awaken deep commiseration and the Directors, aided by the liberality of their friends, have adopted the best means for mitigating her sufferings and ministering to her wants.

While our missionaries have been counsellors of peace and have employed their utmost influence to restrain the violence of the injured and indignant islanders they have not, with the exception of one of their number, appeared to sanction either directly or indirectly the unjust aggression of France on the rights and liberties of their people.

In that solitary and mournful instance they promptly separated the offending brother from their fraternal fellowship, and the Directors without the knowledge of this fact, being convinced that the conduct of the erring missionary had compromised the principles of Truth and Justice and was calculated to destroy his influence with the patriotic natives, felt compelled though with deep regret to intimate to him the withdrawal of the confidence and support of the Society, and they have since adopted measures, should he desire to return to Europe, to secure his passage in the missionary ship.

“To the upright there ariseth light in the darkness.” Even over Tahiti bleeding with her many wrongs the friends of missions must mingle smiles with tears. The people, with the small exception already stated, to escape the yoke of their oppressors, have retreated from their several villages and formed a united community in the extended and well protected mountain fastnesses of their island. Here they dwell in peace yet well prepared for self defence. While intemperance and profligacy reign at the seat of the French Authority here is the asylum of order and morality and while Popery in vain invited her bribes, her blandishments and her threatenings, amongst these mountains Protestant Truth and Evangelical Piety not only exist but flourish and extend.

The failure of Popery to seduce the people of Tahiti must be attributed in part to the unjust and cruel measures with which it has been allied. Their old teachers lived among them as friends and benefactors, never obtained an acre of their land, respected their laws, honored their Sovereign, gave them the Bible and gently led them in the way to Heaven. The professors of this new Faith armed with sword and cannon have seized their country, changed their government, banished their Queen, insulted their missionaries and derided their religion.

Tahiti. A measure of tranquility has succeeded to the ravages of war under which the oppressed island was suffering in the early part of 1844. The French continued to exercise the full powers of the Sovereignty thus obtained over the dominions of Pomare until January 1845 when in consequence of Instructions from their own government, a change though merely formal was introduced.

Paraita, one of the native Chiefs, a corrupt and mercenary man and therefore a fitting instrument to serve purposes of those who had trampled on the rights of his Queen and Country, was recognized as “Regent for ever”, while the French still conscious of possessing the Supreme Authority continued their usurpation as they had begun it under the less ambitious name of Protectorate.

On the 8<sup>th</sup> of January 1845, shortly after the arrival of Admiral Hamelin,<sup>150</sup> the solemn mockery of the Inauguration of Paraita in his new office was enacted. An eye witness thus describes the scene at the close of the ceremony.

“The Governor, the Admiral and their officers then sat down to a native dinner. On the right of the Governor sat about 30 young women wearing on their heads the wreath of faded leaves, the well-known distinctive badge of the prostitute.

“Had any missionary a few months ago met an individual wearing this wreath she would have immediately torn it from her head, concealed it in her dress or thrown it away. Now it is unblushingly worn at a public dinner.”

Only a week or two before the resumption of the Protectorate one of the missionaries addressed a Letter of Remonstrance to Bruat relative to the rapid deterioration of public morals consequent on the intercourse of the French with the natives. He observed :

“At no time since the abolition of the Arioie of Tahiti has public morality been so outraged. Although Admiral Du Petit Thouars in his Official Dispatch in September 1843 acquainting his government with the dethronement of Queen Pomare says that it is time to put a stop to the debaucheries and licentiousness practised at Tahiti, I submit that Tahiti was at that time a moral and virtuous land compared with what it is now as evinced in the scenes of iniquity exhibited in every part of Papeete.”

Another ground of dissatisfaction presented to the Governor, from whom however it received no attention, was the prohibition to missionaries to travel on the island without a passport : the imposition of such a restriction is directly contrary to the strong assurances of protection given by M. Guizot to the Earl of Aberdeen.

M<sup>r</sup> Darling,<sup>151</sup> writing from his Station Punaauia or Burder’s Point in January 1845, observed :

“There are collected at the Station all from Faaa and Eimeo and many from Papara and Papeete who are in favour of the Queen. During the first 2 or 3 months after the rising to arms, all lived up the valley 5 or 6 miles but since it was known that the King of the French declined the Sovereignty of Tahiti they have all come back to the seaside.”

He further observes :

---

<sup>150</sup> [Ferdinand-Alphonse Hamelin \(1796–1864\)](#)

<sup>151</sup> David Darling (1790–1867)

“The Governor of the French has made several attempts to seduce Utami our Chief from his allegiance to the Queen but he has hitherto faithfully resisted, and while Tati, Hitoti, Paraita and some others are still holding with the French and receiving pay from them, Utami has separated himself entirely from them.”

He notes further that “even when they never went out of doors without their firearms they came regularly to Chapel and left their guns outside.”

Huahine. From time immemorial the Society and Georgian Groups have been regarded not only politically but geographically distinct, consequently the French have not even the shadow of a pretext for their recent flagrant proceeding in endeavouring, though with only partial success, to plant the Protectorate Flag on the islands of the former Group.

In January Captain Maison of the French steamer Phaeton visited Huahine and hoisted the Flag first on the Queen’s pier and subsequently at the house of a renegade Chief named Raperoa. It was subsequently pulled down under the orders of the Queen — Teriimano — and the rebel Chief and those who acted with him were brought to trial and punished. The same resistance to the hoisting of the Flag was offered at Raiatea and Pora Pora in consequence of which the French Captain to the great alarm and distress of the people threatened to bring a large force and blockade the Leeward Islands and cut off all communication with Pomare and her family at Raiatea.

Raiatea. Captain Maison of the French steamer Phaeton after his lawless proceedings at Huahine in January, bore down upon Raiatea where he arrived on the 29<sup>th</sup> of that month. The missionaries thus describe the particulars of this new act of aggression.

“The Captain had an interview with deputies from Tamatoa, the principal Chief of the island, in which he stated that he had come to bring the Protectorate Flag. The deputation told him in reply that the people and Chiefs of the island anticipating this proceeding had held a meeting on the subject and resolved that as Raiatea was a distinct government from Tahiti and had never solicited French protection they would not permit the Protectorate Flag to be hoisted. The Captain however desired then to communicate with the Chief to which they replied that it was of no use as they came firmly resolved on that point.

“The following morning however we were all surprised to hear at dawn of day a Royal Salute fired and looking about us we saw the Protectorate Flag hoisted on M<sup>r</sup> Platt’s jetty and the fore mast of the steamer, the main mast bearing the French Flag. The people were seen running to and fro headed by Tamatoa with a blunderbuss, and before we had time to consider, we saw a

man pull down the Flag as we afterwards learned at Tamatoa's command. The steamer immediately lowered all her flags, got the steam up and departed. The Flag was then planted without permission on a little island on the reef where it was again saluted, but fearing lest it should fare like its companion they pulled it down again : and since the period of this hostile visit Raiatea has been under strict blockade."

The Directors having ascertained that Pomare was so reduced in circumstances as to be in want of the necessities of life, voted in the course of last summer the sum of one hundred guineas towards the purchase of supplies for her temporary relief : and other contributions for the same purpose have been raised by Christian friends in this country.

Tahaa. Mr Krause <sup>152</sup> writes :

"We had a day of humiliation and prayer, and Pomare and her suite being in Tahaa with most of my people from the fortress I had a full chapel."

Pora Pora. Although unsuccessful in their attempts upon the independence of the other islands of the Leeward Group, the French through the timidity or treachery of some of the lesser chiefs effected their object at Pora Pora where, in the absence and contrary to the wishes of the excellent Chief — Tapoa — and nine tenths of his people, the Protectorate was established in January. Tapoa himself, like the injured Queen of Tahiti has been living on Raiatea in exile. M<sup>r</sup> Charter writes :

"The house of Tapoa is converted into a Blockhouse, fenced in on the land side with a strong stone wall."

From previous and later Reports of the L.M.S. Directors

1834

A law added to the Code of 1819 making attendance at Public Worship compulsory to all natives.

1840

Under Bruat the following laws enacted :

- (a) Only one pastor permitted to a District;
- (b) Pastors to have passports outside their own District;
- (c) Chapels no longer to elect their pastors but the entire native District, subject to the confirmation by the Legislative Assembly;
- (d) Licenced houses of prostitution to be established in Papeete.

---

<sup>152</sup> Ernest Rudolf Wilhem Krause (? – 1873)

1863

M. Arbousset <sup>153</sup> and his son arrived at Tahiti as pastors being sent out by the Paris Evangelical Missionary Society.

1886

Decision arrived at to relinquish work on Tahiti, on the following grounds :

1. The English missionary has no official status as a missionary.
2. The native churches are under the control of the French government — are subsidized with money grants from that government — and are served by a French Protestant pastor.
3. All education is conducted in French and is under the supervision of French officials.

The 3 last missionaries of the L.M.S. on Tahiti left the work gradually :

Morris <sup>154</sup> in 1868 : Green <sup>155</sup> in 1886 : Cooper <sup>156</sup> in 1890.

The failures and the successes of the L.M.S. then became but memories of the Past, the Curtain was rung down on a Drama of gallant Endeavour even as 10 years previously it had fallen on the political days of old.

## The Independence of the Leeward Islands

Against the French claim that their Protectorate over Tahiti covered the Leeward Islands are the following statements of the various Kings and Queens, including the Queen of Tahiti herself whose mother was of Raiatea, her first husband Tapoa of Pora-Pora and her second husband from her mother's home. Of her first.

1. In a petition to the King of the French — sent September 25, 1844 — she writes :

“I am now residing on the island of Raiatea. It is not my land, it never was my land from of old to the present time. Tahaa and Raiatea, Huahine and Pora Pora are different governments and they have different Kings.”

2. To Commander Hammond R.N. <sup>157</sup> she writes :

“I now make known to you the proper boundaries of my kingdom and of my sovereignty as they descended from my ancestors. Moorea is one and Tahiti and a small island Tuhvaitia (Tetiaroa) and Meetu (Mehetia) have descended from time immemorial down to me. But my kingdom and my sovereignty have never come to these islands (the Leeward). They have continued to be sovereigns over their own lands from time immemorial.”

3. Tamatoa, King of Raiatea, writes to Admiral Seymour <sup>158</sup> :

“My kingdom is distinct. It has been communicated to me from the days of my forefathers. My desire is that I may retain my own government as it descended to me from of old.”

4. To the same Admiral R.N., Tapoa, King of Pora Pora :

“Our governments were never included in the Tahitian. We are the hereditary sovereigns over our islands. We were never under one sovereign or formed into one government.”

5. In a Petition to Queen Victoria, Teriitaria (Teriimano), Queen of Huahine, writes :

“Do not allow one to be included in the Protectorate government. I will never consent to it. I had nothing to do with the French Treaty.”

One of the grounds of the French claim was a report they had gleaned that on a visit paid to Raiatea by Pomare II years back, after formal presentation of food, Tamatoa, the King of that day, addressed him as follows :

“We present to you the island, the landed proprietors, the food, the water, the women and the children.”

Matatore, one of the High Chiefs then present, in sworn testimony, said anent this greeting :

“It was an old custom of ours to pay such a compliment to a great Chief when he paid a visit. It was not giving up the Sovereignty.”

## A French Viewpoint of Tahiti's Troubles

as gleaned from the Historian A.C.E. Caillot <sup>159</sup> in his work  
“Histoire de la Polynésie Orientale”.

One of the invariable principles of Anglo Saxon policy is first commercially mastering the country they seek to acquire, military action comes later, merchants preparing the way for it. When thanks to them the resources and the layout of the country coveted are sufficiently known the armed force sets out and the overrunning takes place. The fruit falls of itself, it is ripe and the natives are compelled to submit, the game is played.

The best helpers which the English have found to commence the application of this principle are certainly their Protestant missionaries, at one and the same time men of God, agents and merchants who by their ardent patriotism, by the diverse trades which they exercise better serve the cause of their nation than do our Roman Catholic priests.

1818

The missionaries commenced to enter seriously into commerce. On May 13 they founded the Missionary Society of Tahiti, an auxiliary to that of London. During its first years this association thrived well but afterwards the enthusiasm cooled when the natives learned better the value of the merchandize they parted with. At the time named, the many novelties seduced these simple children of nature. They had accepted Christianity without understanding either its morals or its principles. They soon experienced the consequences. Up to then the missionaries had been to them both counsellors and friends. In 1818 they became their masters. They sought to apply to the very letter the rules of their religion, and as they dealt with a carefree people they resolved to force the people to obedience by fear of punishment through enacting (a Code of) laws. The Pastors could define the laws since they were the most apt at drawing them up, but they should have rested their Code upon civil ground and abstained from bringing in religion. In purposely mixing the spiritual and the temporal they drew a code as if emanating from God with all its consequences, that is to say the perpetual confusing of divine with human affairs and the constant intervention in politics of the Pastors, the supposed representatives of God upon earth. Unfortunately the new “morale” existed only on the surface amongst the natives as is generally the result of constraint, and if one can but praise the good intentions of the missionaries to raise the tone of the people, one is obliged on the other hand to deplore their method of procedure.

1824

The role played by the missionaries grew steadily in strength not however without encountering a certain amount of opposition. They were greatly occupied in trade, and their affairs were in general highly prosperous. Some of them had fallen upon specially good fortune, the most comfortable homes on Tahiti were those of the men of God. With such backing their prestige was not less considerable, they were in fact the veritable arbiters of the island. The brilliant position they had evolved for themselves tempted those of their confreres working obscurely in the mother land. One of these,

named George Pritchard resolved to seek his fortune in the archipelago of the Society Islands. He arrived at Tahiti and established himself at Papeete.

1827

At the commencement of the reign of Pomare IV, the High Chiefs and the missionaries disputed for power. The young Queen left them alone and occupied herself in amusements. Pomare IV counted for little. The pastors had treated her disdainfully. Not thinking of her as one day mounting the Throne they had entirely neglected her education and since her Accession they were not keen to remedy her ignorance. Thus the royal power grew daily more feeble, her Authority was contested on all sides and continuous troubles spread widely. One quarrel pacified, another arose and oftentimes European vessels in the Pacific were themselves victims of odious aggression.

1835

The Reverend Pritchard had by this year become all powerful on the island. Intelligent and above all ambitious he had gained the confidence of both Queen and Chiefs, whilst the other Protestant pastors, his colleagues, submitted themselves to his influence. He secured the adoption of laws as he desired and the police obeyed him without a murmur. But what rendered him particularly redoubtable to others and made him the leading personality upon the island was that he possessed in the highest degree the favour of Queen Pomare IV. He had so gained her confidence that the Queen acted only by him. She named him her intimate counsellor, her diplomatic and commercial agent, her spiritual director and both her doctor and druggist. The cunning Reverend accomplished these diverse functions with a dexterity that amounted to prodigy. Good at everything, ingenious and courageous, he had thus become indispensable to a crowd of folk who he knew in turn would serve him perfectly. He played for awhile a prominent role owing to a set of exceptional circumstances which he knew well how to make use of. However he was not a great man, not indeed an apostle but simply an intelligent, ambitious man gifted with abounding energy. Like all the English Protestant missionaries he occupied himself as much with politics as religion. He showed himself indeed to be more a politician and merchant than a Protestant pastor and above all than a missionary of Reform. He is not to be compared with the other Reverends on Tahiti for he never had their self denial. He was above all egotistical and hard, and most of his actions show him up in a striking fashion : to arrive at his ends he had recourse to the least legitimate and the most violent means. By his perfidious intrigue he should be held responsible for the blood which was spilled on Tahiti.

1837

It must be avowed that the English Protestant missionaries would have been more than human if they had willingly allowed their labours to be put in question. Now that their work's aim was accomplished and they had commenced to enjoy it they saw it suddenly menaced by the arrival of Catholic missionaries who would exhibit them as impostors to the natives of Tahiti. To avoid this danger they called the civil power to their aid and obtained the passing of a law forbidding strangers to enter Tahiti without the consent of the Queen and High Chiefs. It is impossible to deny that in this affair the Catholic priests were absolutely in the wrong. Is that however to say that the intervention of France was unnecessary? It is not.

The Tahitian Government certainly had the right to forbid the Catholic missionaries to reside on the island but the Law could only come into force, either against a clearly defined category of strangers or against those in opposition to the laws of the country, otherwise it would place outside the Law all the citizens of a country, an attitude contrary to the Rights of nations and in consequence become a

veritable declaration of war. The Tahitian Government committed this latter act in the case of the carpenter Vincent.

The true authors of this action were the Protestant missionaries and above all the Reverend Pritchard whom England had named Consul, but the Tahitian Government alone remained responsible, otherwise it would have had to acknowledge that it was not master in its own house, which would be equivalent to recognizing that it did not itself exist. But at bottom was the truth that it existed only in name. The natives contemned the laws, the archipelago had the aspect of a vast district of prostitution and drunkenness, of which Papeete was the centre. With the exception of the Protestant pastors and some English, no European felt safe. Natives practised theft and assassination with impunity, quarrelled with sailors and dealt them blows. The situation became intolerable for civilized nations, it was incompatible with the honour of a mighty power like France, the sending of a French man-of-war had become essential.

1838

The American Consul (Moerenhout) was devoted to the French nation. He gladly received the 2 Catholic missionaries to whom he offered his home and his table. They accepted. Some Tahitians repudiated the conduct of their government and to give a desirable form to their protest they created under the direction of M. Moerenhout a small religious and political Party which at first was named the Catholic Party and later on the French Party. The Protestant pastors and their followers hated the American Consul and never failed an occasion to place him in all sorts of difficulties. Their aim was to force him to leave Tahiti but he withstood all their enmity and remained. Du Pettit Thouars presented M. Moerenhout as Consul for France. The Queen said that she would prefer to see another person designated but the Commodore replied that M. Moerenhout, known to the world and already accredited as Consul for the United States, had equally the confidence of the French Government and that he alone could be charged to fulfil the important function.

1843

The crafty Consul (Pritchard) remarked to Pomare IV that she had not signed the order which instituted a Flag for the Protectorate, consequently she had the right to retain the Tahitian Flag above her home. The Queen allowed herself to be persuaded and gave the order to replace the old Flag. It was hoisted at first without any alteration, then it received some changes, coconut palms were woven in the centre and a few days later the leaves took the form of a Crown, the old Tahitian Flag transformed itself into a Royal Flag. The Provisional Government of the Protectorate protested — but in vain.

The Admiral warned the Queen that the Protectorate Flag having failed to cause respect for the Rights of France as regards strangers he found himself under the necessity of replacing it by the French Flag on the ground of protection. To his demand to correct her fantastic Flag Pomare IV refused compliance. In a Report addressed to the Minister of Marine he wrote : “If her Flag is not hauled down before midday, I shall take definite possession of the archipelago of the Society Islands and its dependencies.” The fatal hour sounded : the Tahitian Flag was struck and that of France was hoisted, the dethronement of the Queen was accomplished.

1844

On February 26 the following appeared in the columns of the *Moniteur* — a paper published in Paris.

“The King with the advice of his Council not finding in the Reports made sufficient motives to annul the Treaty of September 9, 1842 has ordered the pure and simple carrying out of this Treaty and the reestablishment of the French Protectorate on the island of Tahiti.”

It was a grave mistake which the King and His ministers committed. They had not hesitated to sacrifice the effort for settlement so greatly did they love peace. In truth no government sought more to avoid war than that of King Louis Philippe, for that end nothing counted with him not even the wounds of self esteem.

An English frigate brought the news that the Government of King Louis Philippe had disavowed the latest action of Du Petit Thouars and had refused to ratify the taking possession of Tahiti. This news produced a disastrous effect upon the morale of the French, they lost heart. In defence of the French Government it was said that the taking possession of Tahiti would be an onerous charge disadvantageous to France and that Du Petit Thouars after having legitimately and largely profited by the mistakes of Queen Pomare had thereupon allowed himself to be involved through patriotic zeal in cheating her who had neither arms nor cannon, taking from her without sufficient reason her hereditary Estates.

But since the thing was done, it was all the same needful to ratify it as otherwise it threw discredit upon the representatives of France : and a more serious thing, it encouraged the rebellion which led to a crowd of complications : in a word it failed to follow the course of Governor Bruat who totally disapproving of the arrest of Pritchard had considered it his duty to accept and support it so as not to aggravate the position of the French and their partizans. Unhappily King Louis Philippe and His ministers had not understood this point and it shows us that one should never confide the administration of distant lands to men who are ignorant of them and consequently are incapable of understanding the mental calibre of the inhabitants. For these latter, the least political concession is a proof of weakness. Here then was the result of the sentimental policy of King Louis Philippe and His ministers : Queen Pomare haughtily repulsed their advances and Governor Bruat could not punish her for her insolence since he was, on the contrary, charged to re-establish her upon her throne. The Dignity of France in fact was humiliated.

1847

She returned to her capital where she was received with the honours due to her rank. She held loyally to the promises she had made to the French Government and her subjects did likewise. But it is useless to dissemble : neither she nor they loved France, there were only a few Tahitians who became sincere friends.

1840 – 1880

Protestantism having been introduced by the English was designated by this childish people as “English religion”. Catholicism brought by the French was known as “French religion”. To speak ill of Catholics was therefore to speak ill of France, and when the Protestant pastors discharged their venom against the Catholic priests a regrettable confusion arose in the uncultured brains of the natives, they considered all Frenchmen as enemies.

The knowledge of our language certainly allowed the natives, in time, to gain better information of the priests, they might perhaps comprehend that politics can be entirely separate from religion and how much difference exists between a layman and an ecclesiastic. Little by little French pastors replaced their English colleagues. They continued the work of their predecessors and followed the same line of conduct. Being French they did not of course demand the support of England like the

English pastors. But French missionaries of both cults have alike always done what they could to prevent the spread of the French language throughout Polynesia.

The matter demanded a policy. According to them alike it was not desirable that natives should speak French. As expressed by both parties up to 1880 “The knowledge of our language will lead them to that of our ideas and so to the loss of our religious sentiments.”

On this they were fully agreed till Tahiti became a French Colony and Public Schools were established.

## The War of Independence

1844 – 1846

Incidents connected therewith as recorded by various writers in the Australian Press.

November 1843

Du Petit Thouars annexed Tahiti.

March 1844

A Proclamation has been issued by Governor Bruat declaring all Chiefs who do not submit themselves to the French Authorities in 8 days to be Rebels and all their land and property forfeited. The Patriot Chiefs have retired to the other side (East) of the island with about 2000 men. The natives are well armed.

(There followed the Fight at Point Venus and the skirmish at Faaa.)

July 1884

Queen Pomare has fled to Raiatea. The French barque Albatros from France has arrived with 300 soldiers. They now number about 1300 on the island.

(There followed the Fight at Mahaena.)

End of 1844

The French Admiral who arrived direct from France in the Arianna has tried his soft persuasion to induce Pomare to return from Raiatea. He brought out a variety of valuable presents from Louis Philippe to Queen Pomare. Amongst them is a splendid whaling-boat highly ornamented with carving and gilding, but despite their gilded offering Pomare has no intention to make the concessions required.

(Her Sovereignty it should be remembered had been restored to her but the Protectorate remained. Bruat had ceased to be “Governor” becoming merely “Commandant” but the former Title died hard.)

Extract

from the Paris newspaper the “Moniteur” mailed to Australia from Papeete.

The Government has received accounts from the island of Tahiti dated April 24 which states that even after having vainly endeavoured to reduce to obedience the rebels who had attacked us at Taravao, the Governor M. Bruat proceeded to engage them at Mahaena where they had raised strong entrenchments which were defended by 1000 armed men with 3 pieces of cannon. On the 17<sup>th</sup> the Governor M. Bruat landed with 441 men of all arms. The redoubts were carried by the bayonet. The rebels had 100 men killed, their colours were captured and their cannon spiked. On the following day

we destroyed their works and carried off their arms and ammunition. On our side we have to deplore the loss of 2 officers killed and 50 privates wounded.

Extract

from the Paris opposition newspaper “Réforme” after its reporting the Mahaena fight and that King Louis Philippe had been visiting Queen Victoria at Windsor Castle.

Read that disastrous intelligence and contrast it with the recent occurrences in London. M. d’Aubigny has been removed from Tahiti, his conduct has been blamed in the face of the whole world for having arrested the infamous incendiary Agent who was kindling the fire of sedition against us, Pritchard, the assassin of our soldiers and officers, who has received from the French Government an apology and an indemnity. The French officers, one of whom (Nansouty) bears a name illustrious in our military annals,<sup>160</sup> and the other an Officer of Artillery (Seignette) have been killed. The Dispatch does not mention the soldiers and sailors who must have perished. The conspiracy is flagrant, the complicity avowed. England has herself admitted that her Agent was a firebrand, an intriguer, a dangerous and immoral man who has compromised his character, disregarded his duties and violated the most sacred laws of nations.

February 1845

The loyal subjects of Pomare are encamped about 10 miles from this port (Papeete) at a place called Point Venus from which place they can observe the movements of the shipping either coming in or going out. The natives here keep quiet but, being encamped on both sides of the town, are ready for an attack should any assistance be rendered them by the English.

The French are not idle in making their situation more secure, forts fast being completed, contracts issued for new barracks and officers’ residences, forming altogether such a scene that, to one totally unacquainted with the manner in which the French obtained this Settlement would be quite pleasing.

The natives are still in their encampments at Papenoo and Bonaria (Punaauia), the former about 14 miles and the latter 8 from Papeete. When I visited them the musket and the sword had given place to the spade and the hoe. They rest secure from any attacks which their enemies may attempt, surrounded by reefs and rocks at sea and by defiles, impassable to more than one at a time, by land.

Extract

from the Paris newspaper “Débats”, a freelance publication.

We live here in a constant state of warfare, passing the day in scouring the country and clearing the valleys, gendarmes and soldiers spread right and left seeking for concealed enemies. The natives carry on a real “Kabyle” war against us, lying in invisible ambush, firing upon us as if we were wild beasts and then disappearing with a rapidity which renders it impossible for us to overtake them. During the night, the shore and town of Papeete are guarded by sentinels and patrols at every point and in all directions. Thus have we lived for many months and if our government does not assume a more determined attitude we know not what end we may come to, for our soldiers and sailors are beginning to be worn out by a service so fatiguing and dangerous.

---

<sup>160</sup> The reference is to [Étienne-Marie-Antoine Champion de Nansouty \(1768–1815\)](#).

November 1845

There are upwards of 5,000 of the natives in the strongholds in the mountains at the rear of Papeete.

January 1846

Governor Bruat is making preparations for war. A new stock of ammunition was sent to the Block-houses yesterday. Provisions are dreadfully high but there is plenty of flour and salt meat in the market. Trade in general is very dull. The Governor has placed a field piece in a baker's shop in case of a surprise in the night. It is stated that the natives do not desire to disturb the town in consequence of their being so many stores belonging to the English and the Americans.

February 1846

Bruat prevents news leaving Tahiti as much as he can. Severe punishment for any one speaking or writing concerning the movements of the troops. A Law has been issued by the French Authorities requiring all persons to keep a Journal of all their correspondence, even love letters, also an account of private expenses and of all goods bought or sold. The Captain of the schooner Sarah Wilson was fined 150 dollars for selling a hat, not having taken out a licence or employed an Agent. More troops have arrived. The Governor gave the Patriots a week to deliver up their arms or he would commence hostilities. Very few natives are to be seen about town, women and children making off to the mountains. Merchants are shipping the most valuable part of their goods on board the vessels lying in port.

March 1<sup>st</sup> 1846

The Queen's house is being made ready to receive her but little faith can be placed in the Queen's return to Tahiti. The French steamer is again sent to fetch the Queen, a quantity of cloth has been sent her.

16<sup>th</sup>

Fighting recommenced. The "French" natives in charge of the Fort at Point Venus quarrelling with the Patriots. They fired on one another. The Patriots broke into the Block-house, got into the Fort, dismounted the guns, then left. French forces — 300 by land and 6 armed boats — were sent to assist the "French" natives. The following morning the fight commenced from the boats, the Patriots opposing their landing. The Block-house was destroyed by the Patriots. After 10 days of fighting the Patriots retired inland.

21<sup>st</sup> March 1846

The Patriots entered Papeete. About half past 4 o'clock natives told me that there was fighting at the point beyond the Uranie Barracks. I had heard the fire of musketry but had taken no notice of it, supposing it to proceed from some party of soldiers exercising. However I soon saw that there was something extraordinary going on and walked about 100 yards around a point of land where, by the help of a glass, I could see the natives alternately advancing from their cover of coconut trees to fire. I went towards the field of battle. I found the road occupied by bodies of soldiers and firing going on

all round me. This was actually in the town. Presently I saw a large smoke, the house of Major Fergus<sup>161</sup> had been set on fire. About half a dozen native houses were burning in this neighbourhood. Arriving at the bridge I found a large bamboo house which had been built by the sailors of the *Uranie* on fire, and shots flying in all directions. Musket balls occasionally passed within a yard or two of us as we could tell not only by the sound but by seeing the leaves of the large trees around and above our heads cut off by their passage. It was evident that one place was just as safe as another. We were commanded by a Block-house on the hill just above us, a shot passed over our heads and struck the ground about 10 yards off. This was followed by 3 others after our backs were turned and we were walking back. There can be no doubt that they fired at us. There was a great deal of firing all the night both of musketry and of cannon from the ships and forts. The week passed in the same manner, cannon balls and musketry now and then, and provisions running very short because the “French” natives dared not go outside the town to fetch breadfruit, coconuts etc.

22<sup>nd</sup> March 1846

A house belonging to Captain Moore (an Australian) was burned down by mistake of the Patriots who supposed it was occupied by Captain Henry,<sup>162</sup> the pilot of the port who is much disliked by the Patriots who look upon him as a renegade, he being born on Tahiti and the son of a missionary yet one of the first to accept office under the French.

24<sup>th</sup>

One of the “French” natives deliberately fired at and seriously wounded Dr Henry, Assistant Surgeon of the *Salamander*, this native stating that he would murder any Englishman he came across. The doctor was standing in the garden of Dr Johnson.<sup>163</sup> Tried for the offence, he has been acquitted by the French Authorities on his plea of drunkenness.

April 1846

A party of “French” natives and troops set out with arms and the Protectorate colours under cover of the steamer *Phaeton*. About half a mile from Papeete a skirmish took place between them and the Patriots who had been waiting by the roadside for several days. The former were repulsed and fled back to town.

May 1846

Troops leave for Papenoo. Three days and nights of hard fighting. The French busy building a Fort there but much harassed by the natives rolling boulders down on them and it from heights above. The Chapel has been destroyed and its bell carried off to Papeete. The Government have determined to

---

<sup>161</sup> Major Fergus is referred to by Herman Melville in Chapter XXXII, page 160, of *Omoo*: “Shortly after the engagement at Hararparpi, three Frenchmen were waylaid in a pass of the valleys, and murdered by the incensed natives. One was Lefevre, a notorious scoundrel, and a spy, whom Bruat had sent to conduct a certain Major Fergus (said to be a Pole) to the hiding-place of four chiefs, whom the governor wished to seize and execute.”

<sup>162</sup> Samuel Pinder Henry (1800–1852), eldest son of William Henry (1770–1859).

<sup>163</sup> Dr Johnson is also mentioned by Herman Melville in Chapter XX, page 102, of *Omoo*: “After holding our ground off the harbour during the night, in the morning a shore boat, manned by natives, was seen coming off. In it were Wilson and another white man, who proved to be Doctor Johnson, an Englishman, and a resident physician of Papeete.”

erect Block-houses wherever required to prevent the natives from cultivating the soil and thereby starve them into submission. Troops continue cutting down the breadfruit and coconut trees. The Governor and troops proceed to Punaauia. It is reported in town that natives were at prayers when the French pounced upon them and discharged a volley. The Patriots however returned the salute with fatal precision. The Captain of Infantry (Brea) <sup>164</sup> was killed, Bruat's aide-de-camp lost a leg, a naval lieutenant and others wounded. Brea's body has been preserved in spirits and will be sent to his home in France.

June 1846

Several pieces of cannon have started for Punaauia. The French, having discovered a lofty eminence from which the Patriots' stronghold can be distinctly observed, consider that if they can get their field pieces up to this spot some execution may be done. Patriots arrive here and report that the French had conveyed 2 howitzers a considerable distance up this eminence. The Patriots are prepared still higher up to roll boulders down upon them. Although it is known that the Governor invariably accompanies his troops in action he cannot be distinguished in his disguise by the Patriots.

Mid June 1846

Darling, <sup>165</sup> the missionary stationed at Punaauia for the previous 27 years, whose son Adam <sup>166</sup> like Henry's son had attached himself to the French and received a salary in their service, writes as follows of the last clash but one previous to the submission of the Patriots. He reports to the L.M.S. Directors at Home.

On Sabbath morning by 7 o'clock the whole army of the French were marching up the valley to attack the camp of our people. There are 3 breast works or entrenchments made across the valley (a mountain stream running down it to the sea) at different places. A small skirmish took place at the first about a mile and a half up the valley. The people retreated from that, the French followed. At the second fortification still further up the valley the people again stood and fought. But as the third and last was their stronghold and where they intended to exert all their strength to save themselves, their wives and children, beyond this third fortification their All was placed — if that had been carried all would have gone — here they fought like men and drove the whole French army back. About 70 were killed and wounded, 4 or 5 principal officers were among the number killed. Only 3 on the side of the natives lost their lives and 3 or 4 were slightly wounded. The mountains come so close together just below where the fortification is thrown up and so perpendicular on each side that the natives could tumble huge pieces of rock upon the French troops which killed a great many and eventually drove them back without reaching the fortification from whence the natives were firing. The whole army with Governor Bruat at their head returned to the seaside about 4 o'clock p.m. The wounded had been carried down and put in our Chapel during the day. The steamer went twice to Papeete with officers and others who were killed or wounded. The army at once began the work of destruction in good earnest, burning houses, trees, fences and killing every living thing they could get hold of. This awful work continued for a week or more until every house within 2 to 3 miles of the station was burnt and every breadfruit was cut all round in such a way as they would soon die, none were left on each side of Punaauia except a few belonging to me and many even within our fence were destroyed.

---

<sup>164</sup> Augustin Maurice de Brea (1795–1846)

<sup>165</sup> David Darling (1790–1867)

<sup>166</sup> John Adam Darling (1818–1881)

July 1846

Great preparations are being made in town by the French to commemorate the French Revolution. A part of the Chapel at Taunooa has been taken away, and the ridge pole and part of the Chapel at Papaoa borne off to Papeete for the purpose of the French Feast. Two French officers and Adam Darling went to the Patriots on guard at Taunooa to request the attendance of their Party at the Festival. The Chiefs declined the invitation but offered them as many feis (plantains, similar to bananas) as they might require.

July 15, 1846

Funeral services were conducted during the Festival for those who had been killed in the conflict in both Protestant and Catholic Chapels. A special Salute is reported as having been fired from the forts and shipping in the harbour of Papeete.

September 1<sup>st</sup>, 1846

It was reported in town that Queen Pomare was on board the brig Hannah heading for Moorea from Raiatea. At 2 p.m. the steamer Phaeton started for Moorea with troops to receive the Queen, the Governor and a band on board.

2<sup>nd</sup>

At 1.30 p.m. a great concourse of the people gathered on the wharf to get a sight of the landing of Her Majesty. All the troops that could be spared from forts, block-houses and guard rooms were ordered to be in attendance dressed in full uniform, white gloves etc., the "French" native Chiefs with swords and cocked hats. At 2 p.m. the vessel arrives, a boat comes ashore with the Governor and his suite, M<sup>r</sup> and M<sup>rs</sup> Salmon, their child — no Queen, the thing a hoax.

December 1846

The last clash — at Fautaua — without shedding of blood ends the War of Independence. (See Note #1 to Chapter XI.)

February 9, 1847

Queen Pomare returned to her capital.

## Extracts from Some “Human” Documents

### Queen to Chiefs

(undated but) July 1844

*Peace be with you all. I am going to Pora Pora in the English man-of-war to be confined. It is my wish that you will on no account injure the Frenchmen. Have patience and trust in the Lord God.*

*Pomare.*

### Chiefs to Queen

(undated but) July 1844

*Pomare : this is our word to you. Your canoe is in a bad condition, the outrigger, the bow and the stern all parts are broken. Pomare : will it be well with you aboard the vessel? We are like a nest of eggs under you : if you die all we Tahitians will die with you. Peace be with you for ever and ever. Amen.*

### Queen to Kings

*Otaheite November 24. 1837.*

*To King William IV.*

*To the King :*

*May you be saved by the true God. Continue to assist me a weak woman, stretch out your hand to help me that enemies may not ill treat me. Let us go hand in hand. Peace be with you.*

*Pomare.*

Otaheite November 9. 1843

To Louis Philippe :

O King

*This day my lands have been seized by your Admiral with arms in the hand. I never intended in putting the Crown in my Flag to insult you O King. This is my prayer that you will give me back the Sovereignty and the government of my fathers.*

*Pomare.*

Note. He did and himself wrote to her but his letter is unpublished. (Command Papers Page 487.)

### Queen to Captains

Paofai March 14. 1843.

To Captain Nicholas :

O Commodore

*I make known to you that often times I have been troubled by the French Consul, and because of his threatening language I have forsaken my house. His angry words to me have been very strong and I have only verbally told you of his ill actions toward me. But now I clearly make known to you O Commodore my desire through this letter. Do you shield me, that the French Consul may not at all trouble me again. I look to you to protect me, quickly, now, at the present time and yourself will see the way how. This is my wish. If M. Moerenhout and all other foreigners should want to come to me they must first make known to me their wish that they may be acquainted whether it is or not agreeable to me to see them. Truth and peace to you O servant of the Queen of Britain.*

*Pomare the Queen of Otaheite.*

Taunoa May 15. 1843.

To Captain Nicholas :

O Commodore

*I write to express to you my great pleasure with you. I am desirous that you leave me not. But I am fearful of you, lest you also be overtaken with distress in my great distress. I have compassion upon you in your patience in bearing with me. That is my word to you O Commodore servant of the British Queen.*

*Pomare the Queen of Otaheite.*

*Paofai January 9. 1844.*

*To Captain Nicholas :*

*O Commodore*

*I am not like the same person you saw in Tahiti. I am now living like a poor person at the house of the British Consul. Quickly take up your anchor. Do not delay. It is my wish that you should fly here as an eagle.*

*Pomare.*

### **Captains to Queen**

*Otaheite August 4. 1843.*

*May it please Your Majesty :*

*If it were in my power I would most happily meet Your Majesty's request, but the orders of my Admiral are positive and I must obey. I pray that your Chiefs may ever closely imitate the conduct of British subjects to their Sovereign.*

*J. Toup Nicholas. Commodore.*

*Papeiti October 3. 1843.*

*Madame :*

*I haste to assure Your Majesty that I am directed to render my best services to you in your present perplexing situation. I beg to assure Your Majesty that I shall, as long as I remain here, be ready to render every protection to Your Majesty's person.*

*J. Jervis Tucker. Captain.*

*Papeiti January 6. 1844.*

*Madame :*

*That it may please God to preserve Your Majesty in strength of body and mind during the present trials and finally to re-establish Your Majesty's kingdom is the ardent wish of Your Majesty's most obedient and humble servant.*

*J. Jervis Tucker. Captain.*

### Queen to Queen

Aimata became Queen in 1827 : aged 13.

Victoria became Queen in 1837 : aged 18.

(undated but) February 1843.

*My dear Friend and Sister Queen :*

*My government is taken from me. Think of me, have compassion on me in my affliction and helplessness. Be quick to help me for I am nearly dead. I run to you for refuge, to be covered under your great shadow. I am like a captive pursued by a warrior and nearly overtaken whose spear is close to me. May you be blest.*

*Pomare : Queen of Otaheite*

*Her Majesty's Ketch Basilisk*

*June 13. 1844*

*The supplication of Pomare to Victoria :*

*My elder sister and Queen behold I am yours. Stretch forth your powerful arm and save me. Over-shadow me that I may respire, for my breath is spent in this struggle. I am near my confinement and am much discomforted by the smallness of this vessel. I now fasten again the rope which has connected us. Do you not cut it. You are powerful to save.*

*Your younger Sister in captivity : Pomare*

Note. She uses the term out of respect though older in years.

*Raiatea July 27. 1844.*

*Most gracious Queen :*

*Do not, do not indeed leave me. Do you raise me again from captivity. Be you the protector that I may never, no never be reduced again to captivity. I have no government, Philippe is King.*

*Pomare.*

*Encampment at Vaiaau : Raiatea.*

*September 27. 1844.*

*O great Queen of Britain :*

*My elder Sister,*

*I am wandering in this place and in that place, on mountains and in valleys with fear. This is my word to you : do not regard with strictness my errors and ignorances, shelter me with your great and royal compassion that I may not faint in the day of heat.*

*Pomare.*

There was no response.

Note.

A very “human” document is the Diary of Queen Pomare, now in the possession and close preserve of the Papeete Museum. It is but very fragmentary, dealing only and with many gaps with the years 1843–1847 and is to be read in a sort of Daybook amid much else of no historical value. Her penmanship is good and clear and of course in her native language. It has so far not been translated either into French or English.

## The Accession of Pomare V and the Succession

Queen Pomare IV had had no intention that her second son should succeed her. Her eldest son <sup>167</sup> had died May 13, 1855, her youngest <sup>168</sup> April 9, 1875. She was still left at her Passing with 3. These three were Teratane <sup>169</sup> (called also Ariiaue having taken in addition his dead brother's name), Tamatoa <sup>170</sup> and Punnarii. <sup>171</sup> Her youngest had left a son, Hinoi. <sup>172</sup> It was not Teratane who, in the opinion of his mother, should succeed her. He had no child, he had conducted himself very badly and she judged him incapable of reigning. Her second son Tamatoa was still more unfit for the throne. He had been cast out of Raiatea as King, considered by the natives as impossible.

It was Tamatoa's eldest child, a girl born July 12, 1867 named Terii nui ounu ma'ona <sup>173</sup> upon whom her grandmother poured the most passionate affection and whom she purposed to succeed her. In 1870 at the child's 3<sup>rd</sup> Birthday Feast the Queen had invited 80 guests and addressed them thus :

*"I would present to you my granddaughter. It is she whom I have designated to succeed me and I beg the representatives of France on Tahiti to regard her as such and to observe my words and my desire."*

But the child died December 19, 1872, when nigh 6 years of age, in the arms of her disconsolate grandmother. At the burial of this girl, Commandant Girard <sup>174</sup> gave an address in which he stated *"She was destined to be the Queen of Raiatea and one day Queen of Tahiti by right of inheritance."* Tamatoa's 2<sup>nd</sup> daughter was Teriivaetua, <sup>175</sup> and there was Hinoi, but the ageing Queen left further selection alone.

Note. Tamatoa's 6<sup>th</sup> child was called Aimata after the Queen — born June 29, 1878, died April 3, 1894 — and must not be confused with the Queen herself who was dead before she was born.

### Excerpts

from the Papeete newspaper "Messager de Tahiti" for Lundi, 24 septembre 1877 :

*"The Tahitian Legislative Assembly represented by those of its members at the time in Papeete assembled to day the 24<sup>th</sup> of September at half past seven in the morning, on the invitation of M. Rear-Admiral Serre, Commander-in-Chief, provincial Commandant of the French Establishments on Oceania, to recognize and acclaim the new Sovereign of Tahiti who succeeds to the late Queen Pomare."*

---

<sup>167</sup> Prince Ari'iaue Pomare (1838–1855)

<sup>168</sup> [Prince Teri'itua Tuavira Joinville Pomare \(1847–1875\)](#)

<sup>169</sup> [Prince Teratane Pomare \(1839–1891\)](#)

<sup>170</sup> [Prince Tamatoa Pomare \(1842–1881\)](#)

<sup>171</sup> [Prince Punuari'i Teri'itapunui Pomare \(1846–1888\)](#)

<sup>172</sup> Prince Teri'ihinoiatua Pomare (1869–1916)

<sup>173</sup> Princess Teriourumaona Pomare (1867–1872)

<sup>174</sup> Hippolyte Auguste Girard (1822 – ?)

<sup>175</sup> Princess Teriivaetua Pomare (1869–1918)

At this Assembly the following was announced :

*“We, Pomare V, King of the Society Islands and dependencies, and the Commandant Commissioner of the Republic*

*Ordain that*

- Art. 1. Prince Ariiaue, son of Pomare, succeeds his mother Pomare IV as Sovereign of Tahiti, Moorea and dependencies. He takes the Title of Pomare V.*
- Art. 2. Princess Teriivaetua, daughter of Prince Tamatoa and of Princess Moe, shall succeed King Pomare V.*
- Art. 3. In case of the death of Princess Teriivaetua without issue, the Throne shall descend to Prince Teriihinoiatua, son of the late Prince Joinville and of Princess Isabel.*
- Art. 4. Princess Teriivaetua and Prince Teriihinoiatua presumptive or eventual heirs to the Crown shall be brought up under the superintendence of the Council of Regency created by the Order of this day.*
- Art. 5. The King shall dwell in the Palace in Papeete, the other branches of the Royal Family shall reside in separate habitations.”*

Note. Both Teriivaetua and Teriihinoiatua were then under 10 years of age.

### **The Headship of the Pomare Family.**

Despite the above Order, giving precedence to Princess Vaetua, Prince Hinoi after the death of his uncle represented the Family as its Head, and in all Districts and Islands which he visited throughout his lifetime he was received without question as the Head of the Royal Family. From all assessments of him, he was not one to allow a position to be considered his which was not true. The absence of any official counter Order — eliminating Vaetua — may be due to Pomare’s natural conception that with his Sovereignty surrendered in 1880 went also the above Order of Succession, leaving him free to act as he saw fit as to the Headship after himself and his choice was his nephew Hinoi. Moreover Pomare’s bitter animosity to his divorced wife’s family — the Salmons — may have led to his repudiation of his niece Vaetua when in May 1844 she married into it, her husband’s mother being Titana, the eldest sister of Marau, his one time Consort. The French historian Deschanel <sup>176</sup> writes under date of 1884 :

*“Teriimaevaua, <sup>177</sup> a daughter of Tamatoa and consequently a niece of Pomare V married (in 1884) Prince Hinoi, a nephew of Pomare V. He looks upon Hinoi as his son and purposes to make him his heir. The young Prince as grown up by the side of his uncle at Papeete. He is both gentle and retiring.”*

Note. He inherited the entire Royal Estate.

<sup>176</sup> [Paul Deschanel \(1855–1922\)](#). See [La politique française en Océanie à propos du canal de Panama](#) (1884).

<sup>177</sup> [Princess Teriimaevaua Pomare \(1871–1932\)](#)

The official report of Pomare's funeral (Journal Officiel for June 18, 1891) states that the 2 chief mourners who followed abreast the bier were Hinoi and the Governor, other members of the Royal Family taking their places after them. The Headship of the Pomare Family of today therefore lies in the Hinoi line and is so accepted by all the natives of Tahiti.

See *The Pomare Family Tree*.

<b>Tetua</b>	<b>on her left.</b>
<b>Maeva</b>	<b>on her right.</b>

## The Abdication of Pomare V

He was living beyond his means, his mother's debts were still unpaid, he had named his successor and a disputed infant had just come upon the scene. He feared that the movement by the powerful Salmon faction which he knew to exist might become effective on his death and that his discarded but not as yet divorced wife Marau <sup>178</sup> might be made Queen or Regent during the minority of his successor whoever it might be. By his excesses he was physically a wreck and he sought what seemed to him to be the only way of escape from worry.

It was necessary however to secure the assent of at least the leading Chiefs of the Districts, whereupon the people as a whole, being inarticulate, would have to fall into line. This assent the French authorities on the spot secured for him and themselves, not however without some difficulty as their historian Caillot admits.

A Declaration was drawn up on June 29, 1880 "*au palais du gouvernement*", signed by "*Le Roi Pomare V*" and 20 Chiefs July 1<sup>st</sup>, and was accepted by the then Commandant, Chessé. <sup>179</sup> Ratification in Paris was still required and this was promulgated by President Jules Grévy <sup>180</sup> after approval by the Senate and Chamber of Deputies December 30, 1880.

In handing over his Sovereignty Pomare secured among other minor terms, the following cash benefits :

1. To himself an Annual Pension of 60,000 francs (gold).
2. To Marau " " " " 6,000 " "
3. To each of his 2 brothers " " 6,000 " "
4. The payment of his mother's debts.
5. The completion of the new Palace, begun in the 60<sup>s</sup>.

He died in the old Palace June 12, 1891, his funeral taking place from the unfurnished new one.

### A French Historian's Witness

Gleanings epitomized from Deschanel's book

"En Océanie". Paris. 1884.

Note. Deschanel — later President of France — was an eye witness of much that he records, residing in Papeete.

The parentheses are for the aid of the reader.

*Ariiaue (later the King), who had married a daughter of the King of Huahine by whom he had no issue, was divorced from her and resided with his sister-in-law, the Princess Joinville.<sup>181</sup> He wished to marry his mistress but the Queen forbade it. It was then that an English family, the most powerful and richest on Tahiti, the Salmon-Brander Family, endeavoured to secure a grip upon the presumptive heir to the Throne and thus upon the Throne itself.*

*Well before 1842 (1839) an English sailor, Salmon,<sup>182</sup> became enamoured of one of the young girls who surrounded the young Queen and formed part of her household. This girl was Ariitaimai (her foster sister named Ariioehau), daughter of the illustrious Chief of Papara (granddaughter of Tati I). Upon Salmon's death he left 4 girls and 3 sons. The eldest of the daughters, M<sup>lle</sup> Marama (Titaua) Salmon, married in 1857 the richest merchant on Tahiti, an Englishman (Scotsman) M. Brander. The second, Moetia, married in 1875 the American Consul for Tahiti at Papeete (Atwater). The 3<sup>rd</sup>, born April 24, 1860, married, under circumstances which we will shortly relate, the hereditary Prince and is today (1884) the Queen of Tahiti. The fourth is a young girl of 17 or 18 years of age (Manihinihi).*  
183

<sup>181</sup> Isabelle Vahinetua Shaw (1850–1918)

<sup>182</sup> Alexander Salmon (Solomon) (1822–1866)

<sup>183</sup> The Salmon Family of Tahiti, 1883 or 1885. Top left to right: Narii, Ariipaea and Tati. Bottom left to right: Manihinihi, Marau, Moetia and Ariitaimai. Marau was the second wife of Pomare V.

*The eldest of the Salmon girls, Madame Brander, beautiful, intelligent and rich, inherited the hostility (to the French) and the ambition of her father. Since 1857 up to 1880 there is not a page in the records of the Colony which does not contain evidence of an underground struggle between her and our government. The idea arose with her of the marriage of her sister, M<sup>lle</sup> Marau with the eldest (surviving) son of the Queen. Ariiaue was sickly, he led a dissolute life, he was known to be consumptive and it was thought he had not long to live. Marau was young (15 years of age) and beautiful, she would naturally bear children. At the instigation of M<sup>r</sup> Brander, the (then) French Commandant M. Gibert-Pierre was charged by the Queen with the negotiation of the marriage. He saw the young girl whom he found to be much charmed with the Prince (30 years of age), she pretended to have been secretly in love with him and longed she said to reform him. The abdication of the old Queen was sought in favour of her daughter-in-law to be and Pomare consented thereto.*

*But someone, very cautiously whoever it was, saw the Queen and pointed out to her that by abdication she would lose the 25,000 annual grant made to her by France, that this grant would pass to the new Queen, and that she herself who had occupied the front rank would find herself reduced to the last and without resources. Pomare withdrew her promise of abdication. Upon this the marriage hung for some days by a thread. The young girl no longer sought the Prince. As for him he never wanted her, he had no love for this haughty girl, but being a weakling and indolent he let the matter slide. M<sup>me</sup> Brander however worked so hard and ably that the marriage question was renewed, the aged Pomare would not live for ever, and who knew, once Marau was the wife of the King, what the future might hold.*

(They were married January 28, 1875.)

*In 1877 (the old Queen dead and no issue of the marriage) the Order of Succession designated arbitrarily as the future Queen to succeed Ariiaue a girl of 8 years and already naturally the English Party spoke of marrying her to one of the Brander boys (which became fact), thus we were ourselves preparing with our own hands (through Commandant Serre) to seat upon the Throne of Tahiti an Anglo-Saxon monarchy.*

*Since the coming into power of Pomare V our position had been very equivocal. Hardly married, the Prince had cast off his young wife and had returned to live nigh Papeete at the residence of Princess Joinville. In April 1879 (4 years after the marriage) Queen Marau gave birth to a daughter and the King refused recognition. The French Commandant thought, though happily without success, to bring the two together and cause them to live under the same roof. The intention was laudable from a moral point of view but it must be avowed that from the political it lacked skill. It is very evident that advantage should have been taken of the King's aversion for his wife and all the Salmon-Brander family in order to make him our ally against them.*

*On March 29, 1880 the King, at the time of leaving Papeete to visit the Sous-le-Vent islands, confided both the government and the administration of Tahiti to Commandant Chessé. On the return of the King M. Chessé represented to him the advantages that would be gained by making this temporary renunciation permanent. He spoke to him of the debts left by the Queen Pomare, about 20,000 francs, he assured him that France would grant him a Pension superior to the then Civil List, M. Chessé took upon himself the engagement to assure both him and his family Pensions amounting to about 91,000 francs per annum.*

Note. Pomare accepted these terms and his proclamation was issued July 2.

## His Queen's Children

Marauta'aroa was born April 24, 1860 and was married on January 28, 1875.

3 children were born to her.

2 daughters viz	Teriinuiotahiti	"Terii"	1879
	Ariimanihinihi	"Takau"	1887
1 son Ariihéré	"Fifi"		1889

The following speaks for itself :

*"À M. le Commandant, Commissaire de la République :*

*Salut à vous.*

*M. le Directeur des Affaires indigènes m'a demandé de faire dresser l'acte de naissance de l'enfant de Mme Marahu. Je vous fais savoir que je ne dresserai pas cet acte parce que cet enfant n'est pas de moi. Et je vous fais savoir qu'il ne me convient pas que cet enfant me succède dans mes biens, dans mes terres et dans mon titre. J'ai dit.*

4 Avril 1879.

Pomare V.

(Translation.)

*Monsieur the Director of Native Affairs has requested me to register the birth of the infant of Madame Marahu. I would have you know that I will not register this birth since this child is not mine. And I would have you know that it is not agreeable to me that this child should inherit my property, my lands and my Title. I have spoken.*

The French historian Caillot in addition to quoting the above writes further :

*"My wife has children, I have not, said he at times with a cynical frankness. The absence of a direct heir in chief determined him to listen very favorably to the proposals made in the name of the French government."*

From this it would appear that his answer to Marau's first child's birth (1879) was his Abdication (1880) and his answer to Marau's second child's birth (1887) was his Divorce (1888). The divorce was granted January 25, 1888. Thus 2 of his wife's children — under French law — carry his name, paternity playing no part. The son was born to her after the divorce and carries her maiden name.

Marau died February 2, 1935. Aged 75.

## The Pomare Family

## Characters of Pomare I : II : IV : V

### Pomare I

Jefferson's description : date 1803, the year of his death. <sup>184</sup>

In person he was the most respectable man we have seen since living here, tall (6 feet 3 inches), stout, well proportioned, grave in countenance, majestic in deportment, and affable in behaviour. As to his morals... nothing was sin with him but neglecting praying and sacrificing to his gods. In these things he was exemplary.

Ellis' description : date 1817. From hearsay. <sup>185</sup>

A man of enterprise, excessive labour and perseverance, bent on the aggrandisement of his family, and the improvement of his country, clearing waste tracts of land, planting them, and generally occupying the people with some public work. Though not possessed of the greatest personal courage he was a good politician and a man of unusual activity. In patronizing the idols and adhering to all the requirements of the priests he appears to have been influenced by the constant apprehension of the anger of his gods. He was a pure savage throughout, true to type as his record shows and not to be judged by civilized standards.

From correspondence Home (various).

He was supposed to be between 50 and 60 years of age at his death. He was born in the District of Pare-Arue and by birth was High Chief only of that region of Tahiti. The only thing he would not do for the missionaries was to believe in their teaching. He died as he had lived, a heathen to the core.

### Pomare II

Nott's description : date 1812. From an interview when in Sydney N.S.W. by the "Sydney Gazette". <sup>186</sup>

Tall, somewhat muscular and majestic, his air though somewhat haughty but much less so than might be expected from a man who has been accustomed to command without question and whose early notions could have extended little further than to a conception of his own superiority to every other being on earth. More a friend to civilization than to war, in possession of a power the most absolute that can be conceived and too jealous of its infringement to admit of innovations in the mode of governing to which he had been accustomed.

---

<sup>184</sup> From [Transactions of the Missionary Society, Volume 2, Issue 1 \(1804\), p.295.](#)

<sup>185</sup> Abstracted from [Ellis, Polynesian Researches, Volume III \(1831\), p. 251.](#)

<sup>186</sup> Reproduced in [The Sydney Morning Herald, 18 April 1936, p. 11,](#) in the article by Eric Ramsden, *Henry Nott – Tahitian Bible Centenary*. WWB is mentioned in the article as having found Nott's grave.

Ellis' description : date 1817. Also from personal knowledge.<sup>187</sup>

His character was totally different from that of his father, his habits of life were indolent, his disposition sluggish. Though heavy in his appearance, inquisitive, a keen observer, not fond of conviviality, more at ease when alone, sedentary occupations and amusements appeared more congenial than active pursuits. His policy as a ruler was deliberative and cautious rather than prompt and decisive. He was easily imposed upon. He was more rapacious than tyrannical. Not beloved by the nation at large. Exceedingly jealous of any interference with his prerogative or his interest. During the latter part of his life, the habits of intemperance which he was led to indulge in cast a gloom over his mind. He had long been afflicted with elephantiasis but the principal cause of his dissolution was a dropsical complaint.

From correspondence home (various).

He was the biggest man on the island, 6 feet 2 inches, and proportionally stout, fond of despotic power and loved to have the persons and property of his people at his entire disposal. He supported the old custom that no woman should eat in any home that the King honored with his presence. He was naturally idle, seldom or never walked out except to bathe. He taught the natives to disregard everything the missionaries said as to conduct, by his drunken and abominable manner of life he drew aside the people and when cast out from Christian circles for their profligacy received them into greater intimacy with him. He was steeped in the vices of his savage ancestors, his Mind later on assented to Christianity but his Heart never.

#### **Pomare IV**

Ellis' description : date 1817. From personal knowledge. He left Tahiti before she became Queen.<sup>188</sup>

Her countenance open and lively, her jet black eyes sparkling and intelligent, her manners and address engaging, her disposition volatile, her conversation cheerful. Restraint and application were ill-suited to her lively disposition and uncontrolled habits of life.

Dumont d'Urville's description : date 1831.

Aimata is a girl of 17 years of a lively disposition, strongwilled and of a fiery temperament. Difficult to dominate or to guide, she sought to restore at her Court the still recent dissolutions of the celebrated Itia, wife of her ancestor Pomare I. At the beginning of her reign there was still some limit to her dissolute ways but, gradually emboldened by the example of her mother and her aunt, she gave herself up entirely to her ardent nature. But she was the Queen and people put their blind eye to the telescope. Still the Court imitated her. Bigoted under the missionary student, it became debauched under the young Messalina and the example spread to the lower classes. So far the missionaries have found no efficacious remedy for the fatal profligacy. On various occasions the question of pronouncing the Queen's deposition has arisen but they have not yet ventured on this step.

---

<sup>187</sup> Abstracted from [Ellis, Polynesian Researches, Volume III, p. 251.](#)

<sup>188</sup> Abstracted from [Ellis, Polynesian Researches, Volume III, p. 289.](#)

From correspondence Home (various).

She had no aptitude for governing, leaving it to her Prime Minister and High Council, spending her earlier years as Queen in the unfettered pleasures of Tahitian life and customs, failing in the reserved dignity of a position which she was unable properly to appreciate as hers. The Protectorate in the full bloom of her womanhood crushed her and broke her spirit. She soon had a large family, sons and a daughter, requiring her attention and in her later years she withdrew much within herself, her spokes-woman being her more forceful foster sister, Ariitaimai, the two growing old together.

### **Pomare V**

Diligent search and enquiry from those who knew him having failed to find one good quality or one redeeming feature, it seems more generous to the Dead to treat the subject with silence.

Historical interests however demand the recording of the following Official “sidelights”.

1. The Papeete news sheet “L’Océanie Française” of the month of March 1884 — after his abdication :

By reason of an understanding come to between Pomare V and the Administration of Tahiti, the superannuated custom is abrogated by which the Districts were bound to furnish servants to him whose situation was much that of veritable slaves.

2. From the “Journal Officiel” of June 18, 1891. Extracts from the Address of Governor Th. Lacascade at the obsequies of Pomare V :

I desire at the least to render to his memory the legitimate homage that we owe to the Sovereign whose sincere attachment to France he did not deny for a single instant. Since the moment when had been sealed that part of allegiance which made Tahiti a French Colony, King Pomare proved to all, that he knew how to be at one and the same time a good Frenchman and a good Tahitian, allying to the love of his race the most affectionate sympathy for the nation which had adopted his one time subjects and treated them on the same footing as the French of the Mother Country. His solicitude for the consideration of the native population had its only equal in the veneration which he professed for the Flag which, having shaded his childhood and the cradles of his brothers, had extended its powerful protection over his Throne. Such are the sentiments which Pomare manifested to me even to the eve of his death when in an interview of which the remembrance will ever be precious to me, feeling himself near his end, he held fast to the recognition that the local Representative of France had never failed to be for him and for all his, a good counsellor, a well wishing friend. I fulfil then a duty to render a last homage to the Sovereign whose departure from this world leaves so lively regrets.

The Pastors present were Viénot, President of the Council of the Protestant native church, Vernier, Brun and Deane. As with the Governor, so throughout, no allusion was made to character. Knowing full well what they all did, they evidently felt it their duty to speak well of the Dead and leave the matter at that.

## Some Old Time Tahitian Customs

In the words of those who witnessed them, 1797 to 1801.<sup>189</sup>

1. The Haeva or ceremony over the Dead.

About 20 persons, men and boys, daubed all over with smut, red clay and white in various forms, most of them armed with sticks, attended by a person arrayed in a fantastic habit called a Mourning dress, made their appearance, ran about from house to house, also round the corpse for a short time and then disappeared. While these frightful objects were running from house to house beating their sticks against the outside railings, those within pretended to be much afraid. Many of the outside party were painted as if they had black jackets turned up with white with a double row of buttons, their thighs and breech painted red, their legs white, while their faces were daubed in as hideous a manner as possible.

2. Temaree and Pommarree make Peace.

The first named accepted the latter's Tarra-a-harra or Atonement. If the person offended is a Chief, it is a live pig and a young plantain tree : if an under Chief, a young chicken and a plantain tree. The pig and the chicken may be looked upon as a Sin Offering, the plantain as a Peace Offering.

3. An outward Symbol of peace.

On the top of a hill that separates the 2 Districts we saw a pole set up in the ground upon which were fastened a dead dog and a young plantain tree. We were given to understand that this was the King's Standard, by which notice was given that there was peace between the 2 Districts. If any were to break down the pole, it would be looked upon as a declaration of war. If it should fall by any chance, the King must be informed and a declaration made of its not being intentionally done.

4. Shoulders bared.

This mark of respect for their King is shown him wherever he goes and by all who appear in his presence, his father and mother not excepted, his Queen being the only person exempt. Though he may be absent, his various habitations marked by high posts with the head of a man rudely carved on them can not be passed without bare shoulders. A wilful breach of this custom would certainly be attended with death, and if it should happen that the King passed a person unobserved and so had his shoulders covered, his cloth would become sacred and must be either torn to pieces or given to the King. To prevent such mistake it is usual to give the alarm of his coming by calling out loudly which is passed along.

---

<sup>189</sup> See also *Some Customs in Early Missionary Days* in *Pioneer Missionaries of Tahiti* and WWB's article *Some Old-Time Tahitian Customs* in the May 1942 edition of the *Pacific Islands Monthly*, pages 32–33, in Part VII.

## 5. The marriage ceremony

The mother and uncles of the bride were employed in distributing cloth to the various friends who had met upon the occasion. In one of the houses a kind of Altar was erected covered with a piece of white cloth and on it were placed some old cloths which had lately enclosed the tomb of the deceased father of the bride. After they had distributed the various gifts of cloth the parties went to the Family marae where the ceremony commenced with spreading a large piece of white cloth across the pavement. This done, the bride and bridegroom each changed their dress, after which the mother of the bride with 2 or 3 female relations having taken a sugarcane and broken it into small pieces laid the same upon the leaves of a tree called Amai. The mother and her female assistants then wounded their heads with sharks' teeth and caught the blood upon the leaves on which were placed the broken sugarcane and after this, male and female relatives presented the leaves, sugarcane and blood to the bride and bridegroom who were seated, the man on one side of the marae and the woman on the other, about 6 yards apart : the whole was then offered to the supposed god of the Family and laid upon the Family altar. All was conducted with levity. The mother of the bride now produced the skulls of her deceased husband and elder brother which according to the custom of the country she had preserved and now anointed them with coconut oil. The skulls were laid before the leaves, sugarcane and blood. All being finished, the cloth spread upon the marae was folded up and later was presented to the King at his habitation wherever it might be. The cloths the bride and bridegroom put on after entering the marae are deemed scared and are not worn in common.

Note. "Cloth" was tapa cloth woven from the bark of trees.

## 6. Kava — made from the root of the ginger plant.

Yavva, a liquor much in request, continues to be prepared as related by Captain Cook, and drank to excess [sic] both by Chiefs and the common people. It is a root of a sharp, peppery taste which is chewed and spit into a wooden bowl into which coconut milk is poured and after a little while fermentation is excited, when the whole is strained and wrung through coconut husk and served in cups of leaves made immediately and thrown aside when once used. The effect it produces is a weakness in the legs at the time but not of the brain. But continued use is visible from the head to the soles of the feet. The eyes of Yavva drinkers are much bloodshot and at times very sore, their skin covered with a great thick scurf and the soles of their feet chapt or cracked, it also subjects some to fits. Notwithstanding the filthy manner of preparing, its nauseous smell and to many its disagreeable taste, it is as much admired by Otaheitean epicures as the finest wines produced in Italy or France are by the most refined sensualists at Home.

## 7. A sham fight.

All were clothed as in actual war and armed with spears. It consisted in running hither and thither without any order, whooping and hallooing, the different parties making feint thrusts at one another with their spears. The canoes also had some manoeuvres among themselves. The exhibition was in keeping with these islanders' rudeness and barbarity.

## 8. The separation of the sexes.

According to the customs of the country, women have distinct houses from the men in which they eat their food. Moreover one woman does not eat with another nor even with their children, but every woman and female child have their separate provision basket, as also have the men.

## 9. The Arioi.

A company of travelling Players arrived who go from one District to another to exhibit their truly savage performances. They generally travel in large companies with a Manager at their head. Their manner of performing is thus : The actors place themselves in a ring on the ground, the Manager stands in the middle and begins with a Prologue which he delivers with much vehemence and wild gesticulations of his arms, fingers and feet. Then a signal is given to the actors who all break out into a most singular and barbarous noise which can be compared with nothing better than a herd of swine grunting in chorus : at the same time they keep working their hands and thighs as they sit crosslegged till they are obliged to stop for breath. A repetition of this continues about three quarters of an hour. During the whole of the performance the Manager keeps his place and plays his antics. A drum is also kept beating to which they grunt in time.

## 10. Coffins and the Burial Office.

Tahitians knew nothing of the former. It was either “sundrying” and caves or “earth to earth” burial of the corpse, and if the 2 Spaniards were interred in the latter way at Tautira in 1774 and the Bounty’s Surgeon at Point Venus in Dec<sup>r</sup> 1788, the record for the innovation goes to the Brethren at Matavai in 1797. A boy known to them who had met with a fall from a breadfruit tree on Xmas Day died on December 30 and an Entry in the Journal reads :

Brother Puckey promised to make a coffin for the child which was carried the next day by 4 little boys and several of the Brethren followed. This being the first coffin ever made on Otaheite they were surrounded by crowds of natives who admired the construction of it and said “it would make a fine box to put cloths in”. A long ceremony was performed by the father which appeared to consist principally of an oration on the prospect of his future usefulness had he lived.

The father, mother and relatives were prevailed upon by the brethren to abstain from performing the usual conclusion of the Burial Office in cutting their heads and elsewhere with sharks’ teeth, blood flowing freely and being caught on a piece of white cloth was then laid upon the grave.

## 11. Tattooing. (From later Reports.)

This custom, which was frowned upon and as a general thing was eliminated under the new religion, was considered a most graceful and pleasing adornment for both sexes. It was commenced at an early age and gradually the patterns spread themselves over most of the body of the man : women were restricted to their hands, fingers, wrists, ankles and feet, mittens for the hands, rings for the fingers, bracelets for the wrists, sandals for ankles and feet. The men had chest and back, arms and legs covered with a great variety of figures, trees and vines, birds, beasts and fish, circles and squares, with feet like to the women. Unlike the Maori, Tahitians rarely marked face or throat and if so it was but a small mark on the forehead. The Tatatau used either the sharpened bones of birds or the teeth of the shark. The dye was the drippings of oil obtained by burning the fruit of the candlenut tree, which turns from jet black to blue when it came in contact with the skin.

## 12. Time. (From later Reports.)

Before white men’s reckoning came into use, Tahitians had their Days, Months, Years and Generations, but knew nothing of Weeks or Hours. They spoke of a day as “2, 3 or 4 nights ago” and reckoned these up to the new moon, having no special name for each night but one for each of the

lunar months. These months according to the Seasons constituted a Year, when the cycle of the moons recommenced, but as there was no written form of the language it was difficult to keep accurate records of events such as Births, Marriages and Deaths. Their Age was largely guess work helped out by any special happening of his or her life in the Past. The Generation was a help to long past happenings.

The Time of Day was an immense affair of memorizing over 100 divisions, the Sun and the Tide playing the most important part. The tide at Tahiti never varies : 6 a.m. and 6 p.m. it is at its lowest : at mid-day and mid-night it is at its highest, so an accurate Time Keeper in place of clock, but the 24 Hours were another matter.

## The Cook Memorial at Point Venus

### Extracts

from the Geographical Journal of the Royal Geographical Society. London. Volume 89. N° I. <sup>190</sup>

The following notes summarize all the information now available upon the history of this Monument now standing about 100 yards west of the lighthouse at Point Venus. In 1769 Captain Cook visited Tahiti to observe the Transit of Venus. The Endeavour anchored off the north east shore of Matavai Bay : and on April 15 Cook went ashore “*to fix upon some spot commanded by the ship’s guns where I might throw up a small fort for our defense and prepare for making our astronomical observation. We soon fixed upon a spot of the sandy beach on the N.E. point of the Bay which was in every respect convenient for our purpose and not near any habitation of the natives. The soil where we constructed our fort was sandy and this made it necessary to strengthen the entrenchment with wood : three sides were to be fortified in this manner, the 4<sup>th</sup> was bounded by a river upon the banks of which I proposed to place a proper number of water casks.*” <sup>191</sup>

“*This afternoon May 1<sup>st</sup> we set up the Observatory and took the astronomical Quadrant ashore for the first time together with some other instruments, the fort being now finished and made as tenatable as the time, nature and situation of the ground, and materials we had to work upon would admit of. The north and south parts consisted of a bank of earth 4½ feet high on the inside and a ditch without 10 feet broad and 6 feet deep. On the west side facing the Bay a bank of earth 4 feet high and pallisades upon that but no ditch, the works being at high water mark. On the east side upon the bank of the river was placed a double row of casks.*”

On Cook’s “Chart of the Island of Otaheite” a river is shown cutting the promontory called Point Venus and leaving a narrow spit between it and Matavai Bay. To the west of this spit an anchorage

<sup>190</sup> See the article by G.R. Crone, *The Cook Memorial at Point Venus, Tahiti*, published in [The Geographical Journal, Vol. 89, No. 1 \(January 1937\): 54–58](#). The article was written in response to a letter received by the Royal Geographic Society from Captain J.D. McComish of Sydney, a member of the Royal Australian Historical Society, in September 1936.

<sup>191</sup>

*Venus Fort, Erected ... during the Observation of the Transit of Venus at Otaheite from*  
[A Journal of a Voyage to the South Seas](#) by [Sydney Parkinson](#) (1773).

is marked presumably where the Endeavour lay, and it seems clear that the Fort was built on this spit where it could be commanded by her guns. The approximate position of the fort can also be seen from a plate giving a general view from One Tree Hill. The average width of the extreme portion of this spit appears to be about 200 feet. The dimensions of Fort Venus are not known so that it is not possible to determine its exact position.<sup>192</sup>

The next point to be settled is the site of the astronomical observations. Of the actual observations of the Transit it is recorded "*The Observation was made with equal success by the persons I had sent to the eastward, and at the Fort, there not being a cloud in the sky from the rising to the setting of the sun.*" It seems clear therefore that the Observations were made (both) in and (also) close to the Fort. The quotation from the Journal already given stresses the relation between "the Observatory" and "the Fort". The whole purpose of the fort was to protect the instruments, especially as the natives were much given to pilfering.

There is no record in the accounts of his 3 voyages to show that Captain Cook set up any kind of rock or monument to mark the site of the Observatory. None of the navigators such as Kotzebue, Beechey, Belcher, Dumont d'Urville or Wilkes, who touched at Tahiti after Cook's visits, refer to the evidence of such a mark. Kotzebue however records a tradition about the position of the Observatory : "*By the influence of Wilson a small house situated on Cape Venus was cleared for our astronomical observations. We were told that it stood precisely on the same spot where Cook's Observatory had formerly been erected.*" On his plan it is shown near the extremity of the spit. This was in 1824, forty-six years after Cook's last visit. On the plan contained in Dumont d'Urville's hydrographic atlas, "Plan de la Baie Matavai", September 1838, the word "Observatoire" is written along the extremity of Point Venus but there is no symbol to mark its exact position. There is therefore no evidence before 1840 for the existence of a stone associated with Captain Cook himself.

<sup>192</sup> The drawing below shows the placement of the fort on the spit.

A plan of Fort Venus in Royal Bay, Otaheite. Probably from a lost drawing by H. D. Spöring. From *Charts, Plans, Views and Drawings taken on board the Endeavour during Captain Cook's First Voyage, 1768-1771*. British Library.

**Cook's Monument**

In 1899 M<sup>r</sup> A. L. Anderson wrote to the President of the Society — Sir Clements Markham — stating that he had recently visited Point Venus “*the spot from which the transit of Venus was observed by Captain Cook in 1769*”. He then described a stone which he tacitly assumed to be Cook’s stone and its condition : “*Sunk in the ground there is still to be seen the coral slab placed by the great navigator. It is about a foot square and has a brass plate perhaps 4 inches square and showing the transit line let into its top. As I saw it, the stone was exposed to the tender mercies of goats, children, dogs, cattle, etc. having no protection whatever.*” He had asked the local authorities for permission to fence round the memorial but this had been refused. He therefore suggested that the Society should obtain permission to erect a monument on or a fence around this stone. The Council agreed to do this and secured the co-operation of the Royal Society. At their request H.B.M.’s Consul at Tahiti obtained permission from the Governor of the Colony to erect a monument. In submitting plans for this, he suggested that the Society should send out a suitably engraved brass plate to be placed on the monument. This was done, but while the plate was on the way out, the Consul informed the Society that the Governor had undertaken to set up the monument at public expense. A line was accordingly interpolated in the inscription to record this, so that it reads, “*This memorial, erected by Captain James Cook to commemorate the observation of the transit of Venus, June 3<sup>rd</sup> 1769, was restored and fenced round by the local Administration at Tahiti and this plate was placed here by the Royal Society and the Royal Geographical Society in 1901.* The monument when finished consisted of a column,

surmounted by a sphere, standing upon a plinth in which the stone referred to by M<sup>r</sup> Anderson is embodied, the whole being enclosed by an iron railing.<sup>193</sup>

According to the “Admiralty Pilot” this monument stands about 100 feet west of the lighthouse on Point Venus. The “Pilot” further describes the stone as 15 inches square and marked with a meridian line. A tradition of the association of the stone, over which the memorial has been raised, was very strong locally and it was in fact known as “Cook’s stone”.

Prince Hinoi Pomare, a member of the former Royal House, asserted “*My forebears have of old shown me a stone situated at Point Venus and told me that that stone had formerly served the illustrious navigator and astronomer Cook as a landmark for his observations.*”

Another inhabitant described how in 1868 when he was working as a carpenter on the building of the lighthouse, many visitors, particularly French and British naval officers, came to see the stone set up by Captain Cook and he added that this stone was incorporated in the monument of today. It is clear therefore that local tradition from at least 1868 associated this stone with Captain Cook and that it did not stand on the approximate site of the fort.

After this memorial had been set up (a) M<sup>r</sup> Kyngdon wrote to the Society from New Zealand asserting that the memorial had been placed at the wrong stone, for another stone at Point Venus was locally associated with Captain Cook. In reply to an enquiry from the Society, the Consul at Tahiti investigated the matter with the result that the stone referred to by M<sup>r</sup> Kyngdon had been placed in position by Commander Wilkes, U.S.A., in 1839. (For this see *Wilkes’ Stone*.)

The conclusions to be drawn from the above are :

1. Cook’s observations were made at Fort Venus and not on the site of the present memorial.

<sup>193</sup> The photograph on the left below of the brass plate at the base of the Cook monument was taken circa 1978. The plate was subsequently stolen and replaced in 2011 with the plate on the right. The text of the new plate is as follows: “The People of Tahiti built this memorial to Captain JAMES COOK RN, who observed the Transit of Venus near this site on 3 June 1769 during his first Pacific voyage and gave the name Point Venus. He returned here on his following two voyages. Erected 1901, proposed by the Royal Society and the Royal Geographical Society. Restored 2011 by the Government of French Polynesia at the suggestion of the Captain Cook Society.”

2. Cook does not appear to have set up any mark or rock and no references are made by early visitors to any mark left by Cook.
3. The stone incorporated in the present memorial was associated by local tradition with Cook but the origin of this tradition cannot now be determined.
4. The inscription on the brass plate as recorded above is unfortunately misleading.<sup>194</sup>

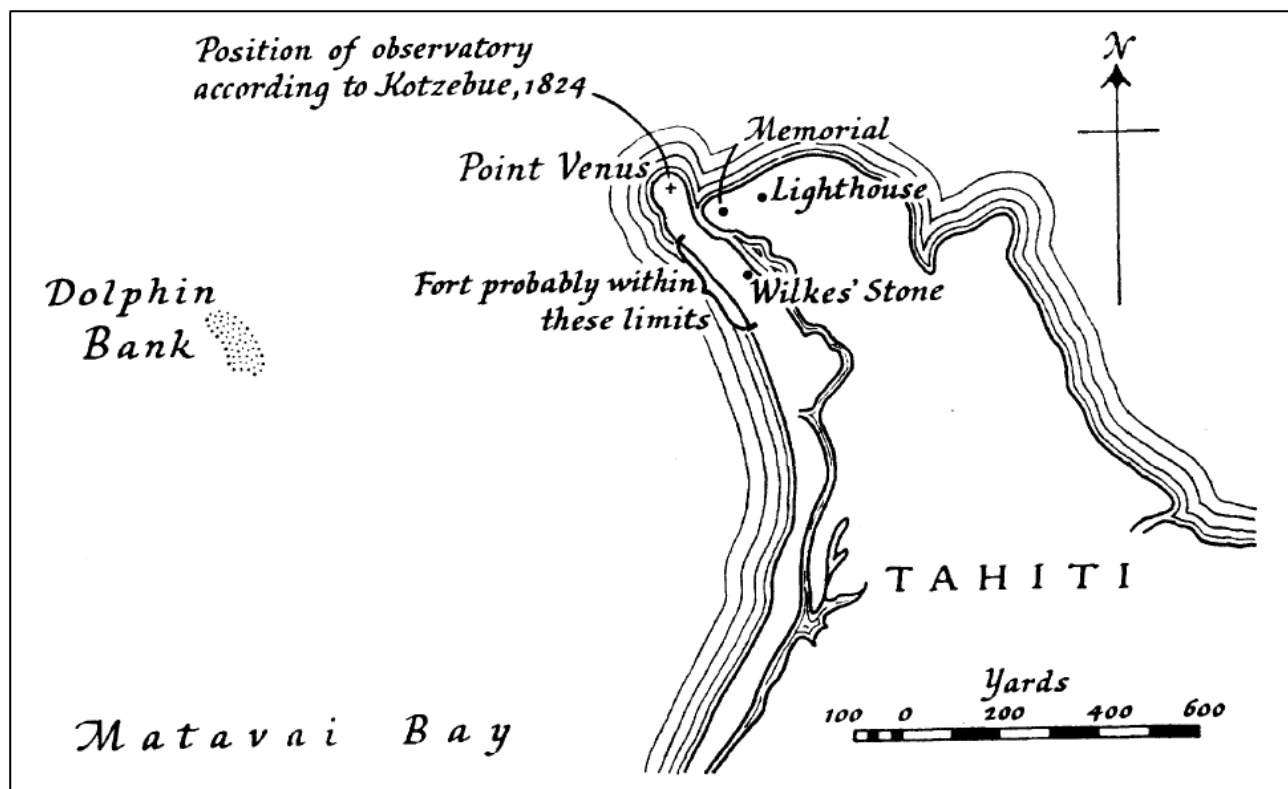

---

Note. As also is the year of placement.<sup>195</sup>

The site where the Fort stood, today occupied by a bungalow privately owned though the land itself is Government property, was used by the first Pomare in 1789 to erect a dwelling for Bligh's expected return and was the first dwelling place of the pioneer missionaries in 1797. It seems highly probable that Pomare removed the stone which was used by Cook in his Fort as the base of his main instrument, and had it taken the few yards across the stream, rather than left hidden under the dwelling to be raised.

---

<sup>194</sup> The article published in *The Geographical Journal* includes the map shown below:

<sup>195</sup> The text from this note onwards does not appear in the article published in the *The Geographical Journal* and so was added by WWB.

This point is referred to in a private letter from the Royal Society in which it is suggested that the stone with its brass platelet in bearing the Meridian line — “a bench mark” — may have been left behind by Cook to mark the site of Observation.<sup>196</sup>

The British Consul last referred to was R. F. Simons. Copies of his correspondence with the Royal Geographical Society in the Consulate at Papeete show that he reported :

- (a) October 4, 1901, the arrival of the engraved plate.
- (b) January 8, 1902, the monument not yet commenced.
- (c) May 19, 1902, “*The monument is now completed.*”

There appears to have been no Ceremony of Dedication.<sup>197</sup>

<sup>196</sup> The photographs in this and the next footnote were taken in November 2014. The stone with its brass platelet has been covered with white paint, but the platelet and the meridian line are clearly visible in the photographs below. The unpainted stone can be seen in the photograph of Cook’s Monument further above.

<sup>197</sup> The photograph of Cook’s Monument below on the left shows the side facing the lighthouse, with the new plate. The photograph on the right shows the side facing away from the lighthouse (which can be seen in the background through the foliage), with the stone and brass platelet.

## Language Pioneering

The island's debt to the pioneer missionaries.

On Tahiti the attempt was made and success achieved by men who had no special training whatsoever in such work or in the studies suitable for such an undertaking. They had to work out all the principles and solve all the problems by and for themselves. Such pioneering is full worthy of record and of praise. The "Journal" of these men tells of their travail.

A little more than one year after their Landing they enter a brief letter sent Home dated August 26, 1798 :

*Out time has principally been engaged in labouring to acquire a knowledge of the language of the country which we find all Europeans who ever visited Otaheite have utterly mistaken as to spelling, pronunciation, ease in learning and the barrenness of it. We have already joined some thousands of words and we believe some thousands yet remain.*

On April 9, 1799 comes the entry :

*Our growth in the knowledge of the language still slow and in many cases uncertain which is in a great measure owing to our not being able to catch the sounds of the words with that exactness which is necessary. The language abounds with vowels, even more than any navigator who has given specimens of it was aware of. Many words consist of nothing but vowels and each has a sound, but the natives utter their words with such rapidity that it is with the utmost difficulty we can discover the true manner of spelling them and when this is accomplished with any tolerable degree of precision there is as great a labour to arrive at the true sense and meaning of a word or its various meanings, for one word is used to express very opposite things in different sentences. And, which adds to the difficulty, they abbreviate their words so much that those which we are well acquainted with and which if fully pronounced we should readily understand are, by the abbreviation, so shortened that we frequently mistake them for new words and are thus puzzled and perplexed.*

Eight years had passed when the entry is made :

*March 11. 1805. On Friday 2 hours were employed in composing an Alphabet of the Otaheitean language in which it was proposed that the English or Roman characters should be taken and Otaheitean names given them for a more easy and natural introduction of letters among the natives. An Alphabet was then drawn up and agreed to by the majority, composed of such letters as were supposed to be in the language though it must be observed that our judgements in this particular, namely what letters are in the language, differ in some respects very much.*

Wednesday April 9, 1806 finds them still at the work :

*In the afternoon had a meeting to rend our Taheitean-English vocabulary. It is proper to observe that our meetings for the purpose of collecting in alphabetical order all known Taheitean words commenced in March 1805. From that time we have in general met twice a week. We have paid a native for attending our meetings in order to ascertain the proper pronunciation of every word which we have written down according to our new Alphabet, as also its corresponding English and its various significations. We have now gone through the Alphabet in that manner and today began to read what is put down for the purpose of further correction. Our present collection amounts to 2,100 words exclusive of 500 names of trees, plants, fishes, birds, insects etc. There are also several hundred*

*more of names expressive of the qualities and states of breadfruit, plantains, coconuts etc. etc. It appears that the Taheitean language has been much mistaken by Europeans in general. All the vocabularies we have seen are essentially deficient and erroneous not only in spelling and signification of words but in all the fundamental principles of the language. In respect to some of the common occurrences of life we allow that a European of ordinary capacity may soon make himself understood, but in respect to such a knowledge of the language as is necessary to convey instruction it is far otherwise. It has been represented as uncommonly easy of attainment but we know the contrary by long experience. Its radical parts or those words that are simple roots are only a few hundreds in number yet these, few as they are, may by the help of prefixes and affixes be easily multiplied to 5000 or 6000 so as to express with much precision any idea commonly occurring to a native's mind.*

*The greatest difficulties for attaining this language arise*

- 1. from the vast number of words that are nearly the same in pronunciation but widely different in sense :*
- 2. from their different way of forming their sentences from what a European would naturally do :*
- 3. from their manner of confining a word or term to a particular thing, whereas its corresponding English would be applied also to other things of the same kind : as also*
- 4. from the arbitrary alterations introduced from time to time on account of some words or syllables becoming sacred.*

*(See Pii in Restricted Use of Words.)*

## Tahiti's Welcome to Victoria's Son

An account drawn upon

from the "Messenger de Tahiti" of June 26 and July 3, 1869.

### Issue of June 26 :

A month ago the coming of Prince Alfred <sup>198</sup> had been announced : the people had been called upon to lend their aid in the reception which would be given him. On Friday evening the Districts commenced to arrive, and on Saturday last June 19 the English frigate Galatea commanded by His Royal Highness Prince Alfred, Duke of Edinburgh, anchored in our harbour about 5 o'clock in the afternoon. She immediately saluted the French Flag with 21 guns and the salute was at once returned by the shore battery. The Imperial Commissioner in Command sent his Chief of Staff on board to convey to His Highness a welcome to our country and to ask him when he would receive the Imperial Commissioner Commandant.

The next day, Sunday, the Prince's aides-de-camp, the Honorable Eliot Yorke and Lieutenant Haig, returned the visit made the previous day by the Chief of Staff and announced that His Royal Highness would at 4 o'clock pay visits to Her Majesty the Queen and the Governor (i.e. the "Imperial Commissioner" and "Commandant" under the Protectorate).

At 2 o'clock the Commandant accompanied by his staff went aboard the Galatea to present his homage to Prince Alfred and to offer his services. His reception was most gracious and cordial. His Highness conducted M. de Jouslard to the battery to allow him to see the cannons of heavy calibre and to explain their handling to him. The Commandant retired after having placed at the disposal of His Highness all the resources which our Military Depôt could supply. At his departure he was saluted with 15 guns which the Duchayla promptly returned.

Prior to 4 o'clock troops were assembled at the wharf and the singers ranged themselves at the Queen's residence to receive the Prince. At the moment when His Highness left his ship he was saluted by a salvo in regular succession from all the artillery of the Duchayla. At the same moment flags were hoisted, the yards manned — honours reserved for princes of the Imperial Family — and when he landed the shore battery fired a salute of 21 guns. The Commanders and staffs of the naval vessels in harbour awaited him at the quay.

The Commandant had sent ahead to His Highness his 2 aides-de-camp who accompanied him to Government House where the Commanders of Military Units and their officers had assembled. After a short stay at the House, His Highness together with the Commandant betook himself to the Queen's Palace. During the short walk all the singers sang Welcome to the son of Her Majesty Queen Victoria, intermingling their chants with the warmest acclamations.

Her Majesty Queen Pomare was surrounded by all her family and the leading Chiefs of the island. She expressed to His Royal Highness how happy she was to see him at Tahiti and assured him that she would do all in her power to render his stay in her country agreeable. At the departure of the Prince the same applause accompanied his way. In the evening he again came ashore and having

---

<sup>198</sup> [Alfred, Duke of Saxe-Coburg and Gotha \(Alfred Ernest Albert; 1844–1900\)](#)

come to listen to the singers gathered in the Queen's courtyard he appeared to take a lively interest in all their songs. An excellent musician himself he remarked with surprise that these songs, despite their simplicity and their original rhythm, contained portions extremely melodious.

**\* also known as Terâtu Tepairu.**

The next day, Monday, a dinner offered to His Royal Highness by the Commandant gathered together at Government House Her Majesty the Queen, Their Royal Highnesses Prince Arii faaite and Prince Ariiaua, Monseigneur the Bishop of Axieri, the Captain of the Kearsarge, the Commanders of the Néréide and the Duchayla, the Foreign Consuls, the principal functionaries and the most distinguished

residents of the country. His Royal Highness arrived accompanied by his 2 aides-de-camp and M<sup>r</sup> Chevalier. Four toasts were proposed : the first by the Commandant to her Majesty the Queen of Great Britain and Ireland, the second by His Royal Highness the Duke of Edinburgh to His Majesty the Emperor.<sup>199</sup> The Queen then drank to the health of His Royal Highness the Duke of Edinburgh who responded in proposing the health of Her Majesty Queen Pomare. The courtyard of Government House had been illuminated and the singers of the Districts had assembled there. The songs followed one another without interruption throughout the evening. There were to be seen strolling in the grounds the Queen, the Prince, the Commandant and those invited who had been unable to take their place at the dinner.

The following day, Tuesday, the natives of the island came to render homage to him at the Queen's Palace, each Tahitian making a present to him of festal adornments, the Queen and members of her family placing themselves at the head of a line of all Districts gathered at Papeete. In the evening the Prince sent his Band ashore. It played, to the intense pleasure of the natives, lovers of music as they are, many pieces remarkably well executed.

Wednesday there was a Ball at the Queen's Palace. The Party was delightful. His Royal Highness had kindly lent his Band for the dance. He paid much attention to the singers of Papara, Papeuriri and Papeari whose dancing songs full of originality celebrated his welcome.

Thursday Her Majesty the Queen went aboard the Galatea to watch the Regatta. The English and French frigates rendered her Royal honours at the moment when she quitted the shore. The first 3 prizes for men were carried off by the Districts of Pueu for outrigger canoes, Afareaitu for whale boats and Papenoo for double canoes. The women of Tiarei obtained a special prize. The Duke of Edinburgh showed the Queen all over his fine frigate and offered her his portrait, also those of his august parents. The Queen took great pleasure in the infantry movements which the Prince caused his marines to execute. Afterwards she returned ashore accompanied by the Commandant.

### Issue of July 3 :

The whole week has been filled with festivities exchanged with His Royal Highness Prince Alfred, our guest during 13 days. Native singers and the Band of the English frigate alternating, gave a concert each evening before the Queen's Palace which drew a large concourse.

Last Saturday, His Highness set the day apart for a trip to Atimaono where he found an establishment full of interest. Unfortunately, arranging to return the same evening to Papeete, he could put in only a very short time there, moreover the weather was very rainy that day, little favouring the outing.

Monday, a double festive event brought together again at the homes of M<sup>r</sup> Brander — first in the country and later in town — the Prince, Her Majesty Queen Pomare and the Commandant. The dinner served in a charming arbour retreat in the centre of the Pirae property was delightful in every way. Then the numerous guests invited for the Ball filled the salons all night, the honours of which were so graciously dispensed by the mistress of the home on the Quai Napoleon.

Tuesday, His Highness gave a dinner aboard the Galatea to the Commandant and some French officers present at Papeete. The healths of Their Majesties Queen Victoria, the Emperor of the French,

---

<sup>199</sup> [Louis-Napoléon Bonaparte \(1808 –1873\)](#)

Queen Pomare, followed by that of the Duke of Edinburgh were cordially proposed and warmly acclaimed.

Thursday at noon the Districts assembled for the last time at the Queen's residence to present their offerings to the Prince, these gathered together before the Palace compound according to custom of pigs, fowls, coconuts, bananas etc. After some words of welcome and best wishes for a good voyage expressed to His Highness by one of the Chiefs, the Queen thanked the population for the assistance which they had given her in receiving her noble visitor and required them to return to their homes and resume their labours.

Before this ceremony, the Queen having assembled all the Chiefs at her home, had requested the Commandant's attendance in order to receive presents of the same kind which the assembled Districts wished to offer him on this occasion when they met him for the first time. Chief Maheanuu who spoke said that, thus conforming to the ancient hospitality customs of their fathers, they wished to give witness for the regard they felt for the Emperor's representative.

Friday morning finally, our illustrious guest left us. At half-past eleven his frigate set sail and clearing the Pass at noon she gave a final salute of 21 guns to the Government of the Protectorate. The shore returned the salute. The Galatea headed towards the Sandwich Islands whence she will reach Japan and the Indies. The Districts wended their way home and quiet in the little capital reigned once more.

## Inter Alia : Jottings and Details Various.

### Restricted Use of Words

There was a Vocabulary in these Periods for ordinary folk and another for Chiefs. A “tapu” could also be placed upon a word as not possible in ordinary conversation from that time onward. The private property of the Pomare Family was Vai – water – Été – basket. When that property developed into part of a community, the Vai being a word used only by the Aristocracy was changed to Papé, the ordinary folks’ word for water. When Pomare chose his secondary name he used 2 aristocratic terms. Po – for night – ordinary folk using Arui – and Maré – for cough – ordinary folk using Hota. Thus however being a name all could use it with impunity. Much of the Chiefs’ vocabulary has now been lost to knowledge and much has no longer a tapu on it.

Other samples of the Past were :

Moe (sleep) for Chiefs but Taoto for others :

Tamahine (young girl) for Chiefs but Potii for others :

Mati (death) for Chiefs but Pohe for others :

Maeva and Manava (salutation) for Chiefs but Ia-ora-na for others :

Ivaho (outside) for Chiefs but Irapaeau for others.

This restriction in the use of words meaning the same thing was known as Pii (to announce).

### The Coming of the Spaniards

The reason Why. Upon the discovery of the Pacific Ocean His Holiness Pope Alexander VI <sup>200</sup> with a magnificent gesture handed over — in 1493 — the Sovereignty thereof with all that it might contain in land to His Catholic Majesty Don Carlos I of Spain. This preposterous claim on both their parts, also affirmed between Spain and Portugal by the Treaty of Tordesillas, <sup>201</sup> was naturally ignored by the Protestant nations, especially the English who set out to find what the vast ocean held for white men in the way of general information, new Continents or Islands for trade or occupation if so it suited them. Urgent and strict orders were accordingly given by their successive Spanish Majesties to their Viceroys in South America to keep watch on every movement of the English, to track them relentlessly and report Home. They had a long start, those English navigators, and the chase led oft, as on Tahiti, to fruitless end.

---

<sup>200</sup> [Pope Alexander VI, born Roderic Llançol i de Borja \(1431–1503\)](#)

<sup>201</sup> The [Treaty of Tordesillas](#), signed at Tordesillas, Spain, 7 June 1494, divided the newly discovered lands outside Europe between Spain and Portugal along a meridian 370 leagues west of the Cape Verde islands (off the west coast of Africa). This line of demarcation was about halfway between the Cape Verde Islands (already Portuguese) and the islands discovered by Christopher Columbus on his first voyage (claimed for Spain), named in the treaty as Cipangu and Antilia (Cuba and Hispaniola). The lands to the east would belong to Portugal and the lands to the west to Spain.

Boenechea set up a wooden Cross at his landing place, Tautira, inscribed :

*Christus vincit.*

*Carolus III Imperator 1774.*

Cook on his last visit inscribed on the reverse side :

*Georgius Tertius Rex.*

*Annis 1767*

*1769, 1773–1774 et 1777.*

Carlos on hearing, gave orders for its removal but that mission never came for Spain had its hands full elsewhere and, its zenith passed, its decline was rapid, there was neither Time nor Means nor Men to think more of any pressing home its Throne's claim to Pacific sovereignty.

### **Sacred Canoes**

Jefferson's description — October 5, 1798 — reads :

*Between this Point (Faré-uté) and the Nanu we met with 3 sacred canoes belonging to Eimeo, one of which carried what the Otaheiteans call the House of God. The canoes were hauled upon the beach under the shade of a large purrow (purau) tree upon the top branches of which, wrapped up in a basket made of cocoa nut leaves with a long pole run through it, hung a man who had been destroyed for a sacrifice and which these canoes were going to convey to a great marae in Eimeo. The double canoe which contained the House of God was quite new as was the House and all its appurtenances. The House of the supposed God was a kind of forecastle that projects beyond the stem.*

*These sacred canoes were always built on the grounds of maraes and by a special class of builders who lived on the spot till the work was completed leading a highly restricted life the while. These Va'a ra'a were large and deep in the body, the prow and stern rising gracefully 12 to 15 feet high which ended in a carved figure of either man, bird or beast. These figureheads were known as Rei,*

*the figures themselves as Ti'i (tikis). The House was a chamber corresponding in height and size with the image carried.*

### **First Recorded Letter of Pomare I**

Having received a letter from Governor King <sup>202</sup> by the Albion, Pomare requested the Brethren and Matavai to write in his name, giving them the outline of what he wished to say.

*January 1<sup>st</sup> 1801.*

*To His Excellency*

*Governor King :*

*May it please Your Excellency*

*Your letter and present I kindly accept. I love King George and His subjects and will while I live be a protector to those of them who put themselves under my care : but I must tell Your Excellency I at this time stand in fear of the Commonalty many of them being disaffected towards me, and their disaffection I fear is encouraged by some seamen who are on the island and therefore I wish Your Excellency to present me with a few firearms whereby my Authority may be maintained and the peace of my kingdom preserved. I request Your Excellency to accept the articles I have sent by Captain Bunker as a token of my goodwill. I hope it will not be long before I have the pleasure of hearing from you again.*

*I remain Your Excellency's friend and humble servant.*

*Pomare*

*X*

*his mark*

The Albion's Captain, Eber Bunker, <sup>203</sup> was born in London 1762 and from boyhood was connected with whaling ships. He was the first whaler on the New Zealand coast early in 1782. He died at his Grant of land "Collingwood" N.S.W. in September 1834.

<sup>203</sup> [Eber Bunker \(1761–1836\)](#)

## Coined Words

Natives upon the coming of the white men saw much that was wholly new to them. They had no word for such things and were driven to compose them. The following examples will show results.

Horse	Puaa horo fenua	Animal of 4 legs (which) runs (on) land.
Cannon	Pupuhi fenua	Blowing with the mouth (upon the) land, i.e. from ships.
Trousers	Piri pou	Covering (for the) pillars, i.e. legs which support the body.
Measles	Ma'i faehau	Sickness (of) soldiers, first brought by them.
Stonemason	Taata patu afai	Man (who) builds (up) stones.
Eyeglass	Titia mata	Filter (for the) eyes.
Saloon	Farehooraa Uaina	Shop (for) wine.
Accordion	Upa upa ume ume	Musical instrument repeatedly pulled.

### Today

Automobile	Pereoo uira	Carriage (of) lightning.
Aeroplane	Pahi reva	Ship (of the) firmament.
Steamer	Pahi auahi	Ship (of) fire.
Singlet	Piri ero	Close (to) chest.

## Ueva

When in December 1808 Pomare II fled to Moorea with the 4 remaining missionaries — Nott, Hayward, Scott and Wilson — he secured through the generosity of Chief Ueva of Faatoai (Papetoai today) a portion of his land called by his Family name as their residence which runs directly up from the Landing place for that village. Here they raised a dwelling and later on a Chapel, the latter close to the water's edge. Ueva became the missionaries' headquarters for many years whilst work was carried on upon Tahiti and in the Leeward islands.

Here in 1812 the wives of 3 missionaries — M<sup>rs</sup> Henry, M<sup>rs</sup> Davies and M<sup>rs</sup> Hayward — died and were buried : here in 1815 Scott and in 1820 Bicknell were laid at rest.

The first Chapel, a native house 80 feet by 25 feet, was opened for use July 25, 1813. The second Chapel, the present day edifice, was begun in 1822 under the plans and superintendence of M<sup>r</sup> Platt<sup>204</sup> and stands on the site of a former marae.

A Tablet commemorating the above named Dead was placed in the Chapel on October 28, 1936. (See *Moorea's Octagonal Church*.)<sup>205</sup>

**The graves of Bicknell, M<sup>rs</sup> Henry, M<sup>rs</sup> Davies and M<sup>rs</sup> Hayward at Ueva.**<sup>206</sup>

**In the foreground — Bicknell with his child's to one side of him.**

**To the left — Scott.**

**Beyond Bicknell's — the 3 women.**

---

<sup>204</sup> Rev. George Platt (1789-1865)

<sup>205</sup> See also the notice of the tablet in memory of the early missionaries in the 21 December 1936 edition of the *Pacific Islands Monthly*, page 8, and the article *L.M.S. Pioneers* in the 22 January 1937 edition, page 6, in Part VII.

<sup>206</sup> In November 2014 (and certainly many years earlier), there was no longer any trace of the graves in the vicinity of Moorea's octagonal church that are shown in the photograph.

## Tahiti Vies With Wales

The following are samples of our “Christian” names for persons even to this day : every vowel sounded separately. “Surnames” are not used but the Old time Family marae is usually added at the end.

1. Tevahineninituaifaopua.
2. Teriimateataiteraianuaanua.
3. Tevahinetepairuteraireia.
4. Maamaatuaiahutapu.
5. Haamanahiaamaheanuami.
6. Moeterauritetupaiahauviri.
7. Airarotuateriirourumaonateraitepomateao.
8. Hinaariitetanuiiterapoiaitearataiafaanui-e-vau.<sup>207</sup>

## First Native Soldiers

Captain Grimes of the brig Hope who anchored at Matavai April 28, 1821 attended the great Annual Meeting of the Tahitian Auxiliary Missionary Society held in the Royal Mission Chapel at Arué — Papaoa — and writes “*On the appointed day of meeting the Chiefs were arrayed in their best dresses, the soldiers were under arms and nothing was omitted to exhibit the greatness of the King.*”

And M<sup>r</sup> Crook notes in his Journal :

*“May 9. 1821. Pomare’s soldiers about 150 in number were drawn up in order with musquets and fixed bayonets.”*

## The Named Stations’ Who’s Who

1. Wilks’ Harbour, i.e. Papeete : after

Matthew Wilks,<sup>208</sup> Minister of Moorfields Tabernacle, London. One of the Founders of the L.M.S.

---

<sup>207</sup> See WWB’s article *Pot-pourri of Tahitian History* in the 16 April 1940 edition of the Pacific Islands Monthly, pages 34–36, in Part VII, and *Names, Nouns and Negatives* in Part XIV, *Tahitian Vignettes*.

<sup>208</sup> Rev. Matthew Wilks (1746–1829)

2. Hankey Town, i.e. Papara : after  
William Hankey, <sup>209</sup> 2<sup>nd</sup> Treasurer of the L.M.S. from 1816 to 1832.
3. Waugh Town, i.e. Matavai : after  
Alexander Waugh, <sup>210</sup> one of the first Directors of the L.M.S.
4. Burder's Point, i.e. Punaruu : after  
George Burder, <sup>211</sup> Foreign Secretary of the L.M.S. from 1803 to 1827.
5. Haweis Town, i.e. Papara : after  
Thomas Haweis, <sup>212</sup> one of the first Directors of the L.M.S.
6. Bogue Town, i.e. Tautira : after  
David Bogue, <sup>213</sup> one of the Founders of the L.M.S.
7. Griffin Town, i.e. Afareaitu, Moorea : after  
John Griffin, <sup>214</sup> who brought Captain Wilson of the Duff into touch with the L.M.S.
8. Roby Town, i.e. Opunohu, Moorea : after  
William Roby, <sup>215</sup> one of the Founders of the L.M.S.  
  
This name was given also to Hitiaa on Tahiti by Henry who served at both Stations.
9. Blest Town, i.e. Papetoai, Moorea : owing to  
  
Pomare's declaration made there as to his long sought decision against idolatry.

### A Light Fingered Gentry

It is evident from the daily "Journal" of the first permanent white residents on Tahiti — those of 1797 — that the Brethren had no easy time guarding their possessions. In point of fact they had little left in their Apartments and Storeroom when fortunate replacements arrived in 1801. It was a hopeless struggle against overwhelming odds from the High Chiefs — and women — down.

---

<sup>209</sup> William Alers Hankey (1771–1859). The town of [Hankey](#), South Africa is also named after him.

<sup>210</sup> [Alexander Waugh \(1754–1827\)](#)

<sup>211</sup> [George Burder \(1752–1832\)](#)

<sup>212</sup> [Thomas Haweis \(1734–1820\)](#). The surname rhymes with "pause".

<sup>213</sup> [David Bogue \(1750–1825\)](#)

<sup>214</sup> Author of [Memoirs of Captain James Wilson](#) (1827).

<sup>215</sup> William Roby (1766–1830)

Theft was clearly a natural instinct and habit of the entire population and they had a special god of Theft — Hiro — to bless them on their enterprise and their success. They needed his aid, for the penalty among them — for one and all — to be caught redhanded was Death.

### Native “Titles of Nobility”

A sample from Ariitaimai’s honours who was High Chieftainess of Papara and the foster-sister of Queen Pomare. She was :

1. Marama o’Eimeo

For explanation see Chapter VIII.

2. O’Tahiti

She had right to a seat in the marae of that name, the fountainhead of Tahitian Aristocracy.

3. Teriirere o’Tooarai

The first part is the prefix of the name of that High Chief of Papara — Teriirere — the son of Amo and Pura, whilst the second is the actual name of the celebrated marae at Papara raised for him by his parents and commonly spoken of as Mahaiatea. Teriirere died without issue, his half brother Temarii succeeding but his line became extinct in the massacre at Papara. The Chieftainship therefore descended through Amo’s younger brother and with it went the marae with which both names had become combined as one. Ariitaimai being the direct descendant of the latter line inherited the famous marae and took a Title from it, similar to our own practice e.g. Lord Grey of Falloden.<sup>216</sup>

4. Tauraatua i Amo

The first name is that of a famous warrior of the Teva Clan whose habitat was a small tract of land at the head of the Papare valley and known as Amo, the same name as that of Cook’s first Tahitian friend. Ariitaimai inheriting the land which as with N° 3 had become inseparable from the man took a further Title from it as with N° 3.

This from a statement made by Tati II, Ariitaimai’s son.

### The First Tahitian Trading Schooner

The Haweis of 72 tons was not built without much heartburning among the Brethren of the early days. There were<sup>217</sup> those who thought first of the Society which had sent them thither. There were others — a minority — who sought to build a vessel wherewith to trade for “private” gain to help out their

<sup>216</sup> [Edward Grey \(1862–1933\)](#). WWB has *Gray*.

<sup>217</sup> WWB has *was*.

meagre salaries with wives and children to support. The majority for the Society won out, The Haweis to be the first of that numerous fleet which today sail in the waters of French Oceania.

Those built by Bicknell and Broomhall in 1800 one gathers were but roughly built “whale boats”. But it was a struggle with finance and labour for years before triumph came and it came despite the fact that there was not a boat builder among them as his former trade. But those men were no dreamers of what might be.

They had thought of it as early as 1798. The proposal was reborn in Papetoai on Moorea where from 1808 onwards the Brethren had massed for safety. In 1811 there was an appeal to far off Port Jackson, their Supply House, for “*tools and 2,000 nails suitable to build a boat*”. In 1812 deaths and much coming and going held back the attempt. In 1813 came Pomare’s permission to cut timber “*defying consequences*” from the gods. Through 1814 and 1815 the vessel was slowly taking shape. In August 1816 it was so far advanced that a request was made to the Society’s Agent at Port Jackson to send “*a competent man to complete the boat and take it to the Colony*”. Captain John Nicholson came upon the scene and 7 white men with him as part of the future crew. So they pushed ahead through 1817 till at last on the 6<sup>th</sup> of December of that year the vessel was launched from its stocks : a great day for both the natives and the Brethren.

Pomare II of course was there and named it but no champagne bottle breaking is recorded. In June 1818 it was ready for sea and with 6 natives added to the crew the Haweis cruised through the Island Groups, carrying the owners to isles they desired to visit and gathering up oil, hogs etc. as cargo. Then on the 1<sup>st</sup> of January 1819 it headed from its Home port Papetoai for New South Wales, arriving with flags a-flying at Port Jackson on January 24, a dream fulfilled and the Brethren had Tahiti’s first trading schooner notched to their lasting credit.

Ten years later she disappears from view, her end unknown so far but those 10 years of service were not wholly uneventful. The “Sydney Gazette” of those days states that shortly after her first arrival she was offered for sale by public auction. Presumably there was no sale for on the 8<sup>th</sup> of May she left for Tahiti under the same Captain.

In 1821 once again at Sydney she was up for sale. Presumably this was successful, for under the command of Captain Jamieson <sup>218</sup> she visited inter-colonial ports and the seal fisheries. Again she headed for Tahiti, returning to Sydney in February 1825. The island Réunion saw her in 1826. It was 3 years later that in March 1829 she met with exciting experience. She was in New Zealand waters in search of flax and pork under the command of Captain James <sup>219</sup> and lay at anchor between Whakatane and Mayor <sup>220</sup> island. Whilst the majority of the crew were ashore she was seized by the Maoris, those aboard being slain, amongst them a Tahitian, and stripped. She was however recaptured by the New Zealander then in the Bay of Plenty. <sup>221</sup>

From that day on, all trace of her is lost. <sup>222</sup>

---

<sup>218</sup> Robert Jamieson, also spelt Jamison or Jameson in the press. A [notice](#) in the Sydney Gazette of 21 June 1822 states “*Captain Jamieson, of the brig Haweis, hereby Cautions the Inhabiatnts against giving Trust or Credit to any of the Crew of the said Vessel, as he will not be responsible for any Debts by them contracted.*”

<sup>219</sup> John James

<sup>220</sup> WWB has Moyer.

<sup>222</sup> The following [article](#) is from the Sydney Gazette and the New South Wales Advertsier of 16 April 1831, page 2: “*It will be remembered that we mentioned, some few months since, a report that this unfortunate vessel had been wrecked on one of the Friendly Isles, in consequence of which, the Church Missionaries at the Bay of Islands, New Zealand, had*

## Sugar and Cotton

A M<sup>r</sup> Gyles <sup>223</sup> who had been engaged on a sugar plantation in the West Indies was, without any previous consultation with the Brethren, engaged by the Directors in London for 4 years and sent out to start and maintain a sugar factory. With the aid of Darling, Platt and a son of Bicknell he set it up at Opunohu on Moorea, but as the natives had neither the aptitude nor the desire to engage in regular work the scheme fell through from inability to procure labour. The experience Gyles had had with negroes moreover did not fit him to deal with free natives like those on Tahiti. In addition, Pomare II became fearful that if the plantations prospered, adventurers would be attracted and his territories injured thereby. To allay his fears Gyles abandoned the work in 1819 retiring to Port Jackson. Bicknell removed the plant to Tahiti and succeeded in making excellent sugar though not in sufficient quantity to be of any commercial value. The site of his factory was Taaone in Arué.

In 1821 Armitage, <sup>224</sup> a cotton manufacturer of Manchester, arrived, sent out by the Directors for the spinning and weaving of cotton, bringing all needed machinery. The opinion of those on the spot was again not sought. Here once more nothing came of the experiment save heavy expenses. It also had to be abandoned for a much later day.

## The Printing Press

The Press brought out by Ellis in 1817 was not the first to be landed on Tahiti. There is the following entry in the daily 'Journal' of the Brethren for June 2, 1798 : "*Today we divided among us some of the most valuable of the books that composed the library, the others were carefully packed up in a dry cask together with a quantity of printing paper. The printing and binding Presses Brother Lewis will keep in his possession if possible.*" Also on June 3 : "*Busy fitting up a printer's shop.*" But it was not possible. When Lewis was turned out of the band, only his barest necessities were supplied him, the Presses remained at Matavai. There was no attempt made at setting them up whilst none knew the language, and Lewis who the Journal shows was to have been the printer was gone. In December 1808 all had fled the place and the heathen party descended on Matavai completely wrecking the place, carrying off from the Settlement everything they could lay their hands on and turning to their own use what they coveted the most — iron. Such was the end of the first Printing Press in Oceania.

The second, brought out under the charge of Ellis who had been thoroughly instructed both as printer and binder, was at first landed at Papetoai and moved from that village to Afareaitu, both sites on

---

*determined on sending their vessel, the Active, to make enquiries upon the spot. We are now enabled to state the result, and feel much regret that our communication is unfavourable. The Active sailed from the Bay of Islands, on this melancholy errand, on the 8th of January last, having on board the Rev. William Yate, Mr. William Puckey, and sixteen New Zealanders. After a tiresome passage of twenty-seven days, they anchored off Tongataboo, where they found the Wesleyan Missionaries well, and greatly prospering in their sacred work. Having communicated to the Rev. Mr. Turner the object of his voyage, and gained what intelligence he could, Mr. Yate proceeded to Lefooga, one of the Hapai Islands, where he arrived on Tuesday, the 14th of February. He there met a European, who gave him a most satisfactory account of the vessel supposed to have been the Haweis, but which now proved to have been the Cypress, taken by prisoners from Van Diemen's Land, in October 1829. The statement of this man was fully corroborated by a Chief from the Island of Nena, or Keppel's Island... Thus there remains additional ground for apprehending that the unfortunate Haweis foundered at sea, and that all on board met a watery grave.*

<sup>223</sup> [John Gyles \(? – 1827\)](#)

<sup>224</sup> [Elijah Armitage \(1780–1863\)](#)

Moorea not Tahiti. Landed on March 19 all was ready for business by June 30. Under the direction of Ellis, Pomare II actually printed the first sheet struck off. An edition of 2,600 copies of a Spelling book was the first book to be printed : next an edition of 2,300 copies of a Tahitian Catechism. These were followed by S<sup>t</sup> Luke's Gospel which Nott had by then translated. The first copy of this was very properly delivered to Nott at Papetoai and the second copy "*half-bound in red morocco*" to Pomare. The other editions of Speller and Catechism had been free gifts to the natives but payment was required for the last named, the Scripture being exchanged for bamboo cane filled with coconut oil, a commercial asset at Sydney. Then followed a collection of Hymns which at once became exceedingly popular.

### The 1<sup>st</sup> President of the T.A.M.S.

In May 1818 at a meeting at Papetoai — Moorea — in imitation of the "May Meetings" held and still held in London, about 2,000 natives attending, it was decided to form a Tahitian Auxiliary Missionary Society to aid the parent Society at Home in their heavy expenditure the whole world over. Pomare accepted the post of President. At the Annual Meeting held in London 4 years later — May 1822 — the Minute occurs :

*"In this vote of thanks to its numerous benefactors this meeting wishes to especially include the President of the Tahitian Auxiliary Society, King Pomare, and the Chiefs of that and other islands of the South Sea and all the other members of that Society for their liberal contribution, in addition to a former one, of the productions of their country amounting in its gross value to £ 1,877-3-7."*

These same islands had cost the L.M.S. up to date £ 5,359-9-5.

### The Island Highway

With the accession of the young Queen who delighted in horseback riding, the Old time trails connecting the villages round the coastline were converted into a road.

In the correspondence with Australian papers of one — Henry Ransom — dated March 1833 we read : "*Round the island for a distance of 120 miles is a raised road which goes by the name of the Broom Road. It is formed by the natives who are sent there as a punishment for any offense they may have committed, which I think is an excellent plan.*"

There is no such bush on Tahiti as broom, hence the title itself long remained a mystery. It seemingly arose from the Orders issued that all owners of property fronting the Highway throughout its entire length should keep their portion swept clear of leaves under pain of punishment. The locally made brooms — from the rib of the coconut leaf — were much in use and evidence. Hence white folk facetiously designated the nameless Highway as the "Broom" Road, which turned phonetically into Tahitian became to them — as it is for all roads today with them — the Pu-ru-mu. The actual Tahitian word for a road, a path or a trail is E'a (also Ara) and for a main road E'atia (also Aratia) but these words are seldom if ever used.

In Jefferson's account of a walk taken by him accompanied by a native guide through "Opare" on the 4<sup>th</sup> and 5<sup>th</sup> of October 1798 he writes : "The roads are the sea beach and narrow footpaths inland

seldom wide enough to admit two persons to walk abreast.” This under Queen Pomare was remedied.  
225

A glimpse along the island Highway.

### Pitcairners Visit Tahiti

In February 1831 H.M.S. Comet arrived at Pitcairn Island and its Captain dropped a bombshell upon the community with the news that he had Orders to carry them one and all off to Tahiti. The British Government had provided a six months’ supply of food, whilst Queen Pomare had promised a suitable location in the Arué District.

Following closely upon the warship there came the Lucy Ann from Sydney to transport them and their belongings.

The unhappy people whose number stood at 87 were faced with a dilemma. They had no wish to leave, especially now that their Leader was dead — Adams <sup>226</sup> died in 1829 — but it was an Order from Home. To rebel was impossible, therefore without any heart in the matter they obeyed.

The reason for this removal was the belief in England that Pitcairn had become overcrowded, based on reports that had reached the Government with but little truth in them.

---

<sup>225</sup> See WWB’s article *Pot-pourri of Tahitian History* in the 16 April 1940 edition of the *Pacific Islands Monthly*, pages 34–36, in Part VII.

<sup>226</sup> [John Adams \(1767–1829\)](#)

Tahiti was reached in March. Before a month had passed they had had enough. The morals of Tahiti were not to the taste of the strict Pitcairners. The elders saw their younger folk sore tempted and swiftly getting out of hand. The change itself took heavy toll. In quick succession 12 died of a fever wholly new to them. Several of them hired a small schooner and fled before April was out but 4 died on the way back and yet another on arrival home.

The British Consul took pity on the rest and chartering an American brig sent the rest back in September. Soon after their arrival 5 more were added to the Dead : 22 in all. <sup>227</sup>

### Wilkes' Stone

This landmark has been long sought in vain, for it lies deep under the sand where it once stood.

Matavai Bay is an open Roadstead. On its eastern side, not more than 100 yards from its beach of purest sand, lies a coral reef unseen at high tide but with broken water at low. It was on this sunken reef that Captain Wallis in 1767 ran his ship the Dolphin but managed to get off without any serious damage done. Such is the "Dolphin Reef."

Upon this reef there stands the "Dolphin Rock", not a part of the reef but separate, cast up on it by a storm in past ages. It rises at low water about 4 feet clear. Local natives affirm however that it was placed there by Cook from which to make certain nautical observations.

At Point Venus, which lies at one of the ends of the horns which form the Bay, there stands the memorial to Captain Cook erected in 1902. At one end of its base is a small copper plate some 6 inches by 4 let into a stone with the meridian line cut into it — a "bench mark". By compass it is in perfect line with the Dolphin "Rock". This coincidence has led many to confuse the Wilkes' Stone with the Cook Stone. They are wholly different.

Commodore Wilkes of the U.S. Navy was at Tahiti in 1839 and in his Report of his Exploring Expedition states that he erected a solid high stone sunk 4 feet in the ground at the edge of the bank directly opposite the Dolphin "Rock" with a mark cut in it exactly corresponding with the then height of the "Rock" so that as time went on scientists, among other things coral, could measure the growth in height of the coral "Reef" which would raise the "Rock" with it.

By 1870 it was in a hopeless condition and 2 "guiding" posts were embedded on either side to hold it firm. By 1880 only one of these posts remained intact. The old native O utu ta ata, who led searchers to the recovery of the Jefferson grave, stated at that time that for many years of his youth one of the posts was still standing but that Wilkes had set his Stone too near the bank, the sea washed its base, it fell and in time was buried feet below.

Wilkes' Stone was placed for record of coral growth, Cook's Stone for record of a Star.

---

<sup>227</sup> See WWB's article *A Link With the "Bounty"* in the April 1945 edition of the Pacific Islands Monthly, pages 25 and 27-28, in Part VII.

## The Tragedy of T. S. McKean

In “Rovings in the Pacific” published in 1851 written by one who refers to himself as “*A merchant long resident on Tahiti*” but who was E. Lucett,<sup>228</sup> the man who sought to bring about peace on the island in 1846 (see Chapter XI) occurs the following under date of 1844 :

“The French Governor (Bruat) had marched to Point Venus, intelligence having been given by a renegade native that his countrymen were assembling in that quarter. The Governor proceeded to the house of the Reverend M<sup>r</sup> McKean and remained some time conversing with him and another missionary who happened to be present, endeavouring to persuade them to take charge of a drunken French soldier who could neither walk nor keep his seat on horseback. A boat was in readiness to convey the reverend gentlemen to Papeete, and the Governor urged them to take his man with them saying he knew that the natives would kill him if he was left behind and he would be no trouble to them as he was drunk and would ‘lie in the bottom of the boat like a log’.

“The missionaries gave their consent and the noise of firing being heard, the Governor mounted his horse to join his party, but ere doing so he rode to the fence and again called out to M<sup>r</sup> McKean repeating his instructions respecting the care of the man. With eager politeness M<sup>r</sup> McKean hastened to the end of the verandah and raised his hat in acknowledgement, and as the Governor rode off and M<sup>r</sup> McKean was in the act of re-entering his house a musket ball struck him in the back of the head, behind the ear. The ball lodged below the socket of the eye. It is acknowledged that it was fired by a native although no one grieves more for the unhappy occurrence than the natives.”

That night M<sup>r</sup> McKean’s home was converted into a hospital and barracks for the French soldiers with “*the destruction of his stock and appropriation of any convenient articles of property.*” The writer accompanied sailors of the ketch Basilisk then in Papeete harbour who conveyed the body in their boat across Matavai Bay to bury it “*shrouded in its bloody vestments*” alongside Nott who had died the month before. There seems to have been little doubt that the musket was aimed at Bruat and he and his were blamed for the tragedy.

McKean was but 37. Born at Garlieston, Wigtonshire, Scotland, he was a rope spinner before studying for the Independent ministry. In May 1841 he and his wife left the Shetland Islands where was his Station and sailed for Sydney N.S.W. Before their arrival his wife gave birth to a son. From Sydney they reached Tahiti in the Camden in February 1842. His Station was Matavai which at the time was a centre of malcontents as to the Protectorate. Things grew so bad and the likelihood of fighting was so clear that McKean took his wife and now 2 children to Huahine in the Leeward Islands some 100 miles away.

He returned at once to his post of duty and to his death as above recorded.<sup>229</sup>

---

<sup>228</sup> Edward Lucett (1815–1853)

**Grave of McKean**

### **Point Venus**

This historic spot which had seen Wallis land, as well as Cook and Bligh, is today forlorn, largely unkempt, part coconut plantation reaching up from the sea some distance inland. But it was not always so, as can be seen in the Report sent Home by Mess<sup>rs</sup> Tyerman and Bennett in July 1823 after the sacking of Matavai in 1808. Mentioning the Bligh House and the British House raised once across the stream, they write *“Eastward of the House they have planted a fine grove of orange, lemon, citron and tamarind trees, all of which are now in their prime and bear large quantities of fruit which the natives use. From these trees others have been raised all over this and other islands.”*

Today Matavai deserves a better fate than its lot. <sup>230</sup>

<sup>230</sup> See *Light on Half-Forgotten Incident of Early Tahiti* in the July 1942 edition of the Pacific Islands Monthly, page 14, in Part VII.

## Introduction of Cats

Rats were indigenous, so also hogs and dogs, but not so cats. Whence came they? Wallis, whose Journal dated July 24, 1767 reads “*I also sent the Queen a cat,*” and Cook were the benefactors without a doubt, the latter on his various visits left 20 in all, and the Spaniards left all theirs. When the Duff arrived its cats could not, seemingly, be spared for we read in the Journal of those then ashore : “*March 31. 1797. Some of the Brethren being troubled with rats last night, we this day applied to the King for some cats.*” They were handed over, 4 in number.

And Crook who was left — alone — on the Marquesas makes an entry in his Diary dated June 12, 1797 before the Duff sailed away : “*Went aboard. In the evening returned on shore with some goods and 2 cats.*” The Captain was bound to be open handed this time. We have here the progenitors of all future Marquesan cats unless Mendana in 1595 perchance had a superabundance and was generous.

231

## The Gambier Islands

### Mangareva

The discovery of this Group is thus recorded in Crook’s Diary on his way to be dropped on the Marquesas Group :

“*April 23. 1797. An attempt was made to land on one of the islands shaped like a half moon with a lagoon inside but it was given up on account of the hostile appearance of a party of natives on the beach.*”

It was given the name of Crescent Island on account of its form and leaving it they made for some high land they could see.

“*April 25. Found this to be a Group of islands with 2 peaks close together in their centre. These were named Duff Mountains, and the Group the Gambier Islands in compliment to the worthy Admiral of that name who in his Department countenanced our equipment.*”

Admiral Lord Gambier <sup>232</sup> was at the time one of the Lords of the Admiralty. The two peaks are known today as Mount Duff and Mount Mokoto.

<sup>231</sup> See WWB’s article *Pot-pourri of Tahitian History* in the 16 April 1940 edition of the Pacific Islands Monthly, pages 34–36, in Part VII.

<sup>232</sup> [James Gambier \(1756–1833\)](#). Gambier was the uncle of Sophia Rose Pym, née Gambier, the mother of WWB’s mother, Lydia Louisa Bolton, née Pym; thus Lord Gambier was WWB’s great-great-uncle. See *Genealogy* in Part I, *Notes on the Life of WWB*.

## The Sovereign Rights of Pardon

That Queen Pomare exercised her Right of Pardon is to be seen in the following, which appeared in the Official Gazette “Messenger de Tahiti” for September 7, 1856 :

(Translation)

Papeete 3 September 1856.

Monsieur the Imperial Commissioner :

I salute you in the name of the true God. This is my message. I have reflected upon the justness of the sentence which has been passed by the Judges upon Taae who was accused of having assassinated Terepohe and here is the decision to which I have come. I definitely inform you M. the Imperial Commissioner that I do not approve of the sentence of death which the Judges have imposed upon him. I would inform you that I would show mercy to Taae, he shall not hang. Here is the sentence which appears just to me for his crime : it is imprisonment with work for the government for 2 years. Enough said.

The Queen of the Society Islands  
Pomare.

The Judges were the Toohitus, the 7 men composing the Supreme Court.

## Native Cloth

The “cloth” so often mentioned in connection with gifts in olden times was made from the inner bark of the banyan, the purao and paper mulberry trees which underwent a long process of softening in water and was then beaten with wooden pounders against a prepared wooden log till all the fibres had closely knit. The different grooves in the pounders gave a variety of textures to the material. The cloth was stained in patterns from various juices extracted from trees, bushes, plants, nuts and bark.<sup>233</sup>

## Parrots and Pines

On January 5, 1800 Henry, his wife and baby Sarah returned from Botany Bay by the whaler Eliza. Among other livestock such as sheep, goats, duck, a turkey — the hen died on the voyage — as well as some Norfolk Island pine and fruit trees, he brought a number of parrots. An entry in the Journal reads : “*Some are to be liberated in the mountains, others were given to the Chiefs who were highly pleased because they have many red feathers upon them which next to musquets are to them the most acceptable things. Red feathers are the most valuable offerings they can make to their gods.*”

There are no descendants today nor have natives any memory of their introduction, but the Pines remain as mementoes of the Past though few in number and widely scattered.

---

<sup>233</sup> See also *Cloth Making (Tapa) and Mats* in Part XIII, *Roamings In the Great South Sea*.

## Grand Airs

As has been already seen in the correspondence of the 2<sup>nd</sup> Pomare modesty was not one of his characteristics. Further proof is clearly to be seen in the grandiose names given to himself and his belongings. The following — quoted by his missionary associates and given as spelt by them — are certainly high sounding. The correct spelling is given.

1. His Title :                   Otoonooyeteatua  
   O-Tu-nui-te-atua   i.e. The great Tu the God
2. His residence :           Yowrye  
   Aorai   i.e. Clouds of the heavens
3. His canoe :               Anooanooa  
   A-nua-nua   i.e. The Rainbow
4. His riding on the shoulders of slaves  
   Maheota  
   Mahuta   i.e. Flying
5. His torch :               Ooweera  
   Uira   i.e. The Lightening
6. His drum ;               Pateere  
   Patiri   i.e. The Thunder

What other Ariirahi thought of these Grand Airs and mighty Claims is not recorded.

## Lake Vaihiria

This sheet of inland water is the only one on the island of Tahiti and its remoteness and inaccessibility caused it to play no part at any time in the historical incidents of Old time. It lies some 1300 feet above sea level, surrounded by mountains reaching 2000 feet above the lake. It is fed by numerous cascades, its waters for some distance finding a subterranean outlet which later form a narrow tortuous stream — a torrent after heavy rain — on its southwestern way to the sea nigh a dozen miles away.

The lake is about a mile in circumference, possessing no defined shoreline, a long waist high grass growing close to the water's edge. Its depth is said to be 17 fathoms (102 feet). Its only fish are eels of a great size, their length running to 4 feet with a girth of nearly a foot, whose fins close to the head give the appearance of large ears.

The native method of crossing, apart from direct swimming, is the making of a raft of Fei trunks (wild bananas) which grow abundantly around, on which supplies are placed and pushed ahead by the swimmer.

**Lake Vaihiria**

The lake is in the direct line of one of the few traverses of the island, Mataiea on the west coast, Papenoo on the east. Reaching the lake from the former, after swimming across, the “hog’s back” of a spur of Orafara <sup>234</sup> Mountain is climbed, on the further side of which are the headwaters of the Papenoo river. Following down this oft times turbulent stream the mountains open out into the broad valley of that name and so one reaches the sea. It is reckoned a 2 days journey if weather conditions are favourable. Caves en route come in handy for shelter.

### **Adam, Eve and Tu**

*“December 27. 1798. Otoo (the 2<sup>nd</sup> Pomare) hearing that Brother Broomhall had in his possession a large Bible with cuts demanded to see it. The book was brought. After a while he sent Brother Broomhall to fetch another picture book. While absent Otoo dexterously removed the plate that represented Adam and Eve in Paradise in a state of innocency and returned the book without any intimation of what he had done. He unfortunately had been previously informed that the persons in*

---

<sup>234</sup> See also *Across Tahiti Afoot* in Part XIII, *Roamings In the Great South Sea*, and *Lake Vaihiria* in Part XIV, *Tahitian Vignettes*. In the former, WWB has *the Col d’Orufaaa*, while in the latter, he has *the “hog’s back” of a spur of Orofena*. Orafara or Orofara is a valley on the northeast coast in which a leper colony was once located.

*the plate resembled the parents from whom Englishmen, Otaheiteans and all men did originally come.*" There was no return of Stolen Goods.

### Crownings Oft

Unlike his mother, Tamatoa <sup>235</sup> son of Pomare IV was not going without a coronation when succeeding his grandfather on Raiatea. The missionaries had the precedent of the Boy-King Pomare III (1824) to guide them and Crowning became the Order of the Day in the Leeward Islands till they were annexed to France in 1888.

With great pomp and stately ceremony Tamatoa was Crowned at Opoa by the Rev. M<sup>r</sup> Platt <sup>236</sup> on August 19, 1857, but he was deposed by his people as quite impossible and returned to his mother's Kingdom in February 1871.

Teriimaevaua, <sup>237</sup> daughter of Queen Pomare, was next Crowned on Pora Pora by the Rev. M<sup>r</sup> Platt on August 3, 1860. She succeeded the first husband of her mother.

Next came Tahitoe, <sup>238</sup> another grandson of Tamatoa IV. <sup>239</sup> He also was Crowned mid great ceremony by the Rev M<sup>r</sup> Vivian <sup>240</sup> at Uturoa on August 1, 1872, but abdicated in 1880.

He in turn was followed by his daughter Teriinauavahoroa, <sup>241</sup> who was Crowned with all due solemnity at Uturoa on April 13, 1881 by the Rev. M<sup>r</sup> Pearse, <sup>242</sup> but died in March 1884.

Tamatoa VI <sup>243</sup> who likewise was crowned with much pomp at Tautu on January 22, 1885 by the Rev. M<sup>r</sup> Cooper <sup>244</sup> and held his Throne till France annexed his Kingdom March 6, 1888.

Six Crownings 1824–1885 and at each the act was performed by the white Pastor. He had great sway in those days and had fairly won it, thus came he, each in turn, to be the Pontiff of the Day.

### One-Tree Hill

Jutting out into Matavai Bay is a high promontory known to the natives as Tahara'a but to white folk as One Tree Hill. The highway now encircling Tahiti finds here its one and only serious climb, the whole 100 odd miles round the coast edge to where on Lesser Tahiti traffic is impossible at the extreme southern end by reason of rugged cliffs.

<sup>242</sup> Rev. Albert Pearse

<sup>243</sup> [Prince Ari'imate Teururai \(1853–1905\)](#). WWB has *Tamatoa IV*.

<sup>244</sup> Rev. E. V. Cooper

When Wallis dropped anchor in the Bay directly opposite the hill, it was clothed richly in fernery, but a solitary and lofty tree stood out, one wholly new to the navigator which seemed an appropriate title for his chartering. It was an *Erythrina* <sup>245</sup> which is but a small tree when growing in the mountains but attains a great size when near the sea. Today the hill is a maze of growth : coconuts and guava in abundance. <sup>246</sup>

## Tarapu

None but the initiated would recognize in this, the good ship Duff as always spoken of by the natives of Tahiti. Apart from the difficulty found in pronouncing English names both for persons and things there was good reason in this instance for a violent change.

The day before that ship hove in sight there had been severe earthquake shocks accompanied by a high sea which greatly terrified the natives. To them it portended some great event near at hand. When they beheld the ship approaching they forthwith placed nature's commotion to the ship's credit — or otherwise — and named it “The Stirrer Up” and do so to this day. <sup>247</sup>

<sup>245</sup> [Flamboyant or flame tree](#). WWB has *Erythrina*.

<sup>246</sup> This engraving of Matavai Bay in Tahiti shows the bark Endeavour anchored in the bay close to Fort Venus, the site from which Captain Cook observed the transit of Venus in 1769.

**View of Matavai Bay in Otaheite from One Tree Hill (Hawkesworth 1789)**

<sup>247</sup> “Even earthquakes are very rare ; the only one that occasioned great alarm, in the memory of the oldest inhabitants, took place a few days before the arrival of the ship *Duff*, with the first missionaries. Hence the people attributed that strange calamity to the prayers of the latter, and called the vessel which brought them *Tarapu*, which signified a rocking of the ground.” [Tyerman & Bennett, Volume II \(1832\), page 183](#).

## A Native “Still”

Prior to the arrival on Tahiti of some Sandwich Islanders, who came upon the scene by the brig Nautilus in March 1798, Kava was the one “strong drink” of Tahitians. On Hawaii “spirits” had long been distilled from the Ti root which grows abundantly on Tahiti. It has many varieties and its uses were numerous, some for medicinal purposes, others for food, others for decorations and garlands but ardent “spirits” therefrom were up to then beyond their ken. Under the direction of the newcomers the new drink was evolved and played havoc with the natives from the highest Chiefs to the humblest of the people till “imported” spirits saved the labour involved. In 1807 Pomare II sought in vain to import a Still, he like the rest had to fall back on the native one.

This “*rude unsightly machine*” is thus described by Ellis in 1829 :

It generally consisted of a large fragment of rock hollowed in a rough manner and fixed firmly upon a solid pile of stones leaving a space underneath for a fireplace. The butt end of a tree was then hollowed out and placed upon the rough stone boiler for a cap. The baked Ti root, macerated in water and already in a state of fermentation, was then put into the hollow stone and covered with the unwieldy cap. The fire was kindled underneath. A hole was made in the wooden cap into which a long small bamboo cane, placed in a trough of cold water, was inserted at one end and when the process of distillation was commenced, the spirit flowed from the other into a calabash, coconut shell or other vessel, placed underneath to receive it.

## Untempered Zeal

Temperance. Nott to Marsden at Sydney, Nov<sup>r</sup> 13, 1834 :

*More than a year ago Temperance Societies were established on these islands but Her Majesty had not then given in her name as a member. After a few weeks however she sent in her name and desired that it might be put down. This was like a death blow to the demon of intemperance here. Soon after, all the other branches of her family followed her example. At a meeting of the Legislature it was proposed and agreed upon, That no person residing in the dominions of Her Majesty whether foreign or native should buy or sell ever so small a quantity of ardent spirits under a heavy penalty.*

Church attendance — by the same letter :

*Since that period it has been ordered by the Legislature that no person shall absent him or herself from any and all the means of instruction that are now made use of. Therefore the people almost every individual come to Worship.*

Bigotry. Henry to Marsden at Sydney, Oct<sup>r</sup> 19, 1835 :

*There is the probability of our being assailed by a host of Popish missionaries with a Bishop and Vicar General at their head. They are now comparatively near us upon what might be considered a neighbouring island (The Gambiers) and from all we can learn are bent upon obtaining a footing upon these islands.*

## Marsden

The part played by the Rev. Samuel Marsden <sup>248</sup> in Tahitian affairs of the early years of 1800 cannot be overlooked in any account of Tahiti's Past. A pioneer Chaplain amid the pioneers of New South Wales, with his headquarters at Parramatta nigh Sydney, he took a deep and practical interest in spheres far distant from his special section and acted till his death in 1838 aged 73 with consuming energy. He broke new ground in New Zealand and reached out still further — though not in person — acting for years as Guide, Counsellor and Friend to those who were at similar work on Tahiti.

The London Missionary Society, grateful for his assistance in the hour of catastrophe, turned to him with regard to their work in the South Sea. In 1801 he became recognized correspondent and advisor of the L.M.S. in relation to its Tahitian Mission. He knew personally most of the Duff band who sailed back and forth to the Colony. From the very first he was insistent on the need of a vessel as a regular means of communication between the Brethren and their chief source of supplies. He played his part in the building of the Haweis along with their regular agent Hassall. Letters from him show the deep interest he took in Tahiti. It mattered not to him — an Anglican divine — that the men on Tahiti could not see eye to eye with him in spiritual things. They were one and all Nonconformists <sup>249</sup> but their main aim was the same and his acknowledged prominent position in the Colony both as Cleric, Magistrate and extensive Farmer was at their ready service. He strengthened weak knees and ever gave wise counsel.

He writes Home in 1814 : “*The Mission at Otaheite has suffered greatly from every one doing what was right in his own eyes. Had some been appointed to teach and others to follow agriculture or any other useful employment it would have been much better.*” The son of a north of England farmer – blacksmith he took the deepest interest in the cultivation of the newly opened land and handcraft of every kind.

Having seen the *Haweis* in service for Tahiti he determined on another boat to serve his mission in New Zealand. He writes to then Church Missionary Society telling them that he had purchased a brig, the Active, 110 tons, its cost outfitted £1,600. Of this sum he paid out of his own pocket £1,200 and asks for the balance “as a loan”. Tahiti also saw the Active.

He was evidently in close touch with Nott over the Scriptures : with Henry seriously menaced with elephantiasis, “*that most disagreeable disease in one of my legs*” : and with Davies with his wail as to the lack of unanimity among them. He served them one and all and Tahiti in rich and practical measure, and the island even apart from religion must be ever in his debt.

---

<sup>248</sup> [Samuel Marsden \(1764–1838\)](#)

<sup>249</sup> [Nonconformist](#): Protestant Christians who did not ‘conform’ to the governance and usages of the established church, the Church of England (Anglican Church).

--------------------------	---------	-------------

Officers killed : Brea and Perotte.

Tahitian Force unknown.	Dead 3.	Wounded 4.
-------------------------	---------	------------

These by missionary report.

## Moorea's Octagonal Church

Begun 1822. Completed 1829.<sup>250</sup>

Of this building we read in a Report sent Home :

*On the 20<sup>th</sup> of February 1822 the Brethren had the pleasure to lay the foundation stone of a new Chapel which is to be of an octagonal form and built with hewn coral rock. The people are carrying on the building with spirit, observing that it will be the first house of stone in these islands.*

But the hewing out the stone from the adjacent coral Barrier reef was no easy task. It took years in the doing and meanwhile they used the original Chapel hard by, originally a native's home used at the Brethren's first settling at Ueva. The architect was the missionary then stationed at Ueva, the Rev. George Platt who superintended the work till 1824 when he was moved to the Leeward islands, his place being taken by Brother Henry — of the Duff band — till 1827 when he was moved to Tahiti. Others held the Station till the finish when Brother Simpson opened it for its purpose which it has served to this day.

In a Report sent Home in 1824 we read :

*The building stands upon the site of an old public marae. It is 60 feet in diameter : the doors and windows are semi-circular and well proportioned, the walls are about 20 feet high. Over each of the 4 doors is an Inscription well cut in the coral stone. Those over the east and west doors are in Latin, that over the south door is in English and that over the north is in the Tahitian language.*

Unfortunately the Report does not give these Inscriptions. Today 2 are clearly to be read, the English and the Tahitian, the Latin ones have had harsh handling.

The English reads :

*Holiness becometh Thy House, O Lord, for ever.*

---

<sup>250</sup> The photographs below were taken in November 2014.

The Tahitian reads :

*This house was begun in the year of Our Lord Jesus Christ 1822 in the reign of Pomare III.*

Time has largely obliterated that over the west door, there can only be read :

*Haec domus sacra . . . Anno Domini 1822 et in anno primo regni Pomare III. . . Gloria Qui in secula. Amen.*

That over the east door has been deliberately wiped out leaving only 3 words at the bottom :

*Gloria soli Deo*

and has *Ebenezer* cut in above them : whilst above that an entirely fresh piece of coral has taken the place of the old, telling in French the renovation of the building commenced by the “parishioners” in 1887 and completed in 1891.<sup>251</sup>

<sup>251</sup> See the article *L.M.S. Pioneers* in the 22 January 1937 edition of the Pacific Islands Monthly, page 6, in Part VII, and *The Island of Moorea* in Part X, *Tales of Roaming*. The photographs of the four inscriptions below were taken in November 2014. The complete Latin inscription has been restored. The pastor of the Protestant Maohi parish of Papetoai, Ariipeu Arthur Faua, is standing below the Latin inscription of *Gloria Soli Deo*.

## Beachcombers

An appeal in 1828 to the Governor of New South Wales having been made by the Rev. C. Barff<sup>252</sup> of Huahine and for Raiatea by the Rev. John Williams to send a sloop-of-war to secure and deport many villainous deserting sailors and convicts who had escaped from durance vile<sup>253</sup> in the Colony was answered by the arrival of the H.M.S. Satellite in the first week of March 1829. News had leaked out of the above action and most had fled to other islands in the Group. The sloop gathered in those within reach then proceeded to follow and secure the rest so far as possible.

It was men like these, managing to land and run wild at Papeete, who attacked the American Consul Moerenhout in 1838 and in the struggle killed his wife. The following is from the reply addressed to Barff sent from the Colonial Secretary's Office, Sydney, January 13, 1829 :

*I am directed by His Excellency to thank you for this information, a part of which has also been received from the Rev M<sup>r</sup> Williams of Raiatea, and to inform you that there can be little doubt of the strange vessel (referred to by Barff) being the Phoebe, the property of Mess<sup>rs</sup> Berry<sup>254</sup> and Wollstonecraft<sup>255</sup> of this Colony which was seized by convicts and piratically taken away some time ago. In consequence Captain Laws<sup>256</sup> commanding H.M.S. Satellite by whom this letter will be delivered now proceeds for the express purpose of capturing these offenders and I have to request you that you will afford and procure him every information and assistance in your power.*

*Alex. Macleay.*<sup>257</sup>

### Papeete's Fête Day

The 14<sup>th</sup> of July was not always the Day of Celebration. From the compliance of Queen Pomare to the Protectorate in 1847 the Fête was held on August 15 being the Birthday of the then French Emperor Napoleon III. But Sedan <sup>258</sup> ended that. From 1870 to 1880 the Fête was held on September 9 being the anniversary of the Protectorate's first installment in 1842. <sup>259</sup> But the surrender of Sovereignty by Pomare V ended that. From 1880 Tahiti has observed the major Fête of France, the Fall of the Bastille.

### The Tragedy of the Moaroa

In the closing days of September 1869 the 3 masted Tahitian barque Moaroa arrived in port without Captain, First Mate, lone passenger and 5 of its crew, all slain in an attempt by Gilbert Islanders to seize the vessel.

---

<sup>258</sup> The [Battle of Sedan](#) was fought during the Franco-Prussian War on 1 September 1870.

<sup>259</sup> In [Summer Cruising in the South Seas](#) (1881), Charles Warren Stoddard writes (page 83) about the Fête Napoléon in Papeete on August 15. He visited Tahiti for three months in 1870, so this last Fête Napoléon would have taken place just prior to the Battle of Sedan.

Owned by W<sup>m</sup> Stewart of the Atimaono Cotton Plantation it had sailed months previously, conveying a cargo of cotton to Auckland N.Z. On its return it was to secure native labourers, under wages, for the Plantation.

Cruising among the islands named Hope, Beru and Byron, 287 natives were collected aboard and sail was set from the last named — an island not named for the famous poet but that of a Captain who discovered it in 1765. It was the 17<sup>th</sup> of July, a calm sea, Byron 6 miles in the offing when at 5 a.m. the Captain called the nigh 300 natives from below to the upper deck to distribute tobacco and shirting among them. Then things happened.

Suddenly a knife thrust in the back slew Captain Blackett, a hatchet ended the life of Lattin the passenger. Tahitians fared the same as white men. The First Mate Crisp lasted a while longer till a savage secured a carbine from a sailor interpreter whom they had tied up and so made an end of him also. The one white man left, the 2<sup>nd</sup> Mate Steenalt, a Dane, became a hero that day.

In a MS left by the late J.L. Young of Tahiti, the presence of Lattin aboard is thus explained :

*On July 4, 1869, off Nukunau (Byron Island) the barque Anna of Melbourne, Captain Bruce, met the barque Moaroa of Tahiti, Captain Blackett, owned by the Atimaono Cotton Plantation under the French Protectorate flag. The Anna had 159 natives of the Gilbert Islands on board, recruited at various islands as labourers for Fiji, most of them, no doubt, induced to ship by false pretences. Two days previously Captain Bruce had heard from a passing vessel of the action being taken by the Courts at Sydney N.S.W. against the Captain and Supercargo of a vessel for kidnapping and incidentally murdering natives and feared prosecution if he proceeded to Fiji with his passengers. Meeting the Moaroa which vessel was seeking labourers for Atimaono, J. B. Lattin — a Frenchman who was the supercargo and part charterer of the Anna — saw the chance of his disposing of his cargo of natives without risk of taking them to Fiji. In concert with Captain Bruce, he told Captain Blackett that his watercasks had leaked and that he had not water enough to carry the natives to Fiji and therefore wished to be rid of them. For payment of Six Pounds per head — euphemistically called 'passage money' — the 159 natives were sold to the Moaroa. As Captain Blackett had not enough money on board to pay the sum agreed on, J. B. Lattin took passage on the Moaroa to get paid on arrival at Tahiti.*

Steenalt and the 5 sailors left unhurt secured themselves in the mess room. All efforts to reach them through the skylight failing, the savages started to celebrate their slaughter by dance and song on the upper deck. Then Steenalt acted. He placed a barrel of gunpowder below them in the centre of the deck he was on, laid a train to the mess room, sent his companions far astern for safety, said his prayers and lit the train. The explosion was like an earthquake. Rushing up, there was not a savage to be seen aboard but the sea was a mass of black heads making all speed for the distant shore. That was the last seen of them. First consigning the dead to the deep, the gallant mate attended the wounded, repaired all damage, ran up the flag and headed for Home. His Log and Report are to be seen today a model of sufficient detail and of modesty.

The fate of the natives was far otherwise than his Log surmizes. He reported “*I believe that all the natives arrived at Byron island except 2 women who had remained on board.*” J.L. Young's MS gives the sequel.

*Owing to the strong current running to S.W. between Nukunau and Beru 20 miles to the west of the former, but few of the swimmers reached Nukunau and a few of the strongest reached Beru, helped by the current. It is uncertain how many survived, some accounts say 8 landed on Beru of whom 4 were women, other accounts say 12 : again, it was said that 30 reached*

*Nukunau, others say more than 40 of whom several died soon after landing. Some of the survivors declared that they encountered a “demon” shark, the Bakoutuea, i.e. King Shark, of great size who devoured several and that fear and exhaustion caused the others to sink.* <sup>260</sup>

## A Weird Appointment

gazetted in the “Messenger de Tahiti” April 3, 1859

**In the name of God whose mercy is infinite.**

**Chief Tariirii**

**You ask to come with me to New Caledonia. I consent. Come then with us. You shall follow the invincible eagles of our Emperor from the summits of Morare to the plains of Diahot. \* I name you from April 1, 1859, Captain Commandant of the native contingent of the troops stationed in New Caledonia. You shall receive 200 francs a month and food.**

**May God protect you.**

**The Governor.**

**Saisset.**

\* A poetical effusion for Mont Doré at the southern end to the delta of the river at the northern extremity.

Saisset was not only the Imperial Commissioner for the “Society” Islands but Governor of French Western Oceania which included New Caledonia. Tariirii was the Chief of Mahina and a Toohitu. He had sided with the French in the troublous years and July 3, 1847 was made a Chevalier of the Legion of Honour. He returned home from New Caledonia together with 24 Tahitians under his command in November 1859. He had taken part in 2 actions and his services were no longer required. <sup>261</sup>

<sup>260</sup> See WWB’s article, *Tragedy of the “Moaroa”*, in the 18 September 1937 edition of the Pacific Islands Monthly, pages 50–53, in Part VII and the footnotes therein, in Part VII.

<sup>261</sup> See the article “*May God Protect You*” – *How Teriiri’i Led His Men From Tahiti to Noumea* in the November 1942 edition of the Pacific Islands Monthly, page 30, in Part VII.

## The Lighthouse at Point Venus

This welcome beacon was erected in 1867. Above the doorway there is a Tablet bearing — in French — the following Inscription :

*Constructed during the reign of*

*Pomare IV*

*Count de la Roncière : Commandant, Imperial Commissioner.*

*de la Taille : Captain of Engineers.*

*Trèze : Builder.*

## The Caisse Agricole

This, the first bank on Tahiti, was founded July 1863 under the aegis of the then Commandant, Count de la Roncière. With the formation of the London Company “The Atimaono Cotton Plantation” that year, a local bank was formed to both foster the production of and to purchase the cotton of small planters who sought to enter the new and then highly profitable field.

## The Messenger de Tahiti

This newspaper, first issued in 1852, was a local sheet of diverse proportions according to news obtainable of Official and local character as well as general information of the outside world which came to hand by boat or mail. It continued publication till the French secured the Sovereignty of Tahiti when its place was taken, a while later, by the present day “Journal Officiel”, a wholly government concern.

The Messenger often had parallel lines of French and Tahitian and at times broke into English, not however as regards that language with signal success as may be instanced in its issue of August 21, 1853, when an appeal was made to the sporting members of the community to attend a Sparring Bout, its principal attraction being John Harrigan “alias Bungarby Jack” who it was hoped would be a compelling attraction, the latter sentiment being thus weirdly expressed “*It might be expected a grand spreckling of the fancy.*” It is unfortunate that the quality of the paper used was often so poor in its earlier issues that they are almost too fragile to touch today. The few copies now existing and obtainable for research are as a rule in a deplorable condition.

## Tahiti's Public Executions

In November 1875 A-Pat was condemned to death for the murder of his nephew A-Si at Punaauia. When asked if he had aught to say, his answer made through the interpreter was short : "*C'est bien.*" The Order of the Court was that the execution by guillotine "*shall take place in one of the public spots in Papeete*". It was to be no hole in the corner business but a warning to others. His attorney took an Appeal to Paris and after many months had passed the answer came that it failed.

It was then decided that the execution should take place at the village where the murder had occurred as a deterrent to further such happenings there. The guillotine was duly transported to Punaauia and set up. Finding difficulty in securing an executioner, the part finally fell to a ruffianly Frenchman who had no hesitation in the matter for a good round figure.

The night before the execution A-Pat was visited in his cell at Papeete's prison by a Chinese friend to bid farewell. Their meeting over, the gaoler opened the prison gates and the friend passed out.

Profound was the astonishment, dismay and hullabaloo when A-Pat's cell was entered to transport him to his end, to find no A-Pat but the friend of the previous evening. Chinese-like with their peculiar indifference to violent death, the two had struck a bargain. For a sum stated to have been 2,000 gold francs which was to be sent by A-Pat to China the friend agreed to take his place. But the Authorities thought otherwise. The police got very busy, combed the town and at last ran down A-Pat. The deferred journey took place the following day and none visited A-Pat once again in gaol.

Arrived at the village where Punaauians gathered in plenty, A-Pat was firmly bound, laid upon the board and slid forward beneath the knife. The executioner drew the bolt but there was evidently a hitch, no knife fell. The crowd had held their breath but nothing had happened. A-Pat, tightly bound, was taken off his bed of death, laid to one side to watch the proceedings whilst the ruffian callously greased the grooves and rope, then tested its working on several handy banana stalks to make quite sure. Confident this time, A-Pat was again lifted upon the plank, the rope was pulled and A-Pat had paid for his crime.

Such was one of the first public executions on Tahiti. Since then there have been but 3 so far as the writer can learn, and none of them Tahitians, since one of the conditions in surrendering the Sovereignty was that no native should suffer the death penalty. There had been but 2 before, banishment or imprisonment taking its place and there were to be none in the future.

The Code of Laws passed in 1819 called for it for murder and for Treason and before it was amended 2 hangings took place :

October 1819            Papahia and Horopae for attempting to overthrow the government.

1821                    Pori and Mariri for plotting to assassinate the 2<sup>nd</sup> Pomare.

The 3 since A-Pat paid the penalty follow.

1. This execution took place up Sainte Amélie Valley on the fringe of Papeete, a white man being hanged to a convenient bough. The 2 men selected for duty not only saw the matter through before a gaping crowd but having also the duty of burying the body hard by, saw no reason for wasting good clothing, so stripped the corpse and divided the perquisites on their way home.

2. This execution took place on Motu-uta, the little islet in the lagoon exactly opposite Papeete's waterfront whence all could see who wished to, another white man meet his death by hanging.
3. This execution was by guillotine and once again a Chinaman. A-Pat had been taken to Punaauia but this took place "in a public spot" in Papeete itself, at the foot of the broad "Avenue Bruat" where 4 roads meet. A full thousand gruesome minded folk were gathered there to watch.

Since that day the ghastly instrument of death stands stored away in the Colonial Prison awaiting another victim who it is to be hoped will be long a-coming.

Some 10 years previous to A-Pat there is record of what may well have been the first guillotine execution. During the reign of the Commandant Count de la Roncière — 1863 to 1869 — four Chinamen of the large colony employed by the Atimaono Cotton Plantation were condemned to death at one and the same time by a Court held in Papeete "*consisting of 7 Judges and a Jury of Assessors*" for murders of their compatriots. The Commandant however was strongly inclined to mercy as also was the Manager Stewart : and one alone, the ringleader, suffered death. After prolonged enquiry, contact was at last made by the writer with an agèd party who when a child and disobeying the orders of her parents who were residents and employed on the estate, crept off with some other juvenile companions "*to see a head cut off*". The memory of that scene vividly abode with her. A witness of the event confirmed the current report of its happening but not as current rumour affirmed that all the 4 were executed.

### The Tragedy of the Sarah Ann

That cannibalism on the Tuamotu Islands was no figment of the imagination of more aristocratic Tahiti and cast its slur upon all who originated from there — as was the case with the Pomares — is evident from what happened to the unfortunates of the Sarah Ann at as late a date as 1856.

The schooner was on its return journey to Tahiti from Valparaiso with 17 souls aboard viz Captain Kraye, his wife, their infant and serving maid, the supercargo and a local merchant, 2 boys the sons of Captain and M<sup>rs</sup> Stevens of Tahiti, together with a crew of 9. Calling in at the Gambiers for a cargo of pearlshell the French sloop-of-war Surcelle was met and the 2 ships set sail to meet again shortly at Papeete. The sloop duly arrived but there was no return of the schooner.

A full year passed. It was taken for granted that the Sarah Ann had foundered when in June 1857 the schooner Julia returned to Papeete from the Gambiers. Its Captain reported that on passing Tematangi — Bligh Island — on his return voyage he had noticed a wreck on the reef. On approaching closer to secure more detail the natives showed so hostile an attitude that he thought it more prudent to pass on and report to the Authorities.

The steamship Milan was despatched. Upon landing not a native was to be seen, but everything pointed to its being inhabited within the last few hours. Marines searched diligently and fired into the pandanus thickets which they were unable to penetrate. Huts and canoes were burned. They believed their search had well covered the atoll and without result. The wreck had gone to pieces, no trace left. The Milan returned to Papeete empty handed.

But the mother of the 2 boys was not satisfied. She forthwith chartered the Julia and went along herself in July. On passing Anaa she wisely secured the aid of some of the natives and their chief Teina. Arriving they found things exactly as had the Milan. Standing alone while the rest scattered

and searched the bush, the Chief suddenly saw a hand working to clear away a stone between some coral blocks. Calling all to his aid they quickly opened a passage to a cavern where they found 12 adults and 4 children who were led aboard the Julia. Along with them went the clearest evidence of the tragedy, a head of still blonde hair, an infant's sundried corpse hung on a pole, skulls, teeth and fingerbones. The Julia returned to port August 5, 1857 but 3 of the cannibals had died on the way. There was no "Life for a Life" under the Tahitian code but they were not allowed to return to their island home.

Bligh Island is an isolated atoll, first seen by Bligh on his second voyage to Tahiti for breadfruit saplings in 1792.

### The Mystery Stone of Tahiti

A short hour's stroll from Papeete's marketplace, up the Tipaerui Valley with finally a rocky ascent on its southwestern side, there is a mountain stream which has gouged out for itself a narrow but deep course to the sea. When the heavy rains descend the stream becomes a torrent between the high banks and in places overflowing. Here, leaning slantingly against its western bank, there is — and has been as far as native memory goes back — a petroglyph Stone or Boulder marked with mystic carving. There is no other similar stone thus marked upon the island. Who placed it where it stands and who wrought it are mysteries which white folk and natives — though the latter have their usual "tradition" — have long sought to know. Scientists have studied it and have been forced to leave the mystery unsolved, both as to its antiquity and true interpretation.

As to Tahitian lore thereon, M<sup>r</sup> A. K. Richer many years back secured the following explanation from Monsieur Buillard on whose Family property it stands, all of whom regard it with veneration and have refused all offers to part with it, even into the care of the local Museum and still more to Museums in far away countries which have sought its purchase. There it is, and there it seemingly is to remain unless the strong arm of Authority steps in some day.

*"The rock was carved in memory of Tetaurii Vahine and her twin children. Tetauriitane, defeated, took refuge in Tipaerui Valley. His wife there gave birth to twins and soon after all 3 died. They were buried on the land of Oteoteroa close to the brook : and the protection of a spirit in the form of a monster eel gives them constant protection. If one touches the rock, milk will flow along the grooves and the offender will die."*

One who has trespassed has good reason to doubt the latter and leaves the whole matter at that. <sup>262</sup>

**Mystery stone of Tahiti**

### **The Atimaono Cotton Plantation**

This remarkable enterprise with its tragic endings was formed in 1863 by William Stewart of Scot-Irish parentage. He with his brother-in-law, a London financier, formed a Company in that City capitalized at £100,000.

Stewart purchased from the natives an area of 17,000 acres with a seafrontage of 3½ miles and extending inland for 7½ miles. He named it “Terre Eugène” after the French Empress.

Importing 1000 Chinese besides hundreds of Gilbert Islanders, local natives and half castes, he soon had 3000 acres under cultivation, extensive buildings erected, quarters also for employees in separate villages, stores, hospital accomodation and wharves for a fleet of vessels to carry the cotton to Auckland N.Z. whence it was shipped to London.

The Governor — correctly the Commandant — from 1863 to 1869, Count de la Roncière, was a warm friend and supporter despite the jealousy of local business interests and the antipathy felt towards the Count himself for his support of a foreign enterprise. But it was not these that brought about ruin save in a secondary sense, but an infamous brother — James — whom he had brought to Tahiti, set up in business and aided in every possible way. In 1869 James determined to quit Tahiti and sued his brother for “immediate payment” of 2 Notes of Six Months each which William to help him had drawn in his favour on his Auckland bankers. Both the Court of First Instance and the Court of Appeal

in Papeete gave James judgements for this “immediate payment”, and for this gross miscarriage of Justice the Governor discharged each Judge from his post, at the same time ordering the local Bank — the Caisse Agricole — to purchase all the cotton then on the Estate to meet the Notes. James pocketing this large sum of One hundred thousand — gold — francs fled by night in a schooner to California leaving sixty thousand francs of debt behind him and was heard of no more.

The Estate went into insolvency as the price of cotton fell disastrously, the American Civil War once over. William struggled gamely on but his health failed him, his post of Manager was taken from him by his creditors, he was penniless and died of a hemorrhage on the Estate where once he was supreme September 24, 1873. His grave site today is obliterated.

**William Stewart**

**The Pomare Family of the Past** <sup>263</sup>

**The Pomare family**

---

<sup>263</sup> The story of how WWB rediscovered the frame with the portraits of the Pomare family is told in Tale #22, *The Boy King* (3), in Part IV, *Tales of a Roaming Grandfather*.

1. Pomare III : The Boy King. (Circle to the right) <sup>264</sup> <sup>265</sup>
2. Terito : Mother of #1 : wife of #16.
3. Haamanahia-a-mai : married #15.
4. Aimata : daughter of #23.
5. Teriinaahoroa of Faaa : married #13.
6. Teriimaevaua II : daughter of #23 : married #12.
7. Ariipeu-a-Hiro : brother of #18.
8. Norman Brander : married #10.
9. Tamatoa Brander as an infant.
10. Teriivaetua : daughter of #23 : married #8.
11. Tapiria : adopted daughter of #7.
12. Hinoi I : son of #22 : married #6.
13. Punuarii : son of #24 : married #5.

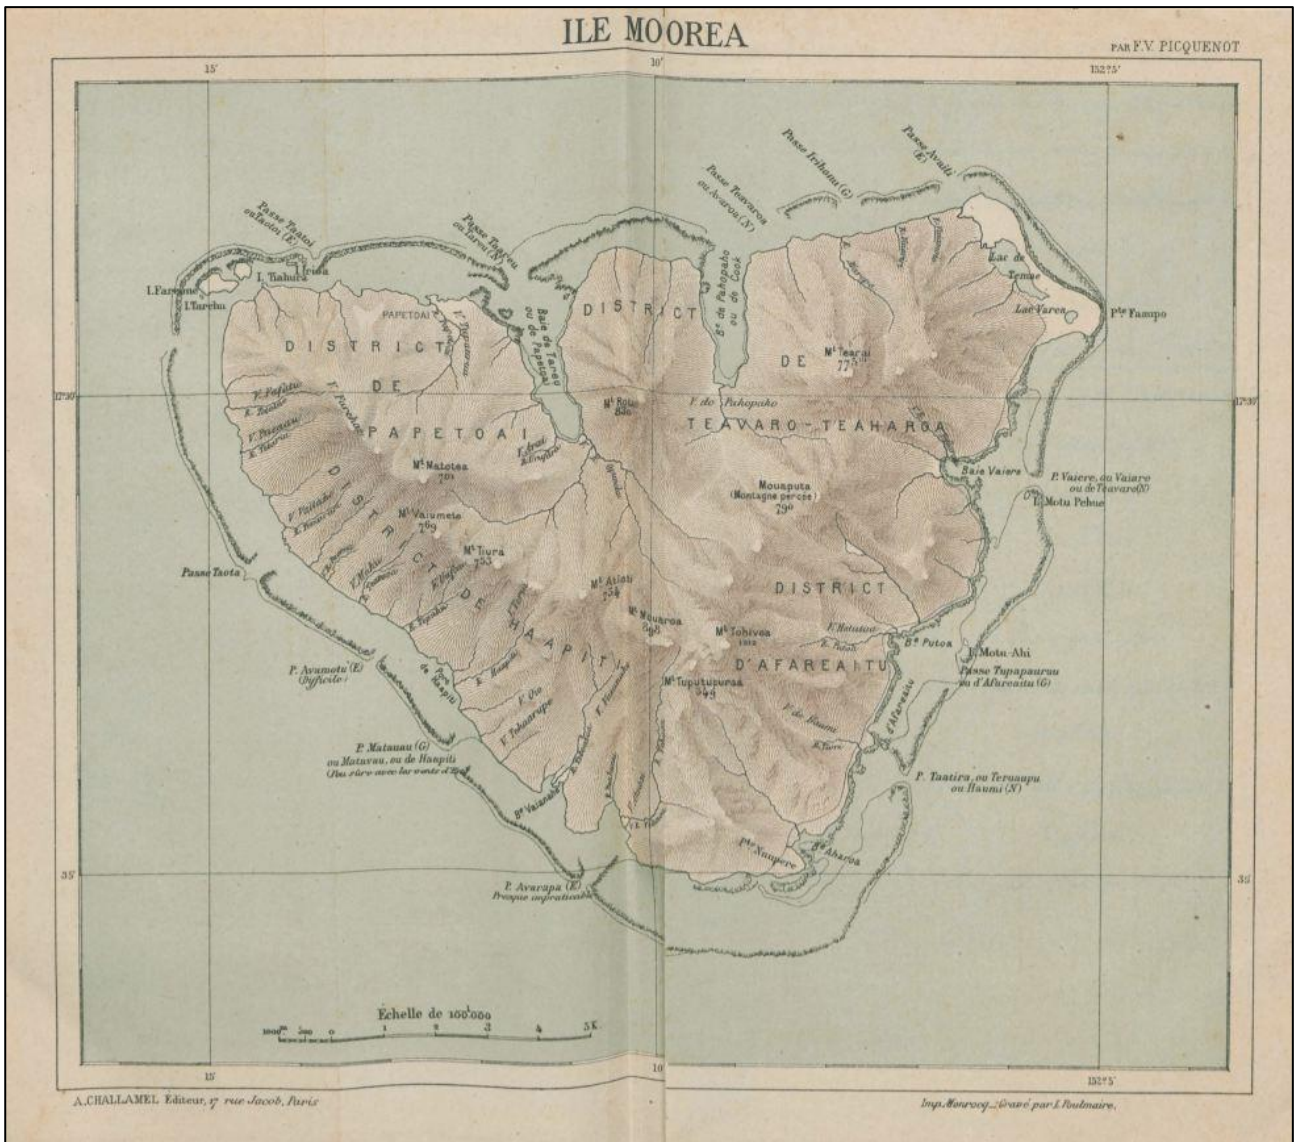

<sup>264</sup> Circle to the right from the portrait at the top of Pomare III, the boy king.

<sup>265</sup> The following is the caption to the same image reproduced in Langdon, [The Lost Caravel Re-explored](#), page 143. WWB's numbering of the portraits is given in square brackets.

Opposite is a composite photograph of Tahiti's royal family prepared by Mrs. S. Hoare, a Papeete photographer, about 1886–7. Most of the people depicted are descendants of Pomare I and the consorts of those descendants. Except for the two part-Europeans, Isabella Shaw (4<sup>th</sup> row) and Norman Brander (5<sup>th</sup> row) all are directly descended from the Hiro lineage of Raiatea or the Mai lineage of Borabora. Prince Hinoi Pomare (4<sup>th</sup> row) and John Brander (5<sup>th</sup> row) are the only others not known to be 'pure Polynesian'. The portraits are in rows of five. **First row:** 1. [15.] Teriimaevaua I (1841–1873), queen of Borabora, daughter of Pomare IV; 2. [16.] Pomare II (c. 1774–1821), king of Tahiti; 3. [1.] Pomare III (1820–27), king of Tahiti; 4. [2.] Teremoemoe, daughter of Tamatoa III of Raiatea, wife of Pomare II and mother of Pomares III and IV; 5. [3.] Haamanahia (1849–1911), grandchild of Mai, king of Borabora and great-grandchild of Tati, high chief of Papara, as were nos. 14 and 15 below. **Second row:** 6. [14.] Princess Teriinaahoroa of Raiatea (1877–1918), daughter of Tamatoa V, granddaughter of Pomare IV; 7. [24.] Pomare IV (1813–77), queen of Tahiti; 8. [17.] Pomare V (1839–91), king of Tahiti; 9. [18.] Arii faaite a Hiro (1820–73), grandson of Tamatoa III of Raiatea, husband of Pomare IV; 10. [4.] Princess Aimatarii of Raiatea (1878–94), daughter of Tamatoa V, granddaughter of Pomare IV. **Third row:** 11. [13.] Prince Teriitapunui of Tahiti (1846–88), son of Pomare IV; 12. [23.] Tamatoa V (1842–81), king of Raiatea, son of Pomare IV; 13. [25.] Pomare I (d. 1803), ancestor of Pomare dynasty; 14. [19.] Moeterauri a Mai (1850–90); 20. [5.] Teriinaahoroa of Tautira. **Fourth row:** 16. [12.] Prince Hinoi Pomare (1869–1916), part-European grandson of Pomare IV; 17. [22.] Prince de Joinville (1847–75), son of Pomare IV; 18. [21.] Teriitaria, queen of Huahine, daughter of Tamatoa III of Raiatea and titular wife of Pomare II; 19. [20.] Isabella Shaw (d. 1918), part-European, wife of Prince de Joinville; 20. [6.] Teriimaevaua II (1871–1932), queen of Borabora, daughter of Tamatoa V, granddaughter of Pomare IV. **Fifth row:** 21. [11.] Tapira, (adopted) daughter of Ariipeu a Hiro; 22. [10.] Princess Teriivaetua (1869–1918) of Raiatea, daughter of Tamatoa V, granddaughter of Pomare IV; 23. [9.] John Teriinuotahiti (Jock) Brander (1885–1918), part-European, son of Princess Teriivaetua; 24. [8.] Norman Teriitua Brander (1864–1930), part-European, husband of Princess Teriivaetua; 25. [7.] Ariipeu a Hiro, grandson of Tamatoa III. (Caption prepared by Dr Niel Gunson, Australian National University, Canberra.)

14. Teriinaavahoroa : daughter of #23 : married the Salmon brothers.
15. Teriimaevavua I : daughter of #24 : married #3.
16. Pomare II : son of #25 : married #2.
17. Pomare V : son of #24 : married Marau Salmon.
18. Ariifaaite-a-Hiro : married #24.
19. Moe-a-mai of Faaa : married #23.
20. Isabel Shaw : married #22.
21. Tetua : married #25 : mother of #16.
22. Teriitua Joinville : son of #24 : married #20.
23. Tamatoa : son of #24 : married #19.
24. Queen Pomare IV : daughter of #16 : married #18.
25. Pomare I : married #21 : father of #16.

## Moorea

## Discovery and Discoverers of Central Polynesia

Compiled from the records of the various Navigators concerned and from those of other voyagers.

Total number of islands in area 105.

Island.	Discoverer.	Date.
---------	-------------	-------

### The Georgian Group

(as recorded at the Admiralty, London, 1768.)

Tahiti	Wallis	1767
Moorea	Wallis	1767
Maiao	Wallis	1767
Makatea	Roggeveen (now grouped with the Atolls)	1722
Mehetia	Wallis (claimed also for Carteret)	1767
Tetiaroa	Wallis (claimed also for Cook)	1767

### The Mangareva Or Gambier Group

(so named by Wilson)

Akamaru	Wilson	1797
Aukena	Wilson	1797
Rikitea	Wilson	1797
Taravai	Wilson	1797
Crescent *	Wilson * (native name Timoe)	1797

### The Marquesan Groups

(so named by Mendana)

South Group.		
Fatuhiva	Mendana	1595
Hivaoa	Mendana	1595
Tahuata	Mendana	1595

Island.	Discoverer.	Date.
North Group.		
Nukuhiva	Ingraham	1791
Nahuka	Ingraham	1791
Uapu	Ingraham	1791

(The North Group also claimed for Marchand and Chanal.)

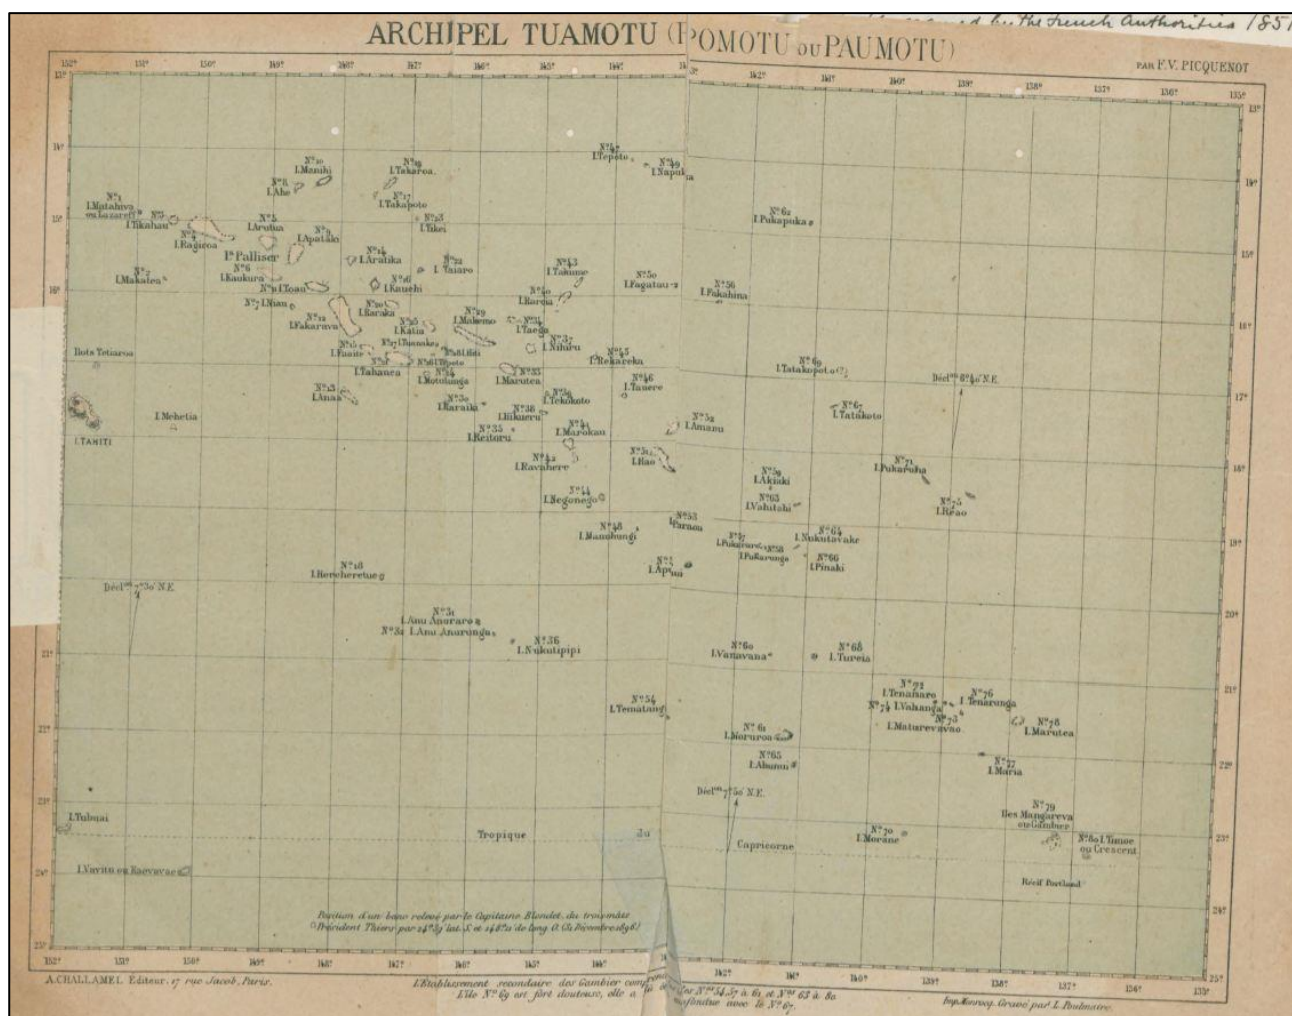

### The Austral Group

#### The Tupuai or Austral Group

(so named by the French authorities 1851)

Raivavae	Gayangos	1775
Rapa	Vancouver	1791
Rimatara	Henry	1811
Rurutu	Cook	1769

<b>Island.</b>	<b>Discoverer.</b>	<b>Date.</b>
Tupuai	Cook	1777
<b><u>The Leeward or Society Group</u></b>		
(so named by Cook)		
Raiatea	Cook	1769
Huahine	Cook	1769
Maupiti	Cook	1769
Tupai	Cook	1769
Tahaa	Cook	1769
Scilly *	Wallis	1767
* (native name Manuai)		
Pora Pora	Cook	1769
(there is no letter "B" in Tahitian)		
Bellinghausen	Kotzebue	1824
(native name Motu-o-ne)		
Mopelia	Wallis	1767
(also named Maupiha'a)		

### The Tuamotu Group

Island.	Discoverer.	Date.
<b>The Atolls or Tuamotu Group</b>		
(so named by the French authorities 1851 — formerly known as the Poumotus.)		
Aha	Schouten	1616
Ahunui	Beechey	1826
	(claimed also for Martin)	
Akiaki	Bougainville	1768
Amanu	Quiros	1606
	(claimed also for Varela)	
Anaa	Quiros	1606
Anuanuaro	Wallis	1767
	(claimed also for Quiros)	

<b>Island.</b>	<b>Discoverer.</b>	<b>Date.</b>
Anuanurunga	Wallis (claimed also for Quiros)	1767
Apataki	Roggeveen	1722
Arutua	Roggeveen	1722
Faaite	Bellinghausen	1819
Fakahina	Kotzebue	1824
Fakarava	Schouten	1616
Fangataufa	Beechey	1826
Fangatau	Beechey (claimed also for Cockburn)	1826
Hao	Bougainville (claimed also for Quiros)	1768
Haraiki	Boenechea	1772
Hereheretue	Wallis	1767
Hikueru	Boenechea	1774
Kauehi	Humphrey	1822
Kaukura	Cook	1774
Makemo	Cook	1773
Manihi	Schouten	1616
Manuhangi	Wallis	1767
Maria	Bougainville (native name Vahitahi)	1768
Marokau	Bougainville (claimed also for Quiros)	1768
Marutea	Edwards (claimed also for Cook)	1791
Matahiva	Bellinghausen	1819
Motutunga	Cook	1773
Mururoa	Wallis	1767
Nange nengo	Wallis	1767
Napuka	Byron	1765
Niau	Schouten (claimed also for Greig)	1616

Island.	Discoverer.	Date.
Nukutavake	Carteret	1767
Nukutipipi	Wallis	1767
	(claimed also for Quiros)	
Paraoa	Wallis	1767
Pinaki	Carteret	1767
Puka Puka	Schouten	1616
Pukaruha	Wilson	1797
Rangiroa	Schouten	1616
Raroia	Roggeveen	1722
Raraka	Ireland	1831
Reao <sup>266</sup>	Bell	1822
Tahanea	Boenechea	1774
Takaroa	Schouten	1616
Takapoto	Roggeveen	1722
Takume	Bellinghausen	1819
Tata Koto	Varela	1774
Tauere	Boenechea	1772
Teko Koto	Turnbull	1803
	(the Supercargo — the Cap <sup>t</sup> Byers)	
Tematangi	Bligh	1792
Tepoto	Byron	1765
Tikei	Schouten	1616
Tikihau	Roggeveen	1722
Toau	Roggeveen	1722
Tureia	Carteret	1767
Vairaatea	Wallis	1767
Vana Vana	Beechey	1826
	(claimed also for Barrow)	

---

<sup>266</sup> WWB has *Reao* before *Raroia*.

There appears to be no record of the discoverers of the 17 remaining small Atolls, unnamed in the above list.<sup>267</sup>

### Some Common Errors Prevalent Today

(summarized from previous pages)

1. That geographically The South Seas (plural) exist. The Pacific Ocean — save on its western coastline — is one undivided whole north and south of the Equator. Tahiti lies in “The South Sea” (singular). The term was first used by the Spaniards, then fixed historically by “The South Sea Bubble”, then by all reports of the whalers as the general term for their hunting ground. The use of the plural is a careless — though poetic — indifference to Fact.
2. That Cook — in 1769 — included Tahiti in his “Society Islands”. Tahiti and Moorea were recorded at the Admiralty in London by Wallis — in 1767 — as “The Georgian Islands” and Cook knew the recording.
3. That Papeete was from ancient days one undivided native village. Papeete was Family and private property, a strip on the waterfront along with others, the general name for the entire waterfront being Nanu.
4. That the earlier navigators knew of and used Papeete harbour. None of them ever even mention it in their Logs.
5. That the first Pomare — who died on 1803 — was the first King of Tahiti. Papara under its Chiefs successfully held out till November 12, 1815. The second Pomare was the first King. The first Pomare failed in his aim, being merely the First of his name.
6. That Prince Hinoi was named by Pomare V as his successor if he had not given up the sovereignty. Hinoi was a boy of under 10 years of age at the time of naming who should follow him. The Succession was to go 1<sup>st</sup> to his next brother Tamatoa’s eldest — surviving — daughter, also then under 10 years of age, Terii Vaetua, who later married Norman Brander. Failing her and her issue of whom there are 3 today it was to go 2<sup>nd</sup>ly to his youngest brother Joinville’s boy and his issue. If Sovereignty had not been surrendered and if Pomare V had — despite his antipathy to the Salmon family of whom Brander was one — stood by his Order, it is clear who would, legally, be King of Tahiti today, Terii Vaetua’s grandson. (See *The Headship of the Pomare Family* and *The Abdication of Pomare V.*) Otherwise, by Pomare V’s legalized adoption of Hinoi as both his “son and heir” the latter’s son — present day Head of the Pomare Family — would be the heir to the Throne of Tahiti.

**Note.**

“The Memoirs of Ariitaimai” mentioned in the list of “Quoted Books” at first bore the Title

“Memoirs of Marau Ta’aroa, last Queen of Tahiti.”

“Printed Privately 1893.”

There is no copy known to exist today. Where it was printed and to whom copies were given are also unknown.

In 1901 a 2<sup>nd</sup> Edition — in English — was printed at Paris under the supervision and care of an American attached to the Embassy there and once a visitor to Tahiti, by name Henry Adams. Marau had requested him to change the Title and use her mother’s name as the one from whom she had received the information 2 years prior to Ariitaimai’s death. A very few copies of this Edition are known to exist today. One copy once belonging to Marau’s brother Tati II is however in the Papeete Museum.<sup>270</sup>

<sup>269</sup> *The Appeal...* is found on pages 23–41 of *Pomaré, Queen of Tahiti*.

<sup>270</sup> See WWB’s letter to the editor, *The Memoirs of Ariitaimai*, in the September 1945 edition of the *Pacific Islands Monthly*, page 59, and footnotes, in Part VII. The *Memoirs* can be found [here](#).

## ADDENDA

### to the manuscript of Old Time Tahiti

#### Digest of Books, Manuscripts and Pamphlets not easily obtainable.

#### A Warm Welcome<sup>271</sup>

Tahiti's reception to its first white visitors as the Dolphin moved along the coast seeking site for anchorage

Extract from

Captain Wallis' Journal of his "Voyage round the world" in H.M.S. Dolphin.

#### C H A P. V.

*An account of the Discovery of King George the Third's Island, or Otaheite, and of several incidents which happened both on board the Ship, and on Shore.*

AT two o'clock, the same day,<sup>272</sup> we bore away, and in about half an hour, discovered very high land in the W. S. W. At seven in the evening, Osnaburgh Island bore E. N. E. and the new discovered land, from W. N. W. to W. by S. As the weather was thick and squally, we brought to for the night, or at least till the fog should break away. At two in the morning,<sup>273</sup> it being very clear, we made sail again ; at day-break we saw the land, at about five leagues distance, and steered directly for it ; but at eight o'clock, when we were close under it, the fog obliged us again to lie to, and when it cleared away, we were much surprised<sup>274</sup> to find ourselves surrounded by some hundreds of canoes. They were of different sizes, and had on board different numbers from one to ten, so that in all of them together, there could not be less than eight hundred people. When they came within pistol shot of the ship, they lay by, gazing at us with great astonishment, and by turns conferring with each other. In the mean time we shewed them trinkets of various kinds, and invited them on board. Soon after, they drew together, and held a kind of council to determine what should be done : then they all paddled round the ship, making signs of friendship, and one of them holding up a branch of the plaintain tree, made a speech that lasted near a quarter of an hour, and then threw it into the sea. Soon after as we continued

<sup>273</sup> Friday, 19 June 1767

<sup>274</sup> This word appears in the text both as *surprised* and *surprized*.

to make signs of invitation, a fine, stout lively young man ventrued on board : he came up the mizen chains, and jumped out of the shrouds upon the top of the awning. We made signs to him to come down upon the quarter-deck, and handed up some trinkets to him : he looked pleased, but would accept nothing till some of the Indians came along-side, and after much talk, threw a few branches of plaintain-tree on board the ship. He then accepted our presents, and several others very soon came on board, at different parts of the ship, not knowing the proper entrance. As one of these Indians was standing near the gang-way, on the starboard side of the quarter-deck, one of our goats butted him upon the haunches : being surprized at the blow, he hastily turned about, and saw the goat raised upon his hind legs, ready to repeat the blow. The appearance of this animal, so different from any he had ever seen, struck him with such terror that he instantly leaped over-board ; and all the rest, upon seeing what had happened, followed his example with the utmost precipitation : they recovered however, in a short time, from their fright, and returned on board. After having reconciled them to our goats and sheep, I shewed them our hogs and poultry, and they immediately made signs that they had such animals as these. I then distributed trinkets and nails among them, and made signs that they should go on shore and bring us some of their hogs, fowls and fruit, but they did not seem to understand my meaning : they were in the mean time watching an opportunity to steal some of the things that happened to lie in their way, but we generally detected them in the attempt. At last, however, one of the midshipmen happened to come to where they were standing with a new laced hat upon his head, and began to talk to one of them by signs : while he was thus engaged, another of them came behind him, and suddenly snatching off the hat, leapt over the taffarel into the sea, and swam away with it.

As we had no anchorage here, we stood along the shore, sending the boats at the same time to sound at a less distance. As none of these canoes had sails, they could not keep up with us, and therefore soon paddled back towards the shore. The country has the most delightful and romantic appearance that can be imagined : towards the sea it is level, and is covered with fruit trees of various kinds, particularly the cocoa-nut. Among these are the houses of the inhabitants, consisting only of a roof, and at a distance having greatly the appearance of a long barn. The country within, at about the distance of three miles, rises into lofty hills, that are crowned with wood, and terminate in peaks, from which large rivers are precipitated into the sea. We saw no shoals, but found the island skirted by a reef of rocks, through which there are several openings into deep water. About three o'clock in the afternoon, we brought to, a-breast of a large bay, where there was an appearance of anchorage. The boats were immediately sent to sound it, and while they were thus employed, I observed a great number of canoes gather round them. I suspected that the Indians had a design to attack them, and as I was very desirous to prevent mischief, I made the signal for the boats to come a-board, and at the same time, to intimidate the Indians, I fired a nine-pounder over their heads. As soon as the cutter began to stand toward the ship, the Indians in their canoes, though they had been startled by the thunder of our nine-pounder, endeavoured to cut her off. The boat, however, sailing faster than the canoes could paddle, soon got clear of those that were about her ; but some others, that were full of men, way-laid her in her course, and threw several stones into her, which wounded some of the people. Upon this the Officer on board fired a musquet, loaded with buck-shot, at the man who threw the first stone, and wounded him in the shoulder. The rest of the people in the canoes, as soon as they perceived their companion wounded, leapt in to the sea, and the other canoes paddled away, in great terror and confusion. As soon as the boats reached the ship, they were hoisted on board, and just as she was about to stand on, we observed a large canoe under sail, making after us. As I thought she might have some Chief on board, or might have been dispatched to bring me a message from some chief, I determined to wait for her. She sailed very fast, and was soon along-side the ship, but we did not observe among those on board any one that seemed to have authority over the rest. One of them, however, stood up, and having made a speech, which continued about five minutes, threw on board a branch of the plaintain tree. We understood this to be a token of peace, and we returned it, by

handing over one of the branches of plaintain that had been left on board by our first visitors : with this and some toys, that were afterwards presented to him, he appeared to much gratified, and after a short time went away.

The officers who had been sent out with the boats, informed me that they had sounded close to the reef, and found as great a depth of water as at the other islands : however, as I was now on the weather side of the island, I had reason to expect anchorage in running to leeward. I therefore took this course, but finding breakers that ran off to a great distance from the south end of the island, I hauled the wind, and continued turning to windward all night, in order to run down on the east side of the island.

At five o'clock in the morning <sup>275</sup> we made sail, the land bearing N. W. by W. distant 10 leagues ; and there seemed to be land five leagues beyond it, to the N. E. a remarkable peak, like a sugar loaf, bore N. N. E. when we were about two leagues from the shore, which afforded a most delightful prospect, and was full of houses and inhabitants. We saw several large canoes near the shore, under sail, but they did not steer towards the ship. At noon, we were within two or three miles of the island, and then it bore from S.  $\frac{3}{4}$  W. to N. W. by W. We continued our course along the shore, sometimes at the distance of half a mile, and sometimes at the distance of four or five miles, but hitherto had got no soundings. At six o'clock in the evening, we were a-breast of a fine river, and the coast having a better appearance here than in any other part that we had seen, I determined to stand off and on all night, and try for anchorage in the morning. As soon as it was dark, we saw a great number of lights all along the shore. At day-break <sup>276</sup> we sent out the boats to sound, and soon after they made the signal for twenty fathom. This produced an universal joy, which it is not easy to describe, and we immediately ran in, and came to an anchor in 17 fathom, with a clear sandy bottom. We lay about a mile distant from the shore, opposite to a fine run of water ; the extrems of the land bearing from E. S. E. to N. W. by W. As soon as we had secured the ship, I sent the boats to sound along the coast, and look at the place where we saw the water. At this time a considerable number of canoes came off to the ship, and brought with them hogs, fowls, and fruit in great plenty, which we purchased for trinkets and nails. But when the boats made towards the shore, the canoes, most of which were double, and very large, sailed after them. At first they kept at a distance, but as the boats approached the shore, they grew bolder, and at last three of the largest ran at the cutter, staved in her quarter, and carried away her outrigger, the Indians preparing at the same time to board her, with their clubs and paddles in their hands. Our people being thus pressed, were obliged to fire, by which one of the assailants was killed, and the other much wounded. Upon receiving the shot, they both fell overboard, and all the people who were in the same canoe, instantly leaped into the sea after them ; the other two canoes dropped a-stern, and our boats went on without any farther interruption. As soon as the Indians, who were in the water, saw that the boats stood on without attempting to do them any farther hurt, they recovered their canoe, and hauled in their wounded companions. They set them both upon their feet to see if they could stand, and finding they could not, they tried whether they could sit upright : one of them could, and him they supported in that posture, but perceiving that the other was quite dead, they laid the body along at the bottom of the canoe. After this, some of the canoes went ashore, and others returned again to the ship to traffic, which is a proof that our conduct had convinced them that while they behaved peaceably they had nothing to fear, and that they were conscious they had brought the mischief which had just happened upon themselves.

The boats continued sounding till noon, when they returned with an account that the ground was very clear ; that it was at the depth of five fathom, within a quarter of a mile of the shore, but that there was a very great surf where we had seen the water. The officers told me that the inhabitants swarmed

---

<sup>275</sup> Saturday, 20 June 1767

<sup>276</sup> Sunday, 21 June 1767

upon the beach, and that many of them swam off to the boat with fruit, and bamboos filled with water. They said that they were very importunate with them to come on shore, particularly the women, who came down to the beach, and stripping themselves naked, endeavoured to allure them by many wanton gestures, the meaning of which could not possibly be mistaken. At this time, however, our people resisted the temptation.

In the afternoon, I sent the boats again to the shore, with some barecas or small casks, which are filled at the head, and have a handle by which they are carried, to endeavour to procure some water, of which we began to be in great want. In the mean time, many of the canoes continued about the ship, but the Indians had been guilty of so many thefts, that I would not suffer any more of them to come on board.

At five in the evening, the boats returned with only two barecas of water, which the natives had filled for them ; and as a compensation for their trouble, they thought fit to detain all the rest. Our people, who did not leave their boat, tried every expedient they could think of to induce the Indians to return their water vessels, but without success ; and the Indians, in their turn, were very pressing for our people to come on shore, which they thought it prudent to decline. There were many thousands of the inhabitants of both sexes, and a great number of children on the beach, when our boats came away.

The next morning, <sup>277</sup> I sent the boats on shore again for water, with nails, hatchets, and such other things as I thought most likely to gain the friendship of the inhabitants. In the mean time, a great number of canoes came off to the ship, with bread-fruit, plantains, a fruit resembling an apple only better, fowls, and hogs, which we purchased with beads, nails, knives, and other articles of the like kind, so that we procured pork enough to serve the ship's company two days, at a pound a man.

When the boats returned, they brought us only a few calabashes of water ; for the number of people on the beach was so great, that they would not venture to land, tho' the young women repeated the allurements which they had practised the day before, with still more wanton, and, if possible, less equivocal gestures. Fruit and provisions of various kinds were brought down and ranged upon the beach, of which our people were also invited to partake, as an additional inducement for them to leave the boat. They continued, however, inexorable, and shewing the Indians the barecas on board, made signs that they should bring down those which had been detained the day before : to this the Indians were inexorable in their turn, and our people therefore weighed their grapplings, and sounded all round the place, to see whether the ship could come in near enough to cover the waterers, in which case they might venture on shore, in defiance of the whole island. When they put off, the women pelted them with apples and banacas, [sic] shouting and shewing every mark of derision and contempt that they could devise. They reported, that the ship might ride in four fathom water, with sandy ground, at two cables length from the shore, and in five fathom water at three cables length. The wind here blew right along the shore, raising a great surf on the side of the vessel, and on the beach.

At day break, the next morning, <sup>278</sup> we weighed, with a design to anchor off the watering place. As we were standing off, to get farther to windward, we discovered a bay about six or eight miles to leeward, over the land, from the mast head, and immediately bore away for it, sending the boats ahead to sound. At nine o'clock, the boats making the signal for 12 fathom, we hauled round a reef, and stood in, with a design to come to an anchor ; but when we came near the boats, one of which was on each bow, the ship struck. <sup>279</sup> Her head continued immoveable, but her stern was free ; and, upon casting the lead, we found the depth of water, upon the reef or shoal, to be from 17 fathom to

<sup>277</sup> Monday, 22 June 1767

<sup>278</sup> Tuesday, 23 June 1767

<sup>279</sup> WWB: (*Here follows an account of the Dolphin Rock, for Wallis was now in Matavai Bay.*)

two and a half : we clewed all up as fast as possible, and cleared the ship of what lumber there happened to be upon the deck, at the same time getting out the long-boat, with the stream and kedge anchors, the stream cable and hauser, in order to carry them without the reef, that when they had taken ground, the ship might be drawn off towards them, by applying a great force to the capstern, but unhappily without the reef we had no bottom. Our condition was now very alarming, the ship continued beating against the rock with great force, and we were surrounded by many hundred canoes, full of men : they did not, however, attempt to come on board us, but seemed to wait in expectation of our shipwreck. In the anxiety and terror of such a situation we continued near an hour, without being able to do any thing for our deliverance, except staving some water casks in the forehold, when a breeze happily springing up from the shore, the ship's head swung off. We immediately pressed her with all the sail we could make ; upon which she began to move, and was very soon once more in deep water.

We now stood off, and the boats being sent to leeward, found that the reef ran down to the westward about a mile and a half, and that beyond it there was a very good harbour. The master, after having placed a boat at the end of the reef, and furnished the long-boat with anchors and hausers, and a guard to defend her from an attack of the Indians, came on board, and piloted the ship round the reef into the harbour, where, about twelve o'clock, she came to an anchor, with a fine bottom of black sand.

The place where the ship struck appeared, upon farther examination, to be a reef of sharp coral rock, with very unequal soundings, from six fathom to two ; and it happened unfortunately to lie between the two boats that were placed as a direction to the ship, the weathermost boat having 12 fathom, and the leewardmost nine. The wind freshened almost as soon as we got off, and though it soon became calm again, the surf ran so high, and broke with such violence upon the rock, that if the ship had continued fast half an hour longer, she must inevitably have been beaten to pieces. Upon examining her bottom, we could not discover that she had received any damage, except that a small piece was beaten off the bottom of the rudder. She did not appear to admit any water, but the trussletrees, at the head of all the masts, were broken short, which we supposed to have happened while she was beating against the rock. Our boats lost their grapplings upon the reef, but as we had reason to hope that the ship was sound ; they gave us very little concern. As soon as the ship was secured, I sent the master, with all the boats manned and armed to sound the upper part of the bay, that if he found good anchorage we might warp the ship up within the reef, and anchor her in safety. The weather was now very pleasant, a great number of canoes were upon the reef, and the shore was crowded with people.

About four in the afternoon the Master returned, and reported that there was every where good anchorage ; I therefore determined to warp the ship up the bay early in the morning, and in the mean time, I put the people at four watches, one watch to be always under arms, loaded and primed all the guns, fixed musketoons in all the boats, and ordered all the people who were not upon the watch, to repair to the quarters assigned them, at a moment's warning, there being a great number of canoes, some of them very large, and full of men, hovering upon the shore, and many smaller venturing to the ship, with hogs, fowls, and fruit, which we purchased of them, much to the satisfaction of both parties ; and at sun-set, all the canoes rowed in to the shore.

At six o'clock the next morning,<sup>280</sup> we began to warp the ship up the harbour, and soon after, a great number of canoes came under her stern. As I perceived that they had hogs, fowls, and fruit on board, I ordered the gunner, and two midshipmen, to purchase them for knives, nails, beads, and other trinkets, at the same time prohibiting the trade to all other persons on board. By eight o'clock, the number of canoes was greatly increased, and those that came last up were double, of a very large size,

---

<sup>280</sup> Wednesday, 24 June 1767

with twelve or fifteen stout men in each. I observed, with some concern, that they appeared to be furnished rather for war than trade, having very little on board except round pebble stones ; I therefore sent for Mr. Furneaux, my first Lieutenant being still very ill, and ordered him to keep the fourth watch constantly at their arms, while the rest of the people were warping the ship. In the mean time more canoes were continually coming off from the shore, which were freighted very differently from the rest, for they had on board a number of women, who were placed in a row, and who, when they came near the ship, made all the wanton gestures that can be conceived. While these ladies were practising their allurements, the large canoes, which were freighted with stones, drew together very close round the ship, some of the men on board singing in a hoarse voice, some blowing conchs, and some playing on a flute. After some time, a man who sat under a canopy that was fixed on one of the large double canoes, made signs that he wished to come up to the ship's side ; I immediately intimated my consent, and when he came along-side, he gave one of the men a bunch of red and yellow feathers, making signs that he should carry it to me. I received it with expressions of amity, and immediately got some trinkets to present him in return, but to my great surprise he had put off to a little distance from the ship, and upon his throwing up the branch of a cocoa-nut tree, there was an universal shout from all the canoes, which at once moved towards the ship, and a shower of stones was poured into her on every side. As an attack was now begun, in which our arms only could render us superior to the multitude that assailed us, especially as great part of the ship's company was in a sick and feeble condition, I ordered the guard to fire ; two of the quarter-deck guns, which I had loaded with small shot, were also fired nearly at the same time, and the Indians appeared to be thrown into some confusion : in a few minutes, however, they renewed the attack, and all our people that were able to come upon deck, having by this time got to their quarters, I ordered them to fire the great guns, and to play some of them constantly at a place on shore, where a great number of canoes were still taking in men, and pushing off towards the ship with the utmost expedition. When the great guns began to fire, there were not less than three hundred canoes about the ship, having on board at least two thousand men ; many thousands were also upon the shore, and more canoes coming from every quarter : the firing, however, soon drove away the canoes that were about the ship, and put a stop to the coming off of others. As soon as I saw some of them retreating, and the rest quiet, I ordered the firing to cease, hoping that they were sufficiently convinced of our superiority, not to renew the contest. In this, however, I was unhappily mistaken : a great number of the canoes that had been dispersed, soon drew together again, and lay some time on their paddles, looking at the ship from the distance of about a quarter of a mile, and then suddenly hoisting white streamers, pulled towards the ship's stern, and began again to throw stones, with great force and dexterity, by the help of slings, from a considerable distance : each of these stones weighed about two pounds, and many of them wounded the people on board, who would have suffered much more, if an awning had not been spread over the whole deck to keep out the sun, and the hammocks placed in the nettings. At the same time several canoes, well manned, were making towards the ship's bow, having probably taken notice that no shot had been fired from this part : I therefore ordered some guns forward to be well pointed and fired at these canoes ; at the same time running out two guns a-baft, and pointing them well at the canoes that were making the attack. Among the canoes that were coming toward the bow, there was one which appeared to have some Chief on board, as it was by signals made from her that the others had been called together : it happened that a shot, fired from the guns forward, hit this canoe so full as to cut it asunder. As soon as this was observed by the rest, they dispersed with such haste, that in half an hour there was not a single canoe to be seen ; the people also who had crowded the shore, immediately fled over the hills with the utmost precipitation.

Having now no reason to fear any further interruption, we warped the ship up the harbour, and by noon we were not more than half a mile from the upper part of the bay, within less than two cables length of a fine river, and about two and a half of the reef. We had here nine fathom water, and close

to the shore there were five. We moored<sup>281</sup> the ship, and carried out the stream-anchor, with the two shroud hausers, for a spring, to keep the ship's broad-side a-breast of the river ; we also got up and mounted the eight guns, which had been put into the hold. As soon as this was done, the boats were employed in sounding all round the bay, and in examining the shore where any of the inhabitants appeared, in order to discover, whether it was probable that they would give us any further disturbance. All the afternoon, and part of the next morning,<sup>282</sup> was spent in this service, and about noon, the Master returned, with a tolerable survey of the place, and reported, that there were no canoes in sight ; that there was good landing on every part of the beach ; that there was nothing in the bay from which danger could be apprehended, except the reef, and some rocks at the upper end, which appeared above water ; and that the river, though it emptied itself on the other side of the point, was fresh water.

Soon after the Master had brought me this account, I sent Mr. Furneaux again, with all the boats manned and armed, the marines being also put on board, with orders to land opposite to our station, and secure himself, under cover of the boats and the ship, in the clearest ground he could find. About two o'clock the boats landed without any opposition, and Mr. Furneaux stuck up a staff, upon which he hoisted a pennant, turned a turf, and took possession of the island in his Majesty's name, in honour of whom he called it KING GEORGE THE THIRD'S ISLAND : he then went to the river, and tasted the water, which he found excellent, and mixing some of it with rum, every man drank his Majesty's health. While he was at the river, which was about twelve yards wide, and fordable, he saw two old men on the opposite side of it, who perceiving that they were discovered, put themselves in a supplicatory posture, and seemed to be in great terror and confusion. Mr. Furneaux made signs that they should come over the river, and one of them complied. When he landed, he came forward, creeping upon his hands and knees, but Mr. Furneaux raised him up, and while he stood trembling, shewed him some of the stones that were thrown at the ship, and endeavoured to make him apprehend that if the natives attempted no mischief against us, we should do no harm to them. He ordered two of the water casks to be filled, to shew the Indian that he wanted water, and produced some hatchets, and other things, to intimate that he wished to trade for provisions. The old man, during this pantomimical conversation, in some degree recovered his spirits ; and Mr. Furneaux, to confirm his professions of friendship, gave him a hatchet, some nails, beads, and other trifles ; after which he re-embarked on board the boats, and left the pennant flying. As soon as the boats were put off, the old man went up to the pennant, and danced round it a considerable time : he then retired, but soon after returned with some green boughs, which he threw down, and retired a second time : it was not long however before he appeared again, with about a dozen of the inhabitants, and putting themselves in a supplicating posture, they all approached the pennant in a slow pace, but the wind happening to move it, when they were got close to it, they suddenly retreated with the greatest precipitation. After standing some time at a distance, and gazing at it, they went away, but in a short time came back, with two large hogs alive, which they laid down at the foot of the staff, and at length taking courage, they began to dance. When they had performed this ceremony, they brought the hogs down to the water side, launched a canoe, and put them on board. The old man, who had a large white beard, then embarked with them alone, and brought them to the ship : when he came along-side, he made a set speech, and afterwards handed in several green plantain leaves, one by one, uttering a sentence, in a solemn slow tone, with each of them as he delivered it ; after this he sent on board the two hogs, and then turning round, pointed to the land. I ordered some presents to be given him, but he would accept of nothing ; and soon after put off his canoe, and went on shore.

---

<sup>281</sup> WWB: *The Chief referred to above was the first Pomare, the then acting Chief of the District. The "old man" with "a large white beard" later mentioned as keen for peace was his father Ha'apai whom Pomare (Tu) had succeeded according to the custom of the country and was in turn to be succeeded by his infant son.*

<sup>282</sup> Thursday, 25 June 1767

At night, soon after it was dark, we heard the noise of many drums, with conchs, and other wind instruments, and saw a multitude of lights all along the coast. At six in the morning,<sup>283</sup> seeing none of the natives on shore, and observing that the pennant was taken away, which probably they had learned to despise, as the frogs in the fable did King Log, I ordered the Lieutenant to take a guard on shore, and if all was well, to fend off, that we might begin watering : in a short time I had the satisfaction to find that he had sent off for water casks, and by eight o'clock, we had four tons of water on board. While our people were employed in filling the casks, several of the natives appeared on the opposite side of the river, with the old man whom the officer had seen the day before ; and soon after he came over, and brought with him a little fruit, and a few fowls, which were also sent off to the ship. At this time, having been very ill for near a fortnight, I was so weak that I could scarcely crawl about ; however, I employed my glasses to see what was doing on shore. At near half an hour after eight o'clock, I perceived a multitude of the natives coming over a hill<sup>284</sup> at about the distance of a mile, and at the same time a great number of canoes making round the western point, and keeping close along the shore. I then looked at the watering-place, and saw at the back of it, where it was clear, a very numerous party of the natives creeping along behind the bushes ; I saw also many thousands in the woods, pushing along towards the watering-place, and canoes coming very fast round the other point of the bay to the eastward. Being alarmed at these appearances, I dispatched a boat, to acquaint the officer on shore with what I had seen, and order him immediately to come on board with his men, and leave the casks behind him : he had however, discovered his danger, and embarked before the boat reached him. Having perceived the Indians that were creeping towards him under shelter of the wood, he immediately dispatched the old man to them, making signs that they should keep at a distance, and that he wanted nothing but water. As soon as they perceived that they were discovered, they began to shout, and advanced with greater speed. The officer immediately repaired to the boats with his people ; and the Indians, in the mean time having crossed the river, took possession of the water casks, with great appearance of exultation and joy. The canoes now pulled along the shore, towards the place, with the utmost expedition, all the people on land keeping pace with them, except a multitude of women and children, who seated themselves upon a hill which overlooked the bay and the beach. The canoes from each point of the bay, as they drew nearer to that part of it where the ship was at anchor, put on shore and took in more men, who had great bags in their hands, which afterwards appeared to be filled with stones. All the canoes that had come round the points, and many others that had put off from the shore within the bay, now made towards the ship, so that I had no doubt but that they intended to try their fortune in a second attack. As to shorten the contest would certainly lessen the mischief, I determined to make this action decisive, and put an end to hostilities at once ; I therefore ordered the people, who were all at their quarters, to fire first upon the canoes, which were drawn together in groups : this was immediately done so effectually, that those which were to the westward made towards the shore as fast as possible, and those to the eastward, getting round the reef, were soon beyond the reach of our guns. I then directed the fire into the wood in different parts, which soon drove the Indians out of it, who ran up the hill where the women and children had seated themselves to see the battle. Upon this hill there were now several thousands who thought themselves in perfect security; but to convince them of the contrary, and hoping that when they saw the shot fall much farther than they could think possible, they would suppose it could reach them at any distance, I ordered some of the guns to be let down as low as they would admit, and fired four shot towards them. Two of the balls fell close by a tree where a great number of these people were sitting, and struck them with such terror and consternation, than in less than two minutes not one of them was to be seen. Having thus cleared the coast, I manned and armed the boats, and putting a strong guard on board, I sent all the carpenters with their axes, and ordered them to destroy every canoe that had been run a-shore. Before noon, this service was effectually

---

<sup>283</sup> Friday, 26 June 1767

<sup>284</sup> WWB: *This became known to this day as "One tree hill" from its towering but lonely Erythrina, now dead.*

performed, and more than fifty canoes, many of which were sixty feet long, and three broad, and lashed together, were cut to pieces. Nothing was found in them but stones and slings, except a little fruit, and a few fowls and hogs, which were on board two or three canoes of a much smaller size.<sup>285</sup>

At two o'clock in the afternoon, about ten of the natives came out of the wood with green boughs in their hands, which they stuck up near the water side, and retired. After a short time, they appeared again, and brought with them several hogs, with their legs tied, which they placed near the green boughs, and retired a second time. After this they brought down several more hogs, and some dogs, with their fore legs tied over their heads, and going again into the woods, brought back several bundles of the cloth which they use for apparel, and which has some resemblance to Indian paper. These they placed upon the beach, and called to us on board to fetch them away. As we were at the distance of about three cables length, we could not then perfectly discover of what this peace-offering consisted : we guessed at the hogs and the cloth, but seeing the dogs, with their fore legs appearing over the hinder part of the neck, rise up several times, and run a little way in an erect posture, we took them for some strange unknown animal, and were very impatient to have a nearer view of them. The boat was therefore sent on shore with all expedition, and our wonder was soon at an end. Our people found nine good hogs, besides the dogs and the cloth: the hogs were brought off, but the dogs were turned loose, and with the cloth left behind. In return for the hogs, our people left upon the shore some hatchets, nails, and other things, making signs to some of the Indians who were in sight, to take them away with their cloth. Soon after the boat had come on board, the Indians brought down two more hogs, and called to us to fetch them ; the boat therefore returned, and fetched off the two hogs, but still left the cloth, though the Indians made signs that we should take it. Our people reported, that they had not touched any of the things which they had left upon the beach for them, and somebody suggesting that they would not take our offering because we had not accepted their cloth, I gave orders that it should be fetched away. The event proved that the conjecture was true, for the moment the boat had taken the cloth on board, the Indians came down, and with every possible demonstration of joy, carried away all I had sent them into the wood. Our boats then went into the watering-place, and filled and brought off the casks, to the amount of about six tons. We found that they had suffered no injury while they had been in the possession of the Indians, but some leathern buckets and funnels, which had been taken away with the casks, were not returned.

The next morning<sup>286</sup> I sent the boats on more, with a guard, to fill some more casks with water, and soon after the people were on shore, the same old man, who had come over the river to them the first day, came again to the farther side of it, where he made a long speech, and then crossed the water. When he came up to the waterers, the officer shewed him the stones that were piled up like cannon balls upon the shore, and had been brought thither since our first landing, and some of the bags that had been taken out of the canoes which I had ordered to be destroyed, filled with stones, and endeavoured to make him understand that the Indians had been the aggressors, and that the mischief we had done them was in our own defence. The old man seemed to apprehend his meaning, but not to admit it : he immediately made a speech to the people, pointing to the stones, slings, and bags, with great emotion, and sometimes his looks, gestures, and voice were so furious as to be frightful. His passions, however, subsided by degrees, and the officer, who to his great regret could not understand one word of all that he had said, endeavoured to convince him, by all the signs he could devise, that we wished to live in friendship with them, and were disposed to shew them every mark of kindness in our power. He then shook hands with him, and embraced him, giving him at the same time several such trinkets as he thought would be most acceptable. He contrived also to make the old man

<sup>285</sup> WWB ends his text here and writes, "*This settled matters. The Warm Welcome became a Friendly one.*" The first words of the next chapter in Hawkesworth, Chapter VI, are "*Matters being thus happily settled...*"

<sup>286</sup> Saturday, 27 June 1767

understand that we wished to traffic for provisions, that the Indians should not come down in great numbers, and that they should keep on one side of the river and we on the other. After this the old man went away with great appearance of satisfaction, and before noon a trade was established, which furnished us with hogs, fowls and fruit in great abundance, so that all the ship's company, whether sick or well, had as much as they could use.

## The Captain and His Queen <sup>287</sup>

### Extracts

from Captain Wallis' Journal of his Voyage round the World.  
H.M.S. Dolphin lay at anchor in Matavai Bay, Tahiti.

July 1767.

On Saturday the 11th, <sup>288</sup> in the afternoon, the Gunner came on board with a tall woman, who seemed to be about five and forty years of age, of a pleasing countenance and majestic deportment. He told me that she was but just come into that part of the country, and that seeing great respect paid her by the rest of the natives, he had made her some presents ; in return for which she had invited him to her house, which was about two miles up the valley, and given him some large hogs ; after which she returned with him to the watering-place, and expressed a desire to go on board the ship, in which he had thought it proper, on all accounts, that she should be gratified. She seemed to be under no restraint, either from diffidence or fear, when she first came into the ship ; and she behaved, all the while she was on board, with an easy freedom, that always distinguishes conscious superiority and habitual command. <sup>289</sup> I gave her a large blue mantle, that reached from her shoulders to her feet, which I threw over her, and tied on with ribbands ; I gave her also a looking-glass, beads of several sorts, and many other things, which she accepted with a very good grace, and much pleasure. She took notice that I had been ill, and pointed to the shore. I understood that she meant I should go thither to perfect my recovery, and I made signs that I would go thither the next morning. When she intimated an inclination to return, I ordered the Gunner to go with her, who having set her on shore, attended her to her habitation, which he described as being very large and well built. <sup>290</sup> He said, that in this house she had many guards and domesticks, and that she had another at a little distance, which was enclosed in lattice-work.

The next morning <sup>291</sup> I went on shore for the first time, and my Princess, or rather Queen, for such by her authority she appeared to be, soon after came to me, followed by many of her attendants. As she

<sup>291</sup> Sunday, 12 July 1767

perceived that my disorder had left me very weak, she ordered her people to take me in their arms, and carry me not only over the river, but all the way to her house ; and observing that some of the people who were with me, particularly the first Lieutenant and Purser, had also been sick, she caused them also to be carried in the same manner, and a guard, which I had ordered out upon the occasion, followed. In our way, a vast multitude crouded [sic] about us, but upon her waving her hand, without speaking a word, they withdrew, and left us a free passage. When we approached near her house, a great number of both sexes came out to meet her : these she presented to me, after having intimated by signs that they were her relations, and taking hold of my hand, she made them kiss it. We then entered the house, which covered a piece of ground 327 feet long, and 42 feet broad. It consisted of a roof, thatched with palm leaves, and raised upon 39 pillars on each side, and 14 in the middle. The ridge of the thatch, on the inside, was 30 feet high, and the sides of the house, to the edge of the roof, were 12 feet high ; all below the roof being open. As soon as we entered the house, she made us sit down, and then calling four young girls, she assisted them to take off my shoes, draw down my stockings, and pull off my coat, and then directed them to smooth down the skin, and gently chafe it with their hands : the same operation was also performed upon the first Lieutenant and the Purser, but upon none of those who appeared to be in health. While this was doing, our Surgeon, who had walked till he was very warm, took off his wig to cool and refresh himself ; a sudden exclamation of one of the Indians who saw it, drew the attention of the rest, and in a moment every eye was fixed upon the prodigy, and every operation was suspended : the whole assembly stood some time motionless, in silent astonishment, which could not have been more strongly expressed if they had discovered that our friend's limbs had been screwed on to the trunk ; in a short time, however, the young women who were chafing us, resumed their employment, and having continued it for about half an hour, they dressed us again, but in this they were, as may easily be imagined, very awkward [sic] ; I found great benefit, however, from the chafing, and so did the Lieutenant and Purser. After a little time, our generous benefactress ordered some bales of Indian cloth to be brought out, with which she clothed me, and all that were with me, according to the fashion of the country. At first I declined the acceptance of this favour, but being unwilling not to seem pleased with what was intended to please me, I acquiesced. When we went away, she ordered a very large sow, big with young, to be taken down to the boat, and accompanied us thither herself. She had given directions to her people to carry me, as they had done when I came, but as I chose rather to walk, she took me by the arm, and whenever we came to a splash of water or dirt, she lifted me over with as little trouble as it would have cost me to have lifted over a child if I had been well.

The next morning <sup>292</sup> I sent her, by the Gunner, six hatchets, six bill-hooks, and several other things ; and when he returned, he told me that he found her giving an entertainment to a great number of people, which, he supposed, could not be less than a thousand. The messes were all brought to her by the servants that prepared them, the meat being put into the shells of cocoa nuts, and the shells into wooden trays, somewhat like those used by our butchers, and she distributed them with her own hands to the guests, who were seated in rows round the great house. When this was done, she sat down herself, upon a place somewhat elevated above the rest, and two women, placing themselves one on each side of her, fed her, she opening her mouth as they brought their hands up with the food. When she saw the Gunner, she ordered a mess for him ; he could not certainly tell what it was, but he believed it to be fowl picked small, with apples cut among it, and seasoned with salt water ; it was, however, very well tasted. She accepted the things I sent her, and seemed to be much pleased with them. After this correspondence was established with the queen, provisions of every kind became much more plenty at market ; but though fowls and hogs were every day brought in, we were still obliged to pay more for them than at the first, the market having been spoiled by the nails which our

---

<sup>292</sup> Monday, 13 July 1767

men had stolen and given to the women ; I therefore gave orders that every man should be searched before he went on shore, and that no woman should be suffered to cross the river.

On the 14th, <sup>293</sup> the Gunner being on shore to trade, perceived an old woman on the other side of the river, weeping bitterly : when she saw that she had drawn his attention upon her, she sent a young man, who stood by her, over the river to him, with a branch of the plaintain tree in his hand. When he came up, he made a long speech, and then laid down his bough at the Gunner's feet : after this he went back and brought over the old woman, another man at the same time bringing over two large fat hogs. The woman looked round upon our people with great attention, fixing her eyes sometimes upon one, and sometimes upon another, and at last burst into tears. The young man who brought her over the river, perceiving the Gunner's concern and astonishment, made another speech, longer than the first : still, however the woman's distress was a mystery, but at length she made him understand that her husband, and three of her sons, had been killed in the attack of the ship. During this explanation, she was so affected that at last she sunk down unable to speak, and the two young men, who endeavoured to support her, appeared to be nearly in the same condition : they were probably two more of her sons, or some very near relations. The Gunner did all in his power to sooth and comfort her, and when she had in some measure recovered her recollection, she ordered the two hogs to be delivered to him, and gave him her hand in token of friendship, but would accept nothing in return, though he offered her ten times as much as would have purchased the hogs at market.

The next morning, <sup>294</sup> I sent the Second Lieutenant, with all the boats, and sixty men, to the westward, to look at the country, and try what was to be got. About noon he returned, having marched along the shore near six miles. He found the country very pleasant and populous, and abounding as well with hogs and fowls, as fruit, and other vegetables of various kinds. The inhabitants offered him no molestation, but did not seem willing to part with any of the provisions which our people were most desirous to purchase : they gave them, however, a few cocoa-nuts and plantains, and at length sold them nine hogs and a few fowls. The Lieutenant was of opinion, that they might be brought to trade freely by degrees, but the distance from the ship was so great, that too many men would be necessary for a guard. He saw a great number of very large canoes upon the beach, and some that were building. He observed that all their tools were made of stone, shells, and bone, and very justly inferred, that they had no metal of any kind. He found no quadruped among them, besides hogs and dogs, nor any earthen vessel, so that all their food is either baked or roasted. Having no vessel in which water could be subjected to the action of fire, they had no more idea that it could be made hot, than that it could be made solid. As the Queen was one morning at breakfast with us on board the ship, one of her attendants, a man of some note, and one of those that we thought were priests, saw the Surgeon fill the tea-pot by turning the cock of an urn that stood upon [sic] the table : having remarked this with great curiosity and attention, he presently turned the cock, and received the water upon his hand : as soon as he felt himself scalded, he roared out, and began to dance about the cabin with the most extravagant and ridiculous expressions of pain and astonishment : the other Indians, not being able to conceive what was the matter with him, stood staring at him in amaze, and not without some mixture of terror. The Surgeon, however, who had innocently been the cause of the mischief, applied a remedy, though it was some time before the poor fellow was easy.

On Thursday the 16th, <sup>295</sup> Mr. Furneaux, my Second Lieutenant, was taken very ill, which distressed me greatly, as the First Lieutenant was not yet recovered, and I was still in a very weak state myself : I was this day also obliged once more to punish Proctor, the Corporal of marines, for mutinous

---

<sup>293</sup> Tuesday, 14 July 1767

<sup>294</sup> Wednesday, 15 July 1767

<sup>295</sup> Thursday, 16 July 1767

behaviour. The Queen had now been absent several days ; but the natives made us understand by signs, that the next day she would be with us again.

Accordingly the next morning <sup>296</sup> she came down to the beach, and soon after a great number of people, whom we had never seen before, brought to market provisions of every kind ; and the Gunner sent off fourteen hogs, and fruit in great plenty.

In the afternoon of the next day <sup>297</sup> the Queen came on board, with a present of two large hogs, for she never condescended to barter, and in the evening she returned on shore. I sent a present with her, by the Master, and as soon as they landed, she took him by the hand, and having made a long speech to the people that flocked round them, she led him to her house, where she cloathed him, as she had before done me, according to the fashion of the country.

The next morning <sup>298</sup> he sent off a greater quantity of stock than we had ever procured in one day before ; it consisted of forty-eight hogs and pigs, four dozen of fowls, with bread-fruit, bananas, apples, and cocoa-nuts, almost without number.

On the 20th, <sup>299</sup> we continued to trade with good success, but in the afternoon it was discovered that Francis Pinckney, one of the seamen, had drawn the cleats to which the main sheet was belayed, and aster stealing the spikes, thrown them over-board. Having secured the offender, I called all the people together on the deck, and after taking some pains to explain his crime, with all its aggravations, I ordered that he should be whipped with with nettles while he ran the gauntlet thrice round the deck : my rhetoric, however, had very little effect, for most of the crew being equally criminal with himself, he was handled so tenderly, that others were rather encouraged to repeat the offence by the hope of impunity, than deterred by the fear of punishment. To preserve the ship therefore, from being pulled to pieces, and the price of refreshments from being raised so high as soon to exhaust our articles of trade, I ordered that no man, except the wooders and waterers, with their guard, should be permitted to go on shore.

On the 21st, <sup>300</sup> the Queen came again on board, and brought several large hogs as a present, for which, as usual, she would accept of no return. When she was about to leave the ship, she expressed a desire that I should go on shore with her, to which I consented, taking several of the officers with me. When we arrived at her house, she made us all sit down, and taking off my hat, she tied to it a bunch or tuft of feathers of various colours, such as I had seen no person on shore wear but herself, which produced by no means a disagreeable effect. She also tied round my hat, and the hats of those who were with me, wreaths of braided or plaited hair, and gave us to understand that both the hair and workmanship were her own : she also presented us with some matts, that were very curiously wrought. In the evening she accompanied us back to the beach, and when we were getting into the boat, she put on board a fine large sow, big with young, and a great quantity of fruit. As we were parting, I made signs that I should quit the island in seven days : she immediately comprehended my meaning, and made signs that I should stay twenty days ; that I should go two days journey into the country, stay there a few days, bring down plenty of hogs and poultry, and after that leave the island. I again made signs that I must go in seven days ; upon which she burst into tears, and it was not without great difficulty that she was pacified.

---

<sup>296</sup> Friday, 17 July 1767

<sup>297</sup> Saturday, 18 July 1767

<sup>298</sup> Sunday, 19 July 1767

<sup>299</sup> Monday, 20 July 1767

<sup>300</sup> Tuesday, 21 July 1767

The next morning, <sup>301</sup> the Gunner sent off no less than twenty hogs, with great plenty of fruit. Our decks were now quite full of hogs and poultry, of which we we killed only the small ones, and kept the others for sea stores ; we found, however, to our great mortification, that neither the fowls nor the hogs could, without great difficulty, be brought to eat any thing but fruit, which made it necessary to kill them faster than we should otherwise have done ; two, however, a boar and a sow, were brought alive to England, of which I made a present to Mr. Stephens, Secretary to the Admiralty ; the sow afterwards died in pigging, but the boar is still alive.

On the 23d, <sup>302</sup> we had very heavy rain, with a storm of wind that blew down several trees on shore, though very little of it was felt where the ship lay.

The next day, <sup>303</sup> I sent the old man, who had been of great service to the Gunner at the market-tent, another iron pot, some hatchets and bills, and a piece of cloth. I also sent the Queen two turkies, two geese, three Guinea hens, a cat big with kitten, some china, looking-glasses, glass bottles, shirts, needles, thread, cloth, ribbands, peas, some small white kidney-beans, called callivances, and about sixteen different sorts of garden seeds, and a shovel, besides a considerable quantity of cutlery wares, consisting of knives, scissars, [sic] bill-hooks, and other things. We had already planted several sorts of the garden seeds, and some peas in several places, and had the pleasure to see them come up in a very flourishing state, yet there were no remains of them when Captain Cook left the island. I sent her also two iron pots, and a few spoons. In return for these things, the Gunner brought off eighteen hogs, and some fruit.

In the morning of the 25th, <sup>304</sup> I ordered Mr. Gore, one of the mates, with all the marines, forty seamen, and four midshipmen, to go up the valley by the river as high as they could, and examine the soil and produce of the country, noting the trees and plants which they should find, and when they saw any stream from the mountains, to trace it to its source, and observe whether it was tinged with any mineral or ore. I cautioned them also to keep continually upon their guard against the natives, and directed them to make a fire, as a signal, if they should be attacked. At the same time, I took a guard on shore, and erected a tent on a point of land, to observe an eclipse of the sun, which, the morning, being very clear, was done with great accuracy.

	Hours.	Min.	Seconds.
The immersion began, by true time, at	6	51	50
The emersion, by true time, was at	8	1	0
The duration of the eclipse was	1	9	10

The latitude of the point, on which the observation was made, was 170° 30' S. the sun's declination was 190° 40' N. and the variation of the needle 5° 36' E.

After the observation was taken, I went to the Queen's house, and shewed her the telescope, which was a reflector. After she had admired its structure, I endeavoured to make her comprehend its use,

<sup>303</sup> Friday, 24 July 1767

<sup>304</sup> Saturday, 25 July 1767

and fixing it so as to command several distant objects, with which she was well acquainted, but which could not be distinguished with the naked eye, I made her look through it. As soon as she saw them, she started back with astonishment, and directing her eye as the glass was pointed, stood some time motionless and silent ; she then looked through the glass again, and again sought, in vain, with the naked eye, for the objects which it discovered. As they by turns vanished and re-appeared, her countenance and gestures expressed a mixture of wonder and delight which no language can describe. When the glass was removed, I invited her, and several of the Chiefs that were with her, to go with me on board the ship, in which I had a view to the security of the party that I had sent out ; for I thought that while the Queen, and the principal people were known to be in my power, nothing would be attempted against any person belonging to the ship on shore. When we got on board, I ordered a good dinner for their entertainment, but the Queen would neither eat nor drink ; the people that were with her eat very heartily of whatever was set before them, but would drink only plain water.

In the evening our people returned from their excursion, and came down to the beach, upon which I put the Queen and her attendants into the boats, and sent them on shore. As she was going over the ship's side, she asked, by signs, whether I still persisted in my resolution of leaving the island at the time I had fixed ; and when I made her understand that it was impossible I should stay longer, she expressed her regret by a flood of tears, which for a while took away her speech. As soon as her passion subsided, she told me that she would come on board again the next day : and thus we parted.

#### C H A P. VII.

AFTER the mate came on board, he gave me a written account of his expedition to the following effect :

“At four o'clock in the morning, of Saturday the 25th of June, I landed, with four midshipmen, a serjeant, and twelve marines, and twenty-four seamen, all armed, besides four who carried hatchets and other articles of traffic, and four who were loaded with ammunition and provisions, the rest being left with the boat : every man had his day's allowance of brandy, and the hatchet men two small kegs, to give out when I should think proper.

“As soon as I got on shore, I called upon our old man, and took him with us : we then followed the course of the river in two parties, one marching on each side. For the first two miles it flowed through a valley of considerable width, in which were many habitations, with gardens walled in, and abundance of hogs, poultry, and fruit ; the soil here seemed to be a rich fat earth, and was of a blackish colour. After this the valley became very narrow, and the ground rising abruptly on one side of the river, we were all obliged to march on the other. Where the stream was precipitated from the hills, [sic] channels had been cut to lead the water into gardens and plantations of fruit trees : in these gardens we found an herb which had never been brought down to the water-side, and which we perceived the inhabitants eat raw. I tasted it, and found it pleasant, its flavour somewhat resembling that of the West Indian spinnage, called *Calleloor*, though its leaf was very different. The ground was fenced off so as to make a very pretty appearance ; the bread-fruit and apple-trees were planted in rows on the declivity of the hills, and the cocoa-nut and plaintain, which require more moisture on the level ground : under the trees, both on the sides and at the foot of the hills, there was very good grass, but no underwood. As we advanced, the hills on each side swelled into mountains, and vast craggs every where projected over our heads. Travelling now became difficult, and when we had proceeded about four miles, the road for the last mile having been very bad, we sat down to rest ourselves, and take the refreshment of our breakfast ; we ranged ourselves upon the ground under a large apple-tree, in a very pleasant spot ; but just as we were about to begin our repast, we were suddenly alarmed by a confused sound of many voices, and a great shouting, and presently afterwards saw a multitude of men, women, and children, upon the hill above us ; our old man seeing us rise

hastily, and look to our arms, beckoned to us to sit still, and immediately went up to the people that had surprised us. As soon as he joined them they were silent, and soon after disappeared ; in a short time, however, they returned, and brought with them a large hog ready roasted, with plenty of bread-fruit, yams, and other refreshments, which they gave to the old man, who distributed them among our people. In return for this treat, I gave them some nails, buttons, and other things, with which they were greatly delighted. After this we proceeded up the valley as far as we could, searching all the runs of water, and all the places where water had run, for appearances of metal or ore, but could find none, except what I have brought back with me. I shewed all the people that we met with, the piece of saltpetre which had been picked up in the island, and which I had taken with me for that purpose, but none of them took any notice of it, nor could I learn from them any thing about it. The old man began now to be weary, and there being a mountain before us, he made signs that he would go home : before he left us, however, he made the people who had so liberally supplied us with provisions, take the baggage, with the fruit that had not been eaten, and some cocoa-nut-shells full of fresh water, and made signs that they should follow us up the side of the mountain. As soon as he was gone, they gathered green branches from the neighbouring trees, and with many ceremonies, of which we did not know the meaning, laid them down before us : after this they took small berries with which they painted themselves red, and the bark of a tree that contained a yellow juice, with which they stained their garments in different parts. We began to climb the mountain while our old man was still in sight, and he, perceiving that we made our way with difficulty through the weeds and brush-wood, which grew very thick, turned back, and said something to the natives in a firm loud tone ; upon which twenty or thirty of the men went before us, and cleared us a very good path ; they also refreshed us with water and fruit as we went along, and assisted us to climb the most difficult places, which we should otherwise have found altogether impracticable. We began to ascend this hill at the distance of about six miles from the place where we landed, and I reckoned the top of it to be near a mile above the river that runs through the valley below. When we arrived at the summit, we again sat down to rest and refresh ourselves. While we were climbing we flattered ourselves that from the top we should command the whole island, but we now saw mountains before us so much higher than our situation, that with respect to them we appeared to be in a valley ; towards the ship indeed the view was enchanting : the sides of the hills were beautifully clothed with wood, villages were every where interspersed, and the vallies [sic] between them afforded a still richer prospect ; the houses stood thicker, and the verdure was more luxuriant. We saw very few habitations above us, but discovered smoke in many places ascending from between the highest hills that were in sight, and therefore I conjecture that the most elevated parts of the country are by no means without inhabitants. As we ascended the mountain, we saw many springs gush from fissures on the side of it, and when we had reached the summit, we found many houses that we did not discover as we passed them. No part of these mountains is naked ; the summits of the highest that we could see were crowned with wood, but of what kind I know not : those that were of the same height with that which we had climbed, [sic] were woody on the sides, but on the summit were rocky and covered with fern. Upon the flats that appeared below these, there grew a sedgy kind of grass and weeds : in general the soil here, as well as in the valley, seemed to be rich. We saw several bushes of sugar-cane, which were very large and very good, growing wild, without the least culture. I likewise found ginger and turmeric, and have brought samples of both, but could not procure seeds of any tree, most of them being in blossom. After traversing the top of this mountain to a good distance, I found a tree exactly like a fern, except that it was 14 or 15 feet high. This tree I cut down, and found the inside of it also like a fern : I would have brought a piece of it with me, but found it too cumbersome, and I knew not what difficulties we might meet with before we got back to the ship, which we judged to be now at a great distance. After having again recruited our strength by refreshment and rest, we began to descend the mountain, being still attended by the people to whose care we had been recommended by our old man. We kept our general direction towards the ship, but sometimes deviated a little to the right and left in the plains and vallies, when we saw any houses that were pleasantly situated, the inhabitants being every where

ready to accommodate us with whatever they had. We saw no beast, except a few hogs, nor any birds, except parrots, parroquets, and green doves ; by the river, however, there was plenty of ducks, and every place that was planted and cultivated, appeared to flourish with great luxuriance, though in the midst of what had the appearance of barren ground. I planted the stones of peaches, cherries, and plums, with a great variety of garden seeds, where I thought it was most probable that they would thrive, and limes, lemons, and oranges, in situations which resembled those in which they are found in the West Indies. In the afternoon, we arrived at a very pleasant spot, within about three miles of the ship, where we procured two hogs and some fowls, which the natives dressed for us very well, and with great expedition. Here we continued till the cool of the evening, and then made the best of our way for the ship, having liberally rewarded our guides, and the people who had provided us so good a dinner. Our men behaved through the whole day with the greatest decency and order, and we parted with our Indian friends in perfect good-humour with each other.”

About 10 o'clock, the next morning, <sup>305</sup> the Queen came on board, according to her promise, with a present of hogs and fowls, but went on shore again soon afterwards. This day, the Gunner sent off near thirty hogs, with great plenty of fowl and fruit. We completed our wood and water, and got all ready for sea. More inhabitants came down to the beach, from the inland country, than we had seen before, and many of them appeared, by the respect that was paid them, to be of a superior rank. About three o'clock in the afternoon, the Queen came again down to the beach, very well dressed, and followed by a great number of people. Having crossed the river with her attendants, and our old man, she came once more on board the ship. She brought with her some very fine fruit, and renewed her solicitation, that I would stay ten days longer, with great earnestness, intimating that she would go into the country, and bring me plenty of hogs, fowls, and fruit. I endeavoured to express a proper sense of her kindness and bounty, but assured her that I should certainly sail the next morning. This, as usual, threw her into tears, and after she recovered, she enquired by signs when I should return : I endeavoured to express fifty days, and she made signs for thirty : but the sign for fifty being constantly repeated, she seemed satisfied. She stayed on board till night, and it was then with the greatest difficulty that she could be prevailed upon to go on shore. When she was told that the boat was ready, she threw herself down upon the arm-chest, and wept a long time with an excess of passion that could not be pacified ; at last, however, though with the greatest reluctance, she went into the boat, and was followed by her attendants and the old man. The old man had often intimated that his son, a lad about fourteen years of age, should go with us, and the boy seemed to be willing : he had, however, now disappeared for two days. I enquired after him when I first missed him, and the old man gave me to understand that he was gone into the country to see his friends, and would return time enough to go with us ; but I have reason to think that, when the time drew near, the father's courage failed, and that to keep his child, he secreted him till the ship was gone, for we never saw him afterwards.

At break of day, on Monday the 27th, <sup>306</sup> we unmoored, and at the same time I sent the barge and cutter to fill the few water-casks that were now empty. When they came near the shore, they saw, to their great surprise, the whole beach covered with inhabitants, and having some doubt whether it would be prudent to venture themselves among such a multitude, they were about to pull back again for the ship. As soon as this was perceived from the shore, the Queen came forward, and beckoned them ; at the same time guessing the reason of what had happened, she made the natives retire to the other side of the river. The boats then proceeded to the shore, and filled the casks ; in the mean time she put some hogs and fruit on board, and when they were putting off would fain have returned with them to the ship. The officer, however, who had received orders to bring off none of the natives, would not permit her ; upon which she presently launched a double canoe, and was rowed off by her

---

<sup>305</sup> Sunday, 26 July 1767

<sup>306</sup> Monday, 27 July 1767

own people. Her canoe was immediately followed by fifteen or sixteen more, and all of them came up to the ship. The Queen came on board, but not being able to speak, she sat down and gave vent to her passion by weeping. After she had been onboard, about an hour, a breeze springing up we weighed anchor and made sail. Finding it now necessary to return into her canoe, she embraced us all in the most affectionate manner, and with many tears ; all her attendants also expressed great sorrow at our departure. Soon after it fell calm, and I sent the boats a-head to tow, upon which all the canoes returned to the ship, and that which had the Queen on board came up to the gun-room port, where her people made it fast. In a few minutes she came into the bow of her canoe, where she sat weeping with inconsolable sorrow. I gave her many things which I thought would be of great use to her, and some for ornament ; she silently accepted of all, but took little notice of any thing. About 10 o'clock we were got without the reef, and a fresh breeze springing up, our Indian friends, and particularly the Queen, once more bade us farewell, [sic] with such tenderness of affection and grief, as filled both my heart and my eyes.

### A Martinet and His Nemesis

Lieutenant Bligh, Commander of H.M. Armed Vessel Bounty, without doubt brought his troubles on himself. Clear proof is to hand. The Journal of one of his crew, James Morrison, holding a gunner's certificate though acting as boatswain's mate, lies today in the Mitchell Library at Sydney N.S.W. The man though but poorly educated was a born writer. He states facts without rancour in his well nigh daily record of all that transpired up to and succeeding the crisis. What happened to him afterwards is not what this memoranda requires, his account of the martinet's dealing with his crew is the object aimed at and Exerpts follow, his oft wild spelling and phonetic names of places and persons only given present day form for the convenience of the reader. In those days discipline had to be severe even to brutality but Bligh was a tyrant and at the same time petty, there was no give and take with him. There is a limit to human endurance and discipline can snap when the strain becomes past bearing. So Bligh found.

The Bounty left the Homeland December 23, 1787 and trouble was not long in appearing, provender the cause. It was the middle of January.

The cheese was got up for an airing.

The Weather still Continuing fine a few days after, the Cheese was got up to Air, when on opening the Casks, two Cheeses were Missed by Mr. Bligh who declared that they were stolen, the Cooper declared that the Cask had been opened before, while the Ship was in the River by Mr. Samuel's <sup>307</sup> order and the Cheeses sent to Mr. Bligh's house — M<sup>r</sup> Bligh without making further inquiry into the Matter, ordered the Allowance of Cheese to be stoppd from Officers and Men till the deficiency should be made good, and told the Cooper He would give him a dam'd good flogging If He said any More about it.

<sup>307</sup> WWB: *the Ship's Clerk*

<sup>308</sup> Morrison's journal was published in [The journal of James Morrison, boatswain's mate of the Bounty, describing the mutiny & subsequent misfortunes of the mutineers, together with an account of the island of Tahiti \(London, 1935\)](#). The

As the ship approached the Equator and the “pumpions” began to spoil, they were ordered to be issued in place of bread. This the crew refused.

The People being desirous to know at what rate the exchange was to be, enquired of Mr. Samuel who informd them that they were to have one pound of Pumpion in lieu of two pounds of bread, this they refused, and on Mr. Blighs being informed of it He Came up in a violent passion, and Calld all hands telling Mr. Samuel to Call the first Man of every Mess and let him see Who would dare to refuse it, or any thing else that He should order to be Served, saying ‘You dam’d Infernal scoundrels, I’ll make you eat Grass or any thing you can catch before I have done with you.’

Another complaint shortly after the above was that both beef and pork casks were never weighed when opened to ensure the full quantity issued.

The Master making this known to Mr. Bligh he order’d all Hands aft and informd them that evry thing relative to the provisions was transacted by His Orders, and it was therefore Needless to make any Complaint for they would get no redress, as he was the fittest Judge of what was right or wrong. He further added, that He would flog the first Man severely who should dare attempt to make any Complaint in future and dismissed them with severe threats.

Appetites were good but there were limits to the cuisine.

23d. March. One of the Sheep dying this morning Lieut. Bligh order’d it to be Issued in lieu of the Days allowance of Pork & Pease; declaring that it would Make a delicious Meal and that it weighd upwards of fifty pounds, it was devided and most part of it thrown overboard, and some dried shark supplyd its place for a Sundays dinner, for it was no other then Skin & Bone.

But Morrison does not omit the Credit account where Credit was due ; and Bligh’s change of temper is altogether too refreshing to pass it over in silence.

On the 18th of April Mr. Bligh ordered all hands aft and after returning them his thanks for their unremitted attention to their duty,<sup>309</sup> informd them of his intention to bear away for the Cape of Good Hope; as it appear’d to him an Impossibility to get round Cape Horn. This was received with Universal Joy and returnd according to Custom with three Cheers...

The Bounty made the Cape in May and sailed from there on the 1<sup>st</sup> of July, arrived in New Holland<sup>310</sup> early in September and in the middle of that month sailed for Tahiti. It was in this last stretch that

were sown seeds of eternal discord between Lieut. Bligh and his Officers.

He confined the Carpenter, and found fault with the innatention of the rest, to their duty, which produced continual disputes evry one endeavouring to thwart the others in their

<sup>309</sup> WWB: (*as they essayed Cape Horn with its storms*)

<sup>310</sup> [New Holland](#) is a historic name for the island continent of Australia. The name was first applied to Australia in 1644 by the Dutch seafarer Abel Tasman as Nova Hollandia, naming it after the Dutch province of Holland, and remained in use for 180 years.

duty, this made the men exert themselves to divert the storm from falling on them by a strict attention to their duty and in this they found their account and rejoyced in private at their Good success. Soon after we saild we discovered a Group of small Islands to the Eastward of New Zealand which were Call'd the Bountys Isles, and Jas. Valentine having been let blood his arm festered and turnd to a mortification of which he Died. Several of the seamen particularly the oldest began to complain of Pains in their limbs and some symptoms of the Scurvy began to make its appearance and weakness and debility began to be observed through the Ships Company, for which Essence of Malt was given to those who appeard worst with portable soup & rice from the Surgeons Chest; the salt provisions were also stopd & flour given in lieu. October, 1788. During this passage Mr. Bligh and His Mess mates the Master & Surgeon fell out, and seperated, each taking his part of the stock, & retiring to live in their own Cabbins, after which they had several disputes & seldom spoke but on duty; and even then with much apperant reserve.

Tahiti was reached on the 25<sup>th</sup> of October 1788 and the Bounty dropped anchor in Matavai Bay.

Imediatly on anchoring, an order signd by Mr. Bligh was stuck up on the Mizen Mast, Prohibiting the Purchase of Curiosities or any thing except Provisions — there were few or no instances of the order being disobeyd, as no curiosity struck the seamen so forcibly as a roasted pig & some bread fruit, and these Came in abundance evry species of Ships Provision except grog being stop'd.

Provisions at first came aboard in great plenty but by mid December the supply of hogs slackened and

Mr. Bligh seized on all that came to the ship big & small Dead or alive, taking them as his property, and serving them as the ship's allowance at one pound pr. Man pr. Day. He also seized on those belonging to the Master, & killd them for the ships use, tho He had more then 40 of different sizes on board of his own, and there was then plenty to be purchaced: nor was the price much risen from the first, and when the Master spoke to him, telling him the Hogs were his property, he told him that 'He Mr. Bligh would convince him that evry thing was his, as soon as it was on board, and that He would take nine tenths of any mans property and let him see who dared say any thing to the contrary', those of the seamen were seized without ceremony, and it became a favour for a man to get a Pound extra of His own hog.

Natives now watched their opportunity when Bligh was ashore to bring off food for the crew aboard — but

as Mr. Bligh observed this, and saw that His diligence was like to be evaded, he ordered a Book to be kept in the Binnacle wherein the Mate of the Watch was to insert the Number of Hogs or Pigs with the Weight of each that came into the Ship to remedy this, the Natives took another Method which was Cutting the Pigs up, and wraping them in leaves and covering the Meat with Bread fruit in the Baskets, and sometimes with peeld Cocoa Nuts, by which means, as the Bread was never seized, they were a Match for all his industry; and he never suspected their artifice. By this means provisions were still plenty.

The Bounty sailed from Tahiti 4<sup>th</sup> of April 1789 and headed for the Friendly Islands, <sup>311</sup> reaching Nomuka on the 23<sup>rd</sup>. A watering party went ashore.

Annamooka or Rotterdam was first discovered by Tasman the Dutch Navigator who reduced the Natives to good behaviour but their present behaviour seems to be such as the dread of fire arms produces for they were very rude & attempted to take the Casks from the Waterers and the axes from the Wooding party; and if a Musquet was pointed at any of them it produced no other effect then a return of the Compliment, by poising their Club or Spear with a menacing look; and as it was Lieut. B.'s orders, that no person should affront them on any occasion, they were emboldend by Meeting no return to their Insolence, and became so troublesom that Mr. Christian, who had the Command of the Watering party, found it difficult to carry on his duty, of this He informd Lieut. Bligh, who dam'd him for a Cowardly rascal, asking him if he was afraid of a set of Naked Savages while He had arms; to which Mr. Christian answerd 'the Arms are no use while your orders prevent them from being used'.

Leaving Nomuka, they approached Tofua with its volcano on the 27<sup>th</sup>. There was no breeze and they lay all day within 7 or 8 leagues of the island.

In the Afternoon of the 27<sup>th</sup> Mr. Bligh Came up, and taking a turn about the Quarter Deck when he missed some of the Cocoa Nuts which were piled up between the Guns upon which he said that they were stolen and Could not go without the knowledge of the Officers, who were all Calld and declared that they had not seen a Man touch them, to which Mr. Bligh replied 'then you must have taken them yourselves', and orderd Mr. Elphinstone <sup>312</sup> to go and fetch evry Cocoa nut in the Ship aft, which He obeyd.

He then questioned evry Officer in turn concerning the Number they had bought, & Coming to Mr. Christian askd Him, Mr. Christian answerd 'I do not know Sir, but I hope you dont think me so mean as to be Guilty of Stealing yours'. Mr. Bligh replied 'Yes you dam'd Hound I do — You must have stolen them from me or you could give a better account of them — God dam you, you Scoundrels, you are all thieves alike, and combine with the men to rob me — I suppose you'll Steal my Yams next, but I'll sweat you for it, you rascals, I'll make half of you Jump overboard before you get through Endeavour Streights'.

He then called M<sup>r</sup> Samuel

'Stop these Villains Grog, and Give them but Half a Pound of Yams tomorrow, and if they steal then, I'll reduce them to a quarter'. The Cocoa Nuts were Carried aft, & He Went below, the officers then got together and were heard to murmur much at such treatment, and it was talked among the Men that the Yams would be next seized, as Lieut. Bligh knew that they had purchased large quantitys of them and set about secreting as many as they Could.

This was the crisis. Now came the aftermath.

---

<sup>311</sup> Tonga

<sup>312</sup> WWB: (*the master's mate*)

The night being Calm we made no way, & in the Morning of the 28<sup>th</sup> the Boatswain <sup>313</sup> Came to my hammock and waked me telling me to my great surprize that the ship was taken by Mr. Christian. I hurried on deck and found it true — seeing Mr. Bligh in his shirt with his hands tied behind him and Mr. Christian standing by him with a drawn Bayonet in his hand and his Eyes flaming with revenge. Several of the men were under arms, and the Small Cutter hoisted out, and the large one getting ready.

I applied to the Boatswain to know how I should proceed, but he was as much at a loss as I, and in a Confused Manner told me to lend a hand in Clearing the Boat and Getting her out, which I did, when she was out the Small one was got in — Mr. Christian Calld to Mr. Hayward and Mr. Hallet to get into the Boat and ordered Churchill to See the Master & Clerk into Her. The Lieutenant then began to reason but Mr. Christian replied ‘Mamoo, Sir, not a word, or deaths your portion’. Mr. Hayward & Mr. Hallet begd with tears in their eyes to be sufferd to remain in the ship but Mr. Christian ordered them to be silent. The Boatswain and Carpenter Came aft (the Master & Gunner being Confined below) and beggd for the Launch, which with much hesitation was Granted, and she was ordered out. While I was Clearing her the Master Came up & spoke to Mr. Bligh and afterwards Came to Me, asking me if I had any hand in the Mutiny — I told him I had not, and he then desired me to try what I Could do to raise a party and rescue the Ship, which I promised to do. In consequence of which Jno. Millward who was by me at the time Swore he would stand by me, and went to Musprat, Burket and the Boatswain on that score, but Churchill seeing the Master speaking to me (tho he was Instantly hurried away by Quintrell ordering him down to his Cabbin) Came and demanded what he had said. I told him that He was asking about the Launch but Alexr. Smith who stood on the other side of the Boat told Churchill to look sharp after me saying ’tis a dam’d lye, Chas, for I saw him and Millward shake hands, when the Master spoke to them, and Calld to the others to stand to their Arms, which put them on their Guard’.

As I saw none near me that seemd inclined to make a push, and the Officers busy getting the boat in order, I was fain to do so too, and the Boat was got out, when evry one ran to get what He could into her and get in themselves as fast as possible. The officers were hurryd in as fast as possible, and when Mr. Bligh found that He must go, He beggd of Mr. Christian to desist, saying ‘I’ll Pawn my Honor, I’ll Give My Bond, Mr. Christian, never to think of this if youll desist’; and urged his wife and family, to which Mr. Christian replyd ‘No, Captain Bligh, if you had any Honor, things had not come to this; and if you Had any regard for your Wife & family, you should Have thought on them before, and not behaved so much like a villain’.

Lieutenant Bligh attempted again to speak, but was ordered to be silent; the Boatswain also tryd to pacify Him to which He replied ‘’tis too late, I have been in Hell for this Fortnight passd and am determined to bear it no longer, and you know Mr. Cole that I have been used like a Dog all the Voyage’. The Master begd to be permitted to stay, but was ordered into the Boat, and Mr. Christian gave Churchill orders to see that no arms went in the Boat.

In Getting the things into the Boat a dispute happend between Churchill and the Carpenter about the latters tool Chest which Churchill wanted to keep in the Ship but by Mr. Christians orders it was sufferd to go in the Boat but he told Churchill to keep the

---

<sup>313</sup> WWB: (Cole)

Carpenters Mates on board and the Armourer — the Masts & Sails were got in and all the New light Canvas with Nails, Saws (hand Whip & Cross Cut), trade, and the Lieutenants & Masters Cloaths, two Gang Casks of Water, four empty breeves, 3 bags of Bread with Mr. Blighs Case, Some Bottles of Wine and several other things, insomuch that she almost sunk a long side. The Lieut. then Beggd that some of the people would stay, and askd Mr. Christian to let the Master stay with them but he answerd, ‘the men may stay but the Master must go with you’. Mr. Bligh then said ‘Never fear my lads you cant all go with me my lads I’ll do you Justice if ever I reach England’. He was then brought to the Gangway and cast of his hands and he went into the Boat. While the Boatswain was getting his things into the Boat I told him my intention was to stay and take my chance in the ship, telling him of the Captains Promise and as he saw the situation of the Boat which was scarcely 7 inches free I had no occasion to point out the Danger to Him, he repeated the Lieutenants promise saying ‘God Bless you my boy; were it not for my Wife & family I would stay myself’ — after Mr. Bligh was In the Boat he beggd for His Commission and Sextant; the Commission was Instantly Given him with his Pocket Book and private Journal by Mr. Christians order, and He took His own Sextant which Commonly Stood on the Dripstone Case and Handed it into the Boat with a Daily Assistant, saying ‘there Captain Bligh this is sufficient for evry purpose and you know the Sextant to be a good one’.

The Boat was now veerd astern and several things thrown overboard to make room, having on board 19 hands. When the boat was put to rights Mr. Bligh begd for a Musquett But this was refused, and Mr. Christian ordered four Cutlasses to be handed in, and I handed in 25 or 26 four pound pieces of Pork, & two Gourds of water. Several other things were handed in over the stern, and as the ship made little way they got ready for rowing and were Cast off, when they Stood in for the land about 8 or 9 Leagues distant. It was now about 8 o Clock in the Morning, the large Cutter was hoisted in and Stowd, and the Arms Collected and put into the Chest when the whole that appeard were 10 Musquets, 2 Pistols and 2 Cutlasses, the Pistols had been taken from the Masters Cabbin and were loaded with powder for the Purpose of firing the Guns.

The behaviour of the Officers on this Occasion was dastardly beyond description none of them ever making the least attempt to rescue the ship which would have been effected had any attempt been made by one of them as some of those who were under arms did not know what they were about, and Robt. Lamb who I found Gentry at the fore Hatchway when I first came on Deck went away in the Boat & Isaac Martin had laid his arms down & gone into the boat but had been Ordered out again.

Their passive obedience to Mr. Christians orders even surprized himself and he said immediately after the boat was gone that something more than fear had posessd them to suffer themselves to be sent away in such a manner without offering to make resistance. When the Boat Put off Mr. Stuart and Mr. Heywood who had been Confined in their birth came up and Mr. Christian related the Cause of this sad affair to the following effect — Finding himself much hurt by the treatment he had received from Mr. Bligh, he had determined to quit the ship the preceeding evening, and informed the Boatswain, Carpenter, Mr. Stuart and Mr. Hayward of his resolution who supplied Him with some Nails, Beads and part of a roasted pig with some other articles which He put into a bag which He got from Mr. Hayward (the bag was produced and I knew it to be the same which I had made for Mr. Hayward some time before), the bag was put into the Clue of Robt. Tinklers hammock, where he found it at Night; but the Matter was then Smothered, & passd off — he also made fast some staves to a stout Plank which lay on the larboard

Gangway, with which he intended to make his escape; but finding he could not effect it in the first and Middle Watches, as the people were all stirring, he went to sleep about half past three in the Morning.

When Mr. Stuart calld him to relieve the Watch he had not Slept long, and was much out of order, & Stuart begd him not to attempt swimming away, saying ‘the People are ripe for any thing’, this made a forcible impression on his mind & finding that Mr. Hayward the Mate of his Watch (with whom he refused to discourse) soon went to sleep on the Arm Chest which stood between the Guns, and Mr. Hallet not making his appearance, He at once resolved to seize the ship and disclosing his Intention to Quintrell and Martin, they Calld up Churchill, and Thompson who put the business in practice and with Smith, Williams & McCoy He went to Coleman and demanded the Keys of the Arm Chest (which Coleman the Armourer always kept) saying he wanted a Musquet to shoot a shark which happend to Come alongside; and finding Mr. Hallet asleep on the Arm Chest he roused him and sent him on Deck the keys were Instantly procured and His party armd, as were all the rest who stood in his way, without their knowing Tor what purpose. In the Mean time Norman had Waked Mr. Hayward to look after the shark, at which He was busy when Mr. Christian Came up the fore Hatchway with his party, he left Thompson to take Care of the Arm Chest, arming Burket [an]d Lamb at the Hatch way and Commanding Mr. Hayward and Mr. Hallet to be silent He proceeded to Secure Lieut. Bligh, whom He brought on Deck placing two Centrys at the Masters Cabbin door to keep him in, and keep the Gunner & Mr. Neilson in the Cockpit and proceeded as before described.

About 9 o Clock a Breeze sprang up and sails were trimmd. When asking the Oppinion of His party, it was agreed to steer for Taheite & Stood to ye S. W. When Mr. Christian had related as above I then Recollected seeing him Make the staves fast to the Plank the night before, and hearing the Boatswain say to the Carpenter ‘It wont do to night’, and afterwards seeing Mr. Stuart and Mr. Christian several times up and down the Fore Cock pit where the Boatswains and Carpenters Cabbins were, and where Mr. C. seldom or ever went.

At Noon Toofoa bore N E 10 Leagues the Boat out of sight under the Land.

The Martinet had met his nemesis.

Mr. Christian having as beforesaid determined on his Rout Hauld to the Southward in order to proceed to Taheite touching at Toobouai in his Way, and Having devided what men that remaind on board into two watches, he Appointed G. Stuart to the Charge of one, and kept the other himself, and ordered Me to take Charge of the Stores and Act as Boatswain, Thos. McIntosh as Carpenter and Jno. Mills as Gunner, however this is not to be considered as a point of authority and was for no other purpose but that of taking Care of the Stores and that He might have some person to Call on in these departments evry one doing their duty alike and obeying his orders—and Here it may not be Improper to explain the Affair more Clearly by giving a list of those who went in the Boat as well as what remained. Those who went in the Boat were

The cutter held the following

1. Wm. Bligh – Lieut. & Commander <sup>314</sup>  
 Jno. Fryer – Master  
 Wm. Elphinstone – Master's Mate  
 Wm. Cole – Boatswain  
 5. Wm. Purcill – Carpenter  
 Wm. Peckover – Gunner  
 Thos. Hayward – Mid  
 Jno. Hallet – Mid  
 Jno. Samuel – Clerk  
 10. Thos. Ledward – Surgeons Mate  
 Robt. Tinkler – Mid  
 Jno. Norton – Qr. Master  
 Peter Linkletter – Qr. Master  
 Geo. Simpson – do. Mate  
 15. Lawce. Labogue – Sail Maker  
 Jno. Smith – Captains Cook  
 Thos. Hall – Ships Cook  
 Robt. Lamb – Butcher  
 19. David Nelson – Botanist <sup>290</sup>  
 in all 19

Those who remained in the Ship were

1. Fletcher Christian – Act. Lieut.  
 Geo. Stuart – Mid  
 Edward Young – Mid  
 Peter Heywood – Mid  
 5. Jas. Morrison – Boatswains Mate  
 Thos. McIntosh – Carpenters Crew  
 Jno. Mills – Gunners Mate  
 Chas. Norman – Carpenters Mate  
 Isaac Martin – Ab  
 10. Chas. Churchill – Master at Arms  
 Josh. Coleman – Armourer <sup>290</sup>  
 Willm. Muspratt – Captains Steward  
 Jno. Sumner – Ab  
 Jno. Williams – Ab  
 15. Jno. Millward – Ab

## The Bo'sun-Mate's Story

Extracts  
from the original manuscript held by the  
Mitchell Library, Sydney, N.S.W. <sup>316</sup>

The Bounty left England with 46 souls aboard

Left Tahiti for Home (The Surgeon had died) <sup>317</sup>	"	45	"	"
Arrived off Tofua (Valentine had died) <sup>318</sup>	"	44	"	"
Headed back to Tahiti (having cast 19 adrift)	"	25	"	"
Headed for Pitcairn (leaving 16 on Tahiti)	"	9	"	"

The following were the 16 :

		Their fate
Morrison (the writer)	Bo'sun's Mate	Freed
Stuart	Midshipman	Drowned
Heywood	Midshipman	Freed
M <sup>c</sup> Intosh	Carpenter	Freed
Norman	Carpenter	Freed
Churchill	Master at Arms	Murdered
Coleman <sup>290</sup>	Armourer	Freed
Millward <sup>319</sup>	Able Seaman	Hanged
Summer	Able Seaman	Drowned
Thompson	Able Seaman	Murdered
Heildbrandt	Cooper	Drowned

<sup>316</sup> This addendum is also from the journal of James Morrison, an earlier part of which which was presented in the previous addendum.

<sup>317</sup> From Morrison's journal: "*December, 1788. on the 11th of December Departed this life Mr. Thos. Huggan & next day his remains were Inter'd on Point Venus and a board fixd to a tree near his grave with an Inscription on it to his Memory...*"

<sup>318</sup> According to Morrison's journal, "*Soon after we saild we discovered a Group of small Islands to the Eastward of New Zealand which were Call'd the Bountys Isles, and Jas. Valentine having been let blood his arm festered and turnd to a mortification of which he Died.*" This was after leaving Adventure Bay, Tasmania in mid-September 1788 and the beginning of October 1788, and thus prior to reaching Tahiti on 25 October 1788.

<sup>319</sup> WWB has *Millwood*.

Skinner	Master's servant	Drowned
Byrn <sup>320</sup>	Able Seaman	Freed
Ellison	Able Seaman	Hanged
Burkett	Qr. Gunner	Hanged
Muspratt	Captain's Steward	Freed

### Prelude

Having cast Bligh adrift Christian determined to head back to Tahiti touching at Tupuai on the way. Reaching that island a somewhat mixed reception awaited the Bounty but it was felt by several to be a suitable hiding place and it was determined to sail to Tahiti, there to procure sufficient supplies of stock and return to settle down permanently. Reaching Tahiti these were secured and sail made once again for Tupuai. It was now July. The natives showed a more friendly spirit and the white men decided on building a fort for any emergency that might arise in the future. But jealousy among the native Chiefs for the white man's favour caused serious trouble and war for both natives and whites, and Tupuai was abandoned in disgust. It was now September and before its close the Bounty was again at anchor in Matavai Bay. It had been agreed upon to separate, some electing to remain on Tahiti, others with Christian to seek other asylum : 16 for Tahiti, 9 for elsewhere, the latter to have the ship, with everything aboard equally divided : the 9 would find they hoped some uninhabited island where they would land their ample stock and plants, set fire to the Bounty and live the remainder of their days out of touch with their fellows. The shore folk landed, supplies were divided, Christian proposed staying a day or two further but at night the Bounty sailed to the surprise of those ashore leaving one of its anchors embedded in the coral bed <sup>321</sup> so keen was the Leader to be off. The 16 took up their residence and the story of their happenings during the succeeding 19 months till the H.M.S. Pandora appeared to gather them in now follows from the pen of the Bo'sun's mate.

The native Hiti Hiti mentioned had visited other parts with Cap<sup>t</sup> Cook : Pora Pora his home.

1789

(September)

I having formerly made Poeno, <sup>322</sup> (Chief of Maatavye) my friend, and Millward having made Friends with Poenos wife, we were now invited to Live with them, which we accepted and were treated like the rest of the Family, but with more attention & respect; the others also went to the Houses of their Former Friends where they were treated in like manner...

<sup>320</sup> WWB has *Byron*.

<sup>321</sup> See WWB's article, "*Bounty's*" *Lost Anchor*, in the 22 July 1938 edition of the *Pacific Islands Monthly*, pages 46 and 48, in Part VII.

<sup>322</sup> WWB has *Paitea*, here and elsewhere. *Paitia* is shown in the illustration *Cession of Matavai* in the article *Light on Half-Forgotten Incident of Early Tahiti* in the July 1942 edition of the *Pacific Islands Monthly*, page 14, in Part VII.

Immediately on landing they informd us that a Vessel had been there lately, and had left a man who they Call'd Browne who was then at Tyarrabboo with Matte <sup>323</sup> settling some business with Vay-heeadooa, <sup>324</sup> Chief of that Pininsula, and as we heard they told strange storys of him We wishd to know what had been the true Cause of his Stay, and therefore appointed Churchill & Millward to go to Tyarrabboo & take presents to Matte and at the same time See who this Man was...

October, 1789. They were well received by all the Chiefs at whose houses they Stop'd on their way, but particularly by Matte & Vay-heeadooa, who loaded them with presents, Matte desiring that we Should make his land our own, and Vayheeadooa giving Strong invitations to Come and see Tyarrabboo, Tommaree, <sup>325</sup> Chief of Paparra, also used them extreamly civil, desiring them to send some of the Others round that He might form an Acquaintance amongst them. They misssd Attahooroo, having but an unfavourable account of it, altho Tetowha the Chief Sent to invite them while they went past in a Canoe and they returned to Maatavye on the 10th of October bringing with them the Englishman who Calld himself Brown alias Bound, and Said he had been left on Shore from the Brigg Mercury, T H Cox Esqr. Commander of London. He said he had stayd at his own request having had a dispute with some of His Shipmates and Cut one of them a Cross the Face with a knife, this and Some other things which he related of himself was sufficient to give a very good Idea of his Character and to put us on our Guard against one who appeard to be a dangerous kind of a Man; however we each gave him some addition to his Stock of Cloaths...

Brown set out with Birkett who went to visit Tu.

When he was gone, Poeno produced a letter Signed T H Cox wherein the Vessel is Calld His Swedish Majestys Armd Brig Gustavus IIIrd and wherein he Calls Brown 'an Ingenious handy Man when sober but when Drunk a dangerous fellow'. This Letter was put on Shore at Tetoora <sup>326</sup> and brought to Poeno, and this agrees with Browns account, as he said she was bound to the Sandwich Isles & from thence to China. As Brown found this letter in Poenos posession afterwards He secured it Himself to prevent it from being of any further Use in pointing out His Character, Which according to His own account was black enough.

There was a formality to be gone through with, which respect for authority called for.

On the 27th, having appointed that We should meet at Opparee, and make out presents to the Young King, <sup>327</sup> We marchd in a body under Arms to Oparee, <sup>328</sup> taking with us the Toobouai <sup>329</sup> Images and several other presents of red Feathers, Friendly Island & Toobouai Cloth, Matting and War Weapons Iron Work etc; and were Joined by those who were at Oparre and after being Welcom'd to the District by the Priest Making a long Oration and presenting each of us with a young Plantain tree with a Sucking Pig or a

Fowle. Having made known our business to Areepaeaa<sup>330</sup> — who told us that we must not approach the Young king as he was yet Sacred, unless we Strip'd the Clothing off from our Head & Shoulders, which we refused telling him that it was not Customary to remove any part of our Dress except our hats and if we were under arms it was not our Country Manner to remove our hat even to the King. However that we might not seem to be deficient in point of Good Manners each was provided with a piece of Taheite Cloth to put over their Shoulders and take off in the Young Kings Presence, when we March'd to his House in procession each attended by a friend to remove the Taheite Cloth which we had on, all of Whom Stripd as they entered the Sacred Ground, the Men to the Waist, and the Weomen uncovering their Shoulders and tucking their Cloths up under their arm, and our Taheite Cloaths were removed. We were followed by a Multitude of both Sexes, all of whom observed the Same rules in their Homage; having got to the opposite bank of the River facing the Farre Raa or Sacred House, the Young King Appeard, sitting on the Shoulders of a Man; and having a large piece of White Cloth round his Shoulders and his Head almost Hid with a Garland of Black & red Feathers. As He approachd the Bank, he Saluted us with the Word Manoa (Welcome) which he repeated to each, calling us by the Name of our Taheite Friends; and having placed himself over against us, Heete-heete Strip'd himself Naked to Carry the presents, and the Party drew up on the Bank for the Purpose. The Toobouai Images were first sent in the Name of the whole, with which Heete-heete told a long Story and which from the Number of red feathers were thought a Valuable present, and produced a general exclamation of wonder when they were held up to publick View on the opposite bank of the river. After these were delivered, evry one sent his present seperatly, which Consisted of Red feathers Cloth &c; and the whole being finishd, the Party formd three divisions & dischargd their arms, at which the Young Chief was so much pleased that He told us to follow our own Country fashion in evry thing, and take no heed of their Ceremonies, when we retired. We were Now Conducted to Areepaeas house where a Feast was provided for us of a Baked Hog, Fish, Bread, Tarro & Cocoa Nuts, Plantains &c; after which a Proportion of land was pointed out for the Use of the Whole when in this district, and in the Evening we returned to Maatavye, and Next day the 28th a Messenger arrived from Matte with a Hog and a Piece of Cloth for each of us and pointed out two pieces of land for the use of the Whole; the One for Cocoa Nuts and the other well stockd with Bread fruit Trees near the Spot where Poenos House stood;<sup>331</sup> these were ordered for our present use, tho we stood in no need of His Care, having abundance of evry thing supplied by our Friends.

They decide upon building a schooner which occupied several of them for the nigh 9 months.

Finding ourselves Settled I began to think it would be possible to build a small Vessel In which I had hopes of reaching Batavia<sup>332</sup> & from thence to England. I comunicated this to McIntosh and Millward, and the Matter was agreed on; but we resolved to keep the real motive a Secret, and to Say that she was only for the purpose of Pleasuring about the Island; and for this purpose, I having observed that Mathw. Thompson had got a Quadrant (formerly Mr. Hallets) and some of Mr. Haywards books, tho He could neither read nor write, I was determind if Possible to get posession of them, and with a little perswasion I got the Quadrant for Six small trade Adzes (Calld here loeys) & a Gallon of Wine but when I wanted the Books he began to have some suspicion, and was sorry that He had let

<sup>330</sup> WWB has *Ariipaea*, here and elsewhere.

<sup>331</sup> WWB: (*at Point Venus*).

<sup>332</sup> Now the [Old Town of Jakarta, Indonesia](#).

me have the Quadrant, which I told him was only for Amusement. He said He had No Cartridge paper and the books would answer that purpose, I told him that I would give him paper in lieu which would answer that purpose better, but this only served to Confirm his Oppinion; however as I had a Seamans Daily Assistant I took no further Notice, and affected to be easy about them tho I was sorry that I could not get them. Norman & Heildbrandt having agreed to be of our party, McIntosh and them removed to Maatavaye on the 1st of November bringing their Effects with them and having got Houses prepared on a Square piece of Ground raised above the level where we fixd a Flag staff to Hoist the Collours on Sundays; we were also Joind here by Burkett (who returned on the Second, & brought Brown with Him) Sumner, Ellison, Churchill & Byrn, and having appointed Divine Service to be read on Sundays evry thing at present seemd right. I now made a publick proposal to build a small Vessel to Cruize about the Island in which was agreed to, as McIntosh said it was possible to put one together and He had no objection, Norman & the Cooper being both Workmen, and the rest of us Could Chop off the rough parts ready for their Use.

Having agreed on this Head, I informd Poeno that we intended to build a little Ship, as we did not understand the Method of Handling Canoes, and in which I told Him that we could carry Him & Matte with some of our Friends to the Neighbouring Islands, he was well pleased, and told us to Cut down what timber we pleased, as there was plenty in Maatavaye.

(November)

On the 12<sup>th</sup> they laid the keel of the schooner, its dimensions being given as follows : Keel 30 ft : Deck 35 ft : Breadth 9 ft 6 inches : depth of hold 5 ft.

(December)

We kept the Hollidays in the best manner that we could, killing a Hog for Christmas Dinner, and reading Prayers which we never Omitted on Sundays, and having wet weather we were not able to do any thing out of doors for the remainder of the Year.

We informd the Natives of the reason of our Observing these Hollidays, and especially Christmas Day; all of which seemd to regard with attention, and readily believed all that we could inform them of, never doubting that the Son of God was born of a Woman, and they always behooved with much decency when present at our worship; tho they Could not understand one word; yet several were desirous to have it explaind to them, and some of them wishd to learn our prayers which they all allowed to be better then their own; those who were constantly about us knew when our Sunday came, and were always prepared accordingly. Seeing that we rested on that day they did so likewise and never made any diversions on it. One of them was always ready to hoist the Ensign on Sunday Morning, and if a stranger happened to pass, and enquire the meaning, they were told that it was Mahana' Atooa (Gods Day) and tho they were intent on their Journey, would stop to see our manner of keeping it, and would proceed next day, well pleased with their Information.

1790

(January )

Throughout they were busy gathering timber when the rainy season permitted.

(February)

On the 1st of February our attention was drawn from our Work by a Heiva which according to Custom was performd in our Neighbourhood before the Chief of the District, to see which all the Inhabitants of the district were Assembled. Evry thing being ready Captain Cooks picture was brought (by an Old Man <sup>333</sup> who has the Charge of it) and placed in front, and the Cloth with which it was covered being removed, evry person present paid the Homage of striping off their Upper Garments, the Men bareing their bodys to the Waist, Poeno not excepted, and the Weomen uncovering their Shoulders.

The Master of the Ceremonies then made the Oodoo (or usual offering) making a long speech to the Picture, acknowledging Captain Cook to be Chief of Maatavye and placing a Young Plantain tree with a sucking pig tyed to it before the Picture.

The Speech running to this purpose — ‘Hail, all hail Cook, Chief of Air Earth & Water, we acknowledge you Chief from the Beach to the Mountains, over Men, Trees & Cattle over the Birds of the Air and Fishes of the Sea &c. &c.’

After which they proceeded to perform their dance...

On the 2nd Came another Heiva, which Poeno brought to the Square; this was Conducted in the same manner, and attended by the Inhabitants as before, but Captain Cooks picture was not present, Poeno receiving the Cloth and Matting which he devided amongst us, the Whole Amounting to near one Hundred Fathoms. After the people were departed we Missd the Flag haulyards, a pair of Trowsers & three Pigs from the Sty; and on enquirey found that the Thief was in Oparre where we followed and apprehended him, finding the Haulyards in his posession but the Trowsers and Pigs were gone. We brought him to Maatavye where we gave him 100 stripes; and Brown having lost a hog Cut off His Ears tho he Could not be sure that he had stolen it. Poeno advised us to Shoot him saying he will now go and Steal from evrybody without fear, however we thought he had been punnishd sufficiently and let him go and he quitted the district amidst the shouts and Jeers of his Countrymen.

Another having stolen a knife some days before, was also brought to the Tree & received a smart flogging. We soon found that this Method of Proceeding had the desired effect, and few instances of the kind happend after, tho they had many Opportunitys to steal our tools they never medled with any of them, as they knew that we would find them out, as they cannot keep any thing to themselves and we began to get hold of their language so fast that we could understand evry thing they said, and make a good shift to discourse with them...

---

<sup>333</sup> WWB: (*Ha'apai* — grandfather of the “young king”)

On the 6th we received a Visit from Eddea <sup>334</sup> who was come down to visit her Son the Young King at Oparre. She brought presents of Cloth for each as did also her Sister Teano (wife to Vayheeadoa, Chief of Tyarrabboo) who accompanied her — She Staid at the Square some days...

The 16 had now held together for nigh half a year. A split occurs but no open quarrel.

8th. We had hitherto gone on with our Work without any thing to obstruct us except Rainy Weather but now an accident happend which put a Stop to it for some time— The affair was this, Thompson who resided with Coleman at Point Venus had ill used a young Girl, for which her brother in revenge knock'd Him down, and Fled.

Coleman was at this time Just recovering from a Fit of Sickness, when Thompson came home vowing revenge on the first that Offended him. A Number of Strangers had arrived at the Point, (where they generally stop on their passage round the Island to take the Opportunity of getting to windward in the morning before the Sea Breeze sets in), and had flockd round the House as usual to see the Englishmen, Thompson Ordered them away, but as he Spoke English they did not understand him, and paid no regard to the Order, on which, he took His Musquet, and firing amongst them Killd a Man & a Child which he held in his Arms, and the Shot passd through a Womans lower Jaw breaking both the Bones, & Grazed another Man on the Back, on which they all fled. The Man was one of Vyeooreedee, <sup>335</sup> who was going round the Island on a party of Pleasure with his family, of which the Child was one. We expected that this would be revenged, but no notice was taken of it. Mr. Heywood Gave the Mans Wife a White Shirt, & Churchill (who had always been aspiring at Command) thought this a good time to Offer himself as head of the Party in Case an Attack should be made upon us by the Natives, but as we all lookd upon the affair as Murder, we declined either making him our Chief or taking any part in the business; on which he sent Brown to Tyarrabboo, to Vayheeadoa for Canoes to Carry him to Tyarrabboo, where he intended to Stay. <sup>336</sup>

(March)

Peter Heywood having set out on a visit with His Friend, we were this day informd that He was killd at Vyeooreedee; but He returned to Maatavye on the 6th of March bringing with him part of the Barrel of Ellisons pistol which he had found at Heedeea, but the Thief had escaped. He informd us that He had stoppd one night in Attahooroo <sup>337</sup> where he was well received by Towha the Chief, but heard some of the People propose to plunder him, on which he made the Chief a Present of His Hat & a Knife which was all the English things He had about him, and he was sufferd to pass unmolested. He next went to Papaara, <sup>338</sup> where he was well received and staying one Night with Tommaree he set out for Vyeooreedee for the purpose of Seeing Obirreroa <sup>339</sup> who was there.

---

<sup>334</sup> WWB has *Itia (the wife of Tu)*.

<sup>335</sup> WWB has *Vairoa*.

<sup>336</sup> WWB has *on which he set out by canoes for Lesser Tahiti accompanied by Thompson and brown where he intended to stay*.

<sup>337</sup> WWB has *Punaauia*.

<sup>338</sup> WWB has *Papara*.

<sup>339</sup> WWB has *Purea (the discarded wife of Amo of Papara)*.

When He arrived in Vyeooreedee he was Seized by the Hair by one of the Natives who held a Stone in one hand with which he was about to knock out his brains but was prevented by another who seized His arm. The Man had mistaken Mr. Heywood for Thompson, and was brother to the Man that Thompson killd, but the other who prevented him was brother to His wife and remembered Mr. Heywood at Maatavye when He came to see the Man & his Child and had Made the Wife some presents when she was weeping over Her Husband & Child. As soon as the Man found his Mistake, He was very sorry, and begd that He would not be angry, inviting Him to His House; but He refused & Proceeded to Obirreroas. He stopd there all night, & proceeded to Tyarrabboo, Calling at Moenannoos as he passd thro' Vyeerre, where he was well received.

When he Arrived at Tyarrabboo He was kindly received and loaded with presents by Vayheeadooa, who pressd him to Come & live with Him. He then proceeded to Matte's, who treated Him in the Same Manner, but beggd that He would not quit Maatavye as he understood that Churchill, Thompson & Brown were Come to live there. Mr. Heywood promised him that He would not quit Maatavye and persued his Journey homewards by the North Side of the Island, being well received by evry person where He stopd in his way.

8th. This day went in quest of more timber with tolerable success. Employd as before & this day arrived a Messenger from Vayheeadooa with Presents and an Invitation for Myself and Millward to come to Tyarrabboo making us large Offers; and a letter from Churchill containing the like invitation and seconding Vayheeadooas request and promising us large possessions in Tyarrabboo and at the Same time telling us that Thompsons arms had been Stolen by the Natives, which was but bad encouragement for Strangers to go there — but as we were glad to be rid of them we declined the kind invitation of Vayheeadooa and sent him presents in return...

12th. Still Employd as before. In the Night between 10 & 12 Came Thompson and having made known his loss of His Arms on which Norman supplyd him with his Spare one, and he set off before Day for Tyarrabboo, having told Norman that he had been informd that some of Matte's men had taken his arms and swore that He would put the man to Death as soon as he found Him out. He said that his reason for returning so soon was to prevent the News of his being at Maatavye from reaching Tyarrabboo before him; but the true reason was that he did not wish to be seen by Coleman who He had robb'd while he was sick, he also said that Churchill & Him had quarreld and parted, and that they lived separate; He at Towtirra <sup>340</sup> and Churchill at Vyeowtaya <sup>341</sup> at the distance of 18 or 20 miles and as his Arms were taken away in the Night, He had no suspicion that Churchill had any hand in the Theft, tho the Natives said Publickly that He had taken them away, and on my enquiring of Poeno about it He informd me that Vayheeadooas Man told him that Churchill had them. On the 14th arrived a Messenger from Matte desiring that None of us might quit Maatavye or Oparre and he Also Confirmd the Account that Churchill had taken Thomsons Arms, we were satisfied of the truth of this and promised the Messenger that we would not go to Tyarrabboo...

16th. Sumner set out for Tyarrabboo on a visit to Matte, and did not return till the 26th during which time the Work still Went on well and by this day, we had got to planking

---

<sup>340</sup> WWB has *Tautira*.

<sup>341</sup> WWB has *Vairao*, but he also has *Vairoa* for Vyeooreedee.

and had got four Streaks on the larboard side. Sumner brought Churchill with Him who informd us that Thompsons arms were restored, and he had brought Normans Musquet with Thompsons thanks for lending it. He said that the Arms had been taken by some of the Natives who were Stopd by Vaydeeadooas Men going a Cross the Isthmus; this passd very well as we did not depend on what the Natives said. He also informd us that Vayheeadooa had died suddenly, and that He Churchill was put in full Posession of the Sovereignty of Tyarrabboo by the Name of Vayheeadooa his Friend deceased who died without Issue, — He made us all promises of large possessions in Tyarrabboo if we would go and live with him but all refused seeing what he aimd at which was no other than making himself Great at our expence and when I told Him that I had rather be one of Poenos friends then Chief of Tyarrabboo he dropd any further perswasions. During Sumners Absence he had made friends with Tommaree Chief of Papaara and he being in alliance with Matte He had no objection to His going to Papaara to live, and he brought Canoes from Tommaree for the Purpose of Carrying him & Burkett there, they being both tired of the Work and seemd to think, like the Natives, that it would never be finishd.

April 1st. Burkett, Sumner & Churchill set out for Papaara, and Byrn & Ellison went to live at Oparre...<sup>342</sup>

Thus Matavai and the schooner had but 6 out of the party of 16 viz McIntosh and Norman (carpenters), Heildbrandt (cooper), Coleman (armourer), Millward (seaman) and Morrison the bo'son.

(April)

15th. Employd fitting the Clamps and getting the Beams ready, making Plank &c.; — this day we received a letter from Burkett<sup>343</sup> informing us of the Death of Churchill & Thompson, also a letter from Brown<sup>344</sup> to the same purpose. Next morning the 16th Came Brown himself, Having been Sent by Matte to inform us by word of Mouth, as he thought that He could not explain it by letter; and He now gave us the following particulars — Soon after their Arrival at Tyarrabboo they had a quarrel (which we were sensible Brown Had fomented) and parted. Thompson making friends with Teetorea the Chief of Towtirra & uncle to Vayheeadooa, and Churchill went to Vyeowtea to a house prepared for him, Brown going to live with Matte who was then at Towtirra. Thompson growing Jealous of Churchill threatend to Shoot him if any difference or distinction was made between them.

This Coming to Churchill's ears he got a Canoe & came down in the night when Thompson was asleep, his men soon found Thompsons Arms, and brought them out to him, but being sent in for the Powder Thompson waked, but the Night favourd their Escape when they returnd to Churchills House. — Thompson missing his Arms soon got a light, and went to his Friend who lay in a House Close by, desiring him to Mann a Canoe, & telling him what had happend, the Canoe was got ready and he reachd Vyeowtea by Sunrise — Churchill being informd of His approach, was up, and desired him to keep off, and Thompson replyd you have nothing to fear, for I have no arms, and I am only come to tell you that I lost them last night, and desire your assistance to recover them, on Churchills appearing convinced that He had no evil intent and he shewing his bayonet as the only arms he had, he was permitted to Come in and their former

<sup>342</sup> WWB: (*where Heywood and Muspratt had moved to.*)

<sup>343</sup> WWB: *then at Papaara*

<sup>344</sup> WWB: *then at Lesser Tahiti*

Animosity being dropd, they began to reason with each other, and found that Brown had been Active in promoting their Quarrel. They now agreed to live together, and Thompson set out for Maatavye to borrow Normans Musquet, while Churchill promised to use His endeavours to recover the Arms. Thompson returnd, and they soon Came to a right understanding, when the Arms were recovered, as if by Churchills interposition, & Thompson being told that they had been taken from some of the Natives Crossing the Isthmus was perfectly satisfied and made no farther inquiry about the business. Soon after Churchill, being bound on a visit round the Island, left Thompson to take Care of the House, who also Sent Normans Musquet by Churchill with His thanks for His civility in lending it, in the meantime one of the Natives, a Man who had been at Lima (Calld Mydiddy) and who had been beaten by Churchill, came to Thompson and told Him evry thing relating to the taking away of His Arms, Mydiddy being one of the principal hands Concern'd. This exasperated Thompson, & he resolved to Shoot Churchill, which He put into execution immediately on his return, for which the Natives had put him to Death.

Burkett wrote thus ‘Churchill having broke his Collar bone shooting at some Ducks, I perswaded him to Stay with us, till he should get well, but He refused, and desired me to accompany him home on the 10th which I did and we went together to Vyeowtea where Thompson received us in a Friendly Manner and we supp’d together, after which Thompson dropd a hint that He had found out the Thief but said no more. Next morning I went to the Beach to put my Canoe in order as I intended to return home after breakfast; while I was getting the Canoe ready I heard the report of a musquet, on which I ran up to the House but was stopd by Thompson who stood in the door loading his Musquet askd me if I was angry: as I had no arms I saw it was in vain to say Yes, and therefore Said No, and said I hope you dont mean to take the advantage of me; He told me “No — not without you are angry” and then Said “I have done him.” Upon my nearer approach, I saw that Churchill was dead, the Ball having passd below the Shoulder through his body, entering at his back. I now thought it high time to be off, and interr’d the Body as fast as I could — Thompson seized on his effects, I askd him for some of his books, but He refused, and I left Him and returnd home. — I intended to have askd your oppinion about the affair, but Have since heard that Thompson is killd by the Natives in revenge for His having killd their Chief, and his body Carried to the Morai.’

We knew not what to think of this business as we were inclined to think that Thompsons death was more on account of His having the property of both, then for Killing Churchill, but the Natives insisted that it was for killing him who they Acknowleg’d to be a Chief in consequence of His Friendship with the late Vayheedooa whose Name he also bore. As I wishd to be particularly informd of the manner of their Deaths and to See Matte about getting Some rope & Mats for Sails, I set out for Tyarrabboo on the 17th in Company with Brown and Arrived at Towtirra where I was well received by Matte who begd that I would not think of Coming to live in Tyarrabboo, which he said would prevent the people from Submitting to His Son.

I promised him that I would not quit my Friend Poeno and told Him I had only Come now to see him, and hear how Churchill & Thompson were Kill’d. I told him also that I wanted some rope & Matts for the Vessel which I described to Him, and he promised they should be made. On enquiring into the manner [of] Churchills & Thompsons death a Man was Calld whom I knew to be one of Churchills favourites, and he related evry thing in same manner that Burkett had done, as he was with Churchill & Steerdhis Canoe in his Journey

round the Island. I then askd Him how Thompson was Killd and by Whom at which he seemd rather doubtful and saying to me 'dont be angry, it was I that killd him seeing that He had killd my Chief & my Friend'. The Manner was this, Patirre (for such was the mans name) being sorry for his Friends death, was determin'd to be revenged on Thompson, and having got five or six More (who when they knew the Cause were equally enraged), they went to Thompsons house and saluted him by the Name of Vayheeadooa and told him that he was now Chief, and such like flattering stories till Patirre got between him and his Arms, and being a Stout man, knockd Him down. The others whipt a short plank (which happend to be at hand) across his Breast, and Placed one on each end, while Patirre ran for a large Stone, with which He dashd His Scull to pieces, they then Cut off His head, & Buried the Body.

In the mean time Mididdy secured their Arms and the House was plunderd; the Head Patirre brought to the Morai at Towtirra, where he had left it and where he said it then was and if I had a mind to see it, he would shew it to Me. I accordingly went to the Morai with him, when he produced part of the scull, which I knew by a scarr on the Forehead. I asked him why they had not brought him to us at Maatavye when He replied 'the distance is too great, and our anger would be gone before we could get there; and we should have let Him escape when we were coold & our anger gone so that He would not have been punishd at all and the Blood of the Chief would have been on our heads'. I Promised the Man that he should not be hurt by me for what he had done, as I lookd on Him as an instrument in the Hand of Providence to punnish such Crimes. I Staid here three days during which time I was Feasted evry day by Matte who also informd me that the Nephew of Vayheeadooa (a boy of about 4 years old) was appointed to His name & Honors, and His father Tyepo as Regent during his minority, the People of Tyarrabboo refusing to acknowledge Young Too, who they said was a Bastard and not the son of Matte. — however as He had some possessions given to himself he was resolved to keep footing in Tyarrabboo, and had hopes of gaining a party in his Sons favour. When I took my leave He presented me with a large Hog, 3 bamboos of Scented oil & a quantity of Cloth and I returnd to Maatavye on the 24th, having been well received at evry place I stopd at, on my way both up & down.

All May and June the few hands toiled away at the schooner. On July 6 she was launched and named the "Resolution."

(August) They were fitting her out.

Evry thing seemd to be had without trouble or Dificulty except sails, and how to procure them we Could not tell, Matting being scarce and at the Best very unservisable, and tho we had Cut up our Cloaths, we had not sufficient Canvas amongst us to make her one Sail which would be fit to set at sea.

A change now took place in their fortunes. They became Warriors for their kindly friends.

(September)

12th. this Day a Messenger arrived from the Young King desiring our Immediate Assistance to quell the People of the District of Tettahah<sup>345</sup> who had rebelld, and made

---

<sup>345</sup> WWB: *Faaa*

an inroad into Oparre, burning all before them; the Messenger also informd us that the Oparre people had repuls'd them forcing them to leave two of their Dead behind them which were brought to the Young Kings Morai, and that they were preparing for another attack, being set on by the People of Attahooroo. — he told us also that Areepaeaa-Waheine the Young Kings Aunt who had been at Ryeatea for some years, was arrived at Oparre with a Numerous Fleet which were all ready for War.

As we did not know that ever we should be able to effect our purpose, tho evry thing was getting forward, we found it necessary for our own sakes, to assist them, and therefore returnd for Answer that we should be at Oparre Next morning — and Armd Accordingly. On the 13th, leaving one to take Care of the Schooner, We marchd to Oparre, where Areepaeaa-Waheine received us, and a Dressd Hog was presented to us. — Byrn & Ellison being at Tetooroa and Musprat on a Visit to Papaara with his Friend Areepaeaa, we were now only Eight in number, but were here Joind by Brown, who informd us that the Attahooroo people had made war on Tommaree;<sup>346</sup> which was further Confirmd by a Letter from Burkett desiring our assistance. Having made our breakfast we proceeded to Tettahah Surrounded By a Multitude (with Poeno & Pyeteea two Chiefs at their head) from Maatavye.

Before that we had proceeded half a Mile We found the Marro Eatooa or Signal for War (which is several Fathoms of Cloth in one piece passd round several Trees, crossing the path several times) and a Hog tied to each tree which the Marro passes round; this is generally Put up with some Ceremony, and the Enemy are defied to take it down.

On seeing this our party ran instantly and seized on the Marro & hogs, when the Enemy who lay conceald till now, made their appearance, and a Fray instantly commenced and Several heavy blows exchanged before We were observed by them — on our approach they Fled, but this Confused Method of engaging prevented us from knowing our own people, who were so scattered that we were not able at a Distance to tell them from the Enemy and we were therefore of No use but to look on while the Enemy retreated to the Mountains & our party returned with a deal of Plunder, & several Canoes which they had not been able to remove. We Now informd the Chiefs that they must alter their mode of Fighting, and bring their people under some Command, in Case they should have occasion to go to war again which they promised to do; and having Demanded Matts to make sails for the Schooner, we took our leave of Fatowwa, or Areepaeaa Waheine, and returned to Maatavye...

Mean while the Tettahah & Attahooroo people had united their forces & were began to Commit Hostilitys both on Papaara & Oparre, and on the 20th we were demanded to assist again, which for our Credit we could not refuse, nor was the Sails any excuse, as we were wanted on Shore, and the Enemy looking on our peaceable inclination as the effects of Fear, sent us word that they would Come to Maatavye & burn the Schooner and a Challenge sent to each Separately by their Warriors, who bid us defiance, telling us that each would have his man to Carry to the Morai,<sup>347</sup> and much more such language. — they had also entered Oparre again burning and destroying all before them.

---

<sup>346</sup> WWB: (*of Papara*)

<sup>347</sup> WWB: (*burial place*)

On the 21st early in the Morning, leaving one as before to take care of the Schooner, we got into our Canoes and paddled to the Lower end of Oparre. Here we were Met by Poeno, Tew, & Fatowwa, and almost all the Men of Maatavye with Pyeteea, & Mattaheyapo at their head who were both principal men & their head Warriors. We were now but Eight in Number, and having given the Chiefs such directions as we thought necessary, they promised to observe them, and being willing to take the Cool of the Morning, we set forward in Good order, surrounded by Multitudes of all ages from both Districts, but the Maatavye men kept Close to us, claiming the preeminence, and keeping the others in the rear. — on our approach the Enemy retreated to a high steep eminence in the Mountains, which Commanded a narrow pass, which was the only one by which they could be approachd, and as this place had resisted all Former attacks, they had got all their property to the place in readiness, & had formd an encampment of Huts ready to dispute the Pass; however we determined to proceed, as we could not hope for Peace without driving them from their strong hold: but it being some miles up in the Mountains, it was Noon before we got near enough to see the pass & the situation of the enemy, who we found well posted. The heat became so intense that we should have been in a bad plight had not our friends brought with them plenty of Cocoa Nuts which we found very refreshing and tho we had Marchd at a slow pace, we now stood in great need of—having halted a few minutes we proceeded to the Pass, which was along a Narrow ridge where two men could scarcely pass in safety. — the Taheiteans made a full stop when they came to the place but seeing us proceed they followed, and Pye-teea & Mattaheyapo came in the Van to be our guides over. — in crossing the pass we found ourselves open to their Stones with which they plyed us briskly from the Eminence above our heads, where our Musquets would not reach to do execution — tho we were forced to walk over at an easy rate for one Hundred yards or more, none of us except Coleman was hurt, and he only received a blow of a Stone in the leg which did not disable him—however his Taheite friend received a blow between the Mouth & Nose that brought him down, & having English Cloaths on was Mistaken for one of Us and they gave us a loud Shout & redoubled their Vollies of Stones, by which upwards of twenty more were wounded before we could fire a Shot. However we got over and with a warm fire advanced up the Hill; when they soon gave way. As soon as this was observed by our Party they rushd in, & three of the Enemies Head warriors having fallen by our shot they fled; and our party persued them down the other side of the Mountains. Mean time the Plunder of their Camp was seized by the Oparre Men, the Maatavye people being more intent on driving their Enemies; the Chief part of their Houses being burnt, and distroyd, we returned in the evening to Maatavye. The Number of Hogs taken here were incredible.

Two victories to the credit of the Army of 8, but the campaign was not yet over.

... the Party in Attahooroo, being Yet in arms, the Young King was desirous that we should assist him to quell them, and force them to Restore the Marro-Oora, or Royal sash, together with the Morai Tabbootaboatea, being the Movable place of sacrafice; — the Pehharaa or Sacred Chest wherein their Images are kept with the Valuables belonging to the Deitys; the Farre 'Atooa, or house of God, with several other things which belongd to them, which the Father of the Present T'towha Chief of Attahooroo had taken in war from oToo or Matte,<sup>348</sup> and which had been kept in Attahooroo ever since, but we found it so fatiguing that we Got the Sails ready in Order to Shorten our marches. —

---

<sup>348</sup> WWB: (*his father*)

We had by this time between 6 and 7 hundred weight of fine Pork Salted, & got it on board, and having bent the sails and Got our Amunition on board, on the 26th we saild for Oparre leaving the Houses in charge of the Natives with what things We did not want and leaving only Skinner in Maatavye who was bad with sore eyes which made our Number still but Eight. At Oparre we found Heete-heete who had come from Papaara where he had been with Burkett & Sumner Who with the Assistance of Muspratt, Brown & Himself had repulsed the Attahooroo & Tettahah people with a great slaughter but as they would not submit to Tommaree, they Had Sent him to us to desire that We would keep them in play and appoint a day to let the Armies of Papaara & Tippirreonoo meet in the Center of Attahooroo. We kept Heete-heete and armd him with one of Matte's Musquets. — we found at Oparre a large Fleet assembled under the Chiefs of Tippirreonoo, who inform'd us that they waited our Orders, the Canoes with provisions being arrived from the different districts and the Morning of the 27th being Calm the Canoes drew up in a line and took the Schooner in tow. The line consisted of 40 Canoes paddling 50, or 60 hands; they had pieces of Painted Cloth hoisted on the Sterns of each, & Drums beating & flutes playing made a very war like show the Warriors Cutting a Number of Capers on their Stages, being dressd with Featherd headdresses & all in their best Apparal, the smaller Canoes being kept at a Distance on each side the line began to move forwards within the reef towards Attahooroo. Mean time Multitudes Went a head by land, and the beach appeard Covered all the Way as we passd. As we entered the enemys Country, they fled to the Mountains, and our party on shore persued them, Burning the Houses, and destroying the Country where ever they Came by rooting up the Plantains & Tarro, and notching the bark round the Bread fruit Trees to stop their Growth, and laying all in ashes before them. About Noon we anchor'd at Taboona, part of Attahooroo, under Pohooataya, the Same known to Captain Cook by the Name of Potatow. The Canoes were here hauld up, and an encampment made with the roofs of the Houses, which had escaped the fire, or that had been spared for that purpose. We were now informd, that the Enemy had posted themselves in a Strong hold in the Mountains, and Could observe them with the glass going up in large bodys to the place where they intended to stand a Siege. — A Council of War was now held, and finding it would be difficult to approach them, it was agreed to send out several partys to burn the reeds on the Sides of the Hills to prevent them from approaching unseen, or laying in ambush for any Stragling party.

Heete-heete was appointed to this business, and in the mean time Ambassadors were sent to demand a Surrender, and a White Flag was hung out on board the Schooner and an[other] sent to be stuck up at about 2 miles distant. During the time the Hills were burning several Skirmishes took place between our party & theirs; but Heete-heete having the Musquet with him always repulsed them, and they were forced to retire to their Strong hold, as we did not approve of their destroying the Trees the partys were Calld in and placed to look out and Heete-heete always caused one or More of His party to Cry out 'alls Well' in the best Manner they Could pronounce it every half Hour on Notice being given on board the Schooner, for which purpose, we fixed one of the Hoops of the Ships Anchor stock to serve as a Bell, striking it with a hammer, and this was repeated by all who happened to be awake in the Camp, which together with Continual fires which were kept burning all night, served to shew the Enemy that we were always prepared for them.

The enemy surrenders without a fight.

In the Afternoon of the 29th we observed a White Flag coming down the Hill, and orders was given not to Molest any who came with it, and before Sunset the Chief Pohooataya with his Wife, attended by a Priest bearing the Flag, came to the Camp. A Council was

now held of the Chiefs & Principal Men; when it was determined that peace should be made, on Condition that evry thing should be restored to the Young King; and that the Chiefs of Atta-hooroo<sup>349</sup> should acknowledge him as their Sovereign. To all which Pohooataya agreed, & with His Wife Came on board the Schooner as hostages for the performance of his part. — but as several of the things were in posession of the other Chief T'towha, messengers were sent to Him to demand them, with orders to tell him if they were not produced in 24 Hours that He might expect no quarter.

In the Night Came Burkett from Papaara, and told us what dispositions were made there, and We informd him how we intended to proceed if Tetowha was obstinate and having appointed the time for storming him on both sides Burkett return'd to Papaara. He inform'd us that Te'towha had, in their attack, been forced into the Mountains & had several killd & wounded. 31st. This Morning we were informd that Te'towha had passd by in the Night, and was gone to Oparre with the Royal Marro which he intended to present to the Young King in person...

(October)

On the 1st of October the Canoe bearing the Morai, Ark &c. — was brought and deliverd into charge of the Priests of Maatavye and Oparre; who proceeded with her directly to Oparre, and Orders were now given for the Fleet and Army to return home, when they accompanied the Sacred Canoe escorting it Carefully to Oparre, and in the afternoon a breeze springing up we Weighd, having Poeno & the Two Attahooroo Chiefs, and run up to Tetta-hah where we anchord for the Night, and weighd at 9 Next Morning the 2nd. here we were Joind by Burkett and Oammo who came to assist at the Peace and Worked up to Toa Roa harbour where we anchord in the afternoon where we landed the Chiefs and Went with them to the Morai, where the Peace was Concluded, and by our advice they were continued in posession of their Land; and Paa, an Old Chief who was out of Commission, was put into the District of Tettahah as a Substitute for Mottooarro to whom it was voted, the Attahooroo Chiefs promised on their parts that they would always honor the Young King as their Sovereign, and by way of strengthning the Peace each of them took one of us as his Friend. Great feasting now took place a Volly of Small arms was fired on the occasion...

The Army of 8 disbanded and were in hopes of being called up no more but it was not to be.

6th. We were visited by Burkett & Oammo (the same mentioned by Captain Cook) Tommarees father, who stayd three days, and returned to Papaara...

(November)

12th. At 4 in the Afternoon we got inside the reef at Tettahah and run down to Taboona, intending to sail for Morea as soon as our sails were repaired, here we came to an Anchor, and Pohooataya came on board, and brought two roasted hogs & some Breadfruit, Yams, & Tarro, we also met with Poeno here, who had left Maatavye the same time we did, bound round the Island; we got one of his Men as a Pilot, and having repaired our Sails, in the Morning, Weighd and run over to Morea, Where we anchord in Vyeerre harbour on the same day; the distance being little more then 10 Miles.

---

<sup>349</sup> WWB: (*district*)

We were well received...

As we began to think our visit long enough, and some of us thought we had been too long from home, we weighd on the 25th having on board Mottooarro, his Wife Fatowwa and several men of distinction, and workd up to Vyeere where we anchored the same day. Mottooarro was very desirous that we should stay some time longer, but we thought short visits best, and promised to come again, he made us each a present of Hogs & Cloth, and Norman having a fancy to Stay a while at Morea he took him at his word and taking his leave of us set out the same night on his return homeward and we prepared to sail next day having on board 48 hogs & a large quantity of Cloth &c. &c...

The Wind being light we did not reach Taboona till the 28th, when we entered the reef and worked up inside of it to Oparre, here we landed the Hogs, and sent them up by land. On the 29th Arre-paeaa Presented us with a large baked Hog and Accompanied us to Maatavye the same day, together with several of his Friends.

As soon as we could see the Beach at the Point <sup>350</sup> we saw it lined by the Inhabitants who had Flockd to the place to see us as soon as the News of our approach began to spread, and when we Anchord could scarce get from the Schooner to the Houses for our old Friends, who flockd about us and were as eager & seemd as much rejoiced as if they had found some of their lost relations...

(December)

December, 1790. Having got evry thing on shore by the 10th of December and expecting the wet season now to set in shortly, we got the Schooner hauld up and housed over to shelter her from the Weather.

Coleman having declared that he would not have any thing to do with the Schooner, and our finding that our hopes of reaching Batavia or any other place without sails, and finding that even Matts could not be had, we dropd any further attempts that way.

1791

(January)

January, 1791. We had now frequent Visitors from different parts & particularly from the Ryeatea <sup>351</sup> people, who made much inquirey about Captain Cook, Sir Joseph Banks &c. &c. — and as we were also Visited by several people of note from Hooa-heine, <sup>352</sup> the Island where Captain Cook had left Omai, <sup>353</sup> we learnt of them that he died (of the Hotatte, a disorder not much different from the Fever & Ague) about four years after he had landed, and the New Zealand boys both died soon after, they greived much for Poenammoo their Native Country, and after Omai died, they gave over all hopes & having now lost their chief friend, they pined themselves to Death. — They also inform'd us that Omai was one of the Lowest Class (Calld Mannahownee) and had been condem'd to be sacraficed for Blasphemy against one of the Chiefs, but his Brother getting wind of

---

<sup>350</sup> WWB: (*Venus*)

<sup>351</sup> WWB has *Raiatea*.

<sup>352</sup> WWB has *Huahine* here and elsewhere.

<sup>353</sup> WWB has *Mai* here and elsewhere.

it sent him out of the way, and the Adventure arriving at Taheite at the Time, he got on board her and came to England, and his Friendship with Captain Cook afterwards, made him more respected then his riches, and the meanness of his birth made him gain very little credit with his countrymen tho he kept them in awe by his arms. —His Horse was killd soon after his landing by a Goat who Gored Him in the Belly which they knew no remedy for, and the only revenge he could have was to kill the Goat; the Mare remains yet at Hooaheine, and part of the House which Captain Cook had built for him.<sup>354</sup> His Goods were devided after he died, & he distributed many before his death, the Musquetts are in possession of a Chief who was his Friend (Calld Tennanea, brother to Tayree-tarieea king of Hooaheine) but are of no use being both disabled; these Accounts we had also from a very intelligent man who lived with Omai some time as a servant, and who informd us that he was very careful of His property till he died, when it was distributed among his friends—they also informd us that His Arms and the Manner in which he used them made him Great in War, as he bore down all before him, and all who had timely notice fled at his Approach and when accouterd with his Helmet & Breastplate, & Mounted on Horse back they thought it impossible to hurt him, and for that reason never attempted it, and Victory always attended him and his Party...

On the 10th arrivd here Eddea from Tyarrabboo, bringing with her Teano her sister & a Number of Attendants. She Congratulated us on the Success which attended us in the War which had proved very beneficial to Her Son, who was now to be invested with the Royal Marro, for which purpose she had now come to prepare. She made each of us a present, and next day we were entertained with a Boxing Match by the Ryeatea Men, & Wrestling and Dancing by the Taheite Men & Weomen. Eddea was Mistress of the Ceremonies, and the Numbers of Spectators present was very great, and among them came Areepaeaa Waheine who had returnd from Morea to assist at the Ceremony of Investing the Young King with the Royal Marro.

Next day the 12th I attended Eddea at her request to Oparre on a visit to the Young King; at entering his bounds she was forced to Change her Cloaths, and put on those which belongd to him, before she could Enter his house, but he desired me to wave that Ceremony, and received Me very Courteously...

14th. Arrived here Burkett on a Visit, with whom I set out on the 17th for Papaara, having heard much of His friend Tommaree who I had not yet seen. We reachd Papaara next day, where we were received by Tommaree himself. He is a Handsom well made man of about 27 or 28 years old and about 6 feet high. He received me with evry token of Friendship, and desired me to be one of His friends; we soon became perfectly intimate, and during my stay he feasted me evry day, and begd that I would be in no hurry to return home.

While I was here the Young Kings Flag arrived, and was received by Tommaree and Conducted to His Morai, but they kept by the Beach close down in the Surf till those who Carried it were abreast of the Morai, when they turnd short round and proceeded to the Morai — as the Flag passd, the Inhabitants hid themselves, and all Fires were put out — we attended them to the Morai, where Tommarees priests having set the Flag up, made the Usual peace Offering of a Hog and a Plantain tree, the Priests repeated it and several young Pigs & Plantain Trees were Offered with long Harrangues and Tommaree made a long speech declaring Toonooeaiteatooa to be his Chief, and ordered a feast to be

---

<sup>354</sup> WWB places this sentence after the final sentence in this paragraph.

provided for those who bore the Flag — this Flag was the Union Jack which they had got from Captain Cox, and was Slung a Cross the Staff with a stick in the tabeling as we sling a Pendant, it was decorated with Feathers Breast Plates Tassels &c. — as the Chief People of the District were present, we honord the Ceremony by firing our Musquets,— which was received as an honor...

On the 23rd I took leave of Tommaree who gave me a pair of Canoes & several Hogs Cloth &c. and Burkett accompanying me we set off for Vyeerre, where we were received by Tootahah, Poenos brother & Moenannoo his brother in law — who entertaind us civilly and we set out for the Isthmus where we hauld the Canoe a Cross, this part of the Island is a low level spot about 3 miles [broad;] it is thick of Wood, but as the Inhabitants frequently travel this way there is a Good road, and it is much easier to haul the Canoes a Cross, then to go round the Peninsula when they are Bound to Towtirra.

As soon as we reachd the North Side we were met by Messengers from Matte desiring us to come up to Him at Affwhaheetae about 6 Miles from the Isthmus; we accepted the invitation, and leaving the Canoes at a house Close by set out by land, and arrived there in the same afternoon, 25th, when a feast was prepared for us, and Matte was glad to see us.

He now informd us that the people of Tyarrabboo had used him very uncivil, altho the Flag had been received, and passd with all the Ceremonies; which he said was only for fear of us and not their regard to His son. He told us that we had yet a right to Chastise them for Killing Thompson, and said that if we once made our appearance in Arms in Tyarrabboo they would never make any resistance and he would be at the Expende of the Amunition, that his Son might be Sole King, he also told us that He had conversed with Tommaree who was ready to furnish Men & Canoes when ever we thought proper to take it in hand.

27th. Having told him that we would Consider of the Matter we signified our intention to go homeward, when he ordered his Canoe & went down to the Isthmus with us, when we launchd our own and set out in Company for Heedee, <sup>355</sup> and having landed at Teetoes (a Man of Rank) we had a dinner prepared, and we then proceeded to Avey Myes where a Feast was also provided, and we remain'd here all Night.

And on the Morning of the 28th a hog & some Cloth being prepared for me I took my leave, and leaving Burkett to return to Papaara, and Proceeded to Maatavye, where I arrived on Saturday the 29th and found Numbers assembled at Maatavye and Oparre to attend the Approaching Ceremony and among them Mettooarro with Norman, Ellison and Byrn from Morea, and all the principal Men of the Island, and the Beach was filld with Canoes.

(February)

13th. This day the Ceremony of Investing the Young King with the Marro Oora or Royal Sash took place; the Sash is of fine Network on which Red and Yellow Feathers are made fast, so as to cover the netting; the sash is about three yards long, and each end is devided into six tassels of Red Black & Yellow feathers, for each of which they have a name of

---

<sup>355</sup> WWB has *Hitiaa*.

some Spirit or Guardian Angel, that watches over the Young Chief while the Marro is in his Possession and is never worn but one day by any one King; it is then put into the Sacred Box and with a Hat or Shade for the Eyes Made of Wicker & Covered with feathers of the same kind and never used but on the Same occasion it is delivered to the priests, who put it Carefully by in the Sacred House on the Morai, where no person must touch it.

This Ceremony was performed at Oparre on the New Morai which was built for the reception of the Movable Morai &c. which we had brought from Attahooroo and where these things were now kept. The Chiefs (or their Substitutes) of Tipperroonoo and Morea attended, and Toonooeaiteatooa <sup>356</sup> the Young King being placed on the Morai, a Priest making a long Prayer put the Sash round his Waist and the Hat or Bonnet on his head & haild him King of Taheite. Mottooarro then began by His Orator making a long Speech and acknowledging him his King, when three Human Victims were brought in and offered for Morea, the Priest of Mottooarro placing them with their head towards the Young King and with a long speech over each, he offered 3 Young Plantain trees. He then took an Eye out of each, with a Piece of split bamboo, and placing them on a leaf took a Young Plantain tree in one Hand, and the Eyes in the Other Made a long speech holding them up to the Young King, who sat above him with his mouth open; after he had ended his Speech & laid the Plantain trees before the Young King, the Bodys were removed & buried by his priests in the Morai, and the Eyes put up with the Plantain trees on the Altar — the rest of the Chiefs then brought in their Sacrafices in the Same Manner, going through the like Ceremony, some bringing one Victim & Some two according to the bigness or extent of their districts, after which large Drovers of Hogs and an immense quantity of other Provisions such as bread, Yams, Tarro, Plantains, Cocoa nuts &ca. were brought and presented to the Young King. Several large Canoes were also hauld up near the Morai on the sacred ground; these were dressd with several hundred fathoms of Cloth, Red Feathers, Breastplates &c. — all which were secured by the priests & Young Kings attendants—the Marro being now removed and taken Care of by the Priests, they all repaird to feasts prepared for them, which lasted some weeks, the Number of Hogs destroyd on this occasion were beyond all conception, besides Turtle', Fish &c. &c. — I enquired the Cause of the Eye being offered, and was thus informed. The King is the Head of the People for which reason the Head is sacred; the Eye being the most valuable part is the fittest to be offered, and the reason that the King sits with his Mouth open, is to let the Soul of the Sacrafice enter into his Soul, that he may be strengthend thereby, or that He may receive more strength of discernment from it, and they think that His Tutelar Deity or Guardian Angel presides to receive the Soul of the Sacrafice. Several Large Hogs were placed upon the Altar and the Human sacrifices offered this day were 30, some of which had been Killd near a Month.

These were the First that had been offered since our coming to the Island. They never offer Men but such as have committed some great Crime Nor then, but on particular Occasions, but Hogs Fish &c. they offer without Number and on evry triffling affair.

20th. Arrived Millward and McIntosh who having settled the Matter relative to the War, we determined to put it into execution, as None of the Chiefs of Tyarrabboos had assisted at the Ceremony of investing the Young King with the Royal sash. Tommaree had proposed to Make a Grand Feast, under Cover of which he Could have his Men and Canoes collected before he told them what he wanted them for, and by that means would

---

<sup>356</sup> WWB has *Tu-nui-e-a'a-i-te-atua*.

prevent it from being blazed about — the English were to be there as partakers of the Feast, and when we were ready to attack them we could be in their Country before they knew what we were at, and by this means make an easy conquest. This appearing to us a very good plan, we agreed to prepare for it as fast as possible, and began to get things in order for Launching the Schooner; but from the Number of Visitors which daily came to see us, owing to the Number collected together in the two districts, we were not able to make any Progress, and it was the 1st of March before we Got her Launched...

(March)

Among our Visitors We often Had the Young King, but as his presence in any House would render it useless to any of the Natives he Never came in.

Sunday the 13th. He was Carried round the Beach of Maatavye on Mens Shoulders dressd in a Cloak of Black feathers and his Head almost Hid in a large Garland of Black and Red Feathers — he was attended by the principal people of the District carrying the Union Jack horisontally over their heads, but as all could not get under it, several Fathoms of painted Cloth was added to it. His Ceremonies are not all performd yet, for which reason he can only pass by the Beach, and cannot go inland, except on sacred Ground leading from the Beach — he made us presents, and appointed each to a portion of Land, being very fond of the whole of us, and desired his Subjects to treat us as his relations, calling us his Uncles (or Medooa's).

14th. Bent the Sails and got evry thing on board and on the 21st Weighd & saild for Oparre, leaving in Maatavye Mr. Stuart, Mr. Heywood, Coleman & Skinner. We anchor'd at the lower part of Oparre where we were Join'd By Norman, Ellison and Byrn, making our number now seven, being McIntosh, Millward, Heildbrandt & Myself.

Burkett, Sumner and Muspratt were already at Papara. All appeared set and rosy for the campaign but tragedy for them all was nigh.

The 25<sup>th</sup>.

... it was night before we reach'd Papaara. We anchord for the night with in a break of the reef about a Mile from Tommarees house. Some went on shore to Tommarees to Sleep, & he Came down to View the Schooner as soon as he had notice of Her Arrival. Next Morning we Weighd, and workd up to the Morai, and Came to an Anchor, here we found Burket, Sumner, Brown & Muspratt. We went on shore to Tommarees to Breakfast but were scarcely sat down when a Friend of Heeteheetes arrived in haste, telling us that a ship had anchord at Maatavye since we had left it, that those who we had left there were gone on board, and that the Boats Mand and Armd were then at Atahooroo in their Way after us, that Heete-heete who was their Pilot had sent him to give us Notice that we might know how to act. No time was now to be lost in fixing on the best plan, and it was agreed to avoid seeing the Boats: and for this reason we got on board leaving Brown & Byrn on shore, and Got under way stood out with a fresh Breeze at E S E standing to the Southward on a Wind. — we hoped by keeping out of sight of the Boats to reach the Ship and go on board of our own accord, hoping thereby to have better treatment then if we stayd to be made prisoners, and Heete-heetes Messenger had given us a very unfavourable account of the Treatment of those who went on board from Maatavye.

But the winds were against the schooner and by the 27<sup>th</sup> they were back at Papara.

When we Anchord we were informd that Mr. Hayward, formerly of the Bounty, was Officer of one of the Boats, which proved to be the same we had seen, who finding they were not like to come up with the Chase had returned to the ship; we also learnt that Byrn had gone to the Ship and Brown having plunder'd Burketts house of all that he could, was gone on board also.

Temarii makes wild efforts to save his 9 friends.

Tommaree, seeing Brown seizing on all that he could find, had sent evry thing back into the Mountains where Burkett, Sumner, Muspratt, Heildbrandt, McIntosh & Millward, went after them, leaving Norman, Ellison and Myself to take Care of the Vessel; in the Mean time I went on shore to get some Cocoa Nuts & some provisions dressd, leaving Norman and Ellison on board, and as the surf run high on the Beach I took no arms with me, when I left the Vessel, when I went to Tommaree he promised that I should have what I wanted Imediately. I told Him that we must go to the Ship, when he said 'if you do Hayward will kill you for He is very angry'. He ordered some hands to carry off Cocoa Nuts and in the Mean time pressd me to stay with him, saying 'if you will go into the Mountains they will never be able to find you'; but I still denyd him; telling him that I must go to the ship. He then upbraided me with deceiving him, and told me that I should not go, and at the same instant I observed several of the Natives on board the Schooner (where they had gone by Tommarees order and under pretence of carrying Cocoa Nuts on board) had taken the Opportunity of Seizing Norman and Ellison and throwing them overboard. I then begd Tommaree to prevent them from being hurted, when he told me that there was no fear of them, and in a few minutes after they landed and were Conducted to Me amidst a Thousand or More of the Natives, when they Poured so fast on board the Schooner that they bore her down on one side and she rolld the most of them overboard; however they soon stripd her of evry thing that they could remove and brought the things on shore, unbending the Sails & unreeving the rigging which they brought away with them.

We askd Tommaree what was the Meaning of this Treatment, and seeing nothing of our Companions and being unarmed ourselves we hardly knew what to think of our situation; he told us it was because we wanted to leave Him, and told us we must go and secure ourselves in the Mountains and keep away from the Ship and we should have our arms and evry thing restored, and he would make good all our damages. We still refused; when he said 'then I'll make you go', and his men Seized us and was proceeding in land with us when we begd of Tommaree to let us see some of our Shipmates before we went, which he agreed to & a Guard was placed over us, till he should return. We were conducted to the house of Tayreehamoedooa where we had provisions prepared in abundance.

We staid here all Night, and next day, When we proposed to make our escape, and a Trusty friend who had lived with me all the time I had been on the Island, being one of Poenos Men, found us out and promised to have a Canoe ready by Midnight to carry us to Maatavye, where he said that Poeno waited with impatience to see us. As soon as it was night, he took his station on the Beach, and about 10 oClock brought Brown into the House; we asked him if he had any arms, when he produced a Pistol which he said he had brought from the Ship with two hatchets & a knife, these He delivered into Normans hands, and asked us what we meant to do, & where the rest were, to which we answerd that we had not seen the others since they landed and we were going to the Ship and askd Him the Name of the Ship & her Commander; but the only account he could give was that she was an English Ship of War and Could inform us No farther. He also Produced a

Bottle with some hollands Geneva of which he offered each a Dram, but the smell proved sufficient for Me and the other two drank but sparingly. Brown told us that He had been Landed at the North Side of the Isthmus by the Ships Boat of which Mr. Hayward had Command, and was sent to Papaara with presents for Tommare, but had not seen him, he said he had been beset near the Moral and narrowly escaped being Killd, his Pistol being wet would not fire, and was forced to shelter himself in the thick Brush near the Morai, and was proceeding to return to the Ship when he was met on the Beach by our Man.

The Canoe being ready we armd, Norman & Myself with a hatchet each Ellison the large Knife, and left the Pistol with Brown, who fresh Primed it, & we set forward; having got to the Canoe without interruption we got in and paddled to Attahooroo, landing about 6 Miles from Papaara on a sandy Beach, which being white was of some help to us in Travelling; here we left the Canoe and proceeded alongshore for 12 or 14 Miles and reachd Pohooatayas House at Tyetabboo about 4 in the Morning of the 29th. Here we found a launch at anchor near the beach, and some Canoes hauld up near the House. We haild the boat but received no answer; those on board being all fast a sleep, as were those who were on shore in the Canoes.

On Enquirey we found that the Canoes belong'd to Areepaeaa, who was Here with them, and the Officer Commanding the Boat was Mr. Robert Corner (Second Lieut of His Majestys Ship Pandora, Captain Edwards) who being asleep in one of the Canoes we waked him and delivered our selves up to Him, telling Him who we were, and delivering the Hatchets to Brown when he came up, also the Pistol and amunition which he had given to Norman by the Way.

Having informed Mr. Cornor where the Schooner was, and what had happend to us, he left us in the Launch with Mr. Rickards, Masters Mate of the Ship, and Six Men, and with 18 more he set out (as soon as daylight enabled him to proceed) by land for Papaara, taking Brown with him, we remain'd here till two in the afternoon when Mr. Hayward (who we found was Third Lieutenant of the Ship) arrived with the Pinnace and 20 Men Armd, and by his orders we had our hands tyed and Mr. Rickards being ordered into the Pinnace, Mr. Seville a Midshipman was put on board the Launch & ordered to proceed to the Ship then 25 or 30 miles distant. Mr. Hayward askd us no other question but where the others were, which we could not answer not knowing ourselves. We parted from the Pinnace about 3 oClock, and during the Passage up, Mr. Seville gave each of us half a Pint of Wine and from Him we learnt the Fate of the Bountys Launch, and he also informd us that Lieut. Bligh was made Post Captain. He also enquired what was become of the Bounty and who was in her, which we answerd to the best of our knowledge, and we reach'd the Ship at 9 oClock when we were handed on board and put both legs In Irons, under the Half Deck, after which our hands were cast loose; there being no Marines, two Seamen & a Midshipman were posted over us with Pistols & bayonets.

Here we found in Irons Geo. Stuart, Peter Heywood, Josh. Coleman, Richd. Skinner, & Michl. Byrn, who informd us that Handcuffs were Making by the Armourer which were next day put on, and orders Given to the Centinals not to suffer any of the Natives to speak to us, and to shoot the first Man that spoke to another in the Taheite Language. We remaind under the Half Deck some days, during which time we had full allowance of evry thing but grog, which we did not then want, having plenty of Cocoa Nuts provided for us by our friends, who were not sufferd to speak or look at us, any who lookd pitifully toward us were ordered out of the Ship...

(April)

On the 9th of April the Schooner was brought to the Ship by Mr. Hayward, and in her came Thos. Burkett, Jno. Sumner, Thos. McIntosh, Willm. Muspratt, Jno. Millward, & Henry Heildbrand who were Iron'd Hand and foot in the Same manner as we were as soon as they came on board.

The Poop or Roundhouse being finishd we were Conveyd into it and put in Irons as before. This Place we Stiled Pandoras Box, the entrance being a Scuttle on the top of 18 or 20 inches Square, Secured by a bolt on the top thro' the Coamings, two Scuttles of nine inches square in the Bulk head for air with Iron Grates, and the Stern ports bar'd inside and out with Iron; the Centrys were placed on the top while the Midshipman walkd across by the Bulk head. The length of this Box was 11 feet upon deck and 18 wide at the Bulk head, and here no person was suffered to speak to us but the Master at Arms, and His orders were not to speak to us on any score but that of our provisions.

The Heat of the place when it was calm was so intense that the Sweat frequently ran in Streams to the Scuppers, and produced Maggots in a short time; the Hammocks being dirty when we got them, we found stored with Vermin of another kind, which we had no Method of erradicating but by lying on the Plank; and tho our Freinds would have supplyd us with plenty of Cloth they were not permitted to do it, and our only remedy was to lay Naked, — these troublesome Neighbours and the two necessary tubbs which were Constantly kept in the place helpd to render our situation truely disagreeable.

During the time we staid, <sup>357</sup> the Weomen with whom we had cohabited on the Island Came frequently under the Stern (bringing their Children of which there were 6 born, Four Girls & two Boys, & several of the Weomen big with Child) Cutting their Heads till the Blood discoloured the water about them, their Female friends acting their part also and making bitter lamentations, — but when they came to be known, they were always driven away by the Captains orders and none of them sufferd to come near the Ship.

Notwithstanding which they continued to come near enough to be observed, and there performd their Mourning rites which on the day the Ship Weighd, were sufficient to evince the truth of their Grief & melt the most obdurate Heart...

(May)

May, 1791. The Schooner being fitted, & the Water Compleat we saild from Taheite on the 19th of May...

From that day the island on which they had dwelt for 19 months became but a memory of the Past.

---

<sup>357</sup> WWB: — to the 19<sup>th</sup> of May

## Tahitian Chiefs and Treaty Making

from “Polynesian Reminiscences” by W. T. Pritchard <sup>358</sup>

In November 1836 and again in January 1837 the Roman Catholic priests in pairs had come and gone from Tahiti — expelled. In August 1838 Commodore Du Petit Thouars had come — and gone after having forcibly secured (1) an Apology, (2) an Indemnity, (3) a Salute of 21 Guns to the French Flag and (4) the appointment of the Belgian Moerenhout as French Consul.

Near the close of 1840 Queen Pomare IV went on a visit to the Leeward Islands. <sup>359</sup>

In compliance with repeated invitations, Queen Pomare, near the end of 1840, went on a visit to the “Leeward Islands,” commonly called the Society Islands, the Chief Paraita being appointed Regent during her Majesty’s absence. My father also left Tahiti on the 2nd of February, 1841, on leave of absence, to visit England, my mother remaining still at Tahiti. M. Moerenhout, the French Consul, now had everything his own way, and soon won the confidence of the Regent, who became his fast friend. Before the Queen returned, M. Moerenhout had quietly obtained the signatures of the Regent and three of the leading chiefs to the following document, which at the time of signature bore no date :—

*“This is a word from the Representative of the Queen and the Chiefs of Tahiti, administering the government of the Queen, now absent, to the French Consul, J. A. Moerenhout. Health to you. On account of the growth of evil in this land among certain foreigners residing here, who are breaking our laws and regulations, who kill people, and commit all manner of crimes, and who are being protected by influential persons residing here as the representatives of countries where those crimes are punished with greater rigour than in ours; this is our word to you. Make known this our word to the King of France, that he may speak to a captain of a ship of war to visit this island, to examine the regulations of this land, and assist us in enforcing the laws of this country, and also to assist us in reference to the false decisions resolved upon. And when our practices shall be understood and the truth made known, then the evil designed by the false party will be removed. Make known our word to the King of France, we wish him to assist us. It is our wish that you send this our desire. Peace be with you,*

*“Paeaita, Regent,*

*“Paite, Hitoti, Tati, Governors of Districts.”*

When on her return the Queen discovered what had been secretly done, she wrote at once to the King of the French, to Queen Victoria, and to the President of the United States, entirely disavowing the document, and stating that it had been surreptitiously obtained by the French Consul during her absence. How the signatures of the Regent and his three

---

<sup>358</sup> [William Thomas Pritchard \(1829–1907\)](#) was the son of [George Pritchard \(1796–1883\)](#), who was appointed British Consul at Papeete in 1837; see *The Consul Pritchard* in the Appendix. This addendum is extracted from Chapter II, *Tahiti Ceded to France*, of *Polynesian Reminiscences*, which can be found [here](#).

<sup>359</sup> In his addendum, WWB has edited the extracted text. Rather than presenting WWB’s text, pages 22 to 29 of Chapter II have been reproduced; the text that WWB has not extracted is shown in grey.

accomplices were obtained, is recorded by the Regent himself in a note addressed to the British Vice-Consul in charge of the Consulate during my father's absence.

*“Dear Friend Cunningham, — This is our word to you respecting the letter which M. Moerenhout, the French Consul, brought, that we might write our names to it. This we declare to you, that we did not know what had been written, we did not rightly understand the nature of the writing. We signed our names to that letter ignorantly. Let that document be thoroughly undone. By no means let the letter written by Moerenhout be acted upon. That is all we have to say. — Paraita.”*

Again, in 1843, when the Queen instituted a stringent inquiry into the proceedings of the Regent, the Chiefs Tati and Utami declared in evidence that M. Moerenhout himself wrote the letter; that he got them into his house in the night to sign their names, under a promise of one thousand dollars each; that they signed it before the Queen either saw or signed it; and that in all they did they acted under fear.

The Queen received from the French Admiral, Buglet, an assurance, which, gratifying as it was at the moment, was subsequently totally contradicted by the acts of another French Admiral. Writing from “the French frigate ‘Thetis,’ in the Bay of Valparaiso,” under date of the 21st January, 1842, Admiral Buglet tells the Queen:—

*“I know that many alarm your Majesty by stating the intentions of France in regard to your possessions, but I can assure you that the Government of the King neither wishes to conquer your States nor to take them under its protection; that which it wishes is to maintain with Tahiti the amicable relations which it has with other States. As soon as possible, my successor, Rear-Admiral Du Petit Thouars, will send a ship of war to Tahiti, not to enforce the execution of treaties which your Majesty, I am convinced, has not broken, but to prove to you yet further the advantages you derive from your amity with the French, and that our missionaries wish nothing but to do good to your subjects, and not to put arms into their hands, as some seek to persuade your Majesty, in order to injure them in your opinion and that of your subjects.”*

Again, on the 21st August, 1842, Queen Pomare was gratified by assurances of a similar nature from Captain Du Bouze, commanding the corvette ‘L'Aube.’

Early in September, 1842, Du Petit Thouars once more appeared at Tahiti, after a visit to France and his promotion to the command in chief of the French naval forces in the Pacific. His first week in port was spent in quiet daily interviews with the French Consul. At the expiration of that time, M. Moerenhout requested the Regent, Paraita, to invite Utami and Tati, two of the great chiefs, to a friendly interview with the Admiral. They came, and what took place is thus described by the Chief Tati:—

*“When Admiral Du Petit Thouars arrived, the Regent sent for Utami and me, telling us that M. Moerenhout and the Admiral wished to see us at a friendly interview at Papeete. From the Consul’s house we went on board the Admiral’s ship, with the other chiefs and the Regent. We were told by the Admiral that he had come to Tahiti because the flag of the priests had been insulted and hauled down, Frenchmen had been maltreated, and the words of the Consul of France had been disregarded. The Admiral said he had great compassion in his heart towards us, but his compassion must give way to his duty to his King, and he must demand redress. The Queen must either give him money or Tahiti, or he would fire upon the land. We were greatly afraid, and talked amongst ourselves. The*

Chief Utami and I said to the Regent, 'Is this the friendly meeting you asked us to attend?' The Regent said, 'Who would have expected such work as this!' It was now night, and when we had taken some wine, we all went ashore to M. Moerenhout's house. There he showed us the agreement, and told us to sign our names at once. We objected. The Regent said all would be well if we signed our names. I told him that he was the Queen's representative, and that if he said all would be right, we could do nothing else but sign. M. Moerenhout said <sup>360</sup> we should all have one thousand dollars each if we put our names to the paper, and then we signed it. We were afraid of the Admiral and his great words. The Chief Utami said, 'How will it be with Britain in this matter?' M. Moerenhout replied, 'This is between France and Tahiti; Britain will be work for me.'"

On the day after the interview, Admiral Du Petit Thouars' frigate 'La Reine Blanche,' was prepared for action; springs were put on her cables, guns shotted and run out, and boats armed. Notice was sent to the various Consuls, that "difficulties of a graye nature having arisen which would probably lead to hostilities, 'La Reine Blanche' was offered as an asylum for themselves and their families." The Queen was at Moorea, an island some nine miles from Tahiti, and under her Government. Her Majesty was summoned by the gallant Admiral "to appear at once at Tahiti to answer to the demands of the great French nation for indemnity for injuries and injustice suffered by Frenchmen at the hands of the Tahitians." Her Majesty was hourly expecting her confinement, and sent over the Rev. A. Simpson, an English missionary, together with Tairapa, one of the Judges of the Supreme Court, as her delegates. Mr. Simpson was soon disposed of. M. Moerenhout wrote to him thus:—

"The French Admiral, Du Petit Thouars, has commanded me to inform you that he will not receive you as a messenger from the Queen of Tahiti, you being an Englishman and a missionary." Tairapa was received, and directed to return forthwith to his royal mistress with the document which the Regent and the Chiefs had already signed, and with the Admiral's message:— "Sign this paper, or pay ten thousand dollars within twenty-four hours; if the paper with the Queen's signature or the money be not before me within the twenty-four hours, I fire upon Papeete without further notice." It was evening when Tairapa arrived in the presence of his Queen and delivered the message. Long and severe was the struggle, whether her Majesty would sign or not. Silent and thoughtful, Pomare lay on her bed in the pains of labour, putting off the moment of decision as long as possible. At length Tairapa reminded her Majesty that the hour was approaching when he must return with the answer, — her signature or her money. "Money?" she exclaimed, "where has Pomare ten thousand dollars in cash? I have the land of my ancestors and I have my people, but where have I ten thousand dollars?" And then Pomare wept! She sent for Mr. Simpson:— "My good missionary, I must sign this paper. I sign it only through my great fear, very reluctantly. I cannot pay the fine. If the Admiral fires on my people, they will massacre all the white men in Papeete before they run to their mountains. Therefore I sign this paper through my great fear of the French, and to prevent the bloodshed they will cause by firing on my people." And then, weeping and sobbing as she took the pen, Queen Pomare signed her name to the document, and Tahiti was gone! Turning to her sleeping boy, she took him up in her arms and exclaimed, as audibly as her sobs would let her, "My child, my child, I have signed away your birthright!"

The following is the document:—

---

<sup>360</sup> WWB: *This for the 2<sup>nd</sup> time it must be noticed.*

*“Tahiti, September 9, 1842.*

*“To Admiral Du Petit Thouars.*

*“As in the present state of affairs we can no longer govern so as to preserve a good understanding with foreign governments, without exposing ourselves to the loss of our islands, our authority, and our liberty, we, the undersigned, the Queen and the principal chiefs of Tahiti, address the present letter to you, to solicit the King of the French to take us under his protection, upon the following conditions :—*

*“1. The sovereignty of the Queen, and her authority, and the authority of the chiefs over their people, shall be guaranteed to them.*

*“2. All laws and regulations shall be issued in the Queen's name, and signed by her.*

*“3. The possession of lands belonging to the Queen and to the people shall be secured to them, and shall remain in their possession; all disputes relative to the right to property or lands shall be under the special jurisdiction of the tribunals of the country.*

*“4. Every one shall be free in the exercise of his form of worship or religion.*

*“5. The Churches at present established shall continue to exist, and the English missionaries shall continue their labours without molestation; the same shall apply to every other form of worship, no one shall be molested or constrained in his belief.*

*“Under these conditions, the Queen and the principal chiefs solicit the protection of the King of the French, resigning into his hands, or to the care of the French Government, or to the person appointed by him and approved by Queen Pomare, the direction of all relations with foreign governments, as well as everything relative to foreign residents, port regulations, etc. etc., and of such further measures as lie may judge necessary for the preservation of peace and good understanding.*

*“(Signed) Pomare.*

*Paraita, Regent.*

*Utami.*

*Hitoti.*

*Tati.”*

The French Protectorate became a fact. <sup>361</sup>

---

<sup>361</sup> Regarding the establishment of the Protectorate, see Chapter X of *Old Time Tahiti*.

## The Pritchard Affair

from “Polynesian Reminiscences”, p. 42 and sequence

by W. T. Pritchard

This book published in 1866 was written whilst  
“my father still lives, a hale, hearty old man”.

### Prelude

On November 7, 1843 Pritchard struck his Consular Flag on the ground that he was accredited as Consul to his Tahitian Queen’s and not to a French government that day proclaimed by Du Petit Thouars : but though striking his Flag he reserved to himself his functions as Consul till the instructions of his government should be received. Much trouble ensued on Thouars’ action. The Queen fled to the Consul’s protection. A British warship lay in the harbour which did not allay the excitement on both sides.<sup>362</sup>

It soon appeared that my father<sup>363</sup> was a marked man. In the afternoon of the 3rd of March,<sup>364</sup> just as he was about to step into the ‘Cormorant’s’ boat, to go on board that vessel on official business, with Captain Gordon, — and in presence of my mother, who

---

<sup>363</sup> George Pritchard, Her Britannic Majesty’s consul, by George Baxter (1840–1867), from the Rex Nan Kivell Collection of the National Library of Australia, Canberra. The scenery represents the bay of Papeete, Queen Pomare’s palace, the chapel and natives returning from a week-day service.

<sup>364</sup> WWB: (1844)

was standing on the verandah, <sup>365</sup> — he was seized by a party of gendarmes, and, without ceremony, led through mud and rain to a “blockhouse,” hastily prepared for his reception. No reason whatever was assigned for his capture, no charge alleged, either to my father or to Captain Gordon. *Inter arma silent leges.* <sup>366</sup>

The place to which my father was taken, commonly called a “blockhouse,” was a building fifteen feet by ten, and twenty feet high, and in place of doors and windows, had loopholes every two feet apart, just large enough to admit the muzzle of a musket. Ten feet from the ground was a floor, dividing the building into upper and lower compartments. A ladder led up to this floor from the outside, through an opening just wide enough to admit one man at a time. The lower compartment had the bare, wet ground for floor, and as the building was on the side of a hill, the rain, which fell in torrents, drained down the slope, making the place quite a mud-hole. My father ascended the ladder, and when the last soldier had followed, it was drawn up and put down into the lower compartment through a trap-door, and my father ordered to descend to his quarters below. As he stepped off the ladder, he alighted ankle-deep in mud, and found a mattress, blanket, and bolster for his bedding; no other furniture was there in the place. My father asked the officer in command to let my mother know where he was, just to relieve her mind. But nay, — *martial law knows not the feelings of a wife.* And for sixteen hours my father lay in his dungeon without tasting food or water, without changing his wet clothes, or my mother knowing what had become of him: he might have been hanged or shot for all she knew. At the end of the sixteen hours my mother heard where he was, and at once sent him food and clothes. The guards examined everything, even the plates, to see that there was no secret message written by the wife to her husband, and then gave the prisoner a little cake, a little water, and a change of clothes, — at the same time handing him a paper with the Commandant’s signature and these words:— “A French sentinel was attacked in the night of the 2nd to the 3rd of March. In reprisal, I have caused to be seized one Pritchard, the only daily mover and instigator of the disturbance of the natives. His property shall be answerable for all damages occasioned to our establishment by the insurgents; and if French blood is spilt, every drop shall recoil on his head.” No sentinel had been attacked; <sup>367</sup> but that did not matter. And instead of moving the natives to attack the French, my father had exerted all his influence to prevent a collision, well knowing that if the Tahitians drove the French into the sea, France could send men enough to sink the island itself.

From this time my mother was allowed to supply food at 8 A.M. and at 4 P.M. As the servant who took the food was seen approaching, a soldier advanced to meet him some fifty yards from the prison, to prevent any communication with my father. It was solitary confinement, the only man entering the dungeon being the soldier who passed the food through the trap-door. On the third day after his arrest, my father had a severe attack of dysentery, and begged that the Commandant would allow Dr. Johnston, who attended our family, to see him. In reply the Commandant stated he was “truly sorry the exigencies of his position did not allow him to comply with the request except under certain restrictions,” which were “as soon as Dr. Johnston presents himself at the blockhouse, accompanied by the interpreter Latour, he shall be introduced to the upper story; the trap-door shall be opened, and the prisoner shall converse for ten minutes with the doctor, but

<sup>365</sup> WWB: *The Consulate house is on the waterfront.*

<sup>366</sup> Among arms, laws are silent.

<sup>367</sup> WWB: *News flies fast in a small community and Pritchard would surely have heard of it. The signature reads strangely as Commandant Bruat reported to his authorities in France that he was absent at the time from Papeete.*

the doctor shall not be permitted to descend into the chamber of the invalid. Dr. Johnston shall be admitted to converse in this manner with the prisoner at 8 A.M. and at 4 P.M. daily, and the medicines shall also be sent at these hours.” As soon as Dr. Johnston saw the place in which my father was confined, he pronounced it unfit even for the dungeon of a dog, and requested that a French doctor might be sent for. M. La Stoiique attended, and declared the place very suitable and proper for the prisoner! Nevertheless, Dr. Johnston represented to the Commander that, to save my father’s life, it was absolutely necessary to remove him at once. In the meantime the dysentery increased, and a fever supervened, which brought my father so low that the exertion of clambering up the ladder and standing on the upper step, to let the doctor feel his pulse, induced so great a tremor and excitement throughout his frame, as to make it utterly impossible to ascertain his real condition. In reply, my father was allowed to go into the upper story, and to sit there ten minutes for the doctor to examine him. No conversation was allowed on any subject other than the dysentery and the fever; and the medicines were emptied out of the papers in which the doctor wrapped them, the papers minutely scrutinized to detect any writing that might be a secret message, and then the medicines put back. On the 8th the Commandant was convinced by Dr. Johnston that if my father remained in the blockhouse another three days, it would cost him his life. At night my father was startled from a doze by the opening of the trap-door, and a soldier descending the ladder with a lantern, followed by an officer, who stated that he had orders from the Governor to convey the prisoner on board the French frigate ‘La Meurte.’ A guard escorted my father, at dead of night, from the blockhouse to the seashore, where an armed boat was awaiting him. Not a word was spoken above a whisper, and the officer in command never relaxed his tight grasp of my father’s arm until the prisoner was safely in the boat between the bayonets of the marines. Arrived on board the frigate, he was put into a compartment on the maindeck, screened off for the occasion from all intercourse with the rest of the ship.<sup>368</sup> As compared with the place from which he had just passed in a high fever, and through the damp midnight air, this was a palace. In the “blockhouse,” not to particularize the vermin and dirt generally which fell through the flooring of the upper room, the guard spat about the place so much that there was a continual drop, drop, drop through the crevices on to my father’s head or face, as he happened to be sitting or lying on his mattress.

Captain Gordon, of H.M.S. *Cormorant*, demanded the release of my father; and after a rather sharp and brisk correspondence, the Governor agreed to put him on board the ‘Cormorant,’ after the vessel was at sea, if Captain Gordon would give a pledge that there should be no intercourse with the shore. By the firm persistence of Captain Gordon, my mother was afterwards allowed to meet my father at sea, on condition that they merely took leave of each other, without making any arrangements as to my father’s property or anything else. On the 13th of March, 1844, the ‘Cormorant’ steamed out from Papeete harbour, and when well out to sea, awaited the French boats. After some little delay — just to exercise the patience of the British commander — my father was put on board, took leave of my mother, and the ‘Cormorant’ steered for Valparaiso; and thus were the French rid of my father.

While my father was in the “blockhouse,” the report of a musket was heard one morning, followed quickly by the sound of drums beating to arms. My mother, to whom a copy of the proclamation containing the words, “if any French blood is spilt, every drop shall

---

<sup>368</sup> WWB: *This also reads strangely as Bruat reports that Pritchard had his meals with the Captain who had ordered the arrest.*

recoil on his head,” had been politely sent by the Governor, thought the next she would hear would be the execution of the threat, and awaited the result of the call to arms with trembling anxiety; and my father momentarily awaited the same result, as he lay on his hard bed, and heard the sentinels cock their pieces, while the sergeant of the guard gave the order to look well to the prisoner. But their anxiety was relieved, and my father still lives, a hale, hearty old man. It turned out to be a false alarm. Two erratic donkeys, not considering themselves bound by martial law, were strolling about the bush in search of grass; as they passed one of the sentries, he heard the leaves rustle, and concluding at once that the natives were coming, fired in the direction of the noise. Though the donkeys escaped the bullet of the watchful sentry, they could not evade the vigilance of the commandant. They were duly captured and duly impounded in the Governor’s yard for I don’t know how many days.

Proceeding to Valparaiso in the ‘Cormorant,’ my father there found his old friend, Commodore Toup Nicolas; and together they came home to England in the ‘Vindictive.’ In his place in the House of Commons, Sir Robert Peel declared “a gross indignity has been offered to Britain in the person of her Consul;” and some sort of apology was tardily made by the French Government of the day.

369

But what compensation did my father ever receive, further than the intimation conveyed to him by Lord Aberdeen, that the “French Government had pledged themselves to indemnify Mr. Pritchard for his pecuniary losses, his illegal imprisonment, and the consequent sufferings of his wife and family,” and “had apologized for the insult offered to the British nation in the person of the Consul”? <sup>370</sup>

Leaving Tahiti as he did, his immediate pecuniary losses were, in round numbers, about £4000. My mother had to do the best she could for herself and family, and she found it necessary to be off from Tahiti as quickly as possible, for the Frenchmen annoyed and insulted her in every possible way, even to sending gendarmes on to the premises to kill pigs and fowls, and to taunt her as she stood on her own verandah. From the Foreign Office my father received, while in England, the sum of £1000, for which he gave the following receipt:— “Received from the Earl of Aberdeen the sum of £1000, which I promise to repay to her Majesty’s Government when I receive my indemnity from the French Government.” This receipt bears date the 12th or 13th of January, 1845. Towards the end of 1846 another £1000 was “loaned” to him by the Foreign Office on the same conditions; and there, with fine phrases, wordy apologies, ample pledges, and considerable loss, the matter rests, <sup>371</sup> so far as my father and his indemnity is concerned. <sup>372</sup>

My father’s consular district comprised Tahiti, Samoa, Tonga, and Fiji, with the intermediate islands. After the “Tahiti affair,” he was directed by the Foreign Office to return to his post, making Samoa his residence. In 1845 my parents went there, and my

<sup>369</sup> WWB: *Pritchard’s compensation*

<sup>370</sup> WWB: *Though he had struck his flag he was still “Acting” Consul till he heard otherwise.*

<sup>371</sup> WWB: *in 1866*

<sup>372</sup> WWB: *This definite statement should silence the generally accepted belief that the Indemnity was finally paid in 1847 by a subterfuge owing to the strong opposition to payment met with in the French Chamber of Deputies, it being smothered in other sums voted. The “loans” were eventually cancelled and the matter dropped.*

mother having returned to England, I joined my father in 1848, after he who had made Pomare an “ex-Queen” had himself become an “ex-King.”

In concluding the narrative of the “Tahiti affair,” — now a mere matter of history, — it is with pleasure that I find myself able to state that, however unhappy my father’s intercourse was with the officers of the French navy at Tahiti, my own personal intercourse with the gallant officers I had the honour to meet in the Pacific, both officially and in my private capacity, was invariably marked with cordiality and a good understanding; and especially from Captain Lévêque, commanding the corvette ‘Cornelie,’ I received, while Consul at Fiji, the utmost courtesy, and experienced the most friendly feelings. It was also always my good fortune to be on the most friendly terms with the French priests in my consular district.

## The Spanish Marine's Story

### Prelude <sup>373</sup>

Máximo Rodríguez, <sup>374</sup> a young man in his 20s having served with particular credit as a marine in the frigate *Aguila* throughout her voyage to Tahiti and back in 1772–3, was selected by the Viceroy of Peru to return in the quality of Interpreter with the expedition which his Excellency dispatched in 1774 in the same vessel to the same destination. The Instructions issued to Máximo required him to remain on the island with the 2 Franciscan friars embarked at the same time whom Captain Boenechea was commissioned to install there as missionaries. The Diary he kept of his sojourn is for the most part a document of simple domestic interest but it contains some historical matter not recorded elsewhere and shares with the more fragmentary report of the Fathers the distinction of being the record of the first sojourn of Europeans at Tahiti without the continuous support of their ship. It has the merit of having been written on the spot. Other records such as those of Wallis, de Bougainville and Cook describe what they saw but none of them acquired the opportunities that fell to Máximo's lot through enjoying the confidence of Chiefs and the common natives alike and living in familiar relationship with them. Moreover he moved amongst them with a competent knowledge of their language which he naturally steadily improved. He had acquired this by prolonged association with 2 of the 4 natives who were taken to Peru in 1772–3 and who remained there in close touch with him until they re-embarked for home in 1774. His record of the important Chief Vehiatua is unique as only the barest mention of him would otherwise be known. It is indeed the outstanding feature of the Diary.

He does not name the place of his birth but many things point to his having been born at Lima and was a halfcaste. This parentage may well have brought about the readiness with which Tahitians gave him their confidence and the actual affection they showed towards him from first to last. It may also account for his aptitude for falling into line with their mentality and merging in their domestic life. <sup>375</sup> Though he alleges that he was “*without education*” <sup>376</sup> it is evident that he had received some teaching by the only teachers in Peru, the Fathers stationed there. They had left their impress on his mind for he shows on occasion the narrow-minded, fatuous religious bias that prevailed in South America in his day. He was no scholar but he had abundant application for the tasks imposed upon him by his Viceroy which were to act as Interpreter for the Fathers and also to acquaint himself with the physical features of Tahiti, its harbours, roadsteads, produce and so forth, as well as the manners and customs of the natives and to keep a record of events day by day. All this he certainly did, with the credit to himself and value to posterity. The writing of the Diary gave Máximo a good deal of trouble and worry even to the ink required but in chief owing to the attitude of the 2 Fathers saw fit

---

<sup>373</sup> WWB's prelude has been adapted from Corney's introduction to the diary, *Some Account of Máximo Rodríguez and His Diary: and the Mystic Bowl of Marae Taputapuataea*, and from his *Descriptive Index of Personal and Place-Names Quoted in the Diary of Máximo Rodríguez*.

<sup>374</sup> Unlike Corney, WWB writes *Maximo Rodriguez*, and other proper names, without accents.

<sup>375</sup> On page xvii of his introduction, Corney quotes David Samwell, surgeon of the HMS *Discovery*, at Tahiti in August 1776: “*They [the Spanish ships] left three Spaniards behind them on the island... One of them was a common person, whom the Indians called Marteemo; he was very much liked by them & had, during his abode here, rendered himself by far the most noted of any of the Spaniards... Marteemo made the tour of the Island & lived upon a very friendly footing with the Natives, conforming himself to their customs & manners, & indulging himself with those pleasures which the Islands afforded, more particularly among the Girls, which last Circumstance was so agreeable to the Genius of these People that they looked upon him on this account to be the best Fellow among his Countrymen, who preserved a haughty Distance in their Behaviour to the Indians.*”

<sup>376</sup> Page xx.

to adopt towards him. The mainspring of their ill will was jealousy on 2 counts : jealousy of his popularity and jealousy of his accountableness to other and higher Authorities than themselves. The seaman servant Pérez also, who had been allotted to cook for the party, tend the garden and livestock and carry out menial duties in general at the Mission House, turned out to be sulky, churlish and disorderly lout and Máximo had to turn cook, gardener and general servant at times. There was heavy domestic discord all too often, there were wrangles into which he was sometimes forced, but throughout his demeanour towards the Fathers was respectful and obedient and he took their language of disparagement and even abuse with fine resignation.

Of the 2 fathers, Narciso <sup>377</sup> and Gerónimo, the latter was the most human and more genial towards Máximo than the former, who seemingly ranked as the senior of the 2 in authority. They came from the Franciscan College of Santa Rosa raised at Santa María de Ocopa in Peru, Narciso an Estremaduran, Gerónimo a Catalan, both in Old Spain, and the 2 men were clearly unfitted both physically and mentally for their task.

Besides the Diary borne off by Máximo on his return to Peru he carried with him a great and unique treasure, a mystic bowl of stone, unique, to be forwarded to His Majesty of Spain from the Chief Tu. This stone came from the island of Maupiti <sup>378</sup> in the Leeward Group. Only 6 miles in circuit it consists mainly of 2 hills and contains a dolerite quarry from which natives were used to procure adze blades and pestles for pounding food. The bowl's experiences were many and varied, finally it was altogether lost but by great good fortune D<sup>r</sup> Bolton Corney discovered it in the National Museum in Madrid in 1912. It was lying, hidden away, as Exhibit Number 2664, none knowing aught concerning it. <sup>379</sup>

<sup>377</sup> WWB writes this name as *Narcisco*.

<sup>378</sup> *Maurua* in Corney's introduction, page xxxiv.

<sup>379</sup> Plate 2, *The Mystic Bowl of Marae Taputapuatea*

The photograph of the *Mystic Bowl of Marae Taputapuatea* below is reproduced in Langdon, [The Lost Caravel Re-explored](#), page 120, from the Auckland City Art Gallery. "It was taken in 1977 when the bowl was on loan to that gallery

Upon Máximo's return to Lima, His Majesty gave him a Commission as Sub-Lieutenant of Infantry with full pay "*as a recognition of merit*".<sup>380</sup> He married, settled down in Lima and died somewhere around the 1820's for his widow held a copy of the Diary in 1825.

**The Story** <sup>381</sup>

Condensed from “The Quest and Occupation of Tahiti”

by Bolton Corney — Vol III.

H.M. Aguila and the storeship Jupiter sailed from El Callao on the 20<sup>th</sup> of September 1774 and arrived at Vaiurua <sup>382</sup> at the extreme southern end of Taiarapu <sup>383</sup> or Lesser Tahiti, where the same ship had come to an anchor in 1772, on the 15<sup>th</sup> of November 1774. The frigate’s boat proceeded to reconnoitre for a better harbour and location for the Mission House, Máximo and Pautu in it. Passing through the reef at the entrance to an anchorage some canoes came out asking for the 4 natives; Pautu, a man of 30 years of age, Tetuanui (Manuel), a lad of 14 years, both of whom had been baptized, Heiau and Tipitipia who had voyaged to Peru on the previous visit of the frigate. The last 2 had died, Heiau, a lad of about 16 years of age, who had expired as the frigate entered the harbour of Valparaiso in February 1773 and Tipitipia, a young man about 25 years of age, at Lima the same year. The natives had understood by signs from the storeship which had arrived 7 days ahead of the frigate that their fellow countrymen were aboard. Pautu was recognized and as soon as the shore was reached the boat party stepped to his home in front of which a multitude had gathered, some delighted, others weeping at the news of the death of those named : here he met his mother and sisters, the din so great that conversation was impossible. Tetuanui’s home was close by. Máximo went off to see Tipitipia’s father where he consoled them assuring them that everything possible had been done to save his son. He then met with Tetuanui’s parents explaining that he was slightly unwell but would soon be ashore. Heiau’s parents were not on the scene, their home being Vairao. <sup>384</sup> The boat was re-entered, not without difficulty owing to the crowd and confusion, and keeping inside the reef they rowed to the harbour of Tautira <sup>385</sup> where the Vaitepihu river reaches the sea, a secure one with good holding

---

<sup>381</sup> *The Story* is condensed by WWB from the *Daily Narrative kept by the Interpreter, Máximo Rodríguez at the Island of Amat, otherwise Otahiti, in the year 1774*, and from Corney’s footnotes. WWB also included comments of his own, in addition to the Diary, in text that is indented on both the left and the right in his manuscript; those comments are also indented here. Quotes from the Diary are given in italics, with edits by WWB in parentheses. WWB is less than rigorous when quoting the text of the Diary; corrections to WWB’s text and quotes, and other additions, are given in square brackets. In places where the ‘quoted’ text is far from being verbatim, the quotes have been removed. At the time of transcribing this addendum (June 2012), the text of the Diary was not available online; WWB’s text has, however, been checked with a printed copy of *The Quest and Occupation of Tahiti*, Vol. III. WWB has translated the personal and place names in the Diary to those in modern use, based on the *Descriptive Index*; the first instance of each translation is footnoted. The dates of the entries in the Diary from which WWB has quoted the text are footnoted. See also *The Grand Tour* in Part XIV, *Tahitian Vignettes*. (The text was subsequently made available online [here](#).)

<sup>382</sup> *Guayurua* in the Diary.

<sup>383</sup> *Tayarapu* in the Diary.

<sup>385</sup> *Ohatutira* in the Diary.

ground and shelter and where Tu<sup>386, 387</sup> and Vehiatua were at the time, after reconciliation had taken place at the close of some trouble between their respective domains.

Note This Vehiatua, an hereditary title of the Paramount Chief of Taiarapu or Lesser Tahiti was Ta'ata, a lad of about 18 who with a younger brother Tetua, not yet in his teens, were left to a mother named Purahi by the late Vehiatua Taitoa. She soon after married a lesser Chief named Ti'i-toria<sup>388</sup> and bore a daughter. Ta'ata's domain was extensive, covering not only Lesser Tahiti but extending up the west coast to Papara and on the east coast to Hitiaa. Tu, a man of 30, was the "first" Pomare, whose domain was at Paré, the north end of Greater Tahiti, but who aspired to gather under him not only the remaining free Districts east and west of him but Lesser Tahiti as well. He laid claim to the latter as against the youthful Vehiatua — and a little later the still younger Vehiatua who succeeded him, and still later the child nephew of the latter, the son of his stepsister and therefore not in the male line — on the grounds of cousinship : Tu's ancestor 4 generations back having married Tetua-e-Huri, the sister of the Vehiatua of that day. But throughout Máximo's stay on Tahiti, Tu and Ta'ata were friends.

The boat party met Vehiatua first whose canoe made for the boat from the harbour's shore and Pautu began according to custom to throw off his clothes in so august a presence but was stayed by the Officer in command, his belt and his sash he insisted upon handing over. Next came Tu in a canoe. He brought one of his 2 younger brothers with him, named Hinoi,<sup>389</sup> leaving ashore his father Ha'apai, his mother Tetupaia, another brother Ariipaea and his sisters so keen was he to see again the young returned marine and so warm a feeling was his that he there and then adopted Máximo as his brother and exchanged names, a lasting bond and sign of highest favour. The boat was told of Cook's and Furneaux's arrival the previous year at Tautira in H.M.S. Resolution and Adventure for a short

<sup>389</sup> *Hinoy* in the Diary.

stay and their anchorage at Matavai <sup>390</sup> and to prove it Tu gave the Officer of the boat a game bag which he had received from Otute (Cook). <sup>391</sup>

Before the 2 ships, still outside, cast anchor it was decided to test other likely situations for the Mission House. The boat under an officer with Máximo aboard left the next day and reached Pueu <sup>392</sup> on the eastern side of Lesser Tahiti, the 2 Chiefs with the party. They met Pahiriro <sup>393</sup> the Arii of that part of Vehiatua's domain, his uncle, a man of some 70 years of age, and soon to pass away with obsequies which Máximo describes vividly. The anchorage was no good. The 2 Chiefs parting company with the white men, the boat was headed for Hitiaa where Riti <sup>394</sup> ruled and de Bougainville had anchored despite grave danger to his 2 ships La Boudeuse and L'Etoile, leaving 6 anchors behind and had borne off Riti's brother Uturu <sup>395</sup> in 1768 who died of smallpox on his return voyage by other vessel. Hitiaa was declared an altogether impossible spot. They now turned and headed for the western side of Lesser Tahiti reaching [Vaiurua]. <sup>396</sup> The 2 Chiefs were there. The harbour unsuitable they worked [westward] <sup>397</sup> to Teahupoo <sup>398</sup> with Vehiatua on board. Here they came across his father's elaborate sepulchral erection, he being a Great Chief, but it was by now in a very tumble down condition. Here Pautu was missing, he was found surrounded by his relatives of the place who were scarifying their heads and smearing the blood over both face and body. This he said was the custom to celebrate a home coming and he evidently quite approved of it. His baptism had not changed his mind. Worse was to come.

The boat next essayed Vairao. <sup>399</sup> Here was the lad Heiau's home and Máximo — with Pautu carrying the boy's clothing to hand to his parents — started for the house but so blocked were they by the huge crowd who swarmed around them that even with busy blows the 2 men failed to get through and had to return to the boat. Neither of the 2 last named spots being satisfactory they returned to [Vaiurua] <sup>400</sup> where they met Tu's old parents offering up prayers at the sacred marae, their object unstated. With the 2 Chiefs and Hinoi the boat headed round the southern end of the island for the frigate to make their report; Tautira was the only spot. <sup>401</sup> Both the boats were well out to sea to avoid danger, but by sundown the following day the Aguila was boarded where Boenechea presented both Chiefs with axes in the name of His Majesty of Spain. Out to sea again he headed, the Chiefs aboard, for heavy squalls forced him to avoid the reef bound coast nor could he return for 3 full days, when Purahi came quickly on the scene <sup>402</sup> in a canoe, anxious as were Tu's people to see her son and their own arii. The Chiefs had had so good a time that they did not land till the following day <sup>403</sup> amid a weeping and wailing and blood besmeared multitude. At last the anchors were dropped in Tautira's harbour and the business that had brought them began. Máximo already had seen much for his Diary,

been very useful as interpreter, done his kindly duty to his deceased native friends and been very busy with his pen the past dozen days.

His rest was short for on the 1<sup>st</sup> of December a site for the Mission House and grounds was selected some 150 yards from the mouth of the river and Vehiatua was asked to give orders for the ground to be cleared and a couple of houses removed therefrom. This was done but a scare — one of many to come — soon arose. One of the seamen ashore had his shirt stolen whilst bathing and threatened those natives around that unless at once returned he would bring seamen with muskets to see to the matter. At once every one got on the move. Vehiatua himself entered his canoe to flee and Tu was about to follow suit. The movements were observed from the frigate and by the order of Boenechea Máximo went ashore and both his knowledge of the language and his standing with the natives soon straightened matters out.

But another difficulty arose. When 20 large breadfruit trees had been felled the natives appealed to Vehiatua to stay the slaughter or they would perish of famine if continued in such measure.<sup>404</sup> He sought to stay the Spaniards' hands. By orders inconsiderately given Máximo had to tell him that if they could not get the trees they needed, the outfit would quit Tahiti, and rather than that, they had to submit and assist in the slaughter.

This was very different from Cook's way of doing things in raising his little fort at Matavai. "[The wood we made use of for this occasion we purchased of them, and we cut no Tree down before we had first obtained their Consent.]"<sup>405</sup>

Máximo formed one of the working party day after day, all was going well, when felling a tree close by the house to be, it struck one of his gang, broke his spine, killing him instantly.<sup>406</sup> Again every native and both Chiefs began to take themselves off by canoe and land, and Boenechea himself had to come ashore to assure them through Máximo that it was a pure accident. The seaman was interred the next day close to the front corner of the proposed residence, near the marae Vaiotaha, the special shrine of the Vehiatuas, adjoining.

On the stump of that same tree the Cross was later erected which Cook found and added so aptly to the Inscription thereon.<sup>407</sup>

This seaman was the first white man to be buried on Tahiti but unfortunately all too shortly followed by his Commander.

Hardly had this trouble passed before everyone ashore was seen to be wildly excited. Up the valley the natives had refused to bring in the food supplies due their Chief.<sup>408</sup> There was War in the air. Vehiatua had gone with 200 men and Tu had followed with 400 more. Máximo was ordered ashore and went up to the valley. The rebellious ones had already fled and the avengers were very busy, wrecking every dwelling and looting everything they could lay their hands on. That done, all was over, and the 2 Chiefs with their mutual friend returned as happy victors to Tautira.

Máximo's duties were set as had been seen but he now had to commence another, that of Family Physician, and there was plenty ahead of him. He served from the highest to the lowest with unflinching

<sup>407</sup> For the text of Cook's addition, see *The Coming of the Spaniards* under *Inter Alia : Jottings and Details Various*.

<sup>408</sup> December 11.

generosity and put the native priests and doctors with their incantations to rout. He gave his patients the choice, they or him, the young marine, the winsome friend of all won out, yet all is told without any trace of boast, and as if the aiding of the sick was but a pleasant duty.<sup>409</sup>

Things were now ready as to foundations for the portable house to be brought ashore and on the 20<sup>th</sup> of December the first white man's residence was raised though as yet unthatched. Vehiatua asked to be allowed to sleep in it which was of course granted to the young man but he made request that the beds should be changed as to have heads not feet pointing to his adjoining marae. This too was granted.

Pahiroiro dying, the Vehiatua's uncle aforementioned, Máximo had to attend the funeral through Tu's adoption of him into the 2 cousinly families. Granted leave of absence he was soon<sup>410</sup> at Pueu with the crowd and noted down all the happenings : the women in the funeral procession besmeared with blood, the Chiefs with their everlasting plantain shoots as signs of friendship, the men howling as if they were dogs, the cloth wraps heaped up on the burial site, a stretcher raised above the ground bearing the body at the residence, feathers placed between the fingers of the dead man, the 4 guards at each corner with switches of the ginger plant to ward off the flies, thence to the marae for prayers by the priests, the return along the beach and the committal to the ground nigh the home.

The thatching was going nicely when more trouble arose. Another theft of clothing from a workman and blows in which the seaman got the worst of it, knocked unconscious.<sup>411</sup> The natives scented trouble, rushed to their canoes and decamped in shoals. Soon only Vehiatua remained. Máximo was again called upon. The Chief said the assailant had fled up the valley but he would get hold of him by his servants. He did and the native got a wholesome cat-o'-nine tails. But Boenechea took stern action this time stating that the Fathers were unwilling to stay among such people and the house would be therefore shipped aboard again. Vehiatua went aboard with Máximo and the ultimatum was withdrawn.

Now Pautu and the boy Tetuanui (Manuel) gave trouble, both of whom were aboard as guests of Boenechea. They feared being detained if the frigate sailed as was threatened. They declared they wanted nothing from the white man, only to stay in their own land. They stayed when the frigate did sail but before that time both of them reverted to the faith of the ancestors to Máximo's great disgust, "apostates" to his zealous Catholic mind.

At last the thatched was completed and on the 31<sup>st</sup> of December, exactly one month since the start, "*provisions, utensils and furniture*" were landed, the Fathers also, who took possession and the Catholic Mission, such as it was, began.

*"On the 1<sup>st</sup> of this month (January 1775), at 8 o'clock in the forenoon, the launch came in with all the marines in uniform, who then formed up on the beach. A little while afterwards the Cross arrived in the boat, with all their Honours the Officers, and the Padres (Fathers) sallied forth to receive it at the landing-place; and as soon as the procession had been formed they began to intone the Litany of the*

---

<sup>409</sup> For example, from December 14 to 16, he treated a sick aunt of the arii Otù with the assistance of the storeship's phlebotomist. On December 17, Máximo writes: *About this time several Indians, nobles and commoners, died of a pestilence that attacked them, which was neither more nor less than a severe chill; and as they always go into the water and observe no care to sweat themselves as we do, it takes such hold of their bodies that many of them die. But they say that this illness comes from our sojourn amongst them, because it was the same way during the first expedition of the frigate [in 1772].*

<sup>410</sup> December 21.

<sup>411</sup> December 26.

*Saints, and the marines fired off the first volley. When they reached the spot where the Cross was to be erected, and at the moment of setting it up, they fired off the second volley. After that first mass was said... and when that was done, Salve Regina ! was intoned, after which the marines fired the third volley and the frigate responded with a salute of 21 guns."*

*"In the afternoon (on the 5<sup>th</sup>) their Honours the Officers landed, and after calling the Chiefs together... the Articles of Agreement were drawn up inside the house and I was directed to explain to them the terms of the Instructions, in the name of our Sovereign. To this they agreed with much pleasure, and proclaimed the King of Spain arii over all the island."*

So came about what was known as the Convention of Hatutira (Tautira) for what it was worth.

*"(On the 6<sup>th</sup>) a print of our Monarch was fixed on the front of the [mission] house. This was done at the pressing request of the Indians, inspired by what Otù had told them after having seen it himself (aboard the frigate)."*

This portrait had disappeared when Cook arrived on the scene not long after their removal, a like fate befell Cook's portrait left by him at Matavai, 1777.

Pautu now ashore had handed over his sea chest and clothing within to the care of the Fathers. He now asked for them intending to make a present of them to his Chief.<sup>412</sup> They first looked through every article *"for everything that pertained to a Christian, lest God should be profaned"*. Vehiatua accepted the gift but left the lot where they were. Later on<sup>413</sup> he asked for and secured them from the Fathers to offer them to his gods in the hope of better health, the priests got them.

The Diarist reports a sham fight. When a Chief is staying in the territory of another, food is brought him and his from his own District. More than 200 canoes were seen inside the reef laden with supplies for Tu from Paré.<sup>414</sup> When these reached the beach a mighty clamour arose, the Tautirans with sticks in their hands made as if to plunder the arrivals. Great confusion but only a sham, Tu got the supplies.

Now Máximo sees an archery meeting which he mistakes as merely good sport but was actually a religious act.<sup>415</sup> Only Chiefs could take part, nor might a fire be lighted in the vicinity during the meeting (which often extended for many days) lest the god they called upon to bless the meeting should be offended and trouble arise among them. He who had the lowest record had to provide a banquet for the rest.

The 2 ships had sailed to Raiatea<sup>416</sup> and had been gone a fortnight. Upon their return<sup>417</sup> the Fathers were told that Boenechea was dangerously ill : the Fathers went aboard : the Commandant gradually sank and 6 days later<sup>418</sup> expired. The following day the body was brought ashore, the marines letting off volleys and the frigate firing minute guns, the natives awe struck as the body was laid to rest clothes in uniform with sword and baton. The grave was dug at the foot of the tree that killed the seaman and which formed the pedestal for the Cross.

<sup>412</sup> January 11, 1775.

<sup>413</sup> February 24.

<sup>414</sup> December 4. *Opere* in the Diary. Supplies for Tu also arrived from Paré on January 14.

<sup>415</sup> January 17.

<sup>416</sup> *Orayatea* in the Diary; also *Ysla de Parayso*.

<sup>417</sup> January 20.

<sup>418</sup> January 26.

Two days later <sup>419</sup> Gayangos who was now in command — having been the First Lieutenant — weighed anchor along with the storeship : and the 2 Fathers, the seaman servant and Máximo were left alone to face the future.

By foot and canoe Máximo headed for Papeari <sup>420</sup> to report the departure of the ships to the 2 Chiefs then there and essayed on the way the Isthmus then a tangled locality and dreaded as the home of evil spirits.

Taravao connecting the two mountain chains is less then 2 miles in length by Máximo's reckoning.

Arriving, Tu at once secured his services for a sick [great-] uncle of his whom Máximo arranged to be carried to Tautira for further treatment. At Vehiatua's house he noted a wonderful concave stone stool, black of hue and highly polished (from Maupiti) which he meant in due time to possess.

In this he appears he failed but he got the Mystic Bowl instead.

Having a couple of days on his hands till the Chiefs were ready to return with him he visited afoot from Papeari to Vairao and was everywhere welcomed, the natives as he passed their homes coming forth to greet him with cloth, coconuts and even hogs. He demurred at such outpourings on a lone traveller. Where he slept the inmates went to the extent of stripping off their clothing and offering the plantain shoot as if he was a Chief. <sup>421</sup> Disclaiming the title he declared — as was indeed the truth — that he was merely the friend of one and all. The throngs that gathered round him so pressed “*that I had nigh been smothered*” just as Cook reports. He thought he would like to see how many there were in one spot he reached and asked the crowd to arrange themselves for count on a piece of open ground. “*I made them out to number [rather] more than two thousand souls.*”

It would appear from this, that Cook's large estimate of the entire population <sup>422</sup> had right on its side with 2,000 in a tiny corner of Tahiti.

Arriving back at Tautira <sup>423</sup> with the Chiefs and invalid he passed into the Mission House expecting a welcome home but got only surly words and a rebuff. “*[But] I omit some of their taunts, [in order] that I may not be vexatious.*” There was no love lost in that household nor with these priests and the public at large.

The Mission's pigs got into the natives' houses and rooted out the stored provisions. <sup>424</sup> The natives chasing them out, the Reverend Father Narciso pelted them with stones and followed it up by intrusion into their dwellings and beating them up, “*... the impetuosity of the person referred to obliged many of them to escape in their bare skins, [including several women] who chanced to be napping [because the day was inclement].*” Then Tu and his young brothers Hinoi and Ariipaea <sup>425</sup> seeing the gate locked, jumped over the fence and Máximo welcomed them. <sup>426</sup> The fathers who had the key were

<sup>421</sup> January 30.

<sup>422</sup> Cook estimated the population to be 200,000 in 1769. See Chapter I and Note #3 to Chapter XI.

<sup>423</sup> February 2.

<sup>424</sup> February 4.

<sup>425</sup> Tu's brother Ariipaea does not appear to be named in the Diary; Corney refers to *Ari'i-paea* in a footnote to July 12, 1775.

<sup>426</sup> The incident regarding the mission's pigs took place on February 4, whereas Tu and his brothers jumped over the mission's fence on February 11, a week later.

enjoying an afternoon siesta and “*their Reverences fell out with me in such sort that I was [presently] sorry enough [I had let the Chiefs go at all]*” and the poor fellow was already in enough trouble with them. He was by this time <sup>427</sup> gardener in chief and he was now told that he must take turns with the seaman as cook week by week to give the other a turn in the garden. He protested “*I was willing to help in everything [because] we were all one party [together, and therefore I felt committed to whatever might crop up, and I told them further that] I had writing [and other things] to attend to [as occasion offered. But] they said [they bore no instructions with them to that effect: that] I came assigned to whatever job they might direct, and as to writing, they themselves were sufficient thereunto. And then they began to sneer at me... alleging [other] things which I forbear to quote.*” So he became a cook.

On top of all this Vehiatua fell sick, <sup>428</sup> the beginning of a long struggle with death, and Máximo devoted to the young patient, doing for weeks his utmost to save him, a record simply told of fine, unselfish service. Though he failed — and even Father Gerónimo gave spasmodically a hand in the effort, he won the love of the young Chief’s mother Purahi — a fine character, strong, but gentle in disposition. She had acted as Regent during her son’s minority (and later did the same for his child brother). She mothered Máximo who throughout tendered her profound respect. So attached did the lads, the mother and their relatives become that they always called him by the special name Oro-iti-mahea-hea : Oro-iti being the name of a priestly ancestor, Mahea-hea meaning “pale”. To them he was “Little Oro the pale faced”. The young Chief had his good days and his bad. At times he was prostrate : “*I [nevertheless] took matters in hand... called for [one of their] canoe cuddies... [Then,] taking Vehiatua in my arms, [I passed him into the cuddy, with his stepfather; and after] covering him well up [I retired to my house], telling [the aforesaid] stepfather not to let [them disturb him on any account].*” When good spells came and he stepped abroad “*they became [very] pleased, saying [that] their god was of but little account, [since he had done the chief no good,] but [that] our god was greater*” and added to their kind words with gifts of fish.

It was now February and for 6 months more the struggle went on. Those were anxious times for all Taïarapu and one would have thought that the Fathers would have been considerate but they had no thought other than for themselves.

They wanted a paved entrance and flooring. From the adjoining marae of Vaiotaha <sup>429</sup> they walked off with much of its trimmed stone work. Purahi had begged them not to. They paid no heed to her distress at such irreverence to the sacred spot of her family. She informed them that she could no longer visit them as was her wont, since she dared not cross the threshold by stepping on those sacred stones — and here for once (and not the only time) her “Paleface”, warped by his bigotry, disclaimed the sacredness and supported his superiors. Their lack of feeling and of decency she nobly repaid with fish for their fast days.

Conversing with some of Tu’s followers the subject of Cook’s visit came up. They declared him to be the owner of Matavai. Máximo quickly undeceived them and assured them that they would not see Cook so long as his Sovereign’s people resided on Tahiti. They replied that they expected his return within 17 months.

In point of fact, Cook returned just 17 months and a few days from that day. <sup>430</sup>

---

<sup>427</sup> February 7.

<sup>428</sup> February 4.

<sup>429</sup> February 17. *Guayotaha* in the Diary.

<sup>430</sup> This incident took place on 18 February 1775; Cook returned to Tahiti, during his third voyage, landing first at Tautira on 12 August 1776, so 17 months and 25 days later.

Vehiatua went off to Teahupoo for a change of air,<sup>431</sup> and Tu went off with his followers to Paré by way of the west coast nor would he return, so he said, till the frigate reappeared. Tautira was deserted by all but a handful. The young Chief had a relapse, “*had lost all power of movement*”<sup>432</sup> and now sent for the sea chest and clothing as aforesaid belonging once to Pautu. Recovering he returned with his mother to Tautira bringing Tetuanui (Manuel) with him, who given the option of staying at the Mission House or quitting for good and all “*very bluntly*”<sup>433</sup> declared for quitting to Máximo’s disgust. The lad had previously walked off with some “*goods*”<sup>434</sup> of the House but there was no return so far of the stolen goods.

The seaman now got surly and quitted both House and Kitchen and Máximo got into hot water for his failure as a cook. There were high words. Narciso told him to hurry up. “*I replied that [he (the seaman) understood how to (cook), but] that I did not... (that) I had not come... to work as a menial. [Then,] turning on me in a passion, he declared that I did come as a menial and [that] they were honouring me too much in seating me at their table... I leave out some further abuse, and gibes that they aimed at me, mocking me by addressing me as (‘Sir Knight’).*”<sup>435</sup>

From this time he took his meals apart “*so as not to have any more squabbles.*”

The young Chief returned to Teahupoo and Máximo set out soon after for the same place to recover the stolen goods and got into real trouble. This place was one of Tetuanui’s parents’ residences. “*I reached the house of Manuel’s father, who received me very coolly, [and when I asked him to account for what he had stolen] he said he had stolen nothing... (but soon after) gave me a bolt of cotton cloth. Manuel arrived very self-possessed... and on my asking him to account for the things (stolen) he retorted very impudently ‘Not I! you son of a harlot.’ This made me angry, and I told him to drop that sort of talk... or I would land him a punch or clout o’ the ears. He retorted that I daren’t do [that]... Thereupon I set to and gave him a pummelling... At the first stroke [Manuel’s] father rushed in and grabbed hold of a club I had in my hand, in order to hit me with it, [so that] for some time we were struggling together, [none]... having the courage to part us... On laying hold of the knife I had he let go the club and made a dash for another stick... I sprang out of the house, where... the bystanders [had] got hold of him... I went off at once to [find] Vehiatua... who... started off... there and then to give [me] satisfaction for the affront, and [the] robbery... [On our arrival]... provoked as he was, [Vehiatua] ordered the house to be burnt, Manuel and his father to be banished and their relations to be dispossessed of their lands.*”<sup>436</sup> Máximo pleaded for them but the 2 were left landless and all their plantations were destroyed by their neighbours. Manuel’s mother whom Máximo wished to see after this trouble was dwelling 2 leagues distant by sea for there is no way by land but he tried to make it.

He was attempting Te Pari, the towering and menacing cliffs at the extreme southeast of the island, a rugged maze.

He fought and climbed for some distance, then on the seashore met with a double canoe which, with another [canoe], shot the treacherous shoal Toatapua (within the Barrier reef) where one canoe was swamped but his lived through it. To land ashore was found impossible, his object was unattainable,

<sup>432</sup> February 24.

<sup>433</sup> March 10.

<sup>434</sup> March 10: “*The Padres then told him [Manuel] he was afraid because his father and uncles had robbed us of some cotton goods and two hatchets or adzes when they were at the house...*”

<sup>435</sup> March 12.

<sup>436</sup> March 13.

as he kept on till he reached Vai-ao-tea <sup>437</sup> where he found the family of Tu residing and Tu himself among them.

Tu through ancestors had considerable land in his young cousin's territory.

Again by canoe he pushed on towards home and reached Mataoae where he encountered a rarity among Polynesians — a dwarf “*whom I measured and found a bare vara (2 ft [9] inches) in height, 3 [quartas] (24 inches) in girth [round the belly], a geme (a span) <sup>438</sup> the legs, the head very large, [and a gruff voice, the entire body hairy, and scarcely able to walk for weariness].*”

At Matavai in 1802 there was a dwarf 39 inches high and well proportioned, 25 yrs of age.

He reached home <sup>439</sup> and delivered up the stolen goods but found that some of his own had been stolen during his absence.

And now at last the Vespers Bell was hung, no call for prayer for other than themselves, the outhouses were completed, the inner fencing finished — real barricades for timid souls — those priests within the now well set up residence as cantankerous as ever, nor any attempt recorded at contact with the common folk whom they had come to convert, a disgrace to their cloth with hearts of stone.

The young Chief had gone to Papeari and news came that he “*was lying sick unto death*”. <sup>440</sup> Máximo got leave and was off to give aid. With Vehiatua was an “*inspired*” quack, beating himself up and raving. He then stripped off the best cloth wraps from those present and keeping for himself those he most fancied he ordered the rest to be given to named friends outside the premises, those present meekly obeying, believing that the trickster's body was possessed by their god. Puhetea, Chief of Punaauia, <sup>441</sup> was there.

Described by Forster of Cook's day as “tall, comely and majestic, one of the noblest models of nature.” [According to Corney] *his family connections with the aristocracy of Raiatea constituted him a patrician among the Chiefs* and of great moment in the politics of Tahiti.

There was trouble in Papara which was much worrying Vehiatua and he was greatly relieved when Máximo took upon himself to send a message to the malcontents that the frigate on its return would avenge anything done to the sick Chief. <sup>442</sup>

This was sent to Terii-rere, the then Chief, a minor under the Regency of Amo, but really of Pura, his imperious consort.

Máximo returned home <sup>443</sup> to meet all kinds of trouble : more thefts even to that of a surplice (a cotton with lace fringe worn by the server at Mass) : the Vaitepiha in flood : everything under water

<sup>437</sup> March 14. *Oyatea* in the Diary; like *Oayautea*, among other spellings, at the extreme south corner of Lesser Tahiti, in Teahupoo.

<sup>439</sup> March 15.

<sup>440</sup> Máximo arrived back home on March 15; word came regarding Vehiatua on April 5.

<sup>441</sup> *Atehuru* in the Diary.

<sup>442</sup> April 8.

<sup>443</sup> April 9.

*“especially our kitchen-garden”*<sup>444</sup> where they had so laboriously planted and tended cabbages and turnips, brocoli and garlic, parsley and onion, lettuce and watermelon, purslane, tobacco and rice : and rats in countless numbers despite cats numerous and Lima dogs, the outhouses full of the rodents. *“I... found it full of rats, of which I succeeded in killing seventy five [over and above those that escaped]”*<sup>445</sup> : the barrels their rendezvous, *“a hundred and eleven rats were killed during [the first part of] the night”*<sup>446</sup> : and again *“Twenty-nine [rats were] killed at night”*<sup>447</sup> ... and *[a little while later we... killed] thirty-one more* : Pérez the seaman who refused to cook meals for him : the fine net and canoe which Vehiatua had just given him with no place to hold them they being semisacred, until at last a house in which no woman had lived was found and moved to the beach.

Again Vehiatua collapsed and this time (let note be made where credit is due) the irascible Father Narciso hastens to his aid with Máximo. They find him still at Papeari and urge him to return to Tautira *“where we could minister to his needs”*.<sup>448</sup> It was May but nigh a month before he arrived, the delay inspired by his fear of the gods, this kept lively by his attendant Tahuas (priests) who had no love for the white men’s interference. Weeks gone by, Máximo went after him, got him into a light canoe *“that he might travel with less fatigue”* and started for home round the wild coast of the Pari. At the islet Fenuaino<sup>449</sup> he had had enough for his weak state. A week’s rest and he reached Tautira. Now began a course of dieting, Máximo the cook but the Fathers were softening at the sight of the consumptive and opened up their medicine chests, the devoted mother Purahi ever at the side of her dying lad.

Máximo had well earned a rest and with the consent of his superiors he was given leave to tour the entire island. Father Narciso actually proposed to go with him but backed out. He made this — his first tour afoot and by canoe — in 16 days and took men with him as paddlers when required. Starting on July 2<sup>nd</sup> he made good progress by sea, stopping off a Afa’a-hiti<sup>450</sup> on the east coast which lies just beyond Pueu and found Purahi there, despite her anxiety, with men gathering timber for a fresh house for her at Tautira, then on to Hitiaa for the night. He met again Riti and as the wind was too high for the canoe *“took a look round [his land, which seemed to me good, in addition to the district being a large one] and well peopled. [I examined] the harbour...”*

One of the 6 anchors lost here by de Bougainville was recovered by the natives and was given to Puni, the noted Chief of Pora-Pora who conquered Tahaa and the most part of Raiatea. In 1777 Cook purchased it from Puni, less the ring and palms. Here the Aguila had grounded in 1772.

The wind not dropping he walked on to Mahaena<sup>451</sup> *“where the arii Otù’s rule begins”* and was warmly received but as usual harassed by the crowd that assembled. The following day *“I went for a stroll about [his]”*<sup>452</sup> *District which [is not a very large one since it] comprises but a single valley.”* He found the soil good and gave the Chief some likely seeds for planting. Taking to his canoe which had followed him he was forced to land at Tiarei<sup>453</sup> where Hinoi, Tu’s brother, held sway. He was absent but those people presented him with cloth and a baked hog as if doing homage to a Chief.

Hinoi, besides Tu, and Máximo had exchanged names.

The next day he walked as far as Onohea <sup>454</sup> where Tu's mother had property, then — as there was very broken country ahead — he took to canoe and landed at Papenoo <sup>455</sup> where yet another brother of Tu was Chief. Here he saw the Papenoo river, the longest of all the countless streams of Tahiti, fed by the mountain torrents from the central masses of the island. He trod the wide valley and noted the large number of its inhabitants; then taking canoe reached Matavai at sunset where he was so overwhelmed by the dense crowd that he had to ask the local Chief to send off to Paré for Tu to come to his aid. Hinoi came to protect him from an all too welcoming community. The following day he took a look at the district (Ha'apape). *"I found it finer than any of those I had seen before, both as to size and goodness of the soil and the density of the population. [They showed me the spot where the Englishman set up his barracks, which is a point of land shut off between a rivulet and the sea, its surface flat and clear of trees. No sign was left, except a fragment of cable, for he razed the barrack that he had set up. There were two ships, here this last time, of which the natives make mention the one as Otute and the other as Opono. <sup>456</sup>] I then made my way back to the harbour, of which I express no opinion, since I am not of the nautical faculty; [but I do say this much, that it appeared to me good, both by reason of its smooth water and its sufficient depth]."* Thence on foot to Paré and Tu with whom he stayed for 2 days. Then off again for Faaa on the west coast, stopping the night at Fare ute <sup>457</sup> owing to heavy rain.

To reach Faaa he must have walked over the site of the present town of Papeete. He makes no mention of such a place, showing clearly that it did not then exist.

He was now accompanied by one of Tu's brothers till a Bowl of great value — a present to His Majesty of Spain — lying at Punaauia was handed over to him. He had his doubts as to even thus securing it. Reaching Faaa he was entertained by Chief Tepahu <sup>458</sup> whose wife as Máximo had learned possessed 3 very fine pearls. He tried his best to secure them but the lady was adamant. He found Faaa very populous, its coast flats under extensive cultivation. The following day he reached Punaauia and his friend Puhatea. To escape the crowd he had to take to his canoe till sundown. The next morning he set off with Tu's brother to the great marae Taputapuatea where *"from a small hut that stands in the said marae [and presently] they brought out the bowl and delivered it to me, it being carried between four men who placed it on board the canoe."* From there he canoed to Paea where Chief Teahatu ruled. He was old and enormously stout. The following morning he went for a stroll, to find upon his return that the Bowl had disappeared. He got busy and found out that one of Vehiatua's relatives who happened to be in Paea had made off with it and had buried it in the sand of the beach to carry it off later on. He found the spot, diggers got busy, the Bowl was recovered and Máximo kept anxious watch over it till he reached home.

Thence by canoe to Papara *"the largest District of all [in] the island and pretty densely [peopled]."* It was late when he reached the youthful Chief Teriirere. Here looking over the countryside he spent 2 nights. The next morning, fearful of a dangerous section of the coast he walked with all his traps — and the Bowl carried by 4 of his men — to where the 2 sections of the District meet : Papara proper belonging to Teriirere, and Atimaono belonging to his cousin Vehiatua. He arrived at Papeari at sundown. Thence he canoed to the isthmus where the canoe was hauled over to the east coast and thus stayed the night. Here news awaited him that Vehiatua was prostrate again. The next morning,

<sup>458</sup> July 10. Tepau in the Diary.

it looking as if the breeze was too much for the canoe he forsook it : “*I went ahead by land and reached [Ohatutira at] nightfall... I presently arrived home and found nothing noteworthy, except the [Padres'] lack of interest in my journey... (The next morning) I went to see Vehiatua, who received me [weeping], with his mother, and [related to] me how the [Padres] would not afford him any aid...*” He asked for ointment which had relieved him previously and in order to let them down gently Máximo told him falsely that it was all used up.

In fairness to the Fathers one should realize their fear that Vehiatua might die whilst under any treatment of theirs with possible consequences to themselves at the hands of the priests in revenge for the contempt shown them. But they failed to realize that Purahi would at once [be] the Regent, of strong character who would have stood no nonsense, especially as it would affect her beloved Little Oro the pale faced.

These were anxious times for Máximo but his pen, despite makeshift ink he tells of, never failed him even in minor incidents. Evidently to please the sick one, his little brother Tetua of 8 years was arrayed in a shirt of white folks' clothes Manuel had once possessed which gave Ta'ata and their mother real delight “*and they sent us some fish*”.<sup>459</sup> Ta'ata urged presents of many kinds to his kindly physician. “*I would not accept anything and made them all understand that it was our duty to assist the sick from the highest to the lowest*”<sup>460</sup> and when told that our Sovereign “*maintained hospitals they were lost in wonder*”. Nothing escapes this Diarist, “*the monkey was found dead at day break and was greatly bewept by the natives*”,<sup>461</sup> surely the first one Tahitians ever saw.

Those were sad days throughout Lesser Tahiti : in desperation the priests ordered human sacrifices to please their gods and restore Ta'ata. Learning that some of the natives proposed to plunder the Mission upon his death, desperately ill as he was, he had himself carried in a litter to the Mission House to reassure the Fathers and tell them that banishment had been meted out to the plotters. His dieting fell again on Máximo who was cook again, Pérez refusing all duty : there was chocolate and rice to prepare, eggflip with cinnamon, broth and chicken stew, cereals and wood pigeon. But Ta'ata after all was a Tahitian and would constantly revert to native foods despite advice and warning of the danger. Máximo applied such remedies as he could lay his hands on but the Fathers were adamant despite the pleadings of the heartbroken mother as she watched her Ta'ata sinking.

“(August) 6<sup>th</sup> day:— *At midnight we heard unmeasured cries and wailing, [and as they caused us alarm, we put sleep aside and kept within our enclosure in some fear; but] towards day break one of the Chiefs came to call me, [on the side where my bedroom faces] to hasten across to [his arii,] who was wishing to see me for the last time... I resolved to go, and the [Padres] hastily shut the door. [Once outside, I was more scared than ever, for the] darkness [seemed to me] intense, and the natives were all in confusion... everywhere turmoil and wailing. They had a canoe in waiting to ferry me across the stream that flows between his dwelling and [our own]. When I arrived they broke out into still louder cries, and hung about my neck, hurling me along... I approached [the arii] and, taking hold of his pulse, I recognised that he was at his last breath, so that in [a] little less than a quarter of an hour he expired.*”

Purahi and Chiefs were supporting him in their laps and the youth's most treasured articles lay around him. It was the day he notes of the “Transfiguration of Our Lord”.<sup>462</sup> Going home he soon returned with Father Gerónimo to offer sympathy to the stricken mother “*whom we found clinging to the corpse*

<sup>459</sup> June 15.

<sup>460</sup> June 27.

<sup>461</sup> June 29.

<sup>462</sup> August 6. Corney notes that this was mentioned in the diary of the Padres; it was not mentioned in Máximo's diary.

(*[which was] now laid on a dais*), *her head and arms smeared all over with blood, and slashing herself about from the waist upwards with a shark's tooth; [which shocked us not a little. In the presence of them all] I began to condole with her, as the [Padre] told me to, but the mourner retorted with a flood of tears and an outburst of passion, [rebuking us for indifference and disregard towards the deceased, and] ending [her complaints] by exclaiming 'Here lies the object of their loathing, [to] whom they [many times denied admission to their dwelling, and whom they] refused to succour with their medicines.'* She gave utterance to *[the concluding] words with such wrath that the [Padre], though he did not understand (nor did I interpret them to him), [became apprehensive that some tumult would arise and] urged that we [must immediately] retire. On our moving off she followed us, begging me with much tenderness to remain with her, for that she regarded me [in the light of] her own son: [with] which request I complied [by the Padre's advice]."* He proved himself indeed a son as his Diary without thought of self relates.

The following day he was at her side again and those about her begged him to get her to cleanse herself from the bloody condition she was in which they dared not attempt. *"In her utter despair she wished only for death. To this moment she had not tasted one drop of water. It was a great consolation to those around [us] to see her softening [down] towards me, and they made signs to me not to leave her by herself, [for they feared she would collapse altogether.] I stayed with her as long as I could."* That afternoon the corpse was borne to Vaioletaha, the family marae, till the formal catafalque<sup>463</sup> for a Great Chief was prepared. No fishing nor kindling of fires was allowed but Purahi ordered the prohibition not to affect the Mission. She refused to eat but Máximo won her over *"which cost me no small effort [to persuade her to]"*.<sup>464</sup>

The following day she arrived at the Mission House for consolation, her gentle disposition had mastered her passion and *"I accompanied her [as far as her house]."*<sup>465</sup>

He reports the gathering of Chiefs and people from all parts, the ordered silence till a certain time, the gifts brought to the child Tetua<sup>466</sup> Vehiatua, and the hunt after the doomed human sacrifices.

There is here no account however of the Mortuary Couch and the last rites, for he wrote of them in a now lost Supplement. The Couch is happily preserved to us in an aquatint made by John Webber,<sup>467</sup> Cook's official artist, from his own sketch

<sup>467</sup> [John Webber \(1751–1793\)](#)

made on the spot in 1777.<sup>468</sup> Other writers moreover deal with the rites and the Hiva, the ceremony at the conclusion when the Chief Mourner, generally a priest or close relative, is arrayed in weirdest garb, its most striking feature the mask worn, with its twin pearl shells with small apertures to look through.<sup>469</sup> Máximo saw the latter at an earlier time.

Some days later they were honoured by the presence of the new Vehiatua to dinner who courteously refused to dine of certain birds shot the previous day as they were scared. Whether those shot by the Father Narciso were herons, cuckoos or kingfishers we are not told but the boy arii had evidently

<sup>468</sup> Plate V. The Mortuary Couch of *Teri'i TA'ATA-'URA'URA*, VEHIATUA-I-TE-MATA'I, Overlord of the clan TE TEVA-I-TA'I (1755–1775). From an aquatint executed by John Webber (afterwards R.A.) from his own sketch made on the spot in 1777.

<sup>469</sup> Plate 7. The HEVA, with PAA RAE; from a drawing in water colour by John Webber.

been well schooled. The same Father later set out with Máximo to climb the heights of the Pari and a fierce gale benighted them. They spent 2 days and nights on the top of those cliffs, very sorry for themselves and deeply grateful to the natives who came to their rescue.

Máximo now made a flag out of native cloth “*with the arms of our Sovereign on it*”<sup>470</sup> to fly when the frigate should come which they were now looking forward to, and tried it out on a staff set up on a nearby hill, saluting it by “*firing the small cannon*”.<sup>471</sup> He had not mentioned before their possession of such a weapon of war.

On the plea of hunting more “*stolen things*”<sup>472</sup> he was granted leave to make a second tour of the entire island. He started on October 4<sup>th</sup> and was home again by the 11<sup>th</sup>. By canoe he made Hitia’a by nightfall and by the next night he had reached Paré and Tu where he attended an Arioi entertainment, trivial but amusing. He had not as yet got the thief. Ha’apai was at Paré and he gleaned much concerning government, customs and politics. This held him for 2 full days. Hinoi now joined him in the hunt and the next evening they had reached Punaauia where Poluetea<sup>473</sup> welcomed them and had heard that the thief was hiding in his District. They got him the next day and the stolen property — part of it for “*Vehiatua’s stepfather’s cousin*”<sup>474</sup> [who] had the rest. The Chiefs wanted to kill the thief but Máximo pleaded and saved his life but not his banishment. The roamer reached Mataiea<sup>475</sup> that night. He crossed the isthmus the next day and arrived home to find that the rest of the stolen goods had been handed over by Vehiatua’s stepfather’s cousin.

“*[There was a great] rumpus between the [padres] and [the seaman out of] which I, [in the character of] mediator [came off] with a drubbing.*”<sup>476</sup> The seaman quit.

On the 14<sup>th</sup> of October the formal Induction of Tetua Vehiatua took place with much ceremony, the six weeks period of mourning over.

On the 26<sup>th</sup> Máximo had had enough of the Fathers himself and declared his intention like Pérez to quit the Mission House. The next day “*[the natives to the number of five hundred souls] joined me, [and began,] some [of them] to carry [the] materials, others to [tidy] and tread down the soil*”<sup>477</sup> about 40 yards from the Fathers’ dwelling. The next day it was completed and Máximo moved in.

And then, just when things had reached a climax, the Aguila appeared in the offing. On the 30<sup>th</sup> “*I embarked in a double canoe with [the arii’s step-father]*”<sup>478</sup> to go off and board her [and] we arrived [alongside when it was already nightfall,] pretty tired [with out exertions].” The night was passed in recounting to the Commander — de Langara — “*all the events that had happened, as I have related*”.

November 1<sup>st</sup>. Owing to squalls and winds they were unable to make harbour.

November 2<sup>nd</sup>. When 2 miles offshore Máximo went off in his canoe to get numerous canoes together for a tow, the frigate made the harbour and dropped anchor.

---

<sup>470</sup> September 21.

<sup>471</sup> September 16. The trial flag was a strip of native cloth and not the flag with the Sovereign’s arms, which was made five days later.

<sup>474</sup> October 10.

<sup>475</sup> Guayuriri in the Diary.

<sup>476</sup> October 14.

<sup>477</sup> October 27.

<sup>478</sup> October 30. WWB has *Vehiatua’s stepfather Ti’i-torea*.

November 4<sup>th</sup>. “*The frigate was beflagged, and a salute was fired in honour of our Monarch, [which caused gratification as well as] terror to the natives.*”

November 6<sup>th</sup>. The Commandant wrote to the priests asking them for their reasons for not holding their post.

November 8<sup>th</sup>. The Fathers replied “*with some lukewarmness*”. A further letter was sent them for a definite resolve “*failing which he could not receive them on board*”. They replied that they refused to stay on unless a guard of soldiers together with food for them — till the frigate’s return the next year — was left them : “*in consequence of which [it was] immediately ordered [that they should] embark*”.

November 9<sup>th</sup>. The embarkation was accomplished — that of the cattle also.

November 10<sup>th</sup>. Máximo as Interpreter made clear to Purahi, in the presence of the Officers, the handing over to her care the house of the Fathers and his own, which she promised to maintain in repair and take care of the furniture.

In 1777 Cook found the Mission House still standing but within it only a table, 2 or 3 stools, a useless tub and an old gold-laced hat. The ephemeral kitchen garden had disappeared.

November 11<sup>th</sup>. “*We watered ship.*” They left goats, fowls, cats and dogs.

November 12<sup>th</sup>, 1775. “*We made sail at ten in the forenoon...*” The Commandant refused passage to any native. Máximo had to forego his wish to take with him a boy of 13, first cousin to Tu.

Such was the end of the Spaniards’ Occupation of Tahiti : the memory of it and of them alone remains.

## Atimaono's Plight

Extract from « La vérité sur Taïti »

by Louis Jacolliot <sup>479</sup>  
Imperial Judge

Paris  
1869

A translation <sup>480</sup>

*This Pamphlet — 56 pages — is a spirited defence of the Commandant and Imperial Commissioner, the Count de la Roncière, in all his official actions covering the years of his residence on Tahiti, 1863–1869.*

*M. Jacolliot was sent out by the Home Government to investigate and report on the troubles of the island.*

*(The underlined are by the writer.)* <sup>481</sup>

And what about the Atimaono plantation? <sup>482</sup>

Toward the end of the administration M. de la Richerie, the predecessor of M. de la Roncière, an English traveller, M<sup>r</sup> William Stewart, <sup>483</sup> arrived on Tahiti. Charmed by the beauty of the place and the climate, by the abundance of the streams, he conceived the plan to establish on the island one of those immense cotton plantations that his fellow British have a talent for establishing in all those parts of the world where gold intelligently employed can fertilize. He returned to London and laid his plans before one of his friends, M<sup>r</sup> Augustus Soarès, who, with the lively comprehension which the English have in such matters, immediately placed several millions at his disposal to carry out his enterprise.

Upon arriving on Tahiti M. de la Roncière realized that the founding of this immense plantation of cotton ought to be the agricultural destiny of the country : others should follow this means, consultation should develop all the riches of a soil so fertile which requires to receive but one grain in its care to return you a hundredfold. Readily seconded in this idea by the Queen of the Society Islands, the Imperial Commissioner accorded to the great plantation that had been started, all the liberties and facilities that the ordinary Colony encounters only upon the land of free America or upon the soil of English colonies.

---

<sup>479</sup> [Louis Jacolliot \(1837–1890\)](#)

<sup>480</sup> The French version of the pamphlet can be found [here](#). The punctuation and formatting of WWB's translation, and the use of italics, parentheses and ellipses, follows that of the pamphlet.

<sup>481</sup> That is, WWB.

<sup>482</sup> The translation begins on page 29, « *Et d'abord qu'est-ce que c'est que la plantation d'Atimaono ?* » The book has *Atimaouo* throughout, yet another example of the handwritten “n” at the time being mistaken for a “u” by the typist.

<sup>483</sup> Jacolliot spells the name as *Steward*.

In less than no time, lands were purchased, stores, houses, workmen's homes were constructed, and 2,000 Chinese engaged, came to lend the help of their arms to cultivate more than 2,500 hectares of land.

Is it necessary to say so? recognizing the welcome that France under the Protectorate gave him, M<sup>r</sup> William Stewart threw his home open *freely* to all the Officials and functionaries of Tahiti... After a while M. de la Roncière felt compelled to make certain comments anent this and to require of M<sup>r</sup> Stewart a less Scottish hospitality... The English gentleman who allowed without a tremor his champagne to freely flow, his horses to become foundered, his purse to disgorge right and left... restrained such actions... and soon found himself blended and mixed up in all the animosity which circulated around M. de la Roncière, who had only done his duty as an honest man, in putting an end to this exploitation... I hold my peace, scandal is repugnant to me, only that it is the same hatred which, keeping prudently anonymous, has trailed in the mud, both in America and France, the man of heart whom I defend. <sup>484</sup>

I arrive at the famous case of M<sup>r</sup> William Stewart, Manager of the Atimaono plantation, with his brother James [Stewart], a case in which the bitter enemies of M. de la Roncière and of the Soarès Company of London reckoned unsullied, united to act together with such unanimity as to leave such traces of their fraud and collusion that I affirm, I say it with my hand upon my heart, I say it as a law advisor and magistrate, instead of breaking Langomazino <sup>485</sup> and Boyer, instead of sending their accomplices to France, I should have charged the Criminal Court to elucidate the matter.

<sup>486</sup> Know you that they have killed his reputation and honour throughout the world, and that Madame de la Roncière died of grief in her Paris home, demanding an enquiry which she could not obtain? <sup>487</sup>

The following is an account of the case W<sup>m</sup> Stewart v James Stewart.

Mr W<sup>m</sup> Stewart, [Managing] <sup>488</sup> Director of the Atimaono plantation, had brought with him his brother James Stewart and had supplied him with the means to open a store upon the plantation itself, where the Chinese work people could secure both articles and food of their country. James Stewart had at the same time established a store in Papeete, the capital of Tahiti, to serve Europeans, contrary to the advice of his brother who told him that this double enterprise would lead to his ruin.

That which was foreseen happened. Soon James Stewart was forced to liquidate his business. The Director of the Atimaono plantation refusing to continue to aid him, the 2 brothers quarreled, and James Stewart decided to leave Tahiti.

He announced that he would sell his stores for provisioning the Chinese, which were situated on the plantation his brother directed. An Englishman, M<sup>r</sup> Keane, came forward to purchase them. To James

---

<sup>484</sup> WWB here omits the following paragraph: « Je me tais... Si on veut savoir la vérité, qu'on fasse une enquête... il y a un an que M. de la Roncière la demande... et un an qu'on ne l'accorde pas. »

<sup>485</sup> [Louis Langomazino \(1820–1885\)](#). Jacolliot spells the name as *Longomazino*.

<sup>486</sup> WWB omits the following at the beginning of this paragraph: « Je ne me dissimule pas la gravité de mes paroles, et cependant je n'hésite pas à les prononcer. Savez-vous que depuis plus d'une année, ces mêmes hommes envoient à la presse américaine leurs calomnieuses délations, traitant M. de la Roncière de forban, retournant sous toutes les faces les malheurs de sa jeunesse, savez-vous qu'ils l'ont tué de réputation... »

<sup>487</sup> And here WWB omits the following: « Il est des gens qui disent : M. de la Roncière est par terre le scandale serait plus grand, si on essayait de le relever... Eh bien ! non, M. de la Roncière ne restera point par terre ; si la vérité et le bon droit ont encore quelque poids en France. »

<sup>488</sup> WWB has *Acting Director* for « directeur gérant. »

Stewart who was leaving the country, ready money was essential, and Keane, although enjoying a private fortune in England, had not for the moment disposable funds of sufficient quantity.

We shall shortly see why James Stewart *wished to sell only for ready money*.

Keane then went to W<sup>m</sup> Stewart, the Director of the plantation, and said to him, "I am in parley to purchase the merchandize and stores of your brother, he demands an immediate payment; you know my family and position, advance me the 92,000 francs I need, you will hold as guarantee the goods I purchase." "I cannot advance you that sum in specie," replied W<sup>m</sup> Stewart, "the funds I have in bank belong to my [shareholders], <sup>489</sup> and I cannot use them in such kind of operations.

Here is all that I can possibly do to aid you," and W<sup>m</sup> Stewart handed to Keane a Draft as follows:

"Six months from the present date, I will pay through my Bankers Owen and Graham of Auckland, the sum of 92,000 francs to M<sup>r</sup> Keane." "As it will not take you six months to receive funds from England, you will be in time to re-imburse me on the date of falling due; this is a way of helping you without running any risk, my personal position does not permit me to do more."

Keane then returned to James Stewart, and offered him an assignment of this Draft. The latter accepted, and the purchaser took possession of both the merchandize and stores.

A month passed. James Stewart busied himself in liquidating his second business in Papeete and made his preparations for departure.

For these reasons, the Director of the plantation wrote to his brother to reclaim from him the 24,000 francs as freightage of merchandize brought during several years to James Stewart by the plantation boats.

James Stewart, fully recognizing the legitimacy of the demand, claimed that it ought to be reduced to 17,000 francs.

Court action was taken upon this between the 2 brothers, before the Tribunal of Commerce, presided over by Langomazino.

#### Long a bitter opponenent of Wm Stewart.

Here was the opportunity of satisfying the intense hatred of the man, and the Judge Longomazino, one of the leaders of the party,

#### in opposition to both Governor and Stewart,

the acquirer by fraudulency of the property of the native woman Vahine Heau, <sup>490</sup> did not fail in his job.

Listen to this outrageous discussion.

James Stewart, brought before the Tribunal of Commerce as to payment of 24,000 francs by his brother W<sup>m</sup> Stewart, as Director of the Atimaono plantation, and for a debt contracted towards the Plantation,

---

<sup>489</sup> WWB has *Company* for « actionnaires ».

<sup>490</sup> Jacolliot has *Vahineheau*.

Demands : that this sum of 24,000 francs be reduced to 17,000 francs that he acknowledges is due. Then producing the Draft for 92,000 francs subscribed by W<sup>m</sup> Stewart to Keane, he demands that this Draft, underwritten for six months, be rendered demandable at once, and that the 17,000 francs which he recognizes as due be set against and the like sum deducted from the Draft of 92,000.

Before a French Tribunal, it would not have taken five minutes to do justice to so scandalous a pretension. *The Imperial Judge Langomazino agreed to the demands in their entirety!!!*

It was in vain that W<sup>m</sup> Stewart's lawyer pleaded :

1. The 17,000 francs that you, James Stewart, recognize due, are due at once; the Draft for 92,000 francs that Keane has transferred to you is not due for 6 months.
2. The 17,000 francs are payable at Tahiti; the 92,000 francs are payable in 6 months at Auckland, New Zealand, at the Bank of Owen and Graham.
3. The Law requires that, for a double debt, they should be demandable on the same date and payable at the same place. These 2 conditions fail you, payment becomes impossible.
4. He who owes "on account" owes nothing, says the legal action, and no power on earth can make payable on sight a Draft payable in 6 months.
5. This Draft is not made out to you, James Stewart, you have received it from Keane. You cannot change the nature of the obligation, the contract is between W<sup>m</sup> Stewart and Keane. If the delay of this Draft appeared too long to you, who forced you to accept it in payment?
6. Another outrage : you owe 17,000 francs to the shareholders of the Atimaono plantation.<sup>491</sup> How do you imagine that this debt to a Company can be covered by the debt of W<sup>m</sup> Stewart, engaging himself not as the Managing Director, but *personally* to render Keane a service?

At this moment the Imperial Judge Langomazino interrupted, "Is it not that by this Draft of 92,000 francs W<sup>m</sup> Stewart becomes surety<sup>492</sup> for Keane?"

"That does not change the situation in the least," replied the lawyer for W<sup>m</sup> Stewart.

1. W<sup>m</sup> Stewart would be surety for the goods sold to Keane by James Stewart but that does not change the nature of the 2 debts : James Stewart owes to the Company, W<sup>m</sup> Stewart is personally engaged with Keane.
2. Suretyship cannot render payable on sight a Draft payable in 6 months.

At bottom to pretend that there is suretyship is impossible.

1. By terms of Law, Suretyship is not possessed, it must be expressed, written, precise.
2. If there be Suretyship, why not assign Keane the principal debtor, for examination as the Code Napoleon requires, before demanding the payment of Suretyship?

(An unheard of thing, Keane was never assigned in this case.)

<sup>491</sup> WWB omits: « pour marchandises apportées à vous par les navires de la plantation. »

<sup>492</sup> The word *guarantor* would be used now.

3. Suretyship, if you claim there is Suretyship, being a purely civil matter, the Tribunal of Commerce is incompetent to handle it.

These principles of Justice are so common that, at the least sign of fraud, deceit or bad faith, a magistrate cannot fail to recognize them. What do I say? a magistrate! I defy that any man, gifted with common sense, can be found capable of ordering the immediate payment of a Draft of 6 months expiration.

Langomazino rendered a judgement, ordering W<sup>m</sup> Stewart to pay forthwith, into the hands of his brother James Stewart, the 92,000 francs, shown on the Draft payable in 6 months, at Owen and Graham's bank in Auckland. W<sup>m</sup> Stewart was authorized in making payment to retain the 17,000 francs which his brother acknowledged due to the Atimaono Plantation.<sup>493</sup>

*On Appeal, the Order rendered by Boyer*

The President of the Superior Court

*was worse still.* W<sup>m</sup> Stewart had brought this Appeal, and had subpoenaed his brother James for 3 weeks later.

What did James Stewart do, who had gained his objects on all lines? He appealed in his turn, and by virtue of an Order by Boyer, to shorten the time, the Director of the plantation was given only 3 days to prepare his Appeal.

The 3 days expiring, W<sup>m</sup> Stewart obeyed the legal Order, and presented himself with his lawyer.

Despite all their efforts, the right was given to James Stewart to first present his accompanying Appeal. He demanded the confirmation of the judgement rendered by Langomazino in all its ends and aims, and moreover now added that his brother W<sup>m</sup> Stewart should be ordered to pay over to him a sum of 25,000 francs, naming a Draft which he had received from him 3 months before...

Here then was the reason for James' Appeal... he sought to procure through it a new demand against his brother...

Moved, and indignant, W<sup>m</sup> Stewart rose and gave the following explanation :

"I signed, 3 months ago, a Draft to the order of my brother for payment of 25,000 francs for merchandize... I wished to come to his aid in his then position short of cash for I owed him nothing. Be that as it may, I accept the responsibility of this act of kindness I committed. That Draft engages me as if I really owed. Here is how the Draft reads : 'Three months from date I will pay to the order of M<sup>r</sup> James Stewart the sum of 25,000 francs at my bankers Owen and Graham of Auckland, value of merchandize.' We have no bank on Tahiti, I am therefore obliged to arrange all my affairs with Auckland, which is the nearest place to our island. I refer this matter to my brother [James Stewart], to know if he has not sent this Draft to Auckland to be paid by Owen and Graham."

James Stewart, being unable to show the Draft, was obliged to own that he had sent it to Auckland to be paid by Owen and Graham. But he added that there was no guarantee against the risks at sea, that he did not know if the Draft had reached Auckland, and finally, desiring to leave Tahiti, he had need

---

<sup>493</sup> WWB here omits: « Rien ne pourrait dépeindre la stupéfaction dans laquelle me jeta la lecture des pièces de ce procès, et surtout de cet inqualifiable jugement. »

of this money at once. One feels that one is dreaming on reading such things. Despite his lawyer who wished to stand firm on the ground of rights to repeal this insensate demand, to pay a Draft which is acknowledged to have been sent to the bankers to pay, W<sup>m</sup> Stewart spoke as follows, "I ask the Superior Court to kindly remit the matter for 3 weeks.

"The Draft, the payment of which is asked of me is both due and been paid without any doubt by this time by Mess<sup>rs</sup> Owen and Graham. In 3 weeks, the *Eugénie*, which runs the service between New Zealand and Tahiti, will arrive in our port, bringing the accounts of the bankers Owen and Graham, and consequently the proof of my own non liability."

Can one believe it? this delay was refused!... The matter was merely transferred to the next meeting of the Court.

M. de la Roncière begged Boyer to grant this delay since there was no danger in doing so. This request<sup>494</sup> gave a pretext for a calumnious denunciation of the Imperial Commissioner accusing him of attempting to influence justice.

At the next meeting, Boyer made an Order confirming in all his rights the judgement of Langomazino, and moreover condemning W<sup>m</sup> Stewart to pay the 25,000 francs, of the new demand, which the Director of the plantation affirmed with good right, as we shall soon see, had already been paid in Auckland.

Not content with that, the Order was to be carried out on the instant, and 48 hours later, in the name of James Stewart, a Sheriff seized all the possessions and tools of the Plantation, and even, contrary to the Code of Napoleon, the provisions serving to feed the Chinese work-people.

Thus, W<sup>m</sup> Stewart was condemned to pay, in 24 hours, under pain of<sup>495</sup> seeing his Chinese terrified whose food had been seized : 1. The sum of 92,000 francs, less the 17,000 francs that his brother recognized due ; 2. the sum of 25,000 francs mentioned in a Draft sent to Auckland by James Stewart himself and which, according to the date of its being due, ought to have been already paid.

100,000 francs to be paid in 24 hours! <sup>496</sup>

How could it be done?...

When one is a capable administrator one does not keep 100,000 francs unproductive at his home. There was no bank on Tahiti. Owen and Graham were in New Zealand, that is to say 20 days sail from Tahiti...

To the unanimous plaudits of all his enemies, this Atimaono plantation, worth several millions, was to [go bankrupt].<sup>497</sup>

M. de la Roncière intervened to save it. He authorised the Caisse Agricole, founded to purchase the coton of small planters, to purchase 100,00 francs worth of cotton from the Atimaono plantation, and W<sup>m</sup> Stewart could then avoid for his London [associates]<sup>498</sup> a ruinous discomforture.

---

<sup>494</sup> WWB here omits part of : « Cette démarche échoua, ou plutôt elle eut un résultat... Elle donna le prétexte... »

<sup>495</sup> WWB omits part of : « sous peine de voir vendre tout son matériel et l'exploitation arrêtée, sous peine de voir révolter ses Chinois dont on avait saisi la nourriture »...

<sup>496</sup> WWB omits: « 100,000 francs dont on ne devait pas le premier centime!... »

<sup>497</sup> WWB has *be made a fiasco* for « va faire faillite ».

<sup>498</sup> WWB has *shareholders* for « associés ».

What did James Stewart do now? With 100,000 francs in his pocket, he escaped under cover of night on a schooner for San Francisco, abandoning his store in Papeete, in which were found neither ledgers, nor merchandize, and leaving over 60,000 francs in business debts... The Law has only one word to define that situation : it is *fradulent bankruptcy* ; and the tribunal to judge it is the criminal Court.

Thus, thanks to the connivance of Langomazino and Boyer (I do not mention the Assessors who were only underlings),

Dr Bonnet and Holozet the Procureur

James Stewart could abstract from his brother 100,000 francs which the latter did not owe him, and escape from Tahiti without paying his creditors.

Fifteen days after his departure, the *Eugénie*, arrived from Auckland, bringing the accounts of Owen and Graham with W<sup>m</sup> Stewart, and in these accounts was found the famous Draft of 25,000 francs to the order of James Stewart which the bankers had paid exactly upon its time expiration.<sup>499</sup>

This was not an error of honest folk who have been deceived, but a collusion, a planned deceit of the first rank, inexplicable otherwise than by the action of open hatred, seeking vengeance...

That was why Langomazino first, and Boyer later, were cashiered from their posts by M. de la Roncière, amid the unanimous plaudits of public opinion (those of honest men), which was scandalized by those odious judgements and by the flight of the fraudulent bankrupt, James Stewart.

Bonnet was given a 6 months sentence of imprisonment and Holozet removed from office.

A final word concerning Boyer.

Scarcely had he rendered his Order than he ordered its execution ; profiting by the absence of M. de la Roncière who was absent on the *Sous-le-vent*,<sup>500</sup> he placed the troops under arms, under the absurd pretext that M<sup>r</sup> W<sup>m</sup> Stewart might be opposed to the approaching execution by guillotine of some of his Chinese, and a revolt possible.

The Chinese had been sentenced to death for premeditated murders, during a period of 4 months, of several of their compatriots. There was never any fear of a revolt.

<sup>501</sup>

Again, the day of the seizure of the plantation, M<sup>r</sup> W<sup>m</sup> Stewart's lawyer [wants to go] to the home of his client to arrange by legal means, correct opposition to the seizure.

---

<sup>499</sup> WWB omits the following: « Ainsi, tous les principes les plus simples du droit foulés aux pieds, un billet de 92,000 francs à échéance de six mois rendu exigible de suite par un tribunal de commerce, bien que cet engagement fût purement civil, un autre billet de 25,000 francs déjà payé à Auckland, que le souscripteur est obligé de payer une seconde fois, sans qu'il puisse obtenir un délai de trois semaines pour prouver sa libération. Que dis-je ? un delai ! — Est-ce que la libération de William Stewart n'était pas prouvée par l'impossibilité où était son frère de lui représenter le billet qu'il avoue avoir envoyé à Auckland à la présentation chez Owen et Graham ? Comme résultat, 100,000 fr. qui n'était pas dus, extorqués, et James Stewart qui s'enfuit frauduleusement, laissant 60,000 francs de dettes sur la place ! »

<sup>500</sup> WWB omits: « pour passer un traité avec le roi de l'île d'Huahine ».

<sup>501</sup> WWB here briefly summarises a rather long paragraph.

Boyer learning of it, [arrests him and throws him in prison]! <sup>502</sup>

Jocolliot now passes to other matter. <sup>503</sup>

---

<sup>502</sup> WWB has *ordered his arrest and the entry of his name in the jail book* for « il le fait arrêter et écrouer à la prison ».

<sup>503</sup> WWB concludes his translation on page 41. The photographs below, taken at Atimaono in October 2014, shows the golf course that then occupied the site of the plantation. See also Tale #70, *Atimaono*, in Part IV, *Tales of a Roaming Grandfather*, and *Tragedy of Atimaono, Story of the Rise and Fall of a Tahitian Cotton Enterprise*, Section 1 and Section 2, by J.L. Young and edited by W.W. Bolton, in the 25 May 1938 (pages 33–39) and 22 June 1938 (pages 34–38) editions of the *Pacific Islands Monthly*, in Part VII

## Transactions

**Extracts  
from the “Journal” or daily diary  
of the first permanent white residents  
on Tahiti.**

**3 Volumes  
covering the years 1797 to 1808.**

**L. M. S.  
London.**

*Preliminary Note.*

*Long gaps often appear owing to the manuscripts, through shipwreck or other misfortune, being irretrievably lost on their way home.*

*Many extracts already appear in the MS of “Old-time Tahiti” dealing with the first 2 Volumes. Others of Volume 3 now follow in addition to the former.*

*The writer was fortunate enough to secure the 3 Volumes for the Papeete Museum on Tahiti.* <sup>504</sup>

*The phonetic spelling of Names and Places are corrected so far as is now possible.*

*Brackets are by the writer as helps to the reader.*

### 1802

February 2. State of the garden.

Cabbages, melons, pumpkins and cucumbers we have had in great abundance. Several bushels of Indian corn have been gathered in. Many of the European vegetables will not come to perfection or produce seed. The vine and fig tree brought from Port Jackson (*Sydney, N.S.W.*) are doing well. Potatoes are good for nothing.

September 23. The Margaret, Capt. Byers and Mr. Turnbull, (*part owner*) anchored.

September 25. H.M.S. Porpoise landed, for the purpose of our self defence, 8 muskets, 10 lbs of powder, 32 flints and 320 musket balls.

---

<sup>504</sup> Some of the extracts can be found in *Transactions of the Missionary Society, Volume 2, Issue 1*, 1804: [here](#) and [here](#). The text in the *Transactions* has been edited for publication, whereas WWB appears to have had access to the text of the original journals. While WWB’s text and the *Transactions of the Missionary Society* are consistent, it is clear that WWB has often condensed or edited the journals.

October 1. Tomorrow the Porpoise takes her departure and by her we send our Journal containing material respecting the island, occurrences, ourselves, etc. It will be a great cause of thankfulness to hear that our Journals sent by the Royal Admiral get safe to your hands.

*Editor's note. The above have never come to hand.*

October 22. It was resolved to send a letter to the Directors requesting an additional quantity of axes, scissors, etc., etc., for the use of the brethren that travel round the island, that presents may be made to those who receive them in their houses and provide them with food.

October 26. This morning a lad was convicted of having stolen 2 razors. Tu <sup>505</sup> (*Pomare II*) requested that in order to deter others, we to give him 20 lashes with the cat. We declined. He commanded one of his servants to do it, which he did in a public manner.

November 23. This morning Teu <sup>506</sup> (*Ha'apai*) the father of Pomare <sup>507</sup> (*I*) and the grandfather of Tu breathed his last in a house a few yards distant from us. His daughter Ovo <sup>508</sup> applied to us to make him a coffin. The corpse was taken to Paré <sup>509</sup> and is to be placed on pillars after the manner of burying people of consequence. Teu died of old age, being we imagine the oldest man on the island.

*(Evidently he was in his 90s — as was Tati I — he had met Wallis 30 years back, an "old man" then.)*

December 23. A barbarous murder was committed this morning in a house a few yards distant from us.

*(One of Itia's residences at Point Venus)*

He was struck by a tomahawk that almost severed his head from his body. The perpetrator of this savage act walked about afterwards with the tomahawk in his hand with as much unconcern as if he had been splitting up firewood. The murdered man had been guilty of a very petty theft. Toward evening Pahiti <sup>510</sup> (*The Head Chief of Matavai*) arrived and ordered the corpse to be dug up and placed within view of the murderer's abode at the Point. This is held by the natives as very unpleasant to the guilty party.

## 1803

February 2. Tu (*Pomare II*) sent to desire that we would write to England that a Still for distilling liquors may be sent for. It is probable that the Sandwich Islanders who are with the King have induced him to make the request. (*Declined.*)

February 5. If our neighbours were more honest we should almost be able to keep ourselves in every article without being burthensome to our brethren in England by rearing and curing pork and sending

---

<sup>505</sup> *Otoo in the Transactions of the Missionary Society.*

<sup>506</sup> *Otáoo*

<sup>507</sup> *Pomarre*

<sup>508</sup> *Owo*

<sup>509</sup> *Oparre*

<sup>510</sup> *Paheete*

it to New South Wales, but it is with difficulty that some of us can get meat to eat. Since the departure of the Royal Admiral we have lost by theft near 200 hogs great and small besides ducks and fowls and things from gardens.

February 28. The last divisions of our sugar was made today : the last of our tea has been made some time.

March 13. The various situations in which the natives are found when we seek to address them render it very difficult to get them together. Sometimes they are busy at work about their houses or making cloth, etc., etc., which they quit — if at all — with no small reluctance, at other times they are feasting and gorging themselves and at other times they are stupefied with kava.

April 4. The ship Unicorn of London, Porter Commander and Mr Newton Supercargo and part owner, anchored in the Bay. It has been reported among the natives that the King is angry with certain of us because they have gone on board ships and desired the captains not to give arms. A charge most untrue. Some of the great people now conceive that we are in their way. It is easy to perceive that a very little matter would turn the favour of the Chiefs against us, and from being our professed friends they would become our open and avowed enemies; in that case the consequence is very obvious. Prudence inclines us to wish that the Mission was speedily put upon such a footing as to provide against any fatal catastrophe taking place. It was judged expedient to request a return in gunpowder for some articles sent to the ship to make a present of it to Pomare (I).

April 11. The Unicorn made signal for sailing. The care of our Journals has been committed to M<sup>r</sup> Newton.

*Editor's note. Mr Newton has had the goodness carefully to preserve these Journals, notwithstanding that his ship was seized by the French.*

April 27. Last evening Pomare (I), Pahiti, Ovo and their attendants arrived to see the young Chief of Taiarapu <sup>511</sup> (*Lesser Tahiti*) who now appears very near death.

*(He was Teriinararoa, younger son of Pomare.)*

April 28. A human sacrifice passed by from Faaa. <sup>512</sup> Toward evening Brothers Jefferson and Scott came home. They had arrived at Faaa, put up at the Chief's house who received them friendly, and that same night the Chief killed the man for a sacrifice

*(For Pomare's use for his dying son)*

that was carried past us in a canoe today. The man was sitting with the Chief and others when the brethren arrived. A little after the brethren were laid down to rest, the natives proposed to remove themselves to the sea beach a short distance off. The intended victim not suspecting their designs accompanied them : there they soon dispatched him with stones and his body was put up in a long basket of coconut leaves. The deed was done with so much quietness and secrecy that the 2 brethren had no suspicion of anything, and were not a little surprised when they heard of it at a distance from the house. The Chief and his attendants appeared as easy and unconcerned as if they had only killed a hog.

---

<sup>511</sup> *Tyarraboo* in the *Transactions of the Missionary Society*.

<sup>512</sup> *Fwhanna*

May 17. The arrows of death continue to spread in a very awful manner among the remains of this once — as has been reported — island, <sup>513</sup> many persons in the prime of life falling a prey to the virulence of intermitting fever which has proved so fatal to the inhabitants.

Statement of the medicines by Brother Elder :

The medicines are in as safe a state as I can put them. Through the length of time they have been kept the greatest part of the powders and some of the liquids have lost much of their native qualities. The powders of bark, rhubarb, ipecacuanha, <sup>514</sup> cream of tartar, sugar of lead which all are in glass bottles are turned into a soft, mouldy lump. Neither can I prevent the medical instruments from rusting.

May 27. Between 3 and 4 o'clock something like a boat was seen in the N.W. quarter making towards Point Venus. Soon after, 2 guns were fired from her. M<sup>r</sup> Turnbull

*(who had remained ashore whilst the Margaret had cruised amid the neighbouring islands)*

immediately supposed some disaster had befallen his vessel. He got a double-canoe launched and sent off Peter Hagerstine, <sup>515</sup> 4 seamen and some natives to meet them. The weather proving very windy and squally, the seeming boat could not fetch into the bay and night coming on she made for Paré. After sundown Peter Hagerstine relanded with the tidings that the Margaret was lost and that Captain Byers and crew were in the above boat : 2 of the crew were wounded.

May 28. This morning Captain Byers, M<sup>r</sup> Wood his mate and M<sup>rs</sup> Wood arrived by water, all in a very weak state. Brother Nott has given up where he dwelt on the west side of the river to accommodate M<sup>r</sup> and M<sup>rs</sup> Wood, and removed to the Society's new home. (*The "British" house.*)

May 31. The chest Captain Byers and his crew — in all 18 souls — saved themselves in, is come up from Paré. It is about 17 feet long, 5 broad and 4 deep. Having no carpenter among them, it is not only poorly patched together but was withal so leaky that it took one person to keep baling by day and night. Providentially they met with a favourable wind and calm weather.

June 15. Some time ago Brother Eyre had begun to enclose a spot of ground.

*(All of Matavai had been ceded to the Society by Pomare I.)*

Yesterday a neighbouring Raatira <sup>516</sup> (*sub-chief*) broke out upon the native who was renewing the work on the fence and much abused Brother Eyre, told him that the land was his and he would have no fence there. When told that his conduct would be reported to Pomare (*I*) he said, "Your God is killing us now, but bye and bye our gods may get the upper hand and then you will be killed." However, this morning the Raatira came, bringing with him a small pig as an atonement for his conduct according to the custom of the country.

---

<sup>513</sup> The island referred to is Raiatea.

<sup>514</sup> [Carapichea ipecacuanha](#)

<sup>515</sup> *Hagerstin* or *Hagerstein* in the *Transactions of the Missionary Society*.

<sup>516</sup> *Rateera*

June 22. A prohibition is laid upon the inhabitants against lighting any fires near their habitations. This is on account of the death (*on the 19<sup>th</sup>*) of the young Chief of Taiarapu. How long it may continue is to us uncertain. The natives are now obliged to retire far inland to cook their food.

June 29. The seaman that was desperately wounded when the Margaret was wrecked is recovering. The prohibition of lighting fires is withdrawn.

July 9. Pomare is very busy preparing canoes to visit Atehuru <sup>517</sup> (*Punaauia*) but Tu (*his son*) has sent word from there to forbid Pomare and Itia going down, as the Atehurians have laid a plot to cut them off.

August 1. The Atehurians have delivered up to Tu the shapeless log of wood which they call their god Oro, or rather his body into which Oro occasionally enters. By this act, peace is assured towards Pomare.

September 3. A messenger arrived from Paré in the afternoon with the intelligence that Pomare was dead. From a man in the canoe when it happened we learned that he was paddling with 2 of his men in a single canoe towards the Dart and was not far from her when a sudden pain seized him in the back which occasioned him to cry out and catch himself up and put out one of his hands behind him to the place where he felt the pain. This he had no sooner done than he fell forwards with his face towards the bottom of the canoe and his hands over the sides dropped the paddle out of his hand and never spoke more. The natives about us do not express themselves with much concern on the occasion.

September 5. Nine of the brethren were down in Paré to show their concern. It appeared to be taken kindly by Itia. <sup>518</sup> The corpse was laid out under a small shed erected for the purpose opposite Tu's dwelling

*(The King's House still so called)*

and decently covered with white cloth. At the feast on the left side sat Itia, and on the right side sat Ovo and her 2 daughters, both once the wives of Tu and Teriinararoa <sup>519</sup> (*their cousins*), and Pipiri <sup>520</sup> (*Pomare's 2<sup>nd</sup> wife*). Muskets were fired in a confused manner as tokens of respect for the dead. Preparations were being made for putting the corpse on a scaffold after the manner of the country, the body placed in a large canoe house such as they carry on their double canoes. Behind Pomare's Fare Tupapau <sup>521</sup> will be that of his father's (*Ha'apai*) and Pipiri's brother, on the right of Tu's dwelling that of Teriinararoa, so that he (*Tu*) soon will have before his eyes the remains of his grandfather, his father and his brother who have all been cut off within 12 months.

September 7. Brothers Jefferson and Youl returned from Atehuru. Tu received them friendly but by his behaviour he is little affected with his father's decease. They had passed the night under the roof of his palace which was not only mean in the extreme but so full of fleas that not much sleep could be got.

<sup>521</sup> farre teapahpow

1804

February 22. <sup>522</sup> At daybreak the natives shouted that a vessel was in sight : presently afterwards something was seen floating on the ocean. The King looking at them with his spyglass conceived them to be very large canoes full of men and making towards Matavai. Immediately a report was circulated that the natives of the Pearl Islands (*Northern Tuamotus*) to the eastward were on their way to attack Tahiti. <sup>523</sup> Some months back the Pearl Islanders invaded and took Makatea <sup>524</sup> (*the present day phosphate isle*). The Makateans fled to Lesser Tahiti and described the invaders as a vary savage people and man-eaters. Tu sent to inform us and desired that our boat (*purchased from the Margaret*) might be launched and sent off to reconnoitre. Some of the brethren went to His Majesty and were no more able to discover by the help of the glass — the weather being cloudy and a drizzling rain — what the floats were than the King. The boat was launched and Brother Shelley <sup>525</sup> with some seamen (*left from vessels which called in the Past*) went out 4 or 5 miles to meet them : but instead of the man-eaters it proved to be large trees that had been washed away from the land, drifting at random.

April 28. Ovo and Pipiri arrived. The latter has changed her name to Tane-ruu-ruu-a. <sup>526</sup> Not long after Pomare's decease, Itia with some priests met to invoke the Manes of Pomare to make his Appearance. The vision was to appear at sea. During their invocations a famous priest among them got into his canoe and paddled off some distance from land to meet the ghost. This he did several times but was unsuccessful. At last, while they were at the height of their ceremonies, a strange noise was heard in the midst of them and Itia immediately cried out "There he is." On this the priest put to sea again and soon afterwards returned with the report that he had seen him : that the upper part of his body appeared out of the water and that it was bound round with plaited cord such as the natives use on occasions. From these circumstances Pipiri took the name which signifies "A bound husband".

May 8. About noon a furious whirlwind. It was a grand though very fearful spectacle. It passed close by Itia's house on Point Venus and near the shed erected for building a boat for the King and the old (*Bligh*) house. Had it touched our dwelling (*the British House*) the consequences might have been fatal. (*The last named was a 2 storied building.*)

June 11. A boat was perceived making for Point Venus. On landing we found her to belong to a vessel at anchor in Taru harbour, Moorea : the vessel is the Harrington of 14 guns and 50 men, M<sup>r</sup> Campbell from New South Wales, and bound to the coast of Peru in the privateer business. The vessel was bound to Norfolk Island for certain supplies and water but gales of wind prevented and she was constrained to call at Tahiti, and being leeward to this island put into Moorea. Having no intention of calling here till on her return she has brought nothing from Port Jackson for us where we understand letters and articles from England are lying for us awaiting conveyance. We are much in want of clothing.

June 30. Drew upon Captain Campbell for a supply of our exigencies. Spared Captain Campbell a quantity of hoop iron : for part payment of which 6 lbs of gunpowder is to be given to Tu.

July 11. Enlarged our demands to the amount of near £ 130 to be paid with between 5 and 6 tons of pork to be ready on his return.

<sup>522</sup> The day these events took place is given as March 18 in the *Transactions of the Missionary Society* [here](#).

<sup>523</sup> *Otaheite* in the *Transactions of the Missionary Society*.

<sup>524</sup> *Maitea*

<sup>525</sup> William Shelley (1774-1815). WWB has *Shelly* here and elsewhere.

<sup>526</sup> *Tahne-roorooa*

July 13. A Bible and Prayer book were sent to the crew, also a few tracts and sermons. At p.m. the Harrington sailed from Eimeo.

July 21. About 4 a.m. we were alarmed by the report of a cannon. Supposing that a vessel might not know her situation with respect to the land, a fire was lighted on the beach. A vessel was presently seen to the eastward. As she came more in sight it appeared that she had met with some disaster in her main-mast. About 6 a.m. she entered the bay. She proved to be the Harrington and had reached as far as latitude 23 degrees when she carried away the head of her main-mast which snapped off her fore-topsail yardarm.

August 6. Since his return Captain Campbell has been so obliging as to permit one of his crew who is a tailor to come ashore and make sundry garments for the brethren. Another of the ship's company has been putting us in a way to make soap.

*(The Harrington sailed the following week.)*

August 20. Some months ago it was agreed that the brethren should build for the King a vessel of 42 feet keel. The shed had been erected by the King's order and timber for the ribs provided. It is found necessary to hasten the work as the King seems very urgent. Brothers Bicknell and Shelley, the shipwrights, and Brother Nott to direct the natives in their work : Aiken, a negro from the Margaret, to assist at one axe and a tomahawk per week as wages. The Society has engaged a foreigner from the Harrington to make bricks, he being by trade a brickmaker and stone-mason. He is engaged to make 5000 bricks at 2 axes and a tomahawk per thousand.

October 15. Oro is brought from Moorea and was landed on the islet in Nanu Bay (*today Papeete*).

October 19. The King sent 5 short notes to as many different brethren concerning his vessel to hurry it on. They were written in a legible hand, tolerably good sense and pretty well spelt. Tu has assumed the name of his father and signs himself in some of his notes "His Majesty Pomare".

November 3. The bricks have been finished and some of the brethren began to bring them home. They were made near One Tree Hill of a red clay.

November 10. The Harrington brig, Captain Campbell, anchored in the bay. Since her departure (*July 13*) she has visited the coast of America and captured 2 Spanish vessels, a brig laden with wheat and flour, etc., and a king's schooner. The prizes are expected in a few days. (*They arrived on the 19<sup>th</sup>.*)

November 12. Captain Campbell removed his vessel to Paré (*to Papaoa in that District*) where His Majesty's ship Bounty had formerly anchored, a far more secure situation than any part of Matavai Bay.

December 8. The King has lately sent to this District a piece of a human body as a confirmation of friendship between him and the District. It is the end of a finger. Pieces taken from the hand, foot or hair of the head are used as tokens of amity.

1805

January 22. Brothers Elder and Wilson departed for Tairapu (*Lesser Tahiti*). They took with them to defray expenses 2 hatchets, 12 knives and 9 combs. Brothers Bicknell and Henry also set out for Moorea. They took with them 2 hatchets and 6 knives to defray charges.

April 22. Last night was lost a trunk containing a variety of carpenter's tools out of a small house standing about 50 yards at the back of our dwelling. None of our neighbours will ever impeach the robber at the time but months afterwards we learn from them who was the thief.

April 30. Some time ago there was stolen a very good copper sieve. A boy was the thief. This morning the boy's relation sent us 2 hogs as a recompense.

May 3. The brethren returned from Moorea and with them a King's messenger who is charged by Pomare to signify to the Raatiras to search for our lost property and to send all strangers that have not business in Matavai to their homes. When he returns to this island depends on religious ceremonies which must first be performed.

May 6. This evening there died in an adjacent dwelling a robust young man of about 20 years of age. He was wrestling in sport and ran a splinter of bamboo into his right leg near the heel. Lancing was proposed by Brother Elder as the splinter was invisible. This was refused and yesterday his jaws were firmly locked. Though no strangers to a locked jaw the natives consider it impossible that it is produced by a wound in the exterior frame.

May 8. About 8 o'clock p.m. there was a very uncommon rising of the sea which overflowed Point Venus. At the east end of the district where the low land is narrow the people were obliged to go to the mountains. The oldest here do not remember ever to have seen the like. There was a rise of the sea of several feet.

June 3. A third attempt has been made of soap making but it failed. We have no book of directions.

June 13. The Alexander, Captain Rhodes, anchored in the bay, coming from New South Wales. As it was not intended to visit this island we are again disappointed in letters and supplies. (*They are in need of pork.*)

June 22. The Myrtle, Captain Barber, anchored in the bay coming from Port Jackson. The captain had no such intention of calling, so nothing was on board for us. Both ships bartering for hogs with muskets. Captain Rhodes has sold a 3 lb cannon to the King for 50 hogs.

July 4. A Chinese has eloped from the Myrtle.

*(The first of his race on Tahiti. Possibly became Nott's servant  
which tradition affirms.)*

July 26. Read over the Journal prior to its forwarding by the Alexander.

October 9. Learned that some weeks ago in our neighbourhood a sick young man was actually buried alive : he was a native of Raiatea and had frequently been employed by us but was taken ill and stayed in a hut near our dwelling where he was fed by our native boys. He went off to some of his acquaintances inland who being tired of him dug a hole, put him into it and covered him with earth. Another sick young man is now with us who was appointed to suffer the same fate.

October 28. A sail was seen. The vessel proved to be the American brig Taber, Captain Sowle.

November 2. Captain Sowle made a present to us in the name of his owner John Clark Esq of Providence of 5 cakes of shaving soap, thread, 7 lbs of tea, a box of figs, 13 bottles of Madeira, 12 bottles of claret, 7 bushels of grounded wheat, corks, and 4 bottles of essence of peppermint.

November 4. The King has sent from Moorea notes to several of us desiring that melons, pineapples, limes and pumpkins be sent him. It is pleasing to observe the rapid progress he makes in his writing and spelling.

## 1806

January 18. Our neighbours carry their affectation of European dress so far that they will give almost any price for an old black coat or blue coat or shirt : and no man thinks that he can go before the King with any appearance of consequence except he has a musket, a coat and shirt or at least a coat to accompany his musket.

January 20. Nine of the brethren went down to Nanu (*present day Papeete*) to meet the King on his return to this island.

January 27. The King and his retinue arrived at Matavai. The great god Oro and his human sacrifices are deposited for the present in the marae at Hiti-mahana. Soon after Pomare's return he desired that we would ask Itia if he might enter our dwelling or not and to do this not in his name. She gave her consent. Soon afterwards he entered several of our upper apartments (*for the bachelors*). This was the first time of his coming under our roofs without making them sacred or his own property.

January 28. Much noise and confusion about us and the marae. Oro has 5 other gods to accompany him to Lesser Tahiti, then the others are to be returned to Moorea. Oro is in his house upon a sacred canoe : in the same house is the Too — or image — of Hiro.<sup>527</sup> The Too of the other gods is wrapped up in cloth and placed on separate canoes covered with the thatch of pandanus leaves. Their names are Tane, Te Mehara, Ruahatu and Hu'ae-ma'a, the 2 last are shark gods. The putrid carcasses of the men sacrificed are hanging up in long baskets of coconut in the branches of the trees about the marae.

January 30. Pomare after dining with us went to Paré for that District's gifts — Titis — to him. In the evening some cloth was sent to us together with a little pig as a present to our King George. This is a ceremony observed on all public occasions when the names of the principal Chiefs are called over one by one and something given to each : and ever since the time of Captain Cook the name of "King George" is added to the list and when the name is called if there be any Englishman present he receives the present, if not it goes to the natives.

March 1. The Lucy of London anchored in the bay, Captain Ferguson. She is a privateer and has been on a cruise off the coast of New Spain and touched here on her way to Port Jackson.<sup>528</sup> One object

<sup>527</sup> Possibly a reference to Hiro, the legendary king of Raiatea, the island formerly known as Havaiki. See [The Lost Caravel Re-explored](#) by Robert Langdon.

<sup>528</sup> The *Lucy* had stopped at Nukuhiva, where Edward Robarts, his Marquesan wife, their daughter, and an elderly Marquesan matron boarded. They disembarked at Tahiti and remained there for eighteen months. See pages 12 and 162 of [Greg Denning \[ed.\]. 1974. The Marquesan Journal of Edward Robarts, 1797–1824.](#) Canberra: Australian National

of his calling here was to enquire after a South Sea whaler called the Minerva whose crew mutinied, murdered the Captain and took the ship. Some few that did not join them were put into an open boat : these were providentially picked up by an English boat. What is become of the Minerva is not known.

March 13. Sent the King the following :

*(In answer to a request from him for a room in their house — see sketch.)*

May you live O King

We are thinking it would be a good thing to make a room for you for a writing place. Do not you cease to write, do not cease to learn English, it is a very good thing to know it.

March 18. Received the following note in English.

Friends

Give you M<sup>r</sup> Nott and M<sup>r</sup> Bicknell for craftsmen to do my room towards the sea in the new home for their it will be made if agreed by you.

May it be well with you. Pomare. King.

*(An answer was sent "Agreed to".)*

May 25. The Queen is very ill. This afternoon the King called and said that she had been delivered of a dead child but his servants have told us that it was a living child and quickly strangled.

June 29. It is difficult to get the natives to hear us at all, they will frequently interrupt telling us that they are all dying of English diseases.

July 1. The Queen continues very ill. A native was sent for by the King to cure her who [it] is supposed has the spirit of Mani Mani, the old Chief killed a few years back by Itia.

July 21. Ariipaea, Chief of the District of Paré, is ill. He sent for sugar, but sugar and tea we have been without for many months past. They are some of the most necessary articles we can have, and the want of them is severely felt especially when any of us are sick which is frequently the case. The Queen departed this life this morning. She was about 23 years of age, of middle stature, affable in her behaviour. Her mother Ovo, Itia and other women cut their heads with sharks teeth according to custom.

August 1. All the articles the Queen used have been put up in the marai where she is in a canoe on a scaffold. To prevent them being taken away they are broken in pieces or spoiled, such as her cup, combs, baskets. All her cloth was about her body. A house has been made about 8 feet high, supported by 6 posts, the sides covered with matting. Her relatives take her food which is laid near the corpse, fish, umu, coconut and water, the natives believing that the deceased come and eat the spirit supposed to be in the food.

University Press. See also pages 83–84 of C.W. Newbury [ed.]. 1959. *The History of the Tahitian Mission, 1799–1830, Written by John Davies*. Hakluyt Society Series II, No. CXVI. London.

November 25. This afternoon a sail was seen off Moorea. Its appearance being very small, some thinking it might be a large canoe, the King sent off his canoe. Late in the evening the canoe returned with the following note :

Gentlemen

I have to inform you of my having stores, etc., on board for you, this vessel having been chartered by M<sup>r</sup> Marsden. She is a private colonial vessel. I sailed from Port Jackson on September 15 and have had a very indifferent passage, being out of meat and firewood. My intention is to get to Matavai but the vessel being out of trim and very foul is not able to do as well as I wish.

E. Edwards

Some of the brethren went off to her in Brother Bicknell's boat with wood and a hog.

November 26. The vessel came to anchor, the Hawkesbury of 20 tons, so small that we are surprised she ever reached this place.

## 1807

March 2. Yesterday a neighbouring Raatira died. It is reported that the cause of his death was that he had been nanatiaha — sorcered by a man who lives at Atehuru who can, it is said, kill anyone he pleases by his enchantments. Few people die but think they have been sorcered or that some other diabolical art has been the cause.

May 9. During last night Pomare had a fit. A message was sent (*to Papaoa – Arué*) requesting the King to come to Matavai. He arrived with some priests and a number of people. Three carried each a young plantain and invoked their gods by repeating prayers all the way. Priests belonging to Matavai began their prayers, singing their orations in concert. Soon after he arrived a man came to the place who claimed to be inspired by Oro and says that the King must go to war with the people of Atehuru.

May 11. The man continues to say that Oro is angry and that there must be war. The people of Taiarapu have also offended by their not wholly leaving land given to Oro (*for the priests' use*). The King and the people about us are busily employed in cleaning their muskets and preparing themselves for war and seem much delighted with the certainty of its taking place after certain religious ceremonies have been performed.

May 25. Today some people came from Atehuru and report that Pomare is encamped there and that the inhabitants have fled to their Paré (*a place of refuge*). All the houses and plantations have been destroyed by Pomare.

June 2. Some of the brethren went towards Atehuru to see if they can do anything to save those fugitives said to be in the mountains.

June 3. The brethren Nott, Elder and Wilson returned. They had visited Pomare's camp. He was on the point of sailing for Papara where most of his warriors had preceded him : he had sent a party to Taiarapu to seize all canoes. The District presents a horrid scene of desolation. The King appeared as if conscious of acting wrongly and was not for entering into conversation.

*(This ends Jefferson's work as Secretary.)*

September 25. *(Jefferson died and Davies took over the work of the Journal.)*

## 1808

October 3. A letter was received from the King :

Friends : be on your guard : the people of Matavai and Mahena are continually talking of war and forming themselves in a party against us. Pomare.

October 11. The alarm of approaching war increasing, the brethren agreed to keep watch during nights.

October 25. The brig Perseverance from Port Jackson anchored in the bay.

November 6. We hear there is much probability that all the east side of the island from Matavai to the Isthmus is likely to unite against the King.

November 7. It is understood that Tauta, the Chief of Fa'ena, and Teahea, the Chief of Hitia'a, will also join the disaffected. This gave great alarm particularly on account of the courageous and enterprising character of Tauta. Pomare advised that our women and children should be sent on board the ship. The married and their families having gone aboard, the single brethren kept watch the night.

November 8. In much anxiety of mind but the rebels did not stir from Papenoo. The vessel was to sail in the afternoon but a letter was sent to the Captain requesting him to stay 48 hours, to which he consented. A meeting was called and it was unanimously agreed

That the state of the island is such that there is no prospect of safety or usefulness even should the disaffected Chiefs prove our friends. We dread the thought of living under a government where nothing is to be expected but constant quarrels and confusion. The consideration of these things together with the little success that has hitherto attended the labours of many years and that Providence had at the present juncture put in our power the means of removal to another island has fully determined our minds.

Pomare intends to leave the island for Huahine.

November 9. The brethren Nott and Scott went to the camp of the rebels to persuade them to meet the King, but to this they objected mentioning several instances of treachery that had occurred during the late war (*with Atehuru*). The Chiefs behaved friendly but though the Chiefs may have regard for us they have not the power to restrain the rabble.

Pomare began to hesitate about going away in the ship, thinking that he should thereby lose all his authority on Tahiti, but added "Perchance bye and bye the people will cut off my head as the people of France did with their King." We told him that if he was determined to stay, some of the single brethren would stay with him. This pleased him much. Brothers Nott, Haywood, Scott and Wilson then offered to stay since they had neither property nor families but with no expectation of doing any missionary work. Leave was then taken of the King and the rest of the brethren went on board together with some of our servants and most of the other Europeans on the island.

November 10. About noon the Perseverance sailed, and at the same hour on the following day the brethren were landed on Huahine.

End  
of the strictly Tahitian Journal : there follow entries from Huahine  
till they come to a close at Sydney in February 1818.

## The Pritchard Affair

1838.

British Consulate. Tahiti.  
14 September 14 1838.

To Governor Gipps  
Sydney. N.S.W.

Sir,

Permit me to make Your Excellency acquainted with what has happened on this island within these few days. The frigate La Venus by which I forward this has been to Tahiti to demand satisfaction for not allowing 2 Roman Catholic priests to remain on this island to teach their peculiar doctrines in opposition to those taught by the Protestant missionaries who have occupied this field for more than 40 years.

Considered only in a civil point of view, to have allowed them to remain in a small community like this, when every individual is professedly under instruction, would in a short time have created anarchy, confusion and bloodshed. I have lately received dispatches from Lord Palmerston in which I am requested to inform Queen Pomare that she is at liberty to receive or reject Roman Catholic priests : that according to the laws of nations no Foreign Power can force upon her any particular sect or party contrary to her own wishes.

French citizens who have come hither as mechanics or merchants have always enjoyed the same privileges as all other foreigners. The 2 priests came with the avowed intention of opposing those who were already instructing the people, the result of which would be, a party would soon be formed by certain disaffected Chiefs and would at once lead to civil war.

The redress demanded by the French Government has been sought in the most arbitrary and illegal manner. On the arrival of the frigate an embargo was laid upon all the ships in the harbour and a letter was sent to the Queen allowing only 24 hours to comply with the requisitions therein contained or the frigate would fire upon the settlement and carry on the work of devastation and death through the whole group of islands. They demanded at the mouth of the canon :

- 1<sup>st</sup>        A letter from Queen Pomare to the King of the French apologizing for having ill treated the French priests,
- 2<sup>ndly</sup>     The sum of Two Thousand dollars and
- 3<sup>rdly</sup>     That she hoist the French Flag on shore and salute it with 21 guns.

It was impossible for the natives to comply with these requisitions in so short a time. To prevent the direful consequences which were pending, I have been obliged to assist the Queen by paying the sum demanded.

Is it consonant with the laws of nations thus imperiously to demand whatever claim they may think proper to make upon a few defenceless natives without the slightest investigation being made or allowing an explanation to be given?

The Commodore has appointed a French Consul and formed a Treaty between the Queen of Tahiti and the King of the French. I herewith forward a copy of the letter to Queen Pomare. There are now at anchor at Tahiti 3 French ships-of-war and 2 more are expected.

The natives know not what to make of it. They consider themselves not only on a friendly alliance with Great Britain but as under the special protection of the British Government.

I hope you will send me of Her Britannic Majesty's ships-of-war this way as frequently as possible. It will be rendering essential service to these islands.

G. Pritchard  
Her Britannic Majesty's Consul.

Before any letter was ready to be sent to Du Petit Thouars aboard his vessel, the Venus, then in port, he called upon the Governor in a courtesy visit. A few days later the following was sent by command of the Governor.

Colonial Secretary's Office  
Sydney. 3 December 1838

To Captain Du Petit Thouars  
Majesty's Frigate "Venus"

Sir,

With reference to the verbal communication which took place between yourself and the Governor of New South Wales at a recent interview with His Excellency relative to your proceedings on your late visit to the island of Tahiti, I have the honour, by command of His Excellency, to repeat to you officially that he has received a letter from Her Britannic Majesty's Consul at that island, representing to His Excellency that on the occasion in question the French Flag was hoisted on the island by your orders, and certain demands were made by you on Her Majesty Queen Pomare, which not only placed Her Majesty in fear and under restraint but forced her to borrow money from the British Consul in order to avert the hostilities with which she was threatened.

The island of Tahiti forms no part of His Imperial Majesty's Government or of the territories of His Royal Majesty but is on the contrary recognized as an independent State under the Sovereignty of its own Queen.

At the same time, in consequence of the strict relations of unity and alliance which exist between this Government and Queen Pomare, His Excellency has thought it right to transmit to Her Britannic Majesty's Government a copy of the British Consul's letter above referred to, and His Excellency deems it due to you as the Officer of a Friendly Power to inform you of the circumstances.

His Excellency will not fail to convey at the same time to his Government the assurance which you have verbally given to His Excellency, that in causing the French Flag to be hoisted at Tahiti you did not intend to indicate the assumption of any act of Sovereignty over that island.

E. Deas Thomson

Du Petit Thouars explains in reply. (A translation.)

Frigate Venus  
Sydney Harbour. 5 December 1838.

M. Secretary-General,

I have received the letter which you have done me with the honour to write to me the 3<sup>rd</sup> of this month by order of His Excellency the Governor of New South Wales.

Alike as you inform me I know that the Government of the Queen of Tahiti is a recognized and independent government. In consequence I desire to inform you, Sir, that having received the Order of my Government to proceed to Tahiti I conceive it my duty to report the details of my action to the Government strong and glorious and to it alone. Already I have informed M. the Minister of Marine of my conduct and to him alone I feel is due the official account.

My relations with M. the Consul of Great Britain have been those they ought to be, polite and full of those regards which are due to the Envoy of a Friendly Power. I rendered to M. the Consul the honours that our Orders accord to his rank, although he never appeared on the frigate other than in the costume of a midshipman. I received him many times at my table as also the gentlemen the missionaries Mess<sup>rs</sup> Rogerson and Barff and all those who did me the honour to visit me.

I offered him for instance — later it is true — an asylum for himself and his family : finally I gave him in his quality as Consul powder which I asked for, and on my departure I offered to carry his correspondence to Sydney and it is I who have brought them. His Excellency will see by the recital of my relations with the Consul of Her Britannic Majesty that I have failed in no attentions which in various forms would be rightly due in a similar case. Such have been, Sir, the only connections which I have had with M. the English Consul Pritchard.

However, independently of the Consular charge of which M. Pritchard is invested at Tahiti, he is known under many different characters and which, in connection with these diverse functions, I found myself under the necessity of having dealings with him : and agreeably to M. the Governor, M. Pritchard being a subject of Great Britain, I desire without going beyond my duty to be allowed to state what have been those fresh relations.

As a Protestant minister I have had the pleasure of seeing M. Pritchard in the pulpit of the principal Church and of hearing him preach.

As a merchant I have had to address myself to M. Pritchard on behalf of the succession and the orphan heirs of M. Captain Bureau, slain along with his crew in 1834 in the Fiji

islands, to ask account of the possessions which the unfortunate Captain had placed in his charge.

As Agent, or rather Factotum of the Queen, M. Pritchard came to see me, bringing up without preamble the subject for which he was sent. I stopped him and asked him to make known to me in what character he appeared in a matter which seemed to have nothing to do with his consular functions. I declared to him that if it was so, I could not listen to him, but if he came as the Envoy of the Queen I was prepared to hear him. M. Pritchard then said that Queen Pomare having no one, by reason of the language, who could communicate with me had sent him as her Agent to propose a Letter of Credit in her name. I replied to the Queen's Agent that if all the resident Consuls would guarantee her signature and the validity of the Letter, I would consent. M. Pritchard asked me if I would not be content with his single guarantee as British Consul. I did not consider it advisable to consent to the request of M. Pritchard, being himself as the Queen's Agent as active party in the matter, but I limited the guarantee I required to himself as Consul to Her Britannic Majesty and to M. Moerenhout, Consul accorded to the United States.

As Interpreter M. Pritchard came aboard accompanied by a Chief who had been sent to me by the Queen to beg of me the loan of a French Flag of which she had need.

Here I think that it is convenient that I should cease. There are all the details which it appears to me that I am permitted to give to His Excellency the Governor of New South Wales. In entering upon these intimate particulars on M. Pritchard's conduct as Agent of the Queen I incur, maybe, the risk of wounding a susceptibility that I respect and which is far from my thoughts to offend.

I beg you to thank His Excellency the Governor for the thought which he desired to be made known to me of his intention to send M. the Consul Pritchard's letter to the Government of Her Britannic Majesty, the Queen of Great Britain.

I subscribe myself with respect, M. the Secretary-General,

Your humble and most obedient servant  
the Captain Commandant of the Venus  
A. Du Petit Thouars

## The Old Time Laws

From 1880 Tahitians have lived wholly under French Laws. For 60 years before that date they lived under their own special Code drawn up under the second Pomare. Prior to then, Law was an unknown word or thing, each Chief did and acted as he saw fit. It would be indeed strange if the Laws of 1820 held good today as first promulgated at Arue on Tahiti. Other times, other needs and manners. Some matters of great moment then are of trivial consequence today. Their Law prohibiting Tattooing causes us a smile and breadfruit as a serious issue seems absurd. From that Code slightly amended at a later date one can picture life and people not as fancy paints them but in truth. One thing of great moment then, even as today, was put a stop to for all time. From the day the Code was issued — printed at the Huahine Mission Press — the slaughter of infants at birth or before birth's arrival was called by its right named Murder and the penalty was Death : nor was Life in general to be taken wantonly without equivalent payment by the slayer. And shortly later on along with that stern Law another equally beneficent was added, Trial by Jury took the place of a Chief's whim or the passion of the crowd. The framers next turned to lesser matters but of great local importance being breeders of endless trouble among the people. As there was no money in circulation then, and such a place as Jail unthought of, penalties had to be paid in kind and very strange they were. It was no good crying poverty. Brazen theft was dealt with and pilfering likewise, the former was well nigh scotched thereby as the records show, but the latter was far too deeply ingrained to be eradicated. Even the Sabbath Day came under the Law. The start was made with 18 Laws, later increased to 30 and others were added as time went on. Pigs are given the chief place, no less than 4 are seen handling this all important matter. Herewith follow samples of this crime with their penalties.

Law 2. If a man steal one pig, four shall he bring as a recompense : for the owner of the pig 2, for the King 2. If he have no pigs, 2 single canoes, for the owner of the pig 1, for the King 1. If he have no canoes, bundles of native cloth, 2 of them. Each bale shall contain 100 fathoms of cloth 4 yards wide. For the owner of the pig 1, for the King 1. If he have no cloth, arrowroot. If the pig was a large one, 400 measures (nigh 220 lbs) : for a half grown pig 20 measures, for a small one 10. If not property, let him be set to work on the land of the person he has robbed.

Law 3. If a pig enters a garden and destroys the produce, let no recompense be required, if because of the badness of the fence he entered. If the pig be injured or killed, the man thus injuring or killing it shall take it and furnish one equal in size to the owner of it. If he has no pig, he shall take some other property. If not, he shall give personal labour : for a large pig he shall make 20 fathoms of fencing, for a small one 5. If it be a good fence and is broken through the hunger and the obstinacy of the pig, it shall not be killed but tied up, and the magistrate shall appoint the recompense for the produce destroyed. The owner shall mend the broken fence. (!!!)

Law 21. Hogs accustomed to devour young pigs, kids or fowls and accustomed to bite and attack children shall be removed to another place or killed. If the owner be obstinate the magistrates shall kill the hog and punish the owner with labour for obstinately keeping such a dangerous hog.

Law 22. There are no pigs without owners. No one shall hunt pigs on the mountains or in the valleys under the pretext that they are without owners. The wild pigs whose owners are not known belong to the people of the valley. The man who is obstinate in hunting pigs on the mountains or in the valleys is the same as a thief and punishment shall be that written in Law 2.

Damage done by dogs is handled in the same manner. Breadfruit, coconuts and general garden produce are in :

Law 25. Climb not unauthorized another person's trees for food : the man who does this is a criminal and shall be punished with labour such as erecting a fence, the length being regulated by the value of the food stolen. If it be food unenclosed he shall make no fence but 40 fathoms of road or 4 fathoms of stonework.

So far women play no part but that omission is met in :

Law 27. No person shall mark with Tatau. The man or woman that shall mark with Tatau shall be punished. The man shall make a piece of road 10 fathoms long for the 1<sup>st</sup> marking, 20 fathoms for the 2<sup>nd</sup>. This shall be the woman's punishment : she shall make 2 large mats, 1 for the King and 1 for the Governor of her District or 4 small ones. If not this, then native cloth 20 fathoms long and 2 wide : 10 fathoms for the King and 10 for the Governor. The man or woman that persist in Tatauing themselves, the figures marked shall be destroyed by blackening them over. (!!)

As a closing extract let us turn to the Sabbath Day :

Law 7. For a man to work on the Sabbath is a great crime before God. Work that cannot be deferred such as dressing food for a sick person, it is right to do, but not such work as erecting houses, building canoes, cultivating land, catching fish and every other thing that can be deferred. Let none travel a long distance on the Sabbath. For those who desire to hear a preacher it is proper to travel on the preceding day. If inconvenient (e.g., if it be the day of preparing food for the Sabbath) it is proper then to travel on the Sabbath to attend public worship but not to wander about. The individual who shall persist shall be set to work by the magistrates making a piece of road 50 fathoms long and 2 fathoms wide. If still he persists they shall make it one furlong (*an 8<sup>th</sup> of a mile!!*).

Throughout the list, the King and the countryside appear to have come off very well in the dealing with criminals. Pomare was far from keen to have a Code but the rewards were too ample to be lightly thrown aside. He consented and signed.

## Pomare and Aimata

Not father and daughter as might well be supposed, nor brother and sister, but the young Chieftain of the island of Tahaa in the Society group, 16 years of age, and the fate destined Queen of Tahiti, then but 8 years old. For years already they had been betrothed by their respective parents and the boy Chief had been given the dynastic name of his father-in-law to be. That betrothment was now to be publicly made and moreover a ceremony of marriage was to be carried through on the island of Huahine which lay between the homes of their respective families. The Nuptials of the Great has ever interested the crowd and this was no exception to the rule. Though Tahiti was not the actual site yet all that befell was the talk of the day thereon, nor has it been lost for future years. It is from the pen of one who saw it all and made a recording of the scene that we can picture it today.<sup>529</sup>

It was December 23, 1822 when Pomare and Aimata were to meet each other for the first time. A week before Aimata should arrive from Tahiti, Pomare left Tahaa landing on Huahine where he was entertained by the highest of the land. The afternoon fixed upon for Aimata's landing saw the "Queen Charlotte" — a brig belonging to the Pomares — drop anchor in Faré's capacious harbour. The young Chief had already entered an open dwelling, dressed in full native costume capped by an English beaver hat. For his age he was tall and remarkably stout. He seated himself on a native stool at one end of the building and the company about him stood silent and grave. Shortly after this, boats from the vessel were seen rowing ashore, the attendants on the young princess in the first, and in the second Aimata, her mother the widowed Queen Terito, and her Aunt Teriitaria (*Pomare Vahine*). Met by High Chiefs and High women they were led to the building and after greeting friends at the entrance took seats near to where Pomare sat. He neither rose to welcome them nor uncovered his head. He sat motionless and dumb. Aimata sat close by her mother. A dead silence followed for a full quarter hour, when Aimata, Mother and Aunt rose and retired to the residence prepared for them. Not a single word has passed between the parties. Custom ruled the meeting.

At noon the following day, Pomare, arrayed as before, reached the Chapel and Aimata soon after accompanied not only by Mother, Aunt and attendants but the island's Queen's Guards under arms, lesser Chiefs in plenty were there, some appaelled in European dress, others wearing large, loose gowns of chintz highly glazed in red or yellow, others in cloaks of broad cloth black or blue, edged with fringe, others in plain native costume holding their right hands a highly polished staff of blackest ironwood; the crowd around, the womenkind in special, all clothed in their very best, colours of every hue "making a rich and amazing spectacle" so pens the writer. The most simply dressed was Aimata in a white English gown with a light pink scarf and a plaited hibiscus bonnet trimmed with white ribbon.

This was to be a Christian ceremony. Pagan days were over. No more the cutting of heads with shark's teeth by the kin of the bride nor exhibiting the skulls of her ancestors, no sitting down on the stony pavement of the marae but a standup affair. It did not take long, the pastors were lenient to the youngfolk. Due registry made and signatures attached, Pomare and Aimata were saluted with 21 guns from a british ship lying in the harbour and volleys of musketry fired by those attendant guards. A sumptuous feast naturally followed — our "wedding breakfast in fact — from which the chronicler asserts he excused himself — and more than likely wisely.

*Aimata did not ascend Tahiti's throne till 1827 upon the death of  
her younger brother Pomare 3<sup>rd</sup>, too young to be present above.*

## A Sailor's Yarn

In 1851 Lieutenant Conway Shipley<sup>530</sup> published a series of “Sketches in the Pacific”<sup>531</sup> which he dedicated to his old Commander Sir George Seymour,<sup>532</sup> H.M.S. Calypso. The narrator was an observant young officer who could both write and sketch, for his book — now rarely to be secured — contains many pictures by word and pen of places visited among the Georgian and Society groups and many others where his Commander dropped anchor. There were many interesting personalities living when the young man sailed the Pacific in 1848.

On lonely Pitcairn's Island was Susan, an aged Tahitian, the sole survivor of those who had sailed from Tahiti with Fletcher Christian. George Hunn Nobbs<sup>533</sup> was still teaching school to the descendants of the Bounty mutineers.<sup>534</sup> Tahiti was still suffering the reaction which followed the French occupation and the Queen — Pomare IV — was a very sad woman indeed. And on the island of Huahine its Queen Ariipaea<sup>535</sup> — an Amazon if ever there was one — was defying the French.

From England, with an elaborate assortment of beads and other trinkets, H.M.S. Calypso sailed round Cape Horn to Valparaiso. There she collected a couple of whale boats, agricultural implements and other useful gifts donated by the local folk for the Pitcairn islanders. Arriving, Shipley found that the latter spoke English with “great correctness but with a Yankee drawl”. When told of the presents aboard Edward Quintal remarked, “Well! we have a good Queen.” The veneration of the simple island folk for anything and everything English was “pathetic”. When H.M.S. Calypso left she carried a letter of thanks from them to Queen Victoria, with every chance of its reaching Royal hands. The island held 140 inhabitants, only 4 of whom had not been born there — Susan, Nobbs who arrived in 1828, Buffet and Evans who landed from the whaler Cyrus in 1823. The memory of Adams,<sup>536</sup> the last of the mutineers, was still dear to the Pitcairners. They denied stories depicting him as a dictator. “He merely held a patriarchal command, and mainly framed their laws which bear evident traces of the old man-o'-war's man.”

Papeete was reached on March 23, 1848. The “settlement” consisted of a number of white washed “cottages” along the waterfront. Pandanus thatch formed the roofing. The Queen's “palace”, the Commandant's residence, the barracks and the hospital were more pretentious buildings erected beyond what the Tahitians called “Te ara Brooma”, the Broom Road.<sup>537</sup> This he says was a curious relic of the early missionary days — actually it was completed in the 1830s. It was, in the main, he adds, built and kept in order by native transgressors of the excessively strict Code established by the missionaries. As punishment they were ordered to build or repair a defined number of fathoms. This work was generally confined to men. Women who broke the laws were usually ordered to make cloth. He was much impressed by the hospitality of the Tahitians in their homes.

Of Queen Pomare he writes “We often met her in our walks, attended generally by her maids of honour, and not infrequently sitting on a fence smoking a cigar made by rolling a little tobacco in a leaf. The Queen is very fat, about 40 years of age and not interesting. Her present husband (Ariifaaite)

is a troublesome, vulgar looking man, very much given to drinking; and if report says true, not more amiable to his wife than other disciples of Bacchus. Indeed the attendants have more than once been obliged to interfere when he has been beating her. She has several children by him who have been adopted by the Kings and Queens of the other islands as their successors.

Shipley has left a much more favourable impression of Tapoa II, King of Pora Pora and Tahaa, the Queen's first husband. There was no living issue of the union. The marriage was later dissolved but there was no ill-feeling between the two. As he had no child of his own he adopted her daughter Teriimaevaua. (On his death in 1860 she was crowned Queen of Pora Pora and Tahaa.)

Of Tapoa, he writes "He was great warrior (in the Society not the Georgian Group) in the of Pomare's father. He is a fine, stout, gentlemanly old fellow (he was only in his late 40s and died in 1860 aged 54, Tapoa like all natives "age" early in appearance), very fond of good English bottled stout and bread and cheese. Altogether he is by far the best informed and best behaved Society islander we have met.

Equally pleasant are his pen pictures of Ariipaea, Queen of Huahine (Queen Pomare's aunt) an "old warrior of some 70 years who, in her young days, often led her troops to the assistance of her brother in his fights with the heathen part of his people on his island during early Christian times. She is a woman of great spirit who has a vast idea of the respect due to her rank. Her husband, less nobly born, has antagonized many of her Chiefs by his dissipated conduct. They decided to ask the Queen to divorce him. She flatly refused, saying that she would not be dictated to by them, that she was supreme and would do as she pleased. She has adopted Queen Pomare's 2<sup>nd</sup> son (who later was the last King of Tahiti under the title of Pomare V). The young Prince arrived on board a man-o'-war, with a pig clasped in his arms and even slept with him."

Another monarch met with was Tamatoa IV, the King of Raiatea, "a tall, ungainly man, married to a woman of inferior birth." Neither had Tamatoa a son to succeed him and had adopted another son of Queen Pomare — Tamatoa V as he was known after his coronation in 1860 upon his adopted father's death : he was deposed by his subjects in 1871 for impossible conduct.

As were most of the English naval officers who visited the Pacific at that time, Shipley was definitely pro-missionary. He had nothing but good to say of them. "It is true that a great degree of licentiousness prevails on all the islands but it is equally true that it prevailed to a much greater extent in the heathen times." Therefore he could well understand that by "ill-disposed" the missionaries were extremely unpopular. The dance called "upa upa" fell under this ban. He observes "the performers are invariably girls of bad character and the performance itself anything but decent and graceful."

A wide-awake and observant young man was  
Lieutenant Conway Shipley.

## PIONEER MISSIONARIES OF TAHITI <sup>538</sup>

### “The Journal”

of the pioneer missionaries to Tahiti is to be found as follows.

1. A manuscript covering from the departure of the Duff from England, September 1796 to August 4<sup>th</sup> 1797. (Herewith dealt with.)
2. “Transactions” Vol. I, covering from August 4, 1797 to July 29, 1801. (Dealt with in “Sketch”.) For this see “Old Time Tahiti”. <sup>539</sup>
3. “Transactions” Vol. II, covering from July 1801 to 1804. (Extracts in other Journal.)
4. “Transactions” Vol. III, covering from 1805 to 1808. (Extracts in other Journal.) <sup>540</sup>
5. The “Quarterly Chronicles” Vol. I, covering the years from 1809 to 1819. (Herewith dealt with.)
6. The “Quarterly Chronicles” Vol. II, covering the years from 1820 to 1824. (Herewith dealt with.)
7. The “Quarterly Chronicles” Vol. III, covering the years from 1825 to 1828. (Herewith dealt with.)

<sup>538</sup> The original text of *Pioneer Missionaries of Tahiti* is stored in the Mitchell Library as Volume 20 of the Bolton Papers (Collection 1–7A, Call Number A3376).

<sup>539</sup> For extracts of the Journal in *Transactions of the Missionary Society*, Volume 1, see Chapters V and VI of *Old Time Tahiti*.

<sup>540</sup> For extracts of the Journal in *Transactions of the Missionary Society*, Volumes 2 and 3, see *Transactions* in the Addenda to *Old Time Tahiti*.

## 1. A MS of the Voyage of the Duff to Tahiti

### Extracts

#### from an MS Journal — not printed

by the L.M.S. — covering the Voyage of the Duff from England to the time the Pioneer Missionaries landed at Matavai, Tahiti, March 6, 1797 : continued in another hand up to August 4<sup>th</sup> when the Duff finally sailed for Home. It would appear that Smith (Ass<sup>t</sup> Sec<sup>y</sup>) wrote the earlier one, and Jefferson (Sec<sup>y</sup>) the latter as he was personally involved in dispute during the voyage and not likely to have described his difficulties as was done.

These MSS were addressed to M<sup>r</sup> W<sup>m</sup> Shrubsole, Sec<sup>y</sup> to the L.M.S., Old Street Road, London.

(Among the Haweis Papers : Mitchell Library, Sydney.)

### 1796

Sept 2. <sup>541</sup> James Gaulton arrives on board as cook to the missionaries and to be accepted as a missionary should his conduct and conversation be found suitable thereto.

(Left at Tonga and killed by the natives.) <sup>542</sup>

Previous to sailing, those aboard had elected by ballot the following Officers : Committee : Revs Cover, Eyre, Jefferson and Lawes : Secretary Jefferson : Asst Sec<sup>y</sup> Smith : Librarian Lewis, Asst Smith. In charge of medical supplies D<sup>r</sup> Gillham.

September 23. Fresh committee elected : Cover, Jefferson, Harris and Henry. Agreed that the Sec<sup>y</sup> and others hold office for a month at a time. Hours fixed for Study, Prayer, etc. Three night watches appointed 2 of 9 members, the other of 8. The D<sup>r</sup> does not appear in the lists. According to Harper's Journal "he was not relished by many of us." Mention is also made by him to M<sup>rs</sup> Eyre, her age 63, her husband 28, who "through weakness and infirmity incident on age has enjoyed but little health since our departure from England."

October 1. A meeting held, presided over by Captain Wilson. It was Resolved "That all other studies of every kind shall from now give place to the study of the Otaheitean language till a tolerable proficiency is gained therein."

(Harper's Journal states that while the Duff lay at Spithead they had access to an original MS of the Tahitian language which had been compiled by some of the Bounty mutineers. "We were employed some days in transcribing it. The original was left in England." Harper was left on Tonga and killed by natives.)

<sup>541</sup> WWB is inconsistent in the manner in which he writes the dates; the format used here is applied throughout *Pioneer Missionaries of Tahiti*.

<sup>542</sup> WWB writes his comments in parentheses and they are often indented.

November 24. Capt Wilson asked each one to indicate in what capacity he should consider himself among the heathen : as a mechanic, a teacher, or preacher. Exclusive of the Ordained, 8 gave in their names as Preachers, viz Bowell, Broomhall, Henry, Harris, Kelso, Main, Smith and Puckey (J?).<sup>543</sup> The others considered themselves as mechanics and teachers.

December 28. A Committee consisting of Bowell, Buchanan, Cover, Henry, Jefferson, Lewis, Main and Shelley with the Captain as Chairman was elected to draw up a Code of Articles of Church Government for the future conduct of all : together with a Statement of religious principles; to be signed by each individual.

December 31. Resolved “that Henry and Kelso do in conjunction with the ordained ministers join in the regular dispensation of the Word of God.”

## 1797

(By the middle of January when the Duff was to the southward of Australia, Henry became the prime mover in a “Heresy Hunt”.)

January 18. For some time past some of the brethren had entertained doubts as to the soundness of the religious principles of Jefferson and Cock, knowing that both of them had been members of Calvinist Societies. On the 14<sup>th</sup> Henry in conversation with Harris spoke against Calvinism. Jefferson joined in and later on Cock and an informal debate ensued. The following afternoon the brethren met as usual to discuss a text of Scripture. That chosen was Romans viii, vv 29 and 30 : each speaking in turn. Cock asked to be excused as he required time to consider so important a text. Jefferson however spoke freely thereon, in general agreeing with those who had preceded him. His views were not wholly satisfactory but on further explanation and stating that his views were not final his statement was considered acceptable.

“But from some other circumstances which transpired the other day, Brother Henry with some other brethren requested a public meeting in order to have these matters more fully enquired into, which had caused much uneasiness in the minds of many of the brethren and had given rise to the suspicion that 2 of our number were of Arminian (Calvinistic) principles.”<sup>544</sup>

(Jefferson’s age was 37 : Henry’s 23.)

It was the 18<sup>th</sup> when under the presidency of Capt Wilson the Heresy Hunt was in full cry, and continued relentlessly till the close of the month when both culprits having dutifully acknowledged their errors, peace once more reigned aboard.

February 21. The “Articles” ordered in December were read, approved and signed by one and all. Work not Talk now lay ahead.

(No copy appended of Articles.)

February 25. Sighted the island of Tupuai (Austral Group).

<sup>543</sup> There were two Puckey’s, William Puckey and J. Puckey

<sup>544</sup> [Arminianism](#) is based on the theological ideas of the Dutch Reformed theologian [Jacobus Arminius \(1560–1609\)](#).

March 4. Sighted Tahiti <sup>545</sup> and Eimeo (Moorea).

March 5. At 7 a.m. were off the Western end of Tahiti. "Soon many canoes were about the ship and the decks were crowded with natives, among them the High Priest Manne-Manne. Two Swedes came aboard and said that Otoo was King of Tahiti and Eimeo. They said that all the English had left Otaheite in a man-of-war which called several months ago."

(This would seem to refer to the "Matilda" whose crew after being wrecked lived on Tahiti. There is a Report among the Haweis Papers supplied by the first mate of the "Prince William Henry" (which called in in March 1792) that "Captain Weatherhead and 17 of his men were taken off (no mention of by whom) and carried to Nootka (on Vancouver Island) but 7 or 8 chose to remain" and these latter were seemingly referred to by the natives.)

They also said that Manne-Manne was a person of great influence on the island and as much respected as the King, being the father of <sup>546</sup> Pomarie (formerly called Otoo) and who lately changed that name for the former on account of the recovery of his son (the present King) from a disorder that attacked him in the night called the Night Cough (Po-Marie).

March 6. Monday. Came to an anchor in Matavai Bay.

(They had gained — not lost — a day, so it was actually March 5<sup>th</sup>.)

As we entered the Bay we discovered a long building near the extremity of Point Venus. Manne-Manne informed us it was Nobrittane Efare (or the British House) built for the reception of the English who might come there.

On being told the intention of the missionaries he asked that some might be left on Eimeo, the island on which his estate lies. In the afternoon Capt Wilson and the Committee attended by Andrew Cornelius Lund, one of the Swedes, landed. They found the house admirably suited for their use, being 120 feet long and 48 feet broad.

March 7. The Captain went ashore and the King met him at Point Venus, shook him by the hand and together they proceeded to the British House. Through Peter Haggerstein, one of the Swedes, the Capt told the King the purpose of their coming and asked the use of the British House. The King said the house was not his, that it belonged to the English being built for them, that we might take possession of it and so much land in Matavai as we wanted and that he would give orders that the people should be well treated. The King and Queen were carried on man's shoulders. The King about 19 years of age well made and tall appears thoughtful, speaks but little and surveys things with great attention. Upon the whole there is something of majesty in his appearance. The Queen appears about the same age, is comely and well proportioned and also has a look of majesty about her.

March 8. The missionaries left the ship about 9 a.m. They were met at Point Venus by the King and Queen who shook hands with each of them and then led the way to the British House. During the rest of the day they were engaged in preparing the house for their accomodation. In this they were assisted by natives. They slept in the house that night.

---

<sup>545</sup> WWB appears to use the modern spelling — e.g., *Tahiti* — when condensing the text in the Journal and the original spelling — e.g., *Otaheite* — when quoting from the Journal.

<sup>546</sup> WWB underlined *the father of* and wrote *Error* in the margin, since Ha'apai was the father of Pomare I.

(Those allocated to other islands, i.e., Tonga and the Marquesas, slept throughout aboard. When divisions of bamboos had been set up in the house, the various rooms for sleep were chosen by lot.)

March 9. Natives brought presents of food, also 10 live hogs, and helped them in the house arrangements. All day bringing goods ashore, the Swedes assisting. The King and Queen often looked in.

(From another anonymous Journal we read “In the course of the day a young woman came aboard who had been wife to one of the Bounty mutineers, by the name of Mackintosh and brought with her a fine girl about 5 years of age who had all the features of a European. The woman behaved with great modesty while on board and seemed to have a very great love for her daughter who she informed us was named Mary Mackintosh. She informed us of the manner in which her husband was torn away from her by the Pandora as evidenced to us that she had a strong affection for him. For the missionaries going to other islands Bowell was elected Secretary.)

March 10. Busy on apartments. The Capt ashore presented suits of clothing to the King and Queen, unfortunately too small for them but were put on after the missionaries had ripped open some of the seams. The Queen was very pleased, but not so the King saying they were of little use and would have preferred a musket. Slept ashore.

March 11. Busy at house. The wives and children came ashore in the afternoon and were met on the beach by the King and Queen who were exceedingly delighted with the children. We have as yet not beheld any improper conduct in the Otaheiteans, men or women, neither have we lost any article to our knowledge, though many have been unavoidably exposed. All for Otaheite slept ashore for the first time.

March 12. Sabbath. Services ashore. Many natives present, among them Manne-Manne, the King and Queen standing at the door of the house, it being customary for them not to enter under the roof of any home but their own. Their own dwelling nearby was a shed, no ways equal to a cart house in England, erected hastily for the purpose of being near the newcomers. Jefferson took the first service on Otaheite, Andrew the Swede translating, the natives seemed greatly interested. The evening service was taken by brother Lewis.

March 13. Pomarie arrived in the neighbourhood and went aboard the Duff. He and his wife Iddeah had come from the southern end.

(He had a residence in Papaoa – Matavai Bay.)

March 14. Much alarmed this evening because Peter the Swede told them “that he had overheard some natives talking of setting the house on fire.” Accordingly kept guard all night. Those ashore strongly opposed to separation of the entire band of missionaries. They would be safer all together. Division of supplies, books, etc., very difficult. Jefferson deputed to interview Capt Wilson on the matter.

March 15. Jefferson went aboard requesting all to remain as violence was feared. Letter received from the Capt saying “that the missionaries remaining on board thought that if they joined those ashore it would have a tendency to weaken instead of strengthening and after the improper conduct of some of the members ashore this feeling was strengthened.” This information gave us some uneasy sensations

as we could neither devise the cause or subjects of such an unchristian reflection. Jefferson aboard to investigate matters, had an interview with the Capt and 2 of the brethren “who informed him that the cause of their reflections was the imperious behaviour of brothers Cover, Lewis and Henry who appeared to assume authority, but did not mention a single instance to justify such an accusation : the truth is we deemed it a mere subterfuge as it is well known that some of the brethren have long viewed the married people with a jealous eye and made no secret in declaring that they would want many more things done for them than for single persons, hence their intention of separating from them if possible.

Pomarre with his attendants called. Jefferson took the opportunity to inform him through one of the Swedes of the purpose of our coming. Pomarre said that it was very good and that he would send his sons for instruction. We were glad to find in him a picture of good nature, very different from the morose figure which represents him in some editions of Cook’s voyages. On being asked for a portion of land to be granted for the brethren’s use, he answered — after consulting with his Privy Counsellor Iddeah — that the whole district of Mattavai should be given to us to do with it what we pleased, adding that Pyteah the present Chief of the district was a good old man, that it would be for our benefit to permit Pyteah to have his residence near our House and that he would be given orders to enforce obedience from the natives and bring us whatever we needed of the produce of the district. He then asked for sky rockets, a violin and lastly for a bagpipe which he humorously described by putting a bundle of cloth under his arm and twisting his body like a Highland piper. When told that we had none of those things he seemed rather dejected. Iddeah though still considered as Pomare’s wife has not cohabited with him for some time but with one of her Toutous by whom she has had one child and is again pregnant. Her youngest sister Whyreede next cohabited with the Chief but left him through dislike for one of far inferior rank. His present wife is a very stout young woman. The father of Pomarre is Otew (formerly called Whappai) now a very venerable looking man, aged about 70, his head covered with grey hairs.

March 16. In the afternoon the Capt came ashore where Pomarre had been awaiting his arrival “to make a formal surrender of the district of Mattavai into our hands”. This was done by Manne-Manne in a long speech which was interpreted by Peter the Swede, and concluded “by making a formal surrender of Mattavai into our hands, informing us that we might take what houses, trees, fruits, hogs, etc., as we thought proper.” After this, Manne-Manne sought the Capt’s help in taking the island of Ulicter, of which he had been King but was driven from it several years ago. The Capt said that he could not do this. In order however to keep in with Manne-Manne, Brother Cover said that the brethren would help the Swedes to finish the vessel which they — the Swedes — were building for him on Eimeo ; and after that and they had learned the language they would go with him in his vessel and talk to the inhabitants upon the matter. This seemed to satisfy him.

The Capt met with the Committee with respect to the brethren aboard, said that he had no authority to land anyone on any island against his will and that the brethren aboard were determined in their view. This information convinced us all that all further effort to prevent separation would be fruitless. Asked if he knew what those on board alleged against those on shore, he replied that it was on account of certain remarks made by Cover, Lewis and Henry settling the allocation of the different members some time back. They acknowledged the remarks which had been made in the best interests of the Society which sent them out. “We are rather inclined to think that the real cause of offence was a difference of opinion concerning the celebrating the birth of Jesus Christ, that Bowell and Buchanan had repeatedly spoken of it as rank idolatry.” The matter was now allowed to drop.

March 17. Engaged in sawing planks and fixing the Store house.

March 19. Kelso and Harris were ordained on shore, the 4 ministers officiating.

March 21. The Duff sailed for Eimeo to view the harbours and Manne Manne's vessel. W<sup>m</sup> Puckey went to see the state of the vessel. Peter the Swede went as interpreter, and along with him his woman Tanno Manno, a man the mutineers called Tim and a boy called Harraway. Whilst there Micklewright the steward deserted. Another Swede now appeared at Matavai named John but "whose mind was gone".

March 22. The Brethren aboard the Duff discussed the question as to arms being left with them on Tonga and Marquesas. The majority was in favour. Some allocated to Tonga felt that Crook and Harris should not go alone to the Marquesas but both men were against any alteration, nor did they think it necessary for the Duff to revisit them once landed. They proposed to the Capt that he should forthwith go first to Tonga, then to the Marquesas, thence return to Matavai and heading home from there, call in at Tonga on his way. The Capt approved of the proposal.

March 24. Busy making a large pigsty. Guards mounted day and night.

March 27. Cock and J. Puckey went to Eimeo with Andrew the Swede to assist in putting Manne Manne's vessel in such a condition as to float it to Matavai to finish the work. The vessel is 42 ft long but disproportioned in her breadth by being fuller aft than forward and the timbers appear to be too small for her size.

March 31. "Some of the brethren being last night troubled with rats, we this day applied to the King for some cats. The King and Queen immediately supplied 4 cats.

(Another hand takes up the Journal.)

April 1. Visited by Mawroa the husband of Pomarre's sister, a man of good sense and great authority.

April 3. Our women crossed the Matavai stream to visit our garden and the countryside nigh.

April 6. Cock and Puckey returned. They had planked up the vessel so that it would be fit to come across shortly.

April 9. Iddeah is mentioned as belonging to the Ariioie Society and Pomarre's sister, wife to Mawroa, as the widow of Motuaro, the late Chief of Eimeo.

April 10. Looking about for a site for erecting new habitations where the soil is better. Did not select one but favoured the spot which the Bounty mutineers had chosen. The land seemed suitable for cultivation "being cleared of trees which had been burned down by the mutineers, with an opening to the west which let in a beautiful view of Matavai Bay and a distant prospect of Eimeo".

They had spoken the previous day to Pomarre as to Iddeah who had murdered her newly born child in spite of their appeal and remonstrance and "is a bold, daring spirit and much more warlike than her husband Pomarre". They had told him that "if they despised our institutions and continued in their evil practices we should leave them and go to another island where we could hope for more attention". "Pomarre was evidently affected by what was said and especially could not bear the thought of our leaving him and promised he would use all his authority to put an end to these practices."

Speaking of child murder they say that this is only one among many unnatural crimes committed daily without any idea of guilt or shame ; that in many districts they hear of men who dress as women do, work with the women in making cloth, are under the same rules of eating and dressing, may not eat with the men or of their food but have separate plantations for their peculiar use. They acknowledge however that the natives have never acted unseemingly in their presence "indeed they

hardly profess to know what we are and suspect we are not Englishmen or like any others they have seen who have ever visited these islands”.

April 14. They report that they have now 59 hogs in their sty.

April 20. They confine a native for 3 hours for theft of a box.

April 21. Two of the brethren went up the nearby valley for wood accompanied by natives. The valley is about 7 miles long and ¼ mile broad, “thickly populated”. One of the two, his feet becoming sore, rested at a native’s house, “the kind inhabitant presented me his wife, and tho’ I excused myself from the favour, he instantly prepared a hog”.

April 24. The Society met and agreed upon new Regulations, abolishing the Committee of 5, only a Secretary being considered necessary. A presiding officer to be chosen at each meeting. Rules for each day’s work were drawn up : “We then proceeded to divide our iron for traffic, and cast lot for the watch hours.”

April 27. Five went over to Eimeo with Manne Manne to finish his vessel.

April 29. They returned without the vessel. A contrary wind drove their canoe to Attahooroo <sup>547</sup> and they footed it home from there. On their way they visited the Tupapaow of Orapiah. <sup>548</sup> “He is in a sitting posture, clothed in red cloth, under a shed.”

April 30. Three of the members, Broomhall, Clode and Main, went with Pomaree <sup>549</sup> on a journey through the island “to make observations”.

May 3. Visited by the King and Queen “who supply all our wants. Our hogs have increased to 70 and we have entreated them to bring us no more. One of our sheep brought a fine ram lamb much wanted.”

May 7. Mention is made of “A chief priest from Papara, Temaree, who is reputed equal to Manne Manne. He is called an Eatooa : sometimes Taata no i Eatooa, the Man of the Eatooa.” They report that he is of the Royal race and son of the famed Oberea. <sup>550</sup> He is the first Chief of the island after Pomaree <sup>551</sup> by whom he has been subdued and now lives in friendship with him and has adopted his son. He is also high in esteem as a priest.”

May 13. “The birth of little Otoo Hassall but this name is so sacred here that every word into which Otoo enters is prohibited, and may only be used in speaking of or to the King”.

May 15. The 3 brethren return. They had made the circuit of the larger peninsula (90 miles) and had also entered Lesser Tahiti where they visited Pomare’s youngest son at Matowee. His district the best cultivated and most populous seen. They had also stopped at Wyoteea.

“The accounts of former navigators as to the populousness of the country are greatly exaggerated. We think that not a fourth part so many will be found as Capt Cook supposes, perhaps not a tenth.”

May 23. Sister Henry gives birth to a daughter.

---

<sup>547</sup> WWB, in the margin: *Punaauia*

<sup>548</sup> WWB, in the margin: *corpse*

<sup>549</sup> Pomare is usually spelt *Pomarre* in WWB’s text, but here he has *Pomaree*.

<sup>550</sup> WWB, in the margin: *error*

<sup>551</sup> WWB, in the margin: *error*

May 29. “Resolved : without delay to erect a building for M<sup>r</sup> Lewis to print therein a Vocabulary and Grammar : and that each member have a copy and one be sent to the Directors.”

May 30. Brother Cover received a latter from Andrew Lind on Eimeo written at Manne Manne’s request asking again for help to finish his vessel ; adding that Iddeah has a spite against the priest and himself and also the Society for telling her that she was wrong to destroy her child and that she has instructed the Eimeo people to kill the priest and all who take his part. It was thought unwise to send anyone over. “We have strong intimations that Micklewright and the Swede intend to seize the vessel as soon as she is fit for sea and make for Port Jackson.”

May 31. The mechanic brethren “completed Pomaree’s promised boat and launched her in the river with the help of the natives : 22 feet long, 6 ft broad, 46 inches at each end, the bottom 17 feet, height 2 ft 6 inches. 3 of the brethren and 40 natives rowed her down to the sea. She moves very swiftly considering her flat bottom, draws only 2 inches of water and is about 6 tons burden.”

June 2. “Fitting up a printer’s shop”. Visited by some new folk, and by Whyooa, the younger brother of Pomare, together with his wife, “a very elegant woman”.

June 7. Complaints of much pilfering.

June 9. D<sup>r</sup> Gillham had his clothes stolen while bathing. The brethren caught the thief and chained him to a pillar of the house but he broke away and went off with the padlock which was recovered shortly afterwards.

June 11. “We walked up the valley about a mile where we have thought of erecting our new mansions”.

(This fell through.)

June 12. “A fact was reported to us which if true was shocking. In one of Capt Cook’s visits he left a great monkey who was made a Chief of Attahooroo, given a wife and 30 servants, also abundance of everything. They called him Taataooree harrai (the Great Man Dog). One day the woman seeing him catching flies and eating them, which insect they abominate, ran away into the mountains, the Monkey and his Toutous pursued but being met by Temaree who was jealous of his authority, he knocked him down with a club and killed him.

“One of our brethren this afternoon sitting in his berth writing, a young girl came in and expressed her surprise that we behaved so different to them from what all our countrymen had done. He told her that such practices were wicked and that if we did such things our God would be angry. “Oh,” said she, “but I will come to you in the night and then none can see us.” He replied, “Nothing can be hid from God, the night to Him is as bright as the day and there is no darkness or shadow of death where any of the workers of wickedness can hide themselves. But if you first put away your evil customs then we should love you.”

June 19. They erect a Flagstaff 40 feet high, rigged like a mast.

June 29. They had a nest of 6 young rabbits “if they prosper, the hills will soon breed them in abundance”.

(A false hope, never found possible.)

July 6. The Duff returned to Matavai.

(Strangely this MS abruptly ends here. Nothing further of record till August 4 which appears in the printed "Transactions" Vol. 1. But along with the above combined MS went an Extra and Special Report of the missionaries dated August 4<sup>th</sup> : as follows.)

### Extracts

from the Report (or Letter) forwarded Home by the Duff, leaving Matavai Aug<sup>t</sup> 4<sup>th</sup>. See Haweis Papers for the original in the Mitchell Library : Sydney.

Beautifully written — evidently by Jefferson, the Secretary. Not signed by anyone in particular but as from "The Missionaries on the island of Otaheite."

In the perusal of our Public Journal you will meet with occurrences which may excite different sensations in different minds and produce an endless variety of thoughts on our mode of proceeding on various occasions ; and while some may endeavour to justify, others may be severe in censuring and condemning us. But let all wait patiently for the end of the harvest when the ingathering shall prove what we are and what we have done.

Our receiving Brother John Harris after his declining the mission to the Marquesas was on the ground of his Christian character and long standing in the Church of Christ, his objections appearing to us well grounded.

Mentioning the departure of Gilham,<sup>552</sup> the surgeon of the party, it says that it has caused great disorder and uneasiness, and that whatever his motives are for such a proceeding they anticipate his explaining to the Directors on his return. They ask that should he "to justify himself" make any charges against those he had abandoned, to remember that "he that is first in his own cause is not always just" and asks them not to be biased in judgement against a body of persons by the evidence of an individual seeing that they are so many thousand miles away and thus prevented from answering for themselves.

(There was clearly a good deal of unpleasantness on the voyage aboard the Duff, much of which will never be known. A fanatical crowd, largely uncultured.)

Remarks that the behaviour of all classes of the natives towards them far exceeds their most sanguine expectations. Their knowledge of the language is increasing and they hope in a few months to be able to preach to them in their own tongue.

Concludes by referring the Directors to Capt Wilson and their Journal for further particulars and "where wherein you may perceive we have deviated from our Instructions and in our transactions appear to have acted unbecomingly we entreat you to call in mind the peculiarity of our situation and hope that you will look upon them charitably."

---

<sup>552</sup> This name is spelt *Gillham* above and *Gilham* here; both spellings are found in the literature.

A P.S. Reminds the Directors of their solemn engagement made in their Farewell Letter read at Haberdashers Hall and that they will “in due course give us a man who will be content to endure hardship for Christ’s sake”.

(This evidently refers to a promise of a Doctor in case of the defection of Gillham.)

## 2. Voyage of the Duff to Tonga

### Harper's Journal

among the Haweis Papers  
Mitchell Library  
Sydney.

Many pages missing in the MS.

March 26. <sup>553</sup> The Duff sailed from Tahiti for Tonga. Aboard was the Swede Peter Hagerston, a Tahitian girl accompanying him, also a Tahitian man and a boy.

March 27. Saw Ulitea, Huaheine, Bola Bola and Otaha.

April 1. Arrived off Palmerston Island. Boat went ashore for a supply of coconuts.

April 5. Passed Savage Island.

April 9. Saw Eooa and several other islands. At 4 p.m. sighted Tonga. On account of the weather the Duff lay to for the night.

April 10. Arrived at Tonga. The following missionaries disembarked : Harper, Bowell, Buchanan, Cooper, Gaulton, Shelley, Veeson, Kelso, Nobbs and Wilkinson.

April 15. The Duff left Tonga for the Marquesas.

August 18. The Duff returned from Tahiti on the ship's way Home. "Brother Nobbs intends to get permission of the Captain to return to England on account of ill health." He went.

September 6. The last entry. "The vessel was unmoored to take her final departure from us. We understand that Capt Wilson intends to visit the island called Feejee."

---

<sup>553</sup> 1797

### 3. Voyage of the Duff from Tonga to the Marquesas

**MS among the Haweis Papers  
Mitchell Library  
Sydney**

From the handwriting the MS appears to be the work of Crook.

Uses the 3<sup>rd</sup> person at first then changes to the 1<sup>st</sup> person.

April 15. Sailed from Tonga for the Marquesas with the 2 missionaries to be left there, Harris aged 40 and Crook aged 22.

May 22. <sup>554</sup> Saw islands in all directions.

(They were in the southern archipelago of the Tuamotus.)

May 24. Attempt made to land on an island shaped like a half moon with a lagoon inside but was given up on account of the hostile appearance of a party of natives on the beach.

(This was a new discovery by white men. The name given to it was “Crescent Island”).

May 25. A further new discovery — Mangareva. Found this to be a group of islands. Two peaks close together on one of the cluster were named the “Duff Mountains”. The Capt named the Group The Gambier Islands “in compliment to the worthy Admiral of that name”. <sup>555</sup>

May 26. At dawn they almost grounded on a lone island, which the Capt named “Sir Charles Middleton Island”, encloses a lagoon. No inhabitants to be seen. Possibly may be Capt Edwards of the Pandora’s “Lord Hood Island”.

(It actually was Marutea.)

May 28. Saw island, tried to make landing but failed thro’ surf.

May 30. A party of 10 made a landing on an island to procure coconuts. Unable to return they spent the night ashore. No natives seen.

May 31. Got the men aboard again with great difficulty. Capt gave it the name of “Serle’s Island” who is in the Transport Office at Home and author of some valuable works. The crew reported the

---

<sup>554</sup> WWB does not write the name of the month for “22” to “31”, but according to [James Wilson, A Missionary Voyage to the Southern Pacific Ocean \(1799\)](#), it did not reach the Tuamotus until May 1797; this explains the date “31”.

<sup>555</sup> [James Gambier \(1756–1833\)](#). Gambier was the uncle of Sophia Rose Pym, née Gambier, the mother of WWB’s mother, Lydia Louisa Bolton, née Pym; thus Lord Gambier was WWB’s great-great-uncle. See *Genealogy* in Part I, *Notes on the Life of WWB*.

remains of 2 huts. A morai or burial spot was also seen. Some very lofty trees to be seen “something of the nature of the Lime tree”.

June 4. Saw the island of Christiana (one of the Marquesas). <sup>556</sup>

June 5. “Working to windward to reach Port Madre de Dios. Saw Dominica, Pedro and Hood Islands.”  
<sup>557</sup> Two men came off from Christiana in a canoe and went aboard. Came to an anchor in the Bay (seemingly Resolution Bay). <sup>558</sup>

June 6. “A few natives came off in canoes and many others came swimming, among the latter several women who were very fair and had much of European countenance. There were to be seen several beautiful young women swimming quite naked except a few green leaves tied around their middle : they kept playing around the ship for three hours — they are called Waheine (women) — until several of the native men had got on board, one of whom being the Chief of the island requested that his sister might be taken aboard which was complied with. The Tahitian young woman who was aboard was much shamed to see a woman on the deck quite naked and dressed her in a Tahitian cloth (a Pareu or robe). The number of girls in the water had greatly increased and they clamoured to be taken on board which was done but it was impossible to clothe them like the first. Nor did our mischievous goats even suffer them to keep their green leaves, but as they turned to avoid them they were attacked on each side alternately and completely stripped naked.” Among those who went on board was “the Great (High) Chief, the son of Honoo mentioned by Capt Cook who is since dead. This Chief is named Tennae. When he was informed of our intentions he appeared overjoyed and made us many promises of houses, canoes and food. Some presents were made him by Capt Wilson with which both him and his brothers who were with him were highly pleased, without showing the least jealousy or desire of having anything they saw. About 9 a.m. Brother Harris and Brother Crook with M<sup>r</sup> Wilson, the Chief Mate, went on shore. We were conducted by Tennae to his house by the road mentioned by Capt Cook which crosses the rivulet of water. When about halfway we halted and rested ourselves on a raised pavement where we were regaled and refreshed by the coconut liquor, after which we reached the house of Tennae. It is built on a pavement of stone and is formed as if against a wall with half a roof or the roof a right angle. It has not the appearance of the houses of Otaheite, nor is it thatched so well, but on the inside it discovers better workmanship. The Chief was desirous of our taking up our residence immediately and gave us a number of coconut leaves full of fruits. After a while we returned to the ship and promised our friends to come tomorrow.”

June 7. “Met Capt Wilson in his cabin and consulted how to proceed. It was agreed for Brother Crook to go on shore and Brother Harris to stay on board until the things are on shore. Agreeable to the same, Brother Crook accompanied by M<sup>r</sup> Wilson and Tom the Otaheitean went on shore. They were met on the beach by Tennae who conducted them to his home and they endeavoured to sling the hammock, when the Chief, observing the roof was too weak, lead them to another house which was within the bounds of a morai (sacred place to worship or burial) where the women are prohibited coming. Here Brother Crook with Tom took up his lodgings and prayed and sang praises to God before the Chief and some of the natives who were very silent and attentive.” After supping on fish went to bed when the Chief thinking Crook was asleep took the bundle of clothing he had brought with him and carried to his own house for greater safety, bringing it back in the morning.

---

<sup>556</sup> [Tahuata](#)

<sup>557</sup> [Hiva Oa](#), [Mohotani](#) and [Fatu Huku](#), respectively.

<sup>558</sup> Vaitahu's harbour on Tahuata

June 8. Sent Tom to the ship with a letter. In the meantime sowed some orange seed and turned up a little ground, the native not forward to help as at Otaheite. Dined on hog and sour pudding and then went to the ship and brought off my chest with several other articles.

June 9. Sent the Chief's 2 youngest brothers to the ship and after preparing a little ground and sowing shaddock and pompions <sup>559</sup> seed went and met them with Brother Harris on the beach. Found several things landed but much damaged by the surf. However got them up the hills to the house.

June 10. Got off to the ship but with some difficulty on account of the badness of the canoe and the ship having broken her cable was at a greater distance. Brought off several things.

June 11. Lord's Day. According to agreement attempted to go aboard to spend the Sabbath but could not get a canoe, therefore was obliged to return and despaired of having a moment alone. However got away from the natives and spent a few hours alone, or rather in the company of Heaven, in the woods.

June 12. Early this morning went to the beach with the Chief and his 3 brothers and found the boat on shore watering, which took us all on board. In the evening returned with some goods and 2 cats.  
<sup>560</sup>

June 13. Went to the beach to meet Brother Harris and found Tom with the small canoe brought from Tongataboo who took me on board. Brother Harris not being ready to come on shore, went by myself, bringing with me a goat. <sup>561</sup>

June 14. The blessing of God attends my little labours. The pompion seed appears to sprung up. The Chief lead me up the country to a large house where we dined on fish and a dish not unlike gooseberry-fool made of the fermented breadfruit and coconut. Heard the ship had again broken her cable and went on the top of a hill where I saw her at anchor further out. At sunset Twharawaya, the Otaheitean boy, arrived at the house and informed me that Brother Harris was waiting on the beach. I immediately proceeded to the same accompanied by the Chief, his brothers and several more. We were soon benighted and the rising of the waters occasioned by the late heavy rains rendered our situation dangerous, as we were obliged to cross the stream, which ran very rapid, several times to the middle in water. <sup>562</sup> However we were much benefited by the ingenuity of the natives who made torches of reeds which gave a good and lasting light, and after much toil we got to the house in safety.

June 15. Went off to the ship in a canoe with 3 natives but before I arrived she was under way, and I was obliged to return. In the afternoon, the ship coming to an anchor I went off and proceeded with all expedition to write letters as the ship is in danger of being driven to sea.

The following "Remarks" conclude this MS. They were apparently rushed through to get all away to the Directors by the ship.

---

<sup>559</sup> WWB, in the margin: *pumpkin*

<sup>560</sup> WWB has *Cats* in the margin, perhaps to indicate one of the first recorded instances of cats in the Marquesas.

<sup>561</sup> Likewise, WWB has *Goat* in the margin.

<sup>562</sup> The meaning of "*several times to the middle in water*" escapes the transcriber. *Tunes* should perhaps be *times*, but there is no dot of an *i* in the text (and the meaning would still be obscure). Perhaps the use of *tunes* is archaic, but no references were found online. Or perhaps the text has been mis-copied.

The people appear kind, friendly and teachable but very childish. They have no human sacrifices neither do they kill their children. I have observed no religious ceremony, but that the Chief must not eat inside the bounds of the marai where his father is buried, nor women enter there nor must the women eat hog. The language is, in many parts, like the Otaheitean especially the pronouns. Some words with a little alteration (? “might be Otaheitean” seems to be omitted in his haste) as the numbers — Mayya — May ah how — Cah how — Tootow. Catow. Some words are like the Friendly Islands as hog, axe, Chief. Many words like neither. All we can do with this people till we have learned their language is to set them a good example, which we hope through Grace to do. Amen.

But though Crook here says nothing of his companion, the Duff has the following note in the Capt’s Report of his voyage.<sup>563</sup>

The Capt asked both of them (after each had been ashore) what they thought of the place and if they still intended to settle there. Crook said that he was encouraged by the reception received, he thought that the Chief had behaved exceedingly well, he approved of the home assigned them, the place and the people, and concluded by saying that though there was not the same plenty here as at the other islands, he had no objection to stay, as he never before, nor since his engagement, had comforts in view, therefore the present state of the island was not so great a disappointment to him. However, appearances gave him reason to think that they had their plentiful seasons here as well as the other islands.

M<sup>r</sup> Harris delivered his sentiments with hesitation, as if fear had taken possession of his mind, his opinions were quite contrary to M<sup>r</sup> Crook’s, he disapproved of everything and judged the scene before him as a solemn one, and in short seemed entirely to have lost his firmness and ardour. The Capt left it to them entirely as his Instructions were to use no compulsion in the case of any of them.

Crook was left Alone, the only white man in the Group.

He was only 22.

---

<sup>563</sup> WWB has *June* in the margin.

#### 4. Extracts From the Quarterly Chronicle, Volume I

covering the years from 1815 to 1819.

Published in Book form  
1821.

Map.

“Georgian” and “Society” Islands marked separately. On the East side of Tahiti reads “Pureonu” — West side “Atahuru”.

1815

<sup>564</sup> About 700 persons have renounced idolatry, attend the preaching and keep the Lord’s Day. They are distinguished from their countrymen by the name of “Bure Atua”.

Letter from Eimeo, September 6, reports the death of Scott but makes no mention of place of burial on that island. “Needs of medicines and other articles is very great.” Crook of great service at Sydney N.S.W. in correcting the proofs of the Old Testament. Have sent a small spelling book there from Tahiti for printing, the London issue being exhausted. Received from Sydney 400 copies of our New Testament history, 900 catechisms, 100 copies of a few hymns composed. Heathen priest of Papetoai (Moorea) <sup>565</sup> converted who, burdened with his idols, burned them publicly, the morais destroyed, altars overthrown, their wood used for cooking. Both sexes now eat together. In May the Queen and her sister Pomare Vahine went over to Tahiti from their residence in Eimeo, the latter seeing the island for the first time. The party stayed in the District of Pare where the King’s daughter Aimata resided with her nurse. The King sent over with his Queen a book for Aimata — “a sign that she was to be brought up in the new religion.”

566

They urge a printing press to be sent, also a medical missionary. Letter signed by Nott, Bicknell, Davies, Henry, Hayward, Wilson and Tessier.

---

<sup>564</sup> WWB, in the margin: *From the Preface*

<sup>565</sup> Text in parentheses are comments inserted by WWB.

<sup>566</sup> Here WWB has, indented, *See “Sketch” pp. 113 and 413 for plot here recorded.* The pages referred to concern (a) the great feast of the Atiroos on Moorea, with kite flying, and the four boys of Marama’s people, who were killed, and (b) the names taken by Pomare II, which suggests that the references to these page numbers are incorrect. The visit of the Queen and her sister to Tahiti in May 1815, with a strong force to attempt to overthrow the pagans, and the subsequent fight of 12 November 1815, is condensed from *The Memoirs of Arii Taimai* in Chapter VII of *Old Time Tahiti* — this text commences on page 100 of WWB’s handwritten manuscript — and from the letter of the missionary Davies of 30 March 1816, to Marsden in Sydney, in *November 12, 1815, When Pomare II Won Kingship* in the Appendix to *Old Time Tahiti* — this text is on page 221 of the manuscript.

Pomare's letter (not yet from Papeete) to those at Uaeva (as he termed Papetoai) :

Maatia. July 3. 1815 (Moorea)

My dear Friends

May you be saved by Jesus Christ, the only Saviour by whom we can be saved. This is an account of our journey : the Ratiras <sup>567</sup> are inclined to hear and obey the Word of God : the Word of God is now growing in Moorea <sup>568</sup> : Jehovah <sup>569</sup> himself He it is that causeth the growth of his own Word : for that reason it prospers : it grows exceedingly. Many there are now that lay hold of the Word of God : there are 34 or 36 in Atimaha <sup>570</sup> of this description. There are others of the common people that are left, they pay no attention to these things, but the Ratiras they all regard the Word of God. As for Maatea they all here, the Ratiras and common people, all of them have embraced the Word of God. 96 new ones are of this description. Not many of Haumi have as yet regarded the Word of God, Hamuna has. Hamuna is a man of knowledge, he has been hitherto a priest of the Evil Spirit, he has entirely cast away the customs of the Evil Spirit. I am highly pleased with these things, and particularly that the Ratiras attend so well to the Word of God. This was my business in this journey, it was to make known to them the Word of God and behold! they have listened unto it, they have regarded it. Had it been otherwise I should have been much grieved.

We shall not go from this place yet awhile. We were to go this day to Haumi but the Ratiras detained us saying Stay a while that you may know that we have in truth hearkened to the Word of God. To this I said Agreed. We shall not go till another Sabbath Day is over, then we shall proceed. They answered That is well. The idols of these Ratira are committed to the fire, they are entirely destroyed. Tomorrow is our meeting for prayer, the commencement of the new month. Should these Ratiras ask me to write down their names, how shall I act? Shall I write them? Write your mind to me without delay and give me instructions how to do. May you be blest of God.

Pomare. King.

There is later on a note that during 1814–1815 the names of those who embraced Christianity were taken down publicly but since the profession of Christianity has become general we have thought proper to discontinue the practise.

A letter from Marsden (Sydney) to Directors in London : October. "There is war at Otaheite. Pomare has no hand in the war, nor his people, he is on the island of Eimeo... <sup>571</sup> Pomare writes like an Apostle (!!!)... This mission has had many enemies but their adversaries must now be silent." Recommends the introduction of simple arts and commerce, mentions the culture of the sugar cane "remarkably fine there" and cotton. The Directors add such will be considered.

<sup>571</sup> WWB, in the margin: *Gross error*

1816

Davies to Marsden, March 30, describing the Fight of November 12, 1815. <sup>572</sup>

<sup>573</sup>

Marsden to the directors in London : October. "I have now the unspeakable satisfaction of forwarding to you some of the Idol gods of Otaheite."

The missionaries had sent them to London through Marsden's care. As to these idols, the following letters appear but out of sequence in the Volume. <sup>574</sup>

Letter from Pomare written from :

Tahiti. Motu'ta. February 19. 1816 <sup>575</sup>

<sup>576</sup>

Friends

May you be saved by Jehovah and Jesus Christ our Saviour. This is my speech to you my friends. (Offer made.) Those feathers of Vairaatoa's own god were from the ship of Lieutenant Watts <sup>577</sup> : it was Vairaatoa that set them himself about the idol.

I have written to Mahini for a house for the use of the missionaries <sup>578</sup> when you let Mahini know where the home is to be, he will get the people to remove it there. Let it be at Uaeva near you.

Should the missionaries arrive at Moorea write to me quickly that I may know. Let me know also what news there may be from Europe and from Port Jackson. Perhaps King George may be dead.

A list appended listing The Pomare Family Gods :

Oro was the principal national god. Temehara is said to have a brother called Tia : these 2 were famous men deified after death. Temeharo was protector of the small island Matea. Teriitapotuura was a son of Oro : Tetoimata his brother. Tiipa presided over the winds. Tii. The principal Tii's are 8 viz Tepiri, Temau, Tuvaipo, Tuvaiao, Tupuai, Aoapeapea, Atheoeo, Nanara. They dwell in the night and to them sorcerers direct their prayers when they want to injure a person. Oromatuas are the spirits of dead relatives. Prayers to these are directed at times for the recovery of the sick.

<sup>572</sup> WWB has November 15, 1815, here and below.

<sup>573</sup> WWB again has *See "Sketch" for this. pp 113 and 413.*

<sup>574</sup> The idols can be seen in the plate in the footnote to *Pomare II's Correspondence* in the Appendix to *Old Time Tahiti*.

<sup>575</sup> WWB, in the margin: *Motu'ta the small islet in the lagoon*

<sup>576</sup> WWB here has, indented, *See "Sketch" for offer of Idols p. 445.* However, Pomare's letter in which he offers the idols is on page 225 of *Old Time Tahiti*, under *Pomare II's Correspondence* in the Appendix.

<sup>577</sup> WWB, in the margin: *of The Lady Penrhyn 1788*

<sup>578</sup> WWB, in the margin: *Fresh arrivals*

Also sent :

A head piece worn by the priest when officiating at the morai called Upooaha. Also one worn by the crier while he proclaimed the observancies at the morai called Horuru, also called Taupoono-te-poro. The handle of a sacred fan with which the priest drove away flies while engaged in prayers and sacrifices — called Tahivianunaehau.

The cloth in which the gods are wrapped is old and very sacred, being made by men, and women are forbidden to make it, working at night not in the day time.

A note is added : “It ought not to be conceded that though Pomare seems cordially to embrace the profession of Christianity and lends it all the countenance in his power, yet his spirit and habits do not manifest that he is under its influence.”

A letter to the Brethren to the Directors headed “Eimeo. August 13. 1816” (gives their account of the Fight of November 12, 1815 <sup>579</sup>) : They state that Nott, Hayward and Bicknell crossed over to Tahiti and toured it reporting upon their return to Moorea, keen reception given them. The School for Adults as well as for children has had great success, hundreds of Eimeo’s scholars are scattered through the neighbouring islands teaching others to read and write. 3000 now have books, many hundreds can read well. The spelling book was held back on hearing that a printing press would be sent out.

We do not think our present situation on this island (Moorea) so healthy — particularly in the rainy season — as many other places that might be found in the islands : yet circumstances have in a manner confined us to this spot so that for a long time past we have had no choice. Our vessel <sup>580</sup> is still in hand, not finished : partly through want of materials, and partly through illness and want of time during many of the past months... Some time ago the pearl fishery and pearl shells promised much advantage : but that trade (which we had partly in view when we began the vessel) was soon brought to a close and now the sandalwood business is also nearly terminated, but were it otherwise, we could not in conscience allow our vessel to be any way concerned in it, as we apprehend most, if not all the sandalwood is used in China or India for idolatrous purposes. The pork trade is likewise at an end for the present, as most of the hogs have been destroyed in the late wars, or have been purchased by the late vessels that have touched here... Our motives in attempting to build it were good whatever may be the result : we had no other view than to serve the purposes of the mission and lessen the expenses of the Missionary Society in respect of our support here. If it fail in answering these ends we cannot help it : we have made the attempt in the midst of many difficulties : but what grieves and perplexes us most at the present time is that the vessel in a manner prevents our removing from our present residence while there is such a loud call from all quarters for us to come. We enclose a letter from Pomare concerning his Family gods which have been delivered to us that we might either destroy them or if we think proper, send them to you. We have chosen the latter and send them mailed up in a case. These are the King’s Family gods and are a good specimen of the whole. The great national ones which were of the same kind, only much larger, have been some time ago entirely destroyed.

Signed by Nott, Bicknell, Henry, Davies, Hayward, Wilson, Tessier and Crook.

---

<sup>579</sup> WWB again has *see “Sketch” pp. 113 and 413.*

<sup>580</sup> WWB, in the margin: *The Haweis*

1817

M<sup>r</sup> and M<sup>rs</sup> Ellis arrived at Eimeo on February 15 and M<sup>r</sup> and M<sup>rs</sup> Orsmond on April 27. With the former the printing press arrived and was fixed for a time at Afareaitu (Eimeo), Ellis, Davies and Crook residing there. Natives helped in creating their homes at that village. Some of the brethren were about to resettle on Tahiti. Crook extremely useful in his medical capacity. Pomare talks of visiting England.

Letter to the Directors headed :

Papetoai. Eimeo. July 2. 1817

Hope last (dated August 13, 1816) received — usual duplicate enclosed. Climate and disease have debilitated most of us, particularly Brothers Bicknell and Nott who are frequently afflicted. The addition to our number we hope will strengthen our hands, and as M<sup>r</sup> Ellis understands printing and you have been pleased to send us a printing press we hope that ere long we shall be able to print and distribute various portions of the Word of God. Out thanks for the medicines and other articles... At Tetaroa 3 places of worship have lately been put up... Afareaitu is on the opposite side of this island. Brother Davies wished to make trial of a School in that District. Brother Ellis was desirous to have the press put up there, considering it to be a healthy place for residence, and Brother Crook wished to accompany them. Sashes, doors and other implements were made here by us... At no period have we been in more need of counsel and direction... the King, the chiefs and people from all quarters apply to us for advice, not only in regard to moral and religious, but likewise civil and political affairs of every description. The religious and political systems of the islanders having been blended together in every affair of life, the change affects every custom and usage. During the many years of our residence on these islands we have most carefully avoided meddling with their civil and political affairs, except in a few instances where we endeavoured to promote peace between contending parties. At present however it appears almost impossible for us in every respect to follow the same line of conduct. We have told the King and Chiefs that being strangers and having come to their country as teachers of the Word of the True God we will have nothing further to do with their civil concerns than to give them good advice. We have advised the King to call a general meeting of all the principal Chiefs and with their assistance and approbation adopt such Laws and Regulations as would tend to the good of the community and the stability of his government : and that in these things, if he desired it, we would give him the best advice in our power and inform him of what is contained in the Word of God and also of the laws and customs of our own country and other civilized nations. The King having been used to arbitrary proceedings, and wishing to be exclusively at the head of everything, did not seem to relish the proposal of a general assembly of the Chiefs : however he expressed a great desire that he might be informed of proper laws and regulations. This affair is still in suspense. The numbers of our respective families are as follow :

Bro. Bicknell 4 children — 2 sons and 2 daughters

Crook has 7 children — 1 son and 6 daughters

Henry has 4 here — 1 son and 3 daughters — 1 son and 1 daughter in the Colony

Wilson has 4 children — 2 sons and 2 daughters

Ellis has 1 daughter

From those stationed at Afareaitu. Events of 1816.

March 18, 1817

It having been agreed by a majority of the brethren that the printing press should be put up for the present at Afareaitu, the press and a great number of other articles were placed on board the canoes at Papetoai which were 9 in number. Brother Davies accompanied them and with some difficulty they reached Atimaha <sup>581</sup> in the evening. Early in the morning the canoes left Atimaha and proceeded to Afareaitu where with some difficulty, the wind being against them, they arrived in the afternoon. The natives gave us a large house by the seaside for our present accomodation. After dark the brethren Crook and Ellis arrived. We took up our residency, together with many natives, in the large house. Fixed upon a site for the press and Brother Ellis' house near a stream of excellent water at the head of the bay : contiguous to this is a small house which the people had kindly put up for the use of the brethren. The natives appeared heartily willing to work and much pleased at our coming here. Much employed getting our habitations into some convenient order. Some of us are much annoyed by the **moschettos**.

There is a very large place of worship now building at Pare on Otaheite by order of the King. <sup>582</sup> A party of people came soon here to get rafters for it and have made a successful attempt to take over a raft of these.

By a canoe which lately arrived from Raiatea — one of the Society Islands — Brother Davies received several letters. Raiatea and Bora Bora earnestly entreating to send them a teacher : the little island of Mârua has also embraced Christianity, the other islands having resolved upon renouncing their idols the whole of that Group of islands have renounced heathenism.

When (this month) the King came over from Otaheite he was accompanied by a great number of the eastern islanders, commonly called Paumotu (as a Group). They were chiefly of the Parata party or inhabitants of Anna or Prince of Wales' Island. <sup>583</sup> Of late years there has been much intercourse between them and these islands, their dialect differs considerably from the Otaheitean and they have some consonants not in use at Otaheite. There is another party of the Paumotu with whom the Parata party have been at war for a long while. These are the inhabitants of the Awura <sup>584</sup> and the Palisier islands. <sup>585</sup> Many of them are at Otaheite and Eimeo now. Their dialect is much the same as the Otaheitean. The King has promised them land for their residence on Otaheite where they may be quiet and safe from their enemies but they seem very much attached to their own little islands, miserable as they are.

---

<sup>581</sup> WWB, in the margin: *Haapiti*

<sup>582</sup> WWB, in the margin: *The Royal Mission Chapel*

<sup>583</sup> Possibly [Manihi](#).

<sup>584</sup> Possibly [Anaa](#), also known as Ara-ura.

<sup>585</sup> [Palliser Islands](#): Apataki, Arutua, Fakarava, Kaukura, Makatea, Mataiva, Rangiroa, Tikehau, Toau

The people became much diverted from their work for us on account of a large fishing net which had just been finished ; the first fish caught by which was sent to Puru and his son Taroa Arii as Chiefs of the island : however they have finished thatching the printing house. They went to sea with their new net and were very successful, catching a great number of large fish. They gave us half a dozen nice white salmon.<sup>586</sup>

We heard that a vessel with 3 masts had arrived and had entered Opunohu harbour. Pomare here was informed that the vessel was the King George, Capt Walker.<sup>587</sup> A parcel of letters arrived for Brother Davies that had been sent from England by M<sup>r</sup> Youl but which had remained in the Colony nearly 12 months. We were invited by the brethren at Papetoai to join them in observing the Anniversary of the Missionary Society (May week).<sup>588</sup>

Setting off early before daylight as we were leaving Timai many of the inhabitants were met with returning from the bush where they retire for private prayer which in general they have concluded before the sun has risen above the horizon. Brother Nott preached to a large congregation. The meeting was held in their large place of worship<sup>589</sup> lately erected near the spot where the Society's vessel lies in the stocks.

A letter has arrived from Utami, the Chief of Attahuru,<sup>590</sup> giving an account of an extraordinary phenomenon in that district of Otaheite. Some days ago, in the evening, the sky dark and cloudy, a loud clap of thunder was heard. Shortly afterwards the whole atmosphere appeared to be on fire which appeared to come from the clouds and spread itself over all the western part of the district, running along the surface of the ground and of the adjacent sea. The people fled out of their homes, and thought that the Day of Judgement had come.

Many of the natives have committed to memory the contents of their books. Chief Faito paying us a visit said he was anxious to see some book printed, and that he could repeat those in his possession without looking at them.

As part of the printing house floor we were much employed with the assistance of the natives in digging down the remains of the Altars in the neighbourhood of the various morais. On the 10<sup>th</sup> of June Pomare arrived to witness the first composing for the printing press done in his dominions. He was asked whether he would like to do the first himself. He answered Yes. The composing stick was then put into his hand and he was directed from whence to take the letters and how to place them until he had composed the alphabet at the beginning of the Otaheitean Spelling Book. He appeared much pleased. During the month of July application for books came from all quarters and numbers of people came over from Otaheite for the same purpose, the natives of Eimeo crowding in. We completed 2,300 copies of the Spelling Book.

<sup>586</sup> [Milkfish \(Chanos chanos\)](#)

<sup>587</sup> WWB, in the margin: *Orsmund's vessel*

<sup>588</sup> WWB: *Note. S.P.C.K. founded 1698. S.P.G. founded 1701. L.M.S. founded 1795.* WWB is referring to the [Society for Promoting Christian Knowledge](#), the [Society for the Propagation of the Gospel in Foreign Parts](#) and the [London Missionary Society](#).

<sup>589</sup> WWB, in the margin: *80 feet by 25.*

<sup>590</sup> The spelling of persons and place names in the text are inconsistent; for example, *Attahuru* and *Atahuru*, *Faaa* and *Faa*, *Opunohu* and *Oponohu*, *Maharepa* and *Maharipa*, etc.

A man of Tairarabu had a canoe lying on the beach. On the Sabbath a higher tide than usual carried the canoe adrift. A native ran to the owner who said that being the Sabbath he thought it would be sinful to secure the canoe. It was lost. Brother Davies explained to the natives the difference between the work of ordinary labour and those of necessity and mercy, the man should have secured his canoe.

Farifau is dead. A native of Bora Bora and a servant of Pomare Vahine. In December 1814 he renounced heathenism. In 1815 there was a meeting of all the Chiefs of Eimeo for the purpose of presenting food, cloth, etc., to Pomare Vahine. The Chiefs were mostly of the heathen party. It was the custom at these “feeding meetings” to make an offering to the gods by taking the head or ears of a pig or fish and some fruits to the nearest morai. Pomare and Pomare Vahine wished to prevent this. It was proposed that a prayer over the food should be offered aloud to the true God before the idolatrous ceremony took place. There was the question who was bold enough to do this. Farifau without hesitation carried it out. There was none taken to the morai. Later, at Pare when food was presented to the Queen and those with her, the priests made use of some threatening and insulting language, magnifying the power of their gods. Pointing to some bushes of red feathers they had set up to represent the idols, Farifau exclaimed, “Are these the mighty things whose power you magnify and with whose power you threaten us? If so I will soon settle the matter,” and seizing them he threw them into a native oven, the stones of which were red hot. There can be no doubt but that his action hastened on the war.<sup>591</sup> At the close of the war and Pomare issued orders for the destruction of the home and altar of the great god Oro at Tautira, Farifau was one of the party sent. They brought away the god on their shoulders after having stripped it of all its ornaments. The log of wood was taken to Pomare, who was in the district of Pare, and set up in what may be called the King’s kitchen to hang baskets of food upon. This was the end of the great god Oro, the possession or non possession of which has caused so many wars on Otaheite.

Our place of worship, becoming too small, had to be enlarged to 64 feet by 22. It is filled at every service, 600 present and others standing outside. Have learned thro one of the crew of Capt Walker’s vessel that Anna has renounced heathenism except one district. It appears from reports that come to hand that when funerals occur at a distance from the missionary stations, a native usually prays at the grave. The brethren Crook and Ellis having now residences of their own, the large house is the home of Brother Orsmond and Sister Orsmond who have lately arrived.

Note. The following is out of its place in the Chronicle. Fragment only.

From Ellis’ Journal of his voyage out : <sup>592</sup>

February 2. Touched at the island of Tubooi — we made various purchases by means of knives and fish hooks.

February 10. At 6 p.m. we were on the point of entering the harbour at Matavai (Otaheite) when the wind suddenly died away.

<sup>591</sup> WWB again has, in the margin: *See “Sketch” p. 113.*

<sup>592</sup> At the end of this phrase, WWB has “— *not given*”, without specifying what was not given.

February 11. The weather being calm, it was necessary to tow the vessel into harbour. Pomare soon came off in a double canoe accompanied by his queen and a numerous train of attendants. In the evening our Captain <sup>593</sup> landed a horse which the owner of our vessel, Captain Birnie, had sent out as a present to the King. Pomare and his people were much pleased with this animal, the first of the kind perhaps which was ever landed on their shores. <sup>594</sup>

February 13. Crossed strait to Eimeo. Arrived at Opunohu Harbour, and this terminated our voyage nearly 13 months from the time we set sail from Spithead.

March 24. Pomare arrived at Papetoai and soon after paid us a visit. Observing my portfolios he was much pleased with the drawings it contains and enquired if I thought it possible for him to learn to draw. He made a sketch of something on a slate and requested from me some copies of things on paper that he might practice with when alone. He seems anxious to improve himself.

Davies' Journal, taking up that from those stationed at Afareaitu. Events of 1816.

August. Set off in a double canoe with Bro: Crook on a tour of Eimeo. We came to Paeau where we saw Abarahama who a little before the late war on Otaheite was there pursued by Tevivirau, the husband of Inomedua, a chief woman of the district of Hitia <sup>595</sup> who was determined to kill him, he being a Christian, as a sacrifice to Oro. He was shot at and wounded in the thigh but ran in among the bushes and made his escape. He is now quite recovered but will carry the honourable scar to the grave. Preached in a very large house at Varari called Teataebuaa. The house which belongs to the King is much decayed. It was formerly used to entertain and lodge strangers in. Brother Crook was here obliged to return owing to severe ophthalmia so proceeded with 2 natives. Reached Atimaha. Found great disorder of various kinds notwithstanding almost all have renounced heathenism. Endeavoured to speak very plainly to the people, leaving with no satisfaction of mind. Opposite Atimaha there is an opening in the reef where a vessel might enter in favourable weather and anchor in safety. Between Oio and Atimaha there is a large tract of land entirely uninhabited and another tract between Atimaha and Maatea. These tracts in old time were thickly peopled but now are entirely deserted. Last night were much troubled with thousands of moschetoos and could get no rest from them till the morning when the wind blew them away. Haumi is a pleasant little valley and well watered by a stream. The land is capable of great improvement. There is an opening in the reef opposite to this valley and deep water quite close to the shore. Went on shore and took up our abode in an unoccupied house belonging to the King. Vara the leading Chief sent a present of fish, breadfruit, etc., to our lodging. Difference existed among the Chiefs' particularly about a place of worship. Motuau (the Chief of one part of this district) had cast away his gods and set apart one of their houses for a place of worship. Vara, then a heathen, persecuted them, his people worshipping in his morai. But of late Vara and his people have renounced heathenism and put up a new and very decent house for worship, the best indeed at this time on the island, large enough for the whole district. I proposed Vara's as the place of worship and Motuau's to be used as the school room, to which all parties were acceptable.

<sup>593</sup> WWB, in the margin: *Capt Powell*

<sup>594</sup> WWB, in the margin: ? *Bligh*

<sup>595</sup> WWB, in the margin: *Hitiaa*

Employed most of the day in visiting the sick, administering medicines and instructing such as had books. Brother Crook rejoined us, had come round the eastern part of the island, partly by land and partly by sea. His eye quite well, an abscess gone.

September. At cock crowing before it was quite light, all the people had scattered among the bush according to custom for private prayer. All had collected for family prayer before sunrise when we met together for Public worship.

<sup>596</sup> The Eyto tree is one of very large size, the wood of reddish brown resembles mahogany and is used in many parts of canoes. The bark affords a brown dye for cloth, nets, etc., which never washes out.

Arrived at Teavaro and was much incommoded by moschettoes. The District now called Afareaitu was formerly called Fareorii, also Matahiopo. In olden times it was very populous and was then in confederacy with the smaller Districts Haumi and Maatea and these 3 were often at war with the rest of Eimeo and were commonly more than a match for all the other Districts put together. The valley here (Teavaro) reaches to the foot of the mountain Tohiea, the highest land in Eimeo. At Papeare <sup>597</sup> were met also the people of the village, left then proceeded to Temae, an interesting little settlement situated inland and is very fruitful. A lake of fresh water perhaps not less than 2 miles in length and nearly half a mile across separates it from the sea. This lake abounds with large fish, particularly the white salmon. It is remarkable that there is no passage for a canoe round this part of Eimeo within the reef. Our men were however able to drag the canoe over a considerable piece of low land into the lake. Crossed the lake when our people dragged the canoe back again into the sea, the land covering about 300 yards. Walked along the beach for some distance till we were overtaken by the canoe which soon brought us to Maharipa which is the common rendezvous of people going to Otaheite or coming from thence as there is a convenient opening in the reef where canoes or boats may pass but it forms no harbour for shipping (as does Opunohu, close to Papetoai). Arriving at Pihaena we sent for the people of Paopao and Paraoro to meet us there which seemed to be taken amiss that we did not call at those places but it was very inconvenient to do so. They are at the top of Cook's Harbour. There appeared here too much of a disposition to find fault and incriminate one another. Having taken our leave we arrived home by canoe at an early hour in the afternoon, September 6<sup>th</sup>.

There is a note appended.

Instead of the multitude of various idols found a few years ago in every place, and the numerous morais, altars and sacrifices, there are now 17 or 18 houses of worship : and except a heap of stones here and there, scarce a vestige of the old religion remains to be seen.

The districts of Papeare and Teavaro lie opposite to Otaheite from which the distance is little more than 4 leagues. Papeare has a capacious harbour within the reef where ships of a large burden may anchor close to shore. The valley is divided by an inferior ridge of the mountains, of gentle ascent on which there is a path which leads over the main ridge, here moderately low, to Opunohu.

---

<sup>596</sup> WWB: *Note by Davies and Crook on a grove of Eyto trees "where we went to prayer"*.

<sup>597</sup> Also known as Vaiare.

Brother Ellis and Brother Crook being nearly destitute of soap, ascended the neighbouring mountain, accompanied by some natives, to gather and burn a quantity of fern to make ashes. This is the first attempt on these islands to make soap with fern ashes. Soap has been separately produced with lye made from the ashes of the Aito or Toa tree but such is not easily procured on this part of Eimeo.

October. It was reported that 3 canoes which sailed from Eimeo for Otaheite some time ago, to proceed from thence to the little island of Tetiaroa, have been lost at sea. A gale of wind arose soon after they had set sail.

November. Some of the people had caught a large shark and had been poisoned by eating of it, particularly those that ate the liver. Bro: Crook administered an emetic to a great many which had the desired effect. Bro: Davies had often warned them against the liver of the shark. One afternoon a small canoe from Otaheite was swamped before it reached the opening of the reef. The 2 men were in immediate danger of being drowned or devoured by the sharks. Bro: Crook with assistance launched his large canoe and with Bro: Orsmond went off to their assistance. Some who thought the brethren would also be in danger soon followed. In a short time all were brought to shore in safety. Set out for Papearae. Formerly it was thickly inhabited but the people died of disease, war, etc., till some years back there was but one family left who, finding themselves solitary, removed to Atihama and for years the valley had neither a house nor a single human inhabitant. About 15 months ago some people were found in a transgression at Atimaha and the Ratiras banished them from that district. Some of these put up a home or two at Papearae and were later joined by others so that now they have 4 or 5 houses and lately they put up a small place of worship.

In the middle of the month a note arrived from Brother Nott at Papetoai informing us that a vessel <sup>598</sup> had just arrived and that Samuel Henry, Brother Henry's son, and 6 missionaries were on board. Brothers Crook and Orsmond set out for Papetoai (in a canoe). The next day a further note arrived requesting Brothers Ellis and Davies to join those at Papetoai. In consequence they set off late in the afternoon to go by land across the ridge of mountains as there was a difficulty in going by canoe owing to strong, contrary winds. They had great difficulty (spending all that night and the next day in making their way) reaching Papetoai about midnight, much fatigued. There had arrived Brothers Barff, Bourne, Platt, Darling, Threlkeld and Williams with their wives.

As a master mariner had come out to take command of the Society's vessel, it was determined that it should be finished as soon as possible so that by its means the brethren might move to their various stations. The Brethren returned to Afareaitu (by canoe) bringing with them a quantity of paper, a present from the British and Foreign Bible Society. The canoes mentioned as lost arrived here again at the closing of the month. They were 3 days and 3 nights at sea, suffered much but no lives were lost. Made the island of Huaheine with difficulty, repaired their canoes, then sailed for Tapua-manu <sup>599</sup> where they stayed some time, then sailed for Eimeo.

The Brethren here discussed Fish poaching. Though the open sea is free for all that desire to fish, yet within the reefs every part is claimed as the property of those living on the

---

<sup>598</sup> WWB, in the margin: *The "Activa", Capt Thompson*

<sup>599</sup> WWB, in the margin: *Maiao*

adjacent coast. The Ratiras and landowners have their respective fishing grounds. Several instances lately of people pretending that since the old religion and customs were abolished, therefore the above custom is abolished raised the question.

It has been decided to sell all books and no longer to give them free of cost. The people have been told that it is so in order that we may have the means of purchasing more paper for printing other books for them. Everyone that wished for a book has been advised to prepare in time 7 or 8 bamboos of oil (about 3 gallons) telling them it would be measured and that whatever was above that measure would be theirs. They seem well pleased at the arrangement. It is of great importance to suit our plans to circumstances. Had such a plan been adopted with respect to the elementary books it would probably have done much mischief and certainly would have prevented many from learning to read, but now all those who have been taught and made some progress in their little books are eager to procure other books. The plan will be attended with many beneficial effects. It will prompt them to useful industry, to place a higher value on those obtained and show them the advantage of barter.

Capt Thompson attended here a native service. He declared that what he had seen here and at Papetoai as to the behaviour of the natives quite astonished him and he thought the people in England could not conceive, except they were to see it, that there was such an alteration in them.

December. The King sent letters to several here requesting that we should be informed that he had had a son born to him at Tetiaroa on the 21<sup>st</sup> of November. (The infant's grave is at Afareaitu.)

Pomare's Letter to Eyre :

Moorea. Afareaitu. July 2. 1817

Very good Friend

May you be saved by Jesus Christ the true Saviour. How is it that you are so attached to your residence at Port Jackson? Have you no thought towards Tahiti? Tahiti is now happy. My affection for you continues unabated my good friend. I have one small request to make. Do not think unfavourably of me for it. Send me some paper and quills, a good quantity. You need not be careful of the quality of the paper. I am writing a dictionary. Perhaps it will not soon be done. My wife Teritaria<sup>600</sup> is very ill. Perhaps she will die.

Pomare.

Pomare's Letter to Marsden :

Moorea. Afareaitu. July 3. 1817

---

<sup>600</sup> WWB, in the margin: *Pomare Vahine not Terito his Queen*

Very good Friend

Health and prosperity to you and also to your family the salvation of Jesus Christ.<sup>601</sup> The Word of God has taken great root here at Tahiti and also verily at Raiatea and also in the other islands. By Jehovah himself the light was communicated. The Lord himself graciously sent his Word therefore it is that we are now instructed. The idols of these countries are wholly abolished, they are burned in the fire : also are abolished the various customs connected with them, they are totally cast away by the people. Do not criticize what I have written, do not smile at my blunders and what is faulty. I know not how to write as I ought, I resemble an ignorant man, his word is easily misconstrued when we write. My good Friend I am very ashamed that I am so poor, having nothing that you may esteem. M<sup>r</sup> Ellis, M<sup>r</sup> Crook and M<sup>r</sup> Davies are preparing to publish the Bible. Monday 30<sup>th</sup> of June was the day they commenced to make preparation of the publishing of the Word of God. The Word of Luke is nearly prepared and the Word of David. The Word of Jonah and also of Job are very nearly prepared. Write to me. Let me particularly know what you desire.

I am Reverend Sir Yours etc.

Pomare.

Ellis' Journal, Events of 1816 :

Early in the month of June Brother Crook and myself left Afareaitu in a canoe and reached Papearae about sunrise. We walked up the valley to the foot of the mountains which we began to ascend. On reaching the summit of one of the inferior hills we stopped to rest whilst one of our men climbed a coconut tree to get us some drink for our journey : after which we kept on our way, resting at intervals, until we reached the ridge where we intended to cross the chain of mountains which runs along this side of the island. Here we were delighted with the beautiful view which our exalted situation enabled us to take, on the one hand of the picturesque island of Otaheite and widely extended ocean ; on the other of the interior of the island of Eimeo diversified by sloping valleys, extensive plains, and meandering streams issuing from the mountains on every side. We found the descent very steep and were obliged to hold by the bushes and by the roots of trees as we proceeded. On reaching the bottom we found ourselves much fatigued and thought descending such a mountain more difficult than climbing one. We sat down beneath a Ve tree and regaled ourselves with some of the fruit which was nearly out of season, they were as large as a peach, of an oblong shape, very juicy, and in flavour resembled an English Magnum Bonum plum. Being recruited we proceeded on our journey, sometime walking through the bush, at others by the side of a rippling brook exposed to the scorching rays of the sun upon a level plain, or on the edge of a hill till we reached the Valley of Opunohu, then proceeded to the place where the vessel lay in the stocks, having been six hours walking from Papearae. We left Papetoai in the boat with Capt Powell and upon arrival at Afareaitu we walked to the printing office and the garden. Capt Powell thought we had made pretty good progress during his absence from Eimeo. After dining the Captain called on Pomare who was residing at his house here and presented to the

---

<sup>601</sup> WWB, in the margin: *See p. 59.* This refers to the letter from Marsden of October 1815 to the Directors in London, in which Marsden states that "Pomare writes like an Apostle."

Captain some presents for Captain Birnie from whom the King had received the present of a horse. We sent back with the Captain a lad whom we had brought with us from the Colony. He might have been of great use to us in the printing office but he conducted himself very ill. The King called one day and asked me for a sunflower, 2 or 3 plants of which were just in bloom in my garden. I told him I wished to reserve them for seed. He said the Queen and her sister desired one very much. I therefore gave one to each of them and also one to another leading woman, with which they were very much pleased saying that they had never before seen such a flower. They asked for some seed which was promised them. With the assistance of the people, put sticks as a fence around our house. The houses here resemble large bird cages : 3 or 4 posts are put in the centre, on the top of which is laid a pole according to the length of the house. On each side of these, a number of smaller posts are fixed in the ground, on which small pieces of wood are laid. From this wall plate (as it may be called) to the ridge pole a number of sticks about 5 or 6 inches in circumference are placed at about 2 feet distance from each other. To these rafters, the thatch — which is made of the leaves of a species of the pandanus — is tied on with a string made of the inner bark of the Purau. From the lower edge of the thatch, sticks of the same size as the rafters are fixed in the ground 2, 3 or 4 inches asunder, an opening of course being left for the entrance. The ground or floor of the house is then covered with long grass, the house is finished. They are from 10 to 20 feet high in the centre, and from 4 to 8 feet high at the sides. Some of them are 50 feet in length, others not above 10 : their breadth varies from 16 to 20 feet. As long as they last they are much superior to the dwellings of the New Zealanders and those of the natives of New South Wales. We were for some time employed in laying down a boarded floor in our sleeping room which we shall find a great comfort. Hitherto we have had a sand floor which — our dwelling being by the seaside — has been very damp. Whilst employed laying down a similar floor in the sitting room M<sup>rs</sup> Ellis and M<sup>rs</sup> Crook were busy making covers for the books. By means of these covers, a sort of trade is carried on with the natives for food : a root or two of Taro (*Arum Esculentum*) or a bunch of *maiore* (the Breadfruit tree) is the common price of a book cover. Except a present now and then from the Chiefs, we purchase from the people almost every article of food the island produces. This will perhaps appear strange to our English friends who may suppose that a sense of gratitude would prompt the natives to supply us with the means of subsistence. This would be the case did those relative bonds exist among them which bind civilized communities but here they are wanting. They are a nation of Individuals and with the exception of the homage they pay to the King and some other like expressions of respect to the great men of the District, they act as individuals quite independent of each other. If indeed an application be made to the Chiefs on any particular occasion to unite in some project, such for instance as to put up a place for public worship, a school house or a dwelling house, the Chiefs as well as the people will join together to do it, but in everything else, each one acts according to his own interest or inclination. At the end of July we moved into our new house. It adjoins the printing office, our former was at a considerable distance from it and occasioned much unnecessary fatigue in walking. M<sup>rs</sup> Ellis finds in M<sup>rs</sup> Crook a very happy assistant. We now number three at this station. May the Lord graciously prevent any dissension amongst us. Busy in my garden : planted some peas and French beans, the latter thrive well but the former have not been brought to perfection. I am anxious to try further experiments by varying the soil and the season of planting. I settled up with Pati, one of the men who have worked at the press and in putting up our house by giving him 6½ yards of calico, a razor, a knife and a Looking glass. Agreed with him to continue his services until the Gospel by Luke is printed.

A garden in these parts is a great acquisition. We have now cabbages, French beans, carrots, turnips, parsley and Indian corn growing : cabbages, turnips and parsley do not seed here. We have also some mulberry trees and a species of the custard apple (*Annona Squamosa*) which I brought from Rio Janeiro. From thence I likewise brought a quantity of coffee seed some of which I planted in the Colony where it grew very well, as did some I planted in a box on board ship but the cats destroyed about 60 plants of it. On arriving here I planted some of the remaining seed but although I have made several different experiments I have not yet succeeded in raising any of it. The convolvulus, capsicum, sunflower and amaranthus together with some native flowers form the principal part of our flower garden.

August 29. It being the 23<sup>rd</sup> anniversary of my birthday, Brother Davies dined and spent the evening with us.

September. Finished printing 2000 copies of the Tahitian Catechism and 2000 copies of Scripture Lessons in that language. Puna and others observed that it was much harder work to learn to write and cipher than to paddle canoes, build houses, put up fences or any other “laborious” work. I urged continued application with pleasant results.

October. Took a sketch of our settlement at Afareaitu. At question time one evening a native asked if they were to suppose that every individual who had died on the islands was lost forever? Brother Davies answered in the affirmative according to the express declaration of Scripture.<sup>602</sup>

If often affords me peculiar pleasure to look around the district on a Saturday afternoon and see the smoke ascending from the cooking houses belonging to the various families who are cooking their food for the coming Sabbath. Not only is their food dressed but their calabashes are filled with water for drink, and their other vessels with water to wash with, and all things are got in readiness by sunset.

Taita Vahine has left us — a servant from the district of Attahuru on Otaheite. We gave her some paper, a copy book, a penknife and a pair of scissors. These and razors are in great request. Have been employed in showing the natives how to make wooden spoons to eat their food with : also went to the mountains to direct how to burn fern for making soap. Was much struck with the remaining vestiges of former habitations which are to be found even to the very tops of the interior hills. These districts must formerly have contained numerous inhabitants. Enquiring to what cause this great depopulation was to be attributed I was told that it was due to the strangling of infants, to diseases introduced from other countries, to the use of spirits and the effect of wars.

Tati Vahine, the wife of Tati, a Chief of Otaheite, paid us a visit in order to inspect the printing press. Most of the Chiefs of Otaheite and many of the people have come over to see it. Its mechanism still remains beyond the comprehension of most of them.

November. Sent 2 men to Papeanae to get Tii root (a species of *Dracana*) in order to try to make sugar from it or to use it as a substitute. Reached there and walked us that valley. On my return took a sketch of the place of worship. The natives of that place prepared food for us. When it was nearly ready they brought a bundle of the broad leaves of the

---

<sup>602</sup> WWB, in the margin: !!!

Hibiscus and spread them on the ground for a table cloth. A coconut shell filled with salt water for each of us took the place of a salt cellar. Two coconuts were provided for us to drink the milk. The food was then brought on : a small pig for us, also one for our natives, breadfruit, taro <sup>603</sup> and feiis.

The woman we had brought from the Colony stole several articles we had missed. They were discovered in her possession. She besought us earnestly that we would not send her back. A note from Brother Nott just then announced that a ship <sup>604</sup> had entered the harbour bearing 6 missionaries. Brothers Crook and Orsmond left for Papetoai. The next day a note came from the Brethren. We agreed to set off the same evening. Proceeded first (by canoe) to Papeare and then directed our way across the mountains. <sup>605</sup> We had not ascended half way to the top of the chain before we felt ourselves greatly fatigued. Our men poured us some water to drink in the leaves of the Hibiscus. As night was fast approaching we hurried on our way but the ascent was sometimes so steep that we were obliged to stop and rest ourselves every twenty yards. By the time we reached the ridge of the mountains it was quite dark. Here we sat down to rest, we were however obliged to proceed for we had still ten miles to travel over the interior of the island. In ascending the mountains we were overtaken by a blind man and his leader. The old man was going down to meet his brother who had arrived in the Active. We were much surprised at the facility with which they travelled along, sometimes crossing brooks of water, then passing through thickets of trees : now going up steep ascents and anon down slippery rocks : yet the blind man excelled us, and even on a road where we could hardly walk five yards without climbing over or creeping under the trunks of large fallen trees that intercepted. He and his companion in short were guides to us and pursued their way faster than we could follow them. About ½ past 11 we reached the Oponohu valley (through mistake often called Taloo) and proceeded in a canoe to Brother Hayward's house. We spent the day very agreeably. Captain Thompson of the Active later visited us at Afareaitu and inspected the printing office. He expressed himself much surprised at the expertness the men who assisted us had already acquired. The man who pulls the sheets does it as fast as I.

December 10. About 4 a.m. set off for Papetoai in a single canoe with Pati (to witness the launching of the "Haweis"), landed at Papetoa, <sup>606</sup> passed through Tamai, crossed the lake and walked on to Maharepa. Here expected to borrow a canoe but the people had all gone to see the brig launched. Walked to the adjoining district, found only one canoe which was about to be used to carry food to Pomare. We were kindly put across Cook's Harbour. Walked on to Pihêna, met the Chief who was ill and infirm, everybody else gone to the launching.

"Found the bottom of an old fishing canoe, the edges of which were scarcely 2 inches above the water, but being too much fatigued to walk any further I got into it and keeping near the shore till we reached Oponohu harbour we crossed over safely and landed opposite Brother Hayward's. We had scarcely arrived when Pati observing the Flag hoisted on board the vessel wished to run on lest it should be launched before he could arrive. He took up his bundle of breadfruit which he had brought from Afareaitu (a

<sup>606</sup> Teavaro?

distance of 20 miles by sea) and ran on before : shortly after, I reached the place where they were endeavouring to get the vessel off the stocks. The King, the principal Chiefs and vast crowds of people were present assisting. After some time the vessel moved from the stocks when the King, performing the usual ceremonies, pronounced as she passed along “Ia ora na Haweis”, Prosperity or Peace to the Haweis. D<sup>r</sup> Haweis has always been considered the particular friend of the Otaheiteans and the King wished the vessel to be called after him.”

At the close of the month a canoe arrived from Otaheite to say that 3 American ships, each 3 masted, had arrived from Boston bound for Chile, that they would move to Oponohu for several days and spare the Society such articles as we were in need of. Canoeed to Papetoai the last day of the year.

## 1818

Brief review by the Directors of the Otaheitean Mission giving the Rules and list of officers of the Otaheitean Society, its object being to aid the Parent Society at Home by aid of gifts in kind. The Rules and names are in Otaheitean as well as English. This is followed by the various Stations and the Brethren thereat, with their wives and children a total of 60.

Extracts of letter from Eimeo dated May 30, 1818 signed by Henry on behalf of all (no special happenings). Also letter from Eimeo dated June 1, 1818 signed by the new arrivals Darling, Bourne, Platt and Williams. A further letter dated September 29, 1818 signed by Darling as “Secretary to the Missionaries in the Windward Islands” mostly dealing with the circulation of books.

Another letter dated October 19, 1818 signed by Charles Wilson written from “Waugh’s Place, Matavai, Otaheite” where he arrived for residence in December 1817 and lost his wife August 10<sup>th</sup> 1818 after a few days illness. Buried at Matavai. (Grave site lost.)

Another letter written in December of previous year (1817) from the Brethren concerning the brig just launched stating that it was calculated that in about 3 months from that time the vessel would be ready for sea, when it was intended that a part of the missionaries should be conveyed to certain other Stations chiefly in the Leeward Islands (none there so far) from whence it would proceed to Port Jackson with a cargo of pork and coconut oil. A Captain and mariners to assist in completing the rigging and in navigating the vessel had arrived at Eimeo by the “Active”.

A note by the Directors stating that “last summer (1817) an active and intelligent person was sent out for the purpose of introducing the cultivation of some of the indigenous plants of the Islands.”<sup>607</sup>

---

<sup>607</sup> WWB, in the margin: *See p. 59.* This refers to the letter of October 1815 from Marsden in Sydney to the Directors in London that “Recommends the introduction of simple arts and commerce, mentions the culture of sugar cane ‘remarkably fine there’ and cotton.”

Hayward in Sydney is urged by Marsden “the highly respected and active friend of the Society in that Colony” to visit England to consult with the Directors as to future plans. Result proposed : to send out a Deputation to see and report.

1819

A letter from John Williams dated Raiatea, 30<sup>th</sup> November 1818 addressed to his friends of the Tabernacle, Moorfields, London. “On the 16<sup>th</sup> of November 1817 we saw Otaheite for the first time a little to windward. Our hearts leaped for joy at the sight of the long wished for land. On the 17<sup>th</sup> we landed at Eimeo, being exactly 12 months since we embarked at Gravesend.” He removed to Raiatea June 20, 1818.

Letter from Crook dated from :

“Bunaaūia in the District of Atahuru  
November 2. 1818

“Brother Bourne and I are situated at Wilks’ Harbour. <sup>608</sup> Although but ¼ of a mile apart we are yet in different Districts and this circumstance not originally contemplated has led to a train of events very different from what we anticipated. Brother Bourne is considered by the natives as the missionary of Pare, whilst I, living close to the boundary of the same District and having my school house therein, am considered by the people as more properly the missionary of Faa and Atahuru. This place (Bunaauiā) which is the residence of the Chief Utami and a populous place is more like a town or village than any I have seen on the islands. Utami who is the Chief of Atahuru is an excellent man. He and his people have promised to cultivate a large piece of land with cotton. The King is now making a tour round the island with a great number of people in his train. As to his person, he is I believe nearly 6 ft in height and proportionally stout, but he stoops and has rather a heavy appearance. He sometimes sleeps in a small Paumotu hut not high enough even for a short person to stand upright in. <sup>609</sup> He sits on a mat which is laid over grass spread on the floor. He writes a great number of letters and keeps a journal in his own language. His posture when writing is to lie at full length on the ground. He is now at Tiaiti in the south part of the island. He entreated me to hasten to the Missionary Prayer Meeting. Before sunrise we were all on board our large canoe, 40 persons in all. We arrived at Tiaiti between 8 and 9 o’clock (a.m.). The place of worship there is capacious enough to hold 15 to 16 hundred people. The subject of Preaching was brought up at the meeting. It was remarked that if our foreign dialect or accent was unpleasant, some suitable natives should come forward to exhort and teach the Word of God.”

Note by Editor. “To the ear of an Otaheitean the pronunciation of a European sounds like the hissing of a goose.” <sup>610</sup>

“Copy of Circular printed at the Mission Press in Eimeo containing an Account of the opening the Royal Mission Chapel in Otaheite : the first Anniversary Meeting of the Otaheitean Missionary Society : the Promulgation and Acceptance of the Laws, Baptism of Pomare,” etc. addressed to :

“Dear...

Otaheite. May 18. 1819”

Signed by Bicknell, Henry, Bourne, Crook, Darling, Pratt, Tessier and Wilson. (Nott’s name is absent.)

A lengthy Circular. Extracts :

The King, Pomare, has lately erected a large and vary long building at Papaoa in the District of Pare in Otaheite. This building we denominate as The Royal Mission Chapel. (Here follows its dimensions. See Chapter VIII.) It is filled with forms and laid with clean grass. The rafters are covered with a fine kind of fringed matting which is bound on with cords of various colours in a very neat manner : and the ends of the matting are left hanging down, like the naval and military flags in St Paul’s Cathedral. The whole building is surrounded with a very strong fence of wood, and the space between it and the building is filled with gravel.

On Monday the 10<sup>th</sup> instant the Brethren assembled at Papaoa. The people were encamped on each side of it along the sea beach to the extent of about 4 miles. They soon assembled together to pay their respects to the King and made a grand appearance being decently clothes in white native clothing. The King first wrote his own name and his gift to the Missionary Society viz 8 hogs. He desired each of us to write our names and our donations. In the same manner he proceeded with all the governors.

The Opening Ceremony — the Promulgation, the Acceptance of the Laws and the King’s Baptism are not in full quoted here (see “History of the L.M.S.” <sup>611</sup>), but extracts follow under *Circular (continued)* below.

Ellis’ Journal. Events of 1818 :

January 1. Went on board the Avon, the Enterprise and the Eagle. They are large ships containing valuable cargoes, arriving here from Owhyhee. The following day Brother Orsmond and myself crossed Cook’s Harbour in Captain Ebbett’s boat and then walked on to Maharepa. Darkness came on so stayed the night, lay down on a mat on the ground but the moschettoes and crabs <sup>612</sup> prevented our sleeping. Had to walk to Afareaitu without shoes and stockings most of the way on account of the frequent streams to be crossed.

Work in the garden. “It is too oppressive to labour in the middle of the day in these climates : the morning and evening are the only times we can employ in work out of doors.”

<sup>611</sup> *The History of the L.M.S., 1795–1895* by R. Lovett is listed in *Other Known Books* under *Inter Alia* in the Appendix.

<sup>612</sup> WWB, in the margin: “Land crabs.”

February. While at work at the printing we were visited by numbers of the natives who have lately arrived from the eastward or Paumotus islands. They appeared much surprised at the sight and use of the press. There is a rudeness in their manners which we do not find in the Otaheiteans and they are less ingenious than the latter, yet they are an industrious and hardy race of people. Their islands are chiefly lagoons, seldom rising 3 feet above the level of the sea. The soil — if such it may be called — is composed of sand and coral, nothing but coconuts will grow therein. Their principal food is fish, their land produces neither breadfruit, taro nor bananas.

March 21. Last evening Teina (Pomare's son) expired. His mother and sister are much distressed on account of the bereavement they have sustained but the King does not appear to be much affected by it.

Have been busily engaged assisted by Pati, Tahuaeva and Hitoti in binding books. The mill boards made from the bark of the breadfruit tree answer very well. Our beach is lined with canoes from different parts of Otaheite, and the district is crowded with people who are all eagerly waiting for books. Capt Nicholson, the Master of our brig, The Haweis, paid us a visit as he was anxious to sound the mouth of the harbour before he came in with the vessel.

April. A meeting was held here attended by the King, Brothers Nott, Davies, Orsmond and Ellis to arrange for the formation of a Otaheitean Auxiliary Missionary Society, which was to take place at Papetoai.

May. Our place much crowded with people who are waiting for books : we labour at them from morning till night but cannot get them ready fast enough. Some said that they could not sleep thinking that they might be unable to obtain a copy.

May 12. Left for Papetoai to attend the meeting which took place the next day and the T.A.M.S.<sup>613</sup> was duly formed.

May 28. Employed printing the Rules of the T.A.M.S. lately formed.

June. Hundreds waiting for the books (The Gospel of Luke). "It is truly gratifying to observe their care of the book when procured : a cover is immediately made for it, and a bag or basket to carry it about in : some are even afraid to take it out lest it should get dirtified or torn : afraid also to leave it at home lest it should be injured in their absence. A native who possesses a book is seldom seen without it save when he is at work : frequently they may be observed sitting in circles beneath the shade of a spreading tree and reading to each other in their own language. The books are bound partly with sheep skins I had brought from the Colony and partly with skins procured by the people, chiefly goat, cat and dog which we have dressed for them, not very well being but indifferent tanners, yet they are strong.

Circular (continued) :

On Tuesday the 11<sup>th</sup> we met the King at the east end of the house. He was dressed in a white shirt with a neat variegated mat around his loins and a tiputa over all, coloured and

---

<sup>613</sup> Tahiti Auxiliary Missionary Society. See *The 1st President of the T.A.M.S.* (i.e., Pomare) under *Inter Alia* in the Appendix.

ornamented with red and yellow figures. The Queen and principal women were dressed in native clothing with an English frill around the neck.

No confusion ensued from 3 speakers preaching all at once in the same house — they being at so great a distance from each other.

After careful attention to the subject we suppose the number of hearers in the whole house to have been between five and six thousand.

Apprehensions were entertained from bringing together and from distant parts of the island, the inhabitants of different districts who formerly had been at variance and Pomare had taken the precaution to place 2 principal persons on whom he could depend at each door and window, but everything was very peaceable and orderly and not the least disturbance occurred.

On Thursday 13<sup>th</sup> at the promulgating the Laws, Pomare proceeded to read and comment upon the 18 Articles. He addressed the people and desired them if they approved of the Laws to signify the same by lifting their right hands. This was unanimously done with a remarkable rushing noise owing to the thousands of arms being lifted at one and the same time.

On Friday 14<sup>th</sup>, at a meeting of the T.A.M.S. Brother Darling moved “That the Treasurer put the property collected on board the first convenient ship and send it to the best market, that the Secretary write a letter to accompany it to the Rev. George Burder, Secretary to the Parent Society, and that the net proceeds be remitted to the Treasurer of the Missionary Society London.” This was carried unanimously.

After this meeting Pomare dined with the body of missionaries at Brother Bicknell’s house and was very affable and pleasant. He proposed that we should print and publish widely his wish, namely that he means to consider Palmerston Island as a place for Tahitian convicts, and that no vessel should remove them.

On the Sabbath at Pomare’s baptism it is noted that Brother Henry held the basin for Bro: Bicknell’s act.

Davies’ Journal of a tour around Otaheite in 1816. Published in sections in the Chronicle but here united. Preaching omitted.

October 21. Left Papetoai (Eimeo) accompanied by Brother Hayward and several natives. The Society’s boat being old and much out of repair leaked considerably. Landed at Maharepa where we intended to remain for the night.

October 22. Early rowed out to sea and set our sail. We had not proceeded far before our mast broke. Made shore at Papearae and after putting our boat in the best order that circumstances would allow made another attempt to reach Otaheite. Arrived in safety about 4 o’clock in the afternoon landing at Outumaoro.

October 23. Wrote to the King at Matavai as to our arrival and the object of our journey — preaching and looking over the ground. Left Outumaoro and came to Papetupa in Faa. At a meeting held there met Tino the famous prophet, an intelligent sensible man. Was kept awake late by visitors.

October 24. Returned to Outumaoro, leaving the boat behind to be taken over to Eimeo. Yesterday had sent to Faita one of the Chiefs of Atahuru to borrow a canoe for our use in going round the island. Our bearer had the canoe for us as we were approaching Outumaoro.

October 25. Came to Taipari in Atahuru taking possession of a small house by the seaside which was given up by the people who resided in it for our accomodation.

October 26. Utami came to join us. He and his wife greatly to their credit have paid much attention both to their domestics and to the people around them, teaching them to read and spell. I had sent some Spelling Books and catechisms to him some months ago. I now saw he had turned them to good account.

October 28. Took our leave of the people at Taipari and came to Teati the residence of Faita which is another subdivision of Atahuru. Faita himself was at Eimeo. Utami arrived.

October 29. Came to Afaina, the people provided food for us here as elsewhere. In the evening Tati, the Chief of Papara, and his wife arrived. They had come from the King and intend following us to Taiarabu. Had a long conversation with him, particularly on the great change which had taken place on Otaheite. He observed that if God had not sent His word at the time he did, wars, infant murder, human sacrifices, etc., would have made an end of the small remnant of the nation. I observed that the numerous old morais, far inland, up the valleys and the skirts of the mountains were proofs that the inhabitants had formerly been very numerous. He said it was an undoubted proof, all the low lands were formerly fully inhabited and in a good state of cultivation, but now the Fau and other bushes and trees cover the land and the remnant of the people inhabit merely the seaside. This led him to mention a threatening by their prophets in former times. When there appeared a backwardness in the people to observe the injunctions of the gods, the prophet used to cry out, "E tupu te fau. E toro te farero. E ore te taata," i.e., "The Fau shall grow and overspread the land, and the branching coral the deep, but the race of man shall be extinct." The Fau or Bureau is the most common tree in the deserted places of the low land, and coral is ever on the increase when not disturbed.

October 30. Left Afaina and proceeded by the sea, accompanied by Tati, for Terehe in Papara. At this place found the largest place of worship in the island, 87 ft by 80, put up by the direction of Tati, this being his own place.

October 31. There is a Chief at this place named Huapee whose wife had been one of my scholars in Eimeo. This woman can read well and has taught several others to read. Her husband is nearly related to Tati. They had left Otaheite and had gone over to Eimeo before the late war. On their return they were alarmed, having publicly avowed themselves Christians, when the war broke out and retired at night to the bushes for prayer, till Divine Providence graciously turned the public scale in their favour. At noon there being some appearance of fair weather we set off to Atimaono but before we could reach it we were overtaken by heavy rain. At worship was much grieved and discouraged by their inattention and levity. I thought it right to notice their behaviour publicly. It is probable that this affair will make some noise in the neighbourhood and it will be well.

November 1. Left Atimaono and came to Mairipehi in Papeuridi thence the following day to Atiteahu and Papeari where we landed opposite to a large old house which was

unoccupied. Here we established quarters. This District is but thinly inhabited and many of the people were absent having gone to Matavai with provisions for the King.

November 4. Proceeded in company with Tati to Toahodu in Taiarabu, thence to Papeuru Mataoae.

November 6. Detained by rain. I had observed a man who wore a check suit in our conversation the previous evening, the people here related the following concerning him. At the time of the late war after the Taiarabuans had joined the Oropoa and assisted them to subdue the Teporionu, the Tairabuans returned home and being displeased with the Oropoa (i.e., the people of Atahuru and their confederates of Papara) they agreed among themselves to make war upon them and in order to render their god propitious resolved to offer a human sacrifice. Accordingly this man above mentioned went in quest of a young man who had renounced idolatry and professed Christianity whom they determined should be the victim : having found him they told him that he would be put to death, that he could not escape. The young man answered "You cannot put me to death. You may Kill this body of mine and that is all that you can do." This ruffian then with the assistance of others immediately despatched him, placed his body in a basket and conveyed it to the morai where it was sacrificed as an offering to Oro. The Taiarabuans attacked the Te Oropoa at Tarehe in Papara and sustained a defeat attended with considerable loss and were driven by the Oropoa to the mountains. We hope that this will be the last human sacrifice offered up on Otaheite. I conceived an unfavourable opinion of the man, so full of religious talk and affectation. Proceeded to Faremahora.

November 7. The people wished us to remain but the weather being very unsettled and having some very dangerous rocks to pass in Taiarabu we thought it our duty to proceed as we might otherwise have lost much time waiting for favourable weather. After a rather difficult passage during which the rain descended in torrents we arrived at Papeote.

November 8. Went on to Temotuî where Tati was rejoined, thence to Papeurua, thence to Vaitoto, thence to Tiapatêê.

November 9. Reached Tautira. Here we found the Queen and her daughter Aimata with Pomare Vahine, the Queen's sister, and their retinue, also an encampment of Paumotu people, the Queen on a journey round the island from Matavai where she had left the King. She had travelled round the east side. Went to Veve's place. He was originally the Chief of Atimaono, is a relation of Tati and has lately been appointed the Chief of Taiarabu during the pleasure of Pomare. We had much conversation with him about the state of things in this island in former times. Among other matters he spoke of Matimo<sup>614</sup> as the natives call him and the Spanish missionaries, if missionaries they were, from Lima who visited Tautira in the interval between the 1<sup>st</sup> and 2<sup>nd</sup> voyages of Capt Cook. There is something mysterious in the circumstances of this Spanish visit. The people showed us the place, near the side of a river where the Spaniards had put up their house, the frame of which had been brought from South America. They had also erected a Cross to which they paid respect as though it had been their Deity, and the natives in general supposed that it was one of the Spanish gods.<sup>615</sup>

---

<sup>614</sup> WWB, in the margin: *Maximo Rodriguez*

<sup>615</sup> WWB, in the margin: !!

November 10. There are 13 canoes of the Paumotuans here. They are of the Avura party, most of them idolators and have their gods with them in their canoes. Their custom is to keep together, not mixing with the other people. Their 2 chief men called at our lodgings. We endeavoured to persuade them to remain that they might be taught the Word of God. They said that those who had embraced the new religion intended to return home, the rest must be left to their own inclinations.

November 11. Came to Ahai. We were shown the grave of a man who a few days before fell from a precipice as he was climbing the mountains for Fei or Mountain Plantain, he fractured his skull and died on the spot. Passed on to Teoneuri, thence to Papehinano and thence to Afahiti.

November 12. Here was an abundance of provisions. In general we had found a scarcity in Taiarabu and had frequently experienced the pain of hunger, but had no cause to blame the people who were themselves in want.

November 13. Had some difficulty in launching our canoe as there was a considerable surf on the rough coral shore. We now took our leave of Taiarabu and crossed over to Hidia. Came to Faône. Here was one Fano, a Marquesan, a native of Ohevahoa whom I had not seen for a some years being formerly acquainted with him. He has resided here for a long time and cast away his idols. He says that he would gladly go either to Ohevaoa and Nooaheva with any of our number that they might receive the truths.

November 14. I had sent a message to the people of Papeiha, a little valley between the rocks in Hidia to invite them to come to Faaone. They returned a message requesting we would come to them. Accordingly we climbed over the precipices and when we arrived in the valley, found almost all the men absent. Collected a few old women and young persons together. We left, climbing over the rocks and precipices on the other side of the valley and came to Teiriiri, wet, hungry and very much fatigued.

November 15. Left Teiriiri and came on by land to Mahaena. Our canoe was brought by our people from Faaone from which place we had proceeded on foot. Took up our lodging with Roro, son of the famous Taūte who headed the rebellion in 1808.

November 16. Proceeded to Tiarai but finding the Mahaena river, which was much swollen by the rains, impassable we were obliged to fetch a great compass <sup>616</sup> inland where we with some difficulty crossed the river and arrived safe at Tiarai. The Ratiras had sent notice to the people at Nanananu, Oropea, Hiovau, Haapupuni and Farumai to attend.

November 18. Sailed in our canoe for Hapaiano. The sea ran high but we had a skillful man with us who proved of great service. Teau, the Chief of the District, was formerly a great persecutor and an instigator of the late war. The people assembled in a house situated near an old marai. The house formerly belonged to the gods.

November 20. In the course of this day a great many people came down from the valley of Hapaiano. We learned that they had several places for Christian worship up the valley,

---

<sup>616</sup> *To fetch a compass* is a Biblical phrase meaning *to make a circuit* or *to take a circuitous route*.

one situated near the curious lake of Papehiria <sup>617</sup> which is perhaps 20 miles from this place.

November 21. Sent our canoe round to Matavai, and proceeded ourselves by land. Much tired by climbing Tapahi hill. Came to Ohonu river. Proceeded to Point Venus where we found the King residing in a house lately erected near the spot where the old British House was situated. We lodged there.

November 22. In the afternoon walked about and took a view of our old residence. Found most of the orange trees in good condition and bearing abundance of fruit, also the lemon, lime and citron trees : but the general aspect of the District is much deteriorated being overrun with thick grass and bushes. Most of the breadfruit trees and either dead or dying. The people are thinly scattered and most of them live by the seaside. They are very desirous that we should dwell among them again.

November 23. Heard that our 2 boats from Eimeo are over here, having come for pigs and coconuts. We informed that we should return in one of them.

November 25. Took leave of the King and came to Papaoa in the District of Pare. The place of worship here is a part of the old long house about 240 feet in length which was erected formerly by the Chiefs for public use and is one of the very few which escaped the general conflagration in the time of the late war.

November 27. Left Papaoa early in the morning and came to Papeete or Nanu. At this place they have lately put up a place of worship.

November 28. Set out for Hautaua Valley where there is a place of worship and where the first native prayer meeting on Otaheite commenced. Here Oito, one of the first who joined us, lives. We returned to Papeete.

November 29. Set out for Taupehodu. Most of the people were absent fishing. At this place Temetau, one of the wise men of Otaheite, lives. Until lately he was a great enemy to our religion and a violent promoter of persecution. He observed that it would be long before the people were instructed in Christianity unless our visits were more frequent. Returned to Papeete.

November 30. Left Papeete and came to a place in the District of Faaa called Tetahua. On our journey from Utami's to Faita's place we had met 2 men of Atahuru who told us they had a quantity of coconut oil to sell <sup>618</sup> and we had advised them to take it to Eimeo where they might exchange it for such articles as they wanted. Here at Tetahua we were informed that the men followed our course and on their return from Eimeo saw a small canoe with the bottom upward drifting between the 2 islands. The men observed to each other, "The man (or men) belonging to that has been lost." After paddling on some distance towards Otaheite they were pursued by a large shark which they caught and killed. When they landed at Otaheite they cut the shark up and found a human head in its belly, but the face was too much disfigured to be known. It was of course concluded that the man who had been devoured belonged to the drifted canoe.

---

<sup>617</sup> WWB, in the margin: *Vaihiria*

<sup>618</sup> WWB, in the margin: See *October 26*.

December 2. Took our leave and set sail for Eimeo.

## 5. Extracts From the Quarterly Chronicle, Volume II

covering the years from 1820 to 1824.

Published in Book form  
1825.

“Georgian” Islands and “Society” still differentiated.

From the Preface :

“Civilization has been more or less progressive in all the islands. Towns and villages composed of neat and well built homes have been erected at the several Missionary Stations, furnished with tables, sofas, chairs, etc., the manufacture of the natives, and with sundry other useful articles procured by barter from the Colony. Many of the Chiefs are attired in European clothing and the native population in general are adopting dresses composed of native cloth, etc., made up according to the English fashion.”

Refers to the sending of the Deputation which left May 19, 1821 in the Tuscan, Captain Stavers, and arrived September 27<sup>th</sup> of the same year.

Notes Pomare II’s death on the 27<sup>th</sup> December of the same year, in his 47<sup>th</sup> year.

The Deputation while at Huahine met Capt Kent of H.M. Cutter the “Mermaid” convoying a schooner as a present from His Majesty the King to the King of the Sandwich Islands who had touched at the island and offered them a passage. Brother Ellis accompanied them. Kindly received in the Islands and Ellis agreed on request to remain, so returned for his things with the Deputation, leaving for those Islands — with his wife — on board the “Active”, Capt Charlton.

(Marsden’s boat was also called the Active — has caused confusion to students of the period. Charlton was the first British Consul for Tahiti — serving Tahiti in conjunction with his duties in a similar capacity in Hawaii.)

Notes the deaths of Tessier July 23 and Bicknell August 7, 1820. The missionary artizans Armitage<sup>619</sup> and Blossom<sup>620</sup> engaged in building a cotton factory on Eimeo.

---

<sup>619</sup> Elijah Armitage (ca. 1780 – ca. 1863). WWB has *Armytage* here and elsewhere.

<sup>620</sup> Thomas Blossom (1777–1855)

Nott removed to Papara from Moorea in 1822 to take charge of the education of the child King. About the same time Princess Aimata, sister to the King, was married to Pomare of Tahaa, “a promising young man descended from the race of Otaheitean Kings”.

Refers to the Coronation of Pomare III and a note adds “The chief authority over Otaheite and Eimeo is exercised not by the Regent appointed by the late Pomare but by Pomare Vahine, sister to the Queen Dowager. The Kings and Chiefs of the Leeward Islands consider themselves perfectly independent of Otaheite.”

## General

“Of the multitude of islands in the South Pacific Ocean which are classed by Geographers under the name of Polynesia, the Society has established missions in the 2 Groups distinguished by the Georgian and the Society Islands.” Mentions discoverers, latitude and longitude of each and distances apart. Population of Otaheite computed, in 1769 at about 30,000 : in 1797 at about 16,000 : in 1802 at 7000 : in 1818 at 8000.

Several Printing Presses have been sent out. Population on the increase. Gyles (who has since returned to England) arrived Aug. 14, 1818, left Otaheite Sept. 8, 1819.

Copy of a printed Circular covering from May 1819 to May 1820 :

Matavai. This Station was formerly occupied by Bro. Wilson only but he has been joined by Bro. Nott who came up from Huahine in the Haweis and they have mutually attended to the duties of the Station. Bro. Nott is diligently employed in translating the Holy Scriptures.

Wilks' Harbour.<sup>621</sup> Bro. Crook is the only missionary at this place, Bro. Bourne having removed to Atahuru.

Burder's Point. This Station is situated in the large District of Atahuru. It is divided into 2 distinct parts. The people have united and settled at the Point, the labours of Bro. Bourne and Bro. Darling thus not having to entail travelling several miles each Sabbath Day.

Papara. It is with sincere concern we mention the decease of both brethren.

Eimeo. Roby's Place.<sup>622</sup> The brethren Henry and Platt stationed here. The whole of the inhabitants of that island look to them as their teachers.

Signed by Nott, Henry, Bicknell, Crook, Darling, Bourne, Platt, Wilson and Tessier.<sup>623</sup>

<sup>621</sup> WWB, in the margin: *Papeete*.

<sup>622</sup> WWB, in the margin: *Papetoai*

<sup>623</sup> WWB has an asterix beside *Bicknell* and *Tessier*, with the note “part only clearly”.

Crook's Journal, Wilks' Harbour, 1820 :

June 25. Deals with the confinement of the Queen and birth of the boy (Pomare III) which he and M<sup>rs</sup> Crook attended professionally. "M<sup>rs</sup> Crook took the child and managed and dress'd it in the English fashion. The King appeared much pleased and would suffer no one to touch the child but M<sup>rs</sup> C."

June 26. The Queen as well as if nothing had happened. Found Pomare sitting in the School with a few of the principal people about him conversing about a part of the Book of Samuel. Invited him to go home and take breakfast with us but he excused himself.

General till July 20. At our Family devotion we are reading Bogue's Discourses on the Millennium<sup>624</sup> and find them very animating. (!!!)

Met the King's messenger with a note saying that he "would come and eat flour (i.e., pie or pudding) with us". Arrived, he asked me to point out to him Lima on the map that hung up. He knew Cape Horn and the river Amazonia under the Line. We talked of the education of his son, and seemed willing that we should have the charge of him. Aimata attends the children's school, she is getting on very fast with her book.

The infant was most of this day at our house with Pomare Vahine who is his nurse. Our daughter Mary is denominated his mother, being the friend of the Queen. She is diligently employed in making clothes for him. The child is also called M<sup>rs</sup> Crook's son because she has the principal charge of him.

July 20. Brother Tessier who is ill sent to me last Sabbath Day, describing his case and requesting medicines, sent him in reply. Today Bro. Bicknell wrote who has had a severe fit of the fever and Brother Tessier was rather worse.

July 22. A letter from Bro. Bicknell requesting me to come. Set off in the evening and got as far as Burder's Point.

July 23. Found Bro. Tessier semi conscious, soon after, he passed away. "His disease was the dysentery. He was a man very short of stature, not endowed with great capacity but employed his talent faithfully. He was peaceable and inoffensive."

July 24. G. Bicknell made a coffin. In the evening the body was carried to the grave by 6 natives, Bro. Bourne, the 2 Bicknells whilst I held up the pall.<sup>625</sup>

July 29. Having returned to Wilks' Harbour a messenger arrived early this morning from Papara reporting Bro. Bicknell very ill. Got men immediately to prepare the boat and having a favourable passage arrived about sunset. Found him very ill with dysentery.

August 5. Brother Bicknell declining fast. Discontinued the medicine.

---

<sup>624</sup> [David Bogue \(1750–1825\)](#). The [Discourses on the Millenium](#) is described [here](#): "The discourses on the millennium are entirely practical and devotional, and though they want the straining for effect, and the ingenious speculations with which some have clothed this subject, and gained for themselves an ephemeral popularity – for to all such trickery Dr Bogue had a thorough aversion – they will be found strikingly to display the enlarged views and sterling good sense of their venerable author."

<sup>625</sup> A [pall](#) is a cloth which covers a casket or coffin at funerals.

August 6. The symptoms of death appeared. Bro. Henry present. Brother Bicknell sent a dying message to his people at evening worship.

August 7. He had lain quiet for some hours apparently insensible and about half past four in the morning he died. He was aged 54. Brother Henry made a coffin and he with G. Bicknell conveyed the body to Eimeo. Our bereaved sister accompanied me home in our boat where we arrived safe at night.

September 7. The Queen and her sister walked hither from Papara. They much wish to live near us.

September 8. The marriage took place of 2 of the Royal Family. <sup>626</sup> Tupuatooroa, the eldest son of Tati, and Manihinihi, the daughter of <sup>627</sup> Once a relation of Pomare, being of the same line as his father. <sup>628</sup>

September 10. Bro. Nott arrived from Haapape. There assembled in the centre of the Royal Mission Chapel (at Papaoa) the King, the Judges, etc. Brother Nott baptized Aimata and Pomare Vahine calling the latter Taaroamaiturai : I baptized the infant Prince calling him Teariitaria, also the Queen by the name of Taaroa Vahine. <sup>629</sup> There were about one thousand people present.

September 19. The people are building a long good house for the Queen <sup>630</sup> : it is to be divided into several rooms with plastered partitions.

It appears to have been at Papaoa adjoining the Pomare Burial ground. <sup>631</sup> The King had already a home at Papeete.

Journal of Capt Grimes of the brig "Hope", 1821 :

April 28. Anchored at Matavai. Wilson and Hayward returned with him from the Colony. Pomare soon came aboard, and was saluted with 13 guns. Among other gifts to him aboard were 2 cows and calves "from a generous individual". Preparations were in hand for the annual May meeting.

May. Five thousand men, women and children gathered at the Royal Mission Chapel. Canoes daily arriving till the day of the meeting, laden with oil as subscription in response to Pomare's levy for the purchase of a ship for his use (other than the Haweis). <sup>632</sup> Pomare's soldiers were present "under arms". <sup>633</sup>

<sup>626</sup> WWB: (?)

<sup>627</sup> The word *of* is missing in WWB's text.

<sup>628</sup> WWB, in the margin: *The Marama of Moorea*

<sup>629</sup> WWB, in the margin: *Terito*

<sup>630</sup> WWB: (*at? Papeete*)

<sup>631</sup> WWB has (*See Ellis' Reminiscencies*) [sic], whereas he is probably referring to Ellis' *Polynesian Researches*.

<sup>632</sup> WWB: (*This was the brig "Governor Macquarrie*). WWB has *Macquarrie* here and elsewhere, whereas the correct spelling is *Macquarie*.

<sup>633</sup> WWB, in the margin: *First Tahitian soldiers*

“The Chapel no doubt is a wonderful performance if we consider the means used in the building of it, but the wood is not sufficiently durable to insure its standing in its present state more than another year or two.”

The whole of the oil placed aboard was nigh 60 tons.

May 24. Removed to Wilks’ Harbour as not only a safe place for the vessel but more convenient as to receipt of oil.

June 10. Removed to Eimeo and having collected above 20 more tons of oil sailed to Huahine where the casks remaining were duly filled. Sailed to the Colony.

Report of Samuel P. Henry (Henry’s eldest son) dated Brig Governor Macquarie, February 3, 1821 :

Gives an account of his calling at Raivaivai or High Island for provisions and reports abolition of idolatry.

Report of T.A.M.S. Anniversary Meeting at Eimeo, May 9<sup>th</sup> and 10<sup>th</sup>, 1821 :

“At 10 o’clock the bell (or rather iron hoop for that is our bell) rang for public worship in the Chapel Royal at Varare. <sup>634</sup>

Subscriptions were less than last year, amounting to only 1155 bamboos of oil, 284 small baskets of cotton, 88 pigs and 2 balls of arrowroot (but this total was later on largely increased).

The Secretary’s Report was “seconded in a spirited manner by Maamaa, formerly a prophet of Oro”.

“We are much pleased in the outward appearance of the people, most of the women having very decent bonnets made, in the straw bonnet fashion, of Purou bark plaited, or sword grass, or some other plant or grass. <sup>635</sup> The men also have got hats which made a very decent and respectable appearance.

Letter of Secretary of the T.A.M.S. to the Directors :

Matavai Taheite. June 15. 1821.

Dear Friends

With this we present you with some property. You are the root and we are the branches. Our country you know is destitute of money. We have therefore contributed property viz oil, arrowroot, cotton and pigs which is our money. We have sent the oil on board the “Hope” to assist you. We wish you to be candid respecting what we have sent, and if it should prove an article of little value or unsuitable, write to us. We shall not cease to subscribe, death alone will put an end to our subscriptions but the living will carry it on.

<sup>635</sup> WWB, in the margin: *!! Bonnets*

We all know how it is with a tree, that the butt end is the most solid part and the small end is soft and soppy. To the small end WE may be compared and YOU to the butt end.

Poihoi Secretary  
Pomare President

N.B. In the Tahitian language the same word when applied to a tree means “Solid” when applied to a person means “Mature”, also the same word applied to a tree means “Soft”, when it is applied to a person means “Immature”.

Crook’s Journal (continued) :

Wilks’ Harbour. 1821.

February 5. In the afternoon a vessel entered Taone harbour. Later the brig made her appearance inside the reef at Papeete, the boats towing her through an intricate channel. Went aboard to find she was from the “Governor Macquarie” under the command of Samuel Henry. She had been purchased at Port Jackson by Mr E<sup>636</sup> for the use of Pomare.

February 19. Pomare made me a very handsome present of stationary, cutlery and tools. His Steward said it was because I am a Toata Tupu — a friend or neighbour.

February 20. Reached my 47<sup>th</sup> birthday. While at breakfast a ship’s boat arrived and on going down the hill<sup>637</sup> I met Capt Grimes of the brig “Hope” which was anchored at Matavai, bring supplies for the brethren.

To May 5. Busy dividing the goods landed at Papeete equally between the brethren — 14 families stationed between the 2 groups of islands.

May 9. Attended the T.A.M.S. meeting in the Royal Mission Chapel at Papaoa. “Pomare’s soldiers, about 150 in number, were drawn up in order, with muskets and fixed bayonets.”

It was agreed that the Laws should be revised, improved and printed afresh, that Tati and Utami be appointed principal Judges, that the missionaries should be left to determine their Stations. Hoto representing the Chiefs of Raiatea demanded the young child Teriitaria that they might make him King, but this was strenuously opposed by Tati, who would not by any means hear of it. Much bartering was urged to be undertaken between the people and the brethren in the future. It was also agreed that people should be allowed to work for their teachers for wages and that no restraint should be laid upon offers to work (as had been the case for a time). Some conversation also took place concerning each Church supporting its own Teacher but this was left to be settled later.

A note here by the Directors :

It is remarkable that no mention appears to have been made before, respecting the support of the missionaries who have been obliged to maintain themselves chiefly by barter at a vast expense to the Home Society. Probably the missionaries thought it too delicate a

---

<sup>636</sup> WWB, in the margin: ?

<sup>637</sup> WWB, in the margin: *Present day Semaphore hill*

subject to be brought forward by themselves. The Society should if possible be wholly relieved from the burden.

June. Relates to the discovery of a plot to murder Pomare. A man named Pori was at the head, aided by a man named Mooriri. They were apprehended, tried and executed on August 14<sup>th</sup>. Crook was informed by Pomare that the intention was to murder him and his family in consequence of these men's hatred of Christianity.

September 26. Arrival of the Tuscan with the Deputation at Papeete.

October 16. The Deputation with Bro. Nott crossed over to Eimeo to see Pomare whom we hear is dangerously ill.

November 13. The American ship "General Gates" lies in the harbour. The brig "Dragon", Capt Walker, here for repair and refreshing. The Deputation together with Bros. Nott, Davies and I breakfasted on board. We were taken to Burder's Point in his boat where we found the King very ill with the elephantiasis and dropsy in the abdomen, etc., so that he gave the appearance of being a mass of disease.

November 29. Pomare removed to Papeete.

November 30. Attended the King. He seemed restless.

December 3. The King was removed to the little islet for the benefit of the air. He is much swollen, the water fluctuates in the abdomen. Many companies of people, from various parts, have come to testify their concern. They came in procession bearing a very long piece of cloth which they call Ahuoto or Weeping Cloth. This is received from them by the King's attendants when they assemble round the King's bed and weep, the tears gushing from their eyes. After about 10 minutes they ceased weeping and the King desired them to withdraw.

December 5. I asked him of the Succession : he replied that it was settled on his son. I asked him of the Regency : he said that it was not settled but seemed to wish to avoid the subject.

December 6. A ship arrived from Port Jackson.

December 7. M<sup>r</sup> Redfern from Port Jackson — a surgeon — together with Brother Nott and I saw Pomare during the day. "We found him in a very low comatose state with short lucid intervals. Shortly after leaving we were hastily summoned. We saw that his end was fast approaching. In the evening I was sent for again. He continued in a kind of stupor. His wife and her sister hung over him, his cousin Manihinihi, all weeping aloud but Aimata seemed little affected. I held the young Prince at the foot of the bed and watched the King.

At eight o'clock he ceased to breathe.

December 8. The body was removed early this morning from the little islet to Papaoa. An immense coffin was made, nearly 7 feet long and about 3 feet wide at the shoulders. It was lined with broad cloth.

December 10. The people all busily engaged in gathering stones to build the King's tomb.

December 11. At the grave side the soldiers fired and the vessels in Wilks' Harbour fired minute guns.

December 22. The young King is called by his father's name Pomare and is to be formally invested with the government.

A letter from Crook to the Directors dated December 21 :

I shall be glad to receive dresses for young Pomare who is now 18 months old, some superior, some common : also a few elementary books, very well bound as I intend to teach him English.

The 4 bells applied for have been received and appropriated : one to Matavai, one to Eimeo, one to Huahine, and one to the Manufactory.<sup>638</sup> Three more are wanted for Otaheite.

There is a note as follows :

The late King stood full six feet 2 inches high and was proportionally stout. He was the largest man on the island. He stooped in walking, and appeared in general reserved and gloomy. He possessed a capacious mind compared with any of his people. He was fond of power and wished to have the persons and property of his subjects at his entire disposal. He supported the old practice that no woman should eat in any home which the King had honoured with his presence. He was naturally indolent and seldom walked out except to bathe. He was more averse than his people to adopt European customs. His father planted many groves of coconut trees but the only thing of that kind which he did was the planting in the Isthmus some trees of that description. He inherited from his father a partiality to foreigners and was always the friend of missionaries. He was much feared by the people.

Letters received from the Deputation :

August. Describing voyage so far : heavy storms, fireballs but no injuries to ship or those aboard.

“Eimeo. December 3. 1821

We have now been a considerable time — about ten weeks — in these beautiful islands, having landed at Matavai (in Taheite) on the 21<sup>st</sup> of September.”

They deal generally with the people and the Brethren, mention the serious illness of Pomare and their interview with him.

“The engraving which was published in The Evangelical Magazine is a tolerable likeness but conveys an idea of a person of much darker colour, and it has a heaviness about the eyes which he does not possess. It is the general opinion of the natives that the likeness is too short in the visage, that the forehead should have been longer and the eyes a little brighter.

---

<sup>638</sup> WWB, in the margin: *At Pirae*

1822.

Annual Report of the Brethren, May 1821 – May 1822 :

Signed by Nott, Wilson, Hayward : Matavai. Crook : Wilks' Harbour. Darling : Burder's Point. Jones and Davies : Papara. Henry and Platt : Eimeo. The Artizans, Armitage and Blossom : Pirae.

The work of civilization progresses. This is evident. We can refer to the public roads and buildings, the large well built boats, the decent appearance of the females in European dresses cut out and made by themselves.

The Queen and her sister with the young King had taken up their residence at Papaoa.

Brother Bourne had left Burder's Point. It was feared that the printing department of which he had the charge would have suffered by his absence but Brother Darling has succeeded in learning the art.

At Papara the attention of the people has been diverted from their proper concerns by the arrival of ships in the neighbourhood, yet some have made considerable improvements in their dwellings which they have plastered with lime.

On Eimeo — at Roby's Place : On the 20<sup>th</sup> of February the brethren had the pleasure to lay the foundation stone of a new Chapel which is to be of an octagonal form and built with hewn coral rock. The people are carrying on the building with spirit, observing that it will be the first house of stone erected in these islands.

Annual Meeting of the T.A.M.S. held in the Royal Mission Chapel, Papaoa, on the 8<sup>th</sup> of May 1822 :

"The people made a much better appearance than they did last year. A great number were clothed in European style and not a single female was observed without a bonnet. <sup>639</sup>

Brother Nott lamented the death of their late President, King Pomare, who had given rise to this Society. He moved that the young King be appointed President in the room of his deceased father. This being agreed to Hitote (with the young King in his arms) <sup>640</sup> as his representative took the Chair.

General : Messrs Armitage and Blossom change site :

#### Report to Directors

Induced by the natives to settle at Pirae (in place of on Eimeo) in the District of Pare. They had hitherto met with great impediments in their efforts to introduce the manufacture of cotton cloth. The progress was very slow owing to the indolent habits of the people.

---

<sup>639</sup> WWB, in the margin: !!!

<sup>640</sup> WWB, in the margin: *one year 11 months old*

May. The Westmoreland (Capt Potter) and the Sydney Packet (Capt Emmets) in Port :

Capt Potter and 2 gentlemen of his passengers dined during the May meeting together with the various missionaries and a few of the principal Chiefs at the young, infant King's house at Papaoa. In the absence of his mother the Queen, his Aunt entertained the company in the English Style as far as her means would allow.

## 6. Extracts From the Quarterly Chronicle, Volume III

covering the years from 1825 to 1828.

Published in Book form  
1829.

Deals almost wholly with the Deputation's Report.

Report "Down to July 24, 1823" :

Matavai is a fine district lying Eastward of Pare and joining it at One Tree Hill and at the distance of 8 miles from Papeete or Wilks' Harbour.

That part of the district in which the new Chapel <sup>641</sup> is situated and where the missionaries reside, and which is on the banks of the Matavai river, is called Haapape, near the head of the Bay. It was here the first missionaries landed and here they took up their residence. On the narrow neck of land which runs down between the Bay and the Matavai river and near Point Venus was a large house built by the natives for Captain Bligh. This house was given to the missionaries and here they resided for a season till they had completed a more substantial dwelling house on the opposite side of the river and about 100 yards from it. Westward of their house they planted a fine grove of orange, lemon, citron and tamarind trees, all of which are now in their prime and bear large quantities of fruit which the natives use. From these trees others have been raised all over this and the other islands both in the Windward and Leeward Groups. The missionaries had been driven from the place by war and did not return again till December 1817 when the Rev<sup>d</sup> M<sup>r</sup> Wilson came from Eimeo. The Rev<sup>d</sup> M<sup>r</sup> Nott who returned from the Leeward Islands joined him in 1819 to be near King Pomare and obtain his assistance in translating the Sacred Scriptures. In 1818 two Chapels in the style of the native buildings were put up at Matavai, one at each end of the Settlement for the convenience of the people. These going rapidly to decay, a large and well built Chapel has been erected 98 feet by 42 feet. It was finished and opened for public worship in the month of October last year (1822). It is situated within 200 yards of the spot of ground which was occupied by the first missionary Chapel built by our brethren soon after they first landed.

Papaoa. Since the death of Pomare, the Royal Family have resided principally here, the place of his internment, which is situated on the opposite side of Matavai Bay and distant from Haapape about 4 miles by land. As soon as M<sup>r</sup> Nott is settled in his new home here (he was then at Point Venus) Pomare is to be committed to his care for education. The Queen Mother Patia, <sup>642</sup> the widow of the late King has no authority. She has lately degraded herself by being tattooed; <sup>643</sup> her sister who goes by the name of Pomare Vahine is called the Queen and possesses the principal authority, in fact both in Tahiti and Eimeo

---

<sup>641</sup> WWB, in the margin: *The 2<sup>nd</sup> Chapel*

<sup>642</sup> WWB, in the margin: *Terito*

<sup>643</sup> WWB, in the margin: *!!!*

through Ariipaea who is Chief of the District of Pare, who is officially Regent for the young King. The Royal Family all reside within Pare, having 3 or 4 establishments in different parts of that District. Pomare Vahine has her house very near the large Chapel Royal which is about the middle of the District, Pomare's tomb is within 2 or 3 yards of her dwelling.<sup>644</sup>

The tomb consists of a stone building, 10 feet long by 8 feet broad and raised above the ground about 4 feet : over this is raised a roof of wood which rests on the walls of the tomb on the 2 sides. In one of the gable ends, which are filled up with boards, is a door through which the coffin has been introduced, and which now stands within covered with black cloth and supported by a scaffold. This tomb is enclosed in a wood built and plastered house, the door of which is carefully nailed up. There is a small window.

Papeete. This Station is called by different names as Hope Town, Papeete, Paofai (the name of a very small part of the land near the missionary's house), Wilks' Harbour and Fare Uti as the natives call it.

The west end lying along the shore is where the Chapel, the Schools and the missionary's house stand.

The people have laid the foundation of a large new Chapel which is to be substantially and handsomely built of timber and plastered, of an oval form 80 feet by 47 feet and to have 2 galleries for the children of the schools. The Building at present occupied as a Chapel is old and going to decay. We had the satisfaction to assist at the laying the foundation stone of the new Chapel (1823).

Eimeo or as it is more commonly called by the natives, Moorea.

Afareaitu. The Royal Family are much attached to this place : and here Pomare's then only son, an infant,<sup>645</sup> was interred near to a large public marae. His grave<sup>646</sup> is enclosed by a strong high wall.

Several of the missionaries resided here for a season but it was afterwards forsaken until it was selected for the place of the School. (The South Sea Academy opened in 1824, for Chiefs' and the Brethren's sons. It opened with 27 pupils.)

Papetoai. The Chapel in present use is a native house 80 feet by 25 feet but this will soon be abandoned for a stone building of extraordinary workmanship. The walls were nearly completed when we left (for other islands) and are about 20 feet high. Over each of the 4 doors is an Inscription well cut in the coral stones. Those over the East and West doors are in Latin, that over the South door is in English and that over the North is in the Tahitian language stating the day of the month and the year of the reign of the King when the foundation stone was laid. It was planned and principally superintended by the Rev M<sup>r</sup> Platt. (He was stationed there 1817 to 1824.) The Building stands upon the site of an old

---

<sup>644</sup> WWB: (*See Ellis' Sketch of 1821*)

<sup>645</sup> WWB, in the margin: *Teina*

<sup>646</sup> WWB, in the margin: *Still existant*

public marae. Its form is octagonal, 60 feet in diameter : the doors and windows are semi circular and well proportioned. (It was not completed and opened till 1829.) <sup>647</sup>

### Tahiti

Burder's Point — Punaaūia. Has a 15 mile waterfront. Four miles up the (Punaru) valley here, on the right hand side, is a curious basaltic mass called by the natives Ofaimarama or Moonstone on account of the face it presents having the figure of a half moon. It stands at the foot of a high perpendicular mountain of conglomerated volcanic rubble. It appears like the end of a cylinder, one half visible, the other half concealed in the ground. Round this stone there is cutting made into the mountain, 8 feet deep, made by the natives as if to examine the curious stone which is remarkably smooth on its surface.

About 10 miles up the same valley we came to a conical mountain, rising as it were out of the valley and filling it up. The view from its summit was of unexpressable grandeur.

Another valley, Orofura, lies 5 miles south of the Settlement. We penetrated it some 8 miles up. We were forced to cross the river (which labours down the valley) with great frequency. Masses of coarse pudding stone have been detached from the mountains at the side. One detached mass was formerly regarded with great fear. They still call it Hiro's Hiding Place. Once, they say, when Hiro, their god of Thieves, was detected in the act of stealing, he hid himself behind this grotesquely shaped mass.

Many battles have been fought in this valley between the natives north and south. Up this valley was the Pari or Place of Refuge which is a very narrow part where the mountains overhang and where the Attahuruans had thrown across a strong wall breast high behind which they entrenched themselves. A little above this Pari in a circular expansion of the now broad valley our attention was attracted by something white in a slight recess of the perpendicular face of the mountain 400 feet seemingly above the river. We were told that these were the bones of a Chief. We doubted if even a cat could have reached the place but the natives said that the man who carried the corpse was one who only by accident was not present with our company, that there were only a few who made such performances their business and were capable of doing it, and perhaps the Evil Spirit aided them. At the entrance to this valley there is the ruin of a national marae. Here High Chiefs were inaugurated to their office. Today Utami and Noho are the Chief and sub Chief.

The actual Settlement is almost the centre of Punaauia.

Haweis Town : Papara. A waterfront of some 14 miles. We gave the village this name in honour of that great and zealous patron of the mission and by request of his relicts who were desirous that some missionary Settlement might bear his name.

The many streams sweeping down to the sea have by their silt gradually formed land in a one time much broader lagoon before reaching the reef.

Tati, the present Governor of this District, is of a gigantic size being nearly 6 ft 2 inches in height and well proportioned. His manners are very agreeable.

---

<sup>647</sup> See also *The Island of Moorea* in Part X, *Tales of Roaming*.

Oberea's marae is now going rapidly to ruins. Its coral rock has been cut flat with stone adzes, the natives' only tool, and correctly squared. Other stones are of a black colour of hard texture, round at the ends and flat in the body so as to lie flat on each other.

Lake Vaihiria is about 24 miles from this place. We reached it with great labour. It is about 15 miles from the seashore. It took from 6 a.m. to 3 p.m. to get up to it, crossing afoot 73 times on the way up a river that has no visible commencement. The lake is about a mile in circumference, surrounded by mountains some 2000 ft high. By barometrical measure we found the lake more than 1300 ft above the sea. Its depth was found by a French visiting naval officer to be 17 fathoms (102 ft). Its only fish are eels of a great size. It does not appear to be the supposed crater of a volcano.

Bogue Town — Tautira. Pomare from Tahaa and Aimata, his wife, daughter of the late King, have lately been appointed Governors of this District where they now reside. Under them the principal Chief is Veve.

There is no low land at the eastern extremity of this part of the island. At the "Rocks" the sea washed the foot of the mountains. To pass round the end of the island, the mountains must be scaled or a passage made by sea, a dangerous undertaking.

Maupiti is nearly 40 miles due west from Borabora. It is about 12 miles in circumference. Its height and outline can be seen at a considerable distance, its central mountain being about 2000 ft high. Its reef is from 300 yards to a mile irregularly from the shore. On the reef are low islands of different sizes, one of these being several miles in length. There is only one Entrance, very narrow, not above 70 yards, a depth sufficient for vessels up to 100 tons, a dangerous Passage at any time. Its mass of central rocks are heavily verdured. One huge mass which rises almost perpendicularly some 700 feet from the sea shows seemingly parapets, doors, windows and niches. The common stone of the islands abounds, it is of a heavy colour, honey combed and indicates the presence of iron. The coarse building stone of conglomerated rubble abounds. Special kinds here seen were : one a fine grained heavy black basalt used for making their Penu (or pounders for making Poipoi) which takes a polish : another a near approach to granite of extreme hardness. There is one hill some 800 feet in height composed of this stone. The Vi apple abounds. There are a great variety and masses of sea birds. Ashore pigs and dogs were very numerous. Flies were very bad, but neither mosquitos nor fleas numerous. The people have built a stone pier, broad and extending 500 feet into the lagoon.

Taero, the amiable King of Maupiti, is between 40 and 50 years of age. Formerly he was the Chief under Tamatoa, the King of Raiatea, but is now in full control with consent of Tamatoa. He is much afflicted with Fefe (elephantiasis).

The ruins of idolatrous maraes cover this island. This is not a formal Station but is served from Bora Bora by Brother Orsmond.

Maiao or Maiao-iti signifies "a little foot" given to it since its form bears resemblance to the human foot. It is also called Tabuai-manu and Tapua-manu which mean the sole of the foot. It has no opening in the reef except a very narrow one on the west side which is always a dangerous venture. It appears to consist of several small islands : the principal one stands in the centre rising 600 or so feet and is of an oblong form. This and the others

are united by a low alluvial land formed by the sea, all of them within one continuous reef. The island's outline is about 10 miles. On it there are several Aito trees of an astonishing size, also a single Ana tree 80 feet in circumference. Both kinds are Sacred. The Chief is Mahini who lives on Huahine. The inhabitants are of a remarkably light colour, many of them as fair as some of the English, especially those women who here are not much exposed to the sun's rays.

Crook's Journal (continued) :

There is an unfilled gap from 1821, Vol. II.

1825

September 20. Bogue Town. The brethren Orsmond and Darling together with the young King arrived together with the Queen Regent, her two sisters and a large concourse of the people to attend the opening of our new Chapel.

September 25. The Court is become exceedingly corrupt and we anticipated much trouble from their presence. But they were under restraint and their stay was short so we have reason to be thankful.

December 14. Brother Pritchard has removed to Wilks' Harbour and M<sup>r</sup> Blossom is to remove to the Seminary at Afareaitu.

1826

May 10. Papaoa. A great number of people attended the Annual Meeting. The Chapel was filled and it was impossible for one preacher to make himself heard by all, Brother Darling preached from the easternmost pulpit and Bro. Orsmond near the west end.

May 12. Spent the greater part of this day in assisting the people to revise their Laws.

June 16. Went to Wilks' Harbour with our 2 daughters to spend a Sabbath with M<sup>r</sup> and M<sup>rs</sup> Pritchard.

Brother Pritchard is or speedily will be a zealous, effective missionary. I think it is a kind Providence that he is placed at Wilks' Harbour : and cannot but think that were there to be but one missionary on Tahiti, he should be at Wilks' Harbour as it is the general sea port and the key as it were of the island.

## 7. Crook's Journal of His Residence on the Marquesas

Notes  
from a MS in the possession  
of  
The Mitchell Library  
Sydney<sup>648</sup>

### Life

W. P. Crook. Born 1775. Arrived Tahiti March 5, 1797.  
Arrived at the Marquesas June 6, 1797, aged 22.  
Left the Marquesas January 9, 1799.  
Arrived England May 19, 1799. Married in London.  
Arrived Sydney 1801 and remained there till 1816.  
Arrived Moorea 1816.  
Appointed to Papeete 1818.  
Appointed to Taūtira 1823.  
Left Tahiti for good 1839 and retired from the L.M.S.  
Died at Melbourne June 14, 1846, aged 71.

See *Voyage of the Duff to the Marquesas* for Crook's Journal up to the departure of the Duff leaving Crook alone in the Group.

### 1797

Alone,<sup>649</sup> Crook spent much of his time at first studying his Bible. The natives thought that he was fretting after his friends and in their own way consoled with him. He tried to explain to them that his book contained the Word of God but they could form no better idea than that he worshipped the Bible and he found it very difficult to convince them otherwise.

Food was very short and he could seldom procure a canoe to fish at sea. Sometimes he swam out for that purpose with a hook and line in his hand, the bait tied round his neck. Many of the natives died of starvation.

He had not been long on the island when he saw the bodies of 2 persons — killed during a raid on Hivaoa — cooked and eaten by the priests. "It is pretty evident that persons are not slaughtered merely to be eaten, as it does not appear that even during the severity of this famine anyone was killed for that purpose."

He was occupying still Chief Teinae's (the Tenna of earlier Journal) "tabbued" house up the valley but his efforts to grow vegetables grew unsuccessful and his iron tools were stolen. In November he

---

<sup>648</sup> Crook's journal was published in 2007 as [An Account of the Marquesas Islands, 1797–1799](#).

<sup>649</sup> At Vaitahu, in Resolution Bay, on the island of Tahua

therefore removed to the habitation of the Chief's younger brother Buakka where he had no longer to complain of want.

In January 1798 the main harvest of breadfruit proved a good one and many of the natives moved their habitations toward the seashore. He decided to follow their example and decided to build a home on the stone platform which from the period of Captain Cook's visit was known to outsiders as Hete Hete's Pipi.

In February the "Alexander" of Boston, Capt Asa Hodge, anchored in Resolution Bay and remained 3 to 4 days. The Captain showed him much kindness. Crook handed over to him his Journal up to date, also a vocabulary of Marquesan words which he had already compiled by degrees, all to be forwarded to the Society (which were duly received one learns) "but my mind was at that crisis so much agitated that I found it in vain to attempt writing a letter to the Directors".

The young Tahitian boy (Harrameia) who had come ashore from the Duff was willing to leave and went aboard but Teinae and one of his brothers followed him and prevented his departure.

Note. Elsewhere he reports that this boy had come on the Duff as an attendant of Peter the Swede. He was suspected of having stolen a ship's compass and fearing punishment he went ashore and secreted himself among the natives. Crook thinking that his remaining would be hurtful rather than useful to him endeavoured to have him sent on board the Duff but the natives who wished him to remain took him off to another part of the island to the house of Chief Duteitei. Quickly able to speak their dialect he had spread various reports to the prejudice of the Duff's people with a view to exalt himself in the opinion of his new friends.

A Sandwich islander on board the American boat greatly attracted the natives and he agreed to stop ashore. He spoke some broken English and accommodated himself with great facility to the native dialect. He desired Crook to teach him to read and write but his attention could not be fixed, and after a few days he gave up learning. He acted however in a friendly manner to Crook whom the natives had now begun to treat with comparative contempt, saying that he could do nothing but pore over his Book while Tama (the Sandwich islander) could throw a stone or a spear further than any of them.

This condition of affairs lead to Crook deciding to leave and take up his residence in another locality ; and he had started on his way to Anateiteina (where the Chief Duteitei lived) when Tama followed him and with tears said that where Crook went he too would go. Tama then returned with Crook and spoke sharply to the natives and Teinae the Chief concerning their neglect of the white man who finally resolved to remain at Wittahue, <sup>650</sup> the name of Teinae's village.

He could by now converse with the natives in their language on subjects within their comprehension but he had great difficulty in obtaining intelligent replies to his questions as to the meaning of many of their words. He failed entirely in his efforts to convey to them any idea of other parts of the world. They were apparently incapable of conceiving anything unlike what they had seen.

His attempt to teach the children the Alphabet and a few monosyllables was not much more successful. A few learned these perfectly but on the whole they preferred to laugh and play instead of being taught. Like the children on Otaheite and adults in some of the other islands near there, they expected to be rewarded for submitting themselves to be taught. "I had nothing to bribe them with but clothes and pieces of iron, and if these had been bestowed upon the children it would have given

---

<sup>650</sup> WWB, in the margin: *Vaitahu*

umbrage to the Chief who considered himself as having first claim upon his adopted son's liberality." In consequence he desisted in his efforts in that direction.

His efforts to explain the Christian religion met with little understanding. Buakka would listen attentively and then say "Very good. Now hear of us and our gods." Tama, speaking to the natives of God said that the English had no gods. He had been in their country (meaning of course America) and never saw any but in his country (Hawaii) they had gods which he described. These being like their own gods they understood and were so pleased that they sacrificed a hog in honour of Tama's gods <sup>651</sup> upon which Tama feasted along with the priests. They made him their Toa or chief warrior.

Crook knew the island well by now, visiting various parts both by land and water.

On the 21<sup>st</sup> of May (1798) seeing a ship attempting to beat up to the harbour, Crook went off to her in a canoe in the evening accompanied by some natives. She proved to be the "Betsy", an American ship, Captain Edward Fanning, who despairing of getting up to the harbour had already determined on bearing away. Crook advised him to touch at Nuquheva of which island the Captain had no knowledge. "Wishing not to lose the opportunity of writing to the Directors of the Missionary Society and apprehending the great difficulty of regaining the harbour from the distance to which the ship had drifted, I resolved though destitute of everything to accompany Capt Fanning to Nuquheva from whence he knew it was possible — at some future period — to revisit Tahouatta." He told his intention to the leading native with him and was given by him the names of the principal persons on Nuquheva to whom to introduce himself. The natives however returned to the shore with the firm belief that Crook had availed himself of the opportunity to return to his own country.

The Betsy with Crook aboard arrived off the S.W. of Nuquheva on the morning of May 24, 1798. They approached Port Anna Maria and a boat was sent to sound the harbour. As the boat neared the beach of Tiyofoe the natives assembled on the beach. Crook called out to a party of priests (when he recognized them as such by their dress) in their language to send some one to speak with him. Two of the priests waded into the water and on Crook's invitation entered the boat. On hearing that he was Kruka of whom they had heard of from Tahouatta and that it was intended to bring the ship into the harbour, they consented to go to her, and went aboard. As soon as the anchor was dropped, they, with Crook, sprang overboard and swam through the surf, he being picked up by a native and carried ashore.

One of the 2 priests was a Chief who at once presented Crook with a piece of white cloth and asked him to declare himself the namesake with the native priest's little grandson Pakouteie (by which name he went during his stay) and as the Chief bore the same name it elevated Crook to equal rank with either of them. Some ornaments were also given him and he slept that night in a tabbu house along with the Chief and some others. Another name of the Chief was Keattonue.

The next morning till noon was occupied in installing Crook in his "new affinity and dignity". Presents were then taken on board the Betsy. By the next day she was fully supplied with coconuts, breadfruit, etc., and the natives helped to water the ship. After a short stay the Betsy sailed and Crook found himself in a new Station without any property, everything he possessed having been left behind at Witahha. <sup>652</sup> he had however procured a Bible and some coarse writing paper from those on the Betsy.

---

<sup>651</sup> WWB, in the margin: !!

<sup>652</sup> Presumably another spelling of Vaitahu.

“Whatever I now asked for was given me and I found my situation so much preferable with respect to the abundance of provisions and the conduct of the natives that I determined upon remaining at this spot.” At the first opportunity he sent word to Witahha of his present place of residence so that any vessel which touched there might be advised of his whereabouts.

He was residing in Keattonue’s house at Maio where there was little or no privacy for him and desired to build a house and make a garden for himself. The Chief showed no objection to selecting an area. This he did on the advice of a native friend named Heehue. It was a cleared level spot near a stream where Crook had already planted some radish seed from the Betsy. The natives helped him fence it. Heehue assisted him both to build the house and plant the garden. They discussed religion and Heehue appeared to be impressed, asking many questions as to how he ought to conduct himself. Crook made prayer with him and ere long he could repeat some taught him. The Chief however avoided the subject saying that he did not know even this or that tree so how could he know God. Some showed a slight interest.

In December 1798 two ships anchored in Nuquheva’s Comptrollers Bay. Crook made 2 attempts to reach them by water but failed. He then went overland and proceeding down a valley called Okkabui reached the shore. Here a canoe was obtained and he together with the local Chief, his brother and his son in law went out to the ships. They proved to be the “Butterworth”, commanded by Lawrence Frazier : and the “New Euphrates”, its Captain, Henry Glasspoole, both ships whalers which had come from Wittahue to repair storm damages. When leaving that Bay, a Chief’s son named Temoteitei was aboard the Butterworth and was detained aboard as a boy was wanted. The cook of the New Euphrates — James Roberts — had deserted and a native named Onoete from Tahouatta had filled the vacancy.

Roberts had been secreted by the natives, his later conduct however lead them to treat him as “a most contemptible person”.

The 2 whalers were anchored near the district of Tipe (Melville’s Typee) between whom and the people of Tiyofae there was much enmity. On the approach of Crook’s canoe, those on board the “Butterworth” thought by his appearance that he was a native woman till he addressed them in English.

The people of Tipe pilfered many articles from these whalers and Crook advised the Captain to remove to Tiyofae but they delayed doing this, preferring to send the boats there for provisions. A land turtle was given to Keattonue and he was promised an English sow. Capt Glasspoole urged Crook to accompany him to England.

“I deliberated upon this proposal which was rendered eligible by the probability that this ship would arrive in England previous to a second voyage of the Duff. In the meantime little effect could be expected from my solitary attempts at Nuquheva and my opportunity of conversing with the native on board would be advantageous to my progress in the language. The information I could afford to the Directors might be of considerable use in the equipment of the next mission.”

A circumstance also unexpectedly occurred which at first added to his reasons for departing. All the able seamen in the Euphrates went ashore one evening with the resolution of deserting and settling down on the island. Some of them who had been with the boats to Tiyofae had observed the great respect with which Crook was treated and formed high expectations of their reception among the islanders. In this view they soon found themselves disappointed. The Captains tried to persuade the seamen to return on board but they refused saying that they had been ill treated, and that the Euphrates was so leaky as to endanger their lives. The Captains then detained suddenly all the natives who

happened to be aboard their ships which caused the natives on shore to threaten to kill all the seamen unless their friends were released. Crook mediated successfully with the different parties concerned in the strife and in a day or two the seamen returned and the natives were released.

Keattonue being informed by Crook of his purpose to go Home in order to return with better means of doing them service reluctantly agreed. He had been treated with much attention by the Captains and the sow which was on board the Euphrates was now sent to him to Tiyofoe, the ships being designed to follow the boats the next day. Crook went with the boats. On the evening of the 7<sup>th</sup> of January the whalers arrived at Port Anna Maria but did not anchor, standing off and on. Crook took charge of the bartering on behalf of the Captains, exchanging iron tools, earthenware, etc., for hogs, coconuts, native ornaments, etc.

Heehue much desired to accompany Crook to England but the Captains declined to take him on account of his age which was between 40 and 50. Onoete who had come from Tahouatta desiring to stay with Crook on Nuquheva was permitted to do so, and went ashore : a boy named Hekonaেকে of Tiyofoe agreeing to fill his place aboard as cook.

On January 8<sup>th</sup> 1799 “the ships made sail that night and at sunset the next day took their departure from Tahouatta” (where he had first landed).

Nothing of his reception there.

On January 28<sup>th</sup> he transferred (? at sea) from the Euphrates to the Butterworth, it having been resolved by the 2 Captains that the latter should proceed direct to England, while the former continued its whaling operations.

The whaler with Crook and Temoteitei on board reached London in May 1799 and the Euphrates with Hekonaেকে on board arrived there in October 1799.

Another whaler, the “London”, Capt Gardener, had dropped anchor at Wittahue on January 8<sup>th</sup> 1799 : made a run to Nuquheva in February. Returning to Wittahue it sailed for London on March 1<sup>st</sup> leaving behind on Tahouatta a French boy (? from where) named Jean Joseph, taking in his place the Tahitian boy Harrameia who had come ashore from the Duff (see above). The “London” arrived Home with Harrameia on board in November 1799.

The MS concludes with “The change of climate much affected the health of these 3 Islanders.”

In conjunction with the MS there is a very ample description of certain islands of the Marquesan Group, also of the physical characteristics, manners, customs, etc., of the inhabitants. There is nothing to show at whose hands. Crook’s knowledge was limited but likely enough he helped.

Islands mentioned as follows : only 6 inhabited.

- |           |  |
|-----------|--|
| Fetthieva | (Today Fatu hiva) Mendana’s La Magdalena. Distant about 10 leagues from Tahouatta. The rock 5 leagues south is called Moto nao or “The lost island”. Inhabited.  |
| Tahouatta | (Today Tahuata) Mendana’s Santa Christina. Wittahue is the proper name of the fertile country adjacent to the Bay where all European ships have anchored, including the level ground at the head of the harbour and the 2 northernmost valleys which open into it. This port was called by Cook Resolution Bay. Inhabited. |

Hevaoa	(Today Hivaoa) The most populous island of the entire Group.
Mohhotane	(Today Mohotani) Mendana's San Pedro. About 10 miles from Tahouatta. Uninhabited.
Fettuugu	Cook's "Hood's Island". Uninhabited. <sup>653</sup>
Wapo	(Today Upo) Named "Trevennen's Island" by the Commander of the "Daedalus". <sup>654</sup> When en route from Tahouatta to Nuquheva in the "Betsy" Crook went ashore for a few hours. A constant intercourse exists between Wapo and Nuquheva, its population equals Tahouatta's.
Huahuka	Also Huahuna. Island inhabited. <sup>655</sup>
Nuquheva	(Today's Nuku hiva) Also mapped as "Sir Henry Martin's Island". About 18 miles long and nearly as wide in its widest part. Not as thickly populated in proportion to its size as some of the other islands. Port Anna Maria is nearly in the centre of the south coast. Comptrollers' Bay is on the east coast. The distance between the two is about 2 leagues. These 2 harbours are superior to any yet known in the Pacific Ocean. Keattonue, the Chief of Tiyofoe (today Taiohae) is the Greatest Chief and also a priest.

The Windward Group are as follows : Fettueva : Tahouatta : Hevaoa : Mohotane : Fettuuga.

The Leeward are : Wapo : Huahuka : Nuquheva.

Note. Mosquitos very troublesome in the Leeward group, seemingly "not yet reached the Windward".

A good deal of inter tribal fighting and some inter island, the latter chiefly between Tahouatta and Hevaoa.

Whales sometimes driven on the coast and caught. Their teeth esteemed so valuable that natives will part with anything they possess in exchange for them.

There are rats, lizards and pigs, the latter alone eaten.

Captain Wilson of the Duff gave Chief Teinae a male and a female cat (also 2 cats to Crook). These quickly multiplied, went wild, killed off many of the rats. The only dog known is one that Crook received from the "Betsy". He took it with him from Wittahue to Nuquheva.

Capt Wilson also left a goat with Crook. After giving birth to 2 kids, a male and a female, it was killed. One of the kids was transferred to Nuquheva.

Fowls are mentioned as gifts, not indigenous.

---

<sup>653</sup> [Fatu Huku](#)

<sup>654</sup> WWB has *Trevennon's Island*.

<sup>655</sup> [Ua Huka](#)

Concerning Crook's promise :

Crook's promise that he would return "with better means" of serving was not kept. Reasons are not known to the public for letting the opportunity pass. Crook however clearly did not forget, for years later whilst working on Tahiti, he sailed again for his first island Tahouatta early in the year 1825 leaving 3 native teachers there. It was too late : the field in general had been occupied by other Faiths than his.

Harris' Defection :

A MS dealing with this matter varies somewhat from Crook's diary as recorded on pp 45–49. By whose hand is unknown but seemingly taken down from conversation of Crook on his return Home by friends interested in his adventures.

Extracts.

On June 6, 1797 the "Duff" arrived in "Resolution Bay", Tahouatta or Santa Christina Island. Teinae the Chief urged Crook and Harris coming to reside with or near him. Their goods were landed the following days.

Crook at once went ashore with the Chiefs. Harris did not land till the 14<sup>th</sup> and "found their provisions (native goods) and manners disagreeable".

Teinae went off to Hevaoa and left them to get support as best they could during his absence. On his return he brought a gift of fish.

The following day he took Crook off on a visit to Enuapoo leaving Harris to the care of Tepaihena whose conduct was such as determined him finally against remaining. He had also been unprovided with food whilst Crook was likely to fare well.

On Crook's return the 2 went aboard the Duff, Crook returning ashore determined to remain even if alone.

The belongings of both men were at Teinae's, about a mile from the beach. Harris had a large red feather in his box and had shown it to the Chief's children. The Chief and others were keen to obtain such a prize and a part of it was given to them by Harris. When he prepared to depart they were reluctant to remove his goods to the beach.

Late in the afternoon of the 23<sup>rd</sup> he obtained the assistance of 2 men and they started for the beach despite Crook's warning of the danger of being benighted. Crook urged Harris to wait till the morning when he would assist him but Harris started off.

During the night Crook heard that Harris had been obliged to remain with his box on the beach but a stream which he would have to cross to go to the assistance of Harris being swollen with the heavy rain he dared not attempt it.

A crowd of the natives gathering round Harris in the night frightened him. They broke open and plundered his box. Teinae brought the news to Crook in the morning, with tears, and apparently in fear of Capt Wilson's resentment when he had heard of what had happened.

With the help of some natives Crook and the Chief carried some bags of his left behind to him. They found him on the beach sitting on his box. The boat from the Duff could not approach the shore on account of the heavy surf so Crook swam off to it and advised the officer in charge of Harris' situation. The boat was brought nearer, the box and bags put aboard and Harris himself (unable to swim) was carried to the boat and so to the Duff.

(He quit. He had had enough.)

## 8. Extracts From Lewis' Journal

from  
the MS among the Haweis Papers  
in the  
Mitchell Library, Sydney.

The daily Entry commenced July 7<sup>th</sup> 1798 and stops on August 21<sup>st</sup> 1798.

Where further Journal entries are is unknown, seemingly lost or misplaced by D<sup>r</sup> Haweis. It is not at all likely that they were destroyed by the Brethren at Lewis' death.

"The Haweis Papers" were collected by his son in 1872. He endorses the first page of Lewis' Journal, "Persecution of Lewis by his comrades". He further remarks on the copy of Lewis' reply to his being cast out of the Society, "This must be Lewis' defence for his native wife. Very able."

There is also a "N.B. My father called him Poor Lewis and wished he had been with Vanderkemp<sup>656</sup> in South Africa when he would have been better esteemed."

1798

July 7. This first entry records that the brethren received very coldly his intimation that he had determined to go live with his native friend at Ahonoo about 3 miles from Point Venus.

It appears that one of the first things he took in hand after leaving Matavai was the erection of a house for himself. (No thought of marriage?)

July 25. On a visit to the British House to obtain some boards he had there, he found the brethren a little better disposed towards him. They were "so kind as to let me have the use of a grinding stone".

July 29. Attending the Sabbath service he "found an amazing coldness of affection" in his brethren.

August 1. "This morning I was greatly distressed in spirit. My thoughts were much occupied and agitated concerning forming a connection with a native of Otaheite. The subject had been much in my mind for sometime before. The disaffection of my brethren on account of my coming here contributed much to my present mental trouble. However, after earnest prayer to God for direction, I wrote to my brethren the following letter, a copy of which is as follows :

"Brethren and Sisters

"After a long and great conflict of mind I now inform you that it is my fixt determination to take to wife one of these natives, and through the assistance of Divine "Providence to abide faithfully towards her until death, thinking it the most eligible step in the present circumstances, all things considered.

---

<sup>656</sup> [Johannes Theodorus van der Kemp \(1747–1811\)](#)

“Dear Brethren, although you may be otherwise minded yet I pray you to remember this, that while in this tabernacle we see but in part and know but in part, many things might be said on the present subject, but I forbear, submitting the whole to Him who disposeth all things to their final end, and may the Lord order our steps, both yours and mine, to His eternal glory and our felicity.

“I hope you will return an answer to this by the bearer. I remain

“Yours affectionately in the bonds of the Gospel

“Thomas Lewis

“Wednesday Aug<sup>t</sup> 1<sup>st</sup> 1798.”

At the same time he wrote a few lines to Broomhall asking for some pitch. While awaiting the bearer’s return and “having the above subject greatly impressed on my mind I sent for the parents of the young woman and herself to my abode and told them solemnly what my intentions were and in what manner I meant to act towards their daughter and towards them as her parents, in the best manner I could in their language, to which proposals all three agreed by saying “Weteearoa” : in consequence of which I delivered to her parents some articles according to the custom of the country : may the Lord who is a witness to these transactions ratify them.”

He records that his letter was not answered nor did he receive the pitch but “was left to a conjecture as to the cause. The Lord, I doubt not, will unravel in His own time the present providence.”

August 2. He attended a meeting of the brethren at Matavai and notes that Jefferson, Eyre and Harris refused to marry him to the native woman.

August 4. Receiving the notice of his excommunication he enters a copy of his reply in which he reminds Harris and Eyre that when he had discussed the matter privately with them Harris had advised him to live for some time with the natives before raising the question of marriage as also giving time to soften any hard feelings over his leaving the British House for Ahonoo, “Be not hasty in such matters as these” : and Eyre had said that if he (Lewis) felt that what he proposed to do was for the glory of God, he (Eyre) knew of no objection in it to his performing his duty as a Minister.

(There is no mention of Cover’s attitude on the general Question — he the other minister had fled the scene.)<sup>657</sup>

August 5. “I spent this Sabbath in contemplating the above events, considering how far they might tend ultimately to the glory of God and the furtherance of the work of the Mission, as nothing but a conviction of such a connection being more to the glory of God and the furtherance of the work hath induced me to take this step : the conduct of my brethren and the event itself, with the circumstances attending both I hope the Lord will cause them to work for our mutual good and enable me to cast my burden daily upon Him.”

August 7. “I felt a great anxiety for doing some good to these poor natives, but they seem deaf to all as yet.” He notes that the erection of his house proceeds very slowly. (He appears so far to be with his friend.)

---

<sup>657</sup> [Cover](#) went to Sydney on the Nautilus, leaving Tahiti on March 30, 1798 and arriving in May 1798.

August 10. “This morning I went to the British House and found brother <sup>658</sup> Bicknell friendly disposed and was informed that some words had passed between him and M<sup>r</sup> Jefferson. When the latter could no longer endure it seems the force of the other’s words he rose up and besought God to distinguish which of them was His by some signal judgement, and without waiting for the same addressed the other brethren beseeching them to do him justice by turning M<sup>r</sup> Bicknell out of the Society, which was not agreed to, for it seems they all agreed to commemorate the Lord’s death without administrating either of the elements to him, but is next door to it <sup>659</sup> : and without any form he is excluded from all their private conferences.

“I spoke to M<sup>r</sup> Broomhall and M<sup>r</sup> Harris, both of them spoke very freely to me on diverse subjects but we did not touch on the subject of my exclusion.

“I went to M<sup>r</sup> Eyre’s Apartment and offered to shake hands with him but he took no notice of it and turned off with a great air. I then spoke to M<sup>rs</sup> Eyre who answered me as usual. I stayed a little while, but he continuing quite sullen, I left the room. I spoke likewise to M<sup>r</sup> Nott who readily gave me his hand, but lying down and very feverish he spoke but very little. He did not seem morose. About 4 o’clock I returned.”

August 11. He records that about 7:45 a.m. he “felt a considerable shock of an earthquake”.

August 12. The Sabbath. He attended the morning worship, Jefferson’s address was made up of too much invectives, “may the Lord direct him to sobriety”. He had a short talk with Bicknell “but the other brethren were very sullen”.

August 13. Went to the British House for a few articles he needed. No one asked him “to stop a single moment” so he returned to Ahonoo.

August 19. Again attended the morning worship held “at the British House”. Eyre preached.

“After the service I was informed by M<sup>r</sup> Nott that it was the Society’s determination not so much as to eat with me, which indeed I found practised before but did not know the cause till now. This lead into a short conversation on some past events. I then took my solitary meal and took my leave of him, wishing him to consider the subject of Excommunications more maturely provided he should in the future be concerned therein.”

August 21. “This morning I set out for the British House to make the locks but found the brethren still the same distance. May God help me to bear it.”

This Entry is the last in the Haweis Papers, dated 18 months before his death in November 1799.

Nowhere in this Fragment are there any particulars as to the young woman — her name, her age, her disposition or her general appearance. The Journal is written on thick cartridge paper. He was a very poor penman as also speller, e.g., Coppy, Freeley, Moros, Excution, Nottice. He was seemingly of a moody disposition as he records a few days after his move to Ahonoo “For many years I have been subject to great depression at times, and at other times to as great elevation of thought.”

---

<sup>658</sup> Elsewhere in *Old Time Tahiti* and *Pioneer Missionaries of Tahiti*, WWB tends to capitalise *Brother*, but in *Lewis’ Journal*, he uses *brother* more often than not.

<sup>659</sup> *Next door to it* appears to be an archaic expression meaning *close to it*, i.e., close to turning M<sup>r</sup> Bicknell out of the Society.

To follow him to his death and taking up his Journal where it so suddenly ends, the following references to him appear in the daily Journal of the brethren.<sup>660</sup>

## 1798

August 21. “M<sup>r</sup> Lewis at work for some of the great people at the forge; he cohabits with a young woman of Ahónoo as his wife.”

September 9. “M<sup>r</sup> Lewis attended our worship in the forenoon.”

October 23. “M<sup>r</sup> Lewis came and removed the remainder of his property to Ahónoo. We feel it a great sacrifice to our feelings, when visited by M<sup>r</sup> Lewis, with whom we formerly worshipped God, not to invite him to our table; but we must act according to the rule of Church discipline.”

October 26. “Michael Donald, who returned yesterday from Ahónoo, reports that M<sup>r</sup> Lewis’s habitation is a place of much discord; that the man called M<sup>r</sup> Lewis’s friend, with his woman’s parents, often abuse him... our conduct to him (however misconstrued into rigour) has been in love and tenderness to his soul.”

December 30. “M<sup>r</sup> Lewis attended the service fore and afternoon. We feel for him, and we feel for ourselves.”

## 1799

January 4. “M<sup>r</sup> Lewis attended morning prayers.”

February 7. In a letter to the Directors :

“Our proceedings against M<sup>r</sup> Thomas Lewis, we hope, have not been unbecoming the station we profess to hold in the church of our Lord and Master Jesus Christ. As the whole transaction is too large to transcribe, we must intreat you till the arrival of our journal... As it is probable M<sup>r</sup> T. Lewis, in his letters, may attempt to justify himself, and throw blame upon the conduct of some of us in a particular manner, we beseech you to suspend your decision till our accounts are read...”

April 8. “Received a note from M<sup>r</sup> Lewis, requesting us to send him a little tea, which was immediately complied with.”

May 16. “Early this morning Tatóoā-noce, attended by a party of her lawless retinue, went to Ahónoo to plunder, as we hear, some of the inhabitants of that place : who had taken the liberty to plunder M<sup>r</sup> Lewis of some hogs, and of which he had made a complaint to the Queen, who went to right him... Those who had plundered M<sup>r</sup> Lewis thought proper to restore what they had taken, as soon as they heard he had informed the Queen, and that she was coming to chastise them for it. We understand, M<sup>r</sup> Lewis, on the Queen’s arrival at his place, interceded for the aggressors so that nothing further will be pursued against them...”

---

<sup>660</sup> The daily journal, which has been published in Transactions, Volume I, can be found [here](#) for 1798 and [here](#) for 1799. Text quoted by WWB has been checked for consistency with the published text.

June 9. 16:30. "M<sup>r</sup> Lewis and woman were present at our worship in the forenoon worship." And again July 14.

July 17. "Received from M<sup>r</sup> Lewis the following note :

"Sirs,

"Having had a frequent desire to see the Journal for July 1798, <sup>661</sup> I hope no objections will appear on your side, therefore, if any particular time be more convenient than another, at which I may obtain a sight thereof, I beseech you to signify it by note ; or should any objection appear, I will thank you to inform me of it..."

He asks further if he may entertain any hope for the accomodation of their differences and signs as "Your well-wisher, Thomas Lewis".

On receipt of the above a Church meeting was called. At its conclusion it was agreed "1. M<sup>r</sup> Lewis, in his separation from the Church, cannot be permitted to inspect our Journal for July 1798. 2. For us to act in concord with the Word of God, and be faithful to our Lord Jesus Christ, we cannot shew the smallest signs of accomodation with him at this time."

"As the boy was waiting for our answer, to return to M<sup>r</sup> Lewis, and we judging it prudent to be deliberate in wording our reply, the following note was sent to him :

"Sir,

"The Church of Christ in Matavai has received your letter, the contents of which our minds are made up upon, and shall be communicated to you in a few days.

"To M<sup>r</sup> Thomas Lewis, Ahónoo.

"John Jefferson, Secretary to the Church."

July 19. Extracts from a lengthy diatribe sent to Lewis :

"Your request to see our Journal for the month of July 1798, we do not consider it prudent to consent unto, while you remain in a state of separation from the Church.

"That insuperable barrier, which the Holy Ghost hath placed between us and you (a righteous excommunication) we durst not remove.

"We think it our duty... to come to the following determinations :

- "1. As heretofore, so for the future, to grant you anything in our power that you may have occasion for, provided you signify the same by note to the Secretary of the church.
- "2. To forbid you entering our Apartments.
- "3. To refuse you our hand, when we meet you on the road or elsewhere.

---

<sup>661</sup> WWB underlines the 8 in 1798.

- “4. To hold no conversation, or communication with you... The Apartment, in which we hold our public meetings, will be always open to you on the Sabbath.”

This diatribe was signed by Eyre, Harris, Jefferson, Bicknell, Broomhall and Nott.

July 23. “As some books belonging to M<sup>r</sup> Lewis were among us, they were this morning collected and sent to him, with the following note :

“Sir,

“I am commissioned by my brethren to return such books of yours as they have in their possession ; and at the same time to request you will send by the bearer, Bate’s Lexicon, and the books you may have belonging to the Society.

“John Jefferson.”

“The messenger returned in the afternoon with the books and under note :

“Sirs,

“I have sent the books in my possession belonging to the Society, except a Bible, and if you have any objection to my keeping that, only let know it, and I shall send it to you.

“I remain Your well-wisher, Thomas Lewis.”

July 26. “M<sup>r</sup> Lewis sent the under note to Brother Jefferson :

“Sir,

“If you please to send me a little tea by the bearer ; if not utterly disagreeable, to come so far as my abode, either today or tomorrow, or any day of the next week, as you may think fit, I desire to have a little private conversation with you, thereby you will greatly oblige.

“Your well-wisher, Thomas Lewis.”

The answer was as follows :

“Sir,

“I have sent you the tea, agreeable to your request ; but for the latter part of your note, I am not at liberty to comply with it... The brethren... do not see it my duty at this time to wait upon you, nor do I.

“John Jefferson”

July 30. “Received the following note and letter from M<sup>r</sup> Lewis :

“Sir,

“If you please to send the iron in M<sup>r</sup> Bicknell’s care, and tell him, if he pleases, to send me the lock of his chest, he may have a key made for it ; and Pott’s Observations, in M<sup>r</sup> Broomhall’s care, by the bearer.

“You will oblige your Well-wisher, Thomas Lewis.”

The book was sent. The iron (a pot it seems) had been lent to a man to finish Manne Manne’s (dead) vessel to heat tar in. It had been stolen, but if found will be forwarded. The key had also been stolen but he hopes to recover it.

Lewis Letter of that day was a spirited reply to their fulminations of July 19, e.g. :

“Your proceedings have originated from *pride, prejudice* and *passion*” and concludes “and (though some perhaps may proceed to their Popish degradation, and even say as Zedekiah — Which way went the Spirit of the Lord from me to speak unto Thee?

“Subscribe myself your well-wisher, Thomas Lewis.”

It was agreed that the Letter should be inserted in the Journal and some observations there made upon it but no answer sent “as we are persuaded it would only lead to an endless and unprofitable communication.”

August 6. They sum up their remarks in their usual manner resenting “pride, prejudice and passion”. Unalterably opposed to connection with any Otaheitean female, they “being not only professed heathens but professed prostitutes”, they quote D<sup>r</sup> Haweis in their favour, they refute the charge of lies and backbiting and profess “love to his soul”.

There is this to be noted as only fair to them. On November 20, 1797 the brethren discussed this subject of marriage, Lewis among them. Each spoke their mind thereon. It was unanimously agreed, each brother alphabetically acknowledging full consent “That to marry an heathen woman was directly contrary to the Word of God”. Lewis had clearly gone back on his word.

There was also the action taken on this matter on January 25, 1798, Lewis still among them, when Brother Cock “in great distress of soul” requested to know if Brother Cover might be permitted to marry him to a young native woman. “He was immediately answered in the negative.”

August 17. “Received the following note from M<sup>r</sup> Lewis with a small box :

“Sir,

“You please to inform M<sup>r</sup> Eyre if he’ll fix the hinges and the 2 locks of Pomère’s little box, and return the same by the bearer, he’ll greatly oblige a well-wisher.

“Thomas Lewis

“P.S. Please to inform me, by the bearer, whether you purpose to answer the queries in my letter or not.

“To M<sup>r</sup> Jefferson.”

The above was thus answered :

“Sir,

“The box will be finished as soon as convenient and returned. I am commissioned to inform you, it is not the purpose of the church to answer the queries in your letter.

“John Jefferson

“P.S. The bearer will deliver your map of the world, which our brother Broomhall had forgotten before.”

August 25. Lewis writes for an explanation of some words in their latest diatribe. Being the Sabbath they cannot reply.

August 27. They reply “The church... is of our opinion the letter sent you... is sufficiently plain, without an explanation.”

September 10. <sup>662</sup> “Received the under note from M<sup>r</sup> Lewis :

“Sir,

“If you please to send me one double *m.* quadrant, one *m.* quadrant, and *n.* quadrant, and a little tea, by the bearer, you’ll oblige yours, etc.

“Thomas Lewis”

The tea and quadrants were sent.

October 1. M<sup>r</sup> Lewis came and by Pomère’s authority got some iron out of the store room. (Note. They had for safety’s sake placed the store room formally under Pomare’s protection.) He left a note in which he writes :

“If things cannot be accommodated among ourselves... I wish to know if it be agreeable to you to *refer the subject to the Directors* and abide by their decision...”

---

<sup>662</sup> WWB has *September 24.*

The brethren were of opinion the above should remain unanswered.

October 12. He tries again and gets the following :

“Sir,

“I am commissioned by the church to inform you no answer will be given to your note...”

October 27. M<sup>r</sup> Lewis and woman attended worship in the forenoon.

November 5. Again a request for some tea which was complied with.

November 10. The two again present at worship.

November 18. “M<sup>r</sup> Lewis came and got out from the store room for Edéā’s use, a bar of iron of which he is to take part and send back the remainder.” He requested some doses of peruvian bark which was given him and made request for brother Bicknell to make him a small box. The brethren consented.

November 22. “M<sup>r</sup> Lewis came to brother Eyre’s to grind a number of adzes, &c. he has been making for some of the natives.”

The End came on the 27<sup>th</sup>.

November 28. “Early this morning a man arrived from Ahónoo to Pitéā, the deputy Chief, to inform him that M<sup>r</sup> Lewis died about sunset last evening. This intelligence Pitéā immediately communicated to” the brethren.

There follows now an exhaustive account of great length in their enquiries as to the tragedy. For this see Transactions Vol. I, pp 146–157 covering dates up to December 12, from which is quoted :

#### The Burial.

November 29. “At 4 o’clock, the brethren being assembled and the weather dry, the disposition for carying the corpse to the grave” (from Ahonoo to Matavai) “was made” as follows. “Having lashed a long pole the length way of the coffin — as the roads are only narrow foot paths — the two men” appointed by Owo <sup>663</sup> to carry the body to the place of internment “took up the corpse... accompanied by brother Jefferson,”... brothers Eyre and Harris following it shortly after. Having arrived at our dwelling, brothers Nott, Jefferson, Eyre and Bicknell became the bearers, brothers Harris and Broomhall following. Brothers Nott and Bicknell with the assistance of some natives had dug the grave a few yards to the south of the 4 brethren’s dwelling. <sup>664</sup> “The corpse being let down into the grave” and prayer ended, the brethren assisted by 2 or 3 natives filled up the grace and withdrew to brother Eyre’s where a prayer meeting was held.

“Our feelings at this truly affecting season”  
“cannot be committed to paper.”

Note. (One is not surprised.)

<sup>663</sup> WWB, in the margin: *Pomare’s sister*

<sup>664</sup> WWB, in the margin: *The British House*

## 9. Notes From the Missionary Register

covering the years  
1813 – 1855

published  
in the interest of the C. M. S. <sup>665</sup>  
but  
covering all Foreign Missions.

Extracts  
from 1814 to 1824.

1814

The Directors of the L.M.S. have received a letter from Eimeo near (?) <sup>666</sup> Otaheite dated October 28, 1812 signed by Mess<sup>rs</sup> Nott, Henry, Davies, Hayward, Bicknell, Wilson and Scott. They report the deaths of M<sup>rs</sup> Henry, M<sup>rs</sup> Davies and M<sup>rs</sup> Hayward. They express gratitude to Governor Macquarie of the Colony and also to Rev. M<sup>r</sup> Ramsden, the Chaplain of the Colony. In number they are 9 men, 4 women and several children. They are about to build a vessel urged thereto by those in N.S.W. They have a school (no building) for children with under 20 scholars. Service is held twice every Sabbath for the natives in their language but thinly attended as most of the people are on Otaheite with the King, also the Chiefs and people of the Leeward islands who went over there on August 13 at the urging of 2 Otaheitean Chiefs.

They record that “On July 18 Pomaree requested them to baptize him professing his belief in the Christian religion. He said that he did this after having long considered the matter, that he had tried to persuade his father in law Tamatoa and Tapoa, the 2 principal Chiefs to the Leeward islands, to take the same step but they said they would cleave to Oro and Pomaree might do as he pleased : he added that if no one else would hear us or embrace our religion yet he would as he desired to be happy after death and be saved in the Judgement Day.” It was explained to him that it was the custom in cases such as his, to further instruct applicants and to watch their conduct for some time in order to be sure they were really converted. He seemed to approve of this and said that he was willing to do as they thought proper and that he left the date of his baptism to them. During the discussion which was lengthy Pomaree proposed the building of a Church (at Eimeo). He was urged to defer the matter until his and the missionaries’ affairs were more settled but he replied “Let us not mind these things, let it be built at all costs.” Owing to his removal to Otaheite nothing can be done however. From his letters to them and “verbal accounts of him” they learn that he “strictly observes the Sabbath and perseveres in an open profession of his new religion before the Chiefs and people, for which we understand he has already experienced a considerable degree of persecution, notwithstanding his dignity.” Though he has got a footing on Otaheite, his regaining the sovereignty appears to them a doubtful matter.

---

<sup>665</sup> Commonwealth Missionary Society

<sup>666</sup> WWB condenses from the Missionary Register and puts his comments in parentheses.

They sent the Directors 2 of his recent letters (with translations). These letters are dated September 25, 1812 <sup>667</sup> and October 8, 1812, which reads as follows :

Papeite, Otaheite, Oct. 8, 1812

My Dear Friends

May Jehovah and Jesus Christ our Saviours bless you. Nothing bad (i.e. war) is talked of at Otaheite at present ; if it were otherwise I would not remain here. There is one thing which fills me with horror which I will inform you of by and by. Satan is perhaps the author of it, he is envious of me. May Jesus Christ save me. The affairs of Otaheite are pretty well settled, the Chiefs having sent professions of subjection, but how long this will continue is uncertain. However at present all is well. My dear friends write to me that I may know your minds. Inform me also of the news from Port Jackson and whether King George is alive or dead.

It is addressed to them at "Uaeva, Moorea".

Another letter appears from him dated Feb<sup>y</sup> 17, 1813 to them at the same address in which he says "Matavai has been delivered up to me. When I am properly assured of the sincerity of the surrender I will write you another letter my dear friends."

#### 1815

At Eimeo there were at last writing Nott and the others as above named and Tessier in addition. Part of the Scriptures have been translated, been printed in Port Jackson and distributed on the islands. From a letter from Eimeo dated April 23, 1814 it appears that about 50 converts are regular in their practice of Christianity. No missionary had as yet returned to Otaheite "nor has King Pomaree recovered yet his sovereign authority, but some persons of consequence there are among the professed converts." Many of that island have removed to Eimeo for instruction in Christianity, among them a Chief named Uparparu, who says that his brother Teirei (also a Chief) is like minded to himself. Among the converts is Matupupa, who was a priest and a principal of Areoi.

Mess<sup>ts</sup> Nott and Hayward who had visited Huahine, Raiatea and Tahaa were listened to attentively. At Huahine they met a young Chief who had visited Eimeo. He professed Christianity and asked for missionaries to be sent to his island.

They report their vessel still a-building.

#### 1816

A letter from Eimeo dated January 14, 1815 states that they have now 300 regular hearers and the number is increasing. The school has 295 scholars, mostly adults. Large numbers of people from Otaheite and other islands visit for instruction. Occasional visits have been paid to Otaheite, Huahine, Raiatea and Tahaa where they have again been well received and requests have been made for

---

<sup>667</sup> WWB: (see "Sketch" for same)

Teachers. Many both on Eimeo and elsewhere have however suffered persecution, their houses burned down and themselves in danger. The missionaries ask urgently for reinforcements.

A History of the Old Testament has been printed at Port Jackson, also the same of the New Testament, together with a Catechism composed and Hymns “which the people sing with delight”. The translation of the Scriptures progresses.

It was hoped soon to complete their vessel. (They had yet long to wait.)

(Note as to the vessel) : It was not launched till December 6, 1817. It was named The Haweis. Was ready for sea in June 1818. Manned by 7 white men and 6 natives under the command of Capt Nicholson. After cruising in the Groups it was headed for N.S.W. January 1<sup>st</sup> 1819 with a cargo of pork and oil. Arrived at Port Jackson February 17, 1819 with Hayward on board.

A letter from Eimeo dated September 6, 1815 records the death of William Scott and urges that more men be sent. The work had greatly prospered, numbers being daily added, whilst morais were being destroyed and altars overthrown.

“In the month of May the Queen and her sister, called Pomare Vahine, went over to Otaheite, the latter having lately arrived from the Leeward islands. She had never seen Otaheite but intended now to make a tour of it.”

The King then residing on Eimeo (Afareaitu) made a tour of that island with a view of persuading the Chiefs and people to cast away their idols.

A letter from him follows (see page 57 of this Day Book).

During June the brethren had received several letters from converts of Otaheite. The King’s daughter Aimata was with her mother and aunt on Otaheite still and from Eimeo the King had “sent a book to her which was looked upon as a public testimony that she was to be brought up in the new religion. (Note. She was then his only child.)

Those attending school numbered 660 : no more could be admitted for want of books. Converts now number 3,621.

They report a conspiracy to massacre the Christians on Otaheite and the escape. (See “Sketch” for this.)

A letter from Marsden appears dated November 7, 1815. (See page 59 of this Day Book.)

For the final clash between Pomare and his opponents in November 1815, see “Sketch”.

## 1817

Reports that Crook had returned to give help and that John Williams, Ellis, Orsmond, Threlkeld, Barff, Bourne, Platt and Darling were en route.

From a letter received from Marsden, he had arranged that Crook should be conveyed with his wife, his 7 children and general supplies in Marsden’s missionary boat secured by him in 1814.

1818

Reports that idolatry has wholly passed away. About 3000 had learned to read and adds "It is painful to add to all this success, but it is ought not to be concealed, that though Pomare seems cordially to embrace the profession of Christianity, yet his spirit and habits do not manifest he is under its full influence".

A letter appears reporting that the small islands of Tapuamanu (Maio) and Tehiroa (Tetiroa) are now wholly Christian and that Tamatoa, the principal Chief of the Leeward islands, together with most of the Chiefs and people have cast away their gods. On Raiatea however there had been war between the heathen and Christians in which the latter were the victors but the heathen were still threatening trouble.

The register gives Pomare's letter re: his Family idols and a list of them (see page 61 of this Day Book).

The Register also gives Marsden's letter re: the Idols (see page 59 of this Day Book).

1819

The L.M.S. Annual Report states that Christianity is now firmly established in the Georgian and the Society islands. There are 67 places of worship on Otaheite and 20 on Eimeo, whilst 5000 people are reading the Scriptures in their own language.

The missionaries had suggested to Pomare the framing of laws, to meet the new conditions, by means of a general meeting of the principal Chiefs, offering their assistance and advice. This proposal however was not agreeable to Pomare who having been accustomed to the exercise of arbitrary power was unwilling to hazard his authority by a convention of the Chiefs. He however accepted the missionaries' offer of assistance and advice.

The King has issued orders for the erection of a school house in every district of Otaheite and Eimeo.

The printing press has been removed (by Ellis) from Eimeo to Huahine. 2 additional presses however have been sent out. 3000 copies of S Luke's Gospel in Tahitian have been issued. "We want to print 10,000 copies of the Gospels and the Acts of the Apostles which we expect will not be sufficient."

1820

Refers to the Society's Deputation about to be sent to Otaheite.

1821

Records the departure of the Deputation, also of missionary Thomas Jones for Otaheite and several artisans. Names the Deputation : the Rev Daniel Tyerman of the Isle of Wight and George Burnett Esq. of Sheffield.

Names Armitage, cotton manufacturer of Manchester, and Blossom, carpenter of London : both married, the former having 2 children.

1822

Refers to Tessier's death, also to Bicknell's "who it is believed was the first person to offer his services for the South Sea Mission". He was buried at Papetoai on Eimeo as he had a child of his buried there. "After the internment the people of their own accord paved the grave over regularly with stones and strewed white coral on the top : this they did as a token of esteem."

Records the arrival of the Deputation on Sept 25, 1821.

Pomare had intimated to M<sup>r</sup> Marsden of the Colony his wish "to learn to trade as is done at Port Jackson" and was embarking thereon. M<sup>r</sup> Marsden encourages this disposition as commerce will stimulate the industry of the islanders.

The natives of Raivavai (or High Island) have built a house for Christian worship, their idols being placed at the entrance to serve as seats for the people.

Reports the Annual Meeting of the L.M.S. Votes of thanks were passed to Pomare, the Chiefs and the peoples of the various Islands of the South Sea for their liberal contributions in kind. The year's total from the T.A.M.S. being over £1800.

Quotes Deputation "Among other marks of improvement we must mention a road (The Broom Road) which is already made to a considerable extent and which is intended to go round the whole island. This is of great and obvious importance. It has been formed by persons who were punished according to the new laws for evil doing : and the intention is that it shall be completed by persons of that description. It is remarkable that these persons have no need to be superintended in their labour, but they uniformly perform the portion of the work allotted to them. Before this, there was no road in any part of the island, except the narrow winding tracks by which the natives found their way from one place to another.

John Williams of Raiatea reported sick. Had sailed for Port Jackson by the Westmoreland.

"Intelligence has since the above information come to hand that King Pomare died of dropsy of the 7<sup>th</sup> of December 1821. His remains were deposited on the 11<sup>th</sup> of December in a new stone tomb at the upper end of the large place of worship which he had erected." (An error — not in the Royal Mission Chapel but near by.)

A Regency, consisting of the principal Chiefs had been formed, the heir to the Crown not being yet 2 years of age.

1823

Gives the Stations and men in charge of each :

Otaheite	Nott, Crook, Davies, Darling, Bourne, Hayward, Wilson, Jones
Eimeo	Henry and Platt
Pora Pora	Orsmond
Huahine	Ellis and Barff
Raiatea	Threlkeld and John Williams, who had returned from the Colony.

1824

Gives Stations as follow :

Matavai	Nott, Hayward and Wilson
Wilks' Harbour	Crook
Burder's Point	Darling
Papara	Davies and Jones
Eimeo	Henry and Platt. Notes the Chapel building there. Spot formerly occupied by the Royal Marae : coral chiefly procured from the ruins of neighbouring maraes.
Tahaa	Bourne
Raiatea	No change
Huahine	Barff

Notes that the Rev<sup>d</sup> George Pritchard and wife sailed from Gravesend July 27, 1824 on the "Fox Hound".

## 10. Notes From the Hassal Correspondence

at

the Mitchell Library, Sydney <sup>668</sup>

Hassall <sup>669</sup> made flight from Tahiti in March 1798 and made a permanent home in N.S.W. and amassed considerable wealth. Kept copies of his own letters and appears to have been a very methodical man. By trade a weaver. Died and buried at Parramatta.

1799

September 3 from London signed by D<sup>r</sup> Haweis and others of the Board of Directors. Roundly condemn them for their flight. A long letter.

October 21 from London signed by Joseph Hardcastle and John Eyre “By Order of the Directors of the Missionary Society”. Acknowledges receipt of letters from Port Jackson dated Sep. 1<sup>st</sup> 1798, one from the brethren save Cock, one signed by Henry and Cover, which set out the reason for their flight. The Directors while not so severe as in theirs of Sep<sup>t</sup> 3<sup>rd</sup> still incline to the belief that their flight was not warranted by the circumstances. They express the hope that the brethren will not look to the Society for any financial support and advise them of the lodging with the Governor of the Colony the sum of £200 as a Trust Fund for spreading the Gospel only, save in cases of extreme urgency when such a call must be agreed upon by the whole body of them.

Governor King was the bearer of this letter.

1800

December 9 from Coventry from M<sup>r</sup> Burder expressing regret at hearing of “the murder of poor Clode in New Holland”. (By a soldier July 2, 1799.)

1801

William Smith to Hassall at Parramatta from prison : “Iron Hutt — one of the strongest cells — 23<sup>rd</sup> of February”. It appears that this missionary was jailed for debt as he mentions that the Bankrupt Laws do not apply in the Colony. Says that “subscriptions are now in circulation” for him. “Youl is very ill with the flux. The Resurrection Men — Mason and Elder — have been reported to the Governor and bad consequences are likely to follow for them. Have you heard anything of Main? I’ll thank you to inquire of M<sup>r</sup> Marsden if he can give an Order, for Main’s wheat to be put into the Stores

---

<sup>668</sup> [Hassall family - Papers of Rowland Hassall, 1797-1860](#)

<sup>669</sup> Rowland Hassall (1768–1820)

at Hawkesbury. If you can get an Order pray send word to him. I do not think he is a good principle (means “of”) he might have got my wheat ready long ere this.”

Smith was a good penman but a poor speller — was better educated than many of them. He had resigned from the L.M.S. May 14, 1798.

August 12. Davies to Hassall from “Matavai in Otaheite”. Reports that 12 of them (?) set out in a canoe to embark in the missionary canoe but their number is now reduced two thirds. (The rest is all religion — a letter difficult to understand.)

August 15 from W<sup>m</sup> Waters to Hassall from “Taheitee”. Says “We came to this place the 10<sup>th</sup> of July”. Asks “How our brother is which was left at Sidney”. Hopes for “a season of joy at M<sup>r</sup> Shelley’s wedding”. (He was one of the new arrivals on the Royal Admiral but showing signs of mental aberration left Tahiti Dec. 29, 1804 and returned to England. Later on (May 23, 1805) Hassall sent his bill to the L.M.S. “for 11½ weeks board, clothing and supplies, etc., to M<sup>r</sup> W. Waters £26-10-4½” !!!

1802

January 9 from Henry to Hassall, “Point Venus Otaheite”. Tells of “being employed at our new home” : that Nott has commenced preaching publicly every Sabbath, that Jefferson had also begun to address the natives and Eyre to catechise. Adults pay little attention but some children promise well. (They had left the Bligh House for a new one in 1798 — the British House — and were now in another move.)

August 18, Davies to Hassall from “Missionary House Matavai”. (The name of the new house. Mostly on religion.

January 7. Cooper to Hassall from London, Jan<sup>y</sup> 7, 1802. (He was one of the Duff company but had fled to Port Jackson with Hassall and the rest.) Took ship to return but owing to an error in navigation and bad weather he writes that they failed to make the island and put in at the Friendly Islands (Tonga). After a 9 days stay the ship shaped its course for the west coast of South America but changed it later for Cape Horn. They reached the Falkland Islands on December 3, 1800. After about 3 weeks there, they sailed for Home and made Plymouth May 11, 1801. He says that he received a very poor welcome from the Directors, on account of reports which had reached them by the “Reliance” of his holding false doctrines. They supplied his immediate needs and he had offered his further services. He was awaiting their reply. (He was refused and resigned from the L.M.S.)

July 30. Smith to Hassall from London advising of the Royal Admiral’s safe arrival after a passage of 15 months from Port Jackson (his debts evidently paid), reaching Home on July 2<sup>nd</sup>. When the ship put in at the Cape of Good Hope, Reed took up the mission work there. “Nobbs and Bill Puckey are all of our party I have yet seen. I saw D<sup>r</sup> Haweis t’other day — gave us a good scolding and considered us robbers for bringing from Otaheite £2000 worth of their property and converting it to our own use.” (? The cargo of oil and port on the “Royal Admiral”) Smith had gone into the drapery business in Leicester.

August 18. Shelley to Hassall from “Taheity”. (He and his wife had landed on January 6, 1802.) Asks for axes “all he can”, also casks for salt pork which he hopes to forward by the “Porpoise”. “Our voyage here was very disagreeable owing to the conduct of the Captain, mostly through the instigation of M<sup>r</sup> Lewin who is the most detestable of characters.” (Not a missionary but sent as a Naturalist to

report.) “During his residence here he has behaved as bad as Vermin on the island plundering the natives and abusing the women.” Says that there has been much fighting and many killed including women and children and that “but for the presence of so many of our countrymen, the missionaries would probably have been driven from our habitations” : that the leading “rebels” had been slain and Pomare remains “Governor”. “We are in no danger while the Porpoise remains and expect an effectual blow will be struck before she goes : if not, in all probability we shall quit the island.”

1803

February 2. Davies to Hassall from “Missionary House. Matavai.” Says that owing to the late disturbances and the frequency of the visits of ships there is a great scarcity of hogs. At present the brethren were enjoying peace and tranquility. Most of the natives of Otaheite and Eimeo had had the Gospel preached to them but so far with no visible results. He complains of the behaviour of Europeans and asks for a collection of Otaheitean words, having heard that there are those in the Colony who know a good deal of the language, among them a M<sup>r</sup> Commings.

August (date torn off). Henry to Hassall from Otaheite. Since last writing, he has had a daughter born — Eleanor — baptized by Jefferson. “The island is still in peace but rapidly depopulating through the ravages of disease and the horrid practice of killing children and of human sacrifices. The district of “Mattany” pretty well escapes from the latter by means of our residence in it. I wish I could give you some favourable account of our labours among these heathen. We have now arrived to a period of trial and discouragement. Satan is now evidently hard at work here striving to stir up enmity and opposition to us and the Gospel. We have experienced but a trifling degree of it as yet, but I think we are likely soon to experience much more. The people are very reluctant to hear us, and often laugh at the most awful and alarming truths they hear.”

Says that the brethren work in pairs — Davies and Henry — Jefferson and Scott — Nott and Hayward — Bicknell and Youl — Elder and Wilson. They daily expect a vessel from the Society (in London) and need it badly “both on account of our still precarious situation and the smallness of our present stock of wearing apparel, etc.” Says that Nott requests Hassall to add another “musquet” to his (Henry’s) own request.

Enclosure of a note from Nott to Hassall from Huahine contains the above request.

February 7. Bicknell to Hassall from “Otaheite”. “The reason for my not writing before was because the last letter I sent you came back and caused some trouble to me though I know not “aney” thing in it but the truth and not to be retracted : and the man I wrote about I have seen nothing worse in his conduct since then than in my own. I send you this in confidence, burn it when you have read it but I hope I shall write nothing untrue... I often wish you had not left the island or the others. I would ask M<sup>r</sup> Hodges to send me as many razors and scissors as he pleases for I have none to give to the natives when I am out among them. I am now enabled to preach to the natives ’tis said to their edification. We are obliged to live without “aney” help mates. I have never thought that women were “unsaff” here and would not be afraid to leave one among the natives, go to other islands and return to find her in safety.”

March 21. Hardcastle to Hassall from London. “Signed in the name of the Directors of the Missionary Society.” Commends to M<sup>r</sup> Caw and M<sup>r</sup> and M<sup>rs</sup> Crook “who are on their way to replenish the Mission at Otaheite. We are extremely desirous of augmenting the number of female missionaries on that island, not only for their sakes who are already there but for the convenience of the single brethren

also, who find it is not good to be alone. Do you think there are virtuous and pious women in your Colony who would be willing to accompany Mess<sup>rs</sup> Crook and Caw?"

September 12. Burder to Hassall from London. "I am sorry to find that you have lost your place (a post under the Colonial Government) but trust that your representation of it is just (a charge made against him by the Governor's Secretary and later proven false) and that your character will not suffer. I have confidence in you that you would do nothing you believe to be wrong, for it is of great consequence in your situation as a religious man in the midst of rogues that you prove yourself a truly honest man and very accurate in all your dealings. I shall be very glad to hear that you have recovered your post (he did) and hope you may as, by your letter to Coventry which I have seen, it appears that the Governor's lady seemed to think your cause good."

1804

August 15. Hassall's father to him dated from Coventry. Says that he has had a visit from a young man from Port Jackson named Ralph Wigan who said he had dined with Hassall on March 15<sup>th</sup> last. "He informed one that you had been robbed of near £100 but that notwithstanding the loss you were in very flourishing circumstances when he came away, and that you keep a carriage and deal in all sorts of cloth, Silks, Rum, Brandy, Liquors, in short everything but Bread, that you gave 100 guineas for a mare and kept her one year and sold her for the same again, that the weekly return of your business amounts to £100, and that you was grown very fat. All these things gave me great pleasure to hear of, particularly of your regularity in keeping the Sabbath very strict. P.S. Ralph Wigan informed me that £20 or £30 was no more to you than a penny or twopence to me."

September (?). Hardcastle and Burder of the L.M.S. from London. This letter of no special moment seems to have been held back for over a year as it has a P.S. dated October 1805 saying that they are sending it by M<sup>r</sup> Gregory Warner who will sail in the "Sinclair" with a view to going on to Otaheite. (Warner was sent out as a Missionary Surgeon — arrived on Tahiti in 1807 — left Tahiti in 1809 and went to Fiji.)

There is a gap here of 2 years in the records.

1807

January 1. The letter from Pomare to Hassall of this date is to be seen in the "Sketch".

May 6. Copy of Hassall's letter in reply to one from missionaries residing at Serampore : India. (Broomhall leaving Tahiti went there.) Of general matters requested. Deals however with some of the brethren : "Crook is now in this Colony with a wife (a very agreeable companion) and 2 children in order to proceed to Otaheite to rejoin the Mission. He preaches each Sabbath in his own residence at Parramatta : Harris serves at Hawkesbury" : and he (Hassall) at Kissing Point and Castle Hills on alternate Sabbaths. (Crook took his time — he returned in 1817 with 7 children.)

June 12. From Nott to Hassall dated from "Tahaete". All business "as you will learn everything respecting the Mission from brother Youll".

June 12. From Davies to Hassall dated from "Taheite". Signed "John Davies for the Society" but handwriting differs from other letters of his. Says that Youl is proceeding to the Colony to see if he

can find a suitable partner there. If successful he intends to return : if unsuccessful he will probably go to England. (He failed — and resigned from the L.M.S.)

Says much about Crook's contemplated return but there would seem to be something holding him back, "embarrassments" which Davies thinks should be laid clearly before the Directors. "This island is again engaged in war. Pomare has again invaded the disaffected districts of Atahuru, Papara and Papeurede, and has killed a great number of the inhabitants, among whom were most of the disaffected Chiefs which are all, they say, to be cut off root and branch before peace is restored. We are grieved at these proceedings but cannot prevent them, and as the conquering party is friendly to us we do not conceive ourselves to be in danger from the present commotions."

Jefferson very ill (died September 25), would have gone to the Colony but feared that he would die on the passage. Youl will give news. Asks for certain articles of clothing including "a pair of stays for M<sup>r</sup> Eyre (presumably for M<sup>rs</sup>), Youl has the measure".

1808

June 13. Letters dated from "Leeds. England" to Hassall from Marsden (business in chief, spelling bad and writing worse) notifies that he has "sent some soul leather for my men".

From M<sup>rs</sup> Marsden, regrets to hear of Shelley (who had resigned from the L.M.S.).

August 5. Letter from Hassall to "My dear Brethren" at Matavai. Advises that he is sending large supplies to them by Captain Faulkner of the "Perseverance" : reports that Elder had married Miss Mary South who is of good character : and that in a letter he had lately received from Marsden, he says "I have seen many of the Missionary Society and shall endeavour to settle the business of the Mission at Otaheite and expect to return to Port Jackson in 5 or 6 months when you will hear from me many things that will gladden your heart and strengthen your faith in the Mighty God of Jacob." Hassall expresses his confidence in the ultimate success of the Mission. As to Crook he will not hinder his return to the island owing to his indebtedness to himself, that the debt could stand over till he could pay it. As to Youl, that he had not accomplished his purpose in coming but is employed at Hawkesbury and "if he could find a suitable partner, you will soon see him again".

September 8. Hassall writes a Statement to London (seemingly to some high Gov<sup>t</sup> Official). He gives the history of the removal of Governor Bligh from Office and protests against the actions of Major Johnston and his colleagues. Hassall explains who he is, gives an account of his career and says that he is at present acting as Agent for His Excellency, Governor King, as also for Marsden. (Both of them were in England.)

There is also the draft of a Petition setting out briefly what had happened and praying that Bligh may be reinstated as the Governor of the Colony. The Petition is addressed to the Right Hon. Viscount Castlereagh, H.M. Principal Sec<sup>y</sup> of State for the Colonial Department. <sup>670</sup>

---

<sup>670</sup> [Robert Stewart \(1769–1822\)](#)

1809

March 6. Hassall to Burder at London. Says that the “Parramatta” by which supplies had been sent to Otaheite did not touch there and is thought to be lost. Refers to Capt Faulkner’s suicide on board his vessel at Matavai. “The brethren are quite silent upon the solemn subject and neither mention his name nor refer to his act in their letters addressed to M<sup>r</sup> Marsden or myself.”

While the “Perseverance”, now returned, was at Otaheite a serious rebellion broke out against the King : the inhabitants of Matavai as well as the greater part of the inhabitants of the island joined the rebel party. Some of the natives advised the missionaries that they would be cut off as well as Pomare, and seeing that Pomare had lost all his influence and authority, it was decided that Pomare and all the missionaries should leave and proceed to Huahine in the “Perseverance”. They went on board the vessel with all the property they could collect. Pomare however on second thoughts decided to remain on Otaheite, on the ground that by leaving he would lose the sovereignty of the island forever. He accordingly returned on shore and 4 of the single brethren decided to remain with him : they were Nott, Scott, Wilson and Hayward. Those who left were M<sup>r</sup> and M<sup>rs</sup> Henry and children : M<sup>r</sup> and M<sup>rs</sup> Eyre : M<sup>r</sup> and M<sup>rs</sup> Elder : M<sup>r</sup> Davies and M<sup>r</sup> Tessier. The Perseverance sailed at 11 a.m. on November 10, 1808, reaching Huahine the following morning. (The 4 went with Pomare to Moorea, awhile later Wilson and Scott left Moorea for Huahine. Still later Hayward left Moorea for Huahine, leaving Nott alone — with Pomare.)

Note on :

Hayward	Visited England 1819. Married. Returned to Tahiti 1821. Retired to N.S.W. 1822 on a/c wife’s health and resigned.
Scott	Left Huahine 1809 for Port Jackson. Married 1810. Returned to Tahiti 1811. Died on Moorea 1815.
Wilson	Left Huahine 1809 for Port Jackson. Married 1810. Returned to Tahiti 1812. Wife died at Matavai 1818. Married 2 <sup>nd</sup> wife at Port Jackson 1821. Returned to Matavai 1821 — retired 1842. Left for Samoa 1844. Wife died on Samoa 1848. He died at Falealili, Upolu, Samoa July 3, 1857, aged 87.

July 22. To Hassall from those on Huahine. Says that brother Hayward had arrived from Eimeo to join those already there. “The brethren were truly sorry to hear from brother Hayward that M<sup>r</sup> Nott had taken a native woman to be his wife.”

There is no comment made upon this Action of Nott’s nor mention of it in general Reports Home but there is this to be said in defence of his action :

1. Too inconsistent with Nott’s attitude in Lewis and Cock’s cases not to have possible reasons of justification.
2. The woman may have been a convert to Christianity.
3. A marriage could not be “solemnized” as all ministers had fled.
4. May have learned of D<sup>r</sup> Haweis’ broadmindedness on the subject which was given to the Captain of the Royal Admiral which reached Tahiti in 1801 with a view to guide him with the brethren.

P.S. It was possibly the cause of Mrs Nott — the shrew — giving Nott so bad a time thro' their married life. (See February 1813 here.)

October 9. Nott to Hassall dated from “Aimeo”. Reports “The schooner commanded by M<sup>r</sup> Berbeck has been taken by the Otaheiteans and one man killed. The rebellion that took place at the time the Perseverance was here ended in an engagement in which the King was defeated and obliged to fly to Emeo. On the 1<sup>st</sup> of this month he engaged them again and has since been obliged to retreat having lost 24 men. A temporary peace is made which is not likely to last long.”

November 18. Nott to Hassall dated from Huahine. “Yours came safe to hand and is the first line I ever received from you though I perceive not the first you ever wrote to me. I came down here from Tahaiti to this island in the “Northumberland” but before we arrived all the missionaries had left it for Port Jackson in the “Hibernia”, Captain Campbell, except Brother Hayward. I hope they may all safe arrive in the Colony but I fear they will be in great danger at the Feegees. Had the musquets you sent to M<sup>r</sup> Henry been good ones I should have taken them, but they are of no use : those sold to the natives by M<sup>r</sup> Halford being so neat in their eyes that they would not esteem those you sent at all. But if you will be so kind as to send me 2 neat ones the first opportunity I shall esteem it a favour.” He asks for half a dozen looking glasses and adds “Had I it in my power to make you any recompense I would gladly do so, and if there is any instance wherein I can serve you I will thank you to mention it in your next. I remain dear Fried, Yours truly. H. Nott.”

The letter makes reference to articles which he and Hayward had received through Captain Campbell who in 1811 lost his vessel on Manihi, one of the Tuamotu islands, was rescued by the vessel “Trial” and reached Moorea.

1810

July 27. Broomhall to Hassall and Harris from “Calcutta”. Congratulates them on the accounts he hears of their preaching the Gospel to the “wretched convicts” : tells them of his final Conversion after 8 years of refusing offers of grace, “t’is true I still feel doubts at times”. Asks them to direct to him by the name of Captain Bloomfield at the General Port Office — gives no reason for this subterfuge.

October 16. Hassall to Directors from Parramatta. The letter of M<sup>r</sup> Wilks of March had arrived along with M<sup>r</sup> Bicknell and the female missionaries sent out. Tells of a meeting held when the majority of those who had lately fled expressed their willingness to return to the field. He urges the sending out of at least 30 families, and the purchase of a vessel.

Hassall held in his possession the original Instructions given by Letter from the Directors addressed to “M<sup>rs</sup> Chrystie and all other Sisters on board the “Canada” : Captain Waite”. It has no date and is signed by “M. Wilks”. <sup>671</sup> (M<sup>rs</sup> C was a widow : her daughter, Sarah Christie.) One reads therein “When you reach Port Jackson, follow my advice and proceed as soon as possible. It will put fresh life in the brethren and perhaps preserve the Mission from ruin. God will take care of your modesty. Try to persuade Youl and Crook to swell your band. If you can’t, don’t take their misrepresentation. Get the brethren (Bicknell or his nephew) to knock you up somewhere aboard a place for your plates. God bless you. Amen. Amen. (And M. Wilks was a cleric!!)

---

<sup>671</sup> WWB, not in brackets: ?

1811

July 15. Nott to Hassall from “Morea”. Says that the Cyclops is sailing for the Colony, after having taken Captain Campbell back from Moorea to Manihi where his vessel lay wrecked. He asks Hassall to dispose of a cask of pork he is sending, and to return him clothing and tools “including 2000 nails suitable to build a boat”.

November 3. Miss S. Christie to Hassall from “Emeo” (very badly written but one can read as follows). “We arrived here on Friday night after a very trying voyage of almost 16 weeks : we were on an allowance of a quart of water for more than 5 weeks, our bread and meat all expended, but we are all through mercy well, and at Emeo in a house of Brother Nott’s consisting of one apartment where we have plenty of visitors. There is a great scarcity of food on the island.”

1812

June 23. From Davies to Hassall from “Eimeo”. Says that on arrival “with the Sisters” “we found the state of affairs here as favourable as we could expect. The Chiefs and various parties of the people are all favourable to us. The late Miss Chrystie now M<sup>rs</sup> Hayward is very ill and not expected to recover. M<sup>rs</sup> Henry has also been ill but is now better. M<sup>rs</sup> Davies is also unwell.”

M<sup>rs</sup> Henry (of the Duff company) died July 28<sup>th</sup>. M<sup>rs</sup> Davies died Sep. 4<sup>th</sup>. M<sup>rs</sup> Hayward died Oct. 4<sup>th</sup>.

December 22. Crook (in Port Jackson) to Hassall at Parramatta. Gives him information received from Capt Burnet (vessel not named) who is fresh from Eimeo. The Capt arrived among the islands “the latter end of September”. As the wind was against their making “Aimeo” he manned a boat and went to that island, being kindly received by Henry who was overcome with grief at the death of his wife. She had been dead some weeks. He found Bicknell making a coffin for M<sup>rs</sup> Davies who had given birth to an infant and died very suddenly. (“September” must be a slip for “August”).

1813

February (?). Nott to Hassall from “Morea”. (He had gone to Sydney to be married and had returned.) October 5, 1812. “Our passage here was remarkable, only 28 days from Port Jackson. Captain Walker behaved very well and obliging. Henry is a passenger by this boat and I hope that he will succeed in his wishes and speedily return. The death of the 3 wives out of our small number was shocking news on his return.” (No name is given of this ship. Not all wished Henry success. See Davies’ letter of the same month. They were a divided family.)

February 20. M<sup>rs</sup> Nott to M<sup>rs</sup> Hassall dated from “Emio”. Says that they had a very speedy passage, Otaheite being sighted on October 4. Speaks of the deaths of the wives and of M<sup>rs</sup> Davies babe. “From what I hear they (M<sup>r</sup> and M<sup>rs</sup> Hayward, married only 7 months) disagreed very much, but he was to blame for marrying her as he knew what she was beforehand, and what was most cruel, he read that notorious pamphlet to her when in dying circumstances (written by Fox) against her.” Very bad writing.

February 25. Bicknell to Hassall dated “Morea”. Says how little is being done towards the instruction of the people. Had just returned from a visit to Otaheite. Then switches to Trade, offers “pea or arra

rate” at one penny a pound, Hassall to supply the casks and pay the freight. “I and George (his nephew) would have been well advanced with the building of our vessel” if they had not had to wait for the Society’s vessel to be first built. “But if it is to be much longer delayed we intend to go on with ours if we are to have nothing to do with the other. This is not in the least out of opposition to the Society and if you or your son Thomas like to join us and have a third of her we would make it a mutual benefit.” In that case, he asks for iron bolts and a pit saw. Otherwise “have the goodness to send us the pit saw. I have plenty of spike nails. Let this letter be in confidence.”

February 5. Davies to Hassall dated from Eimeo. After dwelling on his wife’s death he deals with his fellows. “Our friend M<sup>r</sup> H(enry) is now visiting the Colony. His purpose you will soon learn. I hope his vanity and rashness may not lead him to take some wrong steps, but I fear he has a large family here in destitute circumstances and the brethren think he acts in a very thoughtless way.”

As to Hayward and his loss, “We said on her death that unfortunate M<sup>r</sup> Hayward had a “cracked rib” but that it after all did not turn out so very bad.” (The reference is, of course, to Eve — and her early death.)

Next comes Nott. “Poor M<sup>r</sup> N(ott). I shall say nothing on the subject. (See Hayward to Hassall — following.)

Next he turns to Bicknell, “on whom we depended to superintend the building of a vessel for the Mission : he at first threw cold water on the proposal but afterwards agreed to it. After turning and twisting and shuffling various ways he at last is evidently come to a determination to act in opposition and defiance of his brethren by building a vessel between him and his nephew, and should they get countenance in N.S. Wales and get a register from the Governor that is all they care for. I remember you hinted when I was in the Colony that you suspected he was going for some self interested motive. It is proved plainly now that that was and that is really the case.” He asks Hassall to use his influence to prevent Bicknell from obtaining registration. “Ours is the cause of the Mission and for the good of all employed in it but his schemes are all for self interest and self aggrandisement. It is with grief we are compelled to expose to M<sup>r</sup> Marsden and probably to the Governor the character of M<sup>r</sup> B(icknell) which is a disgrace to our sacred cause and to the name of missionary.” He then dwells on the brethren’s real necessities and the difficulty of securing supplies “through the meagre salaries meted out by London, with wives and children to support.”

February (?). Hayward to Hassall from Eimeo. Thanks him for attending to casks of pork sent but as he lives at Parramatta he will get Shelley at Port Jackson to attend to future consignments, one of which goes forward by Capt Walker of the vessel “Governor Macquarie”. (This vessel was later bought by Pomare II for his own use.)

Davies has written about them and their affairs both to him, the Society in London and Marsden, “suffice it to say that Brother Bicknell has broke off his connection with the Society in the affair of the vessel intended to be built by us for the benefit of the Mission, and has in conjunction with his nephew commenced one for themselves after we had made every concession as far as our situation and the nature of our connection together here, would admit of to accommodate him : and M<sup>rs</sup> Nott has joined him and his family in the most virulent opposition to us and her husband in the business.”

He then roundly assails M<sup>rs</sup> Nott, her “tung” ever ready to “blaiken” her husband and all about her, her feet not taking her to the place of worship but to those who would thwart the rest. She is a trial to her husband and to all the rest of them “abusing her husband in the most unjust and cruel manner.” “The differences amongst the brethren are many.”

February 27. Wilson to Hassall dated from Eimeo. Says that Pomare was here “when we arrived from N.S.W.” (about May 1812) but that 3 months later 2 Chiefs crossed from Otaheite and Pomare returned with them. Affairs on that island as unsettled as ever, and though Pomare is permitted to live there peacefully he has not been restored to his former authority. “We live peacefully here but without any very pleasing prospect respecting the Mission.” Records the death of the 3 women. His own wife and child (a boy) were with him. (Seems not to have been so illiterate as the rest.)

July 31. M<sup>rs</sup> Hassall to M<sup>rs</sup> Nott dated from Parramatta. Acknowledges letter received through Brother Henry. Her reply goes by him. Much about Duty, as Christians, and to husbands and friends and regret at Hayward’s action towards his dying wife. Signed Elizabeth Hassall. Spelling, Writing and Grammar of a low standard.

November 16. Bicknell to Hassall dated from Eimeo. (Hassall’s reply to former one is not given.) “I did not intend to offend you by proposing to you to have a share in the vessel we were about to build but as I heard you say something about having a share in a vessel which might be built here I therefore just mentioned it to you, but did not intend to build any vessel till the Society’s was built ; and then if you had no share in it we “ment” to make it small and not to take her to the Colony till the way was clear, so that M<sup>r</sup> Marsden could not have “seased” her. I have given no just cause of offense to M<sup>r</sup> M, nor injured him in word or deed that I know of, yet it appears that he encourages idleness and flattery rather than industry. It would have been more to the credit (Henry’s) who made it his business to go about and calumniate me without a cause if he had attended to the advice of the brethren and not given way to boastful desires as soon as his wife was dead, but have “stoped” and minded his family, or built them an house before he went, and not leave them in a native house where they are exposed to the natives, and he should have taught them to work and their duty to God and man. But those that are grown up are ungodly for Nancy is a drunkard, a whore, and blasphemmer, a deist and a liar, and Sarah has been drunk and is a horrid blasphemmer as if she had been used to it for 50 years. She wishes the “Bibbel” in the fire and all of us in hell and her father too, herself and Jesus Christ, has cursed the King, and the King of Huahine to his face in such a way as we thought ourselves much exposed to their resentment : we entreated their forgiveness, so it was winked at for the present. She also told a great many natives that we deceived them, that Jehovah was not the true God but that Oro and Tane “was” the true gods and much more. It is said that she hath done more harm than ever her father did good in this mission, she also played the whore in her father’s house. Samuel is a bad boy, he has no employ, he gets drunk, etc. I hope the young people will be better now their father has come. When we had got our vessel nearly timbered when he came back. She is about 52 feet keel and 17 feet beam. We find it hard work, and at this time how glad I would be to have it in my power to be more among the natives. Blessed be God for what our eyes see. Please to send my letters to England and let part of this letter be in confidence. I hope M<sup>r</sup> Shelley will return safe. I lent him several musquets. The state of the islands to human appearance is not favourable to our residence here, the natives have threatened to our face to plunder us and then — it hath been often said — they will kill us. They have a meeting now at Otaheite at which it is hoped the King will obtain the Government of a part — if not all — of Otaheite.”

1814

January 3. Henry to Hassall dated from Eimeo. Is sending his daughter Sarah by Shelley’s vessel. (Shelley had quitted the L.M.S. in 1806 and was in command of a trading vessel, the “Queen Charlotte”.) Asks Hassall and Marsden to look after her. His reasons for sending her Shelley will inform them of, but adds that she has contracted “the Fefe or Elephantiasis” and a change of climate is essential. Says “The King has been drawn aside a good deal, but poor man he has been exposed to

powerful temptations. We are in daily expectation of his arrival here.” (Henry evidences a better education than the rest.)

January 9. Hayward to Hassall dated from Eimeo. Another reference to Sarah. “It is 1000 pities her father ever brought her back to the islands” and hopes “that she will so conduct herself in the Colony that she will not be totally lost to society. It is a lamentable thing that her late conduct here should have been such as to have sunk her beneath the notice of (name omitted) which in all probability it will. She is but young and may reform.”

“We are sorry that our friends in the Colony have conceived such a character of Pomare. His renouncing Paganism is a good thing and had he been a convert to the Lord Jesus Christ would certainly have been a matter of great joy but this we have never thought him to be. His knowledge is far superior to any of his countrymen and may be subservient to (? Made useful) them but I much fear it will enhance his own condemnation (? To Hell Fire). We have better hopes of several of them than of him. Brother Nott has been again very ill. Should he be removed from these islands either by death or on account of his bad health the Mission will sustain a serious loss such as cannot be easily replaced both in our own estimation and many of the natives. The Lord has given him charming abilities and a disposition to preach to the natives. We are getting on with our vessel.”

February (?). Davies to Hassall dated from Eimeo. Reports that the coffee seed from Norfolk Island did not grow, but speaks of another trial “as there can be no doubt of its growing here”. They had plenty of cabbages and other vegetables but requests more cabbage seed “as so far we have not been able to get any of the cabbage plants to produce seed”. Says that for the last few months he has conducted a school but that only his servants attend. Some of them can spell and read pretty well and they are learning “to write in sound” (? lettering). He has also taught them “to sing some verses in Otaheitean which I have composed for their use”. The King is still at Otaheite, “he is a professed convert to Christianity, and no doubt he is a Christian in judgement, but whether his heart is changed is another thing”.

September 22. Nott to Hassall dated from “Morea”. Reports that the “Governor Macquarie” is sailing to the Colony with a cargo of “shels”. “She has been amongst most of the islands, which has afforded us an opportunity of visiting several of them for the instruction of the natives. Everywhere the desire for instruction is general but we are inadequate to the present demands, and the work which we have in hand forbids us to separate. We have engaged with Capt Burnit (Shelley evidently not to be longer in command) to return from the Colony and take the command of her, provided the necessary articles to fit her out can be obtained in the Colony.” They had between 2 and 3 tons of pork salted, ready to send, but the hold was full.

1815

September 6. Nott to Hassall dated from “Morea”. Advises him of Scott’s death on February 9 “after about 6 days illness of a bowel complaint, of which I have so often been laid up myself”. Speaks well of Scott and his work. Says nothing as to where he was buried. (Grave near Bicknell’s at Papetoai.) “The Gospel has made rapid progress in all the islands the 12 months past.”

September 18. Davies to Hassall dated from Eimeo. Tells of his school having increased beyond all expectations “having now more than 660 “schollars” chiefly grown person”. Many have made good progress in spelling, reading and writing. The only one to help him is “Tessier but his efforts are not very helpful as he can neither understand nor pronounce the language. The rest of the brethren pay

no attention to this matter but have for a long time past been chiefly employed in building our vessel which has proved a heavy piece of work and is not yet finished.” Tells of a Letter of Thanks having been sent to His Excellency “who takes a warm interest in the prosperity and success of this Mission and has written to us”. Mentions Brother Crook’s great desire to join them but fears “lest M<sup>rs</sup> Crook should not be happy and contented in a place like this and with a large family which in common with us must be subject to many privations”.

1816

August 13. Crook to Hassall dated from “Aemeo”. Deals at great length on the financial position of the Mission (looked after by Marsden in Port Jackson) and complains of the differential treatment among the Mission band. As to the vessel some of its owners “are not connected with us” : names Tessier, himself, “Bicknell and his wife (formerly M<sup>rs</sup> Scott)”. M<sup>rs</sup> Shelley had also purchased a share. He suggests that a capable man be sent to complete the vessel and take it to the Colony. Seeks Marsden’s advice on the subject but is against his having any share or control in it. “I am exceedingly sorry that his (Marsden’s own) vessel came here (Crook had arrived on it, the “Active”, in May 1816) and especially that the old woman (?) was brought for she rules the whole (of the new arrivals?). They did keep themselves some bounds while we were on board but now they show themselves to be a desperate set as M<sup>r</sup> Smith, mate of the “Queen Charlotte” (then in port) will inform you. They have propagated many evil reports of the missionaries — and of me in particular.”

He admits that while the “Active” was at a N.Z. port (the Bay of Islands) he “interfered to put a stop to the infamous traffic between the seamen and the native women. Our Captain had no command over his men. Because there is a scarcity (of food) here and we (the band of missionaries) sent over to Otaheite for a few hogs we are said to have injured M<sup>r</sup> M’s interest all we could. Pomare has informed us that the Captain said that we were all very bad men except Henry. I am anxiously desirous that the “Active” may get something of a cargo (on the other islands around) but fear that in all events I shall be lashed by that old woman’s uncommonly slanderous tongue and that all things (disagreements) between M<sup>r</sup> Marsden and I will be revived. If any thing particular occurs please consult my private Journal which I have sent to Mrs Harper.” (It is almost illegible.)<sup>672</sup>

November 26. Hassall to Crook from Parramatta. Reports that Ellis and wife are en route and will carry his letter. “I have had several interviews with M<sup>r</sup> M about the vessel. There is no person here who has advanced anything towards his expense except M<sup>rs</sup> Shelley. All the sums paid out (here) on its account have been drawn on the Society therefore the vessel must belong to them when the small sums are (re)paid that any individual may have upon it. M<sup>r</sup> M had engaged W. Puckey at £10 stg per month to go and finish her but sending for me, Mess<sup>rs</sup> Eyre and Ellis about a week after, we were against his going on account of his drunkenness. All bills connected with the vessel have been sent Home to the Society by M<sup>r</sup> M.”

Note. The triumph of Christianity over Paganism which took place in 1815 and reported by the missionaries is to be read of in the “Sketch”.

---

<sup>672</sup> WWB has *ineligible*.

1817

July 5. Crook to Hassall dated from “Afareaitu” (Moorea). Tells of Ellis and he travelling across the mountainous centre of the island to Papetoai. (See Ellis’ Journal quoted previously.)

September 23. Ellis to Hassall dated from Afareaitu. Item — “We want several things from the Colony but as our expenses were so great there and our characters — we hear — have been so much calumniated on that account we forebear writing for anything as individuals till we shall hear from the Directors at Home.”

1818

October 4. Crook to Hassall dated from “Paofai : Wilks’ Harbour Tahiti October 4. 1817” (an evident error for 1818 as content re M<sup>rs</sup> Wilson shows). Reports that he and his family are settled “almost alone” among the natives. “The King is the greatest obstacle in the way at present, though in some respects he is useful. He will exert himself to form a Missionary Society to collect property for the Society, carry on a correspondence, etc., but he will not leave off his sinful habits nor will he take a step on the way of civilization, and his conduct and influence keep the people back.” He speaks of the death of M<sup>rs</sup> Wilson who had died in August.

May 12. Hassall to Pomare dated from Parramatta. Is sending by the brig “Active” the parcel of goods for which Pomare had written him in July 1817. (No trace of Pomare’s letter.) Contents : 2 quires<sup>673</sup> each — foolscap writing paper — best thick — gilt edged — 6 pencils — 12 quills — tin box containing 2 ink powders and wafers.

Pomare was a keen writer — see “Sketch”.

October 26. Henry to Hassall dated from Eimeo. Sends by his son and Hayward, from whom all mission news can be obtained. M<sup>rs</sup> Henry (N<sup>o</sup> 2) ill : Wilson left with 4 small children : M<sup>rs</sup> Bicknell (N<sup>o</sup> 2) very ill. Mentions a daughter “Ellen” but nothing of “Nancy” or of “Sarah”.

1819

March 1. Henry to Hassall dated “District of Papetoai, Eimeo”. Bicknell very ill at brother Crook’s house on Otaheite. Speaks of much mutual trouble of his own but gives no particulars.

July 29. Nott to Hassall dated from “Matavai”. “Just arrived from Huahine. Our house is within a few yards of the spot where the large house stood when you and I arrived in the Duff and in which we resided. Perhaps I may remain here but my object in coming here from Huahine is to avail myself, with the assistance of the King, in revising the Gospel of John and the Acts of the Apostles which I finished translating on the 2<sup>nd</sup> of last month. The King and a number of natives both at Otaheite and Eimeo have been baptized and are formed into Churches.”

Note. Though all was due to Nott, yet he was absent from Moorea when Pomare was won over to Christianity and again was absent when Pomare was baptized.

---

<sup>673</sup> A set of 24 or sometimes 25 sheets of paper of the same size and stock.

September 7. Barff to Hassall dated from Raiatea. Item — “I have begun to taste the sweets — have a thick leg laid under a pillow and have had a touch of intermittent fever.” A poor penman — poorly educated — Féf  ahead for him.

September 12. Tessier to Hassall dated from Papara. Item. Mentions M<sup>rs</sup> Wilson who had been removed from where she lived (Matavai) to Brother Crook’s (Papeete) where she died.

## 1820

January 17. Orsmond to Hassall — a letter which had reached the latter (at some date not given) the year before and now answered. The reply is not given. Orsmond in his letter dwells on his personal needs. Closes with “my dear Isabella sends affectionate remembrances”. She was his 2<sup>nd</sup> wife — just married when he wrote. He had gone to Port Jackson for the ceremony and had returned to his station.

Undated but 1818–1820. Threlkeld to Hassall dated from “Raiatea”. “We are confusion in these islands and I fear things will go on worse and worse. Letters from England will determine the state of the Mission(‘s future?).”

(The welfare of this people is all uncertain.) “The religion is all show and I am grieved to my very soul to see their iniquity, and that encouraged by those who ought to check it. We are all by the ears, no unanimity, nothing that ought to be exists among us here as a body. For the sake of peace and usefulness we came to Raiatea” (He had been on Huahine.) “but am confident that one good Station is all that is wanted in this uncivilized place, and that one should be either at Eimeo or Otaheite.”

“The sugar concern (on Eimeo) is a mere speculation but will succeed if the natives can be persuaded to work. You know how that is to do even if we give property. Spirits will certainly be introduced, and all the train of evils existent to it will of course follow. I hope religion flourishes better in the Colony than here, there there are some who follow on to know the Lord among the natives ; here I know not one. What will be the end of these things God only knows. The Public’s hopes have been raised beyond what they ought reasonably to expect, and I fear it will terminate in flat despair when they know the truth. Ships that touch here will convey the intelligence and we shall all appear like gross deceivers of the people.” Etc., etc., etc., a very Jeremiah. Nott with but half his education was not made of such craven stuff.

Included in Hassall’s Papers is his Will made August 28, 1820 and witnessed by Harris and Oakes (Duff companions) and a Major West. He died possessed of 20 farms of a total area of 2886 acres all within a reasonable distance of Parramatta. One of these was the original Gov<sup>t</sup> Grant of 70 acres — his beginning. He left his house and 2 other dwelling houses in Parramatta, 2 Town Allotments at Liverpool, N.S.W. and a considerable stock of cattle, sheep, horses and pigs “which are of considerable value” to his widow, 4 sons and 4 daughters.

## 11. Notes From the Haweis Papers

at

**The Mitchell Library, Sydney.** <sup>674</sup>

D<sup>r</sup> Haweis <sup>675</sup> was one of the Originators of the L.M.S. and a leading member of its Directorate.

I <sup>676</sup>

Draft of a Letter of Instructions from D<sup>r</sup> Haweis dated March 1800 and addressed to Captain James Wilson's nephew William Wilson, Captain of the convict ship "Royal Admiral". It was intended that the ship should call at the Friendly Islands before proceeding to Tahiti and if the Mission of the former place was still operating and conditions were satisfactory some of the new missionaries should be left there and the others taken to Tahiti.

Wilson was instructed that during his stay at Port Jackson he should make full enquiries concerning the missionaries there who had left Tahiti, what they were doing and how they were conducting themselves, also to guard against their possible attempt to dissuade the new missionaries from proceeding further. "Should any of those who are at Port Jackson think that they did wrong in leaving their Station and desire to return to it, you are, with the approbation of the majority of the missionaries who go on the voyage, to take them with you."

Some of those sent out in the Royal Admiral were intended ultimately for the Marquessan and Sandwich Islands. Wilson was instructed to ascertain fully the position in Tahiti, as the Directors hoped to send there a large body of missionaries, and make it a centre for the Society's work, and to consider the building of a schooner in which other islands could be visited.

The Draft speaks of Otoo's stupidity and brutality and mentions the friendliness of Pomare, Maurua and other Chiefs. General instructions follow for the reorganization of the Mission.

"I am apprehensive that it is very probably that some of our brethren may have thought it absolutely necessary to have taken wives from among the natives, and should that be the case it would be, no doubt, one further Tie of Union, and probably facilitate our civilization of those with whom they are so nearly connected. In the circumstances in which they are placed, I confess, I could not regret such a step, supposing they cleaved only to one woman and that she could be brought under any sense of obligation to her husband as to be for him alone. What progress our brethren may have made in these 3 years we can only know when you arrive. Should the above experiment have been tried and in any manner have proved desirable, nothing would have a more effectual tendency to carry on and accomplish our designs. The Chiefs with whom we might be thus related (as in the case of M<sup>r</sup> Stuart) would bear our name and they would become our close friends."

---

<sup>674</sup> [Thomas Haweis papers, 1757-1820](#)

<sup>675</sup> [Thomas Haweis \(1734-1820\)](#). *Haweis* rhymes with *Pause*.

<sup>676</sup> It appears that WWB intended to number the extracts, but did so only for the first of them.

Note. Too late for poor Lewis.

Who Stuart was is unknown. Possibly a missionary in some other foreign Station.

Wilson is given full authority to remove the missionaries to any other island should he consider it advisable ; or even to bring them back to England.

There is a second letter marked “Particular Instructions to Captain Wilson”.

D<sup>r</sup> Haweis asks him to obtain full information as to the prospect of establishing “a large and solid Colony of serious men” particularly at Tahiti — they to engage in agriculture : and hints that Wilson would be asked to take control of the scheme, if decided upon.

He suggests that effort should be made to obtain a cargo of turmeric, aromatic barks or gum, metals and curiosities, also that he should ascertain if silk could be made from the mulberry plant. He further requests Wilson to try to obtain seeds of coffee and cotton en route and have them planted (aboard) and to examine the possibility of making sugar from the native cane. With Wilson would go 2520 pieces of hardware and tools for the use of the brethren — a present from M<sup>r</sup> Hadfield and himself, and a considerable library of books.

“The Society hopes to send in the Autumn by a fur ship, Barber the Captain, 3 or 4 persons to Nooga heiva in the Marquesas from whence the solitary missionary who was left, returned Home and makes such a Report as engages us to try to make a beginning. This person (Crook) will return thither with his brethren. The same ship engages to touch at the Sandwich islands and for these a like number of missionaries are ready or will be before the 1<sup>st</sup> of August, the time fixed.”

The papers contain 2 accounts of the events leading up to the departure of most of the Tahitian missionaries in March 1798. One is headed “Relation of William Puckey” and the “Statement as to Puckey’s defection”. The latter is based on the former and largely taken up by D<sup>r</sup> Haweis’ comments thereon. The “Relation” appears to have been written when W<sup>m</sup> Puckey gave his version to the Directors either by letter or word of mouth. He and his brother James both left Tahiti for Port Jackson where both resigned from connection with the L.M.S. William visited the Home Land shortly afterwards but returned to Port Jackson where he found various employment till his death there. His “Relation” appears to contain a good deal inserted by D<sup>r</sup> Haweis as he saw fit.

It reads in part as follows :

“For a year they resided among the natives with every token of respect and affection... the district of Matavai was their own. The only cause of complaint against the natives was for petty pilfering. When caught they punished the thieves in various ways such as chaining them by the leg with their hands tied or exposing them in a strong stocks which they had made. The Chiefs far from taking offence at their subjects being treated thus, urged the missionaries to kill them, though the missionaries well knew that the Chiefs often instigated the thefts and received the stolen property. In order to guard their property more securely they decided to leave the missionary house which Pomare had given them, of bamboo and one story, and to erect another in a beautiful situation on the other side of the river, of 2 stories with a balcony quite round it, intending the lower for conveniences and the other for their own habitation. It commanded a view of the Bay of Matavai on one front and a beautiful little Bay the other side — round the Point. The natives entered heartily into the project, trees and spars being brought from long distances, and soon there were several thousand feet of timber sawn and stacked to dry.

“The foundations were laid and most of the first floor up when Hodge met with an accident and the arrival of the ship (the Nautilus) interrupted the work. But for these 2 happenings the missionaries might have secured themselves in a habitation that would have defended them from all fear of depredation.”

There follows an account of what befell the party who attempted to secure the return of the deserting seamen of the Nautilus. (See Sketch for Jefferson's.) This account by Puckey differs in some items :

1. It names 3 missionaries, omitting Broomhall.
2. On being told the purpose they had in view Temarree urged them to desist and return to Matavai. Confident in their ability to secure the return of the seamen they refused and pressed him to accompany them which he did very reluctantly ; but when they came to the river which is broad though shallow he said he must not cross it for beyond, to him, was forbidden ground. There they left him and as usual the friendly natives took them on their shoulders and carried them over. On coming to Otoo's house they told him the purpose of their coming and demanded the deserters given up.
3. Jefferson says on the contrary that they forebore acquainting Otoo with their business till his father arrived.
4. Here it is said that before they reached home again, the Otaheitean servants who attended them had fled back and informed the brethren that they were all killed and that a body was coming to kill and plunder them which put them in the greatest consternation. Nothing however was attempted and by and by their brethren (in Pommarree's canoe) were seen approaching and welcomed by them, but fear had seized them, the opportunity of running away was at hand and Cover (who had always wished to get off) declaring his resolution and persuading his friends, a resolution was taken to depart by many, a few resisting determined not to quit their posts. It was evident to them that no premeditated evil was intended.

“Pommarree and Iddeah came the next day and expressed the greatest sorrow for what had happened and offered to make any human sacrifices of the men, to appease them but they would not hear. Puckey's native friend Geeta, seeing him packing his belongings evinced such distress and he was much affected and hesitated, but having engaged to go with the rest, and adding to this, the temptations he had met with would, he feared, master him some day as he was frequently followed by the women when alone and had been hard beset so that he had taken up stones to throw at them and drive them away, these things he declared decided him to leave. As soon as the news spread that they were going, Pommarree and Iddeah with hundreds of people came to the missionary house with such cries, entreaties and assurances as should have staggered them but they persisted they would go. When the people saw them obstinate they followed them with cries and tears to the shore, making no resistance to their leaving however, and carrying away with them all they pleased. A hundred canoes followed to the ship, the people crying, weeping and pouring forth every expression of the most poignant sorrow at their departure.”

Puckey states that 50 at least would have gone with them and there is added “His recital is truly afflictive and how they could leave the island under such circumstances is surprising when it was impossible that a fear of danger should have remained. However, how missionaries could resist such humiliations and entreaties is as mortifying as afflictive. Certainly they were not such as our Saviour would be served by.”

Reference is made to the statement by Puckey as to the covetousness of the Tahitian native and that this caused Iddeah to instigate the murder of Manne Manne by the Toutou with whom she cohabited.

Despite the fact that Puckey had left Tahiti, his "Relation" deals with things he could have learned of, only at 2<sup>nd</sup> hand.

It records the visit of the Cornwall and the Sally to Matavai in August 1798 shortly after they had fled and says that on seeing the vessels all the local Chiefs and people fled to the mountains fearing that they were to be punished for the outrage committed on the brethren. The missionaries went after them but much persuasion was required to induce them to return. Once returned however they supplied the ships with far more provisions than they needed or could conveniently take on board but the natives would not desist. Pommarree went on board and drank to such excess that he fell as if dead. Broomhall gave him an emetic which brought him round and he was full of gratitude to the giver.

It states that all materials for the 2<sup>nd</sup> habitation being ready, it can probably be erected during Capt Wilson's stay with the help of his crew.

A description follows of the natural features of Tahiti, the climate, soil, and products, and favours a scheme for exploiting these latter natural resources.

The relation — clearly a mixture of Puckey and Haweis — owns that its foundation is Puckey's information to the Directors and ends.

"A more conclusive evidence cannot be given of W<sup>m</sup> Puckey's own views than repeated declaration that if the Directors will let him take a wife with him, he is ready and would be happy to return at a moment's notice but that he dare not trust himself otherwise there again." (He did not return.)

The "Statement as to Puckey's defection" appears to have been roughly thrown together by D<sup>r</sup> Haweis for the purpose of setting the facts regarding the Tahitian Mission partial collapse before the British public and to silence scoffers. The good Doctor was very sore. The following are a few Extracts.

1. "The women of the missionaries have never met with the least rudeness or incivility either when alone or together.
2. "Those who fled carried away all the property with them of the Mission which they had — contrary to our (the Directors) order — divided previously among themselves.
3. "Of one thing we are sure that Our Lord who knew them would not be served by such men whose hearts had departed from Him and were weary of the work.
4. "These deserters after their arrival at Port Jackson very improperly used the Credit which we had given the Governor Captain Bligh for the brethren at Otaheite, applying it to their own purposes.
5. "Of those who fled to Port Jackson, M<sup>r</sup> Henry and his wife soon repented and resolved with their family, to embrace the first opportunity of returning.
6. "Much of our proceedings in the Southern Ocean will depend upon Captain Wilson's report as to the condition of the South Sea Mission."

MS Journal  
of the missionaries on board The Royal Admiral  
(from Portsmouth to Rio Janeiro)

Extracts

1880

May 29. Sailed. Names of those aboard Davies, Elder, Read, Hayward, Watters, Mitchel, Morris, Wilson, Sheppard, Tessier, Scott and Youl. There were 300 convicts aboard bound for Port Jackson. Capt W<sup>m</sup> Wilson in command who had been 1<sup>st</sup> mate on the Duff, under Capt James Wilson, his uncle. Shortly before sailing Sheppard was taken ill and left behind. A Committee had been already formed : viz Hayward, Wilson and Youl, who was also Secretary. Several of the convicts were down with fever.

June 2. The ship's surgeon D<sup>r</sup> Turner died of fever.

June 7. Capt read Directors' Instruction publicly which appointed him Superintendent and President of all Committees. The ship was to visit the missions at the Friendly and Society Islands. Other passengers were aboard than the missionaries (number not stated). During the month convicts died of fever from time to time. The Brethren conducted services among them and taught some to read. Some of the wives and children of those Transported were on board. One — M<sup>rs</sup> Howe — died of fever.

July 2. Convicts still dying : 42 of them this day ill.

July 16. Crossed the Equator : fever abating.

July 19. Fever patients 30 : scurvy patients 30.

July 30. Scurvy cases increasing. Read down with fever.

August 9. Watters down with fever.

August 12. Entered harbour Rio Janeiro.

The Journal ends on August 25. Sent home by a ship import.

May 1800

D<sup>r</sup> Haweis writes An Account of the Missionary Society's Work — to that date.

Extracts

“Otaheite, our principal object, continues to engage general attention, though there is a party in the Society very adverse to it, for reasons which I forebear to record.

“The departure of 14 or 15 from thence by the Nautilus to Port Jackson weakened them considerably and they would have been abandoned to their fate, notwithstanding the solemn pledge given them, if a few had not resolutely set their faces against a dereliction so base, and opposite to every real interest of the Society.

“It has been suggested that the Tahitian Mission is my “hobby horse”, I having first suggested it. In spite of what has happened I still believe that it is the most suitable place in the South Sea to establish a Mission.”

Re the Marquesas he quotes Crook’s favorable report and adds “Mr Eyre and Mr Greathead <sup>677</sup> have pledged themselves for a Mission this year either to the Sandwich Islands or the Marquesas” for which they have kept Crook and the Marquesan who would otherwise have embarked for the South Sea in the Royal Admiral. <sup>678</sup>

Re the deserters : “Port Jackson received with welcome the missionaries who left Otaheite. We have as yet received from them no satisfactory intelligence. We have only to our sorrow learned of the departure of Hodges, <sup>679</sup> his wife and an Otaheitean boy, and their arrival at the Cape, incurring a vast expense which contrary to my opinion, the Directors have paid.

“I think such abuse of the public’s money highly blameable and that no consideration should divert it from its proper use, especially where the object, however pitiable for misfortune is unworthy as a missionary.

“Another deserter, Cock, desired to be left at the island of Soloo, <sup>680</sup> and it may be that some good may arise even from the steps we cannot but disapprove of. If the people who remain at Port Jackson retain their missionary spirit there will not be a wanting a wide field for operations. I confess myself much less sanguine than many of my brethren in this behalf, nor do I think it probable that those who lightly, as to me it appears, have deserted their post among the Heathen, will prosper in their labours in the place they have chosen. Their motives are known to God. No man will rejoice more sincerely in their success and be better pleased to confess myself mistaken in this matter.

“Our ship which conveys a cargo of Convicts will bring us true and full intelligence. I shall be glad to hear that some of those who left Otaheite may be desirous of returning to their brethren. Such permissions will be granted them.”

There follows a large amount of information about Tahiti but nothing to note through whom acquired. Probably either Capt James Wilson or D<sup>r</sup> Gillham.

Temaree — about 50 years of age — son of Oberea <sup>681</sup> — claims the throne — a man of ability — governs his district admirably — greatly beloved — keeps up a strong party against Otoo.

Pommarree — has little power — easy in temper.

Happai — aged — losing influence.

---

<sup>677</sup> WWB, in the margin: *2 of the Directors*

<sup>678</sup> WWB, in the margin: *nothing doing*

<sup>679</sup> WWB, in the margin: *Had resigned from the L.M.S. in May 1798 at Port Jackson.*

<sup>680</sup> WWB, in the margin: *? nigh Borneo*

<sup>681</sup> WWB, in the margin: *Error*

Manne Manne — governs the King by policy and craft — regarded as an Eatoa.

Paitoa — about 60 — gives everything asked for.

Otey<sup>682</sup> — grandfather of Otoo — must be greatly advanced in years as evidenced by his white beard.

“Our people have a great number of servants”, except Jefferson — has none — singular — not affable — does not mix in familiar conversation.

(To Whom this “Account” is addressed does not appear.)

Undated. Account of an Interview with a man named Seymour who wished to go to Tahiti as a missionary. Seymour states that he was at Otaheite with Lieut Bligh from May 9 to July 9. He was charmed with both country and people. Wished to return there with his wife. “Has no greater wish than to live and die there.”

Report of a Conference with Captain New of the “Daedulus” — the latest ship which has touched at Otaheite and the Marquesas. At the former had found several shipwrecked Englishmen who had been there about a year. “They were living comfortably and peaceably. One of them — said to be a Jew — was called Jordan. Conner, an Irishman, seemed a chief leading man amongst them. They told me of a swede, who they said was out of his mind. One of my men was also a Swede who left the ship. There is also one of the convicts — how ever he got there — from Botany Bay. A pretty, white child was brought on board with the stamp of a European. I enquired who he was from the woman who was with him and received the following affecting relation.

“M<sup>r</sup> Steward, one of Christian’s men who had returned to the island, had taken a native woman as his wife and she was called Peggy Steward. This child was born, and shortly after, Steward was seized as a mutineer to be brought back to England to be tried and was compelled to leave his poor Peggy and her infant to bewail his unhappy fate. The young woman was so afflicted with the loss and the dread of the fate which awaited him that she pined away from that moment, sickened and died, and left the little orphan to the care of her sister who had tenderly brought him up, as her own.”

Note. There was a midshipman on board the Bounty named Stewart, who was taken Home on the Pandora “in irons” but later “freed”.

“He thought the women with proper treatment would make as good wives as our own and apprehended that any white woman would be as safe as our own at Home. He found no arms at Otaheite but at the Sandwich Islands there were many. At the latter he said that he saw the man who had killed Captain Cook, he had a monster scar on his shoulder from a wound he had received.”

There is a Criticism of Vancouver’s “Voyage” by Haweis. “Vancouver’s character of Iddea, Pomaree’s Queen — the very reverse of truth. A more impure, murderous, covetous, proud, dominating spirit cannot be shown. This our Journals demonstrate. She could not indeed be jealous of her sister Fierete when she herself lived wholly with a Toutou by whom she has had several children, all murdered by her at their birth.”

---

<sup>682</sup> WWB, in the margin: ?

1802

September 6. Haweis writes a long letter — apparently to some high Government Official at Home, urging <sup>683</sup> that a ship should be supplied to take settlers out to Otaheite, bringing back a cargo of the produce of the island. Says “that Sir Joseph Banks has known and has been consulted in all our steps from the very beginning and I am persuaded that he will continue to give us his favourable suffrage.”

---

<sup>683</sup> WWB has *urge-ing*.

## 12. Some Customs in Early Missionary Days

### Extracts from their Journals <sup>684</sup>

#### The Tarra-a-harra or Atonement

If the person offended is a High Chief, it is a live pig and a young plantain tree : if an under Chief, a young chicken and a plantain tree. The pig and the chicken may be considered as a Sin Offering, the plantain a Peace Offering.

#### A Haeva or Ceremony Over the Dead

About twenty persons, men and boys, daubed all over with smut and red and white clay in various forms; and most of them armed with sticks, attended by a person arrayed in a fantastical habit — called a mourning dress — ran about from house to house and round the corpse for a short time and then disappeared. While these frightful objects were running from house to house beating their sticks against the outside railings, those in them pretended to be much frightened. Many of the outside party were painted as if they had black jackets turned up with white, with a double row of buttons, their thighs and breech painted red, and their legs white, while their faces were daubed in as hideous a manner as it was possible.

#### The King's Standard

Like Wallis and like Cook — these fresh arrivals were under the mistaken idea that there was a King of Tahiti.

On the top of a hill that separated Matavai and Hapyano a pole was set up in the ground upon which were fastened a dead dog and a young plantain tree. This was the King's Standard by which notice was given that there was peace between the two districts. If any were to break down the pole it would be looked upon as a declaration of war. If it should fall by any casualty, the King must be informed and a declaration made of its not being intentionally done.

#### Bare Shoulders

The mark of respect for their King, the bareing of the shoulders, is shown him wherever he goes and by all who appear in his presence, his father and mother not excepted, his Queen being the only person exempt. Though he may be absent, his various habitations, marked by posts with the head of a man carved on them, cannot be passed without bareing the shoulders. A wilful breach of this custom would certainly be attended with death : and if it should happen that the King passed a person unobserved, and so had his shoulders covered, his cloth would become sacred and must be either torn to pieces or given to the King. To prevent such mistake, it is usual to give the alarm of his arrival by calling out aloud which is passed on.

---

<sup>684</sup> See also *Some Old Time Tahitian Customs* in the Appendix to *Old Time Tahiti* and *Some Old-Time Tahitian Customs* in the May 1942 edition of the *Pacific Islands Monthly*, pages 32–33, in Part VII. WWB's additions have been indented.

### The Marriage Ceremony

The mother and uncles of the bride were employed in giving cloth to various friends who were met upon the occasion. In one of the houses was a kind of altar erected and covered with a piece of white cloth, and on it were placed some old cloths which had lately enclosed the tomb of the deceased father of the bride. After they had distributed their various gifts of cloth, the parties went to the Family Marai, where the ceremony commenced with spreading a large piece of white cloth across the pavement : this done, the bride and bridegroom each changed their dress : after which the mother of the bride with two or three female relations, having taken a sugarcane and broken it into small pieces laid the same upon the leaves of a tree called Amai: the mother and female assistants then wounded their heads with sharks' teeth and caught the blood upon the leaves on which were placed the broken sugarcane : and after this, male and female relatives presented the leaves, sugarcane and blood to the bride and bridegroom who were seated, the man on one side of the Marai and the woman on the other, about 6 yards apart : the whole was then offered up to the supposed god of the family and laid upon the family Altar. All was conducted with levity and thoughtlessness. The mother of the bride now produced the skulls of her deceased husband and elder brother, which according to the custom of the country she had preserved, and now anointed with coconut oil. The skulls were laid in front of the leaves, sugarcane and blood. All being now finished, the cloth spread upon the Marai was folded up and later was presented to the King at his habitation wherever it might be. The cloths the bride and bridegroom put on, after entering the Marai are deemed sacred and are not worn in common.

The parties returned from the Marai to their respective dwellings.

### The Corpse of the Great

Upon death all are denied entrance to the death chamber except they bring a gift of a special kind of cloth. The corpse is placed in a bier in a sitting posture. There is a man set to attend it, who every now and then turns the body first on its right side and then on its left. At evening time it is stretched out at full length : in the morning it is again placed in a sitting posture. It is naked except a Marro round its loins and a bandage round the upper part of the head. Sometimes it is disembowelled : if not so, pressing and squeezing are brought into use. It is later borne off to be laid in the Caves of the Great.

### A Sham Fight

All were clothed as in actual war and armed with spears. It consisted in running hither and thither without any order, hooping and hallooing, the different parties making thrusts with their spears at each other. The canoes also had some manoeuvres among themselves. The exhibition was in keeping with the rudeness and barbarity of these islanders.

### The Areeoies

A company of travelling Players arrived who go from one district to another to exhibit their truly savage performances. They generally travel in large companies with a Manager at their head. Their manner of performing is thus : The actors place themselves in a ring on the ground, the Manager stands in the middle and begins with a prologue which he delivers with much vehemence and wild gesticulation of his arms, fingers and feet : then a signal is given to the actors who all break out into a most singular and barbarous noise which can be compared to nothing better than a herd of swine grunting in chorus, at the same time they keep working their hands and thighs as they sit cross-legged

like so many lunatics, and thus they continue till they are obliged to stop for breath : a repetition of this continues about  $\frac{3}{4}$  of an hour. During the whole of the performance the Manager keeps his place and plays his antics : a drum is also kept beating to which they grunt in time.

### A High Chief's Reception

The Chief of Hedeah, with a large fleet of single and double canoes appeared off Matavai and took up their station at a small island about a mile off. Pomere was busily employed in the preparation of a site for the reception on the east side of the Matavai river. Otoo was not present throughout, but asked thro' his representative. The following day this individual arrived at the site to receive the Chief on behalf of his master : he was distinguished by a sprig of small red feathers in the fore part of his hat. The same respect of making bare the shoulders is observed to him as to the King himself, he also takes up his abode at the place where the King may be residing. The fleet now moved from the island and with their streamers flying and their musick playing proceeded towards the appointed place. When the canoes were come to the place of landing, a parley commenced before they put on shore, between Pomere and certain of his orators who were arranged on the sea beach in a line, with the King's representative before them, and the Chief and his orators on board the canoes in which were recapitulated certain articles of their superstitious beliefs respecting the originality of their forefathers, etc. During the repetition of these things, each party threw towards each other some part of a coconut tree, perhaps a token of the rectitude of their belief in the things related. After this ceremony was concluded, the canoes landed and were hauled up on the strand. Then another ceremony commenced, of presenting cloth to the Chief, very little of which came to his share, for as fast as bundles were brought to him, a band of persons laid hold of it and a furious struggle ensued in which the cloth was torn to pieces, and he thought himself highly favoured who could get a piece a foot or two in length. The Chief's own present was likewise cloth of different kinds which was wrapped round several women as represented in the plates of Cook's Voyages.

These ceremonies ended, all parties scattered to fraternize.

### Kava Drinking

Yavva is a liquor much in request. It continues to be prepared as related by Captain Cook and to be drank to excess by both Chiefs and the common people. It is a root of a sharp peppery taste which is chewed and spit into a wooden bowl, into which is poured the milk of the coconut, and after a little while fermentation is excited, when the whole is strained and wrung through coconut husk, and served out in cups of leaves made immediately and thrown aside when once used. The effect it produces is a weakness in the legs at the time, but not of the brain : but continued use is visible from the head to the soles of their feet. The eyes of Kava drinkers are much bloodshot and at times very sore, their skin covered with a great thick scurf and the soles of their feet chopt or cracked. It also subjects some to fits. Notwithstanding the filthy manner of preparing, its nauseous smell, and to many its disagreeable taste, it is as much admired by Otaheitean epicures as the finest wines produced in Italy or France are by the most refined sensualist at Home.

### A Canoe Regatta

A great number of large canoes decorated with a variety of streamers were exercised for some time in Matavai Bay, paddling backwards and forwards, crossing each other in various directions and exhibiting no unpleasing specimen of management of their canoes. After some time they were all ranged upon the beach with their prows pointing seaward. While in this position, Otoo in a small

canoe was drawn by his people walking in the water as they pulled his canoe from one end of the line to the other ; during which he haranged the people on board their canoes and those on the beach and prayed to his gods. This ceremony over, the canoes were again launched, and striking off all together paddled a short distance in good order out to sea, returning after this, and retiring to their stations.

### Honours to the Dead

The Chief had not yet been buried. Otoo and three of his principal attendants paraded about our dwelling. They carried in their hands (right) a sort of clapper made of two pearl shells so fastened back to back as that they could strike them one against another by a gentle movement of their thumbs : these they kept clapping as they walked, keeping time together, for long.

The fear of spooks was strong among them.

### A Noble Infant's Birth

The infant of the Areeoies Matteah and Maheiannoo, both of noble birth themselves, lives. All fires are forbidden to be lighted in any of the habitations of the natives throughout the district until the naval string of the child is dried up. The natives are obliged to carry their food to the adjoining districts on each side to prepare, or to do it by stealth at the extremities of the district.

### Separate Meals

According to the customs of the country, women have distinct houses from the men in which to eat their food, etc. Nor does one woman eat with another nor even with their own children. Every woman and female child have their separate provision basket of coconut leaf, as also have the men.

### A Sacred Canoe

This canoe was decorated with various apparatus of idolatry : such as the wings of a bird nearly as large as a goose rudely formed and covered with feathers of different colours, into which they assert their god Oroo delights to enter : a small canopy fixed over a little stool on which they assert the god rests himself at times, the canopy also covered with feathers : and a hollow cylinder about 10 feet long and 3 feet round also covered with feathers, set upright in the stern of the canoe. To them the sight is very grand and magnificent, to us only Foolery.

### Theft

A second nature — under a special god of Theft

We have cause to apprehend that Covetousness may be mingled with their professions of kindness : therefore we keep a guard of 2 brethren through the whole night.

The Watch overheard Edea, the King's mother and the most powerful person on the island, talking of the great quantity of property in our possession and the propriety of taking it from us.

Early this morning discovered an entrance made into the smith's shop and a number of small but valuable articles stolen.

The brethren mostly staying in their Apartments, preserving them from the depredations of the natives.

Many natives about our house who take every opportunity to steal from us. Our lenity misconstrued into cowardice but it is inconsistent with the character we sustain — not to exercise the least civil authority over them — to even inflict any corporal punishment on those taken in the act of stealing from us.

It is surprising to see with what an avaricious eye they look upon everything we have. Pomere and Edea seem insatiable, they range from Apartment to Apartment night and day, and carry away great quantities of all kinds of articles that they find unwatched.

Brother Harris visited during the night by a thief or thieves who got into his room, ransacked his chest of many valuables, both books, cloth and hardware.

A sextant and mariner's compass have been taken to Hapyano to be placed under the care of the Chief there who can be trusted.

Today 2 Kitchen Jacks (stolen from the Store room) were found buried in the sand a little distance from the house.

We have delivered the contents of the Store room into Pomere's hands. He is now more concerned than we are for its safety. Pomere's servants keep watch round the house at night but they are as great thieves as any others : frequently at night they get in and carry off many things.

Last night thieves got into Brother Broomhall's Apartment and stole two small cases of surgical instruments.

Brother Eyre happening to awake in his Apartment saw 2 of the native watchmen attempting to get over the division separating one room from another : one of them was half over. Asked what he wanted, he excused himself by saying "I thought I heard some thieves within and was come to look for them."

All day surrounded by a tumultuous mob who beg and steal on every hand.

Scarcely a day passes without our suffering from plunderers : last night the Store room again searched. We have now hardly one axe left.

A large axe stolen sometime back is seen in Edea's possession. One of her domestics secured it for her.

A native stole some articles through an aperture in Brother Eyre's window. He was apprehended. Pomere, the husband of Edea, bade us kill him. We delivered him to his own district's people and we have seen him no more.

The natives penalty on discovery was death.

This morning removed the bellows from the blacksmith's shop for better security as the shop is robbed daily.

We continue to be plundered. Our sheep, goats and hogs are at their mercy. Goat's flesh the natives do not like. Of pigs' litters of 7 or 8 we have seldom above 2 or 3 to our share and sometimes not so many.

Our Pioneers could only call their Souls their own.

But

The Otaheiteans themselves practice Enchantment in order to discover a robber. The manner is thus : a pit is made and water put therein. The priest holding a young plantain tree in his right hand utters his prayers over the pit, till the Spirit of the thief is reflected in the water. It does not appear however that every priest can do this.

The connection of the "Spirit" with the "Body" of the thief is not however explained.

## PART X

### TALES OF ROAMING

BY

REV. WILLIAM WASHINGTON BOLTON, M.A.

### PREFACE

The original text of *Tales of Roaming* is stored in the Mitchell Library, State Library of New South Wales, Sydney, Australia, as Volumes 1 and 2 of the Bolton Papers (Collection 1–7A). Volume 1 (A3357) consist of *Tales of Roaming, 1913*, while Volume 2 (A3358) contains *After Thirty Years, Two Months at Home*.

These volumes are now available on microfilm (CY Reel 4990). The handwritten text was transcribed from scans taken from the microfilms and provided in PDF files; see the Preface to *The Chronicles of Savage Island* regarding the guidelines followed during the transcription.

Regarding the dates of his travels, WWB mentions only two explicitly. At the conclusion of *Letters From Japan* in *Tales of Roaming*, his gives the date “May 1913”. And on the back of the photograph shown in Plate 7 in *Tales of Roaming Grandfather*, he wrote “Nanking, June 1913”. In Chapter III of *Across Siberia* in *Tales of Roaming*, just after crossing the border between Russia and Inner Mongolia, China, he wrote that “The Longest Day of the Year found us entering The Taiga Forest”. The longest day of 1913 was June 21, which together with the two dates noted above suggests that he visited Japan in May 1913, then sailed from Nagasaki to Shanghai and Nanking, China, which he visited in June 1913, and then sailed to Busan, South Korea, from where he embarked on his train trip across Siberia in mid June 1913.

His visit to Shanghai and Nanking therefore appears to have been short. He only mentions his travels there in two places — Tale #51, *Of Nan King*, in *Tales of a Roaming Grandfather*, and in Chapter I of *Across Siberia* in *Tales of Roaming* in regard to his friend Pope, General Manager of the Shanghai Nanking Railway, about whom he states that he “ought to have met there [Shanghai or Nanking] but failed to catch at home”.

Although *After Thirty Years, Two Months at Home* is in a volume of the Bolton Papers separate from *Tales of Roaming, 1913*, it was considered appropriate to insert it after *Across Siberia* since it follows chronologically.

WWB does not give a reason why he travelled to England in 1913, but we know that his mother, Lydia Louisa Bolton née Pym, died on January 26, 1914, aged 87, so her declining health was almost certainly a factor. WWB makes no mention of having visited his mother in *After Thirty Years*, but that is the first thing that he did upon arriving in England. According to the England Census of 1911, she was a boarder at 23 Seafield Road in Hove, Sussex, a town on the south coast of England, immediately to the west of Brighton. WWB’s first sentence in *After Thirty Years*, after the Foreword,

is, “To the true Cockney, London and Brighton are synonymous terms. It was thither and its coast line that I at once made my way : London could wait awhile.”

Prior to his visit to England in 1913, WWB would have last seen his mother in 1887, when he moved from Stoke-on-Trent, Staffordshire, where he was curate, to Victoria, British Columbia. According to the England Census of 1881, Lydia Louisa Bolton then lived at 13 Vogue Hill, Gwennap, Cornwall, where she moved from Wimbledon to live with her son-in-law, Henry Colin Cummins, and her daughter, Mary Louisa Cummins, aged 23 and 20, and their daughter, Ethel Mary Cummins, seven months.<sup>1</sup> This might explain why WWB writes that “Devonshire was calling loudly” in *After Thirty Years* — Devonshire is immediately to the east of Cornwall and so he would have passed that way when visiting his sister and mother in Cornwall.

*The Island of Moorea* tells of the geography and history of the island. Though not strictly a ‘tale of roaming,’ it is a good compendium of information recorded in various other Parts.

Following *The Island of Moorea*, Volume 1 of the Bolton Papers has *Discovery and Discoverers of French Oceania*. This information is also available in Parts VII, VIII and IX, and so has not been transcribed here.

---

<sup>1</sup> Sometime thereafter, the Cummins moved to Saskatchewan. Mary Louisa’s son, Thomas Cecil Cummins, married WWB’s daughter, Vyvyan Muriel Bolton in Victoria, British Columbia, in 1910.

LETTERS FROM JAPAN <sup>2</sup>

## I

Head winds and a heavy sea were <sup>3</sup> our fate during the month now passed as we ploughed our way from Seattle to Nippon by way of the Great Circle. It was cold too, for the northern course runs up to high latitude and carried us close to the Aleutian Islands.

But after passing Attu, <sup>4</sup> the last of the Chain which bars Bering Sea from becoming part of the Pacific, we struck the warmer Japanese Current. At last the long days at sea were rewarded by the first glimpse of land. In the far distant horizon, the snow capped summit of Fugi <sup>5</sup> that great and sacred mountain of Japan could be descried. <sup>6</sup> Then as the ship made for Yeddo Bay in which Yokohama lies and at the head of which Tokyo the Capital is built, Cape King is seen terminating the long peninsula which shelters the waters within.

Sweeping round and in, there are to be seen fishing boats innumerable, the men with their heads tied up in the blue and white kerchiefs used so universally, with smocks taking the place of kimono. Some short distance up the Bay lies Yokosuka, one of the Navy Yards of the Empire where Dreadnoughts were being built. A Lightship gives warning of a shoal ; and then the stop comes for the Quarantine Officers to come aboard. That ordeal over, the steamer passes inside the huge breakwater, built magnanimously with money paid by Japan to the Great Powers of more than a generation ago, for attacks made in the 'Sixties on their ships at Shimonoseki, <sup>7</sup> that narrow Strait which a cable could stretch across, dividing the main (or Central) Island of Japan from its southerly sister.

Before however we could reach that haven, sampans and hotel launches swarmed around, their crews clambering up and over the sides like monkeys, to pester us with offers of service. But we got inside at last, and saw steamers from many a nation either resting at anchor or busy loading or unloading. Soon we were hawsered up to a fine wharf (one of many) with spacious warehouses ; and stepped ashore, glad to feel terra firma once again under our feet.

Here was assembled a strange crowd of humanity. The want of clothing on some of the men was deplorable, the amount on others was preposterous. Every conceivable kind of headgear was in evidence. When rain began to fall the Japanese umbrella, which one naturally associates with warding off the Sun, was freely used to keep off the wet. Here was a rikisha man trotting along holding a sunshade over him the while, so big that all that was to be seen was a pair of bare legs and soaked straw sandled feet. Men as well as the women were walking about with babies strapped on their backs.

---

<sup>2</sup> See also the following in Part IV, *Tales of a Roaming Grandfather* — Tale #39, *Of Japan's Weird Ways (1)*; Tale #40, *Of Japan's Weird Ways (2)*; Tale #41, *Of a Castle in Nippon*; Tale #42, *Of Temples Quiet and Noisy*; and Tale #43, *Of Cooks – Good Eats – and Coal*.

<sup>3</sup> WWB has *was*.

<sup>4</sup> [Attu Island](#) is the westernmost and largest island in the Near Islands group of the Aleutian Islands of Alaska, and the westernmost point of land relative to Alaska, the United States, and North America.

<sup>5</sup> WWB initially uses the spelling *Fugi*, then, in Chapter IX, switches to *Fuji*.

<sup>6</sup> WWB has *descried*.

<sup>7</sup> The [Shimonoseki Campaign](#) refers to a series of military engagements in 1863 and 1864, fought to control Shimonoseki Straits of Japan by joint naval forces from Great Britain, France, the Netherlands and the United States, against the Japanese feudal domain of Chōshū, which took place off and on the coast of Shimonoseki, Japan.

There was a Babel of noise but everything was in order for there were numerous little policemen who looked very important with swords dangling at their sides.

Customs passed, and a Letter of Introduction used, which promptly gave me entrance and residence at the Yokohama United Club <sup>8</sup> and I was settled down. A walk and a look around soon followed, to return wondering whether it was all real. When one sees a Japanese sawing backwards instead of forwards, when horses are stabled their heads where their tails should be, when roofs are finished first instead of last, it may well be that one gets shaky as to his mental balance.

There is not much call for horseflesh where men seem everywhere in the shafts, but the Mongolian ponies seen occasionally are rough coated beasts always ready to snap at you but tame towards their Jehus <sup>9</sup> who of course, being Japanese, do not drive them, but walk ahead with the pony's nose right up against their back. Some had straw bonnets on to keep the rain off, or on sunny days the heat. Even the Scavengers are remarkable. I saw what I took to be a straw mat tied in the middle moving along beside a cart. Approaching I discovered a Japanese with a straw coat on which flared out all round him from his feet to a foot above his head. The dogs of the city are the worst of mongrels, the cats accursed, kicked on sight by everyone since the day when Buddha died and they refused to join with their me-ows in the general wailing.

The Bund or Esplanade is a fine piece of road with substantial buildings fronting the sea, but these fine structures are very cosmopolitan in their use, private dwellings and hotels, clubs and garages, offices of steamship companies, all mixed up indiscriminately. Back of the Bund the streets are a marvel, some of them not 12 feet wide and none have sidewalks : they certainly have a curb, but what should be a sidewalk is often not a foot wide, the house fronts working out in most irregular fashion. Everybody walks in the road, and jumps at the call of the rikisha man as he jogs up behind. But in the newer part of the City the roads are broad and good. The pedlars are out to attract notice. One selling fish was making a lusty noise with a large tin horn, another had two drums which he banged continuously. The newspaper boys have a string of bells attached to their waists and see to it that they do their work.

---

<sup>8</sup> Yokohama United Club.

<sup>9</sup> A driver of a coach or cab.

A sight new to me was the scaffolding. They use long bamboo poles 15 to 20 feet, tying them together with a rope. Up these go to the 5<sup>th</sup> or 6<sup>th</sup> storey, not a nail in the whole lot. You can hardly see the building inside for the net work : and they do their building in the same weird way, a long slanting walk from the ground to the roof, up which they walk carrying everything either on their shoulders or in baskets. Seemingly a Lift would be unthinkable. Autos are not allowed in the narrow streets. The Electric Tram runs where the roadway will allow it but as they are always full to suffocation point with the coolie class, they are not patronized by the Foreigner.<sup>10</sup>

There is brilliant foliage and flowering everywhere. The Cherry blossoms were still on the trees, there is abundance of Wisteria : Camelias are very much in evidence but the predominating flower of the month is the Azalea<sup>11</sup> — a dazzling red. In the parks and private house grounds these latter flowers present a wonderful sight. I wandered into two of the parks and watched tree transplanting. The Japanese have no hesitation about it. They take exceedingly large ones up with all their roots intact, and replanting them in their new site, often miles away, prop them up by means of the ever handy bamboo poles. It gives the tree a weird appearance as if it was a very sick one but I failed to see a single instance where those big fellows were not sending out every sign of vigorous life.

I visited the Tea House of One Hundred Steps,<sup>12</sup> and a Buddhist Temple and Graveyard. The first named, perched on top of the Bluff which overlooks the Lower Town, was quite a climb and lower limbs ached healthily by the time I had attained it. The Tea House itself is a rickety affair but has a verandah from which a view of the town and sea is obtained not readily to be missed. Overhead was a trellis work roof covered with mauve Wisteria. As to the Temple, the interrial arrangements looked very tawdry. It was not inviting enough for me to remove my shoes in order to explore : so I passed on to<sup>13</sup> the cemetery. Its mounds of course entirely different from our arrangement. All the bodies had been cremated, and the urns buried side by side as close as possible. Each tiny site covered by a Stone Urn or a short Pillar, with many Prayer Sticks stuck in front. Here was one with an Incense

---

<sup>10</sup> WWB has *Foreigner*.

<sup>11</sup> WWB has *azalia* here and elsewhere.

<sup>12</sup> The Teahouse of One Hundred Steps at Yokohama.

<sup>13</sup> WWB is missing the word *to*.

Stick burning, here one with food placed atop, there surely must be thousands lying in that small space.

Then a stroll through a maze of streets and a mass of horrible odours, with children everywhere and a lively time dodging about to avoid collision with man or beast : and I was back at The Club, a fine building facing the harbour and most handsomely equipped. Here — save for the Germans who have a Club of their own — you are sure to meet all the Foreigners of the place. There is a fine Library and there I ended a profitable day.

## II

The Rikisha — an armchair on the lightest of wheels — seen everywhere was the invention not of the Japanese but of an American. I am given to understand that he was a missionary. That man, despite the fact that he turned his fellow man into a beast of burthen, deserves a monument, and yet I have been unable to secure his name.<sup>14</sup> Many of the runners own their vehicle but most are held by Bosses, the runners carrying their sign upon their backs, a large circle stamped in their vest with the name in its centre.

There are Rules of the Road. The men do not spread all over a street, but follow one another in a somewhat irregular single file. They are amazingly adept at threading their way through a crowd. It is not the etiquette of the Road for them to stop but for the people to part and let them through. A loud “Hi” is enough to make the party in the way give a quick side step, sometimes the wheel grazing your coat sleeve so close is the shave. At night a paper lantern is hung on one of the shafts, and the sight of many of these human glow worms gliding about in the dark streets is most attractive. Your “horse” will call out to you when you are going into a hole, or a rut, or crossing rails, for the springs are strong and you might readily take a ‘header’ if you are not set firm.

I soon found that a tall Japanese — and there are some — tilts you at an uncomfortable angle. The more diminutive he is, so much the easier for you. But in such a case, when you look between the shafts all you can see is an inverted washbowl of a hat, and the feet moving at a jog trot. He is really wearing a loose coat or vest of dark blue, tight white shorts, sandals or the blue digitated sock besides that hat and sandals. When it rains he puts on a cape of straw which makes him look like a porcupine : or else one of oiled paper and mindful of his passenger puts the same across your knees and clear over the front of the hood. You are then in a Palanquin on wheels. His sandals or Waraji are evidently short lived, their wrecks are to be seen on every side for even the Ragman passes them by as hopeless. The Big Toe Sock or Tabi reaches just above the ankle, and is either blue or white.

When your Runner comes to a hill such as The Bluff, another man goes behind and shoves. It seems impossible for them to work together without singing a sort of ‘Shanty’. There is a ‘Heave ho’ in it

---

<sup>14</sup> The identity of the inventor of the [rickshaw](#) remains uncertain. Some American sources give the American blacksmith Albert Tolman, who is said to have invented the rickshaw around 1848 in Worcester, Massachusetts, for a missionary. Others claim that Jonathan Scobie (or Jonathan Goble), an American missionary to Japan, invented the rickshaw around 1869 to transport his invalid wife through the streets of Yokohama. Japanese sources often credit Izumi Yosuke, a restaurateur in Tokyo, Suzuki Tokujiro and Takayama Kosuke, who are said to have invented rickshaws in 1868, inspired by the horse carriages that had been introduced to the streets of Tokyo shortly before. Starting in 1870, the Tokyo government issued a permission to build and sell rickshaws to these three men. The seal of one of these inventors was also required on every license to operate a rickshaw.

clearly enough. Whilst rikishaing is pleasant enough, it goes against the grain to see human beings doing the work of animals and I have hard work keeping seated when the heavy drag comes.

I have more than once these first days in Japan measured myself somewhat indignantly against a Race over whose head I usually can easily look, then looking down have noted that he, like some white folk, has used extra means to add to his stature. Both men and women slip their feet into wooden clogs, with two wooden rests across the sole, 2 or even 3 inches high. This raises them : at the same time making a prodigious and incessant clatter on the streets, and leaving the weirdest-looking marks upon the roads. To hold the clogs on, they use a cord which passes between the big toe and the rest and is fastened at the sides ahead of the instep. When it rains an oil paper covers the toes, so all is comfortable. The quality of pigeon toed women is most marked — the reason is beyond me.

Discarding the rikisha I went again afoot. Nigh Yokohama is an historic spot — Mississippi Bay — where Commodore Perry <sup>15</sup> dropped anchor when he forced his attentions, most happily for all parties, upon the Japanese and made the beginning which has resulted in a fresh World Power. Thither I made my way. Arriving, the first thing met with was a Zoo and I took it in. A general assortment of Japanese Animalia, Beasts, Birds and Reptiles. What took my fancy most was a pure White Peacock. It was a Thing of Beauty and evidently as is the way with peacocks, it seemed very proud of itself. Thence a stroll through paddy fields prepared for rice sowing, square patches of ground a mass of mud and horribleness in which both men and women stood and worked up to their knees ; and soon a large private garden prettily laid out, thrown open to the Public and ending at the beach. The Japanese seem very partial to statues. Here was a life size bronze statue of some famous man with an unpronounceable <sup>16</sup> name — but clothes in a stiff Frock coat instead of the more picturesque Kimono.

Looking out over the broad expanse of the Bay, steamers and junks could be seen making their way in and out from the ocean. It had a peaceful look but there are times when both it and Yokohama's waters are a raging tumult. Whilst hereabouts the full fury of the Typhoon spends itself in the China Sea to the south, its tail end is itself no mean wind. This is the Syphoon. With it comes a warm rain which, after the wind has done what damage it can, makes everything limp — human beings too — causes glued things to fall apart, loosens wallpaper, mildew following in its wake.

There is an old myth in Japan which tells that the Earth, i.e., Japan, rests on the back of a fish whose movements cause the earthquakes which are here so frequent — 400 in a year according to the Authorities. The head of the fish is under the Northern Island, its tail under the Southern, its vitals under Yokohama and surrounding parts, this Bay among them. When the extra violent one followed

---

<sup>15</sup> [Matthew Calbraith Perry \(1794–1858\)](#)

<sup>16</sup> WWB has *unpronounceable*.

closely upon Perry's visit there was no doubt as to its being the wrath of the gods at the Foreign Barbarians being allowed to land in the Empire. Commodore Perry is honored today.<sup>17</sup>

A swamp lying below a long and richly wooded bluff some two miles from Kanagawa, the then port for Yeddo (Tokyo today) was very grudgingly given over to the foreigners. In those days the great Shogun really ruled the land, having his headquarters in Yeddo, giving out orders in the name of the Emperor, a scared spiritual Nonentity who dwelt far inland at the Capital, Kyoto. It was yet a full 10 years before The Restoration,<sup>18</sup> i.e., when the power of the Shogun fell, after a last fierce fight in Yeddo, and the Mikado<sup>19</sup> came into his own again and the "Age of Enlightenment" began. That swamp land is today Yokohama. It divides itself naturally into "The Settlement", "The Bluff", "the Japanese" and "the Chinese" Quarters.

"The Settlement" are those 'early days' narrow streets, with rows of gaunt looking warehouses and offices, a sparse number of retail shops which deceive you at first into thinking them wholesale by their being inset into one time storehouses.

"The Bluff" is high above and is irregularly numbered. The first house raised was Number One — the others come in the order of their erection leading to much confusion to a stranger, low and high numbers being often side by side. It takes time to know where N° 151<sup>B</sup> is on The Bluff, it may be next to N° 2 or at the other end of the area. The houses are detached and set in the midst of woods. There are Public Gardens there and a Nursery. In the former are ferns trained as I never thought possible, to represent dragons and junks, temples and lanterns. In the latter a great showing of dwarf flowers and trees. A chrysanthemum the size of a thimble's round and trees beyond belief. These things are attained by a secret art which is kept strictly among 'the brethren'. Not every Japanese knows it but all love the little midgets which require the greatest care and are usually sent twice a year 'to hospital' for doctoring and nursing.<sup>20</sup>

### III

In the Japanese Quarter lilies are to be seen growing along the ridge poles of the tiled homes. It gives a strange appearance. The face powder, which the Jap women so love and seemingly apply with a paint brush, was of old time made of the lily root. A Mikado wishing to abolish such frivolity ordered

<sup>17</sup> Bust of Matthew Perry in Shimoda, Shizuoka.

<sup>18</sup> The Meiji Restoration was a chain of events that restored imperial rule to Japan in 1868 under Emperor Meiji.

<sup>19</sup> Emperor of Japan

<sup>20</sup> WWB is referring to the art of bonsai.

the plant no longer to be grown “on the face of the earth” : so the people obediently dug it up from the ground and proceeded to plant it in boxes “on the roof”. Here one sees in abundance, material for the national garment on sale, though the best is usually stored away in the ‘go down’ within — a sort of cabinet not opened out to the ordinary buyer. It takes eleven yards of material to make a full size kimono. Noticing on every hand lengths spread out on a flat board I found that it had been Washing Day when the women take the garment to pieces for that purpose.

The two most noted Silk and Curio streets are the Honcho Dori and the Benton and much business seemed ever going on, the rattle continuous of the Soroban <sup>21</sup> of sliding buttons without which the Storekeeper can neither Add, Subtract or Divide. It appears to take him a long time to find out that 2 and 3 make 5. Here too one sees babies innumerable but not on all fours. A Japanese girl as soon as she can walk carries a doll on her back ; then the baby brother or sister takes its place. Boys and men are not above doing the same. The bobbing head peeping out behind the back of some larger being seems content, crying is seldom seen or heard, Stoics from birth, part of a land of Sternest Discipline and Order.

The Chinese Quarter is ill smelling, a warren of humanity. The better class are in less crowded environs. These are the Compradores or Superintendents in foreign business houses through whom all payments and contracts are made. I am told that they are more reliable and honest and never ‘lose their heads’ be the pressure of business ever so great. The lower class provide servants. Certainly the Foreigner has no cause to complain of either Wages or Service.

I was taking Tiffin <sup>22</sup> with a kindly Family on The Bluff and seeing so many servants around, sought information. Two babes were in the care of 3 nurses (or Amahs) each of whom receives \$7<sup>50</sup> a month and “find” themselves. Cooks know their business, have likely been a pupil at some Consulate, Legation or Club. They do the marketing. It is nothing to them to serve elaborate menus three times a day and throw in one of them as a Dinner Party. They are always ready to help one another out of a difficulty, lending your fish or an Entrée, pudding or tableware. No one seems surprised to see someone else’s silver mixed up with his own on his table. The next evening he may meet his own a mile away. It must be a fine country for a Bachelor for he can entertain at any time without a thought as to his cuisine department. As to local dishes, everything of that kind seems to be covered with a thick sauce, and it may well be ; for your “Boy” has 360 different kinds of fish to select from for your table, with all the seaweed he wants thrown in. There is also the Chrysanthemum Salad, made of the yellow kind — and other mysterious additions — which is said to prolong life.

The Bachelor’s Joy is not over with his ‘Boy’ alone for there is the Sewing Lady ever ready. You will meet her on the street carrying needle, thread and multicolored material in her basket together with a 3 legged wooden stool. She sits down where you meet her, repairing on the spot. Her client stands nonchalantly whilst she stiches away at his only coat or pants : she shies at the “clogs”, they belong to another department.

Whilst servants are cheap, tobacco is dear. It is a Government monopoly. The Duty is unthinkable in its dimensions. No one can bring in more than one pound, the Customs Officers are absolutely ruthless and relentless. To pay locally four dollars a pound is staggering. But there is an offset, in the Washing Lady. Everything is a uniform price. You can have a white suit or handkerchief washed for the same price — 2 cents — and fine laundry work at that.

---

<sup>21</sup> The [soroban](#) is an abacus developed in Japan.

<sup>22</sup> [Tiffin](#) is lunch, or any light meal.

Noticing a white concoction sold on the streets, strung on a stick like our chestnuts one after the other I found that it was Midzu Ame, the butterscotch of the nation. It comes from one spot — Uraga — nigh Yokohama and is made from the sugar extracted from millet or rice. It is the candy of Prince and Peasant and is said to be infallible for dyspepsia and consumption.

The “Chit” is a useful and yet a dangerous habit of this coast. Few trouble to carry money. You give a Memo of what you buy, together with the price agreed upon, to the seller who turns these in monthly. The danger comes from not keeping a tally of how you are parting with your Intake. Not only in the shops, but in the Clubs, the Bars and even on the Church collection plate you find this custom in use.

It is from no fear of pickpockets in the crowded streets that men bear no coin on them, and yet I must suppose that there are those who covet and seek other men’s goods for when darkness falls, there appear Watchmen carrying lanterns and bell, the latter ceaselessly clanging till sunrise. If they are after thieves and burglars it is but a poor way to secure them.

Now is the time for summer movement out of Town, and some find strange country or seaside residence. The priests are ever ready to make a little coin and oft times rent their temples. The Images and Altars are put away and the heretics duly installed. They stipulate however that if a funeral has to take place or if certain Festivals occur, the room which contained the High Altar be given over for use by the Devout, to pay their duty to the mighty Buddha.

Yokohama and Tokyo are socially looked upon as one. There are only 18 miles between the two : and half hourly trains and specials after midnight cause Dinners and Dances in either City to be a matter of indifference. The wealthier Japanese go thither in carriages and pair — the railroad far too common — with coachmen and groom set out in wondrous headgear and kimono. The saucepan hat is edged with gold or crimson, so are the mantles : and perched aloft these two look the personification of pride and grandeur. But if the road is not clear, all the pride vanishes, both of them let out shouts and yells in the most undignified manner, and the onlooker feels sorry for the grantees behind.

Before visiting Tokyo myself, I made my way to a fishing village with a name which must surely be a burden to Carry — Ya-wa-ta-ba-shi — for I would see some of those 360 fish of Japan. I was fortunate as to the hour and closely scrutinized the landing. Only curiosity held me from fleeing the odour. Though the colouring of many of the fish was wonderful, they looked a most unappetizing lot. The fishermen must have used dragnets for there were hideous elongated worms, and types which surely otherwise would never rise to the surface or the bait, but all were borne off by the women. The Village itself was remarkable for its squalor and its babies.

## IV

A thirty minutes run in a tram where the long seats face one another landed me in Tokyo, a City of over two million people,<sup>23</sup> covering an area of 28 square miles. Magnificence is mixed with squalor, broad avenues run into streets a cart can barely squeeze through, towering buildings of brick and stone touch hands with huts not fit for human beings, electric cars abound and there is a fine overhead system of railroad which carries you practically all round the outskirts of the Capital.

---

<sup>23</sup> According to a United Nations estimate, the population of the [Greater Tokyo Area](#) in 2007 was 35,676,000.

I made my way first to [the American Quarter](#), across many canals. That Quarter has its history. Just as the swamp beyond Kanagawa was given to the Foreigner, so was Tsu-Kiji given at Tokyo. It too was swamp, on the foreshore of Yeddo Bay, it was the scavengers' district and malarial. Yet the Embassies and the business seekers had to be content. Now it is given up to the Americans and is a very fine part of the Capital. The other Embassies are today around the Palace : the English in a large, walled Park of its own.

Next I headed for [The Imperial Palace](#) standing in the midst of moats and high walls. Magnificent broad approaches of gravelled road lead you through massive stone walls into a widespread Park. Crossing this, you pass over another broad moat (all are filled with water) and more great walls face you but further progress is stayed by sentries. You can however see a good portion of the buildings, which are thoroughly Jap in their style.

[Hibiya Park](#) touches one corner of the Palace grounds so I wandered in to find a rich display of azaleas, with fountains playing and crowds everywhere. The Japanese seem to spend much of their time loitering among flowers. Seated here I noted the extraordinary politeness of this nation. You see it all the time and it is carried to excess. The guard on the train bows every time he passes you : boys when they part raise caps : a man meeting a woman he knows goes through a regular performance. Both stop dead at some distance : the man bows low, the woman ditto, but that is only the beginning. As they draw nearer they still keep up the bowing : when they have met it still goes on ; and after parting the kowtowing continues till quite a distance apart.

It was the annual "Boys' festival" — the Girls' comes later — and that day as I roamed around I met many long processions of them, 4 abreast, visiting patriotic statues and having the value of them drilled in by their elders. In their honour the streets were largely adorned with the Chinese lanterns, above each a branch of paper flowers suspended, usually pink and white.

Now to [Atago Tower](#) <sup>24</sup> from the summit of which a panoramic view of the City can be obtained. Two long flights of steps lead up to its base, one of them straight up, the way for men ; the other curved and broken by rests for women's and the infirm's easier ascent. Reaching the base there is a small plateau with Tea Houses and many seats : then entering the Tower itself a stiff climb leads to the top. It certainly gives a bird's eye view with a maze of streets stretching as far as vision will allow.

Here is [Shiba Park](#) crowded with mothers and children. This spot was once Monastery Grounds. It is full of deep groves of Japanese Pine — a poor relative of ours — and the *Cryptomeria*. <sup>25</sup> There are numerous ponds, full of the sacred Lotus. Here in full Cherry Blossom season is one of the sights of Tokyo, there being many avenues given wholly over to them, some attaining to large size.

By obtaining a special Permit, I was admitted to [the Imperial University](#). The grounds cover a large acreage, once the estate of a Prince, and hold plum and cherry trees, wonderful borders of azaleas, with shady nooks and ponds. There are six thousand men students in attendance : the women have their own University. And first to the Library where 35,000 books are available, whilst ancient Jap manuscripts — and Russian ones too, taken in the war <sup>26</sup> — are stored in vaults and rooms nearby. In the Reference Room there were 300 men hard at their work. The Librarian was very courteous

---

<sup>24</sup> The [Atago Shrine](#) is a Shinto shrine built in 1603; the current shrine was rebuilt in 1958. The shrine is located on Atago Hill, which is 26 meters above sea level. In old times, the shrine had an excellent view of Tokyo, now obscured by high rises. The very steep stairs leading to the shrine are also famous, as they represent success in life.

<sup>25</sup> [Cryptomeria](#) is a monotypic genus of conifer in the cypress family.

<sup>26</sup> The [Russo-Japanese War](#) (8 February 1904 – 5 September 1905) was the first great war of the 20<sup>th</sup> century. It grew out of rival imperial ambitions of the Russian Empire and the Empire of Japan over Manchuria and Korea.

explaining all to me in excellent English. One could not fail to notice the spectacled crowd : indeed one meets few Japs without glasses. The answer given is that as babies strapped to the backs of their elders, the head is forever hanging loose and backward and the eyes are thus unprotected from the glare of the sun. I have yet to see a babe's head covered.

The Lecture Halls are up to date, the seats arranged in tiers : there is a fine block for the Medical School to which is attached a Free Hospital. The largest Department seems to be the Law. The Consular Courts having now been abolished, all dispensing of the Law is in the hands of Japanese. There are foreign lawyers but they do not plead, they are the solicitors.

Thence to a Bazaar, a sort of General Department Store. There are no stairs leading from floor to floor. The walking space between the counters is of stone, and a gentle slope leads you up as you go round and round within the building till you reach the top. The artificial flowers for sale seemed perfect in their naturalness. On the roof is a miniature garden with its pond and goldfish, whilst hanging over these was a full sized Cherry Tree, its great branches loaded with blossom. It was hard to have to believe that every blossom on that tree was artificial. As to recounting what that Bazaar held, one might as well copy out Eaton's <sup>27</sup> Catalogue, then add Whiteleys' <sup>28</sup> special items and then to these the special articles of the country. But I did see what explained a lot, those wonderful head creations of the women of Japan, the enormous quantities of ladies "rats" for sale gave me the key. In a few cases I have seen their hair down and it is very long, well able to be built up into a towering coiffure. Here too were Brocades a plenty, used for the broad Obi or sash which every women wears. I had already had experience of seeing a mature party fixing one of these things on. It was in the railway carriage that bore me to the Capital. She was wholly indifferent to her surroundings. It seemed to me that Obi was about 40 yards long, and the way in which she worked behind her back — she faced the window — to fix the pocket correctly was a marvel. With a kimono thrown over the sash, a woman has no figure left, she has the appearance of a hunchback.

From the bazaar my way lead to Uyeno Park, the best Park of that day. It is a wooded hill, once in the possession of a Buddhist Temple which stills stands crowning the summit. There are large open spaces and many fine monuments of bronze. One of the Buddha some 30 feet high, another of a Prince on horseback, another of a General who lead the "Restoration" forces. Here in this Park so restful now, with scores of children laughing and playing, the last great battle of that day took place. The Shogun's party was utterly defeated and the bodies of the slain lie together under another Monument, with the last of the Shogun's soldiers keeping guard over it in his old age. I noticed a large Tomb with paint brushes hung around it. There have been two great Artists in Japan, Sosen <sup>29</sup> and Hokusai. <sup>30</sup> The former made a specialty in caricatures of monkeys : the latter of New Year's Cards. These are as hard to get as genuine Satsuma Ware, <sup>31</sup> and budding artists adorn the latter's tomb with their brushes for awhile, in the hope of becoming likewise famous.

The Temple bells throughout the Capital are the clocks of the people — they are deep tones, musical and sound over large area. Uyeno's bells now rang out and warned me that it was time to end the day. I found rest in a comfortable Inn and waited for the dawn to learn still more.

---

<sup>27</sup> The [T. Eaton Co. Limited](#) was once Canada's largest department store retailer.

<sup>28</sup> [Whiteleys](#) is a shopping centre in London, England. It was London's first department store, located in the Bayswater area.

<sup>29</sup> [Mori Sosen \(1747–1821\)](#)

<sup>30</sup> [Katsushika Hokusai \(1760–1849\)](#)

<sup>31</sup> [Satsuma ware](#) is a type of Japanese earthenware pottery.

## V

The Imperial Museum was my first quest. The grounds around are very fine, the buildings large, and for Japan quite lofty. The Fine Arts portion is housed in its own, built to commemorate the marriage of the present Emperor. Entering this large Hall you are required to take your shoes off, or you may — if you desire — have a felt covering slipped over them. This is for Respect not Cleanliness. The collection of ancient dress, weapons and coins are interesting. The Funeral Car, drawn by oxen, used for the late Mikado, is preserved here. It is used once only. Built of cherry wood, the spokes of the wheels are so arranged into their hub that they give forth a wailing sound as the Car moves. The old time Palanquins look very comfortable : few however use them today. The China and the inlaid work in the exhibits are masterpieces of craftsmanship. Foreign boys would go wild over such a fierce and appalling collection of Masks as are here on show. The Order (on wood) issued for the extermination of Japanese Christians : as also the later one allowing Christianity once more a foothold in the land are interesting mementoes of the Past. Japanese paintings are not what we understand by the term. They are usually wondrous daubs on rolls of linen. Screen work painting however is wonderful.

There followed a visit to the Capital's Zoo. Animalia both native and foreign, well housed. Here one can see the remarkable Formosan and Inland Sea Rooster. The hen is the ordinary barn door fowl and the rooster himself is nothing much to look at save for his tail feathers. One to be seen had feathers 14 feet long, two others ran 12 and 11 feet. They are said never to tread on them and resent mightily any other bird attempting the affront. I was glad to note the care taken here, for cruelty to animals is all too evident in Japan. Already I have had many a time to turn away disgusted at scenes which I was powerless to ease. Happily the S.P.C.A.<sup>32</sup> is at work in Japan and is supported by the Government, but the task ahead is great.

Much wanting to see a School of Ju-jitsu, my wish was gratified. I secured an introduction to one in full action. Here were 50 couples busy as bees. One of the Professors — whose proportions and muscular development somewhat over awed me — kindly gave me much enlightening information. It takes three years steady grind to become anything like an expert. The easy way in which those experts throw the learners is astonishing. They use hands and feet in the most dexterous fashion. The different grades are distinguished by colored sashes. There were little boys active as cats, and men of mature years who dropped in for their daily exercise. The Wrestlers<sup>33</sup> are of quite another kind. They look monstrosities in their vast bulk, and agility is beyond them but they are herculean in strength and locked together they seem tireless in the fearful strain as they seek to crush down each other by sheer strength and weight.

A fire had just wiped out three thousand houses.<sup>34</sup> I walked through the burned area in intelligent company and here also learned. I had been noticing certain mystic signs of large proportion attached above each Fire Department Headquarters. They are the Rallying Cry of that particular Company. No one seems able to do anything here without noise. When a call comes the Standard Bearer rushes out bearing either a huge mace or a banner with the Sign emblazoned thereon. Where his Company is at work, there in the midst of heat and smoke that Standard Bearer must stand and encourage his fellows. It is very heroic but just as useless as the little stream of water which is hand worked.

---

<sup>32</sup> [Society for the Prevention of Cruelty to Animals](#)

<sup>33</sup> [Sumo wrestlers](#)

<sup>34</sup> On February 13, 1913, the most destructive fire in Tokyo, in almost 60 years, broke out at a Salvation Army hall in the Kanda district, spread over one-half of a square mile, and destroyed 1,500 homes and buildings.

The main object of these firefighters is to prevent its spread. They pull down the adjoining houses. An easy matter this — in most cases — since none rise more than 20 feet. A rope is fastened to one corner post, a good hard haul and all comes down with a crash, the roof usually of tiles covers up everything, even the flames, like an extinguisher. Furniture has already gone, there are no chairs, no tables, nor beds to bother about, there are but the mats on the floors and the sliding doors which are wrenched from their grooves. The crockery must take its chance — a flimsy one : a Jap's belongings — save the more affluent — can be carried away in the arms.

The Fire Watch Towers are high, open ironwork structures with winding stairs. A man day and night paces round on the top. As most of the houses are of one storey, he has a wide vision. When he sees smoke where it ought not to be, he clangs a bell and the excitement begins.

As with fire so with other things. They shunt all the railroad cars by manpower, it would never do to move them with an engine. I have seen navvies working on the track not as with us, each man to his own job, but 5 of them standing in a row at a tie raising their picks exactly together, holding them aloft for a few seconds and then striking at one and the same moment. Then on the next tie, always in time, always working together. In their irrigation they use the water wheel to raise the stream from one grade to another, for the fields are often in terraces, it is men and women too who tread those wheels by the hour, no horse or engine for them.

Hearing that there were Botanical Gardens in Tokyo I made my way thither. They are rather out of the way, in a suburb, a lovely spot once the residence of a prince. The old Manor House still stands, with a large lake in front, and at the back many ponds with stepping stones across them : lilies and golden carp in all. There are both native and foreign plants and trees, and a great show of hot houses. Everything is named in Japanese and Latin. Here are palms and maple trees, bushes of pomegranate, azaleas 6 feet high, iris purple and yellow, daisies pink and daisies white : with groves of bamboo showing all stages of growth. The bamboo is of the greatest value here, they are used as drains, as pipes to carry water from the mains into the homes, as window bars and other useful ends. There is little scent in the local flowers, the plum blossom the strongest and the best.

Here are the Flower Seasons so far as I can gather. February The Plum Blossom : April The Cherry : May the Azalea : June The Iris : August the Lotus : November The Chrysanthemum in all its glory. The Japanese know how to grow the last named as none else do. They can supply them with stems 9 feet high, or as dwarfs of 2 inches growing in a thimble for a pot.

I could not miss The Flower Markets at night. Whole streets are given up to these, and the working classes crowd them. The sellers display their wares in hand carts or on the roadway. The goods range from large bushes laden with bloom to tiny plants. You see both sexes there, devouring the articles with their eyes, a happy, chattering, jostling crowd, content — if not to buy — to revel in their beauty.

## VI

With another morn, The Military Museum could not be missed. Two guns stand outside a splendid Building of stone, guns used at Port Arthur <sup>35</sup> — one Japanese, the other Russian : the latter a wreck, the former in perfect condition, the very one which wrought the havoc. Inside, besides relics of ancient armour and weapons, there is room after room filled with Russian War Trophies. Stucco plans of forts

---

<sup>35</sup> [The Battle of Port Arthur](#) of 8–9 February 1904 marked the commencement of the Russo-Japanese War.

and battle grounds give one a good conception of the difficulties which faced ‘the little brown men’. There is Kuropatkin’s <sup>36</sup> camp bed and armchair, and many times riddled with bullets, siege guns smashed to pieces. Huge paintings in oil hang on the walls, pictures of famous contests covering all periods of Japanese history. Scores of portraits of Generals and noted warriors. One of the actual boats, from which the Japs escaped after sinking the ship with which they attempted to block the exit from Port Arthur, seems a frail thing to take a chance in amid a hail of shells.

Patriotism is exhibited in an immense coil of black rope used as an anchor chain, made of human hair freely offered, in the belief that hair is the strongest of all cord. Elsewhere I saw in Temples this same offering, given for bell rope.

A special Section is The Nogi Room. <sup>37</sup> Here hats come off ; and the glamour of the man and his wife is over everything in that chamber. Enlarged to life size are the photos taken the day previous to the self immolation. In glass cases are the actual letters of farewell written by the couple to their friends : in another are all the medals of the General, stars of gold glittering with precious stones, ribbons and collarets, a very blaze of glory. In a tall case are the uniforms in which their two sons met a soldier’s death before Port Arthur, their swords, their gloves. Another similar case holds the garments the Father and Mother wore and fell dead in, the weapons they used and at the foot of the very mat on which they died. The rents made by those glistening blades are plainly seen, and the blood stains can never be effaced. To us it may seem very gruesome and melodramatic but in the view of the Japanese it was a Splendid Act — an Act of Love — the old couple could not be separated from their Mikado whom they had known so well, whom the General had served and with whose Passing went the Old Order of things. His Era was known as “Enlightenment”, his son’s was to be known as “Development” but General Nogi and his wife wanted none of it.

The “Coney Island” <sup>38</sup> Resort of Japan is known as Asakusa Park. Dense crowds, shops filled with trinkets, toys and dancing girls of wax worked by a machine, ‘movies’ with grotesque pictures of blood and murder outside reaching in their vastness far above the roofs of the shops, shows of the cowboy type, a very pandemonium of noise : and all this around a temple whose entrance gates were guarded by the usual gigantic couple of Protecting Deities in wirework cages, fiends with screwy limbs and hideous faces. At the base of each figure many sandals were hung, offerings of the Devout, for those fiends’ use when they should choose to come out to drive away worse Devils from their Sanctuary.

Hard is the road for the pilgrim here to travel who would pray at that Temple, seeing that every possible device to entrap him and his coin is prepared for him on his way. His aim is to get at those monstrosities who stand guard and whose gratings are spotted with paper prayers chewed into balls and flung at them. He knows that if only his prayer will stick, he may go ahead and turn the Prayer Wheel, and proceeding further may put his shoulder to the bar and turning once, completely round, the revolving Library of the Buddhist Scriptures be then and there his own with all their contents. But see what he has to steer through on his way : yet many succeed and have not lost their all. They need it for Almsgiving is an essential to their devotions.

---

<sup>36</sup> [Alexei Nikolayevich Kuropatkin \(1848–1925\)](#) was the Russian Imperial Minister of War (1898–1904).

<sup>37</sup> [Nogi Maresuke \(1849–1912\)](#) was a general in the Imperial Japanese Army and a governor of Taiwan. He was one of the commanders during the 1894 capture of Port Arthur from China, and the subsequent massacre of thousands of Chinese civilians. He was a prominent figure in the Russo-Japanese War, as commander of the forces which captured Port Arthur from the Russians. Nogi and his wife committed respectively [seppuku](#) and [jigai](#) shortly after the death of his master, [Emperor Meiji](#).

<sup>38</sup> [Coney Island](#) is a peninsula and beach on the Atlantic Ocean in southern Brooklyn, New York City, New York, United States. Coney Island is possibly best known as the site of amusement parks and a major resort.

Inside, and immediately before the curtain behind which the Buddha sits (here a tiny Image of gold but 3 inches high said to have been washed up on the shore of Yeddo Bay) is a huge trough with stout bars along the top. Into this the people throw their money offerings, a daily revenue so I learned of some one thousand dollars. Temple tribute with both the rich and poor comes before their country's taxes. Before a side Altar I noticed a large grill, filled with pieces of paper tied in knots. Men and women buy charmed paper from a stall close by conducted by a monk and tie it into a Lover's Knot. These they hang on that grill and leave happy, their Love Venture being in a kindly Buddha's hands.

For all the noise and surroundings the pilgrim is a devout soul. They show great reverence to Buddha's shrines where'er they be. Here, bending low before the curtain, men and women would clasp their hands together, mutter words and then pass on. I had seen my rikisha man as he passed a Temple lift his saucepan hat to "The Presence" even though that shrine was far off down an avenue. Buddha counts.

Public Holidays here are thick as thieves. There are just 365 Festivals and Anniversaries. To be sure they observe the Great Days of the Chinese Calendar as well as their own, besides which it is necessary to observe the Death (not Birth) days of all their past Emperors. Hence one sees so many always idling in the Parks and on the streets. A Jap's age is — so I found — not reckoned by his Birthday but by the year he was born in, so that if or she comes into the world of the 31<sup>st</sup> of December, the very next day he is 2 years old.

There is a Dolls Festival. It lasts a week. Then the Doll shops are a blaze of colour, and the trysting place of every child. Then rich and poor put on their best, keep open house, and bring out from their hiding place their own and the dolls of former generations, these latter handed down as heirlooms. "Emperors" and "Empresses", "Nobles" and "Great Ladies", all are most exquisitely apparalled. Placed on shelves at the Festival, little tables are spread before them, laden with choice food. Every child is happy : and every Jap (man or woman) having, seemingly, the Child Heart are happy too. There is a glorious time and the doll shops do a roaring trade. Then all is put away for another year, the rag doll alone being left for the toddler to cuddle and learn to carry on its back in anticipation of the real thing later on.

Of many strange sights, one of the strangest is the Babies' Tonsure. Parents affect the monk's cut for their younger offspring, all hair carefully shaved off except what a saucer could cover round the brain. The Japs are certainly kind to children and their old folk : it were better if they were less cold and callous to themselves as adults. Street accidents which I saw, seem to bother no one. If the police are on the spot, others pass by on the other side of the way. It is of no interest to them if they could possibly lend a hand. It is part of the stoicism of their nature I presume.

In a hospital, those who are to be operated upon, gather in the operating room : squatting round they watch one after another cut open, straightened out, sewn up and carried out, then coolly in their turn mount the table. An English surgeon told me that he had the curiosity to feel the pulse of one who was next in order : he found it perfectly normal.

## VII

A friend would not have my Nay, so bore me off for 100 miles run in his auto. The objectives were Mianosita<sup>39</sup> and Kamakura. We had good roads all the way and I saw Japan's countryside as against its towns. The villages we passed through seemed almost continuous and the children legion. A fine view of Mt Fugi was granted, not always to be seen by reason of clouds. Its foothills through which we ran are heavily wooded. At the Hot Springs of Mianosita there is a good hotel with summer cottages attached. The water is so hot that much of the cooking is done on the spot by it. No need of fire. The Hotel lies high up between hills and is much frequented by foreigners.

On the way, the thatched roofs and the lanes took me back to Devonshire. From countless poles in each village, huge paper fish (the carp) were flying in the breeze for we were still in the Festival of the Boys (their sisters' comes in June). The Carp stands for Sturdiness. Each family hangs out as many fish as there are boys. Just once a year the sons take precedence of their parents : the youngest takes the "head" of the board (the floor) and they have their innings. Every wish of theirs — so far as possible — has to be gratified. Some of the carps are of large proportion and extended by the wind give the villages a weird appearance. Accompanying the Fish are kites. One we saw ready for use we measured ; it ran 24 ft by 12.

We worked our way round to Kamakura where is the noted bronze Buddha 50 feet high. It fulfilled my expectations. Its great soft eyes look down upon you as if there was a Brain behind them. The approach to it is through an avenue of trees and what with these and lofty gates and buildings nigh, the Image is well sheltered but hidden from full view till close to it. There is an entrance into its base and standing inside you realize its immensity. It is known as the Dai Butsu<sup>40</sup> and stands (or rather sits) half a mile from the shore. Six centuries have seen it there. Tidal waves have twice swept away everything but it : earthquakes have rocked it on its massive base, but it remains inviolate, passive and contemplative as ever.

---

<sup>39</sup> [Miyanosita](#)

<sup>40</sup> [Dai Butsa Shrine, Kamakura](#), 1896.

Never did it look down upon a worse sight than in those days of the 'Sixties when every foreigner carried his life in his hands. Two English officers, a Major and a Lieutenant, were butchered to death in the avenue down which it gazes with its soulful eyes. They were outside the Settlement for a ride, the great Image their objective. Two self styled patriots seem to have sworn to slay every Barbarian they came across. Lurking in the avenue they perceived there two. Here was game ready to hand. They sprang out and with their long swords struck both from their saddles. They slew the young Lieutenant at one fell swoop ; the Major crawled to shelter. A boy saw the deed and ran abroad with the news. It soon reached Yokohama and men hurried to the scene to find both dead. The murderers were caught and executed, one died a coward, the other with curses on his lips for the foreigners, proclaiming himself a Martyr for his country's good.<sup>41</sup>

With ten miles yet to go a tyre burst close to a village on the seashore known as "The Plains of Heaven", a terrible misnomer for paddy fields were on all sides and the stench intolerable. We footed it to the nearest shelter, a Tea House where we supped. After taking off our boots we were ushered upstairs by the Lady of the House, a most demure party robed in an exquisite silk kimono. Here we entered a room 12 by 12 feet, its floor covered with a thick matting, on its centre a square table 9 inches off the ground around which we squatted tailor fashion on black velvet cushions. For food we had boiled fish and rice, for drink green tea, no sugar. Two of the party were experts with the chopsticks, two of us were novices. I had a very hard time appeasing hunger, and have no further use for either chopsticks or green tea. Late that night we reached our starting point.

Yokohama is not without its sports. There are many tennis courts, Soccer Football has many adherents, Cricket has a strong hold, and Baseball has its following. There is a fine Race course on the top of The Bluff and in the extensive centre part there is an ample golf course. The horses are imported, mostly from Australia, the local breed not being by any means cut out for running a Derby. The Foreigners a few years back purchased this large tract from "The Beggars' Guild".

Beggars in Japan are a decided nuisance, but they are a powerful and rich organization. They meet you everywhere you go and importune you beyond endurance. One source of regular income is the heavy copper coinage of the land. No one wants to carry about such a load as small change gives so are ready to get rid of the burden at the first opportunity. I have seen folk throwing a handful of coppers from their rikisha as they passed a group of children or a resting beggar by the roadside.

The country between Yokohama and Tokyo is mostly given over to fields of barley, oats and potatoes. I covered much of it afoot for I wished to strike the Tokaido or Great High Road from Kyoto to Tokyo at Kanagawa, that Highway which of old the Mikados, Great Princes and Nobles travelled over, seated in their Palanquins and which no Barbarian was allowed to use. The freedom of movement which we now envy — though it still has qualifications — was not obtained without much effort, diplomacy and even bloodshed.

Up to as late as '99 no foreigner could go inland without a Passport, and each place visited had to be named thereon : he had to report to the Police at each and swear to observe such strange regulations as — not to quarrel with anyone — not to break any windows — not to cut his name on trees — nor chalk his name on idols. Even today, once out of the towns you feel you are being watched. The Japs give the impression of being highly suspicious of the intentions of all strangers : they seem to think every outsider is plotting to secure the land for his country. There are enough sign boards about Japan forbidding photography and warning of trespassers to make you think the whole land is counting upon an all conquering invasion.

---

<sup>41</sup> See [The Kamakura murders of 1864: Major Baldwin and Lieutenant Bird \(1971\)](#).

Some short distance out of Kanagawa, up that Tokaido along which one now walks peacefully, you come to a grave. It is that of one — Richardson <sup>42</sup> — who in 1862 was riding along the Highway (strictly within that portion laid down by the Authorities as open to Barbarians to traverse). He was accompanied by a lady and two other men. He was on Treaty Ground reaching out from Yokohama. Suddenly they saw a Palanquin accompanied by a large retinue of servants coming towards them. A Great Prince was being borne within. The little party on horseback edged well off the road. As the procession passed, a sudden rush was made at them, swords swung, Richardson with one slash was mortally wounded, the lady's hat was sliced from her head, the other men badly hurt. They made a desperate charge and got free but Richardson was dying when the rest dismounted him and laying him on the ground rode off to a village for help. The woman was urged to make for safety in The Settlement. She rode madly, lost her way, in desperation took to the sea, arriving at last to spread the news. Help was rushed to the dying man but it was too late. A woman passing, watched him die then dragged his body into some bushes, covering it up lest her people should vent further spleen upon it. Now he lies where he fell, one of the many who had to suffer that we his fellows might live in the land. The Good Samaritan was later known as "Susan" and for many years kept a Tea House nearby. A heavy indemnity was demanded and paid but what Susan got — if anything — was never known.

<sup>43</sup>

## VIII

We are all prone to superstition, the Japanese along with the rest. Seeing foxes caged in a store doorway I noticed that whilst men took a keen interest in them, every woman crossed the road. To a Japanese woman a fox is "the very devil". They hold that a fox is an evil man disguised : and no woman unaccompanied will go into a district where foxes are to be found. Even caged they fear some deviltry. Noticing holly on the doors of many homes I found that holly is considered to be a good omen, and being prickly will help keep Evil Spirits at a safe distance.

Dragging the shallows for shell fish is an extraordinary performance. I watched scores of Junks at it in the Bay. They run up 4 sails broadside to the wind. To prevent capsizing they throw out heavy claws or drags, these scrape along the bottom, the wind doing the needful in the way of progress. Hauling down the sails and hauling up the claws they quickly have a goodly cargo. They are a practical people in another way. You know your railway Class by a broad band painted all along the car just below the windows. White is First, Blue is Second, Red is Third. You know a tradesman by the Crest he wears — about the size of a dollar — woven in the back of his kimono. You know a Coolie by the huge round sign on his back — a circle of white with hieroglyphics. <sup>44</sup> I saw others with another sign below, I believe it gives his Family Tree for Service has been his lot for generations.

I found explanation for most things but in one I utterly failed. In the cool of an evening I sought one of Yokohama's parks and there, as I sat, I saw a Jap of the coolie class appear carrying a large parrot cage but of much finer mesh than usual. In it was a Lark. Walking to a large empty space with trees surrounding it, he set the cage down, lifted the top off and set the bird free. For a while it flew around

<sup>42</sup> [Charles Lennox Richardson \(1834–1862\)](#)

<sup>43</sup> [The Namamugi Incident](#) was a samurai assault on British nationals in Japan on September 14, 1862. Failure by the Satsuma clan to respond to British demands for compensation resulted in the August 1863 [bombardment of Kagoshima](#), also known as the Anglo-Satsuma War. A memorial stone marks the spot where Richardson fell; he is buried in the Yokohama Foreign Cemetery.

<sup>44</sup> WWB has *hieroglyphics*.

him, then lit on his head. Sweeping his arms upward the lark swept upwards too and began a flood of melody till it was a mere speck in the sky yet could still be heard. Full ten minutes by my watch it was gone and free, then the man swept his arms downwards and the bird responded, making sweeping spiral descent till it reached the ground and stepped into captivity as if it was its Home. Once again he set it free and up it went, and though birds flew all round and darted from sight, this bird could only think of Song and its Master. A second and a third evening I went to see the same extraordinary performance.

If you know how, you can tell the Married Women, the Unmarried and the Widow at a glance. It is by their hair. As they are always hatless you have the evidence clearly before you. The married affects a large broad curl on the top of the head. She has in fact two curls, the back one lifts itself highest and is the most aggressive ; they lie crosswise. The unmarried puffs her hair out entirely round her head and in the centre of the circle has a neat little coil of hair with small glass pins stuck through. The widow either cuts her hair short, as a man does, or wears it down her back, tied at the end with a little bow. The first two only arrange their hair once a week, and as the use of a pillow would disarrange the alignment, they sleep with their necks resting on a wooden block, cut out to fit the neck. At 15 years of age they have their hair done up and take to the block.

One is struck by the modesty of the women in general. In the trains, with their seats running lengthwise she invariably mounts the seat, legs and all, and sits her face to the window and her back to those sitting opposite. If she is one of a company of Strolling Musicians — and they are numerous — she stands with her back to the crowd, whilst the men face them. A married woman stains her teeth black, and keeps them so : the idea being that they thus make themselves unattractive save to their husbands. The newer generation seem to be discarding the practice as going a bit too far.

Modesty is close allied with Reverence. All portraits of the Mikado and his Queen have a square piece of paper pasted so as to hang over the face. This is not so much to prevent dust, but idle gazing. Postcards are dealt with in the same manner. When a Jap enters a house to call upon its inmates he always goes forward first to the portrait of the Emperor, makes his obeisance and then turns to greet his host or hostess.

The Religion of the Japanese seems to be a mixture of Shintoism, Buddhism and Confucianism, the first the original one of the land. Shintoism briefly is a belief that everything in Nature has a real Life similar to our own and should be dealt with accordingly. Hence they can give Love to a Flower alike as to a human being. Each Street in a City has its own Life to look after its inhabitants, it may be a Tree or a Flower or a Fish. You will see these in representation nailed over shop doors or hanging from poles along the Street. Buddhism is briefly a belief in the Incarnation of Deity : Confucianism is briefly a Code of Morals.

I noted a Funeral Procession the other day. It is quite unlike a Chinese one save as to its length. First there came 2 men abreast carrying lamps. In olden days burials took place always at night. Next came huge bunches of Fir tied into the shape of cones, each lifted high on poles, the bearers in double rows : then came a gigantic Bird Cage of wicker work carried aloft by 4 men. It could easily have held them. The birds inside are liberated after the Cremation. Then more fir cones and another vast Cage ; followed by 24 men carrying artificial flowers arranged like the Jews' Seven Golden Candlestick — pink and white blooms with gilded leaves on gilded branches : finally came the Body in a very chaste Palanquin made of light coloured wood — both of these to be burned — followed by the Mourners, not afoot but in rikishas in single file, and their number was legion.

It is fortunate that the nation adheres to cremation seeing that they have no sewerage system, drink out of wells and have but poor notion of what a Plumber is. The cartage of sewerage at all hours of

the day — under a blazing sun — is not only horrible but a daily menace to health. They pour this on the paddy fields outside of cities and work in it. I have had to run as from a pestilence from the garbage sampans in the canals. The Japanese seems wholly indifferent to it. Another detriment to a quiet stroll is their habit of throwing the water they “wash up” with, into the street. It is an easy way to get rid of it and also keeps the dusty street from being a nuisance but as they never look outside first, it is anything but pleasant to have a bowl of water suddenly miss you by inches. I have learned to roam around as a rule in more affluent quarters.

## IX

Leaving Yokohama, armed with a passport for the ancient castle of Nagoya I made my way first to Kyoto, the one time Capital, where I had yet another Pass for the Imperial Palace. Not a mile of the railroad but there was something to catch one’s eyes, though there were Tourists aboard sitting in the Pullman with me who carefully drew down the blinds anext them and taking out a novel forgot they were travellers in a land of beauty.

Even the very road bed speaks to one, beautifully laid, every  $\frac{1}{4}$  mile marked by small white posts, bridges worthy of a people far advanced in engineering skill, but because they are Japanese they must needs have a separate bridge, just as they have a separate tunnel, for the Up Line and the Down. We ran through picturesque country, heavily wooded hills, broad rivers somewhat low in volume at this season of the year but showing by their high banks what flood there must be in winter time.

We skirted the seashore, then made inland and worked round M<sup>t</sup> Fuji : saw it from many angles and ere long reached the station from which Pilgrims and Tourists start for the ascent — at the proper season for Fuji is not accessible all the year round. At the summit the Temple is then opened and the priests on hand for offerings. Up that long climb devotees go on foot, some for vows’ sake on their hands and knees : but Tourists mount on horseback.

We ran into Shidsuoka, <sup>45</sup> one of the leading Tea Districts of the Empire. Lying in the offing one could see many steamers at anchor waiting for their cargo : and on the train were merchants from many countries, on their way to make deals for the season’s crop. The tea bushes are close to the road bed, they are round, not more than 3 feet high and the leaves look like “Box”. The soil is sandy and very carefully tended. Usually the bushes are in rows on the side of a hill.

We skirted Lake Biwa for many miles, the largest sheet of fresh water in Japan. It is by no means an idle waste, around it many farms and in it a plenitude of fish. From the train can be seen mile after mile the Great Trunk Road of Early days, leading from Kyoto to the sea at Kanagawa and Yeddo, 307 miles away. It is broad and lined its entire length on each side by trees like poplars, even in parts where there is not another tree in sight. Along it were troops of soldiers and cavalry on the move. Villages and Temples galore, and towering stone Statues of famous men, these latter usually on the summit of a hill.

A day full of interest had turned into night before Kyoto was reached. It lies on a broad flat between two ridges and though it has lost its once high status it is very far from being a dead City. It was

---

<sup>45</sup> [Shizuoka Prefecture](#)

ablaze with light and my rikisha man took me through streets crowded with shoppers, the stores presenting a wide display of wares as he bore me to my Caravansary. <sup>46</sup>

I was up early and set off with my Special Runner, who proved to be an admirable guide as well as a strong and tireless ‘horse’ to see the Palace, the Temples, the Shrines and other sights of Kyoto. First to the Palace. It is not now used by the Mikado but serves as a Museum of Japanese Art. It rises amid gardens and all is enclosed in a high wall. Broad roads lead <sup>47</sup> up from various quarters and passing in through gates — fit for Buckingham Palace as they should be — I was at once taken in hand by a courteous guide who lead the way to the entrance of the first of many one storied buildings where sandals were supplied. Thence into the interior. It would have been a desecration to have trodden here in other than softest foot gear. Those polished floors were almost a feat to keep one’s balance on. Room after room, passage after passage, all tapestried and screened off the one from the other. Japanese screen work so well known is here to be seen of the highest order. Passing through countless rooms I found myself at last in the Grand Throne Room, a vast Hall in the centre of which is a canopied square where stands the Chair of State. Fronting this Throne the whole side of the Hall can be easily removed, thus throwing the regal scene open to the Public who would be gathered in the open square beyond. The whole place bears still upon it the impress of a Dwelling. There is an absence of bric-a-bac, the Art Museum is on the tapestried walls and screens. The 16 leaved Chrysanthemum is the leading design and worked in everywhere most cleverly. Not even in the “Era of Enlightenment” could any but the Mikado and his people find in Kyoto a dwelling and it is still so. It is not a Treaty Port hence Foreigners unless they are in Japanese employ are not permitted residence.

As there was a fine Pagoda nearby and I had not seen one at close quarters we made for it. I told my man to rest whilst I explored. By winding stairs — at times pitch dark — I climbed storey after storey till the summit reached, I secured a bird’s eye view of Kyoto. It looked a really well laid out City. It has broad streets, well built homes, spread out, covering a large area.

Then by way of climbs which tested the strength of my man and made me ashamed to let him haul an able bodied man about, we arrived at the chief Temple of Kyoto — the Kiomidzu. <sup>48</sup> It covers much ground and has many buildings. An avenue of trees leads up to the great stone steps, up which you mount to find the usual Infernal Guardians at the Entrance to the Main Building. Here is an Altar 190 feet long. The chief honours of the place are given to the Goddess Kwannon. There were many folk about, some praying, others chatting and laughing, priests hurrying hither and thither.

<sup>46</sup> An inn with a central courtyard for travelers in the deserts of Asia or North Africa.

<sup>47</sup> WWB has *leads*.

<sup>48</sup> [Kiyomizu-dera](#) in Kyoto

Passing out and by the residences of the monks I mounted further up to another Temple ; at its Entrance a Goddess with the monstrous name of Kam-no-su-be-no-ka-mi, whose grating held countless Lovers' Knots, the old priests nearby busy selling more Prayer Paper to anxious looking man and women. Having arranged the Knot you must toss in a coin into the cage, ring a bell by a long and much worn rope, clap your hands, tie (not here thrown) the charmed paper to the grating — being careful not to touch another's knot else your charm is broken — call out that wondrous name and so depart.

Beneath the broad porch roof I saw a crowd looking upward and following their gaze noted a beautifully striped snake of large proportion attacking a bird's nest for its eggs or young. A sacred snake, it could work its will. I thought it wisest to depart while the going was good, so moved on to where on one side of this Temple there is a sheer precipice with a short fence — today — to keep you at a distance. But still you can see below where there is a rock garden with ponds, and fountains playing. Till not so long ago it was a favorite spot for suicide and for jealous husbands to bring their suspected wives and test their innocence by a fall on to the rocks below. Those who survived the smash were deemed innocent, the majority — who were killed — were held to have deserved their fate. Venturing again within the Temple I saw amid much that was tawdry, a thick rope of human hair, 5 inches through and 250 feet long, given by 3500 women as a special offering — there were some 'silver threads' among the black, so old as well as young had given their quota. The kissing of an Image by all, some with sores upon them, gave me somewhat of a shock. By paths I worked my way down to the rock garden where many were bathing, and as many drinking the same waters. They are said to have healing virtue and many an old woman seemed hoping to rejuvenate herself by the energy of her ablutions. Here again no thought given to contagion.

I called it a Day and gave my good 'steed' a rest.

## X

We were off early to the Shrine <sup>49</sup> of one of Ancient days, set in a large well kept garden, the Shrine itself built picturesquely on an island in the middle of a miniature lake and reached by stepping stones. Its specialty is its Golden Ceiling : but only by dint of much perseverance could I get access at all, as a crowd of school children happened to be there and were being duly instructed by a Teacher as to its

---

<sup>49</sup> Kinkakuji Temple, Kyoto

history. The Ceiling had doubtless at one time shone with gilt but it is now sadly faded and worn. The outside roofing colour was far better — a pure robin egg blue. Then there were Parks and still more Parks to be seen — the Japanese are evidently great believers in Open Spaces — as well as the finer quarters of the City, the main streets, the principal shops and their native wares. My Runner was relentless and tireless, I was to miss nothing. And so another day wore on till evening when I had a Dance Hall to visit where one of the chief Performances of the year was announced as to take place.

It was a staid affair. The Hall is built fronting the Kamogawa River which cuts Kyoto in two, and when after presenting myself I was ushered upstairs I had a long wait which I employed watching the evolutions of the many sampans as they worked their crowded way up and down the stream. Then a door was thrown open and I was bowed in to the preliminary Tea Party. This was a very solemn affair. In a large room a table was ranged on three sides with a very low bench, on the fourth side next the wall. Taking one's cramped seat, the "Mistress of The Tea" appeared, a formal lady so stiff of dress that I thought she would break in two as she bent low to give the formal bow. Then little girls appeared, a dozen of them, all attired in their very best kimonos and with much greased hair, duly trying to appear terribly serious. First they brought round some kind of 'cookie' — each on a separate plate — one cookie for each of the guests — laying them down before the company with gingerly care, then bowed till their heads nigh touched the floor. Not a word spoken throughout by anyone. The cakes distributed, the Solemn Lady poured out tea into tiny cups, the which the diminutive maidens bore around going through the same performance as before. I ventured to put the cup to my lips but passed the cake on to my neighbour who looked tough enough to eat anything. Then with another awesome bow the Grand Dame of the Tea Party — without a feature of her painted and powdered face relaxing the whole long time — worked her way out with bow after bow, the little ones doing likewise. It was quite a strain, and I was glad when it was over.

With more bows from a fresh set of maidens we were ushered down tortuous stairway into the Theatre. The Stage was in front of course, but where the Boxes should be and indeed the full length of the sides, the Musicians sat — women only — each side attired differently and supplying the music with mandolins and a one stringed banjo. "The Gods" were not aloft but in the Pit where a packed crowd squatted on the floor. We were arranged on chairs, in tiers behind and slightly above them. Now the music began. I cannot describe it — it passes words as well as comprehension — it was awful. Then began the Dances. Slowly, solemnly, the dancers marched upon the stage, their colored dress, their sashes and their movements ensemble, very pretty, but never a kick among them. It was a serious business with them and having carried through some Design which was lost upon the Barbarian they passed out. But the Curtain did not drop, scene shifters appeared and in full view worked deftly, to be followed by other dancers and yet others. I could not enthuse. That Dance was not of such a nature as to fill my dreams when sleep o'er powered me, but it was a fresh experience and so part of a roamer's life.

By rail on the morrow I left Kyoto and reached Nagoya, and as there was no purely Foreign Hotel I was whisked off to a Japanese one where the usual Ceremonial reception was accorded me, all the porters, the lackeys and the dainty maids of the House lead by the Proprietor coming out to the top of the steps to greet me and bow thrice to the ground as I walked up the steps. This bowing and scraping is preposterous and overdone the whole land over. The Hotel is in two portions, one run for the Japanese, the other for the Foreigner, the former raised in front of the latter, a little garden with pond and fountain dividing the two.

Nagoya is one of the chief centres of Japanese pottery, the clay and silica being secured at a place a dozen miles away, whence the Japs claim they have drawn it for the past 2000 years. A roam around the little town showed me some true Seto ware on sale, vases and tea pots, fans and cups. Pale grey green and pale blue seemed the predominating colours. "Satsuma" ware came originally from Kiushiu

Island <sup>50</sup> far to the south. Much worthless ware is sold outside today as the real thing. Old time dealers throughout Japan have the real thing but it is hard to persuade them to open their ‘go downs’. They are chary and very loathe to part with it, the more so if they think it likely to be taken out of the country.

The Castle <sup>51</sup> is the most perfect example left in Japan. In the olden days under the Feudal System, the Lord of the District was a very great man — a Damio — and around his residence his dependants gathered. This Castle built in 1610 — by our years — is typical of scores which have now either fallen into hopeless decay or been demolished. Here, as in most other cases, the Castle stands some distance from the Town on rising ground. Looking at it from a distance it is a striking sight, its earthen and stone work into which heavy timber is added giving it a rich grey appearance. Low, flat, almost swampy country surrounds it which throws the Castle out all the more strongly in relief. A moat broad and deep surrounds it. The space in which it stands, enclosed — once past the moat — by a lofty wall faced on the outside with rough hewn blocks of stone, is close on 400 acres and today it houses large Barracks and Drill Grounds. The base of the keep or Citadel — set at one corner of the Castle — covers half an acre, each storey getting less, till at its 5<sup>th</sup> and last you stand in a room only 12 yards square.

The Castle’s Gateway leading into those broad acres is massive, with a double entrance, an outer and an inner, each with doors of tremendous size, both in height, in weight and in thickness. Once inside you have to enter your name and address in a book with soldiers around you, one of whom lead me off to enter the private apartments of the ancient Lord of Nagoya, then to the keep itself. A huge key was produced and the old lock was slow to move but at last the little wicket hole is open and I stepped into utter darkness, to mount by narrow winding stairway, storey after storey. Small ‘windows’ are frequent from which one gets glimpses of the country around. There are slit holes for the archers and trap opening for use of hurling stones or boiling water upon any foes beneath.

All the way up you note a chain and windlass, for there is a well in the base of the keep, known as “The Golden Water Well” which has never yet run dry : and when all the rest of the Castle might have fallen to the enemy, the Lord could still hold out, for none could touch his water supply. With the ancient weapons of war it is unthinkable that such a Citadel could ever be taken by assault.

It is pleasant to see how greatly the Japanese appreciate this Relic of the Past, and with what assiduous care they keep the Castle and grounds. It looks, moat, vast wall and Castle, as if it had come fresh from the hands of the builders and was only waiting for the Old Time Folk — the Great Daimio, and his women, his servants, and his fighters to walk through its Gate.

<sup>50</sup> [Kyushu](#) is the third largest island of Japan and most southwesterly of its four main islands.

<sup>51</sup> The Main Donjon and Sub Donjon of [Nagoya Castle](#). The Golden Dolphins can be seen on the roof of the Main Donjon.

Two Golden Dolphins — said to be worth \$80,000 — each eight feet high are to be seen on pedestals, one at each end of the Castle.<sup>52</sup> They might not have been there today, and a finishing touch in keeping with that noble stronghold would have been lost ; an irreparable loss for all. In 1873 they were taken down and sent off to grace the Vienna exhibition. The Nagoyans greatly feared both for the fate of their Dolphins and for themselves (without their protection) against the devils of the Land. On their return journey the ship was wrecked, and ship and dolphins lay long at the bottom of the sea hard by the coast of Nippon. They were recovered — for Nagoya could not spare them — borne in triumph to the Castle, lifted once again to their commanding site, and the devils were “laid” for aye.

## XI

Thence on to Kobe by rail where there are half a million people and a very respectable number in the foreign Settlement, for Kobe is a Treaty Port. Our Quarter is on The Bund or Esplanade for the City is at the head of the much talked of “Inland Sea”, and is one of the chief ports of Nippon, a keen rival of Yokohama. Back of the City there is a range of hills and in order to gain a good view of the country around and the sea I climbed up to Suwayama Park. Rikishas can go only part of the way. It was here that the French Academy sent their astronomers in 1874 to observe the Transit of Venus and there is

---

<sup>52</sup> The male and female Golden Dolphins contain a total of 88.08 kilograms of gold or 2,832 troy ounces. At the time of writing (December 2012), the price of gold set by the London Bullion Market Association was USD 1650 per troy ounce and so the Dolphins’ gold was worth \$4.7 million. A history of the *Kinshachi*, or Golden Dolphins, can be found [here](#), but there is no mention of the shipwreck. One of the two Kinshachi (with crow):

a stone column on the summit to commemorate that visit.<sup>53</sup> A picturesque Waterfall — Nunobiki<sup>54</sup> — not far distant drew me, but before reaching it I had to run the gauntlet for the climb up is lined with booths selling supposed Satsuma ware and postcards, and each Proprietor comes at you like a Bruiser. At a cost of 30 cents I got through.

At the Hotel which housed me I noticed on the Menu Card a gladsome announcement : “Vegetables supplied from our own farm”, hence after long absence I was able to indulge myself. No one who knows the methods of Japanese farming dare eat their home grown vegetables. Many a Tourist falls sick he knows not why : if he kept his eyes open he would not have to be told to avoid many offered articles of diet. On the roof of these Foreign hotels there is usually an attempt made at gardens, to carry the mind of the traveller “Home” ; here there were geraniums and marigolds, daisies and fernery, climbing and standard roses, a generous lot and pleasing.

---

<sup>53</sup> Venus Observation Memorial, Suwayama Park, Kobe, Japan

<sup>54</sup> Nunobiki Waterfall at Kobe

The Moto Machi <sup>55</sup> is the native High Street of Kobe : it has no side walks but is asphalted, the only piece of that kind of road work I saw in Japan. The shops were full of splendid silks and tempting curios.

From this Port I took boat for a run over the “Inland Sea”. There is always a chance that the weather and the sea may be rough, or fog may shut out everything from sight, but my usual good fortune did not fail me here. No days could be finer than those last ones on Japan. I saw the far-famed Sea at its best. There is a long open space of water from Kobe before the picturesque part begins. We covered this at night time.

Up with the sunrise I found us opposite Abuto Point on one of the Thousand Isles. Here perched on the summit of a rock was a Temple, whilst on an adjoining one was a Tower. The roofs of blue — and of gold — glistened in the sun. Amongst the deep foliage of the hills on other isles there constantly appeared red roofed little bungalows whilst ever and anon Temples, some white walled, others red, raised their heads amid the trees. The Ondo with its narrow strait, not 100 yards across. We had to hug one shore so closely that I could have thrown my hat into the houses as we passed through into Hiroshima Bay where lies the Kure Naval Station. A pall of smoke hung over it, pouring from the funnels of many Battleships. We passed by Naval and Military Magazines, Quarantine and Cadet Establishments, large Barracks — all the preparations for War. Behind another island in the Bay lay 100 Torpedo Boat Destroyers. The rule is stringent that no camera be used here. One was and a little Jap officer aboard, bowing deeply, required from a towering American the offending instrument and bowing once again dropped the camera overboard, no questions asked or answered. A Rule is a Rule with the Japanese.

These Thousand Isles are of course all shaped and sizes. Terraced fields abound whilst the placid sea was dotted with fishing boats, their sails of shapes unknown to a mere landsman. Now we neared Miyajima, The Sacred Isle — and my objective — a heavily wooded spot and even at a distance calls for admiration. A Sacred Isle indeed, where rikishas and dogs, births and deaths are not permitted — if the last two can be foreseen — where for long no woman indeed was allowed to land, where deer roam free and fearless, where crows and pigeons are held sacred, where no vandalism has ever been allowed.

---

<sup>55</sup> Motomachi Street, Kobe

As the steamer worked round a point and Miyajima lay ahead in a sea like a mirror, with its hills running up 1000 feet and more, mantled thick with trees and foliage of brightest green on many a thicket of bushes, it made a picture not easily forgotten. A motor launch took me off and I was soon housed in one of the various buildings which go to make up the Hotel, the sea a stone's throw away, a fountain playing in front with a little waterfall nearby which helps feed a pond where kingfishers disport themselves and ducks abide.

When darkness fell I went out on the water in a sampan to view the illuminations for some Festival being held. These consisted of 250 Stone Lanterns — which line the waterfront on stands — lit by a wick and sperm oil. Seen from a distance on the still waters the effect was excellent.

The Call of the Trees could not be resisted, so I rose with the sun and struck off for the hills alone. Pine, Cypress, Cherry and Maple are only a few of those to be seen. I steered off from the beaten track by narrow paths, crossing rivulets and miniature cascades on their way to the sea. A long climb lead me to a summit, then down and across a ravine, to find myself at last (breaking through the bush) upon the Stone Steps which lead from the village far below to the summit of the highest peak on the island where there is a Temple and a Shrine and close by a Fire which has not been suffered to go out for over 1000 years. Upwards I went again, now by the great broad steps which wind round and round, with tiny Shrines and Buddhas and piles of Lucky Stones upon the way till I reached the Fire. This is no mere Temple light, kept in a Repository and fed by oil but was evidently at first used as a Beacon. Though attached to a Shrine and so Sacred, it is housed today in a rough shed begrimed with smoke. It is an ordinary fire built of great logs which are kept glowing, and no more. An aged priest was in attendance. Not far off as I went on up I came to the Temple's bell hung in a most artistic tower. A pilgrim sensing my wish to hear its sound pulled the rope but once. A rich and full toned sound wafted itself off, it seemed to fill the air, echoing and re-echoing by hill and vale till it died out across the sea.

Entering the Temple I found a book kept for the signatures of outsiders. I copied the Heading written in a very fair hand : — “M<sup>r</sup> Man and Woman : this Book is a Read at Miyajima : take it Name”. I took it, but there was not much to see in that Temple. The view from it was to me the thing. As from no one I had been able to learn the number of the Steps on that “Sacred Way” I counted them as I

descended. There are 2,150.<sup>56</sup> How all those granite blocks were carried up that grade by human hands is a query not easy to answer. No horses (save the island's Sacred Horse) is permitted, and dense bush with frequent cascades hem those Steps in on either side. By the multitude of pilgrims — old and young, men and women — I met climbing up or making their way down, there can be no doubt as to the sacredness of Miyajima nor as to earnestness of the folk to fulfil their duty to The Invisible.

I left other things to a new day.

## XII

Nothing — even though Sacred and in the care of the gods — is left to chance by the Jap. Even this isle has its hidden batteries. But see them none can. Notices meet you even in the by-paths forbidding entrance or the use of camera. But there is enough of interest without trespassing. The straggling Village is free and almost at once I ran across that Sacred Horse. He has his stable adjoining the chief Temple at the waterside. The Shinto Gods prefer white steeds. His colour may be genuine but I had my doubts. Anyway he did not look very sacred for he seemed terribly thin and hungry in his outdoor cage and eat<sup>57</sup> ravenously out of my hand.

The Main Temple is built on piles and runs well out into the sea. There was a service going on with much beating of drums, the priests in gorgeous robes, a great crowd in attendance. Far out in the water

---

<sup>56</sup> Steps to the Daisho-in Temple, Miyajima

<sup>57</sup> WWB use of *eat* here might be as the archaic form of the past tense.

is the great Red Torii.<sup>58</sup> Its picture is known the world over. A Torii is the Entrance Gate to a Temple. They are always built with special care. As this is a Water Temple it is eminently fitting that its Gate should be where it is, and pilgrims crossing to the isle for worship enter by way of its wide spread posts. I took a sampan to see it close. It is built of camphor wood and stands 45 ft high from the sand its posts are sunk in, the beam across the top being 75 feet long. It is painted a brilliant red and can be seen at sea for miles. When the tide runs out both the Temple and its Gateway are bare. The Land Gate or Entrance from the Village is just as impressive. It is built of granite and is a most massive affair.

Along the waterfront — besides those 250 Stone Lanterns which are each 6 feet high — there are Stone Gryphons and a life size Stallion in bronze — a fine piece of statuary cast in Osaka : one living sacred steed, one of effigy. To these are added the usual quota of War Relics — for Remembrance Sake — a Funnel of a Japanese battleship riddled by Russian bullets, and a turret gun of Russia's with its muzzle torn away by the shells of the Japanese.

Now came my boat for Moji and the Shimoneseki Strait where ends The Inland Sea. Arriving at the former I had a long wait for the train which was to carry me through the most southerly of the 3 main islands (which together form Japan) to Nagasaki on the China Sea. Shimoneseki lying scarce half a mile across the strait that bears its name I found — on crossing over for a space — no more inviting. At last the train moved off and all the way was a continuous scene of agriculture. Everybody seemed at work in the fields. Up the hillsides was the same as on the flats. Darkness shut off the scene and it was late when I reached my hotel in Nagasaki.

The Harbour was a busy scene when I looked down upon it from my lofty caravansary. Three Liners were in the centre of the picture, and on the ways<sup>59</sup> was at least one Dreadnought. This is the main coaling station of the Empire. The mines are on Takashima Island close by, and the coal brought down in lighters. Going off to my steamer in a sampan I watched for long the chief sight of Nagasaki — The Women coaling ship. Standing high above them on deck, I looked down upon a busy scene. Lighters hugged close to the sides of the Liner. They were alive with women, a very few men assisting, they stand in line and pass baskets of coal from hand to hand up and up and up an inclined plane, the last half dozen standing on crazy looking ladders leading to the coal chute in the side of the ship. A deft twist to the basket by the last woman, the coal disappears, the basket is pitched down to where a woman awaits it, who throws it to the shovellers<sup>60</sup> and so on to the Grand Circle again. It is

---

<sup>58</sup> The torii at the Itsukushima Shrine, Miyajima

<sup>59</sup> A ship undergoing construction in a shipyard is said to be *on the ways*.

<sup>60</sup> WWB has *shovellers*.

all done with rhythmic <sup>61</sup> regularity and astonishing speed. These coalers are very scantily clad and their manners very easy. Each lighter holds 30 tons, each has 20 women to unload it, the pay is half a cent a ton for each, our ship took in 3000 tons.

Nagasaki has an historic interest. When S<sup>t</sup> Francis Xavier <sup>62</sup> in 1549 first reached Japan he landed on this southern island in the Province of Satsuma. He made many converts and none received the new gospel than those of Nagasaki. When the Edict was issued to banish Christianity it was the Christians of Nagasaki who suffered most, they were massacred in thousands. When — centuries later — the bar was lifted, and priests returned to take up the work, Christianity had perished throughout Japan, save at Nagasaki. A thousand and more from this district of hills and vales came forward, they had kept the Faith amongst them, baptized each their generation, still clung to blessed Mary, and waited patiently till once again The Eucharist might be celebrated amongst them. They had their Hearts' Desire.

— **And here I left Japan.** —

(May 1913).

## ACROSS SIBERIA

## I

I was heading Home by way of northern Asia and middle Europe : the first leg by water from Shanghai to Korea. <sup>63</sup> Sailing between the Yellow and the China Seas there was Tsu-shima Strait to be crossed, and I was minded that here was the site of that one sided naval fight <sup>64</sup> between Togo <sup>65</sup> and Rogentsinki, <sup>66</sup> the Jap and Russian Admirals. In the middle of that way lies the island which gives the Strait its name, where the Jap fleet lay hidden and at rest, waiting those long weeks whilst the Russian fleet slowly made its way from the Baltic Sea. One can picture the swift torpedo boats catching sight of the slow moving enemy coming up the China Sea — for the colliers kept the battleships in leash — their dashing off to Togo, the Japs letting them pass well into the Strait, then slipping out behind them to deploy on either side and letting Hell loose upon them, to settle all but one which escaped to Vladivostock.

Towards evening Deer Island's Light shone out and we entered the harbour of Fusan <sup>67</sup> with its broad Landing stage where the train stands almost alongside the boat, and the scarlet capped porters transfer your baggage in a twinkling. Our Express was waiting, a Sleeper, Dining Car and mail van, and taking a Military Guard of Jap soldiers to protect mail — and ourselves — from bandits, we dashed into the night. Up with daylight we were at the Capital — Seoul. Here there are 300,000 souls, Jap Government Officials, substantial Public and Government Buildings, ornate homes, 14 miles of walls round the City with 8 gates. At once the newcomer is intrigued by the Korean's head gear, his top hat is the most wonderful head covering on the plain order, conceivable. It strikes one as <sup>68</sup> quite unnecessary and ridiculous.

At Seoul I was close to its sea port Chemulpo where the first gun of the war with Russia was fired, when the brave Russian Captain went out to sea — despite the appeals of all the Consuls to save himself and his men from sure destruction — to be battered to pieces by two Jap cruisers within ten minutes. Then on to Kaijo <sup>69</sup> with its fine waterfall where a party of missionaries came aboard heading for Switzerland for some Convention of their particular Creed. Now came Heijo, <sup>70</sup> the second city in size, of Chosen — the name of their country to its natives. By what was to be seen along the way it seems appropriately called The Hermit Kingdom. There is little evidence of modernity save in the towns on the railway line. Elsewhere the houses are of mud and thatch, the women working in the rice and barley fields, bullocks in the ploughs, no roads to be seen. Many of the women — not at work — heavily veiled in white, the men in baggy Turkish trousers — also white — boys as well as girls in skirts. Those seen carrying loads use a unique method. On their backs is a receptacle like our carpenter's tool bag wide open fastened to a tripod, two short legs holding the bag, one long one which can be rested on the ground at any time, the bearer remaining erect.

<sup>67</sup> [Busan, South Korea](#)

<sup>68</sup> WWB has *is*.

<sup>69</sup> [Kaesŏng, North Korea](#)

<sup>70</sup> [Pyongyang, North Korea](#)

Now we approached the Yalu River, the dividing line between Korea and Manchuria, with its  $\frac{3}{4}$  of a mile long bridge. Hereabouts it was that the eager Japs keen to get at grips with their enemy refused the use of Transports and swam the river. There was no bridge then. Once over we were in Chinese territory and a Customs Officer came aboard at Antung,<sup>71</sup> an Englishman of towering height, white helmeted, white garmented, blue eyed and genial. There was nothing to it but the chalk mark. We added more soldiers for we were soon in the mountains. With daylight was had reached the great plains.

Here lies Mukden<sup>72</sup> where not long ago a million men fought<sup>73</sup> and the world gaped at such a number, where strategy was pitted against strategy, where every<sup>74</sup> move of the enemy could be seen as on a table and where Russia was finally hurled back to Siberia and the War was over. Here again was much rice, farm houses still of mud with high foursquare walls of the same around them. Mukden spreads itself far and is again a great centre, a real City standing alone but has feelers stretching out over those vast plains, an octopus with a future. Now we were nearing another centre — though a lesser one in<sup>75</sup> size — Chang Chun<sup>76</sup> — the hub of the bean trade. There are said to be no beans in the world to be compared with those of Manchuria. Vast areas were passed through with the plants well on their way to bearing. There were herds of Manchurian ponies to be seen, those sturdy little beasts which nothing seems to tire. The minor stations had each up to date covering, how ever small the population ; the roofs tipped off with Dragons — to ward off Evil Spirits — and soldiers standing at Attention. At Chang Chun I had to change for Harbin<sup>77</sup> (in Siberia) and travellers from Pekin joined us. In one of them I met an engaging personality who made the long journey to our Home all too short : Pope, General Manager of the Shanghai Nanking Railway<sup>78</sup> — whom I ought to have met there but failed to catch at home — loaned to the Chinese Government to show them how to run a railway, spent long years in India at the same work, fought in the 2<sup>nd</sup> Afghan War<sup>79</sup> and carries the evidence in facial scars, with ample means ran his own hospital for wounded soldiers — of both sides — outside Nanking at the time of the late revolution<sup>80</sup> — as I learned when there — a most gregarious person, a lover of animals, keeps a compound for stray dogs in Shanghai, petted every dog and child on station platforms, hovered day after day around a sick little one in a Russian mother's arms and spent a small fortune in throwing Kopeks to children from the carriage windows. Brimful of useful information, I drew on his store to my own great benefit and content. Such contacts are the surprise of Travel.

## II

The next morning we were at Harbin where we had to change again and wait for the Trans Siberian Express coming from Vladivostock, the Pacific terminus of the Line with its two branches, one running direct to Harbin through Manchuria — known as the Chinese Eastern Railway — the other

<sup>76</sup> [Changchun, Jilin Province](#)

<sup>77</sup> [Harbin, Heilongjiang Province](#)

<sup>78</sup> A.W.U. Pope is mentioned in several newspaper articles of the period, as can be seen [here](#).

<sup>79</sup> [The Second Anglo-Afghan War](#) was fought between the United Kingdom and Afghanistan from 1878 to 1880.

<sup>80</sup> [The Xinhai Revolution](#), also known as the Revolution of 1911 or the Chinese Revolution, was a revolution that overthrew China's last imperial dynasty, the Qing Dynasty, and established the Republic of China.

a much longer one, wholly Russian, skirting the Chinese territory and crossing, far to the north, the Amur River on the way. This great Line was begun in 1891. There are sections every Verst <sup>81</sup> ( $\frac{2}{3}$  of a mile) of it with women working as navvies along with the men. Whilst the Line in the main is single tracked, there is considerable double track already. To date the cost has been Four Hundred Million dollars, and to complete the double track calls for Sixty Million more.

There is but one “International” Express a week, and there is keen competition for a place on that train. I had to wait six weeks to secure mine. There are also two “State” trains weekly. Besides these we were continuously passing others of lesser brand, Emigrant trains and Cattle, Soldiers’ trains and Convicts — the latter with barred windows and hungry, unkempt faces peering out — long Freight trains and Refrigerator ones — carrying the white Siberian butter to Europe and its cars invariably painted white. The Government has erected large Immigrant Sheds at most stations, and a weird looking crowd were to be seen with endless bundles and babies, the women looking every whit as masculine as the men. In the wilder parts these women seem to have at least the Whip Hand for Sunday is said to be Flogging Day, when the boorish vodka-soaked husband, after his Saturday night bout gets a good hiding from his Better Half so as to straighten him up for Monday morning’s work.

At each Station we met with neatly constructed booths where Milk and Bread can be purchased for a trifle, both of the finest quality by actual experience. Passengers have to look sharp at the stopping places of The Express. As soon as the train pulls up, a bell is struck : when Time is up 2 strokes are given with 3 strokes seemingly a moment after, the guard’s whistle blows and the train is off. Seeing that your Book of Tickets is rarely in your possession, to be left behind would be exceedingly awkward.

Whether the Section folk have too much idle time on their hands or possess an artistic temperament I cannot say, but the Distance “pegs” at the side of the road bed for those thousands of miles are not mere plain white ones driven in on the slant, but set upright and ornamented around their base with red and white pebbles, wicker work or a bottomless bucket keeping all in place. The effect is pretty and shows an interest in Upkeep.

The cars are comfortable, the dining cars well served, there is a Library aboard and the latest news (in French) in ‘the diner’. I saw Siberia at the ideal time of the year, everything in Nature looked at its best. It must be a very wearying run when nothing but snow is to be seen on either side. That the snow is a menace can be seen by the preparations made against it. Hedges, miles of them ; and fences piled on high, ready for use in dangerous spots for special drifts.

The Wagons-de-lit of the Continent (of Europe) are in use with their abundant space for baggage, whilst in the Luggage Van there is a Bathroom fitted with hot and cold water as well as a “Shower”, but the long journey is on the whole not a dirty one for the passenger, the lofty engines — like huge, ungainly mammoths — burning wood (in Siberia) and oil (in Russia).

The various ‘types’ met en route change with the scene. The Buriats are the least attractive. They look like a cross between Tartar and Chinaman. They wear a miniature Field Marshal’s hat, placed crosswise in the head, made of leather, are clean shaved but evil eyed. The Cossack wins regard, every inch the soldier with his curved sword always dangling at his side. The Russian peasant badly needs the attention of a barber and one and all seem in a deplorable condition as to clothes. All, even

---

<sup>81</sup> A [verst](#) is an obsolete Russian unit of length. It is defined as being 500 [sazhen](#) long, which makes a verst equal to 1.0668 kilometres (3,500 feet or 0.663 miles). WWB has *vest*.

down to small boys, wear the high boots and despite summer time were clinging to their bear skin cap.

I have run on ahead while waiting for my express at Harbin. That Junction is no small place. There is Official Town, Russian Town and Chinatown. The whole City looks new — the roads are yet of cobblestones — as indeed it is for in 1897 there were only a few Mongols gathered by its riverside — the Sungari, a feeder to the Amur and a navigable stream — with the vast Steppes around it as far as the eye could see. Today there are 80,000 inhabitants and it is growing apace. Drovskis <sup>82</sup> are the chief vehicles, one horse in the shafts with the Arch over its head, the other horse pulling from one side : Officers everywhere, resplendent in uniform, soldiers of many regiments, one and all big fellows : large stores on the Department system : many Churches with their cupolas : and one Foreign Hotel, “The Grand”. A busy spot.

At last, the Train : and we were off with a capacity load of passengers : and before long were at a little hamlet, famous as the birth place <sup>83</sup> of the Tartar Conqueror Genghis Khan who with his legions swept over Asia and Europe till his Dominion reached from the Arctic to the Himalayas, from the Pacific to the Danube. Thence to Sitsikar, <sup>84</sup> surrounded by a double wall, one of mud, one of brick, the richest market for furs in Manchuria and Siberia, Tiger, fox and sable brought here by the Tungan hunters. Then night fell and by morning the flat country was ending for awhile, and we were climbing the Khinagan Mountains. Here a series of loops are made and glimpses of delightful mountain scenery were given us. A special Guard of a dozen Russian soldiers were with us for the mountain men are as yet untamed and often descend to attack and loot. On these beautiful Ranges wild goat, bear and Chinese pheasants abound. On the summit we were glad to seize hold of wraps for it is the coldest spot of the whole run and the Edelweiss <sup>85</sup> was on either side of the track, sure evidence that our feelings were correct. Down grade we went to the Steppes once more where bands of horses and cattle by the hundreds were being herded. By noon the scene again changed, and we entered the Mongolian Desert, sand, with endless hillocks of the same, everywhere. Hour after hour we forged ahead, the monotony only broken by some wanderers on camels from far off Thibet to the markets we had left. By evening we left the Desert behind us and soon after pulled up at Manchuree, <sup>86</sup> the frontier station where we entered Siberia (passport ridden Russian territory). Our baggage was passed — once again by an Englishman — our Passports examined, and we were off again into the night.

### III

The Longest Day of the Year <sup>87</sup> found us entering The Taiga Forest which was with us for two days continuously. Not a forest such as we picture but still plenty of silver birch and pine, lovely wooded valleys and abundance of wild flowers. I saw and gathered — for the mammoth engine often stopped for fuel on the way — Forget-me-nots and large Daisies, Lilies of the Valley and purple Lilac, a yellow tulip shaped flower and many another also beyond my ken. And this in Siberia, all contrary to the usual conception of this land.

---

<sup>82</sup> An open four-wheeled horse-drawn passenger carriage, formerly used in Russia.

<sup>83</sup> The hamlet that WWB refers to must be between Harbin and Qiqihar; however, Genghis Khan is thought to have been born in modern-day northern Mongolia, not far from the current capital, Ulaanbaatar.

<sup>84</sup> Qiqihar (formerly Tsitsihar) is a major city in the Heilongjiang province.

<sup>85</sup> Edelweiss (*Leontopodium alpinum*) is a well-known mountain flower, belonging to the sunflower family.

<sup>86</sup> Manzhouli is a city located in the Inner Mongolia Autonomous Region of China.

<sup>87</sup> In 1913, Saturday, June 21.

Thence to Chita,<sup>88</sup> a military centre, a place of exile for political prisoners — a well built city — a broad river flowing through it, but unpaved streets as usual. It was impossible for me to go through Siberia without the thought being constantly present of those unfortunate Exiles. You have only to look out of the window to see the actual road which they traversed in days gone by, for the line follows it closely. Over Steppe and Desert, through mountains and forest lies that road along which they dragged their weary limbs in chains and with broken spirits.

Once again we entered a Range and climbed the Yablonai Ridge.<sup>89</sup> Here we passed through a tunnel over the stone front of which at one end is engraved in large lettering and in English “To the Atlantic Ocean”, on the other end “To the Pacific Ocean” : a pretty conceit and evidence of British participation in the great undertaking. Tearing down the Ridge we came to a charming spot where the Silenga and the Udu rivers join.<sup>90</sup> Here was a large Military Camp — many thousands of tents — horses tethered on the banks by the hundred — the soldiers bathing after a hot day’s work.

The Sunset was just tipping the tops of the distant hills as we reached Lake Baikal, a sheet of fresh water which could hold England in it — 40 miles across, and in places said to be one mile deep. Here sturgeon abound and seals live — the only body of water inland the world over where these hair seals are found. The railway today runs through a series of tunnels along the steep borders of the Lake, giving charming glimpses of its deep blue waters. Till lately there was a break in the line during summer, when passengers and freight were carried across in steamers, but in winter rails were laid on the ice and the burden — at times — could be borne, otherwise those famous Icebreakers “The Angara” and “The Baikal” of 3,750 horsepower each (built of the English Armstrongs<sup>91</sup>) got to work and kept the lane of water open. They lay in open view when we reached the Town.

Then night fell, and with the morn we were at Irkoutsk,<sup>92</sup> the Capital of Eastern Siberia. Here we changed into a fresh Express. There was no confusion for the compartments tallied in each train and they were drawn up close to each other, car fitting to car. This city is situated on the Angara River, another broad stream.<sup>93</sup> Nearby is one of the great Russian Convict Settlements, 200,000 there. It was Sunday and the women and girls were in their “best”, the men wearing a helmet, new to me, made of that material one associates with a wash-rag (I think called “Lufa”<sup>94</sup>). Gold is found nearby and the Capital is said to owe much to the high class of Exiles who in days gone by found their lot cast in this once wild spot.

Now came a diversified country, at one time flat with large fenceless fields and many patches of wild flowers : then we climbed slight Ranges and found swampland for many miles with pine and elk wood and high grass. Cedars too and larches with the tree of trees from the Pacific to the Urals — the

---

<sup>88</sup> Chita is a city and the administrative center of Zabaykalsky Krai, Russia, located at the confluence of the Chita and Ingoda Rivers and on the Trans-Siberian Railway.

<sup>89</sup> The Yablonoi Mountains run from southwest to northeast, passing to the west of Chita and to the east of Lake Baikal. The range forms the dividing line between the rivers that empty into the Arctic Ocean and those that empty into the Pacific.

<sup>90</sup> Ulan-Ude is the capital city of the Republic of Buryatia, Russia, located about 100 kilometers southeast of Lake Baikal on the Uda River at its confluence with the Selenga. According to the preliminary results of the 2010 Census, 404,357 people lived in Ulan-Ude, making the city the third largest in eastern Siberia by population.

<sup>91</sup> Sir W G Armstrong Whitworth & Co Ltd was a major British manufacturing company of the early years of the 20th century. With headquarters in Elswick, Newcastle upon Tyne, Armstrong Whitworth engaged in the construction of armaments, ships, locomotives, automobiles, and aircraft.

<sup>94</sup> Luffa is a genus of tropical and subtropical vines classified in the cucumber (Cucurbitaceae) family. When the fruit is fully ripened it is very fibrous. The fully developed fruit is the source of the loofah scrubbing sponge which is used in bathrooms and kitchens as a sponge tool.

Silver Birch. We were heading for one of the great Siberian rivers, The Yenisei, and crossed it by a noble bridge,<sup>95</sup> 1000 yards in length, the stream dotted with islands, steamboats plying up and down, a swift, broad river with its outlet in the Arctic Ocean.

Thence to Taiga<sup>96</sup> near where is Tomsk, the site of “The University of Siberia” with its 2000 students ; and its Shrine of a Saint<sup>97</sup> with which is connected the strange tale of Alexander I (1861)

---

<sup>95</sup> A bridge near [Krasnoyarsk](#) carries the Trans-Siberian Railway across the Yenisei River. This structure, one of the longest at the time, was constructed between 1893 and 1896.

<sup>96</sup> [Tayga](#) is a town in Kemerovo Oblast, located northwest of Kemerovo. The town is a railroad junction on Trans-Siberian Railway, and also the starting point of the Tayga–Bely Yar branch of the Western Siberian Railway, which provides access to [Tomsk](#).

<sup>97</sup> [Feodor Kuzmich](#) (or Kozmich) was a hermit who emerged in Siberia in 1836 and died in the vicinity of Tomsk in 1864. He was glorified as a saint of the Orthodox Church and was believed to have been [Alexander I \(1777–1825\)](#) under an assumed identity. Chapel of St Feodor Kuzmich in Tomsk:

who is said not to have died at his Baltic Capital as supposed, but to have escaped his watchers and reached Tomsk, there living as a hermit till he passed as a Holy Man to his rest. It was this currently accepted tale which Tolstoi <sup>98</sup> vainly tried to imitate, when he escaped from his home, and set out to live a hermit's life like his former Sovereign.

Scaling the Sckoursk Range we reached and crossed another great river, the Obi, <sup>99</sup> which gives its name to the Gulf in the Arctic where it empties : and by so doing had entered Western Siberia. It is at the Obi that Big game hunters start for Ibex, Sheep and Wapiti which inhabit the Range through which it flows. Now came the Steppes again — all day we traversed them with farm after farm to the horizon. Omsk at last with its 100,000 people and its beautiful blue and gold domed Cathedral <sup>100</sup> : the Irtych River, a feeder of the Obi, flows by. “Letters from a Dead House”, a terrific indictment of Russia's penal system which stirred the public of many countries years gone by, was issued from here by an exiled Russian Author. <sup>101</sup> “Half Way House” for me in happier times : England was equidistant with Korea.

You cannot tell the mileage made, by posts as in some countries, for these seemingly only tally off the sections ; which reminds me of those telegraph posts. They bear not only a number which must be legion over those thousands of miles, but the year they were erected so that one became fascinated as to guessing how long the next one had stood — one of 1913 would be next to one of 1903. The Time Table gave the mileage as it slowly mounted up, slowly for the Mammoth, though hauling an Express, always took its time from point to point.

We passed through Petropavlowsk <sup>102</sup> (Peter and Paul City), where were caravans halting from Central Asia, to find ourselves again mid fields of corn with many a windmill to grind it and miles of

<sup>102</sup> [Petropavl](#) is a city on the Ishim River in northern Kazakhstan close to the border with Russia, about 261 km west of Omsk along the Trans-Siberian Railway.

virgin black soil awaiting culture ; and so reached [Kourgane](#),<sup>103</sup> the centre of the Siberian butter trade. No one could possibly want finer butter than the white butter of this land. The Urals were now but a night and a morning ahead.

That early morn found us at [Cheliabinsk](#)<sup>104</sup> whence a branch line — a trunk road, no mere spur — runs to Saint Petersburg. Here we had a view of a Russian Military Governor. He had arrived from the Capital. A tall, handsome old man with curled white moustache and a beard brushed fiercely apart. Resplendent with medals robed in a splendid light blue cloak and a cap with a perfect blend of dark blue and light — the former on its crown. Awaiting him was a Detail of Mounted Cossacks, and a drovsky with 3 of the most perfect horses (grey) one could wish to see. The middle one (under the Arch which was inlaid with ivory) stood pawing to be off, the others free of shafts, mad to get going. When at last the great man stepped into the carriage, soldiers saluted, men doffed their caps, the Detail swept around to clear the way, the 3 grey Beauties sprang into the air, their bells clashing in perfect harmony : and he was gone : whilst we went back to our more prosaic mode of travel to pass from Asia into Europe.

#### IV

By midday we began the ascent of the Dividing Range of 2 Continents, and by six p.m. we were down the other side heading across Europe. The Urals are not snow-peaked, rocky or stupendous but they are nevertheless picturesque and abound in Red Fir. The spiral work of the road bed is not acute in its turnings ; the curves round the many shoulders of the mountains are long and sweeping. Up and up we climbed, hardly realizing the height we were gaining. No heavy grades, no tunnels, very few cuttings, the line here double tracked. Many mountain lakes. At [Mias](#)<sup>105</sup> we began the last and the heaviest haul. It is, on the whole, a short ascent as to mileage from Asia, a long descent to Europe. Past [Syrostan](#) one could see the beginnings of many rivers, some to become great ones, as “The Ural” which finds its way to the Caspian Sea, others to flow across Asia. And so to the Summit at [Ourjoumka](#).<sup>106</sup>

Here standing clearly out, close to the track, as the train slowly passes through one of the cuttings, is the great White marble Monument, “The Monument of Tears”, on the actual summit, marking the boundary between the 2 Continents : “Asia” standing out, clear cut in huge lettering ; “Europe” on the other.<sup>107</sup> It was here that the exiles flung themselves down, as grief stricken they bade farewell

<sup>103</sup> [Kurgan](#) is the city and the administrative center of Kurgan Oblast.

<sup>104</sup> [Chelyabinsk](#) is a city and the administrative center of Chelyabinsk Oblast, just to the east of the Ural Mountains, on the border of Europe and Asia.

<sup>105</sup> [Miass](#) is a city in Chelyabinsk Oblast, west of Chelyabinsk, on the eastern slope of the southern Urals, on the bank of the Miass River.

<sup>106</sup> *Ourjoumka* is the spelling found in French texts; *Urzhumka* is found in English texts; the Cyrillic is *Уржумка*. News reports concerning the meteorite that hit near Chelyabinsk on 15 February 2013 claimed that it had been intercepted by the Russian air defence complex at Urzhumka.

<sup>107</sup> The current monument on the Trans-Siberian Railway separating Europe and Asia is located near [Yekaterinburg](#). However, the earliest route of the Trans-Siberian Railway bypassed Yekaterinburg and went through Chelyabinsk to the south; this is the route by which WWB travelled in 1913. The Monument of Tears is located near the Urzhumka Station, which is between Zlatoust and Miass, to the west of Chelyabinsk. References to (i) the “*pyramide blanche qui, près de la station d’Ourjoumka, marque la ligne de faite de l’Oural*” and (ii) to a statue “*between Zlatoust and Miass to mark the border between Europe and Asia*” can be found [here](#) and [here](#). Urzhumka Station (left), in 1899, and the Monument of Tears (right), ‘ЕВРОПА’ (Europe) side, in 1895 ([Trans-Siberian Photogallery](#); see [here](#), [here](#) and [here](#) for more recent photos of the Monument of Tears):

to the Land of their Fathers and entered the dreaded, unknown Siberia. All through the Urals their Way could be clearly traced, winding in and out between the hills.

Then down we sped, soon to see lying far below (in an exquisite valley) the City of Zlatooust.<sup>108</sup> We seemed at one time to be hurrying from it, then turning a mountain shoulder we were heading for it. Lying in the very heart of the Urals, with the river Ai cutting the City in two, its white domed Churches<sup>109</sup> and factories looking like toy buildings from the heights above, and a bright sun flooding all, here to me was the most picturesque sight of all the long journey from Korea. Zlatooust has great Metal Works, Foundries and a Government Armoury, for the Urals are full of minerals as well as of gold, platinum and precious stones. So rich is the district around in the most desired of all its possessions that Emperor Alexander I gave the City its name, which is the Russian for Saint Chrysostom,<sup>110</sup> the Golden Mouthed. Hearing of its riches he went from his Capital to see for himself. He found a Russian prospector at work and rewarded him there and then with many broad acres ; the years passed, his wealth became great, he died a Prince of the Empire. At the Station you have to run

<sup>108</sup> Zlatoust is a city in Chelyabinsk Oblast, on the Ay River, west of Chelyabinsk.

<sup>109</sup> Zlatoust in 1910:

<sup>110</sup> John Chrysostom (c. 347–407), Archbishop of Constantinople, was an important Early Church Father.

the gauntlet of a swarm of vendors who offer from letter weights to broaches, rings and precious stones.

We followed the Ai down to the plains, the population now Tartar, their huts of clay, thatched with straw ; instead of the bell towers of the Orthodox Churches there were the minarets of the Mohammedan Mosques. By sunset we reached Ouva <sup>111</sup> on the banks of the Bulaia where immense log rafts were waiting to be towed to the Volga and so to the Caspian Sea and to market. Nightingales flooded the woods with song as we passed into the night.

Morning found us entering a flat but very fertile country with its green mantle of growing crops. This is “The Black Land District” of Russia Proper. More population, larger villages, but huts not deserving of the name of Homes. Samara, <sup>112</sup> a City of 100,000, centre of a grain trade, was the next stopping place and a cosmopolitan crowd were at the Station — Mongols and Tartars, Russians and Buriats, Cossacks and Circassians. At Batraki <sup>113</sup> we crossed the Volga, a splendid river, alive with commerce, paddle wheelers for tugs. The great bridge “The Alexander” <sup>114</sup> (pride of Russian engineering skill) is one mile long with its approaches, and its floor is 135 feet above the water. The Imperial Arms adorn its entrance and its exit. Once across we were in a much more civilized land. Villages with greatly improved dwellings ; Greek Churches once again.

The next day’s light found us in a busy manufacturing district and by 10 a.m. we drew up in Moscow. Here we had to change once more. I hied to the Kremlin, and all that I had heard concerning it paled before its actuality. It is a City within a City, its lofty walls enclose a mass of splendid buildings — Palaces and Churches — Arsenals and Museums. All these have been rebuilt since 1812 when the Russians destroyed Moscow on the approach of Napoleon : but the walls of The Kremlin and of the Tartar City lying just below it are the old walls. I had entered by “The Redeemer’s Gate” above which is an Ikon of The Christ and on entering or exit every man takes off his hat, and the Guard will see that it is done : even passers by I noticed do the same. Then on to The Great Bell — the Czar Kolokol — fallen from its destroyed steeple and never replaced, a huge piece broken out, enabling me to stand

<sup>111</sup> Ufa is the capital city of the Republic of Bashkortostan, at the confluence of the Belaya and Ufa Rivers.

<sup>112</sup> Samara, known from 1935 to 1991 as Kuybyshev, is the sixth largest city in Russia and the administrative center of Samara Oblast. It is situated at the confluence of the Volga and Samara Rivers on the east bank of the Volga.

<sup>113</sup> Oktyabrsk is a town in Samara Oblast, located on the right bank of the Volga River. It was founded in 1956 by consolidating of three settlements of Batraki, Pravaya Volga and Permomaysky.

<sup>114</sup> Alexander I Bridge, with the Imperial Arms

within ; its weight 400,000 pounds, 20 ft high, 60 ft round its base, its metal as it stands worth two million dollars.<sup>115</sup>

A wander through Moscow had its interest, Churches on every hand, Mosaics on their plastered outer walls, their domes a robin egg blue, a golden Cross surmounting, streets of fine shops, great business blocks, still the cobbled roads, handsomely appointed drovskis drawn by spirited horses, flowers (growing in tubs) half way up the electric tram poles which are placed down the centre of the streets. Near the Station a striking Arc de Triomphe surmounted by a fine piece of statuary, a Chariot and horses ; and in the Station a Shrine with many candles burning, the offerings of the Devout for a successful journey.

Leaving the ancient Capital our way ran through much flat country now full of waving corn. How different a scene from 1812 when, over this same ground, the French Army made its disastrous retreat from a Moscow in ruins. Ahead I was soon to pass another striking Monument — a shaft of marble, reading on one side “Napoleon Bonaparte passed this way in 1812 with 400,000 men” and on the reverse “Napoleon Bonaparte passed this way in 1812 with 9,000 men”.

By morning we were at Brest<sup>116</sup> on the frontier of Russian Poland. Here Latin Churches began with their spires. Crucifixes were to be seen by the roadside and in the fields. A great Military depot was passed, alive with men and horses. Then by evidence of summer cottages each with their well kept gardens we were approaching another big centre, and shortly after we drew up at Warsaw. It was Saturday, hence the Jewish Quarter was tight closed, but the population were about ; the men with their long black coats and small peaked caps, the married women easily detected by their elaborate wigs worn in place of their locks cut off at marriage. A fine City, Zyrardon Church a predominating edifice. A lunch at “The Bristol” (with stringed music accompaniment) recalled the vagaries of the English Nobleman who thus left his mark here.<sup>117</sup> Once more back to the train, to pass through a land improving in up to date notions of husbandry and homes, for the Frontier at Alexandrovo where

---

<sup>115</sup> The Tzar Bell in the Kremlin

<sup>116</sup> Brest is a city in Belarus at the border with Poland opposite the city of Terespol, where the Bug River and Mukhavets rivers meet.

<sup>117</sup> The Hotel Bristol was built in 1900 by a company whose partners included Ignacy Jan Paderewski, Polish pianist and prime minister. A possible origin of the name is the association with Frederick Hervey, the fourth Earl of Bristol and Bishop of Derry (1730–1803). According to his biographer, “So widely famed was the Bishop as a traveller, and so great his reputation as a connoisseur of all good things, that Lord Bristol’s hotel... came to be the best known and regarded in every city or town where he sojourned and was thus the precursor of the Hotels Bristol to be found all over Europe.”

Customs were passed, Passports shown and we left Russian territory behind us — a long run surely from Eastern Siberia.

Now Germany had to be passed through, with Berlin and the Elbe, Cologne and the Rhine ; Belgium too, with Brussels' charms. On these I need not dwell, they are too well known for comment. It was noon when the train drew up at Calais' Quay. Across the water I could descry the white cliffs of Dover. The steamer soon filled with passengers, pushed her nose out into the tossing Straits, her engines chug-chugged steadily, yet all too slowly for me. The Castle and the Breakwater hove in clearer view ; soon we were in smooth water, tied up, the gang plank down, and I stood again on England's soil **after Thirty Years A'Roaming**.

## AFTER THIRTY YEARS, TWO MONTHS AT HOME

### Foreword

My landing place was Dover. No plan outlined, save so far as possible, to pick up the threads of the years from birth to early manhood, revisiting the scenes and weaving them into a whole to last, indelible, till Memory should cease its functioning in some far off land whither the wanderlust should further lead me.

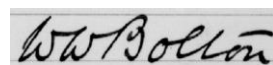

I was not disappointed, as so many seem to be, revisiting ; nor disillusioned. Time must inevitably bring changes : I was prepared for these, but England's soil and historic Past nothing can change ; and to sense these was enough for me, as I would roam over Shires familiar in the Long Ago.

Kent was old ground and must ever be The Garden of England. As the train whirled me along to the Metropolis there seemed but little change ; a glimpse through trees, here a castle, there of a ruined abbey, anon a lovely domain spread out with a Manor House wrapped in ivy, a little village appearing, nestling in the hills, thatched roofs : and every village its House of God, sometimes square towered, sometimes spired ; cattle browsing in the neatly hedged fields ; old men, smock frocked, bent double, working in the fields they had tilled since boyhood ; old women, sun bonneted, sitting at their cottage door.

Then the countryside began to cease, and one grew conscious of some mighty centre reaching out for room — more room. What was country I found was town, whole hamlets had been absorbed, the homes of a million were where once I had tramped for training, or taken part in many a hard fought game. The open spaces grew steadily less, the line of houses thicker, denser ; smoke now hung like a cloud above, borough lines seemed gone, all became one vast maze of buildings and humanity.

We stopped. I was again in London, my native Home, my birth place.

Vancouver Island  
1913

A handwritten signature in cursive script, reading "W.W. Bollon". The ink is dark and the handwriting is fluid, with the first letters of each word being capitalized and prominent.

## The South Coast

To the true Cockney, London and Brighton are synonymous terms. It was thither and its coast line that I at once made my way : London could wait awhile.

Brighton is not a Thing of Yesterday, though of a truth it was raised by the smile of the regent — later King George IV <sup>118</sup> of unblest memory — from an ancient fishing village to a seaside Paris. It figures in Domesday <sup>119</sup> — our Sacred Book which stamps on all mentioned therein a Hallmark which no money can purchase, nor noble deed procure. Back in Saxon days it boasted of great things, it had seen England's enemies land and thrown back into the sea : its rude inhabitants who once had bent beneath Druidical rule had received the foreign missionaries and learned to kneel before the Crucifix. So the Altar of Saint Nicholas <sup>120</sup> was raised — Nicholas the patron of those who seek their living from the fish of the sea ; and the lover of the Simpleminded — as all true fishers are — and of children to whom he still appears bearing gifts in his hands as Santa Claus.

There is not much left now of that ancient Shrine — only the Font, but that is worth going far to see. Its great age alone inspires reverence. Bethink you of the Ministers in Holy Things who for a full thousand years have stood beside it, and of the vast total who in those waters have been enrolled as Christians. Around it now stand pillars raised by the Normans, and touches here and there of the Decorative Age ; clearly too can be seen the ruthless hand of the Puritan, and the whitewash of the soulless Georgian.

Outside is the Altar Tomb of that gallant Captain who aided Charles II <sup>121</sup> — then a fugitive from ill-fated Worcester — to escape to France. At “The George Inn” he lay hidden till he went aboard at

---

<sup>118</sup> [George IV \(George Augustus Frederick; 1762 –1830\)](#) was king of the United Kingdom of Great Britain and Ireland and king of Hanover following the death of his father, George III, on 29 January 1820, until his own death ten years later. From 1811 until his accession, he served as Prince Regent during his father's final mental illness.

<sup>119</sup> [Domesday Book](#), now held at The National Archives, Kew, in South West London, is the record of the great survey of much of England and parts of Wales completed in 1086.

<sup>120</sup> [Saint Nicholas \(270–343\)](#) was a historic 4th-century saint and Greek Bishop. He had a reputation for secret gift-giving, such as putting coins in the shoes of those who left them out for him, and thus became the model for Santa Claus, whose modern name comes from the Dutch Sinterklaas, itself from a series of elisions and corruptions of the transliteration of “Saint Nikolaos”. WWB has *Saint Nicolas*. [St. Nicholas Church](#) is an Anglican church in Brighton; it is both the original parish church of Brighton and the oldest surviving building in Brighton.

<sup>121</sup> [Charles II \(1630–1685\)](#) was king of England, Scotland, and Ireland. Cromwell defeated Charles at the Battle of Worcester on 3 September 1651, and Charles fled to mainland Europe, where he spent the next nine years in exile in

Shoreham close by, and so safely and, in time, a safe return. In that same God's Acre lies another gallant one — a woman <sup>122</sup> — who at the Call of Country donned man's attire and fought at Fontenoy.

In Norman days another fane <sup>123</sup> was needed, so S<sup>t</sup> Bartholomew's was raised ; its site now the Town Hall, but another S<sup>t</sup> Bart's stands close to, locally known as Noah's Ark <sup>124</sup> from its outward appearance ; renowned <sup>125</sup> today for the height of its Ritual and its Roof.

Down from the long Age has come a tradition still obscured. Every Good Friday — known also here as "Long Rope Day" children go skipping in the streets, the rope having reference to the Traitor Judas who on that fatal day committed suicide. Hemp rope locally was ever plentiful for the fishers' nets.

There was the Pavilion to revisit, built by The Regent in the days when he "painted the town red" and Beau Brummel <sup>126</sup> swaggered about, the idol of the ladies, the despair of his creditors. I seemed to hear again the Swedish Nightingale, Jenny Lind, <sup>127</sup> flood the place with song, with the Emperor Napoleon and his Empress in the audience, fresh from Sedan. <sup>128</sup>

Thence to the summit of the nearest "Down" and I was on the Race course, below lay miles of homes, the famous beach alive with children mixed up with bathing machines, minstrels of ebony hue, and boat men, as of yore doubtless urging London bred mothers to a voyage on the briny.

---

France, the United Provinces and the Spanish Netherlands. Captain Nicholas Tattersell took Charles II from Shoreham harbour to France in 1651 in *Surprise*, a coal ship he captained.

<sup>122</sup> [Phoebe Hessel \(1713–1821\)](#) fell in love with a soldier, William Golding, at the age of 15, and disguised herself as a man to enlist alongside him in the British Army after he was sent overseas. The concealment of her sex was so effective that she served for 17 years until voluntarily revealing the truth to her commanding officer's wife and being discharged; even after suffering a wounded arm at the [Battle of Fontenoy](#) in 1745, she was not discovered during her treatment.

<sup>123</sup> Archaic: a temple or shrine

<sup>124</sup> [St Bartholomew's Church](#) is an Anglican church in Brighton, England. It is notable for its height – dominating the streets around it and being visible from many parts of the city – and its distinctive red-brick construction:

<sup>125</sup> WWB has *renowed*.

<sup>126</sup> [George Bryan "Beau" Brummell \(1778–1840\)](#) was an iconic figure in Regency England, the arbiter of men's fashion, and a friend of the Prince Regent, the future [George IV](#).

<sup>127</sup> [Johanna Maria Lind \(1820–1887\)](#), better known as Jenny Lind, was a Swedish opera singer, often known as the "Swedish Nightingale".

<sup>128</sup> [The Battle of Sedan](#) was fought during the Franco-Prussian War on 1 September 1870. It resulted in the capture of Emperor Napoleon III and large numbers of his troops and for all intents and purposes decided the war in favour of Prussia and its allies, though fighting continued under a new French government.

The Esplanade had, I found, been vastly improved ; asphalt now, and flower beds, cosy lounging seats, and “lifts” to reach to and from the sands. Room enough for everybody, even the goat carriages which threaded their happy burdens through a multitude of immaculately dressed men and women. More than ever of Hotels and Apartment houses across the way, no seeming break in the line from Hove to Kemp Town, a full three miles.

Brighton’s environs are a delight, go which way you will. For Ovingdean and Rottingdean you must go over the Downs ; and beyond in a valley lies the former, brought out of obscurity into at least temporary fame by Harrison Ainsworth <sup>129</sup> in his “Grange”. Beneath you lies the Church, the Grange, and cottages set close together amid trees. Descending, you find a tiny House of God, scrupulously kept, many mere slits of windows, speaking for defence and firing of darts and arrows in times long gone by.

Thence across rich meadows to Rottingdean, fit home for artistic souls where Burne Jones, <sup>130</sup> Kipling <sup>131</sup> and William Black <sup>132</sup> made their residence and the first named and the last lie in its graveyard. Burne-Jones’ handiwork is to be <sup>133</sup> seen within the little Church, stained glass windows of intense coloring. The Altar raised high above the nave, a Norman plan, triple steps from nave to Choir, triple from Choir to Stalls, triple again from Stalls to Altar rail. The Font but lately recovered, having been dug up in the Rectory Garden, whilst a three cornered Alms Box seemed quite as old.

Every hamlet around seems to have its Manor House, which according to Sussex custom descends first to the widow, then to the youngest son.

I made my pilgrimage to Lewes and its Castle. The Great Adventure of my childhood ere ever I had entered my ’teens was riding alone on a “bone shaker”, wooden wheels, iron tyres and saddle as ungiving as a board, the 60 miles from London to Lewes : the last few miles in weariness and tears. I wandered along the main street which looked unaltered, there was the Inn where a motherly hostess warmed to the child, fed him and gave him her best room to sleep the sleep of the dog tired ; the same quaint old houses. The Castle beckoned, and I made my way from the Lower Gate by winding path, up tier upon tier of its battlements. Much has crumbled away but there is much remaining. It is set high above the town. On the summit of the hill within those massive walls there is a beautifully kept green sward and around it rise the last two Towers, to the top of one of which you reach by narrow winding stair — the other is not now safe. It is worth the climb to look out from that flat roof, foursquare, looking still ready for business, be it attack or defence.

Below, nestles the town, to one side the River Ouse wends a serpentine way to the sea, across it rises a monument raised to the memory of The Lewes Martyrs <sup>134</sup> who in a blind and cruel age were burned

---

<sup>129</sup> [William Harrison Ainsworth \(1805–1882\)](#) was an English historical novelist.

<sup>130</sup> [Edward Coley Burne-Jones \(1833–1898\)](#) was a British artist and designer. He was closely involved in the rejuvenation of the tradition of stained glass art in Britain.

<sup>131</sup> [Joseph Rudyard Kipling \(1865–1936\)](#) was an English short-story writer, poet, and novelist chiefly remembered for his tales and poems of British soldiers in India, and his tales for children.

<sup>132</sup> [William Black \(1841–1898\)](#) was a novelist born in Glasgow, Scotland. During his own lifetime his novels were immensely popular; however, his fame and popularity did not survive long into the twentieth century.

<sup>133</sup> WWB is missing *be*.

<sup>134</sup> At the time of the [Marian Persecutions of 1555–1557](#), carried out against Protestant religious reformers for their faith during the reign of the Catholic [Mary I of England](#) (“Bloody Mary”), Lewes was the site of the execution of seventeen

for their religious views. On the other side are The Downs, the site of that historic Battle of Lewes<sup>135</sup> when Longshanks the Impetuous and his Father Henry III met Simon de Montfort. That day ended with de Montfort the victor and king and son prisoners within the Castle. But Lewes was atoned for by Evesham,<sup>136</sup> where Simon fell.

West from Brighton, along the coast, lies Lancing just beyond Shoreham, which seemed not yet to have awakened from its dreams. On the side of a hill, embowered in trees rises the College and the Chapel. Surely there is no finer School Chapel in England than that.<sup>137</sup> It is a thing of beauty in stone. Its cost to date of £125,000 will give some idea of its magnificence. To complete it there is another £80,000 to be spent. It has a Crypt beneath it, the size of a large Church. The School is but one of

---

Protestant martyrs, who were burned at the stake in front of the Star Inn. This structure is now the Town Hall. The Lewes Martyrs' Memorial:

<sup>135</sup> [The Battle of Lewes](#) was one of two main battles of the conflict known as the [Second Barons' War](#) (1264–1267), a civil war in England between the forces of a number of barons led by [Simon de Montfort](#) against the Royalist forces led by Prince Edward (later [Edward I of England](#)), also known as Edward Longshanks, in the name of his father, [Henry III](#). It took place at Lewes in Sussex, on 14 May 1264. It marked the high point of the career of Simon de Montfort and made him the “uncrowned King of England”.

<sup>136</sup> [The Battle of Evesham](#) took place on 4 August 1265, near the town of [Evesham](#), Worcestershire. With the Battle of Lewes Montfort had won control of royal government, but after the defection of several close allies and the escape from captivity of Prince Edward, he found himself on the defensive. Forced to engage the royalists at Evesham, he faced an army twice the size of his own. The battle soon turned into a massacre; Montfort himself was killed and his body mutilated.

<sup>137</sup> [Lancing College](#) is a co-educational English independent school in the British public school tradition, founded in 1848 by Nathaniel Woodard. The school chapel:

many all along the southern coast for both sexes. Many of them are famous and crowded, but most of yesterday. One I knew of old, and Brighton College <sup>138</sup> gave me kindest welcome.

Worthing had changed little, I had no difficulty in finding my way about and took the opportunity of crossing the fields once again to the ancient Broadwater Church where of old, Worthingites betook themselves of a Sunday evening. A romantic spot with Knights and Grand Dames lying under huge stone effigies, the very armour still hanging above them.

Thence to Southampton with its ancient walls and gates — a mile foursquare. Out of the latter poured the soldiers with the Black Prince at their head to win fame at Crécy <sup>139</sup> ; a century later <sup>140</sup> Henry V and his men to do the same at Agincourt. <sup>141</sup> Here the Quay whence they embarked for France, and nearby a genuine Tudor house where the much married Henry 8<sup>th</sup> and one of his wives — Anne Boleyn — spent their honeymoon. <sup>142</sup> Within today are many interesting relics of past City times, stocks for the wicked, stones for catapults to hurl from the battlemented walls. A launch bore me on the waters of the Solent where yachts were sailing, steamers plying and the monster Ships of Travel went and came.

On from thence to the New Forest. Not a foot or horseback as of yore but the modern auto bore me on roads which to me seemed perfect. There may be grumblers for aught I know, but they are spoiled children, they should know roads elsewhere than those of Home. The Forest was at its best, foxgloves and wild honey suckle, with masses of heather lined the way. Here were wild ponies to be seen and the red deer, foxes too scampered away, and pheasants overhead. Lyndhurst first, with the King's House where the Forest dues are paid, for there are many hamlets now within the Forest where once were none. Then Burley with its Great Tree, whereon — high up — is built a summer house. Here was High Tea and honey waiting for me in a garden where roses and sweet william abounded : a huge fireplace for winter time, in which I could roam and note where the hams were hung to be correctly smoked when the long dark days come. Then climbing we reached the Summit moor, here the Shooting Box of Lord Lucas, <sup>143</sup> and a view embracing not only Hampshire but Dorset, Wiltshire and the Isle of Wight.

---

<sup>138</sup> [Brighton College](#) was named England's Independent School of the Year 2011–2012 by The Sunday Times. It is a leading boarding and day school for boys and girls aged 3–18, situated on the South Coast of England.

<sup>139</sup> [The Battle of Crécy](#) took place on 26 August 1346 near Crécy in northern France. It was one of the most important battles of the [Hundred Years' War](#) — a series of conflicts waged from 1337 to 1453 between the Kingdom of England and the Kingdom of France and their various allies for control of the French throne — because of the combination of new weapons and tactics used. [Edward of Woodstock, Prince of Wales, Duke of Cornwall, Prince of Aquitaine \(1330–1376\)](#) is known as the Black Prince. WWB has *Creçy*.

<sup>140</sup> WWB has *latter*.

<sup>141</sup> [The Battle of Agincourt](#) was a major English victory in the Hundred Years' War. The battle occurred on Friday, 25 October 1415. [Henry V](#)'s victory at Agincourt, against a numerically superior French army, crippled France and started a new period in the war.

<sup>142</sup> [Henry VIII \(1491–1547\)](#) was King of England from 21 April 1509 until his death. Henry was the second monarch of the House of Tudor, succeeding his father, [Henry VII](#). [Anne Boleyn \(c. 1501–1536\)](#) was Queen of England from 1533 to 1536 as the second wife of Henry VIII. When it became clear that [Pope Clement VII](#) would not annul Henry VIII's marriage to his first wife [Catherine of Aragon](#) so that he could marry Anne, the breaking of the power of the Catholic Church in England began. Anne gave birth to the future [Elizabeth I of England](#), whose gender disappointed Henry. Following three miscarriages, Henry had Anne investigated for high treason in April 1536, for which she was beheaded on 19 May 1536.

<sup>143</sup> Possibly [Auberon Thomas Herbert \(1876–1916\)](#).

Now a dropping down, and leaving the high road reached the Rufus Stone,<sup>144</sup> where the Red King died, struck down by Tyrrel's arrow. A goodly spot truly to die in. The tree itself is dead too, but the Stone holds the site. It stands in a pretty glade with trees here and there, but close by dense wood. It is full likely to be much the same as then it was. The way up, which the yokel took as he bore the royal corpse to the high way, is the way all follow today, with a pool close handy to the road ; which since that day so Old Wives say has never been the same, but dulled by a King's blood which dripped in as the corpse was carried past.

We left the way to Winchester and swept round to our starting point, well content.

Devonshire was calling loudly, with its red soil, its incomparable lanes, its Babbacombs<sup>145</sup> and Brixhams, but it could not be. To London I returned.

## The Thames

To the London born the Thames is without a peer. We may have voyaged on the mighty rivers of the world, have seen the vastness in width and length of the Amazon, the Mississippi,<sup>146</sup> the Yangtze, the Yukon, the Mackenzie and the Nile, but we return to the Thames with an affection that none else arouses. The narrow, short lengthed river of Home grips the heart.

A pilgrimage to its source is high privilege, nor could I be denied. It meant Cheltenham and a run through Berks, Wilts and Gloucestershire, past Slough with Veitch's splendid nurseries, Maidenhead the rival of Henley for Houseboating, Reading of Biscuit fame and Sutton's seeds. Then Swindon with goods' yards to bewilder one, a maze of lines and sheds, and Gloucester with its noble Cathedral both City and Fane far too fine with so infamous a man as King Richard III.<sup>147</sup>

---

<sup>144</sup> [William II \(c. 1056–1100\)](#), King of England from 1087 until 1100, was commonly known as William Rufus, perhaps because of his red-faced appearance. The king went hunting on 2 August 1100 in the New Forest, likely near Brockhurst. He was killed by an arrow through the lung, but the circumstances remain unclear. The arrow was shot by a nobleman named [Walter Tirel](#). A stone known as the Rufus Stone marks the spot where he supposedly fell:

<sup>145</sup> WWB has *Babacombs*.

<sup>146</sup> WWB has *Mississippi*.

<sup>147</sup> [Richard III \(1452–1485\)](#) was King of England for two years, from 1483 until his death in 1485 during the [Battle of Bosworth Field](#). He was the last king of the House of York and the last of the Plantagenet dynasty. His defeat at the Battle

Now came Cheltenham, lying snugly under the protecting arms of the Cotswold Hills, and still inviting sciatics, rheumatics and various other ills to drink of its waters and live. Here gather in large numbers “The Retired” of moderate means. A neat City. The Esplanade with the famous Spa at one end most inviting, down each side huge shady elms, with seats to enjoy the flower beds, the fountains playing, and the many Statues. A city like Brighton replete with schools, chief amongst them of course one of the great Public Schools of Home, <sup>148</sup> with impressive buildings and fine playing fields. Its lofty Chapel akin in measure to Lancing’s glory, the interior roomy, with carved Stalls for the boys facing one another, the Sanctuary imposing. A plethora of Tablets, here a Brass to a soldier, there to a Scholar, here to a Statesman, there to a mere lad in years. Frescoes and mosaics, windows stained, one and all speaking of love for their Alma Mater and gallant deeds.

Nigh Cheltenham lies Prestbury, birthplace of two level headed men famous but yesterday in their respective walks in life, a Bishop and a Jockey. Fraser of Manchester <sup>149</sup> was a name to conjure with in disputations social as well as theological ; Fred Archer <sup>150</sup> was a name to swear by. Both had passed on, but their names abide.

Now heading straight for the Cotswold and climbing by good road, past famous “Meets” for fox hunting and woods where Renard <sup>151</sup> lies, one reaches the summit, and just on the farther side a coulee lies, bubbling with water, the Source of the River Thames. Inset on a wall close by, a tablet reading “Hic Tuus, O Tamesine Pater, Septemgeminus Fons” (Here O Father Thames (is) they seven twinned Fountain). <sup>152</sup> Here indeed are easily to be counted the seven springs, in so confined a space that it is easy to act as the Colossus of Rhodes <sup>153</sup> is said to have done and bridge the lot. Here then was the Beginning of things, the next day I stood on London bridge and saw O Tamesine Pater bearing along

---

of Bosworth Field was the decisive battle of the [Wars of the Roses](#) and is sometimes regarded as the end of the Middle Ages in England. He is the subject of an eponymous play by William Shakespeare.

<sup>148</sup> [Cheltenham College](#), one of the public schools of the Victorian period, was opened in July 1841. An Anglican foundation, it is known for its classical, military and sporting traditions.

<sup>149</sup> [James Fraser \(1818–1885\)](#) was a reforming Anglican bishop of Manchester, England. An able Church administrator and policy leader, he was active in developing the Church's approach to education and in practical politics and industrial relations.

<sup>150</sup> [Frederick James Archer \(1857–1886\)](#) was an English flat race jockey who was the most successful sportsman in horse racing during the Victorian era.

<sup>151</sup> *Renard* is French for *fox*.

<sup>152</sup> [Seven Springs](#) is a hamlet in the parish of Coberley in the Cotswold District of Gloucestershire. It is the source of the River Churn which flows south across the Cotswold through Cirencester and joins the River Thames near Cricklade. It is regularly argued as the real source of the River Thames, as opposed to [Thames Head](#), which is traditionally identified as the source. WWB has *twined* for *twinned*.

<sup>153</sup> [The Colossus of Rhodes](#) was a statue of the Greek Titan Helios, erected in the city of Rhodes on the Greek island of Rhodes by Chares of Lindos between 292 and 280 BC. It is considered one of the [Seven Wonders of the Ancient World](#). The design, posture and dimensions of the Statue of Liberty in New York Harbor are based on what the Colossus was thought by engineers in the late 19th century to have looked like. WWB has *Colussus*.

the commerce of many nations, heading fast and in fine volume for the sea and ocean, where is the End of things.

But I would make closer acquaintance with the River Man from bridge above it. The Thames must bear me to the old haunts upstream and downstream, to Kew, Richmond and Hampton Court ; and likewise to Greenwich, and Woolwich. <sup>154</sup> Then only would I be content.

The start upstream was from Westminster Bridge, the weather perfect, the view from the top deck unobstructed. On the right the Houses of Parliament, never better seen because not too close to them and the Terrace where Members take Tea with their ladies ; on the left St Thomas' Hospital with its amazing blocks of wards, a little further on, on the same side, Lambeth Palace, the residence of Archbishops of Canterbury for 100 years. Set as now it is amid a conglomeration of factories and artisans' homes, it looks every whit its hoary age, gloomy, more like a mediæval fortress than a Bishop's home. You see the Lollards' Tower where many an innocent one was penned, and Royalists too when Puritans ruled and laymen owned the Palace for a time. On this side lies the Albert Embankment, on the opposite the Victoria. Here next is St Mary's Church in the Tower of which, the Queen of James II and her baby girl hid through a pelting rain as she waited for means to escape down river and so to France. <sup>155</sup> Now Doulton's Pottery Works, the frontage of the buildings an advertisement in stone of its special ware of Brown and White.

On the right hand is the Tate Gallery to be revealed in later : on the left is Battersea Park, a splendid space of grass with trees reaching down to the river's edge. On the right is Chelsea Hospital where some 600 old soldiers await their last Roll Call. Close by are the Botanical Gardens just now ablaze with colour ; and Cheyne Row made famous by the great ones who dwelled there. <sup>156</sup> On the left is Wandsworth, on the right comes Hurlingham of Polo record. And all the while one is passing beneath bridges, eight so far, and the river crowded with crafts. Commercial buildings lessen now on either side and rural surroundings take their place. Swans are floating with the tide and young men in shells are to be seen. Now on the left comes Putney, and Fulham Palace on the right, the official residence of the Bishop of London, a spot speaking of Peace and Quiet. Now we enter upon a mileage famous the world over, where Light and Dark Blue fight out their annual struggle and Sculling World Championships are settled. <sup>157</sup> Now all is still, the towpath on the left is quite deserted, the green march on the right gives no sign of life. But once, nay many a time what thrills, what scenes one saw there. Now "Craven Steps" and opposite, another famous Club Grounds, "The Ranelagh". <sup>158</sup> Next, on the right "The Crab Tree" where so many scullers have already "Shot their bolt" and yet have far to go. Now we pass beneath Hammersmith Bridge where the Thames selects to take a mighty bend, Chiswick on the right, Barnes, with its common notorious of old for its dwelling ground, on the left. Thus to Mortlake with its Old time "Ship Inn" ; and opposite to the Inn on the farther side of the river, a great white Port for here is Ending of the Struggle, and victors are acclaimed, and wearied muscles have their rest. Here another wearied Traveller rests ; he of Eastern Travel fame lies beneath a huge stone tent decorated with Stars and Crescents, Burton the Undismayed. <sup>159</sup>

---

<sup>154</sup> Here WWB has ~~and Gravesend~~.

<sup>155</sup> James II and VII (1633–1701) was King of England and King of Ireland as James II and King of Scotland as James VII from 1685. James fled England (and thus was held to have abdicated) in the [Glorious Revolution](#) of 1688. [Mary of Modena \(1658–1718\)](#) was Queen consort of England, Scotland and Ireland as the second wife of King James II and VII.

<sup>156</sup> The famous residents of Cheyne Walk are listed [here](#) and include [Mick Jagger](#) and [Keith Richards](#).

<sup>157</sup> WWB is going past the [London Rowing Club](#) on the left.

<sup>158</sup> From 1883 to 1939 [Barn Elms](#) was used as the club-house of the Ranelagh Club, with polo grounds and extensive gardens. WWB has *Ranelgh*.

<sup>159</sup> [Richard Francis Burton \(1821–1890\)](#) was a British geographer, explorer, translator, writer, soldier, orientalist, cartographer, ethnologist, spy, linguist, poet, fencer and diplomat. He was known for his travels and explorations within

Now Kew and the Gardens known the world over, first laid out under King George the Third, <sup>160</sup> a lover of flowers and the ornate. Their care today is in the hands of the Commissioners of Woods and Forests. Near the main entrance is the Palace, a red brick building, not at all out of place as one might suppose. Conservatories and Palm Houses are seen amid the trees, fine avenues, some gravelled, others of grass, branch out in all directions. A vast place. A large board at the Entrance tells of what specially is in flower. I wandered for hours. First to the Pond where water lilies grow, pink ones and white, their broad leaves covering the surface. Nigh to this is the Museum containing the dried flora and seeds of practically every country of the world. Beyond are the Herbaceous Beds, a large walled in garden of themselves. Here is a bed of wild flowers from Siberia, here from France, here from Canada, here from Oriental Countries. Passing out, one is in the Rock Garden, a little waterfall at one side, and along its course all manner of dainty things ; Iberis and Erica heather, much of the Saxifraga family, Geum and Purple bell. From hence you are lead into the Rose Pergola <sup>161</sup> — with me at the time of fullest bloom worth coming far to see. Now you are amongst the Dahlias and great beds of Phlox and Hollyhocks. Then to the central Palm House, so lofty that within you mount up a winding stairway to a balcony and still those tropical plants and fruits rise higher. This seems the centre of things for broad avenues lead off in each direction. A fountain is playing and peacocks move haughtily about. I took the way to the Rhododendron Walk where the giant bushes lined the sides and formed a domain of themselves. Thence to the Chinese Pagoda rising 200 ft and to Ferneries and Hothouses. The Flag Pole was the last but not the least interesting thing to see for it had grown from a sapling into its towering height — its equal not to be seen in the Metropolis — in that far off Province of British Columbia from which I had come to now stand at its base.

Up river again, and on the right is Brentford and Lion House, town mansion in the past of the Dukes of Northumberland. The House in size imposing, but in form as plain as a barracks from the river. Its park reaches up to Isleworth, still a pretty village. The Thames makes itself felt here, it has not yet consorted with tides, and on the left we reach a Half Lock and boat rollers ; we use the Lock. Shut in for a space, the gates open and we pass on to Richmond. Here life on the river begins in earnest, not of tugs and barges, but of punts and House boats. The river is alive with folk. The Hill, on the left, is

---

Asia, Africa and the Americas, as well as his extraordinary knowledge of languages and cultures. According to one count, he spoke 29 European, Asian and African languages

<sup>160</sup> [George III \(1738–1820\)](#) was King of Great Britain and King of Ireland from 25 October 1760 until the union of these two countries on 1 January 1801, after which he was King of the United Kingdom of Great Britain and Ireland until his death.

<sup>161</sup> The Rose Pergola at Kew Gardens.

crowned with hotels, but once Royalty alone held sway here. It was Sheen <sup>162</sup> in Saxon times. Here in the Palace raised by Saxon Kings, our Edward III <sup>163</sup> died and Anne of Bohemia, <sup>164</sup> wife of Richard II, <sup>165</sup> passed away, her royal spouse in grief having the Palace pulled down nor would he set eyes on the place again. Brave Harry V <sup>166</sup> built anew whilst Henry VII expended a lavish hand and changed its name to Richmond from whence, in the north, he came. Here is the Old Park and the New. At the entrance to the latter stands the far famed “Star and Garter Hotel” <sup>167</sup> and within the Park are held those Rugby battles which have made the residents team a formidable foe for half a century. For one, I should know for I had tested them. <sup>168</sup>

Again in the river’s course comes a mighty bend and we are at Eel Pie Island and Twickenham Ferry. Charming residences here with lawns running down to the river’s banks with an abundance of flowers. Pope’s villa is on the right and the Church where lies buried. <sup>169</sup>

At Teddington another lock awaits, and many islets. From the many fishermen sitting in punts, here there are good fishing grounds. The banks are thick with tiny dwellings, ‘shacks’ we might call them only each is a gem, each different in some way, each with its little garden, its bower and hammock. Flanneled folk seem everywhere and there are boats Sailing ; for this reach of The Thames is renowned for such sport.

---

<sup>162</sup> The area now known as [Richmond](#) was formerly part of Shene (or Sheen) until about five centuries ago, but Shene was not listed in Domesday Book, although it is depicted on the map as Sceon, which was its Saxon spelling in 950AD.

<sup>163</sup> [Edward III \(1312–1377\)](#) was King of England from 1327 until his death; he is noted for his military success and for restoring royal authority after the disastrous reign of his father, Edward II. Edward III transformed the Kingdom of England into one of the most formidable military powers in Europe; his reign also saw vital developments in legislation and government — in particular the evolution of the English parliament — as well as the ravages of the Black Death. He is one of only six British monarchs to have ruled England or its successor kingdoms for more than fifty years.

<sup>164</sup> [Anne of Bohemia \(1366–1394\)](#) was Queen of England as the first wife of King Richard II. A member of the House of Luxembourg, she was the eldest daughter of [Charles IV, Holy Roman Emperor](#), and [Elizabeth of Pomerania](#).

<sup>165</sup> [Richard II \(1367–1400\)](#) was the first English king to make Sheen his main residence, which he did in 1383.

<sup>166</sup> [Henry V](#) was also known as King Harry V.

<sup>167</sup> The [Star and Garter Hotel](#) in Richmond reached the peak of its fame as Richmond itself expanded in the 19th century during the Victorian era. In the period from the 1830s to the 1890s, the hotel guests ranged from literary figures such as [Charles Dickens](#) to exiled crowned heads of Europe such as [King Louis-Philippe](#) and his wife. The hotel’s reputation spread to other countries, with guests arriving from the United States of America and Europe, or travelling by horse and carriage from London to visit the area and stay at the hotel.

<sup>168</sup> According to an article in the Victoria Daily Colonist of August 12, 1906, WWB played rugby for [Blackheath](#) in southeast London and other well known teams. See Part VI, *References to WWB in the Victoria Daily Colonist*.

<sup>169</sup> [Alexander Pope \(1688–1744\)](#) was an 18th-century English poet, best known for his satirical verse and for his translation of Homer. Famous for his use of the heroic couplet, he is the third-most frequently quoted writer in The Oxford Dictionary of Quotations, after Shakespeare and Tennyson.

Now on the left lies Kingston, rightly so called for it holds the stone <sup>170</sup> — to be seen in the Market Place — on which the Anglo Saxon Kings were crowned. Here the many “E”s of those times accepted Lordship — Edward the Elder and Ethelstan — Edmund — Edred — Edwy and the Edgar’s — “The Martyr”, “The Unready” and “Ironsides”. High still on the left we pass Surbiton, whilst on the river bank below is the broad “Queen’s Promenade” with more Houseboats, more skiffs, more gay crowds of river devotees.

On our right comes Hampton Court of which one catches a glimpse through the trees of the beautiful Home Park of the one time Palace. There is nothing small about Hampton Court. Passing through The Trophy Gates there is a frontage of over 300 feet. These seem to be three Quadrangles : the various Royal owners since Wolsey’s <sup>171</sup> first creation have left each their Monogram in stone on cue : here Henry VIII, here William and Mary, <sup>172</sup> here the 2<sup>nd</sup> George. <sup>173</sup> Queen Victoria <sup>174</sup> did much by way of restoration and put it to a practical and benevolent use for as one walks along the corridors the name plates on suites of rooms bear the names of many widows of famous men who here abide. Much is properly closed to the public, much is thrown wide open. The latter includes The Grand Staircase, the Audience Chamber, the Picture Galleries and the State Bedrooms. The Fountain Court none miss. Here is Anne Boleyn’s gateway and you picture her in her glory seeking her Lord and Master through these courts and rooms, only to be denied. There is the Vine House where is to be seen the famous vine 130 years old, a Black Hamburg — loaded down as I once again saw it with clusters for the Royal Table.

There are the gardens, the beds and the terraces, the lawns and the trees, the Grand Avenue with Charles II’s Long water — a very feast for the eyes. A roam in the Home Park, thence to the Maze where as a child one delighted to be lost and found, thence through The Lion Gates across the road, where now Trams run, with Bushey Park : one thousand acres in extent, a good breathing space for

---

<sup>170</sup> The [Coronation Stone](#) is an ancient sarsen stone block which is believed to have been the coronation stone of seven Anglo-Saxon kings. It is now located next to the Guildhall in Kingston upon Thames.

<sup>171</sup> [Hampton Court Palace](#) was originally built for Cardinal [Thomas Wolsey \(1473–1530\)](#).

<sup>172</sup> The phrase *William and Mary* refers to the coregency over the Kingdoms of England, Scotland and Ireland, of spouses (and first-cousins) [King William III & II](#) and [Queen Mary II](#). Their joint reign began in February 1689, when they were offered the throne by the Parliament of England, replacing James II & VII, Mary’s father and William’s uncle, who was “deemed to have fled” the country in the Glorious Revolution of 1688. After Mary died in 1694, William ruled alone until his death in 1702. William and Mary were childless and were ultimately succeeded by Mary’s younger sister, [Anne](#).

<sup>173</sup> [George II \(1683–1760\)](#) was the last British monarch born outside Great Britain: he was born and brought up in Northern Germany. After the death of Anne, Queen of Great Britain, in 1714, his father [George I](#), Elector of Hanover, inherited the British throne.

<sup>174</sup> [Queen Victoria \(1819–1901\)](#) was the monarch of the United Kingdom of Great Britain and Ireland from 20 June 1837 until her death.

Londoners. Just within stands Diana's Fountain playing with a basin wherein are goldfish — but Diana has fled — I know not why — and Venus has taken her place. From here nine lengthy avenues of limes and chestnuts extend. Many folk are roaming about or resting beneath the trees ; and deer are in plenty. The latter are very tame, coming up to you tossing their antlers, pushing their noses against your pockets if haply you have something good for them, though they are fat as butter. Once this Park was part of the Home Park but now it is given over to the Public and the swarms of children appear to appreciate the gift.

Every day has its ending and here came the end to a Wanderer Returned. There was nothing else to do but to return whence I had come that morn, the memory refreshed by a run Up Thames.

Once again Westminster Bridge. The steamer swings out into the tide way and we head downstream with Charing Cross Bridge — once Hungerford — straight ahead. On the left is the National Liberal Club with awnings up on the broad verandahs and members lounging beneath the shade. Here too is the magnificent Montague House, town residence of the Duke of Buccleuch.<sup>175</sup> Down stack and under the bridge we glide, and head next for Waterloo. Now on the left along the Embankment is seen Cleopatra's Needle<sup>176</sup> ; the climate of London has surely greatly changed its surface since the 3000 years ago when it first was raised before the Temple of the Sun in Heliopolis. Back of it rise those Palaces for the Traveller "The Savoy" and "The Cecil" Hotels. We have to dodge in and out of tugs and barges to reach the Arch we aim at. "Down stack" again and we are with Waterloo astern. Now on the left is Somerset House, a labyrinth within for seekers of Births, Deaths, Marriages and Wills of the United Kingdom. Here the Victoria Embankment ends, for we are nearing the City which crowds down to the river bank. Blackfriars Bridge is next negotiated, but where those Friars lived close by it is impossible to see, for factories are dense both on the left and the right of the Thames. Cranes are busy loading into lighters, ocean going ships are anchored in the stream, coal barges are everywhere.

<sup>175</sup> At the time of WWB's visit, the 6<sup>th</sup> [Duke of Buccleuch](#) was [William Henry Walter Montagu Douglas Scott \(1831–1914\)](#). WWB has *Buccleugh*.

<sup>176</sup> [Cleopatra's Needle](#) is the popular name for each of three Ancient Egyptian obelisks re-erected in London, Paris, and New York City during the nineteenth century. The London and New York ones are a pair, while the Paris one comes from a different original site, where its twin remains. Although the needles are genuine Ancient Egyptian obelisks, they are somewhat misnamed as they have no particular connection with [Queen Cleopatra VII](#) of Egypt, and were already over a thousand years old in her lifetime. The London "needle" is one such example, as it was originally made during the reign of the 18th Dynasty Pharaoh [Thutmose III](#) but was falsely named "Cleopatra's needle".

Now comes London's first bridge of iron — Southwark — and on the right raising its lofty head above the buildings surrounding it is that ancient Fane turned of late years into the Cathedral of South London. Before Cannon Street bridge is reached there lies on the right, Bank side, now the vat ground of Barclay's Ales but once the site of The Globe Theatre <sup>177</sup> where Shakespeare <sup>178</sup> staged his Plays and folk crowded to see and hear. The smoke and whirl of industry hereabouts becomes even denser then before. We halt at "The Old Swan Pier", the one time crossing spot for the Play House yonder, then shoot London Bridge. How altered from Olaf's <sup>179</sup> days when wooden piers supported it or from Whittington's <sup>180</sup> when shops and homes were built thereon. The most picturesque of all the bridges now looms ahead through the smoke of London, The Tower, with its central span attached to lofty pillars, the ornamented steel work looking good for ages to come. The grim old Tower of London <sup>181</sup> lies on our left. Here the London of William I's <sup>182</sup> time began and at Blackfriars it ended — a half moon in shape. Now we are at "The Pool" where the Thames broadens out for a time and affords room for many craft. London Docks are on the left and towering masts rise up into the sky, seemingly

<sup>177</sup> Examination of old property records has identified the plot of land occupied by the [Globe Theatre](#) as extending from the west side of modern-day Southwark Bridge Road eastwards as far as Porter Street and from Park Street southwards as far as the back of Gatehouse Square. However, the precise location of the building remained unknown until a small part of the foundations, including one original pier base, was discovered in 1989 beneath the car park at the rear of Anchor Terrace on Park Street. The shape of the foundations is now replicated on the surface. As the majority of the foundations lies beneath 67–70 Anchor Terrace, a listed building, no further excavations have been permitted.

<sup>178</sup> [William Shakespeare \(baptised 1564–1616\)](#) was an English poet and playwright, widely regarded as the greatest writer in the English language and the world's pre-eminent dramatist.

<sup>179</sup> [Olaf II Haraldsson \(995–1030\)](#) was King of Norway from 1015 to 1028. Skaldic poetry suggests he led a successful seaborne attack which pulled down London Bridge, which is one theory of the origin of the nursery rhyme [London Bridge Is Falling Down](#).

<sup>180</sup> [Richard Whittington \(c. 1354–1423\)](#) was a medieval merchant and politician, and the real-life inspiration for the pantomime character Dick Whittington. He was four times Lord Mayor of London, a Member of Parliament and a sheriff of London.

<sup>181</sup> [The Tower of London](#) is a castle on the north bank of the River Thames in central London. It was founded towards the end of 1066 as part of the [Norman conquest of England](#). The Tower, shown below with the Tower Bridge in the background, is somewhat half-moon in shape.

<sup>182</sup> [William I \(c. 1028–1087\)](#), usually known as William the Conqueror, was the first Norman King of England, reigning from 1066 until his death in 1087. Descended from Viking raiders, he had been Duke of Normandy since 1035 under the title of William II. After a long struggle to establish his power, by 1060 his hold on Normandy was secure, and he launched the Norman Conquest of England in 1066.

far inland. Here is “Wapping Old Stairs”, an old time gangway for those who would make for Greenwich, with Rotherhithe across to land at. Ahead there seems no way but still more docks, but here is the great bend of the river, we sheer to the right and make our way round “The Isle of Dogs”. The trade of the world seems gathered in the Commercial Docks as we pass by. There are steamers with ports marked “The Plate”, “New York”, “Hong Kong” and “Vancouver”. Now we pass over the Thames Tunnel, which man’s ingenuity conceived and carried through despite the croakers of my earlier days who prophesied disaster.

Greenwich now and its Park appears on our right hand and high up in the centre of the latter rises The Royal Observatory where the Astronomer Royal and his Staff make their observations of the Heavens. It is something it always appeared to me, to look upon the spot upon which the World waits to know the Time. From this domed building the touch of a button tells London and the World — the far East and the far West, the civilized lands and the uncivilized — when the Sun’s hands touch Noon. In Yokohama and not there alone I have waited watch in hand for the Gun to be fired which announced Noon — and Greenwich fired that Gun.

But a few steps from the landing stage is Greenwich Hospital much mixed up with Royalty. Henry VII liked Greenwich well and Bluff Harry <sup>183</sup> was born there in the Hospital, then a Palace : Queens Mary and Elizabeth too. Down from Westminster oft came the Royal Barge. An entire wing was added by Charles II whose name is engraved above a portico. William and Mary put their hand to the work till Hampton Court proved a greater attraction. Queen Anne left her mark thereon. Now Royalty gives place to Old Salts <sup>184</sup> and a handsome Home Port it is for them. Behind lies the Royal Naval School where close to 1000 sons of seamen are given education.

Further downstream and we reach Woolwich with its Arsenal, with the Victoria and Albert Docks across on the left bank : the river serpentine now. Here took place one of the greatest tragedies the Thames has ever experienced and which in its aftermath I was privileged to take part in. The river steamer, upstream, laden with merry makers <sup>185</sup> from the Gardens and Gravesend below — The Princess Alice <sup>186</sup> — was cut in twain by a German steamer coming down : 600 men, women and children perished opposite the Arsenal. The river boat upended and sunk with the lot. Woolwich holds many memories for me, the recovery of those dead not the least memorable.

But our little river boat has no such tragedy before it. She turns gingerly around for there is much traffic and little room. Upstream now and mighty ocean going ships pass us heading for the Sea : the light still good though fading fast. Factories are closing, barges making all snug for the night, tugs letting off steam and dropping anchor, there is interest to the very last which means The Old Swan Pier hard by The Monument <sup>187</sup> ; and there I parted with the Thames.

---

<sup>183</sup> Henry VIII was also known as “Bluff Harry” or “Bluff Hal” from his bluff and burly manners.

<sup>184</sup> An [old salt](#) in the English speaking naval services is often a raconteur, or teller of sea stories.

<sup>185</sup> WWB has *makes*.

<sup>186</sup> [SS Princess Alice](#) was a passenger paddle steamer. She was sunk in a collision on the River Thames with the collier Bywell Castle off Tripcock Point on September 3, 1878, with the loss of over 650 lives, the greatest loss of life in any Thames shipping disaster.

<sup>187</sup> Swan Pier, near London bridge, is close to the [Monument to the Great Fire of London](#) of September 2–5, 1666.

## London

Having revelled in flowers for weeks I thought it well to start off with pictures in my Home Town. The Tate Gallery was a good beginning. We must be ever grateful to Cube Sugar by which Tate <sup>188</sup> made a fortune and bequeathed his fine collection to the Nation. Masterpieces by those now dead but most of them in full activity as we waited for fresh gifts from their hands, Millais and Watts, Alma-Tadema and Burne Jones, Lady Butler and Fildes, Landseer and Leighton : with nine rooms given over to Turner's landscapes. <sup>189</sup>

Then a stroll past Parliament House to where the striking statue of the Lion Heart <sup>190</sup> stands and not far from it that of the regicide Cromwell, <sup>191</sup> doubtless a great Parliamentarian and who acted for what he considered to be his Country's good ; then across S<sup>t</sup> James' Park and the tall column erected to the

<sup>188</sup> [Henry Tate \(1819–1899\)](#) was an English sugar merchant and philanthropist, noted for establishing the Tate Gallery in Millbank, London.

<sup>189</sup> [John Everett Millais \(1829–1896\)](#) was an English painter and illustrator and one of the founders of the Pre-Raphaelite Brotherhood. [George Frederic Watts \(1817–1904\)](#) was a popular English Victorian painter and sculptor associated with the Symbolist movement. [Lawrence Alma-Tadema \(1836–1912\)](#) was a Dutch born, British painter. [Elizabeth Southerden Thompson \(1846–1933\)](#) was a British painter, one of the few female painters to achieve fame for history paintings, especially military battle scenes, at the end of that tradition; she was married to Lieutenant General Sir William Butler. [Samuel Luke Fildes \(1843–1927\)](#) was an English painter and illustrator born at Liverpool and trained in the South Kensington and Royal Academy schools. [Edwin Henry Landseer \(1802–1873\)](#) was an English painter, well known for his paintings of animals; the best known of Landseer's works, however, are sculptures, such as the lions in Trafalgar Square, London. [Frederic Leighton \(1830–1896\)](#) was an English painter and sculptor, whose works depicted historical, biblical and classical subject matter. [Joseph Mallord William Turner \(1775–1851\)](#) was a British Romantic landscape painter, water-colourist, and printmaker. Turner was considered a controversial figure in his day, but is now regarded as the artist who elevated landscape painting to an eminence rivalling history painting.

<sup>190</sup> [Richard Coeur de Lion](#) is an equestrian statue of [Richard I of England \(1157–1199\)](#), who was also known as Richard the Lionheart, created by Baron Carlo Marochetti. A clay model was displayed at The Great Exhibition in 1851, with the final statue being completed in 1856 after donations were made by the public.

<sup>191</sup> [Oliver Cromwell \(1599–1658\)](#) was an English military and political leader and later Lord Protector of the Commonwealth of England, Scotland and Ireland.

Duke of York <sup>192</sup> — but which one and for what few seem to know — into a labyrinth of streets where old land signs seemed to have been removed but I kept moving hoping to strike Luck which I did in good shape for I found myself in front of the London Pavilion in the midst of a riot. Miss Kenney and M<sup>rs</sup> Pankhurst had just emerged from a meeting, police had surrounded the entire block. <sup>193</sup> They pounced on the first named but in the struggle that ensued the older one escaped. For a few minutes it was a merry time, hats flew, dresses torn, everybody got mixed up, but order was restored and I passed on for another feast of Pictures in the Royal Academy. These are of Today, some to endure, others to pass out ; but the annual gathering together of the best of the year never loses its interest. I was somewhat lost in Kingsway which when I last walked that way was nothing but a nest of slums and rookeries and one had to hold fast to one's possessions, for pickpockets abounded, but I walked it up and down till I got my bearings for none shall so alter London that this native son shall know it not. A good day's work.

Leaving my Club in good season I headed for the City coming out in Holborn as luck would have it, at "The Staples Inn", the quaint old Tudor house where D<sup>r</sup> Johnson <sup>194</sup> wrote and talked, thence Ludgate and S<sup>t</sup> Paul's to find again in Panyer Alley the ancient stone with a relief of a boy sitting on

---

<sup>192</sup> The [Duke of York Column](#) is a monument in London to [Prince Frederick, Duke of York and Albany \(1763–1827\)](#), the second eldest son of King George III.

<sup>193</sup> [Annie Kenney \(1879–1953\)](#) and [Emmeline Pankhurst \(1858–1928\)](#) were suffragettes and leading figures in the [Women's Social and Political Union](#). According to the article published in the New York Times dated July 14, 1913, "Exciting scenes followed the unexpected appearance at the weekly meeting of the Women's Social and Political Union at the Pavilion Theatre this afternoon of Mrs. Pankhurst and Annie Kenney, both prisoners on license under the 'Cat and Mouse Act'. They had a wildly enthusiastic greeting. Both made defiant speeches. The news that the two women were at the Pavilion quickly reached Scotland Yard, and in a few minutes detectives were on duty at every exit, augmented by a number of uniformed police. Almost as soon as the meeting was over the stage door flew open and several detectives rushed on, while others ran around to the main entrance, where Miss Kenney was surrounded by a mass of women. A scene of great confusion followed, the infuriated women trying to save Miss Kenney from being arrested. The women made a savage attack on the police. One officer had most of the buttons of his waistcoat torn off, another was stabbed in the hand with a hatpin, and a third received a violent blow from a walking stick. During the struggle Miss Kenney fell. Her clothing was torn and her hair pulled down. One woman captured the metal badge from an Inspector's cap as a memento of the fray. The detectives managed to arrest Miss Kenney. She was bundled into a taxicab and taken to Holloway Jail. But where was Mrs. Pankhurst? She had vanished. The police watched the exits of the pavilion for some time, but eventually gave up the task as hopeless. To-night a member of the militants' union said: 'Mrs. Pankhurst went straight back to her Westminster flat and an hour after leaving the Pavilion was in her bed enjoying a cup of tea. She is still very weak...'"

<sup>194</sup> [Samuel Johnson \(1709–1784\)](#), often referred to as Dr Johnson, was an English writer who made lasting contributions to English literature as a poet, essayist, moralist, literary critic, biographer, editor and lexicographer.

a mile stone with this inscription beneath : “When ye have sought the city round, yet still this is the highest ground. August the 27. 1688”.<sup>195</sup> I would stand again on the Summit of London. There may be higher ground today for the City’s limits are not those of that proud Londoner. How could another Londoner forebear to stand at noon between Bow Bells<sup>196</sup> and Bennett’s Clock<sup>197</sup> and hear the clamour. Up Cheapside to see again “the oldest building” of that old world street — the only one to

<sup>195</sup> The Panyer Boy, Panyer Alley, St Paul’s.

<sup>196</sup> [St Mary-le-Bow](#) is a historic church in the City of London on the main east-west thoroughfare, Cheapside. According to tradition a true Cockney must be born within earshot of the sound of Bow Bells.

<sup>197</sup> The clock above Sir John Bennett’s shop in London was acquired by Henry Ford in 1931.

escape The Great Fire <sup>198</sup> ; thence to the Royal Exchange with its Christian motto emblazoned on its façade so that all who run may read “The Earth is the Lord’s and the fullness thereof”, and a grasshopper as its vane ; dropped into S<sup>t</sup> Ethelburga’s, the smallest and one of the oldest of London’s Churches. It is hard to locate the spot, for the tiny door is built between two shops, but how restful within, with that rushing whirl of life outside. Thence to Bishop’s Gate still bearing evidence of its first use by a golden Mitre high up on one of the shops adjoining and beneath which on a ledge of stone birds had built their nest and were busy coming and going. Then returning made my way to the Old Bailey <sup>199</sup> which always gives me the ‘creeps’, and so to the Monument for a look from above over my home town. Wren’s <sup>200</sup> work, 200 ft of stone which according to the poet (a good roman) “like a tall bully, lifts its head and lies”. A memorial of the Great Fire, it was the custom then to blame every evil on to the Romanists. <sup>201</sup> Mounting those 345 steps, from the Summit — now heavily railed in owing to many of late years having selected the spot as an ideal one for suicide — I was fortunate in a glorious day overhead, all was clear ; the Thames winding its way along, in the far distance the shimmering Crystal Palace, and below a mass of hurrying black ants, a sea of houses ; factories and Churches pointing to the sky. Who would not be proud to be a Londoner?

There were green fields in my day at Kilburn : but what of today? Therefore thither from the heart of things did I wend my way. First the Strand, with its “Gaiety Theatre” where Marius and Nellie Farren <sup>202</sup> delighted us young bloods, and Simpson’s with its immortal saddle of mutton borne round on square set trays, up the Haymarket where oft wild scenes with police took place, and so to Piccadilly

---

<sup>198</sup> A house on the corner of Friday Street, off [Cheapside](#), is said to have survived the Great Fire of London in 1666.

<sup>199</sup> The Central Criminal Court in England and Wales, commonly known as the [Old Bailey](#) from the street in which it stands, is a court building in central London, one of a number of buildings housing the Crown Court.

<sup>200</sup> [Christopher Michael Wren \(1632–1723\)](#) is one of the most highly acclaimed English architects in history. He was accorded responsibility for rebuilding 52 churches in the City of London after the Great Fire in 1666, including his masterpiece, St. Paul’s Cathedral, on Ludgate Hill, completed in 1710.

<sup>201</sup> [Romanism](#) was a word used as a derogatory term for Roman Catholicism in the past when anti-Catholicism was more common in the United States and the United Kingdom.

<sup>202</sup> Nellie Farren (1848–1904) was an English actress and singer best known for her roles at the [Gaiety Theatre](#), which specialised in musical burlesque, becoming famous in the male and principal boy roles, which permitted an actress in the Victorian era theatre to show her legs in tights. Farren gained a large following among the theatre’s mostly male audience. She was also called *Nelly Farren*.

Circus where Swann and Edgar <sup>203</sup> seem still to attract the women, and Mellin's Food <sup>204</sup> the babies ; and Regent Street with Robinson <sup>205</sup> and Jay's <sup>206</sup> both still going strong ; and so to Oxford Street where Selfridge's <sup>207</sup> was of course, to me, a newcomer. Three names seemed to meet me everywhere, Lyons, Lipton and Salmon, the first for Food, the second for Tea, the third for Tobacco. We used not to be so distinctly aggressive. Now Marble Arch, a white elephant looking as lonely as ever ; and the Edgware Road of Gilpin <sup>208</sup> fame and so to Maida Vale, wholly now a misnomer, and Kilburn but its fields were gone. Once there were wells here, but the spot is all built over whence Health was drawn from Mother Earth. One of the first, if not the first itself, of Volunteer Corps was the delight of boys to watch at drill on the green headquarters of the Victoria Rifles, whose tunics were deep green recalling ever to us, Robin Hood and his merry men. I could find no trace. But God's Acre was still there, not turned into Breathing Spaces as others elsewhere, and St Paul's. I could have found my way blindfolded from the latter to the former for the way had been burned into my childhood's memory as from the one to the other my Father's body was borne amid sorrowing procession of citizens. <sup>209</sup> Others of my own flesh and blood lie with him. That visit of the Wanderer returned belongs to him alone.

I chanced a short cut home. It was risky I allow and I swore to ask no aid. After many windings I found myself at "Ye Olds Swiss Cottage" where in days gone by Gallants and Maidens hid themselves to drink fresh milk and indulge in gossip. Thence I landed at Chalk Farm, but not even a microscope today could find a speck of chalk or farm, upon the surface. I was now in a newer London but everything seemed to be heading to or from one centre. I followed and came ere nightfall to safe anchorage.

Billings Gate sounds unromantic but is wrapped up in London's life, on old time Water Gate when travel by water was far easier than on Land. Here since Saxon days was the town's Fish Market and still is redolent of the traffic. A lively business was being carried on but the language seemed more suitable today for gentle ears than of yore so that this small space has added itself twice over to the Dictionary as representing not only a site but unseemly words. St Magnus Church stands close by where Miles Coverdale <sup>210</sup> was the Minister who ventured alone upon a translation of the Bible and performed the task, the while striving to lift the vendors in the Fish Market to Higher things. A few steps and I was on London Bridge ; 200 years ago it was the only bridge. All along its 1000 ft are lamp posts made out of the cannon captured in the Peninsular War, that war of Vittoria and Corunna,

---

<sup>203</sup> [Swan & Edgar Ltd](#) was a department store, located at Piccadilly Circus, London, established in the early 19th century. The business closed it in 1982 because it would have cost too much to modernize it. The building was bought by Richard Branson of the Virgin Group in 2003 and was a Virgin Megastore until 2007.

<sup>204</sup> According to [this source](#), Mellin's Pharmacy was at No. 48 Regent Street on the north-east side of the Circus, where a photograph of 1904 shows illuminated lettering announcing "Mellin's Food". *Mellin's Infant Food* was an early [infant formula](#).

<sup>205</sup> Peter Robinson's department store was at 272–286 Regent Street.

<sup>206</sup> Jay's Shop at 243–253 Regent Street was a respected retailer of silk and millinery, holding a [Royal Warrant](#).

<sup>207</sup> [Selfridges](#) is a chain of high end department stores in the United Kingdom. It was founded by Harry Gordon Selfridge. The flagship store in London's Oxford Street is the second largest shop in the United Kingdom (after Harrods) and opened 15 March 1909.

<sup>208</sup> [William Sawrey Gilpin \(1762–1843\)](#) was an English artist, drawing master and, in later life, landscape designer.

<sup>209</sup> WWB's father, James Bolton, was the pastor of the congregation of St Paul's Chapel, Kilburn. He died on April 8, 1863, aged 39, when WWB was four years old, and is buried next to WWB's mother, Louisa Lydia Bolton née Pym, and WWB's two brothers who died in infancy, James Francis Bolton and James Beauchamp Bolton. See the photo of the grave under *Kilburn and Wimbledon* in Part I.

<sup>210</sup> [Myles Coverdale \(c. 1488–1569\)](#), also spelt *Miles Coverdale*, was a 16<sup>th</sup> century Bible translator who produced the first complete printed translation of the Bible into English.

of Wellington and Moore.<sup>211</sup> Then up Cannon Street to St Swithun's Church, he of the Rain of 40 days or otherwise which Tradition has been hopelessly torn to pieces by this Day of cold statistics.<sup>212</sup> Let into its front direct against the sidewalk is "London Stone", the central milestone from which all other milestones for far around marked the Distance.<sup>213</sup> How few of those who pass it give it a thought or even know of it ; yet that day I was pleased to see a group of boys and girls having it explained to them. And so to Tower Hill.

Within a few steps of the gloomy Tower of London is a lovely garden, fine lofty trees, rich lawn and flower beds. We call it Trinity Square. No one to look at it unless he knew the Past would think it other than a Breathing Space. Within it is a square, laid with cobble blocks set in the lawn, some 20 feet wide and in the centre is a square stone. Where it rests there stood the headsman's Block for so many years. Out from the Tower the doomed stepped, 'twas but a short walk up the hill, there to kneel and receive the death blow. Here knelt the great one of the land (Tyburn's Gibbet was for the poor) : Laud, More, Fisher, the Earl of Surrey and the last of all, Lord Lovat of 1745, these among many.<sup>214</sup> Within the Tower is a similar spot where even more heads fell.

---

<sup>211</sup> [The Peninsular War](#) was a military conflict between France and the allied powers of Spain, the United Kingdom, and Portugal for control of the Iberian Peninsula during the [Napoleonic Wars](#). The war began when French and Spanish armies crossed Spain and invaded Portugal in 1807. Then, in 1808, France turned on its ally, Spain. The war lasted until the [Sixth Coalition](#) defeated Napoleon in 1814. At the [Battle of Vitoria](#) (21 June 1813) an allied British, Portuguese, and Spanish army under [General the Marquess of Wellington](#) broke the French army near Vitoria in Spain, leading to eventual victory in the Peninsular War. The [Battle of Corunna](#) took place on 16 January 1809, when a French corps attacked a British army under [Lieutenant-General Sir John Moore](#). WWB has *Peninsula War*.

<sup>212</sup> [Swithun](#) was an Anglo-Saxon bishop of Winchester and subsequently patron saint of Winchester Cathedral. According to tradition, the weather on his feast day, July 15 will continue for forty days.

<sup>213</sup> [London Stone](#) is a historic stone that is now set within a Portland stone surround and iron grille on Cannon Street, in the City of London.

<sup>214</sup> [William Laud \(1573–1645\)](#) was Archbishop of Canterbury from 1633 to 1645. One of the High Church Caroline divines, he opposed radical forms of Puritanism. This, and his support for King Charles I, resulted in his beheading in the midst of the English Civil War. [Sir Thomas More \(1478–1535\)](#) was an English lawyer, social philosopher, author, statesman, and noted Renaissance humanist. He was an important councillor to Henry VIII of England and was Lord Chancellor from October 1529 to 16 May 1532. He was imprisoned in 1534 for his refusal to take the oath required by the [First Succession Act](#), because the act disparaged Papal Authority and Henry's marriage to Catherine of Aragon. In 1535, he was tried for treason, convicted on perjured testimony, and beheaded. [John Fisher \(1459–1535\)](#) was an English Roman Catholic scholastic, cardinal, and martyr. Fisher was executed by order of Henry VIII of England during the English Reformation for refusing to accept the king as Supreme Head of the Church of England and for upholding the Roman Catholic Church's doctrine of papal primacy. [Henry Howard, Earl of Surrey \(1516–1547\)](#), was an English aristocrat, and one of the founders of English Renaissance poetry. Henry VIII, consumed by paranoia and increasingly ill, became convinced that Surrey had planned to usurp the crown from his son Edward. The King had Surrey imprisoned, sentenced to death and beheaded for treason on 19 January 1547. [Simon Fraser, 11th Lord Lovat \(c. 1667–1747\)](#), was a

It was but natural to step into All Hallows close by where so many of these decapitated ones were borne forthwith for quick burial. Land lay beneath its Altar for many years till the remains were removed to Oxford. The graveyard has been much curtailed and the bones of many been disinterred and buried en masse in other cemeteries. All Hallows has other memories. Its foundation goes back to 675 A.D. when monks from their country home at Barking served the folk who gathered round William's fortress. Here Penn was baptized as a fine brass erected by Americans bears witness : Bishop Andrewes also who is commemorated above the main entrance by a fine statue together with the Blessed Mother and S<sup>t</sup> Ethelburga.<sup>215</sup> London's sparrows are not proverbial for modesty. As I looked at the group, an impudent little fellow lit on the good Bishop's extended hand whilst his mate sat snugly on their nest in that of the gentle Ethelburga. The floor is a mass of brasses, many of those who had knelt on Tower Hill.

Close to is S<sup>t</sup> Olave's — he a Viking and a friend of the weak Saxon Ethelred the Unready. I had just left London Bridge which he had defended for his friend and the Londoners against the attacking Danes and had saved the town. London did not forget King Olaf. In his own Norway he thought to enforce his new found religion by fire and sword. He failed and fell in battle with his own people. But the Church canonized him and London in grateful remembrance raised an Altar to his memory and built the first little Church of wood to shelter it. It is only some 50 feet square to this day. Its specialty is Skulls. There are 5 carved ones over the Churchyard gate, they abound on the monuments within. The tiny fane was saved in the Great Fire by blowing down the neighbourhood. Here Pepys<sup>216</sup> worshipped, erecting a very graceful monument to his wife and had it so placed that sitting in his special little gallery (The Navy Pew) he could gaze at her pleasing face. One monument is surmounted with stone packages of tea. The Departed was the owner of the ship of which the cargo was cast into Boston Harbour and helped to lose irrevocably Britain's eldest daughter. Stands of wrought iron, to hold the swords and rapiers of the gentry whilst they prayed are to be seen in this House of God.

London surely reeks with history.

To finish a week's roaming I crossed over to South London, making my way first to The Oval, once a kitchen garden in the country but now the Home grounds of Surrey.<sup>217</sup> A fine turf, covering some 10 acres, Club House, Grandstands, Bleachers and many flower beds. No game on, so made for Kennington Common, no common as understood by the term, but today a park well laid out, the central grass plots the playground of a multitude of children, the flower beds most wisely railed off. Where children played was for long years an Execution Ground. Here the supreme debt was paid by

---

Scottish Jacobite and Chief of Clan Fraser, who was famous for his violent feuding and his changes of allegiance. Lovat was among the Highlanders defeated at the [Battle of Culloden](#) and convicted of treason against the Crown. He was the last man in Britain to be publicly beheaded on Tower Hill, London.

<sup>215</sup> [William Penn \(1644–1718\)](#) was an English real estate entrepreneur, philosopher, and founder of the Province of Pennsylvania, the English North American colony. [Lancelot Andrewes \(1555–1626\)](#) was an English bishop and scholar, who held high positions in the Church of England during the reigns of Queen Elizabeth I and King James I.

<sup>216</sup> [Samuel Pepys 1633–1703](#) was an English naval administrator and Member of Parliament who is now most famous for the diary he kept for a decade while still a relatively young man.

<sup>217</sup> [Surrey County Cricket Club](#) is one of the 18 professional county clubs which make up the English and Welsh domestic cricket structure, representing the historic county of Surrey. The club's home since its foundation in 1845 has been The Oval cricket ground, within the Kennington area of Lambeth in south London.

many followers of Bonnie Prince Charlie <sup>218</sup> ; here too the Chartists <sup>219</sup> used to meet and give Westminster many a bad hour ; here too Whitefield <sup>220</sup> the great preacher addressed thousands. The Oval clearly has great influence here. All the boys were engaged at cricket but with outfits to amaze. One wicket a tree, the other a lone stick with a coat thrown over it, balls of cotton, others of coconut fibre, no two alike in size, a boy who owned a real cricket bat seemed to be the Fairy Prince amongst them — most bats cut out of a piece of plank : but every game played seriously : the bleachers filled with a motley crowd of humanity, a sad looking lot as if the Joy of Life had passed for them. I recalled Newington Butts <sup>221</sup> but where the rifle once held sway was a maze of poor folks homes. In the midst of a small park, once a graveyard — headstones still to be seen amid the bushes — rises a handsome Clock Tower. Here once stood St Mary's Church mentioned in the Domesday Book of the Conqueror. A short walk brought me to Spurgeon's Tabernacle <sup>222</sup> where the Baptist Evangelist held crowds spellbound for over 30 years. Close to, is the house built "For joy and gladness" as a Tablet states, after Spurgeon had reached the half century of Life, and in which he died.

Not a stone's throw away is the "Elephant and Castle" — who of London knows it not by name? — yet an utter misnomer unless one refers it to the gigantic hold Drink appears to have over the people hereabouts. You see it written on their bloated faces, especially the women who are seen carrying jugs of beer to their homes or else lounging outside with a glass in their hands. And just beyond lies Bedlam. Back in the 13<sup>th</sup> Century a Priory was established here, turned in Henry VIII's time into a hospital. Its inmates the Insane. Its true title is "Bethlem" but the world over it is Bedlam. <sup>223</sup> A handsome imposing building housing 300 mental wrecks. Next came The Surrey Theatre, famous as the one time home of Melodrama. Here Siddons and Keene <sup>224</sup> drew crowds, and once it was all the vogue for Georgian dandies to cross the river with their ladies to "see the play" at The Surrey. In the Blackfriars Road lies "The Ring" where pugilism holds sway and I noted a coming event when I would be there to see. The Oval and the budding cricketers having recalled past days I would finish day and week by revisiting the true Home of the National Game "Lords", where Kent was even then

---

<sup>218</sup> [Prince Charles Edward Louis John Casimir Sylvester Severino Maria Stuart](#) (1720–1788), commonly known as Bonnie Prince Charlie, was the second [Jacobite](#) pretender to the thrones of England, Scotland, and Ireland. Charles is perhaps best known as the instigator of the unsuccessful Jacobite uprising of 1745, in which he led an insurrection to restore an absolute monarchy in the United Kingdom, which ended in defeat at the Battle of Culloden that effectively ended the Jacobite cause.

<sup>219</sup> [Chartism](#) was a Victorian era working class movement for political reform in Britain between 1838 and 1848. It takes its name from the [People's Charter of 1838](#).

<sup>220</sup> [George Whitefield \(1714–1770\)](#) was an English Anglican preacher who helped spread the [Great Awakening](#) in Britain, and especially in the British North American colonies. He was one of the founders of [Methodism](#) and of the evangelical movement generally. He became perhaps the best-known preacher in Britain and America in the 18<sup>th</sup> century, and because he traveled through all of the American colonies and drew great crowds and media coverage, he was one of the most widely recognized public figures in colonial America.

<sup>221</sup> [Newington Butts](#) is a former village, now an area of the London Borough of Southwark. It is popularly believed to take its name from an archery butts, or practice field.

<sup>222</sup> The [Metropolitan Tabernacle](#) is a large Independent Reformed Baptist church in the Elephant and Castle in London. It was the largest non-conformist church of its day in 1861. [Charles Haddon Spurgeon \(1834–1892\)](#) was a British [Particular Baptist](#) preacher.

<sup>223</sup> The [Bethlem Royal Hospital](#) is a hospital for the treatment of mental illness located in London,. Although no longer based at its original location, it is recognised as Europe's first and oldest institution to specialise in mental illnesses. It has been known by various names including St Mary Bethlehem, Bethlehem Hospital, Bethlehem Hospital and Bedlam. The word bedlam, meaning uproar and confusion, is derived from the hospital's prior name. Although currently a modern psychiatric facility, historically it became representative of the worst excesses of asylums in the era of lunacy reform.

<sup>224</sup> [Sarah Siddons \(1755–1831\)](#) was a Welsh actress, the best-known tragedienne of the 18<sup>th</sup> century. [Edmund Kean \(1787–1833\)](#) was an English actor, regarded in his time as the greatest ever.

battling with my own county.<sup>225</sup> Greater accomodation seemed to have been provided and the M.C.C. Premises<sup>226</sup> more striking. The Serving Boards were not of my day, ours would have hid their heads in shame before such wonderful things. The seriousness of the crowded seaters was very evident, the comments on the game by those around me quite an education in itself. In a lull of the game I could not help but hear “her” tell “him” that once she had made 32 the top score of her life. I am convinced that he kissed her beneath her sunshade for so glorious a triumph.

Middlesex came within 6 runs of winning. A miss is as good as a mile ; but it was a fine contest and none owed Kent a grudge.

## London

To merely wander aimlessly about in the British Museum, that “grandest concentration of the means of human knowledge in the world”, is to waste one’s time. One must enter with a purpose, each to his liking. What appeals to one, may not to another. I would refresh the memory in the MSS, gather of England’s Past in the treasure finds of river beds and barrows, and live again one’s world roaming in the Ethnographical Section. But even as I made from one to the other there were endless things to attract ; here the Rosetta Stone, the key, at last, to decipher the ancient hieroglyphics<sup>227</sup> ; here sculpture of Rome, Greece, Egypt and Assyria ; here boyhood finds a place, two sculptured ones quarreling over a game of knuckle bones, and of course a Hercules calling to his aid in the slaughter of a bull, not only his knife, but a terrier, a snake and a crab. Being a Philatelist, the Tapling Collection was of course not forgotten and once again regret revived of careless traffic in school days of many a gem today.

That human dynamo — W. T. Stead<sup>228</sup> — whose career I had watched from its beginning — could not be forgotten. He had passed, his grave the Atlantic, but his workshop was still a Mecca : a Publishing House today. He lived and worked for All sorts and Conditions of Men. The very office boy tells you in subdued tones what you yourself are thinking as you move about where once that consuming Energy spent his Force, and dictated words which men the world over read with interest even if some of us could not follow him in his Boer War<sup>229</sup> days, his Cromwell worship and his handling of The Communion of Saints.

---

<sup>225</sup> [Middlesex](#) is one of the 39 historic counties of England (though it has been succeeded for administrative purposes by Greater London) and the second smallest by area. The low-lying county contains the wealthy and politically independent City of London on its southern boundary and was dominated by it from a very early time.

<sup>226</sup> [Marylebone Cricket Club](#) is a cricket club in London founded in 1787. It owns, and is based at, [Lord’s Cricket Ground](#) in St John’s Wood, London. MCC was formerly the governing body of cricket both in England and Wales, as well as worldwide

<sup>227</sup> The [Rosetta Stone](#) is an ancient Egyptian granodiorite stele inscribed with three scripts: the upper text is Ancient Egyptian hieroglyphs, the middle portion Demotic script, and the lowest Ancient Greek. Because it presents essentially the same text in all three scripts, it provided the key to the modern understanding of Egyptian hieroglyphs. WWB has *Rosetti*.

<sup>228</sup> [William Thomas Stead \(1849–1912\)](#) was an English journalist and editor who, as a pioneer of investigative journalism, became a controversial figure of the Victorian era. Stead published a series of hugely influential campaigns whilst editor of [The Pall Mall Gazette](#). Stead was on board the [RMS Titanic](#), losing his life when it sank in April 1912.

<sup>229</sup> The [Boer Wars](#) were two wars fought during 1880-1881 and 1899-1902 by the British Empire against the Dutch settlers of two independent Boer republics, the Orange Free State and the Transvaal Republic. They are sometimes referred to as “the South African War” since the black population of South Africa was also involved in the conflicts.

Here I was near to “Maskelyne and Cooke”,<sup>230</sup> how could I resist the spell to be deceived again. “Cooke” is dropped, “Devant” now takes its place. Those Originals have Passed to where there are surely no more illusions and ghosts are realities. The Firm today no longer confines itself to public performances but are prepared I noted to act as Principle Entertainers. Much as the better class Geishas of Japan do. I entered and witnessed a full interesting programme. There was juggling with bricks ; and a Fly which spelled out words ; there was painting done without hands ; pillar boxes which contained men and women, and again they didn’t ; crystals in which we saw Visions ; and a Haunted House where ghosts appeared. Men from the audience mounted the stage — only to be fooled : they would light paper from their ears, their pockets would be picked by unseen hands in the sight of all. They may be accomplices : I certainly was not when as a youth I mounted that stage and had “the Box Trick” performed upon me. I am still as much in the dark today as to how the thing was done as was that audience on such happenings.

It was time to get a breath of fresh air, so wended my way to one of The Lungs of London — plebeian Hampstead Heath. One senses ’Arrys and Cockles, Aunt Sallies and donkey riding, but these, I had so timed it, were conspicuous by their absence. Its rightly named title is “Parliament Fields” and is one of the finest open spaces of London. Broad walks beneath trees meeting overhead, hill and dale, sand for the children to build castles in, much furze,<sup>231</sup> goodly ponds with life buoys handy for too venturesome souls ; sheep grazing ; and a cricket match in full swing. From the Summit, on one side of you a fine panorama of the great City ; on the other, miles of wooded countryside. Here stands that ancient Tavern “Jack Straw’s Castle” named after one of Wat Tyler’s ablest lieutenants in the rustics’ rebellion of King Richard II’s day.<sup>232</sup> Here may be the resort of the Poor as against West End Parks, but no Cockney is ashamed to own that he is proud of Hampstead Heath with its pure air, its space and beauty.

From the Mall along the Processional Way, on the left the Admiralty where I once read, doubtingly, Nelson and Wellington met on the steps for the one and only time and passed, neither knowing the other.<sup>233</sup> Through trees is seen the Horse Guards Parade, that Tilting ground of many old time Tournaments. On the right lies Marlborough House, and a little beyond, the Chapel which Charles the Martyr<sup>234</sup> raised that his Queen might worship after the Roman Faith, which helped in measure to bring him to the Block. Close to, one comes to the back of S<sup>t</sup> James’ Palace, and the gate through which he stepped that frosty morn in January to walk, under guard, by yonder path through parkland, to Whitehall and death. Here is Sutherland House, a royal dwelling for a citizen.<sup>235</sup> Straight ahead rises the Victoria Memorial which by its dazzling whiteness that day made the Palace behind appear the grimier, the gold tipped railings helping but little. Someday, I take it, the Mall will rival that splendid way in Berlin with sculpture and trees alternate and a new Front to the Palace at its end to

---

<sup>230</sup> [John Nevil Maskelyne \(1839–1917\)](#) was an English stage magician with his friend, cabinet maker George Alfred Cooke. Upon Cooke’s death in February 1905, Maskelyne started a partnership with [David Devant \(1868–1941\)](#). WWB has *Cooks*.

<sup>231</sup> [Gorse](#), furze, furse or whin are members of the genus *Ulex*; the genus comprises about 20 plant species of thorny evergreen shrubs.

<sup>232</sup> The English [Peasants’ Revolt](#) of 1381 was one of a number of popular revolts in late medieval Europe and marked the beginning of the end of serfdom in medieval England. The names of some of its leaders, [John Ball](#), [Wat Tyler](#) and [Jack Straw](#), are still familiar in popular culture.

<sup>233</sup> [Arthur Wellesley, 1st Duke of Wellington \(1769–1852\)](#) and [Horatio Nelson \(1758–1805\)](#) met for the only time on September 2, 1805, in a waiting room at the office of the the Secretary of State for War and the Colonies in London.

<sup>234</sup> [Charles I \(1600–1649\)](#) was King of England, King of Scotland, and King of Ireland from 27 March 1625 until his execution on 30 January 1649.

<sup>235</sup> Previously known as York House and Stafford House, [Lancaster House](#) was purchased by and completed for the [Duke of Sutherland](#). In 1912 it was purchased by the Lancastrian soap-maker [Sir William Lever](#) who renamed it in honour of his native county of Lancashire.

make it a really noble Avenue. Now one turns slightly for Constitution Hill, the latter the purest figment of speech, the slightest of rises in a goodly length of road. At the end an Arch of Triumph surmounted by a group of statuary, five rampant horses tied to a chariot, the woman with the reins seemingly having her work cut out to hold them. Here is Hyde Park Corner, and nigh stands Apsley House given by a grateful nation to the Iron Duke, and in the centre of this open space his monument, figures at each corner, standing for those who made his Fame imperishable, a Dragoon, a Grenadier, a Fusilier and a Highlander. St George's Hospital stands out amid the mansions, with as many beds therein as there are days in the year. "The Serpentine" within Hyde Park was a gay scene, boats, paddlers, bathers, the whole banks were alive.

The history of the Park goes back to Saxon times. It was a manor then. It was Henry VIII who turned it into a Park. Elizabeth his daughter was wont to hunt in it. Here great events have taken place. Mass meetings, reviews, encampments, shows. Here Lord Mohun and the Duke of Hamilton <sup>236</sup> fought together and both died, here the Duke of Grafton and Spencer stood and fought it out. I tooted Rotten Row (Le Route de Roi) despite the horsemen and was content. <sup>237</sup>

Thence to Kensington Gardens and through the trees can be seen where Queen Victoria was born and men first knelt to her to swear fealty that early morn in 1837. Man's handiwork in the Round Pond and the Broad Walk leads to the Albert Memorial. Time has told on it since first I saw it as it came fresh from the hands of its creators and London's smoke. Across rises The Albert Hall where ten thousand can assemble and whose organ in my day of attendance at Oratories was said to be the largest in the world. Here too were new names to me — the Royal College of Music and a noble building with a commanding Central Tower, The Imperial Institute, where matters Colonial hold pre-eminence. The South Kensington Museum of my day is no more. The building is there but the name is today The Victoria and Albert. The treasures of the former are separated into their various departments. I was bound to go into the Engineering to see again Stephenson's "Rocket" <sup>238</sup> and Arkwright's first "Jenny" <sup>239</sup>; and into the Natural History Museum where the art of the Taxidermist is to be seen in perfection, from hummingbirds to mammoths.

Brompton Oratory was too close not to be entered, a centre of Roman Catholic activity always associated with the name of Cardinal Newman, <sup>240</sup> that Master of flowing English. Its Altars many, the building spacious, nothing English about it, but the whole impressive.

Then a run out to Alexander Palace, that rival to the Chrystal one, raised in my young days by private enterprise, but today after many vicissitudes acquired for the use of the public forever. Past Finsbury Park, home grounds of the Tottenham Hotspurs of soccer fame, then to cross The New River, source of North London's water supply which runs from Hertfordshire, and a hundredth part of a share in

---

<sup>236</sup> [Charles Mohun \(c. 1675–1712\)](#) and [James Hamilton \(1658–1712\)](#) fought a duel in Hyde Park on 15 November 1712.

<sup>237</sup> WWB wrote this paragraph in the margin, with an asterix indicating where it was to be inserted.

<sup>238</sup> [Stephenson's Rocket](#) was an early steam locomotive, built in 1829 at the Forth Street Works of [Robert Stephenson and Company](#) in Newcastle Upon Tyne.

<sup>239</sup> [Richard Arkwright \(1732–1792\)](#) was an Englishman who is often credited with inventing the spinning frame, later renamed the water frame following the transition to water power. He also patented a carding engine that could convert raw cotton into yarn. A self-made man, he was a leading entrepreneur of the Industrial Revolution. His spinning frame was a significant technical advance over the [spinning jenny](#).

<sup>240</sup> [John Henry Newman \(1801–1890\)](#) was an important figure in the religious history of England in the 19<sup>th</sup> century. Originally an evangelical Oxford academic and priest in the Church of England, Newman was a leader in the [Oxford Movement](#). This influential grouping of Anglicans wished to return the Church of England to many Catholic beliefs and forms of worship traditional in the medieval times to restore ritual expression. In 1845 Newman left the Church of England and was received into the Roman Catholic Church where he was eventually granted the rank of cardinal by Pope Leo XIII.

which makes the owner a man of wealth. I have never heard of anyone holding a King's Share, that is one entire. A climb up Muswell Hill and on its summit stands the Palace. The view from the front esplanade is worth the journey thither alone. The plain below and up the opposite rise the home of a million ; the dome of S<sup>t</sup> Paul's looming up in the distance ; fields and woods as one looks towards Essex. It was an "off day" and things were stagnant but I went over the race track below where I with others organized the earliest sports of the place. The Hall within the Palace is spacious, there is an old time Roller Skating rink and a Shoot the Chutes,<sup>241</sup> and the inevitable Tennis Courts. Here was yet another of London's Breathing Spaces.

The Temple Church, ancient home of the Knights Templar,<sup>242</sup> could not be ignored. Within, many recumbent effigies of those of the Order lie immediately under its Dome : the building itself constructed on the model of Jerusalem's Church of the Holy Sepulchre. All around are Cloisters, and Halls where lawyers are bred and dined and wined. Tourists with pencil and notebook in hand drove me from the graveyard, and I took refuge in the — to me — new Law Courts, an imposing block of buildings across the way. Here was opportunity to see Justice dispensed at England's headquarters though the full flood was not on. Some names of Judges posted up were those of companion athletes in days gone by, which put me in mind to make for Covent Garden where, in a handsome house once owned by an Earl of Orford, is located another "Ring" more aristocratic than that of Blackfriars Road nurtured by the National Sporting Club, where Gold belt bouts are held in the presence of a strictly select attendance. From there I made good circle. First to Fleet Street where I would see Young Life in an Old Setting. In "Ye Olde Cheshire Cheese" Inn I found the latter, at its tables where not for the first time I had sat, I saw the former. Up Ludgate to S<sup>t</sup> Paul's, not then to linger, for Sundays had found me there, of course, alike with Westminster Abbey — would that those choristers had sung for hours instead of minutes — but the rather to wander awhile in the little graveyard outside where are the bases of the ancient cloisters and the graves of the early Bishops of London, Milletus<sup>243</sup> and his fellows. Here too rises S<sup>t</sup> Paul's Cross, on the spot where a former one stood, an open air pulpit where great preachers of old held forth to the multitude gathered in Cheapside and many a Proclamation was read out which altered a Dynasty or changed Faith or Law.

Thence into "Little Britain" at the site of the one time Blue Coat School founded by Edward VI<sup>244</sup> as "Christ's Hospital"<sup>245</sup> — now removed to Horsham, one portion of the General Post Office to be seen in its place. A Fire Station today where oft we boys watched with keen interest other boys,

---

<sup>241</sup> [Shoot the Chutes](#) is an amusement ride consisting of a flat-bottomed boat that slides down a ramp or inside a flume into a lagoon.

<sup>242</sup> The Poor Fellow-Soldiers of Christ and of the Temple of Solomon, commonly known as the [Knights Templar](#), were among the most famous of the Western Christian military orders. The organisation existed for nearly two centuries during the Middle Ages. Officially endorsed by the Catholic Church around 1129, the Order became a favoured charity throughout Christendom and grew rapidly in membership and power. Templar knights, in their distinctive white mantles with a red cross, were among the most skilled fighting units of the Crusades. Non-combatant members of the Order managed a large economic infrastructure throughout Christendom, innovating financial techniques that were an early form of banking.

<sup>243</sup> [Mellitus](#) (died 24 April 624) was the first Bishop of London in the Saxon period, the third Archbishop of Canterbury, and a member of the Gregorian mission sent to England to convert the Anglo-Saxons from their native paganism to Christianity. WWB has *Miletus*.

<sup>244</sup> Edward VI (1537–1553) was King of England and Ireland from 28 January 1547 until his death. The son of [Henry VIII](#) and [Jane Seymour](#), Edward was the third monarch of the Tudor dynasty and England's first monarch raised as a Protestant.

<sup>245</sup> [Christ's Hospital](#), popularly known as The Bluecoat School, is an English coeducational independent day and boarding school located in the Sussex countryside just south of Horsham. The school was originally founded in the 16<sup>th</sup> century in Greyfriars, London and Hertford.

hatless, heavy blue cassocks tucked up, yellow stockinged and buckle shoed, play football, a heavy grating between them and us. But a few steps and I reached S<sup>t</sup> Bartholomew's Hospital and noble Church, with Smithfield Market adjoining. On a Tablet sunk in the Hospital wall, the Martyrs of 1555–1557 are commemorated.<sup>246</sup> But a few paces from that wall, men, women and youths gave themselves to the fire rather than to deny what to them was The Faith. Then the space was a Field where asphalt now is, and round the Stake stood men who thought they were doing God's Will by immolating others.

The Hospital and Church date back to 1100 A.D. A courtier, one Rahere,<sup>247</sup> of Henry I, resolved to change his rough manners and went on a pilgrimage. Far off he fell desperately ill and vowed if spared to build a Hospital in his home town. He was lead later to add a Church and himself became a monk and still later the first Prior. A goodly portion of that Church still remains. The Founder's tomb is by the Altar in the Choir, his dust therein still well above ground. In S<sup>t</sup> Bart's one sees Norman architecture in all its fulness. Happily the Great Fire spared it, that scourge stopping happily at Pie Corner, but a stone's throw away. Here in 1509 and for over 20 years after, one of my own family was the Prior.<sup>248</sup> He left his mark upon the building. There is Prior Bolton's Window and the same

<sup>246</sup> Martyrs burned at the stake during the [Marian Persecutions](#).

<sup>247</sup> [Rahere](#) (died 1144) was clergyman and a favourite of [King Henry I \(c. 1068–1135\)](#). He is most famous for having founded St Bartholomew's Hospital in 1123.

<sup>248</sup> In Section III, *Early Notices of Boltons*, in [Genealogical and Biographical Account of the Family of Bolton in England and America](#), we read of "William Bolton, from 1509 to 1512, Prior of St. Batholomew's, Lord of the Manor of Stanmere Magna. His device, a *bolt* and *tun*, was lately to be seen in some parts of the park wall. Canonbury-house is said to have been made use of as a country residence by the Priors of St. Bartholomew. (*Lyson's Environs of London*, vol. iii. 302.) He is portrayed upon a sable with his brethren in the collection of Sir Robert Cotton."

The window of Prior William Bolton in [St Bartholomew Church](#).

There is also a Prior Bolton Street in the London Borough of Islington.

© 2012 Google. Image Date: May 2012.

priest's Door. He was the last Prior but one before Henry VIII got in his deadly work. Bolton was evidently an architect of no mean ability for he was in charge of the building of the Chapel of Henry VII in Westminster Abbey where now the Order of the Bath has its stalls.

Passing out of the Church by an ancient stone gateway, it is but a step to the Hospital, the richest in endowment in London. Here over 100,000 persons are treated every year. Over one of the Entrance gates is recorded the munificence<sup>249</sup> of Henry VIII to the building Fund. One wonders from what act of vandalism he got the money.

I could not leave the neighbourhood without a visit to The Charterhouse, once a monastery, then for centuries a great Public School — like the Blue Coat to be removed to the country, at Godalming — now the Home of some 50 old Bedesmen,<sup>250</sup> each with his own apartment, and pocket money also supplied. I saw many of the white haired old men, in their frock coats and tall hats, some in need of a staff to help them along but most carrying themselves bravely as they passed me by.

Passing now the Old Watch Tower, I read S<sup>t</sup> Sepulchre's,<sup>251</sup> opposite what once was New Gate, upon a board, but that Saint was ever a puzzle to me. It may have had something to do with the custom of ringing of the Church's tenor bell whenever a prisoner was hanged within those walls over which it looks.

Down Holborn now to Ely Place where hidden away is a Chapel<sup>252</sup> well worth seeing, but known to few. Here is a portion of a one time great estate owned by the Bishops of Ely — their Cathedral duties being in far off Cambridgeshire — here was His Lordship's London Palace. They possessed many acres, now all that remains — and it is not theirs — is their House of Prayer. It has had its ups and downs. All was well till rapacious Henry VIII looked upon it. Its priests were driven forth and the

Fr Nicholas, Assistant Priest at Our Lady and St Joseph's, Kingsland, and Archivist of the Archdiocese of Westminster, refers to William Bolton and Prior Bolton Street in his *Roman Miscellany* blog post of 20 October 2007 [here](#):

I have previously mentioned one of our local landmarks, Canonbury Tower, which was built by William Bolton, the Prior of the Augustinian Priory of St Bartholomew's, Smithfield (1505–32). You can still see his device of a barrel (tun) pierced by a crossbow bolt on some nearby buildings. Bolton was also Master of the King's Works and was involved in many other building projects, such as Westminster Abbey's Henry VII Chapel and monument to Lady Margaret Beaufort.

Last night I visited a parishioner and passed a road called 'Prior Bolton Street'. I was then told that the remnants of a fishpond that once belonged to the good Canons occasionally 're-appears' and floods the basements of certain houses in the area. England is full of stories of ghosts who lament the destruction of the 1530s — phantom monks and nuns and all that — but it is curious to hear of a pond that serves to remind the people of twenty-first century Islington of pre-Reformation days!

Note the discrepancies concerning the period during which Bolton was Prior among WWB (for over 20 years from 1509), *Genealogical and Biographical Account of the Family of Bolton in England and America* (1509–1512) and Fr Nicholas (1505–1532).

<sup>249</sup> WWB has *munifence*.

<sup>250</sup> [Bedesman](#) or beadsman was generally a pensioner or almsman whose duty it was to pray for his benefactor.

<sup>251</sup> [St Sepulchre-without-Newgate](#) is an Anglican church in the City of London. It is located on Holborn Viaduct, almost opposite the [Old Bailey](#). St Sepulchre is one of the "Cockney bells" of London, named in the nursery rhyme [Oranges and Lemons](#) as the "bells of Old Bailey". Traditionally, the great bell would be rung to mark the execution of a prisoner at the nearby gallows at Newgate. The clerk of St Sepulchre's was also responsible for ringing a handbell outside the condemned man's cell in [Newgate Prison](#) to inform him of his impending execution.

<sup>252</sup> [St Etheldreda's Church](#) is located in Ely Place, off Charterhouse Street, Holborn, London. It is dedicated to Æthelthryth, or Etheldreda, an Anglo-Saxon saint who founded the monastery at Ely in 673. The building was the chapel of the London residence of the Bishops of Ely. The chapel was purchased in 1873 and opened as a Roman Catholic church in 1878.

Chapel was sold — a very gem. For years it was a Proprietary Chapel — its owner secured on hire a Minister to run it and halved the profits. Then the Welsh in London bought it and worshipped there, adding heaps of plaster. Their rule came to an end and it was long for sale, till “The Christian Brothers”, a Roman Order bought it and have largely revived its one time beauty. On one side there are the Cloisters in excellent shape, a beautiful Crypt, the Nave rib roofed with handsome wood, and windows of rich stained glass. The plaster has all gone, the Chapel is itself again, it looks good for ages to come. Ely Place has but one way in and out, high iron gates watched by day and locked at night — old customs oft die hard. Adjoining is Hatton Gardens, once correct description but today an entire misnomer for Hatton Gardens is a <sup>253</sup> Street and nothing more. But a world known street for it <sup>254</sup> is the habitat of London’s Diamond Merchants. Mostly foreign names above the doors, within what wealth of precious stones! At the far end is the Italian Church still famed for its music ; an Orchestra added to a splendid organ for High Mass. Thence to Gray’s Inns of Court, another home of Lawyers, forbidding looking buildings but set in delightful space of lawn and trees, not for the public as mighty and stout iron railings testify. Now to Bloomsbury Square to where once Earl Chesterfield <sup>255</sup> lived, and wrote letters to his son which have long survived him, wise words say some, others describe him as a grievous Prig.

The day begun at The Temple, ended at a modern Fane, S<sup>t</sup> Alban’s Holborn, raised so it is said upon the actual site of that Thieves’ Kitchen immortalized by Dickens, <sup>256</sup> built by the munificence of “A Merchant of London” to the glory of God and for His poor who still dwell in their thousands in tenements around it. To me Fathers Mackonochie <sup>257</sup> and Stanton were realities not mere names, able and stout hearted ones who contended against huge odds for the Faith of their Fathers and won out. The few of those days sowed, the many of today reap. To step inside S<sup>t</sup> Alban’s is to sense in ways inexpressible The Beauty of Holiness.

I would renew my youth ; that sturdy old Fortress, Palace and Prison, the Tower of London called me. What a history it holds, what tragedies those deep dungeons could tell, from its narrow windows how many have looked out upon the Liberty denied them! Through its gates many a gay cavalcade has passed in and out, through also many a state prisoner to pass out again only to the green sward and the block on Tower Hill. A Prison but also a Palace ; for Kings and Queens from the Conqueror to the Merry Monarch <sup>258</sup> looked upon it as a Home. A Fortress in its first raising, who in days gone by could hope to batter down 15 feet of thickness or swarm up its precipitous wall? Furious crowds have surged around but no straight assault ever availed, by treachery or faint heartedness has entrance ever been obtained. London in the Conqueror’s day was but a small half moon, he raised his Fortress where enemies would first touch its walled precincts as they approached up river, London’s wall swept round the arc with gates at intervals till it and London ended at Blackfriars. The Tower was built to face the river, with but two entrances, one from the City by drawbridge across the Moat, the

---

<sup>253</sup> WWB has *is is*.

<sup>254</sup> WWB is missing *it*.

<sup>255</sup> [Philip Dormer Stanhope, 4th Earl of Chesterfield \(1694–1773\)](#) was a British statesman and man of letters. In 1732 there was born to him the son, Philip, for whose advice and instruction at Westminster School were afterwards written the famous *Letters to his Son*.

<sup>256</sup> In [Oliver Twist](#).

<sup>257</sup> [Alexander Heriot Mackonochie \(1825–1887\)](#) was a Church of England clergyman and mission priest known as “the martyr of St Alban’s” on account of his prosecution and forced resignation for ritualist practices. Mackonochie was also a leading member of the broader Catholic revival. He was one of the first Priest Associates of the [Confraternity of the Blessed Sacrament](#) and served as Master of the [Society of the Holy Cross](#). Under Mackonochie the Society increasingly represented the vanguard of the [Anglo-Catholic](#) movement. WWB has *Maconochie*.

<sup>258</sup> [Charles II \(1630–1685\)](#) was known as the Merry Monarch.

other from the river. When the Thames was the main highway the (now 2<sup>nd</sup>) Lion Gate on land was but little used, the Water Gate was the main one. Nowadays one can walk along the river front with the Tower a fair distance back, and keep on with the Moat to one side the whole way round till the river is reached again. And all the way there are trees and gardens. From the Tower Bridge the whole Fortress lies plain before you. In its centre rises the Keep or White Tower, the oldest portion. This is defended by a wall flanked by 13 other Towers. These are again defended by another wall flanked by 6 more on the river front and 3 others at the back. Inside the Inner Wall beside William's Tower there is the Chapel, the Hospital and the Barracks. The corner Bastion of the old Roman London wall was built into the Tower. Near Trinity House close by, many yards of that same Wall are still standing, and other portions crop up along the arc to Blackfriars.

Dropping down from Tower Hill we reach the 1<sup>st</sup> Lion Gate and passing through, there is at once the moat to cross by means of a stone bridge — once a drawbridge of wood — to reach the real entrance at the further side. That moat is dry and spacious ; for looking down I saw many squads of soldiers drilling in the bottom. The Beefeaters <sup>259</sup> were standing within and courteous to visitors as ever, but nowadays there is no Yeoman to act as guide, nor is it necessary, since placards give the names of the different spots and “This Way” keeps you ever on the straight path. Of course not all is open, for much is inhabited but no historic site seems to be denied you. On the left is the Bell Tower where Queen Elizabeth was forced to sojourn by a jealous sister <sup>260</sup> and but a step beyond on the right is that gate opening to the river through which she and many another notable passed to close confinement. The second of the 13 Inner Towers to attract me was the Bloody Tower where the Boy Princes <sup>261</sup> were done to death, their bodies being carried across the Quad to be hid beneath the stairway of the White Tower, the very centre of things, later to be discovered and now resting in an urn in Westminster Abbey. The third was the Wakefield Tower where the Crown Jewels are to be seen. When Colonel Blood <sup>262</sup> attempted his grand coup these were kept in another — the Martin Tower. Hard by a narrow winding stair leads you up into a circular room of solid stone wall. It was in this room when no Jewels were stored there that the all too gentle King — Henry VI <sup>263</sup> — came to his end. Opposite the door of entry there is a deep window recess with Aumbry and Sedilia <sup>264</sup> of stone. Here Henry was wont to say his Devotions, using the recess as a Private Oratory and here as he knelt in prayer he was done to death. The Regalia is of course full of interest. Here you see Crowns with

---

<sup>259</sup> *The Yeomen Warders of Her Majesty's Royal Palace and Fortress the Tower of London, and Members of the Sovereign's Body Guard of the Yeoman Guard Extraordinary*, popularly known as the [Beefeaters](#), are ceremonial guardians of the Tower of London. In principle they are responsible for looking after any prisoners in the Tower and safeguarding the British crown jewels, but in practice they act as tour guides and are a tourist attraction in their own right.

<sup>260</sup> [Elizabeth I \(1533–1603\)](#) was imprisoned for nearly a year by her half sister, [Mary I \(1516–1558\)](#), on suspicion of supporting Protestant rebels.

<sup>261</sup> The [Princes in the Tower](#) were [Edward V \(1470–1483\)](#), King of England from 9 April 1483 until the ascension of [Richard III](#) on 26 June 1483, and [Richard of Shrewsbury, Duke of York \(1473–1483\)](#). The two brothers were the only sons of [Edward IV \(1442–1483\)](#) alive at the time of their father's death. Then 12 and 9 years old, they were lodged in the Tower of London by the man appointed to look after them, the Lord Protector, Richard, Duke of Gloucester. This was supposed to be in preparation for Edward's coronation as king. After Richard took the throne for himself, it is assumed that they were murdered sometime around 1483.

<sup>262</sup> [Thomas Blood \(1618–1680\)](#) was an Anglo-Irish officer and self-styled colonel best known for his attempt to steal the Crown Jewels of England from the Tower of London in 1671.

<sup>263</sup> [Henry VI \(1421–1471\)](#) was King of England from 1422 to 1461 and again from 1470 to 1471. Contemporaneous accounts described him as peaceful and pious, not suited for the dynastic wars, known as the [Wars of the Roses](#), which were to commence during his reign. His periods of insanity and his inherent benevolence contributed to his own downfall, the collapse of the House of Lancaster, and the rise of the House of York. Henry was imprisoned in the Tower of London, where he died the night of 21 May 1471. It is widely suspected that Edward IV, who was re-crowned the morning following Henry's death, had in fact ordered his murder.

<sup>264</sup> In the Middle Ages an [aumbry](#) was a cabinet in the wall of a Christian church or in the sacristy which was used to store chalices and other vessels. Sedalia are seats for the priests. WWB has *sedilia*.

6000 Diamonds in them, the Ruby worn by gallant Henry in the crown encircling his helmet at Agincourt, the Royal Sceptre containing the largest cut Brilliant in the whole world, Spurs of Gold, Eagles, Spoons of the same, Collars, Stars and Badges of Chivalry sufficient to bewilder. There were others standing by frankly awed ; there was another — whose nationality I will not name — of quite different opinion, who gave vent to his feelings thus. “For those who like Royalty, I guess it’s all right, but we don’t want any such trash. Come away,” said he to his wife, and they went.

Thence to the White Tower, the interior of each room of the plainest description. All that was aimed at was Strength and Security. No Tower seemed capable of lending itself to the comforts of a Palace. Here the Kings of France and Scotland were prisoners at the same time <sup>265</sup> : here Richard II was forced to sign his Throne away. <sup>266</sup>

Up yet other flight of stairs with the Chapel of S<sup>t</sup> John, in perfect preservation, where closely confined prisoners not allowed into the Chapel in the Quad could have rendered to them the offices of Religion. Downstairs one steps to the Armouries — not a collection of present day rifles, but rather a Museum of both Foot and Horse defences as also of instruments of torture, horrible to look upon, knowing that they had been used by Englishmen upon their fellows. The Suits of Armour complete and fine, battle axes and old time crossbows, rapiers and bucklers and one item which none can look upon unmoved — The Soldier’s Cloak on which Wolfe expired on the Plains of Abraham in his hour of Victory. <sup>267</sup>

I passed out to see The Changing of the Guard. A long business but worth watching : their movements like clockwork. When the Band set Dead Slow Time they marched as if to a Funeral, when the Time changed they stepped out thrillingly. A Prince was captain of the Day, his Lieutenant was a giant. He must be 6 ft 4 in at least, then on top of all that he wore a Guardsman’s Busby. <sup>268</sup> He seemed ‘the whole show’ as in his scarlet coat, gold braid and flashing sword he marched at the head of his Company. It may have been against the regulations but an old Beefeater standing by me could not help exclaiming, “Oh! but he’s a Beauty.”

But that Quad held other things for me than pageantry. I crossed it to Tower Green (now all granite blocks) and the Tower Chapel of S<sup>t</sup> Peter ad Vincula — how appropriate a title “in chains”. A tablet of brass let into the stones tells you that here men and women suffered decapitation, and their <sup>269</sup> bodies lay in the House of God hard by. Here died Anne Boleyn, The Lady Jane, The Lady Howard and that Old Lioness, The Countess of Salisbury, who refused to kneel, Lord Hastings dragged from the Council Chamber hard by without a moment’s warning, and Essex of the Ring. <sup>270</sup> Thence to the

<sup>265</sup> During the reign of [Edward III \(1312–1377\)](#), both [David II \(1324–1371\)](#) of Scotland and [John II \(1319–1364\)](#) of France were prisoners in the Tower of London.

<sup>266</sup> Henry of Bolingbroke (1367–1413) deposed [Richard II \(1367–1400\)](#) and had himself crowned as King [Henry IV](#).

<sup>267</sup> Major General [James Peter Wolfe \(1727–1759\)](#) was a British Army officer remembered chiefly for his victory over the French in Canada. He was mortally wounded at the Battle of the [Plains of Abraham](#), a pivotal battle in the [Seven Years’ War](#). WWB has *Heights of Abraham*.

<sup>268</sup> [Busby](#) is the English name for the Hungarian *prémes csákó* or *kucsma*, a military head-dress made of fur, originally worn by Hungarian hussars. WWB has *Busbie*.

<sup>269</sup> WWB has *there*.

<sup>270</sup> [Anne Boleyn \(c. 1501–1536\)](#) was the second wife of Henry VIII. [Lady Jane Grey \(1536–1554\)](#) was *de facto* monarch of England from 10 July until 19 July 1553. [Catherine Howard \(c. 1518–1542\)](#) was the fifth wife of Henry VIII. [Margaret Pole, Countess of Salisbury \(1473–1541\)](#) was the niece of Edward IV and Richard III; she was executed in 1541 at the command of Henry VIII. William Hastings (c. 1431–1483) was a close friend and the most important courtier of [Edward IV](#), whom he served as Lord Chamberlain. On 13 June 1483 during a council meeting at the Tower of London, [Richard IV](#), accused Hastings and other council members of having conspired against his life; while other alleged conspirators were imprisoned, Hastings was immediately beheaded in the courtyard. [Robert Devereux, 2<sup>nd</sup> Earl of Essex \(1565–1601\)](#) was a favourite of Elizabeth I. In 1601 he led an abortive coup d’état against the government and was executed for treason. The Essex ring, said to have been given to him by [Elizabeth I](#), is displayed in the Westminster Abbey Museum.

Beauchamp Tower with its many pitiful mural inscriptions cut into the stones by its imprisoned inmates. Coming out again into the Quad, a Sentry stood before a door. It is the same door through which Lord Nithsdale <sup>271</sup> escaped in female <sup>272</sup> dress by aid of his wife the night before he was to kneel on the Green. They still guard that door : tradition dies hard in the Old Land. Steps nearby lead on to the leads <sup>273</sup> where the confined could exercise, and adjoining them the Gaoler's House where Lady Jane dwelt till she stepped out to her death. I had circled the Fortress, the Lion Gate was passed and I joined once again in the rushing life of the Capital.

A Cockney would not have done his duty to his Home Town who did not pay a call upon Earl's Court Exhibition. I found that it had been given a new name, you pass in to the "Imperial Services Exhibition". It has developed since my day amazingly. You have before you everything connected with the Army and the Navy, Field Telegraph and Camp Equipment — Uniforms and Arms — Ambulance Trains and Armoured ones, Block Houses and Entrenchments. There are Lifeboats and floating bridges, Torpedo boats and nets, Diving Tanks and Cruisers. You can sink the boats of the Enemy at 1 penny a shot, you can cross a respectable Harbour by means of a military raft for the same price. Here too are many relics of past Heroes ; for one, the Tent in which he and his companions died, his shovel and theodolite <sup>274</sup> stand. An entire Tudor House has its place, nor seems at all incongruous. Today there is the Great White Way for pleasure seekers and banal hideous music without soul and stall keepers who watch your approach and pounce out upon you to draw you within and fleece you. I preferred the Old days.

I sought again the old Ballad Concerts of Afternoons held at Queen's Hall to recall memories of Antoinette Stirling, Patti, Foli, Reeves and other celebrities of that day. <sup>275</sup> The season was not on but a Promenade Concert at the old stand made up for the loss. I noted the still large gathering of young men among the crowded audience. With Sir Henry Wood <sup>276</sup> as Conductor there was sure to be fine orchestral work. The formal seating spaces did not appeal, the Pit of yore was good enough for me. Thus rounded I off another week.

---

<sup>271</sup> [William Maxwell, 5th Earl of Nithsdale \(1676–1744\)](#) was a Catholic nobleman, who took part in the [Jacobite Rising of 1715](#). Nithsdale was captured, found guilty of treason, and sentenced to death. The night before the day appointed for his execution (24 February 1716), he effected an escape from the Tower of London meticulously planned by his daring and devoted wife, Countess [Winifred Herbert](#) who had been admitted to his room. By exchanging clothes with his wife's maid, he escaped the attention of his guards. He fled to Rome, where he lived in poverty and happiness with his wife until his death.

<sup>272</sup> WWB has *femal*.

<sup>273</sup> The meaning of *leads* in this context escapes the transcriber.

<sup>274</sup> A [theodolite](#) is a precision instrument for measuring angles in the horizontal and vertical planes. Theodolites are mainly used for surveying applications.

<sup>275</sup> [Antoinette Sterling \(1850–1904\)](#) was an Anglo-American vocalist. In 1873 she made her first appearance in England at Covent Garden and rapidly became a popular favourite among the contraltos of the day. She gained her greatest successes as a ballad-singer. [Adelina Patti \(1843–1919\)](#) was a highly acclaimed 19<sup>th</sup> century opera singer and one of the most famous sopranos in history. [Allan James Foley \(Signor Foli\) \(1837–1899\)](#) was a distinguished 19<sup>th</sup> century Irish bass opera singer. He was distinguished for his vigorous, straightforward way of singing, and was a great favourite in London for many years. [John Sims Reeves \(1821–1900\)](#) was the foremost English operatic, oratorio and ballad tenor vocalist of the mid-Victorian era.

<sup>276</sup> [Sir Henry Joseph Wood \(1869–1944\)](#) was an English conductor best known for his association with London's annual series of [promenade concerts](#).

## London

It was Students' Day at the National gallery. Amid the priceless collection there were many easels set and men and women, mostly grey haired busy and intent, unmindful of the loungers. The Old Masters dealing in the main with things Religious, the more modern by a sort of natural reaction from excess, dealing with things Mundane. There have been notable additions since last I had the privilege of roaming through the various salons. Then standing long at the Entrance I took in once more that wonderful vista of Trafalgar Square, Whitehall beyond, massive hotels and Office Buildings on either hand.

Here close by rises S<sup>t</sup> Martin-in-the-Fields — hard to believe that this was once fields and so all the way to the Ford at Westminster — a Church more fashionable in days gone by, where still each week the bells are rung for Nell Gwynne<sup>277</sup> — beloved of Charles II — whose ashes he buried in its vaults. An Archbishop delivered her funeral oration and a legacy compels that she shall never be forgotten.

Now to Seven Dials<sup>278</sup> — a quarter of the Town not so long ago of most unsavoury odour, today but a name. Once seven dials focussed seven struts, now only a single dial remains. Passing on there

---

<sup>277</sup> [Eleanor “Nell” Gwyn \(or Gwynn or Gwynne\) \(1650–1687\)](#) was a long-time mistress of [Charles II](#). Called “pretty, witty Nell” by [Samuel Pepys](#), she has been regarded as a living embodiment of the spirit of [Restoration](#) England and has come to be considered a folk heroine, with a story echoing the rags-to-royalty tale of Cinderella. She was the most famous Restoration actress, possessed of an extraordinary comic talent. Gwyn had two sons by King Charles.

[Figure of Nell Gwynne by George Stuart](#) in the [Museum of Ventura County](#).

<sup>278</sup> [Seven Dials](#) is a small but well-known road junction in Covent Garden where seven streets converge. At the centre of the roughly-circular space is a pillar bearing six (not seven) sundials, a result of the pillar being commissioned before a

comes Soho, where hardly a shop bears an English name. Here the Huguenots established themselves when driven from France.<sup>279</sup> A mass of cafés and restaurants today in place of looms. Within the Church of S<sup>t</sup> Ann you read a remarkable inscription on a tablet : “Near this place is interred Theodore, King of Corsica, who died in this Parish December 11, 1756 immediately after leaving The King’s Bench Prison, by the Benefit of the late Act of Insolvency, in consequence of which he registered his Kingdom of Corsica for the use of his Creditors.”<sup>280</sup> Just how things worked out one would like to know but ordinary histories are silent.

Here is Greek Street with fierce sounding names on the sign boards : one “Barbarossa” struck me as specially fine : curio shops, old silver, old engravings, old furniture in abundance. Nearby I sought The Argyll Rooms<sup>281</sup> notorious resort of all Young Bloods of three decades and more ago. High carnival was held here, helped periodically by influx from Oxford and Cambridge making night hideous and the police alert for trouble. Their day is evidently passed. If I mistake not, the fine Organ which so greatly helped to drown the din now leads in praise the peace loving congregation of the tiny Church of S<sup>t</sup> Peter close by. You turn into Piccadilly Circus and to take the scene about you in at leisure, make for the triangular Haven of Rest occupied by a Fountain raised as a Memorial to the philanthropic Earl of Shaftesbury.<sup>282</sup> Here you are in the centre of things, roads deviating therefrom

---

late stage alteration of the plans from an original six roads. A replacement sundial column was constructed in 1988–1989, to the original design.

<sup>279</sup> The [Huguenots](#) were members of the Protestant [Reformed Church of France](#) during the 16<sup>th</sup> and 17<sup>th</sup> centuries. French Protestants were inspired by the writings of [John Calvin](#) in the 1530s, and they were called Huguenots by the 1560s. By the end of the 17<sup>th</sup> century and into the 18<sup>th</sup> century, roughly 500,000 Huguenots had fled France during a series of religious persecutions.

<sup>280</sup> [Theodore of Corsica \(1694–1756\)](#), born Theodor Stephan Freiherr von Neuhoff, was a German adventurer who was briefly [King of Corsica](#). In 1749 he arrived in England to seek support, but eventually fell into debt and was confined in a debtors’ prison in London until 1755. He regained his freedom by declaring himself bankrupt, making over his kingdom of Corsica to his creditors, and subsisted on the charity of friends until his death in London in 1756.

<sup>281</sup> The Trocadero Restaurant opened in 1896 at a site on Shaftesbury Avenue that had been formerly occupied by the notorious Argyll Rooms. The [London Trocadero](#), an entertainment complex, incorporated a number of historic buildings and was most recently used as an exhibition and entertainment space. WWB has *Argyle*.

<sup>282</sup> [Anthony Ashley Cooper, 7th Earl of Shaftesbury \(1801–1885\)](#) was an English politician, philanthropist and social reformer.

as spokes from a hub. Across I note that the “Cri” and the “Pav”<sup>283</sup> are still doing business, whether that are as lively as I knew them I cannot say, but hope not. Here comes towards me a Coach and four high mettled steeds, with liveried Coachmen and similar Footmen behind. I would ask the uniformed Walking Dictionary beside me who of the noble and wealthy come, but stay just in time, the whole outfit is but an Advertisement of a French Perfume! Evidently not to be outdone, there followed a Toothpaste man seated inside a huge white Paste Case. Above the din can now be heard fifes and drums and along sweep a contingent of Boy Scouts preceded by a mounted Bobby and followed by their baggage in a go-cart.

I pass on to S<sup>t</sup> George’s Hanover Square, famed spot for the Church ceremony of Marriage of the Fashionable ; and soon to All Saints Margarets Street<sup>284</sup> as famous in one direction as Brompton Oratory is in another. Next come Harley Street and Portland Place, famous in yet another direction, for Physicians and Surgeons ; each house it would appear hides within it a Specialist in some human ill.

And at last the spot I was aiming for, Regent’s Park, the Breathing Space of North London. And well used any day of the week, plenty of grass and shade giving trees, corpses everywhere like one imagines a battlefield which on closer inspection were men ‘dead to the world’ for the nonce. Here Orators were busy, as in Hyde Park, groups gathered round some man or woman holding forth. They seem very much in earnest those speakers. For those who do not care to listen<sup>285</sup> there are walks in plenty, seats wisely placed for shade, lovely flower beds to gaze upon, a Park wherein to wander till a bell rings out, the acreage is cleared, the warders lock the gates and recreated folk and bairns made each for home.

But ere that hour I would be a bairn again and step inside the Zoo. Since those days when with wonder one gazed through bars at the multitude of captives, mine had been the privilege to see many of these Wild Animals “at Home”, free to come and go, yet the Zoo still held its interest. It is a wonderful education in Natural History for “Stay at homes” such as were there in crowds that day. The country cousin was very much in evidence ; and the inevitable “lost child” yelling lustily for his mother. I should have felt a real loss had that note been absent.

The day ended for me at “The Ring” in Blackfriars Road. My companion, I confess, was not of the Aristocracy. He was my Waiter at the Club. To him I owed a pleasant evening’s sport. A Boxing enthusiast, he put me wise of a good thing, on the square, and in return he, for once, was not seated amongst the gods. Yet he was a handful for me before the bouts were over, his enthusiasm was far too evident, his remarks too audible. The Preliminaries were excellent with a nice assortment of Knock-outs and Draws. Eugene Corri handled the main event, England v Ireland : Wells v O’Keefe, the Englishman a goodly man to look at, the Irishman a fighter, spilt nose and all.<sup>286</sup> It went 15 out of 20 rounds before O’Keefe entered Dreamland. I had to hold my companion down by force time and time again.

---

<sup>283</sup> The [Criterion Theatre](#) is a West End theatre situated on Piccadilly Circus. The [London Pavilion](#) is on the north-east side of, and facing, [Piccadilly Circus](#) in London. It is currently a shopping arcade, and part of the Trocadero Centre.

<sup>284</sup> [All Saints, Margaret Street](#) is an Anglican church in London built in the High Victorian Gothic style and completed in 1859. The church’s style of worship is [Anglo-Catholic](#).

<sup>285</sup> WWB has *list*.

<sup>286</sup> Eugene Corri was a famous referee and the first to officiate from inside the ring. He is the authour of [Refereeing 1000 Fights — Reminiscences of Boxing](#). William Thomas Wells, better known as [Bombardier Billy Wells \(1889–1967\)](#), was an English heavyweight boxer, British and British Empire Champion from 1911 until 1919, defending his title fourteen times. [Pat O’Keefe \(1883–1960\)](#) was an English boxer who became British champion at both welter and middleweight.

As we made our way back to the Club past midnight I had the vision once again of London's Fire Brigade on the run. There can be none so callous as to be unmoved as the clanging of the bell is heard and the engines rush past. They came, they disappeared in a flash, yet had I time to raise my hat to men who do honour to my Home Town.

For old times' sake I hied me to the Wax Works of Madam Tussaud to look again upon her Royalties and Notables, her Tableaux and her Chamber of Horrors. No longer in the modest home I knew, but now housed in noble quarters ; but why not of stone — in case? I refused a guide book. Within is a Living Book of History. The dates attached to the Figures is surely enough for a student of the Past ; one has seen pictures of the Illustrious till the likenesses of most are unmistakeable. Imagination draws them tall in the main, here one gets the truth which disappoints a little, and the clothing, probably from long use and unavoidable dust, lacks spruceness : but one leaves the better for a visit. There was an exquisite figure of Queen Alexandra <sup>287</sup> in her widow's weeds, pre-eminent to my mind amid the nigh 400 to be gazed upon. Some historical personages before whom, in wax, I lingered longest were Berengaria — the beloved of the Lion Heart : the daring, dauntless Margaret of Anjou, who fought instead of her too gentle consort : Isabella, her antithesis, who wrought her husband's death and — amazing thought — found punishment at the hands of the son she had nursed in her bosom. <sup>288</sup> Of more modern, Garibaldi, Lincoln, Scott and Sun-Yet-Sen, Dorando the runner, and Dan Leno. <sup>289</sup> The Napoleonic relics must surely appeal. Here were things which the Hand which rocked the World had touched and daily used. The Tableaux are striking, especially the finding of Harold's body after Hastings by his Editha, and the death of Gordon. <sup>290</sup>

The Horrors must needs induce a thrill. There seems among the faces no set Type. Most you would pass on the street as quite the ordinary. It is what they Did rather than what they were which makes the Chamber uncanny.

It is but a step to Marylebone Church. Nothing to look at architecturally, its portico like so many London Churches Corinthian, but it holds memories. Here Byron was baptized, and Nelson's

---

<sup>287</sup> Alexandra Caroline Marie Charlotte Louise Julia, [Alexandra of Denmark \(1844–1925\)](#) was the wife and queen-empress consort of [Edward VII \(1841–1910\)](#). Alexandra was highly popular with the British public

<sup>288</sup> Berengaria of Navarre (c. 1165–1230) was Queen of the English as the wife of [Richard I](#). [Margaret of Anjou \(1430–1482\)](#) was the wife of [Henry VI](#). [Isabella of France \(1295–1358\)](#) was Queen consort of England as the wife of [Edward II](#). Isabella and her lover, [Roger Mortimer](#), deposed Edward, becoming regent on behalf of her son, [Edward III](#). Many have believed that Isabella then arranged the murder of Edward II. Edward III deposed Mortimer in turn, taking back his authority and executing Isabella's lover. The Queen was not punished, however.

<sup>289</sup> [Giuseppe Garibaldi \(1807–1882\)](#) was an Italian general and politician. He is considered one of Italy's "fathers of the fatherland". [Abraham Lincoln \(1809–1865\)](#) was the 16<sup>th</sup> President of the United States, serving from March 1861 until his assassination in April 1865. Lincoln successfully led his country through its greatest constitutional, military, and moral crisis — the [American Civil War](#) — preserving the Union while ending slavery. [Robert Falcon Scott \(1868–1912\)](#) was a Royal Navy officer and explorer who led two expeditions to the Antarctic regions. [Sun Yat-sen \(1866–1925\)](#) was a Chinese revolutionary, first president and founding father of the [Republic of China](#) in 1912. [Dorando Pietri \(1885–1942\)](#) was an Italian athlete famous for his dramatic finish and eventual disqualification in the marathon at the 1908 Summer Olympics in London. [Dan Leno \(1860–1904\)](#) was a leading English music hall comedian and musical theatre actor during the late Victorian era.

<sup>290</sup> [Harold II \(c. 1022–1066\)](#) was the last Anglo-Saxon King of England. Harold died at the [Battle of Hastings](#), fighting the Norman invaders led by [William the Conqueror](#) during the Norman conquest of England. For some twenty years Harold was married to [Edith Swannesha](#) and had at least six children with her. Major-General [Charles George Gordon \(1833–1885\)](#) was a British army officer and administrator. News of Gordon's death in Khartoum attempting to suppress a Muslim revolt led to a wave of public grief across Britain.

daughter Horatia, here Browning married his “perfect mate” and Charles Wesley lies in its graveyard.  
<sup>291</sup>

By devious ways I reached the Marble Arch and again the same impression left — a Freak. King George IV who ordered it that he might enjoy to himself a real Roman Arch of Triumph after the order of Constantine, <sup>292</sup> could not stand it and had it removed from the front of Buckingham Palace to gaze on Tyburn Tree. <sup>293</sup>

For here is the site of that noted gallows to which criminals were dragged on tumbrils, <sup>294</sup> or driven shackled in carts from Newgate to suffer death. About the centre of the great open space into which and from which six great arteries of London pour, there is a triangular stone let in the asphalt, this stone bound on its edges by brass, which because of the endless traffic passing over it, is burnished till it glitters. On the wall nigh the Arch there is a Tablet announcing the site in the roadway, but few there be of London’s millions who know it. I took chances and dared any taxi – van – bus – cart or auto to run me down as I stood alone in the midst of them on that site of the gallows hard by the Ty Bourne stream on its way to the Thames.

London has stretched out the past 30 years. Its extremities of today were then countryside. I took the Tube to Golder’s Green passing under Hampstead Heath and Belsize Park. Here an auto bus awaited and a charming drive along suburban roads with plenty of trees brought me to Hendon at “The Greyhound”. From the Church built on the hilltop one can see the Flying Fields below, the sheds and grandstands set in a broad expanse of open country. I would see things closer so walked down to find Air Races on. There were Monoplanes and Biplanes. The sky was soon full of these birds. What a change in a single generation. In my youth undreamed of, and today the Air in large measure conquered. Flying will soon be a commonplace, and another horror added to War ; for not for pleasure

<sup>291</sup> [George Gordon Byron \(1788–1824\)](#), commonly known as Lord Byron, was a British poet and a leading figure in the Romantic movement. He is regarded as one of the greatest British poets and remains widely read and influential. [Horatia Nelson Thompson \(1801–1881\)](#) was the illegitimate daughter of [Emma Hamilton](#) and [Horatio Nelson](#). WWB has *Horatio. Robert Browning (1812–1889)*, poet and playwright, married poet [Elizabeth Barrett Browning \(1806–1861\)](#) on 12 September 1846. [Charles Wesley \(1707–1788\)](#) was an English leader of the [Methodist](#) movement.

<sup>292</sup> The [Arch of Constantine](#) is a triumphal arch in Rome, situated between the Colosseum and the Palatine Hill. It was erected by the Roman Senate to commemorate [Constantine I](#)’s victory at the [Battle of Milvian Bridge](#) on October 28, 312.

<sup>293</sup> In 1571, the [Tyburn Tree](#) was erected near the modern Marble Arch. The “Tree” was a novel form of gallows, such that several felons could thus be hanged at once, and so the gallows were used for mass executions. The triangular stone in the roadway appears to have been replaced by the circular stone below on what is now a sidewalk.

<sup>294</sup> A [tumbril](#) is a two-wheeled cart or wagon typically designed to be hauled by a single horse or ox. Their original use was for agricultural work. Their most notable use was taking prisoners to the guillotine during the French Revolution.

alone will they be used. The Old Order passes, and we of an older day do well to acclaim the New Order, nor hold back in keen interest as The World advances.

The gracefulness of a bird in flight is met by Man today in the Air man and the Danseuse. Having that day seen the one I was bound to see the other. That same evening I saw Pavlova, the famous Russian Madame.<sup>295</sup> Her movements on the stage are gracefulness personified. Her whole troupe would shine as Stars of the Board but for Pavlova's brilliancy. At times the whole company seemed to float in the air so lightly did they touch the stage. When at the last, after dazzling movements Pavlova swept above the head of her strong armed partner in the dance there to lie full extended a white mass, immovable, the crowded house sat spellbound. Could That there be a living Woman? A Bird alone could make that Flight.

Before my Club saw me that night I had been initiated into two secrets of my Home Town. My companion refused to return till I had tasted "the most perfect cup of coffee" and "the most luscious Chop" in London. I am no gourmand, yet would I learn. The two are not found under the same roof, neither house is easy to be found. Not in gilded palace, not in the hostelrys of the rich, but to humble spots tucked away in by-streets did my Epicure Clubman lead me. I was first placed under oath never to divulge the names of place or person ; he is a selfish Old Bachelor who would keep good things to himself, yet had I wormed myself into his good graces and was rewarded. The uninitiated would pass those Eating Houses with a sneer, but he who possesses a Soul for perfection of Drink, who would rather have one perfect Course to Eat than a dozen indifferent ones, scents these from afar, finds, and having partaken of, goes home to his Club — as we — at peace with all the World.

I would pace The Thames Embankment which I had seen from the River. The whole waterfront seemed so altered since the days when in strong company I walked it of a night to see the sadder side of London's life ; the destitute, the homeless, the hungry and the sad assembled in their hundreds. I remembered it as The Emporium of Misery. On the way I dropped in at The Savoy Chapel, a Royal Peculiar, close to Somerset House built by that Lord Protector of King Edward VI who could not save his head from the block when Queen Mary took the reins.<sup>296</sup> It is a strange looking little building, most unpretentious, its square tower fit rather for a corner gable of a Castle than to cap a Church. Here, despite its homely appearance, history was made, for at The Restoration the Conference assembled which gave to England's Church her present Liturgy.

Reaching the Embankment I could not recognize the place. It has been transfigured, the gardens beautiful, the roadway a pleasure to walk upon, the very arches of the bridges which cross it carrying the trains seemed brighter spots, where once a mass of bedraggled humanity hugged themselves close from rain, sleet or snow. Electric lights today dispel all gloom.

Here at close range was Cleopatra's Needle with its hieroglyphics. Its history is given on its four sided pedestal. Presented to England by an Egyptian Viceroy, after lying on the sands of Alexandria for centuries, I could recall it brought to England in a buoyant case. Lost in a storm in the Bay of Biscay, it was picked up later, still floating and here raised : a relic of past glory.

---

<sup>295</sup> [Anna Pavlova \(1881–1931\)](#) was a Russian Empire ballerina of the late 19<sup>th</sup> and the early 20<sup>th</sup> century. She is widely regarded as one of the finest classical ballet dancers in history.

<sup>296</sup> [Edward Seymour, 1st Duke of Somerset \(c. 1500–1552\)](#) was Lord Protector of England during the minority of his nephew [Edward VI \(1547–1553\)](#), in the period between the death of Henry VIII in 1547 and his own indictment in 1549.

To another extremity of London — the countryside of my youth — I would go. To Wimbledon by way of Putney was the route and by bus at that, passing the grounds of Stamford Bridge and the erstwhile Lillie Bridge <sup>297</sup> where I once took part in many a strenuous contest for supremacy on the cinder path, and as a youthful Cambridge “Blue” secured the other height of my ambition, The Half Mile Championship of England.

Footing it from Putney I soon mounted the Hill, coming out on the edge of Wimbledon Common. Though London had reached out to here its mighty paw nothing seem disturbed, the same fine open space, no building or road encroachments. Gone may be the Commons fame but it has not lost its pure countryside look. We had moved from the close confinement of London’s streets to the village of Wimbledon and now I stood before my first school which faces the Common at the Putney end. <sup>298</sup> As it was in the painters’ hands I made bold to enter and roam over it from top to bottom. Here was the room where the timid boy had his first taste of a Bully, here the room with memory in chief of a highly irascible Drawing Master. Above, the dormitory of pillow fights (and the slipper oft as a sad conclusion) and where the unfeeling Matron of the Boney Hands rubbed infernal grease upon my poll despite fervency of pleading. Here the Reception Room where The Head — a fine musician — was used to play on a full sized Chamber Organ and bestowed on me many a kindly pat as his leading soprano. I walked into forbidden ground — the long garden now uncared for but then too sacred for boys save of Sundays.

Thence a good half mile to our specially allotted <sup>299</sup> football and cricket ground, and hard by where at a later date the earliest games of Lacrosse in England were played and the lot fell to me to take part therein. I looked for the old landmark “The Windmill” <sup>300</sup> and it was still in place, but whether its

---

<sup>297</sup> The [Lillie Bridge Grounds](#) was a sports ground that opened around 1867. The ground started to fall into disuse after the opening of nearby [Stamford Bridge stadium](#), and after a riot on 18 September 1887 which destroyed the track and grandstand, it finally closed in 1888. Lillie Bridge is these days better known as a London Underground (LUL) maintenance depot, and the Earls Court 2 annex of the Earls Court Exhibition Centre complex was built over the railway lines.

<sup>298</sup> [Nelson Academy](#), in Eagle House, Wimbledon High Street, a boarding school for young boys, was open when WWB lived in Wimbledon; however, it is situated at the Wimbledon end of the Common. Otherwise, no record was found of a school for boys in Wimbledon during the 1860s and 1870s.

<sup>299</sup> WWB has *alloted*.

<sup>300</sup> [Wimbledon Windmill](#) is situated on Wimbledon Common in the London Borough of Merton, and is preserved as a museum.

sails now moved I trow not. Here was the central point of the great annual Rifle meet, now transferred to Bisley.<sup>301</sup> No “Butts”<sup>302</sup> now but what days those were for<sup>303</sup> all of us of Wimbledon. The thousands of Volunteers, the sight of the Regulars, the various Camps, the side shows were things to look forward to all the year. They moved the transient camp, they cannot remove the genuine “Caesar’s Camp” — the round tumulus still easy to be seen.<sup>304</sup> Nearby I stood on “the Hornets” Rugby Ground<sup>305</sup> where first I measured myself with men and learned to take the rough knocks as part of a far tougher game than that as played today : Richmond, Blackheath and the Clapham Rovers were our strongest opponents, they still are in the field I see. Here still stood the old Pound — though the village stocks were gone — where stood the impounded cattle who had made too free of the Common. The Village, now a Town, I found the same. By winding ways and without a question I sought and found old landmarks. By the same old footpaths boarded high on either side I took the short cut to our country home.<sup>306</sup> I feared the hand of the destroyer, but not so : that avenue on the hillside was wholly unaltered. Across the way from the home there still stands the old shed and the grass run, where an elder brother kept his beagles, which gave us fine cross country running. Here was the very tree where a future Nimrod<sup>307</sup> made his first “Kill”. A starling fell before the deadly aim — the means? a catapult and a single N<sup>o</sup> 6.<sup>308</sup> The deed done, there was no joy, no triumph.

<sup>301</sup> The [National Rifle Association](#) was founded in 1859, based on Putney Heath & Wimbledon Common. “These annual gatherings are attended by the élite of fashion, and always include a large number of ladies, who generally evince the greatest interest in the target practice of the various competitors, whether it be for the honour of carrying off the Elcho Shield, the Queen’s or the Prince of Wales’s Prize, or the shield shot for by our great Public Schools, or the Annual Rifle Match between the Houses of Lords and Commons.” The centre moved to [Bisley](#) in 1890.

<sup>302</sup> The *Rifle Butts* was an area at the north end of the Common where the shooting competitions were held.

<sup>303</sup> WWB is missing *for*.

<sup>304</sup> At the southern end of [Wimbledon Common](#) are the remains of an Iron Age hill fort known as Caesar’s Camp. The round well (below) is easy to be seen; however, a [tumulus](#) is a mound of earth and stones raised over a grave or graves.

<sup>305</sup> [Wimbledon Rugby Football Club](#) is a rugby union team from Wimbledon, London. The club was a founding member of the [Rugby Football Union](#) and were at that time known as the Wimbledon Hornets.

<sup>306</sup> For the location of WWB’s two residences in Wimbledon, see *Kilburn and Wimbledon* in *Notes on the Life of WWB*.

<sup>307</sup> [Nimrod](#) is, according to the Book of Genesis and Books of Chronicles, the son of Cush and great-grandson of Noah and the king of Shinar. He is depicted in the [Tanakh](#) as a man of power in the earth, and a mighty hunter.

<sup>308</sup> N<sup>o</sup> 6 is a size of [lead shot](#).

Bitter sorrow o'er the deed struck the small boy's heart. With pomp and ceremony we laid the bird to rest in the back garden and one at least watered the grave with his tears. I sought the lane at the bottom of our Hill where our fruiterer's errand boy would oft accept our challenge and dismounting from his cart would try his pace against us, and thereby found his forte, and became the greatest sprinter of his generation.<sup>309</sup>

But here was change indeed, for the lane is today a fine asphalt road with electric cars upon it, and all beyond where once were fields and many a slough in which we sailed boats, and in an oilskin boat once nigh came to an untimely end, are rows and rows of houses. Then, the grounds at the end of the lane from the Railway Station were laid out for Croquet — the fashionable game with Lawn Tennis quite unknown — and the Championships of England were decided at Wimbledon for there were no finer lawns than those.

The old footpaths were gone ; I took my way, along finished thoroughfares, and sensed that Wimbledon and London now are One.

## Epilogue

My Time Allowance was well nigh up. No chance to roam through other haunts in other Shires : Lincoln, Cambridge, Stafford.<sup>310</sup> But one country district called and would not be denied. Not all born Londoners have their Traditions deep set there. Paternal and Maternal ancestors oft are of other Shires. Mine were, and to my maternal ancestry I would pay my dues. To “Three Counties” I made my final pilgrimage — that quaint old time village where Hertfordshire, Bedfordshire and The Light-Blue County meet, each claiming a third of the cottages and a like portion of the taxes.<sup>311</sup> Around

---

<sup>309</sup> [Harry Hutchens](#) was born in 1858, the same year as WWB, and discovered that he was a fast runner when he was 14 — in about 1872, when WWB was living in Wimbledon — and working as a messenger at Putney Station — near Wimbledon. He was considered the fastest runner of his time.

<sup>310</sup> WWB attended university in Cambridge and was ordained and became curate in Stafford, but his connection with [Lincolnshire](#) is not known.

<sup>311</sup> See [Hertfordshire](#), [Bedfordshire](#) and [Buckinghamshire](#) (the The Light-Blue County).

WWB's maternal grandfather, Rev [William Wollaston Pym \(1792–1852\)](#) was rector of [Willian](#) in North Hertfordshire, at All Saints Church, Willian.

<sup>313</sup> [John Pym \(1584–1643\)](#) was an English parliamentarian, leader of the Long Parliament and a prominent critic of [James I](#) and then [Charles I](#). However, there is some [doubt](#) that he was related to the Pym's of WWB's family.

<sup>314</sup> [Francis Pym \(1756–1833\)](#) was a British Member of Parliament, as was his great-great-grandson, [Leslie Ruthven Pym \(1884–1945\)](#), and great-great-great-grandson, [Francis Leslie Pym \(1922–2008\)](#).

## ALASKA AND THE YUKON

### MODERN YUKON <sup>315</sup>

#### THE QUEST FOR GOLD

#### PERILOUS RIVER NAVIGATION

#### DOMAIN OF THE CARIBOU

It is 50 years ago since gold was discovered in the Yukon, Alaska, and yet the search still goes on. Scattered throughout the land are still small groups of prospectors, washing the pay-dirt by primitive methods, but wholesale assaults are now being made by large companies, whose dredges move slowly, leaving great mounds of tailings behind them. An article in *Country Life* gives an interesting insight into life on the Yukon River today.

In Dawson City there have been many changes since the great rush of 1898, states the writer, and the population is now a fifth of what it used to be. The old-time miners had no modern machinery to aid them and had to thaw the ground by building fires on it. The dredge clears its way by pumping steam into the frozen soil or by the cold-water thawing process and one dredge can do in a day what a dozen men could not do in a year.

#### Great Feats of Navigation

The amazing manner in which the stern-wheel steamers are navigated up and down the river — for the great waterway changes its name frequently and “the River” is the local name for the whole stretch — excites admiration in the tourist. The abrupt descents in the upper reaches demand extraordinary feats of navigation, and these boats are fitted with six rudders, four between the ship and the paddle and two beyond. One of the earliest captains found that some of the more treacherous bends demanded a more rapid swing of the helm than was possible by hand and fitted a steam appliance which makes the wheel spokes just a blur as the steamer practically slides round a twist in the river.

How is one to take a steamer with a draught of 3 ft. up a stream 2½ ft. deep in parts? This is demanded in places, and several methods have been perfected. On each side of the stern-wheeler there are tall hinged poles as strong as wharf piles. These are lowered down somewhat like grasshoppers’ legs and with a pull from a cable ahead and a threshing of the paddle the vessel almost jumps the bar.

A method rivalling the last in ingenuity is practised as much as possible to save the hands additional work. Up in the pilot-house the stream is surveyed to find the deepest part, the wheel is spun and the vessel laid broadside to the current there. Acting as a dam the water gurgles up against the hull, the wheel is again spun and the ship rides down on the surge of the released water.

#### Migration of the Caribou

A great sight in July is the migration of the caribou. Every spring, by thousands they begin their trek, and in July they cross the Yukon on their way to summer pastures. During this month it is almost impossible to go upon the river without seeing hundreds of the beasts. The steamboat does not seem to trouble them and they simply tread water to let it go past and then breast the heave of its wake.

---

<sup>315</sup> WWB’s text is handwritten on the right-hand page of his notebook, with the left-hand page left blank. The following text has been transcribed from a newspaper article that WWB cut out and pasted on the first left-hand page. The article has no date nor source, although it refers to an article in [Country Life](#), a British magazine launched in 1897.

The writer concludes with the following paragraph:—

“To climb any of the surrounding hills and look down into the valleys gives one a memorable impression of the havoc that can be created in the quest for gold; but even there nature works, trying to tidy up again. Looking down on the furrows left by the dredges one can see here and there, already, bushes taking hold as though to cover up the desolation. In the end, however, it is less what man is about [in] these places than the larger effects of nature that will remain in your mind. There they lie, the lonely ranges, one after the other, domain of the caribou, the moose, the bear, the wolf, their northern tips dropping down toward the Arctic — all, whether it be noon or midnight, clear to the gaze and in the farthest north is that extraordinary radiance in the sky”.

## I

Alaska and The Yukon <sup>316</sup> are one and indivisible. He who would see Alaska must make journey on the River. Its course is 2,300 miles and it cuts the Land in twain. To visit Juneau, the Capital, is but to touch “the hem of the garment” ; to take train from Cordova to Fairbanks — which is in the Heart of Alaska — and return by the same route is to know but a smattering of the immense territory. I would learn of Alaska, so took the River Route. What I learned on the way is here set down. <sup>317</sup>

I headed for Skagway, 1000 miles to the north of my start, so as to reach Whitehorse near where the Yukon has its triple source, and is the head waters of its navigation for other than canoes. The season is short for freedom from ice, and July the best of the few months possible for river travel. <sup>318</sup>

My boat pulled out from Seattle and I was started on a journey of 6,000 miles ere I should see it again. The Shipping Company caters to Tourists, but not in the sumptuous style : my berth in a crowded ship was a middle one, the lower one, also occupied (and which scoffers call “the dog kennel”) was on the floor : their main eye is on the freight.

---

<sup>316</sup> [Yukon River.](#)

<sup>317</sup> [Juneau, Alaska.](#) [Cordova, Alaska.](#) [Fairbanks, Alaska](#)

<sup>318</sup> [Skagway, Alaska.](#) [Whitehorse, Yukon.](#)

We ran along the east coast of Vancouver Island, and all day long I was passing over familiar waters, and noted peaks on the island to which I had climbed, pack on back, in years gone by. Crown M<sup>t</sup> looked more beautiful than ever ; boats were busy in the “Race” off Campbell River with its Tyhee Salmon of 40 lbs and more ; “Seymour Narrows” we caught just right and hurtled through without a tremor. We did not stop at Alert Bay, nor at any other usual port of call till we had covered 580 miles and reached Prince Rupert, at the tip end of Alaska’s “Panhandle” : as the map shows. The “Inside Passage” — as against the west coast of Vancouver Island, the “Queen Charlottes” and the “Alexander” Archipelago — is well called a sheltered one so far as rough seas are concerned ; there are but 3 short stretches where the full roll of the Pacific is felt, one as you leave the north end of the first named island and cut across Hecate Strait, the other two at the south and north ends of the second named Group, Millbank Sound, and Dixon Entrance which leads in from the Ocean to the Terminus of the Grand Trunk Railway at Prince Rupert. <sup>319</sup>

The first 2 days we moved through channels and passages ; some, miles in width, others narrow, with islands in them great and small, all heavily timbered to the water’s edge ; snow here and there where the peaks on the mainland ran high ; an archipelago which makes a landsman wonder how the pilot can thread his way through and why he chooses one way more than another. Graham’s Reach was specially beautiful, on both sides streams are to be seen tumbling down the sides of the mountains in cascades or sheer drops. There was no sameness even for an hour those first 2 days, the scenery changing all the way like a kaleidoscope.

At last one sees the colour of the water change, where the Skeena River empties, and in the distance there lies Port Essington and its Canneries. Soon lighthouses and buoys appear ; a Quarantine Station ; and on one side Tsimpsean Peninsula and Prince Rupert, a town with a future ; at present 7000 dwell there, with room for 100,000. Port Simpson is quite close and would have been the Terminus but for a bridge which would have had to be built and considered unnecessary with the neighbouring site so excellent. <sup>320</sup>

Then on to Ketchikan and so passing into Alaska but not for ‘keeps’ till the journey’s end, for the Great River I was heading for has its vagaries, sweeping in and out of British Columbia, the Yukon Territory and Alaska as fancy seems to take it, till it settles down, and after a visit or two to the Arctic Circle heads for the Bering Sea, its delta near S<sup>t</sup> Michael’s. We did not call at Metlakatla as it was off the main route. I should like to have seen it with its great Mission Church and sawmills, all under, till his death of late, the papal rule of the missionary Duncan who in ’87 broke from the Church he had served so long at the mouth of the Skeena and betook himself and all his adherents to Annette Island under United States Authority. But Ketchikan gives a good sample of a modernized Indian Settlement. It has Stores, Churches and Canneries with a touch of mining life from the mountains at the back. There was much freight to deliver here. <sup>321</sup>

<sup>319</sup> [Alert Bay, British Columbia](#). [Prince Rupert, British Columbia](#).

<sup>320</sup> [Port Essington, British Columbia](#). [Tsimshian people](#). Port Simpson is known as [Lax Kw’alaams, British Columbia](#).

<sup>321</sup> [Ketchikan, Alaska](#). [St Michael, Alaska](#). [Metlakatla, Alaska](#). [William Duncan \(1832–1918\)](#). [Metlakatla, British Columbia](#).

By Clarence Strait we pushed on to Wrangell. There is nothing left of the old Russian Trading Post save the name and the site of the Fort. The Stikine River pours out just north of the ancient Headquarters for Russia's possession in the Americas, and it is busy during the season of canning and salting salmon. There are many Totem poles, over which some amongst us went wild, but they are not the equal of those at Alert Bay or others on the coast of British Columbia. Here was the original route to get into the Interior after Fur, but its heyday has passed. <sup>322</sup>

Thence we steered for Wrangell "Narrows" and went, at last, dead slow. Then we turned in : the ships twist and turn, with the banks so close that in places you could jump ashore, buoys everywhere marking the tortuous way, the water swirling and eddying. It takes hours to get through — and there are accidents at times. On the morrow we made Stephen's Passage and dropped anchor off Douglas Island, the site of the famous Treadwell Gold Mine, with Juneau, the Capital, opposite on the mainland. <sup>323</sup>

French Pete <sup>324</sup> first found the gold in 1890. The original "Glory Hole" is shown you. Treadwell, <sup>325</sup> a prospector, bought him out, and worked at the face of the rock till it became too dangerous to blast it further. With a fortune his already, he sold out to a Company, for a million dollars, who worked downwards. There are of truth 3 mines, one working from the 900 ft level, a second from the 1500 ft and a third from the 2,100 foot. The yearly output is four million dollars. The miners are treated almost sumptuously, with rest rooms and Reading rooms, fine dining halls and a swimming tank. With Treadwell, the Klondike and Nome (let alone the countless other sources of gold in creeks and rivers the whole country over) Alaska's purchase in 1867 for seven million dollars is one of the greatest "deals" in history. With fur and fish as well as gold the United States and its citizens have won to date 500 million dollars from land and sea. <sup>326</sup>

<sup>324</sup> Pierre Joseph Erussard de Ville

<sup>325</sup> John Treadwell (1842–1927)

<sup>326</sup> [Nome, Alaska.](#) The [Alaska Purchase](#) was the acquisition of the Alaska territory by the United States from the Russian Empire in the year 1867.

Juneau lies at the foot of a mountain 3000 ft high, down which a waterfall drops to add to an already picturesque scene. Here lives the Governor and the Chief Judges. There is here the Capital Building, a large Hospital, fair shops and many autos. The streets in the main are very steep. Fairbanks is its rival, the one at the southernmost tip of Alaska, the other in its heart. Time will tell. <sup>327</sup>

## II

Wherever The Klondike is named, the Lynn Canal is known. It was from Haines, nigh the head, (where a U.S. Military Post is today) that the Dalton Trail started, on which men struggled to the distant land of gold by the Chilkat Pass. We stopped to discharge cargo then entered upon our last leg. The actual Head of the Canal is in two parts, the one to the left leads to Dyea — now deserted but once alive with a mad crowd making for the Chilkoot Pass and so to Lake Lindeman, one of the sources of the Yukon : the other to the right, the better way (discovered later) though full of desperate chances, Skagway and the White Pass. By sunrise we were tied up at the wharf and the first 1000 miles was covered. <sup>328</sup>

---

<sup>327</sup> Juneau, Alaska (date unknown).

<sup>328</sup> [Lynn Canal](#). [Haines, Alaska](#). [Dalton Trail](#). [Chilkat Pass](#). [Dyea, Alaska](#). [Chilkoot Pass](#). [White Pass](#).

Skagway, Alaska (date unknown).

As I roamed around waiting for the train <sup>329</sup> to start its climb of the mountains ahead and its run of 110 miles to Whitehorse I saw mementoes of the Past in the bones of crazy craft and raft lying on the Flats, abandoned by their owners. Skagway's tale of crime spread far and wide. Here — where today all was so peaceful — was the scene of the operations of the very scum of the earth till at last the better element rose in its wrath, "Soapy Smith" <sup>330</sup> fell dead in his tracks and the rest of the gang were jailed or fled. Here scores "died in their boots" in true Western style and fortunes wrung from the Klondike were lost over the gaming table, the harpies and the "hold ups" before their owners saw the steamer which was to bear them "Home". It looks its name, "The Gateway of the North", lying in a valley stretching back to the mountains where on the summit you can descry one break, the White Pass. Through Skagway passes in all the supplies for Dawson and Atlin and 1000 miles beyond, and out of it pours the gold in "bricks" or "dust". <sup>331</sup>

It is worth going 1000 miles to see that Pass, 3000 feet up in the snow lines. As the train creeps slowly up you can see plainly the one time Trail from the valley floor with its deserted Road Houses. For the last mile it seems incredible that men (and women too) could have survived such labour, packs on their backs. "Dead Horse Gulch" is said to take its name from the frequency with which horses in very despair committed suicide by hurling themselves and their load over the precipice.

The train creeps along the edge of mountain after mountain, ever mounting, the grade is 4 per cent. From Skagway to the Summit of White Pass is 20 miles by rail for it is forced to take a serpentine course ; the Trail is but six. Just before you gain the summit you pass "Inspiration Point", well named, for you see what you saw from the water, only reversed. The valley lies before you shut in on both sides by lofty snow tipped mountains, far off lies the little Town (but once it held 15,000 souls) and behind it lies the blue water of the Lynn Canal. Then another grinding of the wheels and Skagway River is crossed by a cantilever bridge. Below dashes the stream, tumbling and foaming on its way down to the valley and the sea. Soon after a halt ; and one steps out into the keen, bracing air of the Pass to see 2 Flags floating to the breeze with a pedestal between them ; on the side we had come, the Stars and Stripes, on the other, the Union Jack. A step and we had changed country.

Thence — whilst the train takes a breather — a short walk : and there lies a tiny sapphire spot of glacial water — Summit Lake — another of the sources of the Yukon for it trickles down the gentle grade to Lake Bennett and so on to join the waters of Teslin Lake and become the Upper Yukon. Once again aboard we ran down a long and easy slope through a country the reverse of what we had just left. We were at the back of the Coast Range and their backs are broad and bleak, bare and stony, <sup>332</sup> no tall timber, ponds and pools of milk-white water, a barren land. Now Lake Bennett with a church boarded up and many deserted buildings where 10,000 once gathered and in feverish haste built boats and rafts, some good, most crazy, some of boards brought over the Pass on their backs,

<sup>332</sup> WWB has *stoney*.

some of packing cases.<sup>333</sup> Here they waited for the break up of the ice so that from here there might be no more packing. We ran along its eastern shore for 27 miles. Some ten miles from the deserted town we passed out of British Columbia into Yukon Territory, so did not change our Flag. Not till Eagle City is reached will that change be. The Barren land had ceased, we gathered wild roses, larkspur, marguerites, and fireweed which was rampant and at a distance looked like a carpet of heather.<sup>334</sup>

Where the two arms of the Lake meet and run out as a river towards the Yukon there is a Swing bridge — the most northerly in the world. Here Carcross (Caribou) lies with its large Industrial School for Indian boys and girls, and here lie the remains of Bishop Bompas the Apostle of the Yukon, the Mackenzie and the Peace River Indians. For 30 years he never went “outside” and became at last, in colour, manners, speech and habits, much like the Indians themselves. His Memory Lasts.<sup>335</sup>

Sweeping to the east we came out upon the Great River proper, and soon saw below us (from the bank we were following) Miles Canyon, a splendid gorge with basalt-like rocks hemming in each side. How that water poured through the narrowed space, what tragedies it had seen. There is the narrow entrance, then a straight rush, then a whirlpool, then another long rush bending slightly, then out into broad space heading for the Rapids. It invited closer acquaintance and I accepted a few days later. Soon we saw the Rapids, the White horses foaming and tumbling over the rocks. Many an outfit, many a life was lost here : I was one of the lucky ones for I simply had to tackle them.

A few minutes more, and with the roar of the Rapids in our ears we drew up at Whitehorse and I sought my hotel.

## III

Whitehorse is a busy little town of 1500 people, situated on a flat of the river bank.<sup>336</sup> Here is a Post of the Royal North West Mounted Police, and the starting place of the stern-wheeler river steamboats down the Upper Yukon as far as Dawson. Naturally the inhabitants are chiefly those connected with the Railway, with longshore and river men. The bone yard holds many worn out steamers, the largest “The Yukon” hailing from Victoria’s yards but found too heavy of draught for the river.

When the water way is closed by ice, mail and passengers are carried down river by sleigh and horses, relays ready every 20 miles at the Road Houses en route ; the freight is borne over the ice by a fearsome looking engine called “The Caterpillar” which draws 12 trucks on sleighs behind. To carry fruit and eggs in to Dawson in 50 below zero, they have a contrivance of heaters — like Japanese hand warmers — which are refreshed at each stopping place whilst the horses are changed.

It is here that Service lived who wrote “The Songs of a Sour Dough” as he worked in the Bank and was not suspected of “having anything in him”. I found the people very kind and helpful though there are far too many loafers who have reached the end of their tether and are content to laze the days away.<sup>337</sup>

The Barracks are a number of wooden buildings in the form of a square — some built of logs as are most of the houses along the Yukon — there is no formal Fort. I soon met the Inspector of the Mounted Police — a fine upstanding fellow in the prime of life — and discussed with him the possibility of shooting the Rapids. It is an unknown accomplishment nowadays, the last boat known lost 2 men out of its 3, and though there are Indians living above them, nothing will induce them to go through. They portage their canoes. We also discussed the trip down the river in a flat bottomed boat. This is steadily done to Dawson as a rule (500 miles down) though some go further. With the usual paternal care of the Police every boat has to bear a Number, and a full description of each man going is taken in case of disastrous ending by drowning — or worse ; for desperate characters are not unknown to frequent the banks.

---

<sup>336</sup> Whitehorse, Yukon (date unknown).

<sup>337</sup> [Robert William Service \(1874–1958\)](#)

It was Sunday afternoon and the Inspector and I started for a walk to the Canyon that I might see it at close quarters, a 6 mile tramp. His plump, good little wife warned him against me as a dangerous schemer. As we strolled along, a tough looking man joined us who was on the same quest. He gave his name as Hopkins. He had started down the river alone, 10 days before, had met bad weather, got soaked, lost heart, and packed boat and himself back to White Horse<sup>338</sup> on a passing stern wheeler. His intention was to go “outside”. I asked him to join me but he hesitated. The Inspector scowled. We passed the Rapids and as we reached the Canyon we saw 2 canoes being lowered by Indians from the railway track to the river bank. We lent them a hand, bringing the boats down through the brush.

Seeing a tent a little further up the stream we went thither to seek a cup of tea — for a fire was going outside. Here we found 2 prospectors, Robertson, a New Zealander, and his companion, a Swede. They were strapping fellows, like the Inspector, the New Zealander grizzled and well on in years. They were very cordial and in conversation the older man told of his shooting the Rapids in the first rush of '97. The Inspector (all innocent) mentioned my desire ; and Robertson said that he would gladly put me through, but his canoe was too cranky. I thought me of the Indians' canoes and bore off the Inspector for an interview. The headman gave the matter the usual prolonged thought, said that each had cost him 45 dollars and how could he get the boat back. I showed him gold in my hand ; and my helpful friend promised that he would see the canoe returned on the morrow. The bargain was struck. We hied back to the tent and told Robertson that we would “call his bluff”. He laughed and said that he was ready right away, but there must be a third as doubtless I was no canoe man — a libel. The younger man declined. Then I turned to my stalwart friend who I knew to be an Eastern Canadian expert from items he had let fall on the way. Surely he would not “let me down”. He must have forgotten his wife's warning. He was game. Hopkins had shied from the very first, said he had wife and children in Seattle and would take great pleasure in watching the proceedings — or the Suicide — from the heights above.

We stripped. I was ordered into the middle thwart to face down stream, Robertson took the prow with his paddle, the Inspector took the stern with another. I lit my pipe for I was but a passenger, we shoved out into the stream and were off. We headed into the rush of the river, then (turning sharply) dashed into the Canyon. We were seemingly on the top of an arch for the water is so squeezed that it is higher in the centre than<sup>339</sup> at the sides. We went hurtling along the first straight run ; then — the two men paddling furiously — into the Whirlpool, flying straight through, down, then up ; now we had another smooth run and as the canyon bore towards the east, the gloom was less, we could see full daylight ahead, the basalt rocked walls taking tints from the sun peering down. We were out. I had a lovely time. I was sitting in water, my pockets full of it, may baccy<sup>340</sup> pouch soaked but my pipe still going. We had dropped 30 feet in  $\frac{5}{8}$ <sup>this</sup> of a mile.<sup>341</sup>

The paddlers took a rest as we swiftly were borne on the stream for a good half mile and till the waves of the Rapids were seen ahead. Robertson kindly remarked that I should have all that was coming to me, the Inspector seconded the motion, so they put the canoe through the very middle of the Fury. We rose up into the air as if shot out of a catapult, great combers came at us from both sides but suddenly drew back in the nick of time. Certainly we shipped much water for we went straight through some waves that rose at us on our way. Great rocks appeared in our course, over which the green water swept menacingly, and we missed them with only inches to spare, we twisted this way and that ; those men front and back of me were experts at such a job, without a doubt. It was thrilling. We

<sup>338</sup> Both *Whitehorse* and *White Horse* were common usages at that time.

<sup>339</sup> WWB has *that*.

<sup>340</sup> Tobacco.

<sup>341</sup> Thirty feet is not much of a drop for  $\frac{5}{8}$  of a mile of rapids; it should perhaps be 300 feet.

were through, but not before I had seen Hopkins and other people gazing amazed at us from above. They said that it was a fine sight — it was far better to have been in it.

When we got back to the Barracks, the wife gave me no small wiggling<sup>342</sup> for risking her husband's life and I deserved it ; but all's well that ends well, and she soon set herself to look after our comforts. That evening I walked back some way with the old New Zealander and putting gold in his hand thanked him warmly for his aid. He said that I — a mere landsman — had behaved very well in somewhat nerve-wracking circumstances : and that he, like me, had thoroughly enjoyed it. I know Inspector Acland did.<sup>343</sup>

#### IV

On the morrow Hopkins came to my way of thinking and agreed to try again as far as Dawson. Once settled we got what few supplies we needed, the ever kindly Inspector lending me tent and blankets, then waited for a start, for that man whose word was Law refused for days to give me a Permit with so tough a companion — and alone. I won him over at last but had to promise to report at each Police Station on the way so that he could keep informed by telegraph of how I fared.

The days passed happily with visits to Fox farms and Mines. And the days are long : so short the nights that you can see to read out of doors even now till 11 p.m. and by 2 a.m. you can take your

<sup>342</sup> Present participle of *wig*, to rebuke someone severely.

<sup>343</sup> Arthur Edward Acland — born in London, England on January 25, 1874, died in Coquitlam, British Columbia, on May 28, 1952 — poses here in partial uniform in the midst of chopping a tree in a clearing on the Dalton trail, June 1899. His wife was Annie Rose Acland.

book in hand again. Early in this month of July the local photographer took a photo of the town by ordinary light, on the stroke of midnight, and it comes out as clear as if taken at Noon.

The day came when Hopkins and I started down the Yukon. We had a 12 ft flat bottomed boat, brand new, made of rough lumber and built in a day : a simple ender so had to use a paddle as a rudder. Hopkins' original was too small. Ours was very broad, and carrying all our supplies, baggage as well as ourselves, still left comfort and plenty of room for long legs. We took a couple of oars, and for a sail had our blankets, willow branches could be secured as mast along the way. The Inspector himself came down from the Barracks to see us off, took our descriptions and painted our number on the prow. Ours was 169 which meant that that number had gone 'down river' since the ice went out in the Spring. As the average crew is 4, it will be seen that quite a number of prospectors still travel that way. With a cheery goodbye from many friends on the bank we pushed off, and caught at once in the strong current swept downstream, myself steering. Whitehorse for me was a thing of the past.

Gliding downstream at this stage of the Yukon there is little to be done, it is more to steady the boat than to propel it. We soon found the blanket very useful and took it in turns to handle the tiller. We had not gone far before we rounded a bend to see a stern wheeler puffing and blowing as it crept upstream, pushing ahead a barge load of coal from a mine at Carmacks, 200 miles downstream. We had to cut over to the other side smartly, to avoid the wash.

Hopkins soon began chatting and I lead him on to talk of himself. By trade a Boilermaker, he told me how he had so far got through life without any trouble to bother about save one. I enquired what it might be. "A cursed barber attacked my pompadour which I wanted to make lie down and killed all the roots of my hair," said he. At that he took off his cap and with it his overabundant hair and disclosed a pate as bald as an egg. The transformation was so sudden and amazing (it cut off 10 years of his age) that I had difficulty in doing the proper thing, i.e., sympathizing with him. Since this disclosure he often became young, and he had to own that it was very cooling on some of our roasting days. I was "Boss" to him from the very first and a more willing helper — even servant — one could not wish to have.

We bore on past the Takini, one of the many big streams which pour in along the way. The Upper Yukon has numerous portions under diverse names given by the early prospectors to their localities. Our first leg was to be the head of Lake Lebarge, some 25 miles down and after a hundred twists and turns we reached our camping ground towards evening. Together we cooked a good meal and turned in to be ready for an early start, as the Lake is a tough customer with its strong and contrary winds. Field mice were our bed companions so by 4 a.m. we were astir and an hour later we were off. All was still as we paddled out and took a course down the centre. The Lake is 32 miles long and in places 3 miles across. A "following" wind sprang up and blanket up, away we went before it but by 9 a.m. it was "whitecaps" and going strong, so strong that with our keelless craft we had to make for shelter on a large island, happily fairly close, the only one on that great sheet of water. On it we found a building used in winter as a Road House and took shelter from a heavy storm. With the breeze dropping in the afternoon we were off again and kept paddling till supper time. Lebarge is a forbidding looking spot amid the mountains, red rock with patches of spruce and jack pine on the western shore, great grey, rounded hills of limestone on the eastern, the only sign of animal life being the young spruce trees barked neatly from base to a couple of feet up. You see thousands of these thus served all along the Yukon. It is done by rabbits. They begin high because the snow packs high, and then follow down as the snow melts. Other than spruce, many trees are barked by Indians for medicine and for basket work.

The next morning Lebarge was in a sullen mood giving us a taste of headwind, with showers, Old Sol bravely trying to break through. We paddled for hours, feeling very fit and taking things as they

came. Towards the mouth of the Lake there are some miles of beach, rough enough in all conscience. On these we towed our craft, one of us ashore with a 50 foot rope, the other aboard keeping its nose out. At the end of the long haul we reached the outlet where are several log houses forming another Road House and stables. Men were busy here packing whitefish in ice boxes to ship to Dawson.

The Reach we now swept into is known as “30 Mile” that being the distance down to Hootalinqua, a settlement (or rather once was such) where the Teslin joins the Yukon. It is the swiftest part of the Upper half of the river and we went down flying. It is to look at, as if you were sliding down a grade, the slant is clearly evident from a canoe. The turns are sharp, calling for smart steering, the water swirling and in eddies, with much white water. To keep the boat steady, I had Hopkins face downstream, using the oars as balances. The scenery here was very fine, closed in as it is by mountains on either side whilst eagles were numerous sweeping overhead and screaming, there were seagulls too ; and about the boat were kingfishers and ducks as we rushed along. Bones of many crafts were on the banks, probably having become unmanageable in the swift current. The telegraph line which connects Dawson with the “outside” runs along the right bank from Whitehorse : but close to Hootalinqua it crosses to the left bank by very high poles. Here we landed and looked about for a camping ground. The sole inhabitants, the Operator and his wife, promptly came forward and offered us the Road House with its huge common room, many bedrooms — beds with springs — kitchen and stove. We were in clover, ate our frugal fare and slept snugly till dawn. High up above the river the (deserted) log house of the R.N.W.M. Police is perched, headquarters when here was a Roaring Camp and Livingstone Creek up the Teslin was alive with Diggers. Today a few miles up the Creek two gold dredging machines equipped with costly machinery lie rotting away. Those 2 inhabitants are workers, they have a neat garden — fenced in — where rhubarb and cabbages, radishes and turnips were flourishing : and a Hot house, heated by steam as its pipes showed, with flowering plants within. High above that garden a large scow had been dragged and, filled with water from a mountain stream, acted as a tank, giving force for spraying.

Starting afresh we entered the long Reach known as The Lewes and made for the next Telegraph Station at Big Salmon River, another large tributary. Not far from the start we passed a Shipyard, with a ways occupied by a disabled steamboat, everything ready for business, workshop, windlass, sawn lumber, but not a workman : another sign of a Past Day. Here were Indians catching “King Salmon” with nets and others fly fishing for grayling. One boy came along with us for a mile kneeling on a crazy raft of 4 small jack pines and with a paddle of wondrous make. He made us a potlach of his fish and of course I potlached him — with biscuit. We passed huge stack of cord wood frequently — not only here but all our way — no habitation near, these for the steamboats which usually hawser<sup>344</sup> the boat, but at times merely run the nose of the stern wheeler into the bank, facing upstream, and keep the engine running at half speed as the wood is carried aboard.

Twenty miles on our way the mountains on either side opened out and we entered a flat country. Here lay Big Salmon working its way to the Great River, and here are the haunts of moose and bear. There is a bar at its mouth (The Cassiar) washed, when the river is low, for gold. We had no difficulty and rested awhile, entertained by an old prospector who had not been ‘out’ for 20 years, and the Operator. Across the water is a large Indian Settlement. Afloat again we had not gone far, when on turning a bend we came face to face with a black bear of no mean proportions. He made tracks. We had no firearms though bear steak would have come in handy.

What with bears and pack train dogs, Caches of food have to be strongly built. Those of Alaska resemble small houses on platforms, raised on posts, 10 to 12 feet from the ground. Graves too have

---

<sup>344</sup> Hawser is a nautical term for a thick cable or rope used in mooring or towing a ship.

to be protected. We passed many with a little roof built over them with supporting sides. Above the roof there is often a high scaffold on which they place the belongings of the departed. On one I saw a rocking chair swinging in the breeze.

We had hoped to reach Little Salmon before evening camp but a heavy rainstorm spoiled our plans whilst still 10 miles away. We had to seek shelter, such spots are few and far between and hope had nearly fled when I spied across the river a Lineman's shelter amid the trees. Hopkins rowed hard but we were far out and we shot past to land some hundreds of yards before we could make a landing. Finding a brand new log hut with a heater in it, we were glad enough to pack our goods over rough ground, make supper, dry out by a roaring fire and seek repose.

## V

We had not gone far the next morning before, at diverse spots, we came across porcupine sitting on boughs close over the River watching for fish. Some made hasty tracks, others were far too comfortable to worry about us. They looked very fat and their colour was that of fresh grass. We were passed by a couple of stern wheelers, their Captains hailing me and asking how we were making the journey. Before noon we were at Little Salmon river where was a Store run by an Englishman : a fine axeman as was evidenced by the log houses of the missionary and himself as well as the little Church, all his handiwork. The Parson was away, so also seemed all the inhabitants of numerous shacks. From here we had 40 miles to go to reach the next Post, "Carmacks", which takes its name from the recognized discoverer of gold on the Klondike.<sup>345</sup> We used our blanket whenever we could but here the river broadens greatly and winds about in an astonishing manner. How many figures of S we made I cannot say but we seemed to go 5 miles to make 1. We passed a very noble looking hill called "Eagle's Nest" which dominates the landscape for miles. After hours in a wild looking country it was startling to hear suddenly the 6 o'clock whistle of a coal mine calling the men to cease work. It seemed to come out of nowhere, but a bend of the river showed us the Shaft and the miners' cottages. This coal was first discovered by a negro but he was jockeyed out of his rights. It is too poor in quality for the steamers but much traffic in it passes up and down the Yukon. Another half mile and we were at the Settlement's Store and Post Office, and made our camp nearby.<sup>346</sup>

Leaving Carmacks at no very early hour on a Sunday owing to the Family Wash of the previous evening needing a further drying we made our way steadily towards the 2 Rapids we had to shoot

---

<sup>345</sup> [George Washington Carmack \(1860–1922\)](#)

<sup>346</sup> [Carmacks, Yukon.](#)

before Dawson was reached, “Five Fingers” and “Rink”. They were 20 miles off but the time seemed short for me owing to the wild beauty of the scenery. Hopkins by now had developed an astonishing ability to sleep, he would lie for hours in the bottom of the boat “dead to the world” whilst I kept watch and guard. With a steering paddle I had only to keep the craft on its course and could take in quietly all that was to be seen. And here great walls of rock, shelving back, hemmed in the river. Back of these were range after range of mountains with ever changing forms. Moose tracks — like human trails — could be seen on their sides leading down to the water, for there was little timber.

We had been given careful directions at Carmacks as to the 2 Rapids and knew that the only way to get through the first was to hug the right hand shore. I hugged it accordingly for miles (before it was really necessary) to make sure. To be caught on the wrong side we were told would mean disaster. Just after 3 p.m. coming round a bend I saw the preliminary white water of “Five Fingers” and waking my partner got all ready for business.<sup>347</sup>

The appearance of the 50 foot rocks which lie across the river’s way and whose extremes force the stream to a width of but 150 yards is as if you place your hand on a table, spreading out the fingers towards yourself, the thumb and little finger are on shore, the others are spaced in the river’s bed. We were in the correct position and our pace increased more and more rapidly. We steered straight for the passage on the right. There was a stiff headwind which as it met the tearing waters kicked up considerable waves. It did not take long but whilst we were at it, it was pretty strenuous. A big comber (just after we had passed through those towering Fingers) carried us — as if we were a leaf — clear over a great slab of rock, then dying dropped us with a mighty flop that lifted us from our seats. I had the oars to keep us “nose on” (for the slightest bend and we would have overturned) and they held the strain, our nerves were in the best of shape, and all went merrily.

An Indian hailed us shortly afterwards who shouted from the bank that he had moose meat. Every prospector is keen to get it and doubtless he placed us in that breed. Making a landing we purchased a fine leg. A couple of miles more and rounding yet another bend found ourselves in a fine stretch of water at the far end of which lay the “Rink Rapids”. They are pretty enough but there is nothing to them as on the right there is a smooth, though swift, passage which a tyro<sup>348</sup> could negotiate.

<sup>347</sup> Five Finger Rapids (date unknown).

<sup>348</sup> A novice or beginner

By suppertime we reached Yukon Crossing where passengers going by stage — or in winter by sleigh — make crossing for Dawson. Here we found an hospitable man and his wife at the Road House with comfortable quarters for the night, the good housewife kindly cooking our moose meat to perfection and adding choice viands of her own.

Our next objective was Minto 25 miles downstream, there to drop a passenger to whom I had offered a lift despite the warnings of Hopkins, “Can’t you see Boss that he’s only a tin horn gambler.” Certainly his looks belied him as a prospector despite his harping upon mining. He was quite dapper, his only impediments were a small handbag and an overcoat. He had walked from Whitehorse and been nearly eaten alive by mosquitos. I noticed that he cultivated the nail of his “little” fingers which is done by gamblers for the express purpose of manipulating cards. Despite all, I gave him a lift. I could see that my partner got quite a shock when the breeze lifted up the man’s coat as he was changing seats in the boat and revealed to both of us that he carried a small Gatling Gun in his hip pocket. But all went well. We dropped him at Minto and pushed on for Fort Selkirk where the Pelly River (a famous hunting ground) joins the Yukon and by the junction forms the “Yukon Proper”. So far we had been on the “Upper Yukon”. <sup>349</sup>

## VI

We seemed to ourselves very small fry in our humble craft on a river now one mile across, dotted here and there with islands. But this did not last long. At “Hell’s Gate” some 10 miles from the Fort the river is compressed again. Here we passed another steamer making its way upstream. Whilst this spot is nothing to small fry it is probably the toughest of all the route for large craft, and the steamer seemed to move by inches only. The water is very shallow and very swift. By 7 p.m. we reached the junction of the rivers and a little further on we came on to the Fort, once a real one in “Hudson Bay” days, which consists of the Police Barracks (now deserted) : quite a number of log shacks (very much

---

<sup>349</sup> Minto Landing, Yukon.

[Fort Selkirk, Yukon.](#)

alive) : the “Savoy” Hotel : a couple of Stores : a Post and Telegraph Office : a missionary’s house and a Church. Purchasing some bread we floated down another mile so as to make camp in quieter quarters, and found the spot on an island.

Next day we set out to make the record day’s work of our journey and covered 70 miles, making our first stop 20 miles down where we delivered a letter given us at the Fort. Here we found a one armed Englishman, who is farmer, hunter and axeman despite his handicap. A breeze was very helpful but the blanket needed careful sailing with the sudden turns or there might well be an upset. The scenery was magnificent, rocky sides towering sheer from the water to the heights which cricks the neck to follow, then hills covered with verdure, foothills to mountain ranges in the distance. Close to the water the willows grew and rabbit warrens abounded, the little creatures taking not the slightest notice of us though I steered close alongside where they gamboled about. They seemed countless. Yet one of the strange things about the Yukon rabbit is that they entirely disappear for a year or two, none know whither, then reappear as if by magic.

Passing Selwyn we kept going to Coffee Creek opposite to which the summits of the rocky cliffs take wonderful shapes, looking for all the world like Battlements and Castles with rounded Towers, and straight walls as if built by the hand of man. We had another letter to deliver, so landed, only to find the party gone, so left it in a rickety mail box, then 2 miles down made camp on an island with our tent on “White” moss, beloved of moose and caribou, and slept soundly on a deep mattress of it which held neither roots nor stones for tired limbs.

The day following our record, we made a very respectable advance of 52 miles, finally calling a halt 70 miles from our goal. We passed the mouths of the White River and the Stewart (where Stewart City lies), both streams mighty feeders of a still greater one. Early in the morn we saw on the right bank what looked like 4 log houses rolled in one and everything looked so prosperous that we decided to explore. Here we spent an hour or so with a French Canadian, a marvel of industry as evidenced by a flourishing farm of oats, potatoes and many another vegetable. He lives on one of the main lines of travel for Moose and Caribou who cross (both by swimming or on the iced surface) from the valley opposite his home to make for the Pelly River. Up at the head of that valley, Sheep are found in plenty. The country is very open here and the Yukon very broad.

Becoming mail carriers once more, we headed for White River. At its mouth there were many buildings, one actually of corrugated iron but as we were on the wrong side of the river when we first sighted the Settlement, we were swept far past before we had paddled half way across. Some 10 miles farther on we came to the great Stewart feeder which is navigable for steamers to some Falls, 200 miles upstream. This was the river on which gold was first found along the Yukon, and the first rush came in ’84. The Yukon at once broadens still more and gets more muddy.

We wanted bread, so figured on being on the right side this time and drew up at the once famous “City” which still boasts of “The Stewart City Store” : “The Bar” : “The Stewart City Hotel” and

“Smyth’s Hotel and Store. No wet Goods.” <sup>350</sup> That is all that is left of the City today. We avoided the Dry one and visited the Wet one (not “The Bar”) and found a hearty Irish woman the proprietress who supplied our want : a loaf cost 25 cents, a meal 2 dollars and a bed the same per night. I had noticed some sunflowers and asked to see her garden. This was evidently the key to the housewife’s heart for she was charmed. Her vegetable garden would be a credit to any city residence. In the large Glass house she was growing Cucumbers and Tomatoes on trellis work. Outside were stocks, nor had she forgotten Sweet peas. She had tried but failed with Roses but there are the wild ones in plenty everywhere, as there are fruits, the wild strawberry, the raspberry, and the cranberry. She pressed upon me many pansies asking me to take them “outside” to show what the Yukon country — supposed to be so grim and cold — could do. She saw us off and blest us for our coming, and a few miles past man’s habitation we went to camp. I loved those nights of perfect stillness, save for the rushing river as it swept along a few feet from where I lay : my partner in the land of dreams.

Exactly equalling our previous record we reached the Klondike the following day. We made 2 calls, one at Ogilvie opposite “60 Mile Creek” — the distance reckoned from old Fort Reliance near where Dawson stands — to deliver mail : the other at Indian River 18 miles on, with similar intent, where the wife was busy pickling mushrooms. We had some difficulty in keeping the channel as the Yukon is very broad hereabouts and there are countless islands. Blind alleys or hidden shoals are not conducive to progress and at times are dangerous. We crossed from side to side for deep water and swift current, and at last rounded a spur to enter a Punch Bowl at the far rim of which Dawson lies on a goodly stretch of level land with an 1800 ft slope behind it, known as “The Dome”. No spot in the 500 miles we had come of the Yukon’s course is more admirably suited for a City. <sup>351</sup>

<sup>350</sup> Stewart City, Yukon (ca. 1898).

<sup>351</sup> [Klondike, Yukon](#). [William Ogilvie \(1846–1912\)](#).

The Klondike River — with its still hidden wealth — pours out close by, and at that historic river's mouth we tied "N° 169" up, the fragile thing that had served us so well, among company the most crazy lot imaginable, relics many of them of '97 : so called scows and elongated boxes, all of the roughest workmanship. It is marvellous how they ever arrived : daring men must have handled them : they rest and rot, mute evidence of what men (and women too) will risk for gold.

We had arrived. That glide downstream was well worth any slight inconveniences we had met, and will always be a pleasure to recall.

## VII

Dawson is still very much of a frontier town, there are but few solid buildings : and the sidewalks are like the waves of the sea. The dust of the streets seems kept down by the people themselves, each home and store sprinkling the roadway with a garden hose. Gramophones<sup>352</sup> abound, music pours out continuously from all sides. Here is a place where 25 cents is still the smallest coin and where prices stagger the outsider. The auto has of course found its way here and plies the road to where Man has torn up the bed of the Klondike, its various creeks, and blasted down their sides.

Men of a rough type are seen on every hand but lawlessness is unknown with the red coated Police always about. It is no longer the wide open Town. Just lately there was a 'round up' made of the gamblers who had filtered in, 50 and more were served with the "bluepaper" which means "Get out and quickly too". There is a useful citizen much in evidence, he seems to be the official Town Crier. In the clearness of the atmosphere his voice seems to cover the Town.

Many pretty log houses are to be seen, mixed up with ramshackle frame buildings. There are generally flowers blooming in front, some have window boxes but these are lying on the sidewalk. The

---

<sup>352</sup> WWB has *gramophones*, but this spelling was rare.

inhabitants are not so mad for Gold that they can give no time to sport. There was Baseball one evening of my stay, “Civil Servants versus Bank” and the Fans were yelling in good style. There are Tennis Courts (of wood) and a Cricket pitch. They even squeeze in a short season of Soccer with snow generally flying in their faces, and in its proper time Lacrosse. Nature however is dead set against The Ancient Game, and golfers look at their clubs and sigh in vain. Here Pantages<sup>353</sup> of theatre renown first got his start and in early days many of the famous fighters in the ring gave of their best to crowded houses and for rich purses.

A walk round the city took me to a street well named “Church” for on it stands 3 so close that the hymn of one must disturb the prayers of the others, the “Good Samaritan” Hospital wedged in between them. The Barracks, the Administration Buildings, the Court House and The Post Office are substantial wooden buildings, whilst Government House is imposing ; but otherwise the majority of erections for business are very poor. The roads are deplorable, the virgin soil untouched with ballast ; outside the town the sides are lined with every kind of cast off mining machinery and rotting boats. Dawson needs a tidying up, but there is neither Mayor nor Aldermen. Once there was a City Charter but by plebiscite it was given up, so the duty of all becomes the duty of none.

At the far end of town, downstream, there is the Catholic Hospital and Church, both on the choicest site of the place, commanding a full sweep of the river. A Ferry runs across by overhead Cable and by the amount of coming and going there must be a good population hidden away on the other side of the Bowl.

Severe cold is evidenced by the double windows and the storm doors, whilst many of the shacks have a roof of earth which was bearing a fine crop of grass waving in the breeze. Dawson is built on an<sup>354</sup> ancient glacier bed (and was a swamp in '97) though to the eye nothing could be more seemingly likely. The proof is found when digging for foundations, glacial ice is struck.

Despite the illimitable water which sweeps by, a water flume costing half a million dollars is seen high above the town running along the side of the Bowl. This not for Dawson but to lead water to the Klondike washings from Moose Creek 12 miles away. It gave power which the Yukon could not do. The Guggenheims constructed another for Bonanza, costing four million dollars which brought water from 60 miles away.<sup>355</sup>

<sup>353</sup> [Alexander Pantages \(1867–1936\)](#)

<sup>354</sup> WWB has *a*.

<sup>355</sup> Bonanza Dam, Yukon:

I rambled often to the Klondike by way of the bridge which crosses it from town, and took in the Diggings. Here was a Dredge working 35 feet down, to the bedrock of the once peaceful stream and its average daily output is 3000 dollars. The mighty pile of debris far up behind it showed the work of destruction it had already done. Further up lay Bonanza Creek, a feeder, and here again, as still further on, the wreck of nature was seen as men were busy at hydraulic work washing down the sides of these creeks. The Klondike was indeed The River of Gold, none like it the whole world over.<sup>356</sup>

I found pleasant company at “The Zero Club” of which I was made a member but my visit had to end as the “Alaska” was pulling out for Fairbanks 1000 miles away. The boats get larger and more sumptuous the farther down you go, for no boat goes the whole long way to the Yukon delta. There was now an “Observation Room” and commodious State Rooms on The Texas which is not the name of another boat but the topmost deck of these steamers. In earlier days the State rooms were called after the various States of the U.S. (for from Dawson on they are all American, not Canadian) : and Texas being the largest in area, the name was reserved for the largest room which was on the top deck. When the rooms were only numbered, the name Texas was still retained, but not for one room only, it covered the whole series atop. One lives to learn. I was lucky in my State room, nearest to the sky.

## VIII

Once off — with a 100 ton barge full loaded lashed ahead by steel cables — “The Alaska” swept along downstream with 1000 miles to go : a difference indeed from my 12 ft boat, which I had given to my companion. The Indian Mission at Moosehide Creek soon appeared with its Memorial Church raised in memory of Bishop Bompas, who was never seen without an Indian child in each hand, and another tagging on behind. With him the Industrial School for the natives — which I had seen at Carcross — was an obsession ; and to it he drew all children possible.

Ten miles on came the site of the old Fort Reliance, telling of the days when the Hudson Bay Company reached out its mighty paw from far off Labrador to the Mackenzie and, not yet content, stretched over the Rockies to the Yukon and settled here, last but one of its Northwestern Outposts, and that one, Fort Selkirk which I had passed at the mouth of the Pelly. The great River was now gliding through chain after chain of mountains, an island here and there. The pilot swerved continually

---

<sup>356</sup> Hydraulic mining on Bonanza Creek.

from side to side following the channel. He knows his way by the colour of the water. There is but one thing that ties him up and he cannot contend with, and that is Fog. But August is not its season so we were safe to go ahead during daylight, unless we struck a sand bar of sudden formation. On one long bench of beach I saw the Original Transportation Company of the Country hard at work ; dogs harnessed ashore to a rope, hauling a boat upstream. <sup>357</sup>

Fifty miles down we came to Forty Mile (from Fort Reliance not Dawson). Here 15 miles up the creek, gold was found at Bonanza Bar in '87, ten years before the Klondike, and it still produces its placer gold. It was from "Forty Mile" that those who made The Great Discovery set out upon an Indian's report (and evidence) to them. They made across country and river to the Head of the Klondike, Henderson going up present day "Hunter" Creek : Carmack up "Bonanza". The latter on finding richest pay dirt gave no thought to Henderson but hastened back to "Forty Mile" to record his claim. Soon all at that creek made tracks to the Better Land and staked before ever Carmack's partner knew. It seems a mean thing to have done — but gold has ever turned men's heads. <sup>358</sup>

Off again we went, this time into a big open country, the mountains thrown suddenly back. We passed Coal Creek with its bunkers, its coal like that at Carmack poor of quality as yet. Then came a striking action of the river. In aeons past it must have met here an obstruction in a wall of rock. It did not trouble to go round but worked its way over the lower part, gradually wearing it down deeper and deeper till it is here 150 ft to its bed. It left however on the one hand a mighty mass 60 ft high (known as "The Old Man") alone, upright, still defiant, whilst a similar mass of like height (known as "The Old Woman") still holds the shore on the other side. It was at the foot of "The Old Man" that the Pioneers of "Forty Mile" swore that they would be buried ; but their bones lie far off and scattered. They were a restless crowd.

Then the wood pile had to be replenished and we crawled crab fashion to the shore, where high up on the bank above (to avoid all possible chance of flood or ice reaching it) 100 cords were ready, stacked. The gangplank was run out and the crew clambered up the bank — as did we passengers to stretch our legs — and threw the wood lengths down to the beach : from thence by truck it was carried aboard.

A half hour later we passed the clear cut Boundary Lines, the old one made by Ogilvie some 50 yards from the new and final one, marking British and American territory : and were once more in Alaska, and the Stars and Stripes would float above me till Seattle, and my journey's end in Canada. Now, Eagle City came in view with its Wireless Station and the frontier Customs House. It used to be "Fort Egbert" and the fine Barracks of the Army Post still stand : but deserted. Another freak — not this time of the river but of nature — next appeared : "Calico Bluff" so called from the appearance it gives as if an immense Calico sheet, heavily ribbed, was suspended from summit to its base. The pioneers had a ready wit, but sometimes went astray : for Circle City our next halting place was named by them, assuming that they were located on the Arctic Circle but really were over 80 miles below. It was once a town of 1000 souls but was depopulated by the Klondike rush. Now men have in some measure returned to mine on Birch and other creeks nearby. From Circle there is a Winter Trail to Fairbanks of 160 miles, a short cut indeed as compared with the 800 we had to go by water. The mountains had ended just before we reached Circle : and now came the Yukon Flats extending over 200 miles of the river's course. Here it stretches out its bounds till there are 40 miles between its banks with a maze of islands large and small. Sand banks are plentiful. It is an immense sight from the Texas ; water as far as the eye can see, one cannot think of it as a river. Here ducks and geese

---

<sup>357</sup> [Fort Reliance, Yukon.](#)

<sup>358</sup> [Forty Mile, Yukon. Robert Henderson \(1857–1933\).](#)

have their habitation in the breeding season, coming from vast distances, a very paradise of rest for them. These flats tend steadily northward and 85 miles on, where the Porcupine River flows in at Fort Yukon, it enters the Arctic Circle. We had taken a special pilot aboard at Circle for this part of our journey. He threaded the boat through those islands, keeping strictly to the channel he knew by long experience, refusing all short cuts, and yet we struck bottom at times. We could quickly feel it all through the steamer : we hit, then glided over the bar, which oft forms overnight. We kept going, no damage done.<sup>359</sup>

## IX

Fort Yukon was in full sight, though far off across the river which had narrowed somewhat. Its buildings could be seen on a gentle slope as they shimmered in the sunlight. We were within the Arctic Circle, that imaginary Line, redolent of famous deeds by famous men, its apex sought long and seen at last. Soon we were tied up nigh the mouth of The Porcupine, no mean river of itself. Down it (first of white men) came Murray in 1847 bringing the goods of his Company from York Factory on Hudson's Bay, 4000 miles away. It took 2 years for the transit but Time was not of moment then. Today the Porcupine is the way which the Police take from Dawson to reach Herschel Island at the

<sup>359</sup> [Eagle, Alaska](#). Yukon River at Eagle:

Calico Bluff, Alaska:

[Circle City, Alaska](#). [Fort Yukon, Alaska](#).

mouth of the Mackenzie river flowing into the Arctic Ocean, or to trek to Edmonton in Alberta, and beyond.<sup>360</sup>

The Fort is no more, but the Settlement is a live one : Indians in the majority. There are Stores of General Merchandise, a resident Doctor — with a plate on his door — a fine log hospital, a School, a Pool Room and an Episcopal Church, its square tower holding a bell. Outside the House of Prayer is a veritable Children’s Graveyard, the majority of its graves bearing an age from 1 to 14. I spoke to an Indian who told me, “Every year plenty children of Indians die.”

I saw two boats like mine, numbers 47 and 74 which had made the run this spring from Whitehorse — but the men I could not find. One of the sights of the place are The Dogs. I counted 50 “huskies” and “malamutes”,<sup>361</sup> fearsome looking beasts (who snarled like wolves and tore at one another ceaselessly) gathered by our boat’s side. The Kitchen Department tied a hide of bacon to each end of a stout cord and threw them to the pack. Then pandemonium reigned. Not even a husky can get easily away with the rind and most of those canines got pieces of one another in place thereof. Then a sack of bones — tightly tied — was thrown. When that sack was torn to shreds and its contents secured, fierce battles began and in their fury a dozen would leave their mouthful to dash into the fray and tear at the dog that was down. It was not a pleasant sight. One hears of the savage northern dogs : I have seen them, but I was too late to see that other sight — the Midnight Sun — one should be at the Fort the first fortnight in June.

Fort Hamlin 150 miles away was our next port of call, the Flats with their islands all the way. Then those Flats were over and the river takes only one broad channel for the mountains were with us again, low at first, steadily rising till the high ridges are squared off atop as if by human hands. Here lies Rampart City, a fair sized Settlement, a supply camp for the Diggings back in the hills. Rex Beach, writer of famous Alaskan stories lived here — his rude cabin still to be seen. Across the river is the U.S. Experimental Farm on sloping land with its up to date buildings and fields of various grains. A couple of hours and we reached The Ramparts Proper, where the squared top mountains run high and close together, shutting the waters in, narrowing them and deepening them till there is not more than 100 yards from bank to bank, and the vast volume of water — 1000 miles of it behind and 40 miles

<sup>361</sup> WWB has *mamalukes* here and elsewhere.

across not far away — presses so fiercely that there is swift water indeed, and an approach to “Rapids” since an ugly reef of rock — despite the depth — rises in the middle and attempts to bar the way, giving a passage on either hand of scarce 50 yards. It is a gloomy Reach but you are quickly through it. Here were many Indian fish wheels ; and beyond the squeeze both tents and drying grounds. <sup>362</sup>

Now, Mission, where the Episcopalians have a neat frame Church for the Indians who are active enough to have a sawmill in active operation. Time pieces are changed here, putting them back an hour, the next change is at S<sup>t</sup> Michael in the Bering Sea. Before sunset we arrived at Tanana. <sup>363</sup>

The Town is situated on a broad flat, well raised above the river. Some claim it to be the most beautiful site on the Yukon ; opinions differ ; it has not the setting that Dawson has with its Punch Bowl. It is a busy place : for connection is made here with boats going up and down the Tanana to Fairbanks ; and those to and from Saint Michael and from Dawson. It has long been the meeting place for Indians to trade their furs with the white man. Here too is a large Post of the U.S. Army — Fort Gibbon — with fine Barracks. Those soldiers must have much spare time. The Town has Avenues numbered 1, 2 and 3, but houses are sparse save along the waterfront where Saloons, Restaurants, Stores and Hotels abound. It boasts a Jeweller’s shop with no mean display in his windows. The dogs are countless.

<sup>363</sup> [Tanana, Alaska, 1911:](#)

## X

The mouths of The Tanana are a mass of quicksands, the channels never the same. It is always a chance that you get stuck on a sandbar. We did. A visible sand island of 100 acres lies right in the middle of the main mouth, round it we crept and got safely in. A half hour later, the barge hawsered to our bow found a nice soft resting place and in our efforts to pull it off, we swung round and got in the same fix. It was 8 hours before we got clear. The experience is so frequent that no one gets excited. Off at last, we sought another way, the crew calling the depth which was very uneven, 6 ft, 4 ft, 8 ft, 5 ft. A great river, no creek, in a flat land, the dirtiest stream in the whole Yukon basin : it bears Mother earth in countless tons along with it from its very source, so making a Delta with half a dozen “named” mouths, the rest are nameless.<sup>364</sup>

Many fishing wheels were in evidence ; the “King” salmon were about over, the “Silver” were now running ; a month later it would be the “Chinook” kind. These fish wheels are set in the strongest current and as they sweep round and catch up the fish, they are connected with a stout board, or a trough, set slantwise in each flange which throws the fish into a large box set on each side at safe distance from the wheel. I saw some not yet cleared, the big fish filled the box to the brim. At “20 Mile Wood Camp” we had a feast of wild fruit as the crew filled up the wood box : raspberries, blueberries, cranberries and black currants.

I had thought of The Tanana as a sinuous river in well defined channel, winding its 300 miles course east. Its sinuosity was correct enough but its breadth is an ever changing quantity. It will narrow for a mile or so, only to break out into an expanse of waters like a flood, where soundings have to be continually called by men stationed on the barge ahead. Despite its manifold difficulties it must be navigated for it leads into, and indeed all along back of its bank it is, the Garden of Alaska. Here also are abundant Big and Small Game, the moose and caribou, the lynx and rabbit, ducks and ptarmigan.

---

<sup>364</sup> Tanana River at Fairbanks:

It is a slow journey upstream ; bucking the current is a very different thing from gliding with it, as we had been for so long. We made but 80 miles the first 24 hours, when (after another struggle with a sandbar) we reached “Hot Springs”. A dozen years back, Alaska yielded up this secret and men claim for them medicinal qualities and have made of them a health resort.<sup>365</sup> Here also is an extensive Fox Farm, as also at Tolovana, our next stop — only 75 miles by rail to Fairbanks but 140 by water — where we also saw some fine animals, with marten also in captivity. Birch bark canoes now appeared for the first time on the run, their seams heavily glued with resin. There must be Athletes here for I saw a Rugby football in the Store, all ready for the game. The spot takes its name from a pretty stream flowing in close by.

As we crept slowly up, time and again we nearly “boxed the compass” in a few miles run. Sutherland was not honored by a stop, its mail being tied to a faggot of wood and deftly thrown ashore. Then Minto, the second of that name for me, the first one where we dropped “the Tinhorn Gambler” — this one noted for its duck shooting. The second day was over when according to schedule we were due at Fairbanks, but the river was exceptionally high owing to recent rains and the current extra strong, with Fairbanks another 24 hours ahead.<sup>366</sup>

“Chief Thomas” is evidently an industrious and thrifty Indian, combining wood merchant with salmon curing, as his large Camp and huge sign board testifies 20 miles above Nenana passed by. Then came “Eat’em up Frank’s Estate”, who lives up there for the good of his ‘health’ having carved up some man in California in the Long Ago and now is a simple farmer with many broad acres his.<sup>367</sup>

Now a long Reach of difficult water, with the boat twisting and turning to avoid the floating trees and those blown down projecting from the bank we were forced to hug. Last trip up, the current swung the boat round plumb upon the point of a fallen tree, thus projecting, which bored a hole clear through the stern into the boiler room and gave the Engineer the surprize of his life, missing his head by inches. On another trip up, an unseen “floater” was caught by the stern wheel and flying up on The Texas, smashing the companion way and creating general havoc on top. But though we missed these excitements we had our own troubles, for a tube in the boiler sprang a leak and we could scarce get steam enough to crawl ahead. The ash pan was half full of water and it became a question whether we could make Fairbanks before repairs would be indispensable. But the Captain struggled gamely on and eventually made our goal.

First however we had to cross “12 Mile Bar”, which could only be done by use of “The Jack Knife”. This is not the schoolboys Delight, but the loosening of the barge on one side, whilst tightening up on the other so as to be able to take sharp corners. Then Chena. Here is “The Tanana Valley Railroad” which runs 2 trains a day to Fairbanks, and has other lines laid to various points along the gold bearing creeks. Here The Chena river joins The Tanana and makes a pretty picture with farms at the back creeping up the hillside.<sup>368</sup>

We left The Tanana and went up The Chena which is navigable for 100 miles for light draught vessels. The 10 miles and more which we had to ascend is known as “The Slough” and takes time and many a Jack Knife to navigate successfully. But Fairbanks at last, and stepping ashore I had covered another 1000 miles of waterway.

---

<sup>368</sup> [Chena, Alaska](#).

I was sorry to see the last of that company aboard, who had interested me greatly by their very diversity. There was the cross-eyed Montenegrin who had bled for his Prince <sup>369</sup> and whose every effort to be polite of speech had ended in breaks of rudeness : the ponderous Alaskan, jovial and free of talk : the irrepressible Philadelphian who called everyone (bar me) by his or her Christian name : the travelled U.S. Lieutenant in charge of Telegraphs : the inevitable Railroad man whose rapid talk was ever of Rails, of Land and Transportation : the long haired, high booted Frontiersman, grizzled, hard as nails : a Russian from S<sup>t</sup> Petersburg with parted beard and courtly manners : a well groomed Skagwayan with his petite bride on their honeymoon : a school ma'am very angular : and a lady missionary most sedate. From one and all one could learn — and hear of Life from another angle.

## XI

Man is a wonderful Being. Here in the heart of a Forest Empire, surrounded by half a million square miles of Land as yet scarce untouched and over which Nature has had its way for untold centuries, having but a few Indians to say her Nay — you suddenly come upon a Metropolis in miniature. Man says “Here I will dwell” and forthwith clears the ground, builds a railroad, erects Hotels, installs a water system, electric Light turns the short Night into Day, telephones connect everyone with his neighbours, Schools, Churches, Libraries, Hospitals, Banks are raised, and newspapers abound. Here standing alone is a tiny spot — a little World in itself — created “in a night” : and yet not really Alone for a single wire strung on poles for a thousand and more miles connects it with the Greater World outside. It looks complete, up to date, as if it had borne the weight and experience of years, but really is “A Thing of Yesterday”. It is set in the V of two rivers — is really on an island — on a large tract of level land, the mountains some distance back. It is neat, no swaying sidewalks, no ramshackle stores or houses, all is trim, taut, well built. Many of the homes have beautiful — even if small — gardens, sweet peas and poppies are to be seen on every hand. It bears an honored name, that of no mean Vice President of the United States. <sup>370</sup>

The real founder was — as usual — a miner, Felix Pedro <sup>371</sup> by name, who believing that gold lay hereabouts, worked tenaciously on for years when others quit and finally found his quest. In the height of its Day, Fairbanks held 8,000, now things were very quiet, and everyone was waiting. What they await is the contemplated Government Railway from the coast to Fairbanks as its Terminal. It will come in time.

I arrived at an interesting time ; for The Chena, alike with The Tanana, <sup>372</sup> was in flood ; and the wooden bridge spanning it and connecting Railway Town with the City proper was in danger of being smashed by the drift which high water had loosened from its banks miles above. Men were stationed on the bridge with long poles to divert the logs and stumps from jamming as they struck the piles of the structure. There was but a short four feet from the water to the floor of the bridge, and roots were high and had to be axed and even sawn by men who were evidently experts at “riding a log”. From

<sup>372</sup> WWB has *Tenanana*.

the windows of the Tanana Club <sup>373</sup> — to the privileges of which I was courteously invited — as well as afoot it was a sight worth watching, day by day.

A roam around had much interest. One Church is clearly conducted by a Progressive : its large sign board on which is usually found the Hours of Worship and Subject of coming Discourse held nothing of the sort : for thus it read “Kansas did it — Will Alaska? Bank deposits increased, etc., etc.” What Bank deposits have to do with the Kingdom of Heaven I failed and fail to see.

I wanted to meet — from my start — 3 men whom I knew “outside” and who I knew were “somewhere in Alaska”. I had met one by sheer good luck at Whitehorse : here I met another on the street. The third was still lacking.

At night that bridge collapsed, but the light was that of Day and I was there to see. Despite every effort, the logs and roots piled up high against it and with the flood behind it brought such pressure that mere piles and wood could stand no longer. An extra freshet bore along a huge battering ram, it struck a fatal blow and with a crunch, a wrench and a roar the whole thing “went by the board” and the river, triumphant, smiling, swept hurtling on its way. It was a fine sight — for me : the citizens thought otherwise : “but,” said men beside me, “better than a jamb such as happened a few years back, when the defeated river sought revenge by flooding the town and its winter cellars, citizens navigating the streets in boats.”

A Day of Rest (The Sabbath) passed all too swiftly and on the Monday morn I started again, this time headed for S<sup>t</sup> Michael Island, another 1000 miles away. “The Alaska” swung off from the wharf, this time with no barge to impede, and with a flood behind. Whistles tooted a Farewell from many a steamer, half Fairbanks lined the shore, men hungry-eyed for the “outside” looked longingly at the craft, husbands staying in for the long winter waved goodbye to wife and children ‘going out’ : there were many tears aboard. “The Rush” was on, only a boat or two more before the land would be locked up and those ‘within’ begin their hibernation.

We made fast time, fairly racing along, the lack of any weight at the bow and our running faster than the current causing a motion like that of leaping and a tremendous quiver day and night. During that

---

<sup>373</sup> Tanana Club, Fairbanks, Alaska, 1916:

morning we passed many portions of the Fairbanks Bridge floating gaily to the ocean. Nenana was the excitement of the afternoon. Here is a large community of Indians and a Mission Station with excellent buildings (not of logs) and a Trading Post with great business in furs, for the Nenana River leads up into a fine hunting country. Some mission folk were ‘going out’ and a crowd of Indians gave vociferous cheers as they speeded the departing ones. We met the “Up” boat and — as Time does not seem to count despite the schedule — turned head upstream, both boats drew to the bank, hawsered themselves together and had a “Chin Chin” for an hour or more.

There was heavy rain that night and running out of the storm area into bright sunlight we met Fog which we had no reason at all to expect at that season of the year, so had to tie up to the bank for 6 hours till it kindly lifted. But then a clear sky and a wonderful view of Mount McKinley — the highest mountain on the Northern Continent — was vouchsafed us. Eighty miles distant it towered in the sky, with a portion of the Alaskan Range also snow capped and formidable, of which it is the Crown.

What took 3 full days to go “up” took us but 24 travelling hours to go “down” : and we were back again at Fort Gibbon, I to make transfer to “The Sarah” <sup>374</sup> for the voyage to S<sup>t</sup> Michael. But though the boat was there, it did not mean prompt departure : for the Sarah — whose twin sisters are “The Susie” and “The Hannah” — had to await orders, so there were 2 days to roam about, nor did I miss the chance to explore all the neighbourhood afoot. The Indians hereabouts have the charming name of The Qliyukuwhutana and for natives they looked clean, healthy and prosperous.

## XII

We pushed out on a roastingly hot day. The passenger list was light but the freight was large, that is, what was outside “The Sarah” for she pushed ahead three large barges, the middle of oil, on either side of which was one of coal and one of wood for S<sup>t</sup> Michael ; whilst alongside we had “The S<sup>t</sup> Michael” tied up to us which had outlived its usefulness and was going to join half a dozen others in the Boneyard at Andreaofsky. This was letting us off easy, as on her last trip she had 5 barges in front and one on each side. The Sarah is far larger than any other stern wheeler on The Yukon, 220 feet long with a 40 foot beam, thus giving excellent promenading space. Everything on her spic and span. From Tanana down the steamers use crude oil so there was an end to the wood pile and its delays.

---

<sup>374</sup> Steamboat *Sarah*, 1911:

Here unexpectedly I met aboard — as an Official of the Company — the third party I was on the lookout for. He was making for the same port as I was. Such is luck.

All day we ran through a lovely land, ever changing in aspect but always charming, the current not so strong and the eddies less noticeable, for The Yukon is now of such noble width that it needs must become stately and sedate in its final stages to the Sea. Plenty of Indian villages were passed with an ever increasing number of dogs. At one village which is a Camp for Government Mail dogs, where plenty of fish were being prepared for their future wants, there were 40, each tethered apart to a stake on the beach and each had dug a hole in the sand which was used as a kennel.

The Indian graveyards now took on a gayer hue. The coops erected over the dead were painted in the weirdest and most flaring colors : there would be yellow and blue with mauve on the roof and sides, whilst red and green would be used on the crosses at each end. A fair sized Flagpole also of many colors would stand at the head with a piece of calico for a flag.

Whilst we made calls at various places, Telegraph Posts and native villages, Ruby was the most important one of the day. For many miles we could see it as we approached down a long wide Reach. It is well named for it is indeed a Gem in a lovely setting. It lies in a hollow between two ridges of a mountain and creeps up some distance on either side. It has distinctions. It claims to be the geographical centre of Alaska : it has sent out in its short history one and a half million dollars of gold : and its men are noted for their Great Thirst. Anyway Ruby can afford to acknowledge the last without taking offence with such other high claims. Long Creek is its main payer. Nearby we passed a rock face which in early days had been ‘holed’ and ‘salted’ but that was done by base fellows from Nome and not by Rubyites. Another barge was added here, so both sides were now equal. <sup>375</sup>

In the evening we were given evidence of the care the Company insists <sup>376</sup> upon for passengers and boats. There was the sudden clanging of a bell which gives the Alarm of Fire. Every man flew to his post, boats were swung out, hoses unloosed and played, lifebelt cases undone and served out. It was but a Practice but well done, and no confusion ; nor were we passengers excited.

---

<sup>375</sup> [Ruby, Alaska](#), in about the 1910s:

<sup>376</sup> WWB has *insist*.

We had now passed into a level land still tending fairly to the south as we had been from Fort Yukon. Far as the eye could see from the Texas all was a plain covered with small timber : that to the north being where the great Koyukuk River lies, navigable for 600 miles, but ahead there was one huge mound which raised itself up, round which the Yukon winds and takes a quick turn due south. It rises (on its river side) abruptly, the face of it worn sheer away. On its summit lies a Grave, at the foot of a gigantic Cross of wood. None can possibly miss it. Standing there alone in the wildness, it makes a striking picture. Here fought, here died and here were buried 3 Englishmen, Lieutenant Barnard <sup>377</sup> and 2 companions from H.M.S. "Enterprise" who in 1851 had come thither from Bering Sea seeking news of Sir John Franklin. Barnard sent word up The Koyukuk that he would like to see the Chief of that Tribe. His message was misunderstood and was taken as a Challenge. Down the river swept the Chief and his Braves who were ever at war with the Nulato Indians on the Great River and (overpowered by numbers) white men and their Nulato friends perished. At the foot of the Mound lies the village of Koyukuk where the river of that name runs out. <sup>378</sup>

A few miles on we came to the Post and Fort founded in 1838 by a half breed Russian — Malakoff. From the very first it was attacked by those fierce Braves from the north ; and Nulato has the bloodiest history of any Yukon Settlement. There is no Fort now : only a line of log buildings fronting the river, and on a small rise close by, there is the usual fantastic graveyard, only more than usually weird in its arrangements. Three U.S. Flags flew from poles at the head of graves : looking glasses were at the head of others. Inside some of the coops there were changes of clothing, changed regularly so that the Departed may ever have clean Raiment. All good Indians are buried with their face to the Great River from the Circle down, so that they may see the "King Salmon" run. <sup>379</sup>

It was here that another tragedy took place a few years back, when Archbishop Seghers <sup>380</sup> of Victoria, B.C., on a missionary journey to Alaska (which was in his oversight) was foully murdered in his tent by his lay Brother attendant who escaped the hangman on the plea of dementia. The beloved Bishop does not lie here but on fair Vancouver Island, long his home.

### XIII

Passing Kaltag we were but 80 miles in an air line from our objective but by river route had 500 miles and more to go. All day we ran along the Kaiyuh Mountains, a fine Range, peaked but, as yet, without snow. There were but a couple of calls, but Indian camps were plentiful. Anvik lies at the mouth of a pretty stream of that name. Here many Indian women displayed their wares (tobacco pouches) but of unattractive make. A large Sign near a Store showed evidence of a kindly Heart : "Attention! If you are tired, call in. Free Accomodation." A toiler upstream in a flat bottomed skiff would certainly be

weary. A stable — though I could hear no horse in the country about — bore another sign, “The City Hall”.<sup>381</sup>

Then came “Holy Cross” formerly an Orthodox attempt to Christianize the Indians, but now under the care of Jesuit Fathers and the Sisterhood of Saint Ann. An impressive set of buildings with a well kept garden in front, a large Church and a ‘Calvary’. The one and only Hotel a disused steamboat moored to the bank with sign board “The Oil City”. Transfer is here made for the Iditarod country.<sup>382</sup>

Further downstream we made halt at Russian Mission, a Settlement still bearing the stamp of its beginnings in the great Church — one of those Mosque like structures with its green painted Domes and Golden Crosses with double crossbar and yet one other below always seen on the slant. Soon after this, the Yukon turns almost sharply to the north and it was easy to see that we were nearing its

---

<sup>381</sup> [Kaltag, Alaska](#), in 2002:

[Anvik, Alaska](#).

<sup>382</sup> Mission in [Holy Cross, Alaska](#), 1914:

Delta ; the mountains were being left behind, the lower hills were flattening out as if squashed down by some mighty force, the banks, far off to either side of us, were low, and gulls were plentiful. <sup>383</sup>

Then came Andreafsky which we reached by leaving the great River and going a few miles up a charming little stream of that name, its clear water quite a change after the muddy Yukon. Here are wintered many of the regular River Steamboats — with fine Quarters for the men : and here also is the Boneyard where we left the “Saint Michael”, its journeyings over for good, the latest addition to half a dozen others. But before we could get up we had to leave our 4 barges behind. <sup>384</sup>

Back to the river and all set, we came to Last Mountain village where a large herd of reindeer are kept by the U.S. Government. They were being attended by Indians who took on much resemblance to the Esquimaux, and this increased as we passed on further down. They were of shorter stature, more plump, their skin smoother and they wore “muck lucks” which are on the order of moccasins but the upper part is of sealskin and the lower of walrus hide. No kyaks as yet, only very light canoes.

Now there was indeed a final end to the mountains and the Delta began. At usual times it is 60 miles across but at others it extends to 250 reaching down to the Kuskokwin country. The land is very low and covered with “tundra” — the abomination of the foot passenger, being tufted grass on lumps of mud broken into squares by frost and thaw — and remaining so. We made progress slowly in a misty rain common to these parts. Nigh Hamilton we met with the Kyaks (their single occupant looking very comfortable in his seal skin covered craft) and moored “Bidarkies”, no mere canoe but a good sized boat made of walrus ribs and hide.

We arrived at Kotlik at eventide. This is the last Post on the Yukon before it enters the Bering Sea and has finished its long course. Despite the fact of the vast width of the mouth we were forced time and time again into the narrowest of channels. A Dredge is kept hereabouts at work but the tide and the river together work constant havoc and it became a question, with a falling tide, how far we could get without running aground. By 8 p.m. (but of course still daylight) we were hard and fast. At midnight we were off and had left the Great River which I had followed so closely from its birth at Summit Lake. We passed into Pastol Bay and were in The Bering Sea. <sup>385</sup>

<sup>384</sup> [Andreafsky](#) combined with [St Mary's, Alaska](#) in 1980.

<sup>385</sup> [Kotlik, Alaska](#).

Creeping carefully along under the lee of the land for the swell was heavy for a flat bottomed boat (and a strong wind blew) we reached opposite Stebbins Village <sup>386</sup> on S<sup>t</sup> Michael Island as the sun rose. Our real Port was on the other side a dozen miles away. We anchored and waited for wind and tide to fall. I passed the time with a new experience. I was at home in a canoe and would fain make acquaintance with a kyak. There were many around us. By the kindly aid of a Judge aboard who spoke the language like a native I was handed over to the tender mercies of a short but husky Esquimaux. The hole in the centre of the top covering of seal skin is made for one, but the 2 of us stowed ourselves in — a tight fit. I left him to do the paddling with his double ender, he kept us balanced beautifully as we circled the ship then made for land where I had a stroll in the village and made effort (at his urging) to enter his inglot <sup>387</sup> but not only was the ingress <sup>388</sup> some difficulty to a Cheechako (new comer to the land) as it was like trying to enter a dog kennel, but the odour coming from within of fish and blubber oil was overpowering. He did not press the matter and we returned without mishap.

In the afternoon we weighed anchor, and rounding a Point found the sea calm enough for safe travelling. A Tug coming out to meet us, tied up alongside and gave a helpful hand. Soon we came in sight of the main settlement : and warping up, made our landing. I notched another 1000 miles to my credit and all the way a Pleasure.

## XIV

But I had not yet finished with Alaska. There was Seward Peninsula to be seen. S<sup>t</sup> Michael <sup>389</sup> was but a halting place. The island is low but here and there are slight rises : tundra everywhere. It would be impossible to get about the place but for the wooden sidewalks which reach every inhabited spot, even the Esquimaux Village. There is no timber on the island, the original buildings being all of logs brought from far off Sitka in the Alexander Archipelago I had passed through on my way to Juneau.

---

<sup>386</sup> [Stebbins, Alaska](#).

<sup>387</sup> No reference to this word, which WWB uses to refer to the Esquimaux's residence, was found online.

<sup>388</sup> A means or place of entering.

<sup>389</sup> Riverboats on ways in [St Michael, Alaska](#), 1916:

The Post was founded in 1833 by an officer of The Russian Fur Company — Michael Tebenkoff<sup>390</sup> — who gave it his guardian Angel's name. In the midst of many galvanized iron stores there still stands the original one, with a brass plate above its now closed door (erected by men thoughtful of the Past), "Constructed by the Russian Fur Company in 1833. Material brought from Sitka." On a point of land overlooking the water is one of the old Redoubts, loop holed for rifle and cannon, six of the latter still standing on their tiny carriages. Another Redoubt is to be seen in the middle of the Settlement.

S<sup>t</sup> Michael is really a U.S. Military Reservation, but the mercantile and transportation Companies operate under Permit of the War department. The Post itself is (as usual with Americans) trim and neat, the men mainly belonging to the Signal Corps, there being a Wireless Station here. Even the dogs of the Post are carefully thought of, possessing their stables where each dog has his stall and his run, his name painted over his abode and his harness slung alongside. The number of River Boats lying up on the many "Ways" bespeaks much traffic but travel has been light of late. The Shipyards, Machine Shops and Warehouses mean considerable population, and large Signs meet the eye of "Bunk House", "Dormitory", "Hotel". Several stores deal extensively in native curios, such as baskets of tundra grass, muck licks and ivory work. Both Greek and Roman have their Church ; the former of the usual fantastic arrangement within, much tinsel flowering, with Ikons thick on the walls.

I made my way — by sidewalk — to the Esquimaux Village to visit their Ke-sheim, a combination of Meeting House, Dance Hall and Turkish Bath. It is built half underground and entrance is gained by a tiny door which one has to crawl through. Inside there is a bench all round, and in the centre a large pit where a fire is lit when the Bath is called into requisition for the sick. The smell is concentrated Essence of 100 Zoos and I stood it as long as I could : then visited the captive black bears of the natives on their chains in the open : one of which is specially adept with "Root Beer". It holds the bottle between its paws at first, then lying on its back makes sure that he has every drop. The days passed interestingly. The waterproofs of the Esquimaux caught my eye. They are like a sack, with arms and a hood and are made of the stomach lining of whale and walrus. They can be rolled up into a small ball when not in use.

---

<sup>390</sup> [Mikhail Dmitriyevich Tebenkov \(1802–1872\)](#) of the [Russian-American Company](#).

The S.S. “Corwin”, <sup>391</sup> formerly a Bering Sea revenue Cutter, was to start for Nome and way ports, so saying farewell to “Sarah” I went aboard the much smaller craft and found myself by the following morning in the Bay where Golovin lies. This is on the southern side of the Seward Peninsula ; the Arctic Ocean is on its northern. Rounding Rocky Point — well named — we kept at a distance offshore as we next made for Bluff where a gold bearing creek joins the sea : its workings close to shore. A boat put off from our ship : for there is no possibility of a wharf along the coast. I was glad to see mountains again though these are very bare, many with a mantle of shale, looking like clay at a distance ; nor are they high. Hereabouts were to be seen ashore great herds of reindeer. This animal is a Government monopoly. Only Esquimaux are permitted to keep them. It was thought that by importing them from Lapland, a steady and serious occupation would be provided the native, and many of them have proved highly successful at the business. <sup>392</sup>

Then came Solomon — or rather, what was a Settlement so called till lately. In the “Great Storm” as men call it, this place was wiped off the map for the nonce. <sup>393</sup> Nome also suffered terribly. Bering

<sup>391</sup> [S.S. Corwin](#), Nome, 1911:

<sup>392</sup> [Golovin, Alaska](#):

<sup>393</sup> The Great Storm took place on October 5 and 6, 1913.

Sea is a treacherous and fierce body of water. Storms rise with a rush and the shores are low. It was however on its very best behaviour as I crossed the Norton Sound from S<sup>t</sup> Michael. Soon the great stretch of famous beach appeared with its black sand, 20 miles in length, reaching from Cape Nome to Cape Rodney, with Fort Davis, a Military Post, at one end, Nome City about the centre and Rodney far off at the other, opposite to which lies Sledge Island, the one and only Place of Refuge for ships when storms rage. To it all shipping round make haste and shelter behind its lofty shore. Now Nome was seen. The engine stopped, the anchor dropped, out to us came two sturdy launches, and to these we were transferred, but even they had to tie up to the buoys 100 yards from shore. To flat bottomed boats we again transferred, and as the last big comber of the three drove us up and landed us on the beach, men in high gumboots grasped the bow and hauled us out of the reach of receding waves. Had it been stormier we would have had the experience — which by good luck was mine on leaving — of using the Aerial Route, by line and breeches buoy, and been slung up high in the air to a stout wire, extending from a Tower ashore to another similar one raised far out past the Breakers.<sup>394</sup>

## XV

Nome lies on the First beach, there are what are known as the Second and the Third where the waves in aeons past beat against the mountain sides and pay gravel<sup>395</sup> is also found. There is even a Fourth Beach high up amid the hills and the gravel seen there is clearest evidence. It was the Black Sand of Nome which made it more famous in '98 than even its creeks. Here gold could be gathered on the seashore. In 1910 came the great Stampede where 25,000 people camped on these barren shores, and as there were no Police to keep Law and Order, Nome was a Roaring Camp in very deed.

But now all is orderly. It is not an attractive place. It has one main Street, a mile long, behind which are others of shorter lengths. There is a fine Life Saving Station in the middle of the waterfront : those Breakers call for it. There are hotels and banks, schools of course and Churches, Clubs, various Fraternal organizations and a Station. There are many “workings” in Nome’s district, and a Railroad

---

<sup>394</sup> [Solomon, Alaska. Nome, Alaska:](#)

<sup>395</sup> [Pay gravel](#) is also known as “pay dirt”, a nickname for gravel with a high concentration of gold and other precious metals. The metals are recovered through gold panning.

runs for 80 miles inland due north, a railroad that once was, but now (owing to a Government Tax of a crushing order) the engines have given place to dog teams which give entire satisfaction — as I know. The Town has another distinction besides its golden sands. It is famous for its Dog Races. From here the Great All Alaska Sweepstakes starts with its run over the snow of 400 miles to Candle (on Kotzebue Sound to the north) and back, in which the finest of the fine teams take part, untold gold is wagered and its progress followed by millions of the Great World Outside. Another race is “The Derby”. This is but 72 miles, to Solomon and back, and pace here rather than Endurance counts.

A roam around took me to the “Public Square”. It is an imposing Title but the reality discounts the claim. Its dimensions are very small, it does not possess grass. It seemed to be The Children’s Playground for there are swings and a tiny pond, both fully occupied. The craze then on was boat sailing in the miniature sea. The Beach is almost worked out, a few men were engaged with their sluice boxes which I watched for some hours and saw scarce paying results. The whole shore as far as the Sand Spit where the Esquimaux live, some in tents, others under their upturned bidarkies, is a sight for its wreckage. Not only smashed boats and rotting sloops but piles of machinery, rusted and half buried, line that shore. Countless oil cans, shacks falling down with decay, dilapidation written large, speak of a wild day gone by. But among the debris I came across something of Today. Two Whitehorse boats of this year, Numbers 117 and 121 lay there, which had made the full journey — and I envied the men.

The Ivory carving of the Esquimaux is very fine and they make much money by their skill with the tusks of the walrus. Even “Sour Doughs” (white residents) do not spurn the beautiful goods offered but add steadily to their collections. Though keen to sell, I found those Esquimaux never importunate and always courteous.

My Luck held. I spent a day with the Swede — Eric Lindblom <sup>396</sup> — the actual discoverer of the Nome Gold Field who happened to be on a visit to Nome and who invited me together with another Outsider to go over The Pioneer Mining Company’s operations on Anvil Creek, the site of his great Find and Fortune. It was an instructive day but more properly forms an Appendix than to be here set down amongst one’s own experiences.

---

<sup>396</sup> [Erik Olof Lindblom \(1857–1928\)](#). WWB has *Lindbloom*.

Visiting M<sup>r</sup> and M<sup>rs</sup> Darling in their charming home and with them going over the lady's kennels where "Scotty Allen"<sup>397</sup> looks after her celebrated dogs, and has won a name wherever Dog Racing stirs the blood of sportsmen, I learned their story, bound up as it is with the Blue Ribbon of Alaska. Here again it — like Lindblom's — finds more correct a place in an Appendix. But an experience of my own claims right of present record.

I was bound to sit behind a dog team : and I did for 40 miles and more : and further I rode on the one and only "Dog Railway" that I have heard of, in the World. It was thus. The 80 miles of rails laid in 1900, already referred to, had lain unused for years. Quite lately, a big Norwegian — Matson by name — ventured to become Lessee of the private owners on the basis of a percentage of profits. Instead of cars and trucks he uses trolleys and instead of engines — dogs. I sought him out and engaged a seat for a Friday's run of The Dogmobile. At 9 a.m. sharp I was at the Starting place which was not at the Station but in the middle of a street. We were timed to return at 7 p.m. Two trolleys coupled together were piled high with freight, a seat also was fixed up in my honour : and harnessed in front were twelve huskies and "Black Nettie" as the Leader. There was 2500 lbs of freight aboard, not counting Matson, myself and 3 others.

All aboard, and "Mush" the magic word, off went the train, no laggard pace but a trot that covered ground at a fast clip. No two rails in a straight line with one another, no ballasting, no attempt at grading, that railway rose and fell just as the ground happened to. How engines and cars ever kept the rails is hard to conceive. There were 4 miles of fairly level land, then a 5 mile climb up grade over the Divide from the head of Anvil Creek to the head of Dexter. Every dog worked with a will, no whip, only "Mush". At the start they were crazy to be off, they were just as eager all day long. When we reached the Summit we tied up 4 of the team in Dexter's deserted Station, for now the hardest part of the journey was over. The howls of those left behind were piteous.

Then the "Coasting" began : but first the dogs were unharnessed and put on the trolleys all mixed up with the freight and ourselves. I had 3 sitting on my feet, and Nettie on a box behind with her pretty head over my shoulder. We were off, and went dashing down grade for 6 miles, taking turns that made me grip tight, and over crazy trestles in which many a tie was absent. Our way was along a mountain side with the valley of the Nome River, at first, far below, but at the end of that 6 mile 'coast', we crossed it by bridge and drew up at a Road House — nothing but a Tent. Here we lunched on bread and ham and coffee, but not so the dogs, they eat but once a day. Then off again for another 6 miles slightly up grade along the Nome to Hobson which was our day's Terminus. Here we unloaded the freight and gave the huskies a rest, whilst Matson and I walked a couple of miles up a creek to a Dredge he wished to see. But first that Nome River had to be crossed and there were neither bridge nor stepping stones. Matson generously offered me his broad back and on it I safely made the crossing. Again on our return he gallantly did the same ; then hitching up the dogs we started homewards.

Those dogs are very 'knowing'. When the time for hitching comes, each one steps up to its place as its name is called. They well know too the drinking spots along the way and the whole team will suddenly switch off and plunge into the pool. On our return to Dexter where we had left the 4 dogs, we again uncoupled, took them all aboard and had another 6 mile 'coast' but this was a far steeper grade, and accordingly the pace grew faster and ever faster till to a 'tenderfoot' it seemed positively risky, but we got down somehow in safety : then one more hitching up, the Dogmobile drew up in Nome — on Time.

<sup>397</sup> [Allan Alexander "Scotty" Allan \(1867–1941\)](#)

## XVI

And now “The Senator”<sup>398</sup> hove in sight and the order came to get ready for the last leg of my trip. The Aerial Cable was at work, and a look at the Breakers assured me that happily we must needs go out that way. We went in the Cage by bunches. Four stout ropes are attached to the four corners of that means of transit, the flooring is 12 ft square, and railing 4 ft high keeps you from falling out unless you wish to. Up you go 40 ft in the air and look down upon the crowd below as if from a balloon. Then you are swung out over the sea and look down upon those Combers thundering on the beach as your Cage slides along the cable. Reaching the Tower we were slowly lowered to its base. Thence a jump (at the correct moment) into a stout launch and we headed for the steamer kept at a respectful distance out.

The last I saw of Nome was a flicker of lights along that world famous beach : and high up in the sky the Cross of the Catholic Church, brilliant with its electric globes, a welcome to the Incomer and a final message of Hope to those who would fain return to the Great World Outside, but are not free from Danger on the way. For 2 nights and 2 days The Bering Sea was in a furious rage. The 3<sup>rd</sup> day it was sullen, the 4<sup>th</sup> morning broke gloriously as we passed from the Sea to the Ocean between Unimak and Unalaska (Islands of the Aleutian Group), all clouds gone, the water deepest green with white caps everywhere to set it off, and for our companions, whales, albatross, sea parrots and auks. Far off, where no land could be discerned 2 Volcanic Mountains rose into the sky, one a perfect Sugarloaf of purest white with a thin wreath of smoke atop telling of semi slumbering fires within : the other more rugged, its top blown off, leaving 2 horns covered with snow.<sup>399</sup>

Ten came the long Home Stretch, the great Waste of the Pacific, a stretch where little commerce ever plies and we were alone for days, so far out from land that even the mighty M<sup>t</sup> Saint Elias was beyond all possible range of vision. But Sea and Breeze were wholly on our side. Land hove in sight the 9<sup>th</sup> day out, Vancouver Island once again (its mountain tops), then “Flattery”, “The Straits” and “Puget Sound”.

<sup>398</sup> S.S. Senator, ca. 1911 (left), and taking passengers in Nome, August 1914 (right):

<sup>399</sup> Possibly [Bogoslof or Agasagook Island](#) and [New Bogoslof or Fire Island](#).

The 10<sup>th</sup> day from Nome, “The Senator” docked at Seattle ; and landing, I had completed the circle of a 6000 mile Alaskan trip : 6 weeks (and over) spent roaming in one of Nature’s Great Wonderlands with all her many lessons on hand for those who have eyes to see and ears to hear.

I end as I began, and there can be few if any to dispute it — Alaska and The Yukon are One and Indivisible. He who would see Alaska must make journey on the River.

## THE GOLD OF NOME

None can dispute Lindblom's claim to be Nome's Pioneer. He is "Mr" now. A Swede, as his name bespeaks, thick set, short of stature, with hands which show that he has long since parted from pick and shovel, wiry and quick of movement, he is the best possible type of the successful miner. His great wealth still finds him a simple, open hearted fellow and report says that he is generous to a fault. He has travelled much since those strenuous days of '98, knows London, Paris and Berlin well, and has heavy interests in Mexico, as well as here.

Khaki clad and gumbooted he stood ready for a day with me. We trudged over miles of country as he explained everything and oft gave spice to his talk with stories of the early days. Laughingly he told of how various newspapers have portrayed him and how far from the truth they were : some of his being "shanghaied" on a whaler and his escaping here, others of his being shipwrecked upon this coast, and yet others of how a blind instinct brought him from Sweden around The Horn to this Land of Gold awaiting him. Someday, he said, he may write down the truth and the history of his discovery and to me he gave it as we roamed the length of the Creek which gave him a Fortune.

The real tale is simple enough. A sailor in many a ship from his Homeland, he was in San Francisco on his beam ends <sup>400</sup> when he read an item in a whaler's yarn to newspapermen of there being gold around Cape Nome far to the north. Having no means to ship as passenger, he worked his way as one of a whaler's crew. Arriving, he wandered long north of the future Town, fell in with another of his countrymen — Lindberg <sup>401</sup> — and still prospected. Coming south on the Peninsula they reached the ridge of hills below which a Creek made its way to the Sea. Across from where they stood, they saw the further ridge surmounted by a rock — the reproduction of a blacksmith's anvil. It was virgin land so there and then they named the stream "Anvil Creek".

As they had reached the height on which they stood, they had flushed a covey of ptarmigan. The birds — as they ever do — flew down, not up. "We will prospect where those birds alight," said Lindblom. Where they lit was "Discovery" and a fortune for both. He took me there, showed me where he had driven in his first rough stakes, and where awhile later the largest nugget so far found in Alaska was picked up. Another Swede <sup>402</sup> soon joined them as he roamed around the land. He was welcome, and Number 1 Above and Number 1 Below were added to his own. Then Saint Michael's heard of it, then up The Yukon went the news and men poured in and staked the whole 4 miles of Anvil Creek. Next the World heard of it and a Rush came. His talk was all in broken English, softly spoken and no rough word escaped from him, but the Pioneer appeared in his tale of that fierce host fighting for a place in the new Land of Gold, "there was a dead man for breakfast every morning."

Men squeezed out of all chance on the Creek began in '99 to try their luck in the sand of the sea shore where that River of Gold ran out. It was rich in the precious metal. The Black Sand of Nome was discovered and another Rush began, and with this last one came men who would make money without work, by 'jumping' claims or robbing them. He told of both, and showed me where, as we went along.

Miners had worked hard. A great mound of pay gravel was ready but too late in the short season. Frost and snow came and covered all. When Spring arrived they went back to wash it down and get the treasure in it. But others were before them at it who had tunneled in and got away with all but a

---

<sup>400</sup> Hard up; in a bad situation. The beams are the horizontal transverse timbers of ships. This nautical phrase came about with the allusion to the danger of imminent capsize if the beam ends were touching the water.

<sup>401</sup> [Jafet Lindeberg \(1873–1962\)](#)

<sup>402</sup> [John Brynteson \(1871–1959\)](#)

frozen crust — the Mound was there but it was hollow. “Discovery” itself did not escape. In defence of his gold he had been forced in ’99 to “put daylight” into a couple of a gang. He and his Chum kept their “dust” in a leathern portmanteau inside their tent, close against the back end. They had been too busy to go to Town with it. There was Forty Thousand dollars in that case. “Bad men” they knew to be hanging about, so had set some of those working for them to watch their Dumps with lanterns. All was quiet : the two in the tent were sleeping. Men crept up and cut the canvas so that by lifting the cut flap they could pull the portmanteau out. They succeeded but it was heavy and in carrying it off, they tripped in the darkness over one of the guy ropes. The shaking of the tent woke Lindblom. Striking a light, he looked towards his treasure store, took all in, seized gun, rushed out into the night and seeing forms of men ahead fired twice. His wild aim was true as cries attested. There was a scurrying and flitting of figures up the Creek side, then all was still again. An Arm of the Law appeared to say that two men had been attacked as they had made past “Discovery” in the dark, and were being doctored in Nome, one shot through the shoulder, the other through the arm. The affair ended there. Years later, Lindblom was accosted in Seattle by a man who said that since he had been shot in the shoulder up North in a quarrel, he had been unable to do anything, was ‘down and out’ and that knowing Lindblom to have made a fortune there, surely he would give him aid. He got it.

As to ‘jumping’ claims, it has only been by gun, litigation and a million thrown away that he and his have kept their own. Men tried the game of Non Citizenship time and time again. He took me to where he had ‘called the bluff’ of two Americans. They had appeared one morning in true Cowboy outfit, pitched their tent on his claim telling him that not being a Citizen of their Great Country (which however he had been for many years) they had ‘located’ and for the good of his health he had best clear out. He did not argue the point, but going for 3 of his men who he knew <sup>403</sup> would gladly fight, he posted them behind some brush near the tent, then himself walked in on the men. He told them that he had returned to ‘dis-locate’ them. They laughed in his face. Stepping back he signalled his men. “Hands up” was now his order, and they obeyed, with 4 guns covering them. He took their guns, threw their tent over his claim line ; then gave them back their weapons and saw no more of them.

But a heavier fight was on his hands when bigger rascals came after him. They secured an Order from the San Francisco Courts to eject the Swedes, Law’s officers in Nome enforced it, and the Gang worked furiously placing the Clean Ups in a Safe they had brought with them. But those Swedes were a match for them. They sent South the fastest craft in reach, with the true facts, got an Order ousting the men, served it with guns in their hands and ejected them upon the spot. So suddenly and fiercely had the Swedes swept down upon them that the Gang had not been given the time to remove their Safe. As they made for Nome to hurry south to tell more lies and reverse the last Order, Lindblom and Lindberg got to work on that locked Safe. They toiled for hours, finally cut a hole and drew out a small fortune : for in those days \$10,000 was not thought much of for a few days’ work and the men had been for long weeks in possession. Then working further they found the bottom of that Safe to be not of solid steel but of wood with a very thin plating of steel to cover it below ; its purpose clear. Knowing that in the end the Swedes would triumph, they planned upon eviction to draw from below all within it, and leave a weighty, locked, but empty Safe behind. I saw that Safe, it lies where it had been broken open all those long years past. A Judge and a Lawyer both ‘served Time’ before that business was done with.

Now all is Peace, so far as Man is concerned. But not so Nature. The War of Destruction still wages. That Creek is a wreck, and yet Man will not let it rest. The “Pioneer Company” — which is practically the original 3 — has bought out all smaller men on Anvil Creek and has set out to tear it up to its bedrock. There is no chance of dredging, it is all done by hydraulic means. The water is brought 42

---

<sup>403</sup> WWB has *know*.

miles from the head of Nome River, at a first cost of a million and a half. The huge streams of water shoot out from their hose mouths 250 feet and tear down the banks to their base ; then other hose, and pipes like sewers for their size, force the dirt up to the steel lined sluice boxes where riffles of steel hold the grit and gold. There is glacial ice below the surface of sides and bed. You see it and it fights back hard and long, before the fierce play of hose is conqueror. The tailings form small mountains. In some spots they had already reached to bedrock — a deep chasm — and men were carefully scraping the bottom so that nothing but the bare hard rock should remain. There is gold all the way. Lindblom took a shovel and leading me to a spot nigh bedrock, dug up a small spadeful, then washed it with a master's hand : there was gold dust and a tiny nugget left behind ; a present there and then to me from a simple and gallant man.

In his fine Auto we went and returned. Of Nome's roads I will say nought, Nome seemingly still thinks only of Gold.

## ALASKA'S BLUE RIBBON

From Nome to Candle and back : 400 miles of trackless, unbroken snow. Once a year Nome, all Alaska and a million folk Outside, for the inside of a week centre their interest and hopes on Dog teams struggling for Victory over that long race-course. A man to each sleigh.

It is no brutal exhibition of forcing defenseless and dumb animals to terrific strain for man's mere pleasure and profit. Those dogs are as keen as their masters behind or running alongside them. They cannot know of The Blue Ribbon, the Fame, the huge Stakes involved or the heavy bets laid on them, but they do know their Competitors, those other teams alongside them at The Start, and Pride of Place, a determination to lead the rest at any cost is their Inspiration. No lash is used or necessary to urge them on, "Mush" is the one command, and mush they do, till some in the teams can mush no longer, then lay down and whine, their hearts greater than their strength, to see their fellows pass ahead, and they to trail behind.

Of the many celebrated Teams and the Great Race itself a book could and should be written. I can but tell shortly of one of those teams which it was my good fortune to see in their home. In earlier days when Nome was "humming" and 16 Teams would enter for the Race, one resident — Allan <sup>404</sup> by name and working as Secretary to the Darling Company of merchants — as a side issue had a team and a partner. The latter leaving for other parts, the Stables were in danger of extinction. Then it was that M<sup>rs</sup> Darling stepped into the breach, but it is hard to say whether the husband or the wife have and take deeper interest. Anyway the wife's name is always associated with the dogs, and no woman could love dogs better.

As to "Scotty" I was glad indeed to grasp the hand of so good a sport. He is a little fellow, pleasant and quicksilver all over. As his name implies Allan is from the Land of the Heather. He had his first lessons in dog teams in the Canadian North West during the '80s. Now he is Past Grand Master, and by thrice winning the Great Sweepstakes has well earned the title by which he is known throughout Alaska of "The King of the Trail".

M<sup>rs</sup> Darling's dogs are 36 in number. No care is thought too great to give them. In the Stables each dog has its stall : and those dogs are different from the ordinary dog met in the street as Racers are from Cab horses. They were turned loose in the yard by bunches, for my inspection. They are not true huskies nor malamutes, but a cross of Bird dog and the first named. Everyone of them is a fine specimen of dogdom. The Leaders were brought forward. "Baldy" first — as the most renowned — whose love is centred on one person alone in the world — Scotty Allan — and of whom many a tale is told. Then "Irish", a setter, with lovely eyes : but those eyes are delicate, and so when Leading he wears goggles of strange make, which were put on for my benefit. Then came the third Leader, "Spot", a pointer, a magnificent thing, proud as a peacock of himself, and always posing as for a photograph.

The teams as they were turned loose in the big yard tore wildly about but a single word from Allan and they stopped in their tracks. As he said to me, "If you are not Master in the Kennels, you will not have obedience on the Trail." During the short Summer the dogs are fed on fish, but as soon as Winter comes they — like Allan himself — go into training, and have special diet served them. I asked him how much of the 400 miles he actually ran. "Somewhat under half," the rest he covers standing on

---

<sup>404</sup> WWB has *Allen* here and elsewhere.

the runners behind. The Record Time for the 408 miles is 76 hours. I saw the beautiful sleigh, weighing but 30 lbs, made of hardest hickory, tied with reindeer sinews, its runners shod with ivory.

Men say that Allan is King because of his wonderful handling of his dogs : but he modestly lays in to “The Luck of the Trail” which has mostly been his. There are however blizzards to be faced by all. He has been fortunate as to broken runners and tired dogs, but not always the latter. One Rule that must be kept is that every dog starting must be brought back either dead or alive. None can be added.

“Baldy”, the Hero by common consent of the great race, once came near being brought home on the sleigh. He played out in breaking the trail, and after a rest was so stiff that Allan put him in a robe and tied him tightly down in the sleigh. Soon after restarting there was trouble in that robe, and tearing himself free Baldy leaped out on the trail. Still Allan would not harness him, so Baldy ranged ahead, breaking trail for the rest. Allan felt that the only way to show the dog that he was useless was to place him again as Leader for awhile. The dog would show his master how greatly he erred. Once in his old place he swept ahead, setting a terrific pace and kept the honored post to a victorious end. No wonder that “Baldy” is a Hero. He has a Heart of Pure Gold too.

In another of those mighty struggles of grit and endurance, Scotty, in the lead of all, heard something snap ; leaning forward and outward from where he stood behind his team, his head struck a tall iron post marking the trail and with such force that he was knocked senseless and fell over in the snow. The team went on for some distance — as their track showed — when Baldy must have turned, and saw no Allan. When Scotty came to his senses, Baldy was standing over him, licking his face and howling in his grief, his mates in their line standing round awaiting their master’s orders. That year again the Darling dogs captured The Blue Ribbon of Alaska.

Of a certainty they will be my Favourites whilst Life is mine : I count myself fortunate to have seen them.

## WHERE IGNORANCE WAS BLISS

It was glorious summertime in the Canadian North West. All looked fair to the outward eye but there were murmurings of a coming storm, not of Nature, but of Men. Riel the Half breed <sup>405</sup> was, for the second time, at work. Escaping from the Vengeance for his first rebellion <sup>406</sup> into the United States, he had managed to sneak into the Territories once again, and though his whereabouts could not be located, it was becoming increasingly evident to those who watched the Indians that he was sowing seed vigorously and that on fertile soil. There were isolated black deeds being done, and every little incident of offence by white men was magnified a hundredfold by Riel's watchful agents, which oft times lead to tragic end.

The North West Mounted Police could not be everywhere, but once on the trail were relentless in endless pursuit. It was ever a stern chase, for the Indians were at home on prairie, in timber and foothills. Once murder had been committed, the Indians' blood was up, and his hand was against every white man as he sought escape. But not "alone" would he flee from the Wrath behind, that was never his way, he and his, sometimes his grown up family would raze their tepees and escape on their prairie ponies. The Police were always splendidly mounted, and to meet them when out in their scarlet coats, broad hats and high, spurred boots was a brave sight. They hunted sometimes in couples, at others in small posses — but a single Red Coat was enough to strike the fear of the Law into the heart of Indians in normal times.

Mounted on a cayuse, <sup>407</sup> clad in tanned leather coat, and prepared in a saddle bag for a long ramble, I was in the foothills, a rolling land with scrubby timber here and there. <sup>408</sup> I had been riding all day, and as evening drew on was beginning to think of a likely spot where the pony could be tethered and graze, I cook my grub then roll up in my blanket for the night. Just then I caught sight of a couple of tepees down in a ravine. Here I thought is the very thing. Why not chip in with these wandering folk, it would be company anyway, and Indians had never been aught but friendly to me. I was some distance off at first, but as I rode near I could see some commotion in the camp. A man stepped out into an open space, then quickly hied him to a tent, out of which another came with him, then women, then another man stepped out from the second tepee, and long they looked nor moved as I drew near. I put it down to a natural unfrequented spot ; and working my way down, rode right in among them and dismounted.

The 3 men I summed up in a moment as father and sons, the father well on in years and of an unpleasant look, the sons fine stalwart men but by no means of genial aspect. With the bridle over one arm I stepped up to the old man, giving him word of greeting but got in return but a stolid stare. The 2 sons stood mute, rifles in their hands. Still sublimely unconscious why there should not be friendliness on both our parts, I thrust my hand into a pocket and drew out some plug tobacco, always carried as a sort of invincible visiting card. To receive the plug is to make a friend, to refuse it is to declare enmity. Extending the tobacco with a genial word, my unmistakeable innocence of any secret they held, causing their coolness to a stranger (so unlike those fine strapping giants of the Plains) evidently had a lightening <sup>409</sup> effect. Casting a look at his sons, the old Indian took the plug and

<sup>406</sup> The [Red River Rebellion](#) of 1869–1870. The [North-West Rebellion](#), which took place in 1885, ended in Riel's arrest on May 15, his trial on a charge of high treason, and his hanging on November 16, 1885.

<sup>407</sup> [Cayuse](#) is an archaic term used in the American West, usually referring to a feral or low-quality horse or pony.

<sup>408</sup> WWB was a missionary at [Moosomin, Canada](#), in what is now southeastern Saskatchewan, from 1884 to 1886. He was 26 years old in the spring of 1885.

<sup>409</sup> WWB has *lightning*.

grunted thanks. Such grunt is not a growl but caused by their guttural tongue. I knew then that I had him and the whole lot, and gave further plugs to the sons.

Putting the first coolness down to their perhaps not wishing to be put about serving a stranger, I lead my pony off and tethered him, first leaving blanket, saddle and bag at the feet of the men : then returned to be at once invited inside one of the tepees, where in the middle was a small fire over which a pot hung and the smell that arose was very satisfying to a hungry man. I made to undo my bag to help the meal out, but the men grunted dissent and I forebore. We squatted down around that iron cauldron and the old man plunging his hunting knife therein, brought out half of a rabbit which he extended towards me, gripping one end with his hand. I promptly grasped the other, and though 'twas amazing hot, held on grimly till a parting came, then fell to and devoured. Bannock was handed me by a squaw, and water was handy. The meal finished, we lit our pipes and smoked around the dying embers. I noticed that one man was always outside, first one, then another. I had some little gifts in my bag which I got out and <sup>410</sup> gave to the women and children. By signs and much gesticulation we made talk till time came for sleep. The old man pointed to where I should lay me down, the squaws withdrew, I rolled myself in my blanket and slept profoundly.

I awoke to find a small fire going, and a warm drink being prepared, which together with the remains of our last night's repast formed out breakfast. We were genial friends by now, and one of the sons first watered, then saddled my cayuse and with hearty a hand grasp all round and many thanks on my part — which I am sure they understood — I rode off to wander for yet another day.

A summer morn again : we had risen early and I had been lopeing many hours through this ravine and that, turning as I felt inclined, mounting any high ground to have a look around, when I decried a posse of Police riding towards me. I was well up, and watched those Red Coats with some pride at their brave showing, then rode down towards them. We drew rein and the Sergeant expressed his surprize at meeting a lone white man in so unfrequented a spot. "You're sixty miles north of the railroad." "I know, I'm fond of roaming." "Seen any Indians in your travels?" "Yes! put last night in with some." I saw the posse exchange glances. "How many were there?" I gave their number and described them as best I could, not forgetting to tell of my at first cool reception. "And you tell me that you slept in their camp last night?" "Certainly I did. Why not?" "Well, Sir, I don't know who you are but I beg leave to say that you've been dreaming." I told him plainly that I was not in the habit of day dreaming, that I was very much alive, that as he had asked me a straight question, I had given him a straight answer. He saw that he had made a mistake and apologized handsomely. "But do you know who those fellows are? No of course you don't or you would have kept clear of them as doubtless you would from the very Devil himself. They are murderers. We have been after them for weeks, have driven them hard, got clear on their tracks, only to lose the brutes. They have sworn to kill every white man they come across and they have done so, by Jove, as their track shows. What's the trick you have, Sir, to be able to lie down and sleep with those butchers doubtless looking at you, a white man in their very tent. But we're on their trail now with a vengeance. Which way have you come since you left them? How long have you ridden since then?"

Now : though indeed they were murderers, they had hospitably entertained me. I had eaten of their salt and we had smoked the pipe of peace together. I rejoiced to think that I should not have to betray them, even when the Law — in the person of those Red Coats — put it up to me. I told that Sergeant what was the very truth, that I had been riding for mere pleasure and to save my life I could not help him as to my back tracks, save in general, South by the Sun : that I had been a full 5 hours in the saddle : that as I mounted so did they, which meant a 10 hours start : that as an Officer of the Law I

---

<sup>410</sup> WWB is missing the word *and*.

wished him luck, but as one man to another in my heart I couldn't. He smiled, saluted, thanked me. As he rode off I heard him say "That man has the luck of the devil. He slept among those murderous fellows. Only his ignorance saved him."

**A BRUSH WITH WOLVES** <sup>411</sup>

Sheep are defenceless things, wolves are fierce and strong. I was the sheep and the wolves were of the “timber” kind. It was a run for life, but other legs than mine saved the situation. ’Twas in the early 80’s in the Canadian North West, with deep snow upon the ground and every river frozen solid. The then one trans continental railroad ran nigh the Boundary line twixt Canada and the States, leaving the vast space to the north with nought but buffalo trails as summer guides, the Compass winter’s only finger post. Above the railroad lay that great stretch of open land which was then being occupied by oft times far scattered settlements and outpost pioneers : above that prairie domain lies timber stretching up to the Barren Lands to the East and Great Slave and Great Bear Lakes to the West.

In a sleigh of the toboggan kind, i.e., not having runners but lying flat upon the ground, without a seat, with head and tail piece gracefully curved both for more easy gliding and better protection for head and feet ; and drawn by a team of bays — no Indian cayuses those, but Canadian horses true, and trotters fast, well used to ice and snow ; I had left the railway and my “shack” now many days, had made an old time Hudson Bay Fort where I was right royally entertained by the Factor, <sup>412</sup> and struck out still further north — alone. I purposed working my way round through the timber country to an advanced settlement, then to beat south and so make “Home”, though ’twas but a rough and humble one.

We were now on our last lap, my general direction I had gleaned from some Scotch Crofters <sup>413</sup> as I left them (after an hospitable night in their turf dwelling) at early morn. The timber would be kept till a Valley appeared and if I had held the right direction, south by east, I should find a lone settler on the further bank. But the way was long and it would surely be nightfall ere I could arrive. What mattered that! It was a glorious day, the sun shone, there was a sting in the air and that night ’twould be full moon. My team ripped off the miles in gallant style, the timber was open, and the going good, blest with a surface that held and gave but spring to the horses’ feet. Wrapped as I was in buffalo robe, hands, head and face encased in fur, triple socked and mocassined, beneath me skins and blankets, it was solid comfort to glide along, lying at full length, with nought but the thin wood of the sleigh between me and snow. We had rested at noon, fed and were off again amid the silence of the woods, broken only by the merry song of the sleigh bells. Not a soul had we seen all day, nor of Life aught save now and then a scurrying rabbit, recognized only by his apology for a tail, which being black gave away the wholly white rabbit it belonged to. Now the sun had settled in the west, and the moon was appearing through the timber. I was confident that I was heading aright, nor did a care of any kind disturb my mind.

But hark! What was that? As quick as I, those horses heard, shot their ears forward and broke into a gallop. A howl long and mournful, far off in the rear, such a howl as I had ne’er yet heard from throat of animal. So this was a Wolf’s cry, thought I, and fell romantic ; Poor, Lonely beast. But feelings altered (quick as the first which had sprung to mind) when that single howl was answered by another, then another, then by a great chorus of uncanny volume. Not Lonely, but a Pack, and they spoke clear behind. At that grand outburst, thrilling to hear but highly unpleasant, my bays increased their pace to danger point thought I. They gauged the danger and the Terror behind better at that early stage than I, but I must be the Master. The reins I must not lose, for I alone knew the direction, so instead of

---

<sup>411</sup> For a shorter version of this story, see Tale #69, *On Wolves*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>412</sup> A *factor* of the [Hudson’s Bay Company](#) was a district manager who was paid a share of the profits of the Company.

<sup>413</sup> A *croft* is a fenced or enclosed area of land, usually small and arable with a crofter’s dwelling thereon. A crofter is one who has tenure and use of the land, typically as a tenant farmer.

them lying loosely in my mitts <sup>414</sup> I wrapped them round and round my muffled wrists. So too, if the team parted with the sleigh by misadventure, I preferred to be dragged by them, even to my death, than to be left to face that Fury, alone. And it was by no means impossible that such parting might be, for a stump or a root hidden just below the surface of the snow — to be seen by daylight but not at dusk or moonlight — if struck at the pace we were now travelling would mean a rending of the wood ; and what that meant for me I had learned already by hard experience.

I must gain and keep control of those sacred steeds. If they ran amok despite the curb, they still stood a fighting chance, but not so I. We had grown to know one another well, I alone for months had tended them. Many a night I had slept in the open, with them tethered nigh (when free they would come to my call) : but now they were terrified. I spoke to them gently by name and their ears moved at the familiar sound. I counselled Steadiness, and lay but just feeling their mouths, keeping them straight ahead as my plan had been in the hours of perfect peace. Now it was War and the enemy was not going to let us forget it. At the first outburst it was a distant cry but it was certainly clearer now. Galloping fast as those horses were, those Fangs behind were faster still.

If only I knew how far off that Valley lay — that settler's home and safety. Would the timber never cease. If but a few miles I felt sure that we should win but if the distance had been wrongly calculated! I felt in the sleigh and there lay to my hand sure enough a Smith and Wesson, a little friend I never moved from Home without, for who knows what may hap when Indians are ugly and horse thieves about. It might help at a pinch, it might stop one or two for good and give us further chance. I should be on a level with them and could hardly miss the mark. So I lay still : to get excited would be to ruin all, the horses had the speed, I had the brains. We were going to win. My eyes were ahead but my thoughts never left the Fury behind.

One mile, surely two we must have covered, those horses never letting up, when straight before us the moonlight came clear : no trees now intervening : here then was the last of the timber, here close to was the Valley, and maybe across it was the house. Out under the full moon we flew : stretching far down was the Valley, and a dark patch on the top of the farther bank some little distance to the right showed a glimmer of light in a window. Could we make it though before — and again that blood thirsty chorus rose in our rear — yes clearer and surely nearer.

In those days — I know not now — every settler put a light in his window at nightfall as a guide to possible wanderers. This was not the first time by many that I had found it very helpful, but never was it more truly welcome than that night. The valley itself is broad and its slope on each side very gradual. Long Ages ago it must have held a mighty river for in an air line from bank to bank that Valley stretches a good half mile. Today a stream (dignified by the name of River) runs through it, not 50 yards across. I learned these facts for the first time as made hot and fast for that light. Not knowing of the stream had banks or not gave me an anxious moment but I surmized (and correctly) that it was altogether likely the settler would have placed his Home near a ford, and might even have a sleigh road for timber on my side of the Valley.

As my bays galloped down I drew them to my right and just as we reached opposite that blurred patch with its glimmer on the summit I felt just such a sleigh road under me : we had almost crossed it but I swerved the horses round in time, got on to it fair and square, dashed on and down, then saw the ice ahead. Now would the pair or even one of them slip, for then 'twas likely still to be all up with us, as once again the Pack gave tongue : they too had come out of the timber and evidently saw their quarry below. But here Instinct came to those horses' aid ; as they reached the ford and the ice, they shot

---

<sup>414</sup> WWB has *mits*.

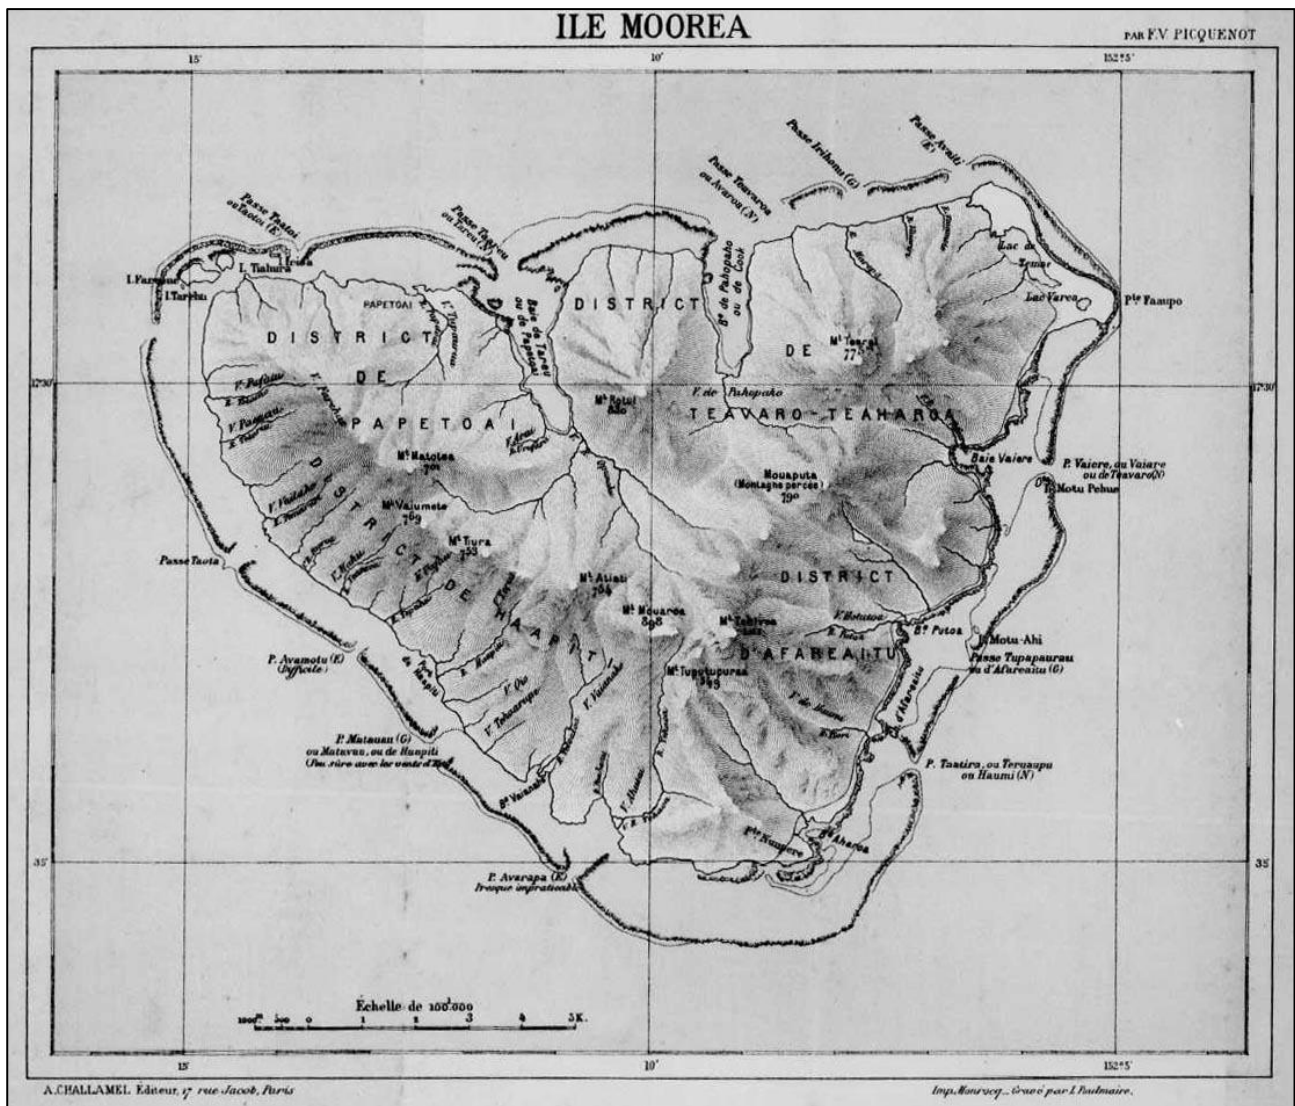

their hind legs towards their front, half sat upon their haunches, and by the very fury of their pace slid clear across.

Now up they tore, keeping the track which was certainly a help. Then I acted. The revolver spoke. But alone it would be useless. The man inside his cosy Home would say "What's that — 'tis a branch snapping by the frost — all's well." Quickly the weapon spoke again — once — twice. The door flew open : I saw a figure : heard a door slam in the stillness of the night : a man passed like a flash across the light to my right. That was enough for me — the stock yard would lie that way — to it we headed — saw high stout paling and wide opened gates. Into it the horses plunged, the gates swung together behind us, the race was over : my gallant Bays had won.

Now out of my warm bed I quickly got and went straight to my sweating, trembling and exhausted team to give them each caress ; then rapidly we unharnessed them to lead them into the warm cattle shed, nor left them till rubbed and bedded down, well stocked with hay, they should be sure to have the rest they rightfully deserved.

But even before we had begun unharnessing, those sharp fanged brutes were at the gates, so a close call had we : and we could hear them snarling as they sprang at gate and paling. Not they but the bays were our only thought : but when all was snug and we made our way by the back yard into the log shack, I opened the front door of my good friend's Home and saw the pack, under the moonlight, discomfited, making their way down to the ford again, to return to their den in the timbers : whilst for myself I turned to eat up the remains of my kind host's meal ; then rolled up in my robe upon the floor and dreamed — No! not of wolves, but a strange mixture of Winged Horses ; fangless Babes ; and Home Sweet Home, e'en "England" : not my prairie Shack.

THE ISLAND OF MOOREA <sup>415</sup>

Across a ten mile Strait from the north west coast of Tahiti lies the heart-shaped island of Moorea. It is extremely picturesque in appearance both at a distance or on more intimate acquaintance with its towering, broken, rugged heights, in parts like castellated <sup>416</sup> walls of rock, lending itself readily to both artists and photographers, an endless stream as magazines and travel tales bear abundant testimony.

The interior is a maze of long dead craters and steep ascents, nowadays all overrun with that curse brought in by innocent enthusiasm for the Lantana, a towering bush ranging wildly like the blackberry, ever ready to lacerate the unwary.

<sup>415</sup> Longer versions of all of the stories found below are to be found in Part IX, *Old Time Tahiti*.

<sup>416</sup> WWB has *castlabeled*.

Moorea covers some 50 square miles of land, its littoral at the foot of the continuous mountains on which the villages stand being 38 miles, flat land with scarce a rise the whole length over. Up till late years the various streams from the hills were crossed by wooden bridges of so light construction that light horse drawn vehicles alone dared venture but having now been strengthened the ubiquitous motor has invaded the isle.

Formerly many thousands inhabited those villages and the short valleys running up into the hills but the latest census gives but 1837 and these mainly half castes. Some old time villages with all their inhabitants gone have become lost to ken but there still remain Papetoai and Haapiti, Afareaitu and Maharepa with lesser settlements between.

Three towering heights break the skyline unevenly as one views Moorea from Papeete on Tahiti, two of them sharply peaked, the third finely moulded and unbroken, the highest by many feet, around whose summit clouds linger when all else is clear. This is Tohivea rising 3000 feet and more.<sup>417</sup> Nigh the centre of the picture stands the rugged and sharp pointed Mauaroa, and at the island's eastern end rises the fantastic Mouaputa, the basalt peak with the huge round hole near its summit, large, lofty<sup>418</sup> and roomy enough to rest and shelter in for the few white folk who have ever ventured to reach it, and so, Tradition holds, made when the giant Pia hurled his javelin from Tahiti in defiance of his enemies on the rebellious isle, nor stopped in its flight when the towering peak of rock stood in its way.

A Barrier reef completely surrounds Moorea, save at one reach where it becomes a Fringing reef, and hugging the shore permits neither boat nor canoe to pass. There are but 2 main breaks in that encircling coral wall, one on the near side of the island straight across from Papeete, opposite the village of Afareaitu : the other at its northern end leading into Oponohu Bay where nestles the village of Papetoai, the chief settlement on Moorea. Within that reef the broad smooth waters of the lagoon lend to a pleasing paddling in canoe, with rests by the way on little islets as the various settlements are passed.

Ashore, the ruins of countless maraes abound, some on the shore line, others high up the valleys, and there are caves in those mountains, some known, others lost to knowledge where the ancient dead were laid away, and to which the natives of today fear to go, much less to enter for fear and dread of Tupaupas, the ghosts of those carried up to their last resting place in the Long Ago.

The island has but one lake at its north east corner, Lake Temea, where the Fringing Reef holds back the large area of brackish water save for an outlet allowing ingress and egress for fish, chief of which is the silver and white scaled Ava, formerly held as forbidden to the common herd, the food for Chiefs alone and today much angled for by epicures. It runs to a considerable size, a hefty trout for sample, and spawns in the placid waters which lie between the two lesser settlements of Temea and Tiaia.

The Brethren enter the following in their Journal (1816) :

Proceeded to Temae, an interesting little settlement situated inland and is very fruitful. A lake of fresh water perhaps not less than 2 miles in length and nearly half a mile across, separates the village from the sea : this lake abounds with large fish particularly the white salmon. It is remarkable that there is no passage for a canoe round this part of the island within the (Barrier) reef. Our people were however able to drag the canoes over a considerable piece of low land into the lake.

<sup>417</sup> WWB has 3975 *ft* above the word *more*.

<sup>418</sup> WWB has 2593 *ft* above the words *lofty and*.

Upon leaving we crossed the lake in our canoe. Our people with some difficulty dragged the canoe from the lake into the sea, the land being about 300 yards wide.

There is no small amount of history connected with the island. Its very name holds interest and historic facts.

To the first white voyagers it was known under an entirely different name with which great licence was taken in its spelling. Cook has it as Eimeo, but Melville has it Imeeoo, whilst the first missionaries make brave attempts in their correspondence, Emoo, Emeo and Aimeo. The last one was nearest to the truth which is 'Ai-meho.

But 'Ai-meho after all was not its first or true name which was the one it now bears, but a substitute. Before Christianity came upon the scene there was a drastic law on both Tahiti and Moorea that words or even parts of them became 'Sacred' by Chiefs using them in their own new names, their property, or their newly coined daily vocabulary. This law was known as Pii and it meant death to him or her who broke it.

Some Moorean Chief thought fit to take part of the word Moo-rea for his own use and therefore a new name had to be found for the island. Moorea was a very appropriate one for it meant "Offshoot" and clearly was used as believing the island to be an offshoot through volcanic action from the vastly greater volcanic island of Tahiti.

Happily there was good ground for a new name the while still connecting the two islands. Moorea had been for centuries the spot where fugitive warriors in Tahiti's many wars had fled for safety and knew that once upon it they would not be allowed to starve. The word for "Food" is closely allied to the Kai of the Maoris but lacks the K, an unknown letter to the Tahitian peoples. Meho means "place of Retreat". What more to the point than to call the smaller isle where Food was sure for those in Retreat or Hiding Place. So was it but no white man ever got it right in writing or indeed in sounding.

From the very first this island played no small part in the politics and quarrels of the day. They were a fighting crowd, as ready to fight among themselves as with the neighbouring islands. Tradition has many a tale of bloodshed to tell before Cook came upon the scene and records it as a fact. Let one fierce slaughter stand for the Long, Long Ago as it has come down the Ages.

Centuries before Wallis, first of the white men, saw Moorea as he made for anchorage at Matavai Bay on Tahiti, the Paramount Chief on Moorea was he or she of Haapiti. Their forebears had won the position, a woman Chieftainess in chief, and her succession still retained it when the White Man came. She had had visitors from across the Strait and had given them hearty welcome but they had overstayed their welcome and became not only insolent but aggressive. The slaughter of 2 boys who had played a prank with kites against these Atiroos was too much for Marama. She called upon her warriors to avenge her and they carried out their mission with relentless fury. Not content with massacring every Atirooan man, woman and child upon Moorea, hunting them up the valleys and hills whither they fled for shelter, they launched their war canoes and sped across the Strait, swooped down on the Atiroos' headquarters nigh Punaauia slaughtering the lot, then still bloodthirsty sped on to Lesser Tahiti to complete their task, and did so with such thoroughness that the site of that bloody scene has ever since been known as Teahupoo, "The Pile of Skulls". 'Tis a peaceful village enough today.

When Cook arrived in 1769 he saw a fleet of 160 large double canoes attended by 170 smaller double canoes gathered in Matavai Bay, Tahiti, preparing to attack Moorea. The Chiefs of Faa and of Paea were there to secure the first Pomare's assistance. He hung back, at heart a coward. Cook computed

that a force of 7,760 were ready for a fight. They went and were defeated. Mahini of Moorea must have had no small force to beat off such an attack.

Again in 1773 he found the two islands at war and again Tahiti retired worsted. Moorea was keeping up its record so far as outside enemies were concerned. Internally the supremacy of Haapiti now assured, put a stop to sanguinary fights between its villagers.

In 1777 Cook who had hitherto only seen Moorea from a distance sailed thither, anchoring not in the Bay that today bears his name but in Oponohu. Usually he was very forbearing but Moorea saw him showing the strong arm, though he must have regretted it. A theft of a goat tethered in the Bay so angered him that taking his cutter he sailed round from Oponohu to the next bay, Pao Pao, from whence he gathered the thieves had come, landed his small force, burned the homes of the natives, destroyed their canoes, only to find on his return the goat aboard, a misunderstanding all round. The memory of that raid on innocent folk is retained by his name being applied to where he cast no anchor tho' most think he did.

With the coming of Christianity by the arrival of the missionaries on the Duff (1797) Moorea comes to the forefront in a wholly different way. Not at first, for the first attack on Paganism centred from Matavai on Tahiti and one reads only of an inspecting tour made by 2 of the "Brethren", not undertaken till 1802 on the neighbouring island. The Brethren were having a very rough time on Tahiti for their first 10 years, and other islands had to wait.

Moorea's turn came suddenly and from that time it has a record well worth recording and of which it has no reason to be ashamed.

Neither the first nor the second Pomare had Chiefly rights on Moorea save through marriage with Moorean heiresses. The father had for his second wife Tetua of Raiatea whose possessions reached to Moorea, the son had for his first wife Tetuanui of Moorea. These marriages brought large property to both, some at Uaeva (Papetoai) and some at Afareaitu. At both places they erected homes to which they retired as fancy took them from the Chieftery Paré Arué on Tahiti, their rightful heritage. It was the second Pomare who found Moorea not only a casual residence but a City of Refuge. Through him and his troubles Moorea though small compared to its neighbour Tahiti has to its lasting credit the happenings now to be described.

(1) It was on Moorea at Uaeva (Papetoai) that the Second Pomare surrendered to Christianity as against Paganism. That was in 1812. Things had been going badly for him at Matavai as well as for the Mission Band whom he befriended but refused to submit to as his Faith. The crash came towards the close of 1808. In November things were so threatening that all but four of the Brethren escaped on a calling brig to Huahine and thence to Port Jackson (Australia). He in December met his enemies nigh Papenoo with such forces as he could gather and was totally defeated. Without further effort he with his 4 faithful friends fled to Uaeva. He, as they, was a refugee and as the months and years passed he had time to ponder over things both material and spiritual. Suddenly he announced to the Brethren that he would be a Christian and with that announcement Christianity gained its first and decisive Victory. The Brethren knew full well what that decision meant. It might take time but the end was sure. His surrender was of a truth really a masterpiece of strategy rather than a full change of heart. The Brethren to his very death record how shallow was his conversion but it served his end. He knew that hundreds on his own island were Christians at heart. He would cease to fight as Pagan against Pagan but it should be a fight, Christianity against Paganism. It came within 3 years. On November 15, 1815 the 2 forces met in a death grip and Pomare won, but it was on Moorea that the campaign was planned.

(2) It was on Moorea at Afareaitu that the first Printing Press in Oceania was set up. That was in 1817. The press was brought out from England under the charge of the new missionary Ellis who had been thoroughly instructed as a printer and was landed at Papetoai February 15, 1817. In a letter to the Directors in London we read

Brother Ellis was desirous to have the Press put up at Afareaitu and Brother Davies wished to make trial of a school in that district whilst Brother Crook wished to accompany them. Brother Ellis considered it to be a healthy place for residence.

From the Journal of these 3 at Afareaitu we have the details of the removal,

It having been agreed to by a majority of the brethren that the Printing Press should be put up for the present at Afareaitu, the Press and a great number of other articles were placed on board the canoes at Papetoai which were 9 in number. Brother Davies accompanied them, and with some difficulty they reached Atimaha in the evening of March 18<sup>th</sup>. Early in the morning of the 19<sup>th</sup> the canoes left Atimaha and proceeded to Afareaitu where with some difficulty — the wind being against them — they arrived in the afternoon. The natives gave us a large house by the seaside for our present accomodation. After dark the brethren Ellis and Crook arrived.

March 20. Fixed upon a place for the Press near a stream of excellent water at the head of the bay (inside the lagoon). The natives appeared heartily willing to work and much pleased at our coming here.

June 5. Employed with the assistance of the natives in digging down the remains of the altars in the neighbour maraes as part of the printing house floor.

An Edition of 2,600 copies of a Spelling Book was the first struck off from the Press. The Entry for June 10 is as follows :

Pomare arrived to witness the first composing for the printing press done on his dominions. He was asked whether he would like to do the first himself. He answered Yes. The composing stick was then put into his hand and he was directed from whence to take the letters and how to place them till he had composed the Alphabet at the beginning of the Tahitian Spelling Book. He appeared much pleased.

(3) It was on Moorea that the first Tahitian trading schooner was built and launched at Papetoai. That also was in 1817 but the building had taken many years to bring about the launching. It was a remarkable undertaking seeing that there was not a boat builder amongst the Brethren as his former trade. The nearest was Bicknell, by trade a wheelwright. In 1813 the Keel was laid though it had been discussed and planned from 1809. In 1811 there had been a request sent to Port Jackson, their Supply House, “for tools and 2000 nails suitable to build a boat”, then came a full year of sudden deaths and much coming and going.

In February 1813 the Brethren wrote to Pomare, then at Matavai on one of his short visits, to see how the land lay for his plans, asking his permission to cut timber to which he replied, “Cut down for the Keel of our vessel without regarding consequences. What will be the consequence? Shall we be destroyed by the Evil Spirits? We cannot be destroyed by them for we have a great Saviour Jesus Christ.” So the work went forward, none afraid.

Through 1814 and 1815 the vessel was slowly taking shape. With the New Year they wrote Home :

Our vessel is still in hand, not finished : partly through want of materials, and partly through illness and want of time to attend to it during many of the past months. Some time ago the pearl fishery and pearl shells promised much advantage : but that trade (which we had partly in view when we began the vessel) was soon brought to a close and now the sandalwood business is also nearly terminated, but were it otherwise we could not in conscience allow our vessel to be any way concerned in it, as we apprehend most if not all the sandalwood is used in China or India for idolatrous purposes. The pork trade is likewise at an end for the present, as most of the hogs have been destroyed in the late wars, or have been purchased by the late vessels that have touched here. Our motives in attempting to build it, were good, whatever may be the result : we had no other view than to serve the purposes of the Mission and lessen the expenses of the Missionary Society in respect of our support here. If it fail of answering these ends, we cannot help it : we have made the attempt in the midst of many difficulties.

In August 1816 it was so far advanced that a request was made from Moorea to the Society's agent at Port Jackson (Hassell who had come out in the *Duff* but had fled and taken up residence and trade — a flourishing one) to send "a competent man to complete the boat and take it to the Colony". Captain John Nicholson came upon the scene and 7 white men with him as part of the future crew. So they pushed ahead through 1817 till at last on December 6<sup>th</sup> of that year the vessel was launched from its stocks : a great day for both natives and the Brethren.

We have the following account of the great event from one of them who was not at all likely to forget it.

December 6. About 4 a.m. set off (from Afareaitu) for Papetoai in a single canoe with Pati, landed at Papetou, <sup>419</sup> passed through Tamai, crossed the lake and walked on to Maharepa. Here expected to borrow a canoe but the people had all gone to see the brig launched. Walked to the adjoining district, found only one canoe which was about to be used to carry food to Pomare. We were kindly put across Cook's Harbour. Walked on to Pihêna, met the Chief who was ill and infirm, everybody else gone to the launching.

Found the bottom of an old fishing canoe, the edges of which were scarcely 2 inches above the water, but being too much fatigued to walk any further I got into it and keeping near the shore till we reached Oponohu harbour we crossed over safely and landed opposite Brother Hayward's.

We had scarcely arrived when Pati observing the Flag hoisted on board the vessel wished to run on lest it should be launched before he could arrive. He took up his bundle of breadfruit which he had brought from Afareaitu (a distance of 20 miles by sea) and ran on before : shortly after, I reached the place where they were endeavouring to get the vessel off the stocks.

The King, the principal Chiefs and vast crowds of people were present assisting. After some time the vessel moved from the stocks, when the King, performing the usual ceremonies, pronounced as she passed along "Ia ora na Haweis", Prosperity or Peace to the Haweis.

---

<sup>419</sup> Teavaro?

D<sup>r</sup> Haweis has always been considered the particular friend of the Otaheiteans, and the King wished the vessel to be called after him.

In June 1818 it was ready for sea and with 6 natives added to the crew the Haweis cruised through the Island Groups carrying the owners to isles they desired and gathering up oil, hogs, etc., as cargo. Then on the 1<sup>st</sup> January 1819 it headed for New South Wales from its home port Papetoai, Moorea, arriving with flags aflying at Port Jackson February 15<sup>th</sup>, a dream fulfilled and both the Brethren and Moorea had Tahiti's first trading schooner notched to their lasting credit.

(4) It was on Moorea at Oponohu that the first Sugar Factory was set up. That was in 1818.

A M<sup>r</sup> Gyles <sup>420</sup> who had been engaged on a sugar plantation in the West Indies was commissioned by the Directors of the Missionary Society on a 4 years' contract to set up and maintain a sugar factory. With the aid of Darling, Platt — both missionaries — and a son of Bicknell, he established it on Moorea, "but as the natives had neither the aptitude nor the desire to engage in regular work the scheme soon fell through from inability to procure labour."

The experience that Gyles had had with negroes moreover "did not fit him to deal with free natives like those on the islands."

In addition to the troubles which arose in this way with the natives, Pomare became fearful lest if the plantation prospered adventurers would be attracted and his island Group injured by their presence and actions. To allay his fears, Gyles abandoned the work, retiring to New South Wales.

Bicknell Junior removed the plant to Tahiti and succeeded in making very good sugar though not in sufficient quantity to be of any commercial value. The site was Faone within Paré-Arué.

(5) It was on Moorea that the first Book of Scriptures was printed and distributed from Afareaitu. That was in 1818.

Much preparation was necessary before giving the chosen Book — The Gospel according to Luke — to the public. They had to be able to read. There has been noted the issue of a Spelling book and whilst Henry Nott was completing his Translation, 2,300 copies of a Tahitian Catechism were issued.

The first copy of the Gospel was rightly sent to Nott at Papetoai, and the second "half bound in red morocco" to Pomare. There came a change of policy with the issue. Hitherto all books had been free gifts but now a charge was made. The following quotation is from the Brethren.

For several weeks past the people have been told that books are to be sold in order that we may have the means of getting more paper towards printing other books for them. Each man that wished for a book has been advised to prepare in time 7 or 8 bamboos of oil (about 3 gallons) telling them it would be measured and that whatever was above that measure would be their own. They seemed well pleased.

It is of great importance to suit our plans to circumstances. Had a similar measure been adopted with respect to the elementary books it would probably done much mischief and certainly would have prevented many from learning to read. But now all those who have been taught and made some progress in their little books are eager to procure copies.

---

<sup>420</sup> [John Gyles \(? – 1827\)](#)

The question of both paper and binding appears often in their Journals and the eagerness of the people.

Busily engaged assisted by Pati, Tahuaeva and Hitoti in binding the books. The mill boards made from the bark of the breadfruit tree answer well.

Our beach is lined with canoes from different parts of Otaheite and the District crowded with people who are all eagerly waiting for books.

Our place very much crowded with people who are waiting for books : we labour at them from morning till night but cannot get them ready fast enough : some of them said they could not sleep thinking they should be unable to obtain a copy.

Truly gratifying to observe their care of the book when procured : a cover is immediately made for it, and a bag or basket to carry it about in : some are even afraid to take it out lest it should get dirtied or torn : afraid also to leave it at home lest it should be injured in their absence. Frequently they may be observed sitting in circles beneath the shade of a spreading tree and reading to each other.

And again

The natives crowd from all quarters for books.

Been employed now about 2 months in binding the books partly with sheep skins I had brought from the Colony and partly with skins procured by the people, chiefly goat, cat and dog which we have dressed for them not very well we being but indifferent tanners, yet they are strong.

There seemed no end to visitors : for again one reads

While at work at the printing we were visited by numbers of the natives who have lately arrived from the eastward (or Paumotu) islands. They appeared much surprised at the sight and use of the press. There is a rudeness in their manner which we do not find in the Otaheiteans.

Tati Vahine, wife of Tati, a Chief of Otaheite, paid us a visit in order to inspect the printing press. Most of the Chiefs of Otaheite and many of the people have come over to see it. Its mechanism still remains beyond the comprehension of most of them.

Exchange, no robbery, appears in the Diaries :

M<sup>rs</sup> Ellis and M<sup>rs</sup> Crook employed in making covers for the books. By means of these covers, a sort of trade is carried on with the natives for food : a root or two of Taro or a bunch of Breadfruit is the common price of a cover.

Anxiety as to supply of paper is relieved. There arrived

a quantity of paper, a present from the British and Foreign Bible Society.

High praise appears for the printer's Devils :

Captain Thompson inspected the printing office, he expressed himself much surprised at the expertness the men who assisted me had acquired. The man who pulls the sheets does it as fast as I can.

Their memorizing ability is noted :

Chief Faito was anxious to see more printed, he could repeat those in his possession without looking at them.

With “Luke’s Gospel” printing reached its climax on Moorea.

(6) It was on Moorea where the first Boarding School was opened at Afareaitu. That was in 1824. This was for the sons of the Great and the little Boy King Pomare III was there till his death. Hard by lay the body of his baby elder brother Teina<sup>421</sup> whose grave is thus described at the time : “His grave is enclosed by a strong high wall, near to a large public marae.” Tho’ much broken that wall still stands.

The first Headmaster was Brother Orsmond<sup>422</sup> who had arrived in 1817. He retained the position till 1831, removing to Tautira on Tahiti. His place was taken by Brother Simpson who had arrived in 1827, who was in charge of Papetoai ; and the Institution was removed in 1831 to Oponohu which was in his district, but a short walk from his Chapel. It passed under the care of the French Protestant Missionary Society and its record became undistinguished. Its actual site in both villages are today impossible to trace.

But the “South Sea Academy” lead the way.

(7) It was on Moorea at Papetoai that the first Stone Church was erected in Oceania. It was opened for worship in 1829 having been commenced in 1822. We read

On the 20<sup>th</sup> of February (1822) the brethren had the pleasure to lay the foundation stone of a new Chapel which is to be of an octagonal form and built with hewn coral rock. The people are carrying on the building with spirit, observing that it will be the first house of stone erected in these islands.

But the hewing out of the stone from the coral reef was no easy task. It took years in the doing. The architect was the missionary Platt who superintended the work till he removed to Pora Pora when his place was held by Brother Henry till 1827 when he<sup>423</sup> moved across the Strait. The local deacons with other brethren then watched the work to its completion, Brother Simpson being called upon to take charge and open the Chapel for regular use in 1829.

A Report sent Home in 1824 by visiting Delegates of the London Society makes the following comments :

The Chapel at Present is a native house 80 feet by 25 feet, but this will soon be abandoned for a stone building of extraordinary workmanship. It stands upon the site of an old public

---

<sup>421</sup> WWB has *Tina*.

<sup>422</sup> WWB has *Orsmund*.

<sup>423</sup> WWB has the word *likewise* here, since he originally wrote that Platt went to *Tahiti*; later he crossed out *Tahiti* and wrote *Pora Pora*. Presumably Henry went across the strait to Tahiti, not Pora Pora.

marae. Its form is octagonal, 60 feet in diameter : the doors and windows are semi circular and well proportioned. The walls were nearly completed when we left (for other Groups) and are about 20 feet high.

Over each of the 4 doors is an Inscription well cut in the coral stone. Those over the east and west doors are in Latin, that over the south door is in English and that over the north is in the Tahitian language stating the year of the reign of the King when the foundation stone was laid.<sup>424</sup>

Today 2 of the Inscriptions are clearly to be read, the English and the Tahitian, the Latin ones have had hard treatment.

The English reads “Holiness becometh Thy house, O Lord, forever.”

The Tahitian reads “This house was begun in the year of Our Lord Jesus Christ 1822 in the reign of Pomare III.”

Time and man’s hand have played havoc with the Latin ones.

That over the west door Time has largely obliterated. There can be read “Haec domus sacra... Anno Domini 1822 et in Anno Primo Regni Pomare III... Gloria Qui in Secula. Amen.”

That over the east door Man has wiped out all but 3 words at the bottom, “Gloria soli Deo”. Above there appears “Ebenezer” and above this name in place of Saint there appears in French, “This temple was reconstructed by the Protestant Parishioners of Papetoai 1887–1891.”

As there is no record of the Church having ever been entirely closed since its opening day one must conclude that “renovated” would have been a better word.

---

<sup>424</sup> See also 6. *Extracts From the Quarterly Chronicle, Volume III*, in *Pioneer Missionaries of Tahiti*, in Part IX, *Old Time Tahiti*.

Entering the building the visitor sees a large and handsome Tablet of wood, gold lettered, upon one of the many sides. It bears 5 names and tells a Tale of the Past. It reads in Tahitian <sup>425</sup>

In grateful memory  
of  
HENRY BICKNELL  
arrived  
on the ship Duff  
March 5, 1797  
Died August 7, 1820.

Also  
WILLIAM SCOTT  
arrived  
on the ship Royal Admiral  
July 10, 1801.  
Died February 9, 1815.

Also  
SARAH HENRY  
Died July 28, 1812.

MARY DAVIES  
Died September 4, 1812.

SARAH HAYWARD  
Died October 4, 1812.

The graves of the above lie nearby.

This tablet was erected by the  
L.M.S.  
1936.

The little cemetery is within a stone's throw of the Church and these white folks' graves are outlined with coral rock laid there from the first. Close by them are a few graves of natives, evidently there to stave off any possible attempt at desecration for they are those of the first native Christians, given Christian burial on Christian ground. When Christianity ruled the isle there was no further fear.

Thus reading of Moorea we may surely say that the little Isle has clearly won right to a place in the History of the Past and its natives have good reason to be proud of their Home.

Additional note.

The grave of the first boy of Pomare II by his wife Terito of Opoa who was born on Tetiaroa Nov<sup>r</sup> 21, 1817 and died aged 4 months lies "on" Afareaitu. Aimata was his elder sister and Pomare III was younger brother. His name was TEINA.

# PART XI

## ROAMING THE PACIFIC WATERS

BY  
REV. WILLIAM WASHINGTON BOLTON, M.A.

### PREFACE

The original text of *Roaming the Pacific Waters* is stored in the Mitchell Library, State Library of New South Wales, Sydney, Australia, as Volumes 7 and 8 of the Bolton Papers (Collection 1–7A). They are partly rewritten from Volume 5, *Roaming in the Great South Sea*, and Volume 6, *En Voyage*. In contrast to the other volumes in the Bolton Papers, *Roaming the Pacific Waters* is typewritten, rather than handwritten.

This text represents WWB's travels in the South Pacific from 1920 to 1921 and from 1924 to 1925; the period WWB spent on Niue, from 1921 to 1924, is covered in Part II, *The Chronicles of Savage Island*. We know that he left Victoria in 1920 <sup>1</sup> and visited Hawaii, Fiji, New Zealand, Tonga and Samoa, before arriving on Niue on 12 June 1921. <sup>2</sup> We also know that he departed Niue for the Kermadecs in April 1924. <sup>3</sup> He then travelled to the Kermadecs, New Zealand, Australia, Lord Howe Island, Norfolk Island, the New Hebrides, New Caledonia and Singapore, returning to Victoria in 1925. However, the only firm dates that we of those travels is All Souls Day, 2 November 1924, and Armistice Day, 11 November 1924, which he spent in Vila, New Hebrides. <sup>4</sup> He then travelled among the islands of the New Hebrides, spending some time on Santo.

In Tale #50 in Part IV, *Tales of a Roaming Grandfather*, he writes "I was roaming in the New Hebrides when word reached me that my helping hand was needed amongst you [at the University School]." It would appear that he then returned to Victoria rather quickly. He stayed in New Caledonia long enough to visit Noumea, Bourail, Saint Louis and Conception, probably a week or so according to his stories. He then travelled by ship to Singapore, where it appears he stayed only a few days. If he left the New Hebrides in about early December 1924, he probably departed Singapore in about January 1925.

These volumes are now available on microfilm (CY Reel 4990). The text was transcribed from scans taken from the microfilms and provided in PDF files.

## INTRODUCTION

With time no object, nor definite program ahead, a special sense of freedom and pleasure is the possession of the Roamer setting out to learn what he may haply gather on the way. That way, in fact, led from the picturesque City of Victoria, B.C., the Gateway to the Pacific from the Canadian hinterland, over much of Polynesia and Melanesia, together with those Continents on the western boundary of the greatest of oceans, Asia and Australia, with their respective appurtenances of adjacent islands, till it ended at that other Gateway to the Pacific from the Indian Ocean, Singapore; and took five years in the doing.

All that had been settled was the Island of Oahu, one of the Hawaiian Group as the first objective, the rest must shape itself. Without companion there was no call to consult the wishes of another, but though alone there was at no time a consciousness thereof, by reason of the good comradeship met all along the way and a ready willingness to help which smoothed out every difficulty.

May what I learnt prove useful, as well as interesting, to my fellows.

## A FOREWARD : WHITE AUTOCRATS IN THE SOUTH SEAS

---

There was Adams.<sup>5</sup> Peeping up above the waters, a mere speck of land amid a vast stretch of lonely sea, there lies the isle of Pitcairn one mile wide by scarce two miles long — after Sydney and Norfolk Island, the oldest British Colony in the Southern hemisphere. It was Captain Carteret<sup>6</sup> in H.M.S. Swallow who in 1767, first of white men, mapped it on the chart. Magellan had passed by, far to the north, two centuries before, so had Mendana and Quiros later.

The Midshipman Pitcairn was the happy lad to sight it, and to him was the lasting credit given by his Commander, nor attempt ever made to change the name. It was not then, nor ever is easy of approach. They saw a coastline, precipitous and rugged, a line of high points with a valley covered deep with vegetation, but no sign of life thereon. To this day it may well have been left as it then was, but for an happening over 1000 miles away — a mutiny on the high seas.

In 1789, more than 20 years later,<sup>7</sup> there headed for the isle another man of war, The Bounty : without Commander and but a handful of crew. No flag flying, proclaiming boldly its nationality, but rather was it a fugitive from all its kind, seeking to hide from a Justice that its crew knew full well would reach out after it, nor rest till it had found its quarry.

Lieutenant Bligh had been commissioned to sail to Tahiti and there secure plants of the bread fruit tree (which Captain Cook had reported upon after his first voyage in the Pacific) and carry them to the West Indies, with the idea of thus furnishing a useful food for the whites and natives of those islands. The stay upon Tahiti had been long and pleasant and the crew left it with regret. Three weeks hence, heading west in preference to returning on the course they had come, round the tempestuous Horn, 25 of the crew with the mate at their head broke out in sudden mutiny. They not only had had enough of their commander but to some of them the delights of Tahiti were over mastering. Putting Bligh and eighteen others in the launch, together with a sparse supply of equipment and rations, they set them adrift off the Tongan Group to find their way Home as best they could.

Bligh was not long in touching land, but that landing at Tofua cost him the life of his Quarter Master, and drawing off he vowed to make no further landing till he had reached a land of civilized folk. He did not know for a certainty of the settlement just made at Port Jackson (the Sydney of today) so struck out west, passing group after group of savage lands, till he reached Timor 3600 miles away — a mighty feat of endurance for one and all; yet all came through, though nearly finished.

Mutiny is an evil deed, and yet for those mutineers it may well be that they had cause. For that same Commander was sent by the Home Authorities a while later, as Governor of the new settlement in Australia. The settlers, not long after, rose in rebellion and imprisoned him in his official residence; his rule they declared to be impossible. To Home, both sides appealed. Bligh was recalled, promoted, but no further employment was given him by the Powers that be.

The mutineers, who had compelled three young midshipmen to remain with them, turned and made back towards Tahiti. They were conscious of their peril, for ere they made that island, they touched

---

<sup>5</sup> [John Adams \(1767–1829\)](#)

<sup>6</sup> [Philip Carteret \(1733–1796\)](#)

<sup>7</sup> WWB has *less than 20 years later*.

at Palmerston, now enrolled in the Hervey Group, found it uninhabited though rich in produce of a kind, a fairly safe hiding place from Justice. Thence they headed for the Austral group south of Tahiti but were driven away by the natives. To Tahiti they then went and after a second attempt in the Australs, returned to Tahiti and took their chance. But not all of them were so inclined. Nine of their number determined upon seeking greater security. These, together with seven native men and twelve women, set sail once again in *The Bounty*. It was well; for Justice though tardy reached out from Britain and laid hands upon all those who had remained save two who had been killed by Tahitians. They were placed in irons and carried off for trial. Their ship was wrecked upon the coast of Australia and some of the mutineers were drowned, one of the midshipmen amongst the number; the rest were saved, most only to be condemned. Three were hanged, a few altogether freed from complicity, the young midshipman and two others sentenced to death, but life was granted them by a King's Pardon.

Carteret's account of his voyage was a published report and was upon the *Bounty*. Here the band seeking safety read of Pitcairn's finding. What better place for them! And so to Pitcairn they went, not finding it readily as Carteret's longitude was incorrect; not easy of access when reached. They landed, stripped the *Bounty* of everything they might need, burned and sunk the ship and settled down. But not peacefully. Within two years only one man, a mutineer, remained, Adams, whose real name was Alexander Smith and who has left no reason for the change. Jealousy and drink brought crime. First, over the women folk, the native men attacked the whites and killed five : a little later the four whites with the help of the women killed off all the native men. One of those who remained discovered how to make a powerful spirit from an island root. He served it out to another, the two perished, one by suicide, the other at the hands of the remaining two. Then illness of a natural order took one more and Adams reigned alone. His reign was long and masterful. Women and children were in his charge. Things had to change, and first he changed himself. When in 1808 some 20 years later an American trading ship appeared, seeking fresh water and haply fruit, Adams had his kingdom in ideal shape. His Bible was his Book of Laws. He was his own interpreter and had moulded his people into models of Christian piety. He was still in his prime for he was but 2 and 20 when he broke with Law and order. He had passed through a fierce ordeal and was tamed thereby.

When Britain learned, it took no further steps of vengeance; it left Adams alone, nay instead stretched out its hand to help : and when as the years rolled on, men of war came upon the scene, Adams trembled not. Though free now, he had no wish to leave. Pitcairn was his home, his kingdom : he had enough to live upon, his word was law, he was at peace with all and himself. Grey hairs came and length of days : then the final scene, and the one time mutineer was laid to rest, with the regret of all, in the lonely isle which had so well sheltered him in the day of his necessity.

---

There was Marsters.<sup>8</sup> When Magellan in 1521 rounded Cape Horn and sailed out into the Pacific — he the first of white men so to do — the first landfall that he made, he named San Pablo. To look at a map is to wonder how he had sailed so far without sighting land, for San Pablo is in the Hervey or Cook Group and named Palmerston today.<sup>9</sup> The Marquesas, the Gambier, Tahiti and other groups

---

<sup>8</sup> [William Marsters \(1831–1899\)](#), born Richard Masters. WWB has *Masters* here and elsewhere in this section; however, the family on Palmerston has always been known by the name of *Marsters*.

<sup>9</sup> WWB has mistaken [Palmerston](#) in the southern Cook Islands for [Puka Puka](#) in the Tuamotu Archipelago, French Polynesia, the latter being the first island sighted by [Ferdinand Magellan](#), in 1521. Palmerston was discovered by Captain Cook in 1774. This and WWB's next sentence are therefore incorrect. (There is also a [Pukapuka](#) in the northern Cook Islands.)

lay clear across his path. But those islands that look so close upon the map are oft hundreds of miles apart; and it was chance not knowledge that chiefly caused the pioneers to make discovery. Magellan died from a native spear, and lies buried in the Philippines, and San Pablo dropped wholly out of ken. Two centuries later, Cook sailed into the South Seas and in 1774 made a second voyage. It was then that he rediscovered San Pablo and renamed it after one of the then Lords of the Admiralty at Home.

A lonely but fruitful spot he found it, and was glad thereof, for when he touched there again in his third and final voyage, his cattle needed fodder and his crew a change of diet. It is but an atoll, a ring of coral enclosing a lagoon eight miles in diameter, but a ring abundant of life. This was the isle that the *Bounty* mutineers had touched at when heading back towards Tahiti in 1789 but had left alone. Then another long period passed before Palmerston was trod by man.

It was in 1862 when a ship's cooper named Marsters with three wives, landed on the atoll and proceeded to take possession. In time he had a numerous family, and his sons took to themselves wives from neighboring islands, and the Marsters increased until today there are 120 souls all bearing the one name — Marsters. He, the first, was no derelict; he had his views of autocracy and religion. He ruled, he judged, he punished. He built a Church out of wreckage cast up on the atoll, and all have since that day, had to carry out their religious duties. The Marsters family is not likely to be dispossessed, for there is but one ship a year that calls from the outside world. They are Britishers, one and all, and King George is their undoubted Sovereign Lord.

---

There was Jennings.<sup>10</sup> Not far to the north of British Samoa lie the Tokelaus, and Olosenga<sup>11</sup> has been, till lately, considered an integral part of that group. But it has other name than that by reason of its white discoverer. Among white folk it is Swain's Isle : not large, one mile broad, by nigh 3 miles long, of coral formation, but very rich in cocoanuts.<sup>12</sup> Hither over 50 years ago<sup>13</sup> came Eli Jennings, an American who had married the daughter of a Samoan chief, and settled down as Lord of the manor whose rights there were none to dispute. He opened up the isle with roads, planted and tended with care, and made good money. A church he built too for his dependents, and secured a native Teacher to educate the children. It is a thriving little colony still; and though no longer British, having of late been ceded to American Samoa, no one has had cause to regret that an American and his off-spring have ruled the land.

---

There was Enderby.<sup>14</sup> The Auckland Islands lie 290 miles to the south of New Zealand and were discovered in 1806 by Captain Britow in the whaler *Ocean* belonging to one Samuel Enderby. He

---

<sup>10</sup> Eli Hutchinson Jennings (1814–1878)

<sup>11</sup> [Swains Island](#)

<sup>12</sup> WWB uses the spelling *cocoanut* here and below, and then switches to *coconut*, starting with his account of Tonga, *Tong-a Tabu*. He then uses both spellings in *Of Cocoanuts*, concerning Samoa.

<sup>13</sup> Swains became a semi-independent proprietary settlement of the Jennings family, under the U.S. flag, on October 13, 1856.

<sup>14</sup> [Charles Enderby \(1798–1876\)](#) founded the [Southern Whale Fishery Company](#) in England in 1846. In December 1849, he established the [Enderby Settlement](#) in Erebus Cove, [Port Ross](#), at the north-eastern end of [Auckland Island](#), close to

took possession of them in the name of King George 3<sup>rd</sup>. They were much used both by whalers and sealers. Later on in 1847 a lease of the islands was granted to Charles Enderby who formed the Southern Whale Fishery Company and went thither to control. He had at his own urgent request been appointed by the Colonial Office Lieutenant Governor responsible to Downing Street. Almost at the same time Douglas <sup>15</sup> of the Hudson Bay Company had been given a similar commission over Queen Charlotte Islands and to both these officials the Home Government had been careful to point out that they were given authority solely to meet the circumstances of the times. "It conveys to you no power to make laws or constitute a regular government but it gives the party bearing it a position of authority which is both important and valuable." <sup>16</sup>

When Enderby landed in '49 there were half a hundred white folk in the Company's employ and some 70 Chatham Islands natives to assist them. At first all went well and the Governor reported on the benefits that would soon follow to the New Zealand settlers and that things would prove financially a success. But the company promoter's sanguine expectations were not realized. His rule did not suit his subjects and soon he writes Home asking how to deal with cases which were extreme enough for transportation. He got no satisfaction. "You must deal with offences, should they unfortunately occur, to the best of your ability according to the law of England, summoning a jury of settlers if it should be absolutely necessary." But there were no "settlers"; all were the Company's employees.

By '51 things got so bad that a commission was sent out by the Company itself to look into matters; both disputes and finances. This did not help matters. Enderby endeavoured still to rule his refractory subjects till in disgust the following year he issued a proclamation of abdication complaining of the insults to which he should seek redress in Wellington, N.Z., through the Governor, Sir George Grey. <sup>17</sup> But Grey declined to take any part in Enderby's quarrel with his company or its employees. Referring the matter Home, word was returned that having tendered his resignation, the Colonial Office without any expression of opinion as to the merits of the case warned Enderby to abstain from any further exercise of authority. Thus ended his brief reign.

The Company itself collapsed a few months later and H.M.S. Fantome went down to evacuate the settlement. Since then the group has come under the jurisdiction of New Zealand and upon it today are found periodically both whalers and sealers to replenish stores, whilst sheep farming has become a profitable industry. Here too are depots for ship-wrecked seamen. Government steamers call from time to time and vessels find in Port Ross a fine spacious harbor where many a hard pressed vessel seeks safest refuge. But the one time autocrat of the group is merely a tradition of the Past, his very name unknown to most.

---

[Enderby Island](#). The ill-fated Enderby Settlement finally bankrupted the Enderby family business, which was liquidated in 1854. Charles Enderby died in poverty in London in 1876.

<sup>15</sup> The Colony of the [Queen Charlotte Islands](#), in what is now British Columbia, Canada, was created by the Colonial Office in response to the increase in American marine trading activity resulting from the gold rush on Moresby Island in 1851. No separate administration or capital for the colony was ever established, as its only officer or appointee was [James Douglas \(1803–1877\)](#), who was simultaneously Governor of Vancouver Island. The colony was merged with the Vancouver Island colony for administrative purposes from the 1850s to 1866, when the Colony of Vancouver Island was merged with the mainland, which until that point was the separate Colony of British Columbia. The British Parliament had created the Colony of British Columbia in 1858 and appointed Douglas as Governor. James Douglas is the grandfather of WWB's wife, Agnes Jane (Lily) Bushby (1865–1944).

<sup>16</sup> From this point onwards in *Roaming the Pacific Waters*, the text in each chapter is contained in only one or two paragraphs. Paragraph breaks have therefore been inserted for easier reading.

<sup>17</sup> [George Grey \(1812–1898\)](#)

And there was Yankee Ned.<sup>18</sup> The Torres Straits lie to the north of Australia and are dotted with many islands. There is Thursday Island of pearl fame; Wednesday and Friday Islands too. Most have their history, Yorke Island amongst them. Its palm bordered shores bespeak a languid calm, yet few islands in those straits have such a record for wrecks. There is heavy salvage waiting there, and without effort of man, the sea steadily disgorges good Spanish crowns and swords and guns. Hither fled Yankee Ned, an American deserter from a man of war, married eight native women and started pearling. He amassed a fortune, and also a large progeny. Yorke Island is full of Yankee Neds. He, the first, lived to nearly 90, and died not perhaps in the odour of sanctity but certainly in the midst of tumultuous noise, insisting upon his gramophone playing its liveliest airs till Yankee Ned had passed to a Better Land.

<sup>18</sup> [Edward Mosby \(1840–1911\)](#).

## THE CROSS ROADS OF THE PACIFIC : OAHU

(O-R-WHO)

### The Approach

Straight ahead it lay, seen through the haze of the noon hour of a glorious summer day. No low lying curve darkening the far horizon, but the Mountain Range of Koolau on the Isle of Oahu. We were heading for its eastern end where it dips into the sea, to appear again, twenty miles away as another of the Hawaiian group. To the West it grew higher and higher till the eye could no longer distinguish between the range and the sky. Steadily things became clearer. There could be seen a reef with the surf dashing over it; and beyond a bay bounded by mountains : and between these a valley under cultivation with a white painted mill in the centre. Outside the reef, rose Rabbit Island, a towering rock in shape like a gigantic barn. Now Makapuu Point appeared, with its Lighthouse, to warn ships at night (they know no fog in this favoured land) that here is the turn for Honolulu. Rounding the Point we plough along to Koko Head, the first extinct volcanic crater to be seen, where we turn, then Diamond Head appears, another crater, impossible this one to be mistaken for what it was in bye gone days. One can see nestling behind it, an Army Post with the Flag flying in the Trade Wind, and high up on the very pinnacle of the old crater's edge, facing the West, there are guns. Diamond Head to Hawaiians is what Fujiyama Mt. is to the Japanese. Neither can think of one without the other.

Now for the last time we turn and see Honolulu itself, nestling exactly on the opposite side of the Mountains to that which first we saw. Under the very nose of the Head, jutting out into the water, there rises a large white mansion. Those who built it wanted surely to have nothing of earth to obstruct their view. It was the home of the Castles, of Missionary stock, but is now the home of the Elks Club. There is a bend here in the shore line : and the calm waters inside the reef over which great waves tumble unceasingly, the many bungalows, and the multitude bathing, tell that we are opposite Waikiki Beach, famous the world over for its possibility of all day immersion, and its surf riding. In the middle of the bend rises up the great Moana Hotel, unmistakeable, the modern hand of business grasping the opportunity of Nature's handiwork. There is a long sweep of coastline, till far to the West one sees Barber Point, where a Captain of that name lost his good ship over a century ago, but now there is a Wireless Station, and a Lighthouse round which ships turn, on their way to far off China. A great reef of coral gives no sign of a passage way, but Nature was indulgent, for there are three clear breaks in that long sweep. We are making for the first; not far off is Kalihi, and then comes one leading into Pearl Harbour, ere long to be one of the great Naval Bases of the world. But our eyes now are upon the City. It lies on the flat at the foot of the mountains. A dozen spurs of the great range, called lovingly by Old Timers, The Delectable Mountains, run down towards the sea, forming entrancing valleys. Up all these there peep out Homes, amid a riot of Royal Palms and cocoanut trees.

The engines which have throbbed so ceaselessly for days and nights now well nigh cease, for out from the harbour there speed forth two cutters. There is the Quarantine Officer to come aboard, the Customs and the Pilot too. Ranged up in line, hats off and veils all lifted, we are passed by that dread czar without a hitch, the Customs (if you are properly prepared) takes but a moment; and there is naught to do but watch the Pilot at his work. Now, under our own steam we go, but in days of old, a long line of natives towed the ship in, who grasped the hawser and walked along the reef (which here bends in to the shore) unmindful of coral or of surf. Slowly we reach where the reef parts, we glide in between, and at once there is calm water. The docks are some way off, but now appear the diving

boys, dark skinned native sons, who swim out to meet you, jump off every nearby projection, hurl themselves from every stationed ship you pass; no height seems to faze them; and every movement of their lithe bodies is clearly to be seen as they duck and dive, and twist and turn like the very fish themselves, urging you all the while to “throw a copper” which in those deep clear waters you can see them grasp beneath the surface, as it slowly sinks.

We are at the dock at last, safely hawsered, the gang plank is in place, and we step ashore. Aloha is the first word to greet you, and you must not look surprised if some one throws around your neck — not his or her arms — but a garland of flowers. That is their way. They would have no lonely strangers here. And some of those same flowers have a heavenly smell. Aloha means far more than a mere formal welcome, it stands for sympathy and a willingness for friendship. And the Americans have caught the same spirit of the place for you meet the “glad hand” everywhere. Here then in mid Pacific we stand. A long time dream is realized : attained is the Land of the Perpetual Summer, no biting cold — the Tropics without the dangers of the Tropics — no agues, fevers, elephantiasis — few flies to make life a weariness — no reptiles poisonous or otherwise — a land of sugar cane and pineapple, of cocoanuts and palm — an Earthly Paradise — the Hawaiian Isles.<sup>19</sup>

### Hawaii's Isolation

To those who have lived in the great centres of the Continents it is a strange feeling to think that upon arrival where these Islands are. America is 2000 miles away to the East : China 5000 to the West : to the South, New Zealand is nigh 4000 : whilst directly to the North, those barren Aleutian Islands lie 3000 miles away. No wonder that these isles took long a finding. Men sailed long across the Pacific ere they hit upon these mountain tops rising out of the sea : they crossed far to the South. The natives tell of a Japanese junk drifting here in the long ago, which is not at all improbable, for the remains of similar craft have been found far further north, cast up by the waves on the coasts of “B.C.” They say moreover that a Spanish ship bound from Mexico to the Philippines centuries ago was wrecked on Hawaii, blown out of its course, and making a discovery for itself alone. The real pioneer was Captain Cook in 1778 and here (on Hawaii) a year later he fell before the spears of the natives in a quarrel not his own which he would fain have put a stop to. Fifty years ago our Schoolmasters in the Old Land taught us of the “Sandwich Islands” and “Owhyhee”. The former was Cook’s naming in honor of his superior, the Earl of Sandwich,<sup>20</sup> the latter was his attempt at phonetic spelling. He was nearer to the true name than we are for the natives have no true “H”.

Whilst there are eight main islands, there are five only which are of interest to travellers. They are all Volcanic, and string out in a long line from North West to South East. These five are Kauai — Oahu — Molokai — Maui and Hawaii. The last is the largest, and had the capital on it for many years, but Oahu has Honolulu on it and so now takes the lead.

<sup>20</sup> [John Montagu, 4th Earl of Sandwich \(1718–1792\)](#)

## Volcanoes

The one now active volcano is on Hawaii — Kilauea — “The House of Everlasting Fire”. It is a troublesome fellow, and is watched day and night by scientists. It was here that an act was performed rivalling the Biblical story of Elijah and the Priests of Baal <sup>21</sup> — an act of noblest heroism and Christian faith, and well worth passing on. In 1820 the first missionaries arrived. Just prior, the whole nation had overthrown Idolatry. But old beliefs die hard and the Spell of Pele, the dread goddess of the Volcano, was still strong upon the people. Kapiolani, <sup>22</sup> a princess, greatly beloved, became a Christian and in 1824 determined to break that spell. Her husband and her friends would fain have stayed her, but she would go into the very home of the goddess, and there bring the matter to an issue. It meant over 100 miles of arduous walking, but with a few faithful ones she made her way. At the Volcano’s edge, Pele’s High Priestess met her and furiously warned and forbade her not to go down into the Pit where the boiling lava surged. Kapiolani answered her in Scripture texts. Then with her faithful but frightened band she descended to the very edge, gathered the Sacred Berries which grew nearby, cast them and stones into that Liquid Hell crying “I fear not Pele, for Jehovah is my God! If now I perish, then fear Pele — but if Jehovah preserve me at this hour, fear Him alone.” There this little band sang Christian hymns, there they bent knee in adoration of their accepted God Supreme, and there Pele fell, never to reckon more as a Power over the souls of men.

On Maui is the largest extinct volcano in the world. It is 20 miles round its rim and 2500 feet deep, and even now with its head and best part of its body blown off, it rises 10,000 feet above the sea. So these far off isles may indeed be said to be uncommon ones, and aroused in me a keen desire to learn more deeply of them.

## A Note of History

To at all properly understand the Group and its people, we should make ourselves acquainted at least in some slight measure with their history. Each island had its King or Chief of Chiefs, but then rose up Ka-meha-meha <sup>23</sup> surnamed the Great, who with a mighty hand and strong right arm subdued the rest. To us, the interesting thing is that he was helped throughout by an Englishman, a captive from a Trading Ship “The Eleanor”, John Young <sup>24</sup> by name (the boatswain), who however was treated with great kindness, presented with much land and raised to the rank of a Chief. For over forty years he was the friend, first of that King in Council as well as his companion in all his wars; then of his successors, and lies now at rest amongst the sepulchres of Royalty. But Kameha-meha’s bones (after the flesh had been removed and burned as was then the custom, and as indeed they did to Captain Cook) rest no man knows exactly where. They were concealed in some cave on Hawaii, as his forefathers’ were, and the secret died with those who thus interred him.

It was then (just 100 years ago) that the first missionaries and their wives arrived from Boston, U. S. A. They were Congregationalists. It was the wives who had the surprise of their lives; and their needles flew to the rescue, to clothe their dark skinned sisters in hot haste. They had not time to devise flounces and frills and a waistline, just a plain white night gown with a train, reaching from the neck

---

<sup>21</sup> [Elijah, challenge to Baal.](#)

<sup>22</sup> [High Chiefess Kapi’olani \(c. 1781–1841\), challenge to Pele.](#)

<sup>23</sup> [Kamehameha I \(ca. 1758–1819\)](#)

<sup>24</sup> [John Young \(ca. 1742–1835\)](#)

to the feet. The elder matrons to this day wear this apparel (The Holoku) come weal, come woe (only now it is black) and certainly it allows ample play for their robust and rotund figures.

The Royalty of these Islands has oft times trod the streets of London. The first was Kameha-meha the Second and his Queen Kamamalu, when George 4<sup>th</sup> was on the throne : but King and Queen both died there, of plain ordinary measles. It was a far off place for them to die in, amid strangers, and in a vast city, but their bodies rest quietly in their own beloved Palm Islands, brought hither on a British Man of War. In 1850 Liho-Liho ere he became the king was also shown much courtesy in London; and so was his widow, Queen Emma, in 1865. Nearer our own times King Kalakaua, in 1851, made a tour of the world, and London gazed on him with some wonder, for he was of the robusto build : yet neither did he die in the land of his fathers, but in '91 in San Francisco.

At the Golden Jubilee his Queen Kapiolani <sup>25</sup> was present, as was also Lilioukalani, Queen in her own right, the next Sovereign, who saw the end of Royalty here. She had a stirring time for a few years. Slowly the powers of the Crown had been curtailed — the whites say justly, the natives say unjustly — (and of a truth it is not altogether an honourable story on the white man's part). Hers was the slogan "Hawaii for the Hawaiians first : and the Crown freed from its bondage", but it was too late in the day. The whites took matters into their own hands, and forming a Provincial Government, deposed the Queen. Their real aim was undoubtedly annexation to the States. It might have taken longer to reach this but for a mad attempt in 1895 on the part of the Royalists to restore the Queen by force of arms. She was not wholly unconscious of the move, and who can wonder. The first clash came below Diamond Head, the final up the Nuuanu Valley. The revolutionists were gathered in and tried, Her Majesty among the number. Some were banished; none were put to death, the Queen was confined for about nine months in her former palace, then set free to retire to her own private home close by, where she died when well past eighty, Queen to the last in the hearts of her own people.

The Provisional Government had given place a year before to a formal Republic, but now the final step was taken, and as a group the Islands became a Territory of the U. S. A.; and that it is American is to be seen on every side, not aggressively, but in the progress, the life and the energy of those Islands. Capital has flowed in (Eighty million dollars and more, in the sugar industry alone) and the land been made "to blossom as the rose". What the Natives could not have done in a thousand years is a fact accomplished in five and twenty.

## A City Embowered

Now that we know some slight measure of the Past, let us wander here and there in Honolulu. There is "Fort Street", the main artery of the business section, running up from the water front; where in the last of the savage days our own John Young, by his wise counsel and under his personal direction, built a Fort in 1816 of coral rock, with walls 12 feet high and in thickness 20 feet; with seventy guns (later on) to exact respect from all and sundry. These business streets are narrow, the broad avenues are met with farther out. It does not take long ere you begin to find your tongue in gravest difficulty. Certainly there is Emma Street and Water, Queen Street and Hotel, the (long) King Street and Beretania (the latter the Hawaiians attempt to reproduce "Britannia") but what stranger can at once smoothly mouth N u u a n u — W a i a l a e — P u n a h o u and M o i l i i l i.

---

<sup>25</sup> In 1887, Queen [Kapi'olani \(1834–1899\)](#) traveled to London to attend Queen Victoria's [Golden Jubilee](#). [Princess Lili'uokalani](#), [King Kalākaua](#)'s sister, traveled with Kapi'olani as her interpreter. WWB has the [Diamond Jubilee](#) of 1897.

There are the homes of 80,000 people here, but so embowered amid the wondrous foliage that it is hard to realize the fact. But of a truth on this same flat of land below the hills at the back, there could be housed half a million, if the great stretches of rice lands, and duck ponds, filled with rushes and wild Taro, were drained and brought under the hammer, which is under advisement and may shortly be accomplished. These waste lands occupy the main frontage to the sea, and the city circles round them till Waikiki suburb is reached. But everywhere else, Honolulu is one huge harbour. Not to Hawaiians but to outside countries this is due. The soil always produced the cocoanut, the Banana and the breadfruit trees, but these are but a tithe of the glorious sight. The sugar cane was always here, and Taro, the Hawaiians' Staff of Life, but all other now abundant fruits and vegetables they have to thank the foreigner for. Vancouver,<sup>26</sup> the Englishman, brought hither the orange and the almond : Don Marin,<sup>27</sup> the Spaniard, the pineapple, the grape, the fig and vegetables : and he it was who made the first sugar of commerce, yet no country has yet raised a monument to his memory.<sup>28</sup>

Here are no towering firs and British Oak but what is lost in height is gained in width of spreading shade. Here the North Temperate eye beholds the Banyan Tree, sending down new roots from its branches and thus expanding horizontally. These same side branches then become assistant trunks, and one tree looks like a miniature forest in itself. Here is the Poinciana or Flame tree, a graceful fellow with leaves each cut into 20 slithers, and the loveliest rich red flowers in groups like cherry blossoms covering its upper sides. Here are the Pink and Golden Shower, each of them Trees, not shrubs, with flowers like bunches of grapes hanging down amid the leaves. Here is the Bottle Tree with its enormous bulk of trunk, with a bark like the hide of an elephant : and the Rain Tree with a spread on top (shaped like an open umbrella) of over 100 feet. Here too is the Algaroba, one of the greatest blessings ever bestowed upon these Islands. It cares not for soil, has turned waste lands into forests, provided fire wood for the natives, honey to the bees, and fodder from its pods for the cattle. And gratitude alone would forbid the omission of the shady, gnarled trunked Hau Tree whose maze of branches twine and intertwine and are usually supported by posts and cross beams, beneath which I have sat to read by the hour, sure protector from sun and from rain.

But the Palms are Honolulu's glory. I can well believe that there are some 80 varieties here of these Princes of the Tribe of Plants. Some run straight up, till clear at the top they burst out into long sweeping fans : others break out almost from the ground : the Cocoanut Palm is of the former kind, the lovely Chinese Fan Palm of the latter. Then there is the Date Palm, its tall trunk all scarred from the very base where the huge leaves have broken off : and the Talipot with the most gigantic leaves of all. But for me the Royal Palm holds first place. It is used in Avenues : and a line of those beauties rising in their stately grandeur on either side of a driveway is a sight that can never be effaced from the memory. The trunk is whitish — swollen in the middle — and taped elegantly both above and below : then from the apex shoot forth the huge drooping fans.

From China and Ceylon, Japan and California, Mexico and Southern Europe, New Zealand, Australia and many another hot house, have come these treasures of nature which, together, have caused to create "Honolulu the Beautiful", even as any one who strolls along the streets of the City has no doubt of it as "Honolulu the Cosmopolitan".

Of Bushes there is the all prevalent Hibiscus. There are hedges of it everywhere. It is both single and double, and runs every shade from a glorious red to the most delicate pink : with yellow and white

---

<sup>26</sup> [George Vancouver \(1757–1798\)](#)

<sup>27</sup> [Don Francisco de Paula Marín \(1774–1837\)](#)

<sup>28</sup> However, Marin street near the Honolulu Harbor was named for him; a 28-story high-rise apartment house called Marin Tower was built in 1994 on the site of his house, marked by a plaque and a sculpture; and Vineyard street and boulevard are also named for his vineyard.

besides. Of Flowers they cannot grow the Rose here (save for an apology thereof, which hangs its head for very shame), but they have two flowers at least, whose fragrance is exquisite — the Plumeria and the White Ginger, both with a scent like the orange. Hawaiians make wreaths (or Leis) from the flowers, and decorate their friends departing or coming with a necklace of heavenly odour : the young men place them round their hats and the girls wear them as a crown.

### Afoot

Walking I regret to say is not a characteristic of these folk, though there are some few faithful ones who have formed a “Trail and Mountain Club”. But with an extensive and frequent car service, and five thousand autos licensed, neither natives nor Kamaainas (Old Timers) dream of doing aught but ride : and the Malihini (stranger) is no whit behind. I noted the persistency with which everyone hugs the shade. To seek sun and revel in it, to feel its warm rays go right through you is more than most white folk here can understand. To me too the rushing auto is no real way to learn the secrets of a town or country. One catches only glimpses of views, of flowers, of homes artistic and of nooks which well repay the slower progress of the pedestrian. And so I roamed afoot, and in due course of time covered the whole entrancing isle.

### Of Mind and Soul

Honolulu does not lack for either Schools or Churches. There are Schools for the Hawaiians, Schools for the Japanese, Schools for the Chinese, Mixed Nationalities Schools, and Boarding Schools. Punahou School (one of the latter) has magnificent grounds 85 acres in extent. It is a relic of the first missionary days and run by a Board of pastors — the whole place speaks of wealth and prosperity. Of Churches there are diverse : to suit many minds. I noted one of the Latter Day Saints (but not polygamous) and the 7<sup>th</sup> Day Adventists. I passed a German Church but its doors were closed. There is an old Hawaiian Church hard by the Palace (the only Royal Palace that these Republican States of America possess). It is built of coral rock, each stone quarried out from the reef by some native, and brought as their contribution to the glory of their new found God. Hard by is the old Mission House; brought round the Horn from Boston and raised in '21. There was some hesitation as to allowing it to be erected, for as the natives felt and said “Houses such as that were only fit for Kings”. Close by in Lunalilo's <sup>29</sup> Mausoleum — he lies not in the Royal Graveyard up Nuuanu Valley — and whose crown was stolen from the Royal Tomb and later found in Philadelphia : some soldiers had purloined it. Of the Episcopal Church there is the beautiful stone Cathedral in the heart of the City. It is a choice piece of work and does credit to its London Architect. Around it gathers a very nest of activities : the Priory School for Girls, the Iolani School for Boys (neither for whites), a Church for the Chinese, and another Church for the Japanese.

Here too the Romanists are quietly at work. They have several Churches scattered about, but all quite unpretentious, their Cathedral least of all, though situated on Fort St., the main artery of the City. The reason for their outward non-aggressiveness is found in the Past. A century ago a Frenchman of the

---

<sup>29</sup> Lunalilo, born [William Charles Lunalilo \(1835–1874\)](#), was king of the Kingdom of Hawaii from January 8, 1873 until February 3, 1874.

name of Rives,<sup>30</sup> after a twelve years residence in these isles during which his reputation was none of the best, stole aboard the vessel which carried the King and Queen to London and their death. Being forced to carry him, he acted as interpreter. Arriving in England, he was dismissed for misconduct (the King's money chest was rifled sadly on the way) and went to Paris. There he made out that he had great wealth and influence, purchased on credit a full cargo of goods, and sought not only labourers to cultivate his "Estates" but priests to teach his "People". Three priests and three lay brothers were deputed to attend him home. A ship was duly chartered and church ornaments were added now to the cargo, all of which were to be duly paid for on arrival at Honolulu. The rascal had 'his tongue in his cheek' for he himself took passage on another ship, was dropped off in South America, and these Islands knew him no more. The Captain landed his passengers, but took his cargo elsewhere. In the first year the priests worked unmolested, making converts : then the king and chiefs took action. The natives were forbidden to attend. It was clearly the fancied 'Image' worship that brought about the trouble. They had but just thrown off their old idols, and wanted no religion which seemingly had the same. The priests were banished and carried to California despite their protests. But the Lay Brothers remained and kept the Faith alive. Some six years later they boldly returned and there was heaps of trouble till they were sent off again. But two more appeared and they also were sent off. Then the French Home Government got busy. A man-of-war appeared and gave the poor King short shrift. It was War, or Freedom for the Roman Faith (and a Church site into the bargain). The King chose the latter. It is worthy of note, that through all the trouble, the Protestant Missionaries had urged Religious Equality. To see that Cathedral packed to the doors, allowing me a kneeling space only on the threshold is evidence that the Romans have done good work, for it was an Hawaiian service I attended.

### Customs of Old

Here are some strange facts which call for explanation but I failed to get light thereon. The first Whites found that every religious ceremony of the old heathen worship was accompanied by the frequent use of Holy Water. They also found Cities of Refuge scattered on these Islands, as amongst the Jews of old. They found indeed Marriage, but whilst every other act, Birth, Burial, Houseraising and Canoe Launching was accompanied by elaborate incantations and sacrifices (not alone of pigs but of human beings oft) yet Marriage was entered upon with less ceremony than of planting a tree. It is a long cry from today when the native women are securing their right to the Ballot, to those cruel days of old when women were treated worse than the dogs which ran around. They could neither eat with their men nor with their own baby sons : all share in the chief foods of the islands, the cocoanut, the banana, the pig, the turtle and the shark was denied to them. These things were Tabu and to break them meant death. Those were Feudal times when the King and Chiefs owned all the land and taxes were paid in the only coinage of the time, Food and Feathers. The King and Chiefs were supposed to see that their serfs lacked for nothing, but their liberty and their lives were ever in jeopardy. Despite the rich nut brown of their skins, the features of the poorer natives speak plainly of Past Suffering. It is not fair to judge as to the beauty of the brown races by the standard of the white, so I attempt nothing in that direction save to say that their eyes are the most striking part of their physiognomy. The men have not the build of athletes, they are however experts in and on the water : the one land game they indulged in freely seems to have been Tobogganing. Wherever on the mountain or old crater side there was a smooth run, here on boards and lying flat on their face they flew down the

---

<sup>30</sup> [Jean Baptiste Rives \(1793–1833\)](#)

steep slope, the steeper, the better : and many a slide is still to be seen attesting to the popularity of this out door exercise.

### **Punch Bowl and the Pali**

I have made my bow to both Punch Bowl <sup>31</sup> and the Pali. <sup>32</sup> And in very deed I had to make my bow, for at such heights the Trade Wind is very masterful and I visited both when it was hard to stand upright. Punch Bowl is an extinct Crater just back of the City proper : indeed its front has homes a good way up, some of them only to be reached by tortuous paths. Leaving the car line on Emma St. (named after that strong but engaging Queen Consort, <sup>33</sup> the grand daughter of our own John Young) I took to the broad auto road which winds round the back and finally leads clear into the basin. The rim is high, rugged and broken : the inside is no longer lava rock but is covered with that rock, which disintegrated, makes good loam in time. The army now uses the Bowl as a rifle range. When they are firing, none can enter; a red flag flying, forbids. But there was nothing doing and I was alone on the Crater. I made my way to the highest point from which a fine panorama lies before you of the City, Naval Base and Sea. It was here, on the Sacrificial Stone which being solid rock Time has not altered nor ever will, that men were slain and cremated who had broken the Tabu of olden days. Hither they were brought, and one could visualize the dreadful journey as the victim was forced up the rocky precipitous sides, to the spot of immolation. There, looking down upon the grass huts below, and beyond the reef to the deep blue of the sea; pinnacled up high in the air so that all could see the tragedy, the butchers and the butchered stood and for what? Perchance he, a man of the people, had allowed his shadow to fall upon a Chief. Such atrocious wrong meant Death and Cremation upon that spot, which now curious eyes look upon, and pass on to other sights without a tremor. They had an eye to the Picturesque and the Theatrical, those savages of old. Their whole world should see Justice! meted out : no prison compound here.

The Pali is an eight mile tramp on a twisting and turning well kept road, deep shade for the best part of the journey, the mountains hemming you in, then opening out for a view, an up grade all the way. There is a ridge of mountains which runs clear down the Eastern side of the Island (there is another on the Western side, and between them is that plateau where the vast plantations of sugar and pineapple lie). In that Eastern range there is but one Pass to the coast line. That gap is the Pali. The ridge breaks apart for a space, less than 100 yards. Ere the white man came with his road making, there was nothing beyond that break. A sheer precipice, a 1200 foot drop clear into the open country below, and the coast line beyond. Nowadays you turn the corner to your right (if you can, for there are times when neither man nor vehicles can make that turn for Wind) and a wondrous piece of concrete road making winds down with many an S to the level land at the base. Across the face of the precipice is a stone wall : and standing there, you have a truly splendid view, well worth the tramp to see. There is the rugged range to your left, running as far as the eye can see, there is a valley at your feet, all parcelled out and under cultivation. The trunk road runs clear, every turn can be seen, a red road amid brilliant green fields — villages and houses dot the landscape. There are hills between you and the sea which look like ant heaps, but for all that are real hills standing alone; and there is that wondrous tropical sea. The reef was clear, though far away, there was not a cloud in the sky, and the sun poured down, but tempered by the whistling wind. There are islands all along that coast, beyond

---

<sup>31</sup> [Punchbowl Crater](#)

<sup>32</sup> [Nu'uauu Pali](#)

<sup>33</sup> [Emma Kalanikaumakaamano Kaleleonālani Na'ea Rooke \(1836–1885\)](#)

the reef, and the waves can be seen dashing themselves in sullen fury against their age long barriers. Set against the corner of the broad road down to your right is a wire cable, fixed with iron rings cemented in the rock for foot passengers to cling to, as they turn around and down. I clung hard and could scarcely make it. Here is a funnel, and the wind disputes the right of man to force himself through, where for untold centuries none but it held sway.

There was History made at Pali. It was here that the King of Hawaii (the largest of all this group of islands, 200 miles away to the South) made himself the undisputed King of all the Kings. Landing with his army, from their war canoes, along the shores of Waikiki, Kamehameha the Great met the Oahuan King and his forces in the Nuuanu Valley and drove them mile by mile back to the Mountain ridge. He knew and they too knew what was his aim. There was no escape for that beaten army. To their right and to their left were mountains, rugged and unscaleable : and behind, there was the Gap! and the Precipice! The victor pressed on. The mountains narrowed, broke apart, the vanquished host rolled back, still back till at last all hope was lost, and down headlong to death went the Oahuan army, King, Chiefs and all; and Hawaii's King was Lord of all the isles. 'Twas in 1795.<sup>34</sup>

### Of Dress

How different the native then from now. Today the young native "Blood" is a well dressed fellow as you meet him on the street. His forefathers would not know him. His is an ample wardrobe, theirs most scanty. Boston made great efforts to meet the deficiency, but the missionary boxes could oft times bestow no more than a single article apiece to each of the clamouring applicants. And thus it was no unusual sight to see at the Sabbath Service, men wearing on so important an occasion each their entire wardrobe. One had on only a pair of shoes; another a hat; one a coat; another a pair of trousers; and still another a shirt, but alas! would mistake the entrance, and put his feet through the arms and tie the tail around his loins with a string of fibre. Some preferring one garment above all others, "hogged" them, and bartered what else he got from the Church's Grab Bag, for his particular choice. Thus would be seen one with many hats on, piled one upon another; and another with his beloved coats till his arms were helpless. An umbrella together with a pair of boots was quite sufficient to stamp the owner as a then day "Blood"; whilst the greater the squeak, the greater the value of shoes.

### A Bird's-Eye View

Tantalus is a mountain whose top is 2000 and more feet up in the sky. It lies directly behind Honolulu and the Punch Bowl. I went that way and stood upon the very summit, alone. It took three hours steady climbing. My descent was by another route, and it would be hard to say which to give the preference. It was hot, and though Tantalus usually is among the clouds, and the rain is plentiful, I was drenched to the skin but once, and the Summit itself was on its best behaviour. The road zigzags all the way, and every 100 feet rise, and every turn, brought out new beauty. Little eyries peeping out all the way from amongst the rich foliage all with their faces seaward, the summer homes of those

---

<sup>34</sup> [Battle of Nu'uanu](#). In fact, the Chief of Oahu, Kalanikupule, escaped the battle, but was later captured and sacrificed. In 1898 construction workers working on the Pali road discovered 800 skulls which were believed to be the remains of the warriors that fell to their deaths from the cliff above.

who in the so-called winter live below : and as you look down, you see those bungalows everywhere, each with their garden setting. Chimneys happily conspicuous by their absence. Some folk with extra artistic eye paint their roofs green. Far above you can see the head of many valleys, where settlement ends, and the Jap and the Chinamen take hold, with their rice fields, and rickety shacks. The road leaves the last 500 feet for the pedestrian. There is but an even trail, and there is a need for a sturdy stick, and even then one has to grab branches to help mount up. But the view is well worth the climb, panoramic and grand. There I gazed long, and ate my frugal lunch of fruit, carried in true tramping style in a handkerchief tied to my waist line. Close to the very summit, above the road, there lies a lovely garden — the loam rich and red — laid out on terrace above terrace, where violets and carnations, gladioli, and calla lilies were blooming in profusion. And many another garden I passed on my way up and down but none fairer than the highest one of all. There is a brave attempt at lawns, but the grass is wiry and mats. Whilst the lawn mower, and even the gasoline driven one, is in use by the whites, the Jap seems wedded to his sickle. Why they refuse to use the scythe, I know not; but they will squat on their haunches and hack, by the hour.

### Fish and Poi

The Hawaiian fisherman with his glass box is strictly up to date. For him no line and rod. Hour after hour he strolls about in the water, at times up to his neck in the sea, peering down, with a spear in one hand, and a linen bag in the other, at times a comber comes in from the reef, and our fisherman wholly disappears, but he takes it with unconcern. The box is eighteen inches by twelve : no top, and glass for a bottom. It is held by the teeth! A white man I met who attempted its use, had a truly heavenly time whilst he was surveying the deep and spearing the scudding fish : but he reports (forgive the expressive language) that he had “one hell of a time” the next day, when to talk was an impossibility, and to eat a torture.

Prejudice is a foolish jade. I long held back from devouring Poi (a native food) which most told me is Concentrated Essence of Soap Suds. It comes in three grades, one fingered, two fingered, three fingered, the first being thick, the second less thick, the last like a fairly strong soup. It requires some agility and knack to land the last named safely in the mouth. It has for long years been my ardent wish to weight two hundred pounds and more. Here to hand was the infallible recipe sought so long. My course was clear. I partook, not once, but freely. Poi is good. I am still trying to define the taste. It was the three fingered kind. Despite protests I giped at the native means of handling, desecrating matters with a spoon. But the scales remain the same.

### Oahu's Fujiyama

A stroll round Diamond Head has its interest. Here at its base, next door to where I housed, was the home of Jack London <sup>35</sup> when he reached Port from 'Frisco in that weird voyage of “The Snark”. Without any knowledge on Navigation, with only his wife and a man friend they launched forth into the Pacific. The space was limited, the way was long, the woman took her place at the wheel alike with her men folk. Fair and square they hit Oahu and were welcomed as they deserved to be. Now on the way round I passed where Lilioukalani had her seaside home and here many a gay party did she

---

<sup>35</sup> [John Griffith “Jack” London \(1876–1916\)](#)

and her brother Kalakaua hold. All town rode out on horseback for such festivity. A little further along is where Robert Louis Stevenson <sup>36</sup> dwelt and wrote.

Nearby is Kapiolani Park with its Polo Ground and Race Track, and one sees the well groomed ponies taking exercise. The horse was not indigenous but brought first from California in 1803. The wonder at the animal was great : but riding quickly became a passion with the natives. Even the then aged King, the warrior Kamehameha, must needs to sit astride. His bulk was vast, and the poor beast must have groaned beneath his weight, but his horsemanship was soon acknowledged as among the best. Horses have now given way to the auto and electric car and only in country places can you see the women astride with their long divided skirts and hair a-garlan'd. The lily ponds attract and the many Palms and shady trees. And then one steps into the Aquarium that wonderland of what the sea holds hereabouts. No picture, no artist could do justice to those fish. The colours might indeed be there, but never the glint and the light which the water gives them. They are striped and of hues as none could imagine : there is a pike like fish of an indigo colour (every whit of him) which greatly took my fancy; there is a flashy fellow of gold and red and blue who seemed conscious of his grandeur : there are eyes in some of them which actually seem human as they look at you and wink. I left that spot amazed.

A little beyond and one comes to Bertleman's, a woody spot where the Revolutionists of '95 <sup>37</sup> were taken by surprise as they foregathered for their attack upon the city, and where blood was shed. And then passing round the nose of the old crater there is a clear sea view, and gazing forth South East, twenty miles away there appear the outline of the mountains on Molokai, the Dreaded. Who has not heard of that awesome spot, the Leper Settlement, Home of Horror and Heroism. No idle curiosity should draw men to land thereon, and indeed it is only with the greatest difficulty that anyone can secure a permit to step ashore. Yet some few thus have done, and Stevenson was one. It was well : and had its sequel. No curiosity drew him, but a supreme sympathy; and a longing to grasp the hand of those who were living out their lives for the betterment and the cheer of God's most stricken ones. But Damien <sup>38</sup> led the way, and therein lies his title to the rank among the world's Great Heroes. He did not have to go; he, a poor Belgian peasant's son, trained for the priesthood, volunteered and deliberately landed there to dwell : and knowingly shut to and closed the door of his own Tomb. When he died, himself become a leper (for it is infectious and Damien washed and bound the lepers' wounds ignorant of the sanitary methods of today) there were those who dared to defame him. They were those who themselves had had the knowledge and the opportunity to choose as he had chosen, but had held back. It was then, that Stevenson let go, and his 'Open Letter to Dr. Hyde' is a masterpiece of indignation. There are men there today, and women too, who in the service of their stricken fellows will never leave The Forbidden Isle. Who then can look across that Strait of Waters which separates Diamond Head from Molokai, unmoved. It was Earth's Hell, it is now (at the cost of Damien's life) but an Ante Chamber thereto.

And now we swing off to the left and soon are passing through one of Uncle Sam's Army Posts. It is clear that the States aim to make of Oahu a veritable Gibraltar, for there are barracks and fortifications everywhere. All the commanding heights have their guns, and in the very heart of the Island there is a camp for 30,000 men. They will be ready when the clash comes, if come it must. And all the guns I noticed point towards the Land of the Rising Sun. Below are to be seen the buildings of the Military Academy, a private Boarding School for whites, built up by a lone Englishman through many years : all honor to him. The boy soldier thus lives under the very shadow of the real article, and smart the

<sup>37</sup> [The 1895 Counter-Revolution in Hawaii](#)

<sup>38</sup> [Father Damien \(1840–1889\)](#)

youngsters look in their peaked cap, their khaki and laced leggings. Through farms where cattle browsed one wends his way round to Kapiolani Park again, and home.

### Up Nuuanu Valley

The golfer has his course of 18 holes up Nuuanu Valley at the Country Club, a lovely site, nestling beneath the hills. The Club House is a wide spreading Bungalow and no care seems spared to keep the course in shape. The showers are daily, the Pali draws them, but the golfer cares not. To be soaked three times in a round with such Liquid Sunshine and to reach the last hole dry as a bone, is the usual thing and evokes no comment. Hard by is Queen Emma's Country Home. It is now a Museum of her belongings and twenty-five cents admits you. Your guide is a buxom Hawaiian lass whose eloquence is overpowering. There is Dining Room and Sitting Room, Hall and Bedroom, the kitchen the only part not now existing. The Four Post Bed fascinated me, truly a Royal Bed, fit for such portly Poi fed forms — half a dozen lean bodies would have room and to spare. There were oil paintings galore of Royalty and Foreign Potentates, gifts to the gracious Emma, who died at last of apoplexy. There was her bridal dress, and her husband's Windsor Uniform. They became sticklers of etiquette these Kings and Queens and held their Drawing Rooms and Receptions under Europe's rigid rules. And made slips too as other humans do. When Emma and her lord stood before the Minister to be joined in Holy Matrimony in the old coral Church, clad in regal robes and attended by a vast host, and the ring was asked for of the Royal Bridegroom, he had left it behind, and much discussion took place there and then as to the legality of using the signet ring of a lawyer friend who stood as his right hand. That ring was used, and the ceremony went through.

The glass cases are many, and the articles innumerable, but when with grave face my dark skinned maiden pointed out Queen Emma's Spittoon! I thought it time to go. My reverence for Royalty might vanish, for there seemed naught of Emma's that was to be withheld. And so I wandered further, and came to the Royal Mausoleum. The heavy gates I tested one by one. Luck was with me for a postern gate opened at my touch. Here then I walked among the Tombs, and saw where the Kamehamehas, after their strenuous life, rest from their labours. The greatest of them all does not lie here, some cave of Kona holds his bones, nor Lunalilo, he of the stolen crown : but what greatly pleased me was to stand beside the grave of Old John Young and read his epitaph of faithful service done. The Hawaiians knew his worth. For forty-six long years he was companion of Kings, yet was over forty ere he began his work. It was only right and fitting that here in the outdoor Westminster Abbey of these Isles, with Palms waving o'er him, he should lie. I gently closed the gate with a Requiescant in Pace<sup>39</sup> for them, one and all. Then made me to Kahala, some miles out of town, near Koko Head. Here there is a lovely sandy beach where the rifles smuggled from 'Frisco were, in '95, buried for days in the sand, till the hour struck for action. Now there are many lovely waterside homes; and much Family bathing was going on, as I rested beneath the Palm trees, watching the rollers break upon the Barrier reef.

---

<sup>39</sup> [Requiescant in pace](#): Latin for *May they rest in peace*.

## Oahu's Museum

The Bishop Museum <sup>40</sup> is well out of the City proper. But before you reach it, if a Malihini keen for knowledge, you have to wander through Korean, Jap and Chinatowns with their oriental smells. Under a fierce sun this is somewhat trying. In flaring letters I saw one sign "Tattooing Done Here" and curiosity drove me within. They seem to do it en bloc, to impress at one fell blow of many needles, any pattern on any or on all parts of your anatomy you choose. On the walls are pictures of what they can supply. Crosses and Snakes, Birds and Beasts, Flags of all nations, and women galore. I was sore tempted to bare an arm and add to those which in the days of my childhood, my brothers, just for practice, had imprinted on my tender arms : but when I saw another notice "There must be no Washing for One Month" I fled the place.

I arrived at the Museum on the correct day and hour. The wondrous golden Feather Cloaks of the Kings are under lock and key. They are only shown at stated times. This was one of them. The largest of the cloaks has a spread of eleven feet at the bottom, a vast cloak, all gold, fit for a man of gigantic stature such as the first Kamehameha. He was the first to wear it completed, seven other kings had lived and reigned and died as it was a making. The ground work of them all is a coarse net fibre, and to these the feathers are attached in tiny bundles. The feathers forming the border lie the other way to the rest. The bird which supplied the feathers is now extinct. No wonder! and moreover its name was the most appropriate one of Ohoh! <sup>41</sup> It had but one golden feather under each wing, and evidently disliked the operation. So does vanity have its Price, and Nature her Revenge. To the British Museum some of these cloaks had strayed. In the astonishment at the appearance of the Pale Faces, Kings and Chiefs who alone had these wondrous cloaks, had presented them with their choicest gifts as to the gods. All honour to London's Treasure House in restoring them to their rightful home. One beauty was discovered at Boston, U.S.A. where it was being used as a sleigh robe, a heavy flannel lining having been added. It bears the marks of its rough usage. Some others have circlets of red feathers added amid the gold, and others black.

There were no guns in those days; but bows and arrows, slings and bird lime were the weapons used. The Museum is a Storehouse of Hawaiian and Polynesian treasures, and takes many days to thoroughly explore. But the collections within its walls are only a minor part of its activities. Its research work on Polynesia keeps a trained staff busy. Its publications are wonderful reading. It has more than justified its existence and the prescience of its Founders. Mrs. Bishop <sup>42</sup> was a Princess, the last of the Kamehamehas, and to her came all the personal property of that line. She was of great wealth, as also was her husband, an American Banker. <sup>43</sup> He it was who started the first Hawaiian Bank, <sup>44</sup> which is still one of the leading ones, and with their private store at his command increased their fortune tenfold. To the Hawaiians they bequeathed it all in noble ways and benefactions; this Museum is one of them

## Olla Podrida <sup>45</sup>

In the dead of night I went off, hunting the night blooming Cereus, <sup>46</sup> a truly noble flower. It lasts but a single night, then the great creamy flower wilts and dies. It is a Cactus and grows best over walls. There is none to be seen here finer than that on a 3000 foot wall some four feet high which runs round part of the Punahou School. The flower is some eight inches long, opening out like a huge tulip; some of them are a span wide.

The first Kamehameha's Statue stands in front of the Government Law Building and looks across at the Palace. The original one, cast in Italy, was lost off the Falkland Islands, and the Insurance covered the cost of this one; when lo! the original one was recovered from the deep and now stands on Hawaii at his birthplace. This is no lifeless cold marble Statue, but there he stands, a tall commanding figure, nut brown in hue, with a golden Feather Cloak about him and a helmet of like feathers on his head. His action seems that of calling upon others to follow.

A few steps from there brought me to the Palace, <sup>47</sup> its architecture moulded upon that of Versailles, and I entered the Throne Room. It is kept as it was, a large room, rectangular, with oil portraits of kings and queens, European as well as Hawaiian, on the walls : and at one end, on a raised dais, The Throne with heavy curtains behind. The last that chair saw of Royalty was when Queen Lilioukalani <sup>48</sup> stood before it, arraigned for misprision of Treason. <sup>49</sup> Her sentence was Prison for five years, Hard Labour, and a \$5000 fine. But the bark was worse than the bite. There was no Hard Labour, there was no Fine, and after about nine months confinement in some rooms above (her own Royal Apartments ere the Republic came), she was allowed to go free. The older Thrones made of the native Koa wood (mahogany texture) covered with rich crimson brocade and surmounted on the high back by a carved crown are in the Bishop Museum, along with the Kahilis or plumed Staffs of State, for all the world like huge feather dusters. They were borne by chiefs and others specially chosen, on great occasions such as Marriages, Burials and Drawing Rooms; great cylinders of many coloured feathers, mounted on heavy Staffs, ornamented with rings of ivory and tortoise shell, and tower eight to ten feet high. They are barbaric, not artistic. Nowadays the Palace is a maze of Government offices : and the Governor resides in Washington Place, Lilioukalani's private home.

To have visited Wo Fat's Chinese Restaurant is, so I was told, to have really lived. But after I had been and partaken of his fare I began wondering if I should not die and bring my wandering to an abrupt conclusion. I formed one of a party who were set upon initiating me. It of necessity lies hidden in Chinatown where odours of an overwhelming kind do ere abide. Ascending stairs, one is ushered into a broad gallery where are many separate tables, minus cloths. From here you look down into the hall or pit below where Chinamen of lesser breed are hurtling thin food with their chopsticks. The noise is infernal and the table manners do not bear inspection. Aloft, we find our company very varied, Hawaiians many, and not a few whites. We select our Menu from a card, where English appears as she is spoken by others. The spelling can only be described as "gone drunk". I gave over my Life to my friends who ordered a wondrous dish of Chop Suey, Water Chestnuts, Egg and Lobster, Rice and Soi. The first named is one of those dishes that no European can ever hope to analyze. I could see that

---

<sup>45</sup> [Olla podrida](#) is a Spanish stew made from pork and beans, and a wide variety of other meats and vegetables, depending on the recipe used.

<sup>46</sup> [Night-blooming cereus](#) is the common name referring to a large number of flowering Cereus cacti that bloom at night.

<sup>47</sup> [Iolani Palace](#)

<sup>48</sup> [Lili'uokalani \(1838–1917\)](#)

<sup>49</sup> [Misprision of treason](#) is committed by someone who knows a treason is being or is about to be committed but does not report it to a proper authority. This occurred following [the 1895 Counter-Revolution in Hawaii](#).

lots of chopping had been done, for everything was in narrow ribbons. It was a sort of Pot-Pourri of all things eatable — and I ate it. The last named is a pungent sauce, a little of which goes a very long way. The whole was rounded off with copious draughts of clearest Chinese tea served in tiny handleless cups. Some of the party disdaining knife and fork made fair headway with the chopsticks but it is too like baseball for me, you miss more often than you hit and it takes too long. I refused all further invitations, Life is far too precious.

Herewith is a Recipe for housewives as to preparing for the table that special delicacy, so long favourably known as the *Pièce de Résistance* of Hawaiian Cookery — Baked Dog.

Take a Dog. Keep him in solitude. Pamper him with toothsome delicacies and choice vegetables till his coat shines for sweetness. Then you know that he is ripe. Kill and bleed. Have ground furnace all ready and heated stones. Place some of the heated stones inside your dog, then swathe him in Ti Leaves, and Banana Leaves on top of that. Place body in oven, cover with an old mat, then heap on soil and leave for two days. After which bring him forth — and call your friends together for the Food of Foods.

## Good Fellowship

I was shown that I was not the only priest of the Outdoor Life : there are over 200 in Honolulu who have not bowed to the knee to Baal<sup>50</sup> of the Auto; men (and women too) who have banded together under the “Trail and Mountain Club”,<sup>51</sup> and week in, week out, use the means of locomotion God has given them for health, happiness and education. I have met them, so I know. They hold a weekly luncheon in the heart of town and are addressed by those who have roamed the world. An open invitation to the public led me there, and I left it as an Honorary Member. The speaker of the day was an American who had lately been sent to the Far East of Asia, on a “boosting” mission for a chain of New York Hotels. A typical American speaker, rapid, full of vim and racy stories, humour bubbling over. He took us to Japan and China, the Philippines and Assam, Straits Settlements and Mandalay, India and Ceylon, Sumatra and Java, Australia and New Zealand, thence to the Polynesian Isles and so back home. Sixty thousand miles in all, yet he was no Superman, for most of his hearers were like Veterans of the Trail by Land and Sea. But it is good to grasp the viewpoint of others as to Lands, some of which we know, and others that we hope to.

I was invited to the Balboa Day<sup>52</sup> Banquet. It was held al fresco, under the cocoanut trees with a multitude of electric lights and tiny flags. Here if anywhere one could realize that Hawaii is the melting pot of nations. At my table there were representatives of a dozen nationalities. There was much speech making — though none of a high order — the best by a Canadian but evidently learned off by heart. A Jap speaker cogently remarked that whilst his nation owed an incalculable debt to Balboa, in that his ‘discovery’ of the Pacific Ocean led to the opening up of Japan, yet it might be allowed for him to remark that the Pacific Ocean had been remarkably well known to Japan for untold

---

<sup>50</sup> [Baal](#) is a Semitic title meaning “master” or “lord”.

<sup>51</sup> The [Hawaiian Trail and Mountain Club](#) is an Oahu based hiking club founded in 1910 to explore and enjoy Hawaii’s unique natural heritage and environment.

<sup>52</sup> According to an article in The Straits Times of Singapore, 17 September 1927, page 8, Pan-Pacific or Balboa Day was inaugurated by Queen Lilioukalani in Hawaii on September 17, 1913, on the 400<sup>th</sup> anniversary of the discovery of the Pacific by [Vasco Núñez de Balboa \(ca. 1475–1519\)](#); however, Balboa first sighted the Pacific Ocean on September 25, 1513.

centuries ere Balboa's eyes first lit upon it. There were speeches also by the Governor and other Americans, besides one each from a Filipino, a Chinaman, a New Zealander, a Portuguese, an Australian and a Hawaiian. The motive power of the gathering is an organization known as "Hands Across the Pacific" : <sup>53</sup> its object the welding together into one common Brotherhood for Trade and Friendship of all those who dwell by the Pacific Waters.

### Oahu's Kew Gardens

The old Hildebrand Homestead, not three blocks from the heart of the city is a sort of miniature Kew Gardens. <sup>54</sup> It was thither I was drawn by accounts of the many treasures it contains. There is no symmetry about the grounds, perhaps once there was, but now it is a very maze of growth. I saw there the Betelnut Palm, 60 feet of broom stick, straight as an arrow, with a tiny tuft of leaves at the very summit : and the Travellers Palm from which clear fresh water can always be obtained, by making an incision at the base of any one of the branches which spring from close to the ground. I experimented and found it so. There were giant Magnolias full of fragrance, and the Red Ginger : and in another part men busy potting new varieties of trees and flowers which were pouring in from other lands. But of roses, never a one. The truth is there is a beetle which somehow or other has emigrated from Japan to these isles, a night prowler, having a passion for roses, peach and almond trees, which during the day lies hidden in the ground. Until some antidote is found for him, rose culture is practically an impossibility on Oahu. None so far as I can learn have attempted Pot-Pourri <sup>55</sup> here, yet they have ingredients enough to hand. Besides Plumeria, White Ginger and Magnolia, they have the Oleander, Verbena, Syringa, Heliotrope, Stephanotis, and Ylang Ylang from far off Java. I expect that this is far from the end of the list but can only mention what I saw in that emporium of Tree and Flower Land.

Sugar and pineapple play so large a part in the life of these islands that it is not so extraordinary to find both a Hospital and a Nursery set apart for them in Town. Here are to be seen row after row of these plants, each one a different kind, carefully labelled and watched with all possible care. Some are new and others are sick. When a new enemy Parasite is discovered in the fields, hither plant and insect are carried, and the whole world sought over for a devourer of that particular pest. This hospital has already meant the saving of millions of dollars to Oahu's industries; and no expense is spared as to its upkeep and development.

### Of Maidens' Attire

The young Hawaiian maiden follows not her buxom Mother in the use of the Holoku. Her street attire is quite up to date, nor but for her rich brown skin would you know her from her equally modishly

---

<sup>53</sup> Alexander Hume Ford (1816–1945), who co-founded the "Hands Across the Pacific" movement, was also responsible for establishing the Hawaiian Trail and Mountain Club and initiating the celebration of Balboa Day. He moved to Hawaii in 1907 and it is probable that WWB met him while in Honolulu. See [Hawaiian Prophet: Alexander Hume Ford](#) by Valerie Noble (1980).

<sup>54</sup> The Royal Botanic Gardens, Kew, usually referred to as [Kew Gardens](#), is in southwest London, England. The [Foster Botanical Garden](#), in Honolulu, was first planted in 1853 by the German physician and botanist, [William Hillebrand \(1821–1886\)](#).

<sup>55</sup> [Potpourri](#) is a mixture of dried, naturally fragrant plant material, used to provide a gentle natural scent inside buildings.

dressed white sister. Yet I cannot help but think what a far step from that of her great grandmama whose only covering was the Pau or loin cloth made from the bark of the mama-ke tree, yet it was ample. Did the tree win the title, or did the title name the tree? The strips of bark were united by overlapping the edges, beating them together and glazing them with a kind of resin. Five of these cloths were used joined together which were wound round the waist and reached below the knee. But women of the Court went one better than Bark. In the Bishop Museum I saw a Golden Feathered Pau a good twelve yards in length. What the lady must have felt and looked like when that stretch was wrapped around her on a broiling day, one can but faintly imagine. But even she was excelled by the Queen who had seventy-two yards of orange and scarlet material wrapped o'er her portly waist till with her arms outstretched, not the most fervid courtier could reach so far as to be able to kiss her dainty hand. Yet note that at that time on Oahu, crinolines <sup>56</sup> were the rage at Home.

Two hundred nightgowns (Holokus) marching through Town was the sight that met my eyes as I entered the City proper on a festal day. Each buxom lady was adorned over the shoulders with a crimson and gold cape (an Ahuula) and a wreath of flowers across her forehead, another round her neck. They sang soft melodies as they went, and two by two wended their way to an Exhibition of Ancient Hawaiian Wares. 'Twas a pretty sight.

## Tramping

The Island of Oahu can be traversed in three laps, each distinct. There is the West side, which the Railroad monopolizes, skirting the edge of the Mountains so close to the sea that there is no room for road. This lap ends at the North end of the island at Haleiwa, <sup>57</sup> where there is an Hotel. This is a trip of some fifty miles. The second lap is the Auto road which runs clear up the centre of the Island to Haleiwa then turning to the East completes the North run and heading South finds its way back to Honolulu by the East Coast and the Pali. This is a trip of some ninety miles. The third lap is one which the man on foot alone can fully do. It runs round the Southern end of the Island and starting from Honolulu meets the autoist at the foot of the same Pali. This is a trip of some thirty miles. That I might know Oahu from end to end I covered the three of them, began with the South, then took the West adding to it the tramp not up but down the Central Plateau, and left to the last the East side and the North.

## Oahu's South <sup>58</sup>

The southern tramp was an all day hike and full of interest. Starting early I made off to the Koko Crater where is a great Wireless Station and not far off a Fishpond which rents at seven thousand dollars a year, and bespeaks a vast aquarium of fish. These ponds are arms of the sea dammed off, and here fish are preserved for the market. Thence by a rough road I made my way up to the Lighthouse of Makapuu Point whence I could see the top of that vast crater on Maui Isle as well as

---

<sup>56</sup> [Crinoline](#) was originally a stiff fabric that first appeared around 1830, but by 1850, the word had come to mean a stiffened petticoat or rigid skirt-shaped structure of steel designed to support the skirts of a woman's dress into the required shape.

<sup>57</sup> [Haleiwa, Hawaii](#). WWB has *Haliewa* here and elsewhere.

<sup>58</sup> See also Tale #55, *Of Oahu Island (O-r-hoo) (I)*, in Part IV, *Tales of a Roaming Grandfather*.

the islands of Molokai and Lanai. Here are three keepers (one a fellow Londoner) all comfortably housed in separate homes. I was taken over the Lighthouse; and its workings were explained to me. Then I climbed down, but not by road, the rather over lava rock with a wicked drop on my right. One mile of lava rock is equal, in my mind, to five miles level walking. Reaching the beach, I made my way through scrub and arid waste to Wai-man-a-lo, a sugar plantation. I tramped right through the heart of it, and the heat was stifling with the tall canes, far above my head on either side, keeping out the breeze. At the mill I found a colony of over 200, all engaged in the business; a school for the droves of children, as well as a store or two. This is that valley which I saw from the steamer. Then I had to climb out of it through more sugar, and to twist and turn with the road as it winds its way through a spur of the main ridge, with many a pineapple farm on either hand. From where I struck the main road it was easy going. The climb up to the Pali is all concrete laid with a wall of the same on the outer edge (280 thousand dollars were spent on six miles here), a truly magnificent piece of work. At the Gap itself the Trade Wind was on its best behaviour and I had no need to grasp the wire rope. Now all the way was down grade, and a kindly Providence here threw in a Shower Bath free gratis. It was very welcome. Down it came and right to the skin it reached (we are but thinly clad in Tropic Lands) nor were towels needed, for once again the sun, and everything was dry. There was no need to sing me to sleep that night.

Ere I took the railway, I rounded off more fully the Southern end, for I had espied a charming little bay under Koko Head, some ten miles out of Town and I must needs investigate. Its foreshore I found was owned by a group of men who had put a Tabu on all visitors. But I got busy, pulled a wire or two, and soon became a privileged party. For me the bars were to go down, the Tabu was lifted. Thither therefore I went, armed with a note to the Jap in charge, a note written in his own tongue, so that I knew not if it might not be to set the dogs upon me if I overstayed, or to kill the fatted calf on my approach. I found a bay, in shape, like a balloon, with its narrow end the outlet to the sea where the great waves dashed clear over the rocks on either side of its entrance; a sandy beach with a lazy sea lapping it; for the reef across its middle bore all the roughness away. A Bungalow for the owners and a shack for the Jap. By a narrow and winding path I made my way down the cliff to the little haven, and found Mr., Mrs. And Master Jap at home. Whether it was the note or their own household's needs, I know not, but soon after my arrival when I was resting on a log, the little family came along with a net a-fishing bent. I was an interested spectator of the hunt. The brown folk with their spidery legs bare to the thigh marched into the water and looked. Attaining a safe height I also looked. I saw nothing but they saw their dinner shimmering before their sharper eyes. The net was some forty feet long, a great canvas bag in the centre with a large mouth into which they dropped two stones. On either side of the bag was about twenty feet of sail cloth a foot wide. Gathering it all up, they walked single file into the spot they had chosen for their cast. With a quick movement the man walked away from the woman, turned shorewards and swept the net into the water. At once the woman began drawing her end towards the man, and I could see the bag in a flash alive with movement. Drawing it to land they emptied the contents into a box, and in that one haul had enough fish to keep them going for days. They said "Low tide, small fish : high tide, big". It was low, and they were of sardine size. The man gathered up the net and walked off : calmly leaving his little mate to heave the box on her shoulder and march home behind her Lord. When I presented the pair with an orange, his tiny little eyes closed tight with joy, and his grin reached from ear to ear. After a laze, I left them, to wander homewards in a blazing sun, past dairy farms and apiaries, with Waikiki Beach and its surf riders as my reward at the end thereof. Thus added I Hanauma Bay and Quick Eats fishing to my bag of knowledge.

## Oahu's West and North <sup>59</sup>

The railway was now due. I made my way thus to the north end of the Island reaching Haleiwa with its hostelry, whence I headed south on foot down the Central Plateau, thus covering by rail and foot some ninety miles. The train journey was delightful. The line is a narrow gauge, and the engine being an oil burner, I escaped both dust and smoke and saw all that was to be seen on the way. As we made first for Pearl Harbour we passed through the Honolulu Sugar Plantation, then circled round the great sheet of water where Uncle Sam is expending twenty million dollars. There were Battleships at rest, and the huge Drydock, the Wireless Station and lofty cranes, and above us circled many aeroplanes, like monstrous gadflies shimmering in the sun. Now we came to salt beds, and fish ponds, banana groves and rice fields, the latter gay with an army of banners flying in the wind to keep the birds off the fast ripening plants. The Mountain Range which we were nearing was a striking sight, its rugged peaks and heather mixtured sides of red and brown ever changing hue as sunshine or cloud played upon them. Up into every valley headed the sugar cane; and the mills with their lofty stacks were going at full blast; while here and there a church spire was seen. Then we came to the great sugar plantations of "Oahu" and "Ewa". The scene changed at Sisal where rope is made from the plant of that name, the fibre of which is like flax : and as if man had not enough already to occupy him, we came to cotton fields — at present but an experiment.

Now we reached the southern tip of the Western <sup>60</sup> Range and were hemmed in close between the Mountains and the sea, but only for a few miles. Before the Waianae Sugar Plantation came into view, at the little Settlement itself, we came to a halt. Here is a beach of purest sand, not a rock to be seen, a long stretch shaped like a crescent. Looking up at the Mountains at the back one had to own them a forbidding looking lot, with the highest peak on the Island among them, now the only home left to the wild goat and the pig, the roving cattle, the turkey and the dove. The only break in the whole range is here, a sudden low cleft through which runs a trail (no road as yet) leading to the very heart of the Island, Wahiawa. Then come Makua and its Barking Sands. They are only to be found on these Islands and Scientists have come from far to study this strange thing. At a distance they look no different from any other sand, but they are really minute shells or rather capsules, which under certain conditions (and only under such), a grade of dampness in the air, and the wind from a certain quarter, will explode under pressure and give out a sound like the bark of a dog. <sup>61</sup>

Now we ran for miles along the edge of the rocks up the West side of Oahu, none hotter or drier part than this the whole year round, till at Kaena Point where there is a lighthouse, we took a sharp turn, and were at once on the North Side of the Island. There is a broad level ledge of land all along this North end, so the railway has no difficulty. Once we had swung round the last spur of the range we came upon another great Sugar Plantation, that of Waialua. Haleiwa is but a step further, where I left the train to find a lovely half mile beach of sand, a river running in at one end, and on the bank of the stream an up to date Hotel embowered in trees and palms and shrubbery, with wide portico and Lanai where all meals are served. <sup>62</sup>

After lunch and a stroll around to get my bearings, I went off to find my Druidical Remains. I understood that both a City of Refuge and a Temple were in the neighbourhood, though I was warned that both had felt the ravages of wrath and Time (in 1820 just a century ago they had fallen, together with Idolatry) and that the first named was mighty hard to reach. I found it so. It was five miles further

---

<sup>59</sup> See also Tale #56, *Of Oahu Island (2)*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>60</sup> WWB has *Eastern*.

<sup>61</sup> [Wahiawa](#), [Makūa](#).

<sup>62</sup> [Waialua](#).

on, upon Waimea Headland, and a stiff, long winding climb to reach the summit. But it was worth it, The Refuge known by the melodious name of Puu O Mahuka <sup>63</sup> has now only its outer walls standing, the grass houses within the enclosure are gone : but what a site. It is almost at the brow of the Promontory, a sharp drop of some 700 feet to the level land below, and the sea a half mile off. There were other Cities of Refuge but this one served for the North when the land below, now so thinly peopled, was alive with natives. He who sought Refuge here from the Vengeance close behind him, had to bestir himself to get to safety. Those natives must have been as goats for climbing. A river runs down a deep gulch on one side, but how they got the water up and other necessary supplies passes my understanding. At the back there is a vast stretch of high table land now covered with pineapple : indeed this fruit grows up to the very walls, and Japs were busy hoeing all around. There are two enclosures, together some hundred yards in length by fifty wide, not running parallel, but one touching a corner of the other and then advancing further towards the Headland. Perhaps the Priests lived in one, the Refugees (till certain rites had been performed and they could go forth safe and free) in the other. The walls are now about four feet high, but judging by the fallen stones when the place was wrecked, I should say that they may have been originally full twice that height.

The Temple or Heiau (why not have added an O and so used all the vowels) known as Kupo-polo, some eighty yards by thirty yards in size I found on the flat below, a mile or more away on my way back. It nestled under a high bank, and a long wall 300 feet away kept out intruders. A tangled maze of shrubbery made approach no easy task. The outer walls are clear, but the stone altars are no more. It looks as if a cyclone had struck it, and from all accounts, when the doom of Heathenism was sounded, the natives and priests themselves, went at wrecking with a will. They levelled everything but the outside walls and the main dividing one; and even these they half destroyed. When one recalls the appalling shedding of human blood which took place within that coral enclosure none can regret that its nemesis came.

### Oahu's Central Plateau

The 5:30 a.m. whistle of a mill calling men and women to the fields aroused me, and breakfast over I set out early. Now I faced South with thirty miles to go and Honolulu at the end. No narrow, dusty road, but a broad, well oiled one for autos all the way, a joy to walk upon, not a loose stone nor sign of dust, the first seven miles all up grade, but a gently rising slope, with shady trees (in chief the Ironwood) till the high plateau is reached, these trees on either side, planted in perfect line throughout. Sugarcane all the way, and gorgeous golden gadflies for companions. Now came the Pineapple Plantations. Once on the Height of Land the whole country lay before me. Far as the eye could reach there were endless miles of pineapples. All day it was either they or sugar. I saw enough of them to surfeit my sight for a life time. There is no wonder to me, now, in the Official Statement that 600,000 tons of sugar and six million cases of pineapples are exported year by year. There are great fissures in this Central plateau, but even here man will not let Nature rest : down the banks and all along the bottoms fruit or cane are growing. The whole country alive with husbandry. In the cane fields, some weeding, others burning, train loads moving to the mills : in the pineapple fields horses singly ploughing between the rows, many gathering the fruit in sacks, and auto trucks bearing it off in boxes piled high with the golden fruit.

---

<sup>63</sup> [Pu'u o Mahuka](#)

It is a wonderful sight in that country between the two ranges, with its endless fields and the broad trunk road cutting them in twain, and the autos tearing along, some northward bound, and as many south. Thus twelve miles passed ere I noticed it, and I was at Wahiawa, with its four mile Reservoir and the vast Schofield Barracks, and in the very heart of the Island of Oahu. What the object is in placing such an Aldershot <sup>64</sup> in such a spot, I know not. Here is accommodation for 30,000 men. Here are battalions of Infantry, Artillery and Cavalry. Huge buildings, great plains for drilling, small buildings, numberless, tennis courts and baseball grounds, a city in itself, hidden away, yet has its railway line running direct to Honolulu. These soldiers were truly an agreeable change from the endless vista of waving masses of sugar, or the stiff cactus-looking plants of the pineapple. On this went, mile after mile, till it became almost oppressive and I was glad ere full darkness came to hie me to a spur of the main line, and wait for the little train to pick me up and land me safe in Honolulu.

I learned some things that day. Sugar needs Irrigation, whilst pineapple requires only the gentle dew from heaven. There is no room for the small man in either industry in Oahu. The big Corporations will indeed buy, and buy fairly, the produce of the small man, but for white men there is no possible living to be made. No white man could work his own fields, the heat would prostrate him, and the price of labour is high. No alien can homestead land, and other land is at a price which eliminates all profit. To even purchase Stock in the great companies is not easy. The present holders want no better investment of their money, they have but to lie back and draw huge dividends whilst the Jap does their work for them in the fields. The exclusion of the Jap would spell ruin for Oahu.

### Oahu's East and North

One lap of the Island still was left ere I had circled Oahu, that lap from Honolulu to Haleiwa by the East Coast. I would fain have walked the whole of the fifty miles but there are roads and roads. The East side is very showery, the Trade Winds bring up the clouds from the sea, and hurl them against the range where they break : and they were road making, which meant deep mud. Just as the Central road is magnificent so was the Eastern road just then deplorable. I used sane judgment therefore, and took refuge in an Auto Bus which covers the first thirty miles : and mixed up with Japs and Chinamen, with women kind and children many, whom we dropped every now and then en route, I reached Hauula, my arms aching from having to cling on like grim death hour after hour, to keep myself from being shot out into the mud. The still lighter folk had a sorry time, they oft left much space between their seat and themselves as they rose to the roof. The Chinese friend a near me smoked an abominable mixture that gave forth an odour of burning leather, and at the same time never ceased a chatter with me which left even a Yankee orator far behind as to both rapidity and eloquence. At times we deviated into the fields where the way was narrow, and to pass vehicles no sinecure. Once indeed we made our way up the bed of a stream with a flooring of rocks : but nothing fazed our driver, who whenever opportunity served broke all laws as to speed and took the wildest chances at sharp curves. He too was Chinese. <sup>65</sup>

From the city was made for Kaneohe on the opposite side of the Island : from there we headed North, with the sea on our right hand all the way. Kaneohe was Voting. The Primaries or Preliminary contest for the Territorial Parliament was on — and as women for the first time were casting their ballots, the

---

<sup>64</sup> [Aldershot](#) is a town in the English county of Hampshire, located about 60 km southwest of London. Aldershot is known for its connection with the British Army. This led to rapid growth from a small village to a Victorian town, and today it is known as the “Home of the British Army”.

<sup>65</sup> [Hau‘ula](#)

hamlet was alive with them. They had evidently put on their Sunday Best, and Holokus both white and black were everywhere. It was a case too of low shoes and Nature's own brown stockings, no need of hosiery. The fact that a woman's name was on the ticket (a thing unheard of, and still to be debated in the Courts of Law) doubtless brought out so great a crowd. She won. <sup>66</sup>

There are underwater Coral Gardens, and an amazing fish life to be seen here, then we passed on through Banana groves to Waiahole where there is a large pineapple factory, for here the valleys are covered with that fruit. Here too is a three mile tunnel bored through the Range to carry water up to the Central Plateau, and the pipe three feet through, looks like a great black snake as it crawls up and down the hills, bearing the precious fluid. This village is where we lunched. No dainty meal served on faultless linen on a luxurious porch, but in the precincts of a Chinese General Country Store, where you choose your meat, behold it cut, watch it fry, then sit you down on a bench to eat with all sorts and conditions of man, each evidently striving to complete their meal the quickest. I was the last.

Waikane, the next village, is the most charming I have seen on all the isle, it has an Old World look about it which sent me back to parts of the Sussex Coast before the days of Tourists and of Trippers. From thence to Hauula there is no more picturesque stretch on Oahu. The mountains at the back with their deep furrows clothed in green of varied hues by reason of their diversity of trees and shrubs; the "white water" in almost unbroken line, the fields where cattle graze, and every now and then a Church with its little turret or a pretty bungalow peeping out upon you, the School Houses and the quaint looking children on the way home from lessons; the water buffaloes who count ten between every step they take as they plough up the rice fields; Kahana Bay round which we swept, hemmed in by hills, and at its head a stretch of park land; even the ruins of an old mill looked artistic, and Hauula itself at last, with its country Inn where mine host, a Swiss, and his good wife, a Belgian, received one cordially, and where are to be found good company, "good eats", and beds of down embowered in mosquito net. I arrived at an interesting time, when a case of Atavism was to be seen within a stone's throw of the hostel, for the natives had slipped back to the ways of their forefathers in the brave Pagan days of old. They were holding a Jamboree over the body of a dead man. The pig had been slain and was a roasting, the contraband "Oko" was on tap, singing and jubilation had taken the place of wailing, and the circle of men and women outside the shack, under the Banana grove, sat far into the night. At dawn the body, encased in a rough coffin made on the premises, was lifted into a waggon, the mourners climbed up and sat on the sides of the cart, the Jehu <sup>67</sup> called aloud "All aboard" and thus hied they to the burial.

Here are some so called Sacred Falls, with a pool at the foot, and fourteen Stations or natural Stone Altars on its way to the sea. It is not easy going, up or down, as the way is narrow, and there is naught for it but to get into the stream. Here leaves are placed on each altar with a stone to keep them from departing suddenly, as this Way of the Cross is made. The appeal is said to be to some god of old who took refuge here from the wrath of Pele who was hunting him over hill and dale with her volcanic fire and ashes : perhaps when Koko Head blew off, and all fled for their lives into the clefts of the rocks.

Now forth I tramped, sugar once more all the way, and a sun which would fain burn you up, past Laie and Kahuku : a pleasant stroll of many miles, for the road was good. Along my route was Blue Grass to be seen as in Kentucky, and of course many a horse ranch : and at Laie the Mormon Settlement of Hawaiians : for both this peculiar creed as well as Christian Science, New Thought and Pentecostal Mission have found on Oahu congenial soil and many followers. Just as I saw in Salt Lake, so here :

---

<sup>66</sup> [Kaneohe](#)

<sup>67</sup> [Jehu](#) was a king of Israel in the 9<sup>th</sup> century BC.

with the Mormon's usual thriftiness, broad avenues, neat cottages, well trimmed lawns, and luxuriance of flowers, ferns and all manner of tropical trees. The very birds seemed to pipe more strenuously than elsewhere on Oahu. Much carefully tended Taro, and men pounding Poi; everybody busy; a thing strange for Hawaiians who now have grown so weary that they look to the Chinese to grow their Taro for them, and to catch their fish. And in the centre of the Settlement is their Temple, of some ancient kind of architecture, surrounded by gardens laid out by one who has made landscape gardening the study of a lifetime. If there were more like settlements of the Church of Jesus Christ of Latter Day Saints, the native race would not be dying out, for in work, not laziness, is life.<sup>68</sup>

Kahuku at the North East corner of the Island has a Marconi Wireless Station : twenty-four masts towering towards the sky. Nearby is a huge sign to tell you that from here you can send your messages to America or China as you will. Here I dropped in at a large Plantation Store served by three young white men of the better class, sitting on the counter, twirling their thumbs to keep them busy. Where boys are sent that they may become better men, came next in view; the Industrial School far from all temptation, a rustication in very truth. Now but a few miles more and Waimea hove in sight, the site of that City of Refuge that I had already climbed to, where a halt was called and whence towards evening the railway bore me home, down the West coast. Oahu had become an open book to me.

## Wizardry

The Kahunas of old (the priests and medicine men) were wizards indeed. Their "Praying to death" was no fanciful dream, explain it how we may. So had they worked upon the people for many generations that once man or woman knew that they had been marked a victim, they collapsed and wilted fast to death. And more : it did not require that anyone should know that they had been marked for death — there was a subconscious treatment, almost unbelievable 'tis true, but cases are too well known to doubt. There was the white man married to a native girl who from perfect health began to droop. He could not account for it. He called in a white doctor to his aid. The latter in his diagnosis found that there was nothing wrong, and surmized the true cause. He discovered that another woman had through jealousy paid heavily in kind for the Kahuna's services. It was ticklish work but the doctor approached the Medicine Man and boldly offered him much gold to stay proceedings. This could not be done unless a substitute was found. To the Chinese, money is more than life — to leave a competency for their kith and kin is their supreme object. A Chinaman was found, who for much gold accepted, and in a few months died; the Native girl recovering and living long.

John Young, our old time pioneer, beat a Kahuna at his own craft and game. The King's favour to this white man roused jealousy, and at length murder in many hearts. They dared not openly attack him because the King would surely wreak his vengeance. So they sought out a Kahuna to pray him to death. The King got wind of it and acquainted Young. Forthwith he tracked the Wizard to the hills where he had built his Praying House and had begun his incantations. The Sailor built himself a similar one and notified the Medicine Man that he purposed setting to work to pray him in his turn, to death. So great is the power of will that the wizard becoming convinced that the white man had the greater power, collapsed; dying in short order. Young had no further trouble.

## A Forced Comparison

Broad of creed I had already heard High Mass for natives at the Roman Cathedral. There was the packed congregation, reverent, in dead earnest, all hearts beating in that perfect union of thought, belief and feeling which is one of the glories as also the powers of that Faith. A cassocked orator in the pulpit, no laboured discourse, his words in the unknown tongue flowing like a river. Then once more the worship proper, the bent knee, the deep hush save for the voice at the far off Altar as he turned with his “Oramus”, <sup>69</sup> or the choir pouring forth rich melody from the gallery behind. Then the tinkling of the cluster bells, once, twice and yet again, and the Silence that can be felt — at the moment of the Host Uplifted. Then a thousand stood, strong in the faith and praise of Him in Whom they believe : and kneeling again for their benediction, rose, each to go their several ways, content in the thought that they had given due and orderly worship to their Maker.

I walked over to the old Coral Church, the rock hewn edifice raised through the efforts of that brave band of earnest men and women who jeopardized their lives a century ago to bring that Light “to Lighten the Gentiles” which lay as a duty upon their souls. In place of the Altar, a large organ high up; and in front of it the choir of men and women; below these a dais set with palms and ferns, with a Reading Desk to the fore. A line of dark skinned Deacons entered, followed by the Native Minister, white haired, white waistcoated with ample gold chain for his fob, and with him a white woman. These two on the dais alone. The congregation not by any means reverent, whispering, chattering, moving in and out at any and all times. None knelt, they either stood or lolled back in their seats. Hymns joined in well by all, an anthem by the choir most excellent; the Part Singing true — the Altos beautiful. During the first address a Collection made (without the least disturbing the Speaker) in long handled crimson bags. Then rose the woman, a “Down East” Yankee by her speech, which was in English : not eloquent, to many “wells” and “buts”. Her attire, a loose silk blouse and dilapidated straw hat. Then another address by the man, a torrent of words and much animation : a Doxology <sup>70</sup> (sung), this last the very best, for it was soft and low. All stood as it floated o’er the spacious nave : and we dispersed. That service failed utterly to impress. Here sat Kings and Queens in days gone by, in grandiose pews at the back, soft cushioned and with Tablets of their predecessors on the wall behind. They were sincere but they have passed and with them the fervour of their new found creed. The nave of the great Church is now but half filled, the galleries wholly empty, the older natives conspicuous by their absence, the younger folk in measure held, but these not serious. It looks as if there will be still further wanderings to other Folds or None — unless there be a revival of the old time ardour which those pioneers of Christianity from far off Boston so powerfully aroused.

Men say that the Hawaiian is a dying Race. Fortunate then are those who shall pass in and out among them before that end comes, for they are an enjoying folk and those of whom a pleasant memory abides. It is so with me, and Oahu I shall ne’er forget, the Isle of Sugar and Pineapple, of Cocoanut and Palm.

---

<sup>69</sup> Latin: *We pray*.

<sup>70</sup> A [doxology](#) is a short hymn of praises to God in various Christian worship services, often added to the end of canticles, psalms, and hymns.

## IN THE HURRICANE BELT

To pass over that “imaginary line running round the centre of the earth”, the dream of childhood : to cross the International Date Line where Time jumps four and twenty hours at a bound, so that a whole day is lost to you, unless you retrieve it by making the circuit of the globe : to have a taste of the Doldrums, that space of vacant breeze between the Northern and the Southern Trade Winds, which sometimes is a stretch of one hundred miles, and yet again is not at all but instead a storm of wind and rain battling overhead where the two winds meet and fight it out : these are some of the incidents met with as one makes that long passage South, from Oahu to the Land of the Maoris under the Southern Cross. The Merchantman and the Man of War alone nowadays greet King Neptune in his true Domain — The Line. The rough boisterousness of the Barbering and the Ducking is not becoming to the present day luxurious passenger on the Liner. Therefore it is not easy to grasp that one is poised upon the supreme bulge of the earth’s crust. There is the same sun, the same heat, the same illimitable waters, but the Daily Chart tells the tale and imagination does the rest. Once passed — we begin to think of entering amongst those Thousand Islands of the South Seas of which so much has been written since the White Race first roamed amongst them. Men say there is a Lure of the Tropics, would that lure descend upon us, or leave us unscathed — Time would decide.

### The Run To Fiji

Our course lay straight for Fiji, but ere we reached that ‘halting’ spot we had to thread our way through many Groups. The days pass, and the hot nights too : and at last, something else than sea appears as the eye roams wistfully over the watery waste — Canton Island, <sup>71</sup> one of the Phoenix Group, all low coral islands, these surrounded by reefs — otherwise known as Atolls : the first break in over 1000 miles. At a distance, it appeared like a band of glittering gold in the horizon — this because of the blazing sun playing on the combers as they broke over the coral. When we grew closer, we saw its shape, an oval, some nine miles long, the width of the sand varying from 50 to 600 yards, a cocoanut tree here and there, looking very lonesome : some brushwood too : great Frigate birds flying overhead with the slaves, the Booby gulls, in attendance nearby. We passed close to the entrance to the lagoon (within the latter a huge expanse of turquoise colored water, calm and most inviting), a narrow space the entrance, and drawing little water. Here a British ship found her grave in the long ago, and there remain two deserted huts close by, put up by the wrecked mariners. Who picked them up one wonders, for few ships then passed that way. Happily there is fresh water to be found, a thing not always to be secured on these weird rock circlets rising out of the depths.

There is thirty miles of water between Canton and other atolls of the group and none of the rest did we see. That night we passed through the waterway which divided the Ellice Group from the Tokelau, both of which are inhabited. <sup>72</sup> Five hundred miles from Canton we came in day time to the Horne Group <sup>73</sup> (under French Protectorate). We passed Futuna with its Mountain Peak 2500 feet high. Houses and sheds, native huts and Churches. Then Alofi appeared, rising 1200 feet out of the Sea. What with banks and currents; and shoals some of which are not even above the sea level, a well as

---

<sup>71</sup> [Kanton Island](#) is the largest, northernmost, and as of 2007, the sole inhabited island of the Phoenix Islands, in the [Republic of Kiribati](#). It is an atoll located in the South Pacific Ocean roughly halfway between Hawaii and Fiji.

<sup>72</sup> [Tuvalu](#) was formerly known as the Ellice Islands. [Tokelau](#) is a territory of New Zealand.

<sup>73</sup> The [Hoorn Islands](#), including [Futuna](#) and [Alofi](#), are one of the two island groups of the French overseas collectivity of [Wallis and Futuna](#).

the disturbance of the compass due to magnetic minerals in the bed of the sea under the ship, any captain has an anxious time, as he threads his way through these many dangers. But what think the majority of passengers of that : their aim seems to be but to eat, drink and be merry. Concerts and dances, mock marriages and deck games fill out their time.

Now no more sight of land till Fiji; and meanwhile we skipped a day, for we had reached the 180<sup>th</sup> meridian, the antipodes of Greenwich. We went to sleep on Thursday night and found it Saturday upon awakening. And with that day upon us we entered Suva.<sup>74</sup> All the day we had threaded our way under a glorious sun, the rich verdure of the islands of this Group a delight to the eyes.

### The Fiji Group

We passed Vanua Levu (Great Land), the second largest island of the Group, with the little island of Ovalau nestling under it on which is Levuka, the old time capital where the first settlement of whites took place in 1835 and which held its own till Suva's more commodious harbour and easier approach bore off the prize in 1882 : but today Levuka is far from moribund; its foundations were too well laid for that. It boasts, amongst other things, of schools both Public and Private equal to any elsewhere found in the South Seas.<sup>75</sup>

Then Viti Levu (Great Fiji) loomed up, the largest island of this group, with its four thousand square miles of land and today alive with industry. Besides the sugar, the cocoanut and the banana Plantations, there is rice and tobacco, rubber and Indian corn, coffee, oranges and vanilla, tea and cocoa, pearl-shell and turtle, not forgetting *bêche-de-mer* — a sea slug highly prized as a table delicacy in China.

Tasman<sup>76</sup> beheld Fiji, the first of white men, in 1643, but found no safe anchorage; other as daring seamen followed him, but it was a party of escaped convicts from Australia who first settled down among the savage natives upon Ovalau. Not a promising outlook one would think, but Levuka grew and prospered and is still the centre of Fiji's copra trade.

Time was, when no white man dared to go into those hills which we were fast approaching. They were homes of tribes ever at war with one another, each penned up in their narrow confines. But now the white man rules and the natives are content to have it so. There is justice for all, and the policy has ever been to govern in accordance with the usages of the Fijians so far as possible. Still the Family Council is held : then there is the Village Council, after that the District Council, then steps in the Provincial. The Chiefs still retain their rank, and ancient title of Roko Tui. They are responsible to the Governor for their respective Districts. Today those one time savages would be hard to beat as a law abiding community. Our possession today — but not accepted willingly. Now that we know their value commercially, politically, strategically, we wonder at the gross stupidity of our Leaders in the years gone by who had to be forced to extend the boundaries of the Empire into these far off seas. We lost Tahiti and others when we could have had them, not even for the asking, so willing were the natives to come under the Flag : and through the war we have got hold of Samoa at long last after its many vicissitudes. Polynesia is now practically ours (save Hawaii and Tahiti, the Marquesas and the

---

<sup>74</sup> [Suva, Fiji.](#)

<sup>75</sup> [Levuka, Fiji.](#)

<sup>76</sup> [Abel Janszoon Tasman \(1603–1659\)](#)

Paumotu) but we badly bungled Melanesia (which stretches from Fiji to New Guinea) : and the best half of Micronesia is gone for good (first to the Germans, and now to the Japs).

Fiji is Melanesian, the darkest skinned race of the three, negroid and warlike. Tasman lit on them in 1643 but did not like the look of the natives, nor did Cook in 1773. Cannibalism was rife to a late day. Here reigned Cakambau,<sup>77</sup> that very real person of the Story Books, “The King of the Cannibal Islands”. Fiji was a name to be feared among mariners, for the natives were known to take great gastronomic delight in “long pig” in contradistinction to him of four short legs and a squeal, indigenous to most of these Islands of the Pacific since Cook first set his ancestors ashore. Fiji lies in the cyclonic belt along with Cook<sup>78</sup> and Tonga — Samoa too — and has a yearly brush with the elements, when it is wise to run in place of arguing, and seek shelter in the holes and caves of the earth if such can be found nearby. The Fijis are Mountainous, well watered, many forested, coral belted, they enjoy boiling springs and earthquakes. Here are 60,000 Hindoo coolies, employed under Indenture, i.e., to be duly returned from whence they came. They are restless, and the whites of whom there are but 5000 go oft in fear of an uprising. The Fijians of which there are 80,000 give no trouble. Since he has been missionized his bellicoseness has evaporated. His energy however does not extend to steady work. His main aim in life seems to be hair-dressing. His head gear is a marvel. A pompadour of crinky hair, a guardsman’s busby; which lies like a huge mop up his pate, dyed oft times to red (his favorite colour) or golden brown or even white. He and his womankind took kindly to garments from the first. A shirt and a kilt of linen for him; any old kind of dress for her, neither affecting any footwear. The first Missionaries were Wesleyans and they lead in converts today. The Romanists had much difficulty here as elsewhere to get a footing. This being a Crown Colony, the Anglican has its following among the elite.

A Barrier Reef rising far out from the land encircles Viti Levu, thus leaving a glorious stretch of quiet sea of loveliest hue between itself and the shore. We entered Suva through a fairly wide break of an inner reef, beacons on either side. Yet many a ship falls by the way, for we passed wrecks here and there, one even at the harbour mouth, where master mariners had met their match.

## Suva

Suva with its two miles wide harbour looks very pretty from the water, its red roofed residences dotted about on the green hillside, but it lacks progressiveness. Probably the Municipal Fathers were short of funds. There is a Main Street but the stores are meanly housed, a look of a frontier town of the wild west about the place : yet it boasts a Carnegie Library, a solid Post Office Building, a large hotel and a resident Grammar School for the whites, where many boys of junior age were seen with a school cap to distinguish them. A mile along the shore is the Botanical Garden with its profusion of tropical trees, bushes and plants, and nearby a goodly well-kept piece of ground many acres in extent, Cricket was in full swing, a Pavilion well attended. The players were all whites. Perhaps no aboriginies allowed; for the game has its disadvantages when taken up by the natives of these isles, and has had to have formal edicts issued against it. In Samoa and in Tonga all work stopped, whilst 100 played upon a side and a game lasted for weeks. Then came the order that cricket must be restricted to one day a week, under grievous pains and penalties for disobedience. But such games are the saving of

<sup>77</sup> [Ratu Seru Epenisa Cakobau \(1815–1883\)](#)

<sup>78</sup> WWB is referring to the Cook Islands.

the young white clerks and officials : they keep up health and spirits, and prevent the deadly dangers of isolation. Hence it was good to see many Tennis Courts in active operation.

Everywhere there was color through the abundance of Hibiscus and Croton bushes; jasmine was running riot over the houses; gardenia scented the air; the purple blooms of the Bougainvillea covered many a wall; whilst, almost a weed, one saw on all sides the Mimosa, that freak plant which shrinks from your touch as if frightened, and nightly rolls itself up, nor opens till the morning sun appears.

Here Churches have to think essentially of windows as ventilation rather than opportunities for embellishment of the building, walls are broken from plate to floor to let in the air, and by windows, with heavy venetian blinds, to ward off the elements if need be.

The Hindoo very much in evidence : the men small headed and of lightest build, the very opposite to the befrizzled and husky Fijian; their women robed in white or yellow of gauzy texture with gold ringlets in their nostrils, bracelets on their ankles and many rings adorning their toes. Their children exceptionally pretty with wonderful eyes and oft times finely chiselled features.

The Fijian as a longshoreman is fine, indeed next to the Niuean he is the most active and industrious of all these Southern Islanders : but as a tiller of the soil, he is, like the rest of them, the rankest of failure. He works fast at his specialty, his greatest strength telling : freight both coming and going is eaten up by him as if by magic : and all this for one dollar a day — with unlimited food of ship's biscuit, potatoes and salthorse <sup>79</sup> thrown in. Work done and cash in hand, no more work for him : he retires to drink Kava and laze till the next ship makes port. His physique is splendid : and it fascinates to watch him, naked save a loin cloth wound about him, his great shoulders and chest of chocolate hue, bending and heaving at his task. When the Fijian and the other native groups take to boots, there is going to be a new type of shoe in the boot trade. Long ages have developed in them an enormous foot, with the toes so wide spread that they are like another pair of hands. To watch a native climb a cocoanut tree to reach the fruit is to see that his feet are as good as hands, grasping and holding with the grip of steel.

## Headed South

Leaving Suva, we were soon passing Beqa, the island of Fire walkers, a tribe possessing and still practicing the secret of walking upon red hot stones with perfect impunity.

Then Kadavu, the most southern of the Group, some forty miles in length with Mount Washington rising in its midst, its summit hidden in the clouds. Very close to the encircling reef we passed , so close that the thatched homes of the natives buried amid banana groves and the gardens where workers were busy, were as if we walked amongst them. Here was the last point of land, none more till New Zealand loomed ahead.

No waters the whole world over usually more riotous or inhospitable than those we now entered : the mighty sweep from the Antarctic giving free rein to wind and billow. Yet it is not always in bad humour and such a happy temper was our lot. A few hours tossing and then such a sea for smoothness as the most indifferent sailor could but welcome. We were out of the Tropics before another 1000 miles were notched; and though the sun shone out, there was a nip in the air which called now for the

---

<sup>79</sup> [Salt-cured meat](#) or salted meat.

warmer clothing of the Temperate Zone, and told us that we were approaching that far off haven we had set out for. And so it was : for at break of day I stood upon the deck and saw the Land of the Maoris (the home now of over a million whites who swear allegiance to Britain's King) burst through the gloom of night.

## UNDER THE SOUTHERN CROSS : NEW ZEALAND.

### The Pioneers

New Zealand consists of two Islands, the North and the South, with a tiny appendage below called Stewart or Third Island. The Dominion is famous for its Maoris, its varied scenery, its thermal wonders, its so called advanced legislation, its mutton and its butter. It has four big centres : Auckland and Wellington in the North Island, and Christchurch and Dunedin in the South. Auckland leads in population, numbering nigh 130,000 people and was the first Capital : Wellington being centrally located has now displaced it, and there is a very natural rivalry between these two cities. Christchurch is the City of the Elect, the emporium of the Elite, where the Rough and Ready gives place to the Polished, whose river, the Avon, as it flows slowly and gracefully through the town seems to bespeak the gravity and seriousness of its people. Dunedin is the chief town of a settlement of Scotsmen, who with their usual thoroughness had the plans of the new city drawn out ere ever they left the Home Country. Many are the books which tell of the history of New Zealand. It is enough for us, if we know the essential outlines. Not without struggle, and sufferings bravely borne, and splendid deeds by splendid men, have we come into possession of these Isles. Certain men stand out prominently, Captain Cook, Captain Hobson, Sir George Grey, and nearer to our own times, Premier Seddon. Cook, who may be said to have really discovered them, tho' Tasman first lit upon them a full century before : Hobson who annexed them to the Empire : Grey who loved and served them for a generation : Seddon who rose from the ranks to become one well worthy to take his seat as indeed he did at the Imperial Council Table. <sup>80</sup>

Certain deeds too stand out amongst the many : the old whaling industry, the Maori Wars, the advent of Christianity, and the Magna Carta of Waitangi. Fierce, cruel, ruthless men were those whalers who sought refuge from Antarctic storm or fresh water and supplies in the harbours of the land, but they met their match in the cannibalistic Maori. It was the awakening of the native mind to the unworthy way in which land grabbers had and were cheating them out of their soil which brought about those terrible conflicts when Maori and white man fought. Marsden, the New South Wales Chaplain from the Old Land, first brought the Gospel to these shores, landing in the Bay of Plenty, carrying his life, along with the Bible, in his hands. After him came a line of splendid men, the two Williams brothers, and Selwyn standing out preeminent; the latter a giant of strength and ability, recalled to die as Bishop of Lichfield. In those far off days these islands were to be had by Europe for the picking. It was Hobson of the Royal Navy who gathered together the Chiefs, so far as he was able, at the Bay of Islands, and there swore compact with them in the name of Queen Victoria, assuring them of liberty and protection under the British Flag. It was by a matter of almost hours that he forestalled the French Captain who was sailing at that same time to hoist his Emperor's flag over the South Island. Hobson won. <sup>81</sup>

<sup>80</sup> [James Cook \(1728–1779\)](#). [William Hobson \(1792–1842\)](#). [George Grey \(1812–1898\)](#). [John Seddon \(1845–1906\)](#).

<sup>81</sup> [Samuel Marsden \(1764–1838\)](#). [Henry Williams \(1792–1867\)](#). [William Williams \(1800–1878\)](#). [George Augustus Selwyn \(1809–1878\)](#). WWB was ordained deacon in 1881 and priest in 1882 by George Selwyn's immediate successor as Bishop of Lichfield, [William Dalrymple Maclagan \(1826–1910\)](#).

## Auckland

Auckland lies upon an isthmus, scarce ten miles wide — a narrow neck of land connecting rich lands north and south. Right across the isthmus she stretches in her suburbs — she herself resting on the shore of Waitemata Harbour, whilst her offspring O-ne-hunga nestles on a far larger harbour — Manukau — a magnificent stretch of water, but useless owing to its bar. Auckland faces America, Onehunga, Australia. This isthmus was for centuries the Debateable Land of the Maoris. More battles were fought here between the savages of the North and of the South thereof, than anywhere else in New Zealand. Nature seems to have anticipated these struggles, for dotted about the isthmus are natural strategic heights, standing solitary, each a natural fortress, castles which barred the way, the Pa's of the Maoris, and every one of them could tell a stirring tale. The white man saw the value of the site at once, purchased, located, built a city and the Tamaki Isthmus has since then known Peace. Auckland has its Fetish, it is Rangitoto, an extinct volcano, forming an island at the mouth of the Harbour, a main peak rising high, with a lesser one on either side. As with the Jap it is Fuji, and with the Hawaiian it is Diamond Head, so with the Aucklander it is Rangi all the time.

A climb to the summit of Mount Eden which seemingly rises in the heart of the far flung city gives a panoramic view which is hard to beat. All around at your feet is man's habitation, the factories, the workshops, the schools, the churches, tram cars feeling their way out till the last shops are passed, and only the red tiled homes remain. Gazing east you look up the great Hauraki Gulf till in the far horizon you see the waters of the ocean : to the right and left there are vast stretches of undulating farm lands : then turning round you look clear over the Manukau Harbour to where the huge rollers of the Tasman Sea thunder at the bar. There is nothing to obstruct your view, everything is below you, you might be floating in an aeroplane so clearly does every item lie beneath. Auckland is not a symmetrical city; it seems to have "just grown" — but it is picturesque for all that, with its rich foliage, its many parks and open spaces; and that touch of colour given by the 75 per cent of red tile roofing.

Mine was the time of roses, and of Calla or Arum lilies. The latter are indigenous and rank among the wild flowers of this land. Every park and garden was resplendent with all manner of old country flowers. The florist shops carried lovely blooms of the choicest roses of today, and few homes could be passed which had not Bush and Climbers to make the touch of "Home" complete. It was strange to feel that at that very time in that far off "Home" all gardens were sleeping their winter sleep. Summer here, Winter there, my old time world clear upside down.

The fact of two of Auckland's suburbs bearing the names of Epsom and Newmarket bears witness to the hold which racing has upon these people. Indeed New Zealand is no whit behind Australia in love for the race course and every town has its speedway. In the cars, women as well as men are to be seen eagerly scanning the cards bearing the entries and the weights. The Government has shut down on the Bookmaker and the Totalizator<sup>82</sup> is everywhere used instead. If horse racing leads in sport, cricket runs it a close second. On one of the local grounds on a Saturday morning, I counted ten matches being carried on at the same time, by school boys, and then there was room. In the afternoon the men appeared. Of the prowess of the New Zealander at Rugby the world has had proof, whilst all other British sports are freely indulged in. The fine harbours give ample scope for yachting.

---

<sup>82</sup> "[Totalizator](#)" is the name for the automated system which runs [parimutuel betting](#), calculating payoff odds, displaying them, and producing tickets based on incoming bets.

## The Iron Horse

Railway travel can be done on a really economical basis. The Government issues a ticket good for thirty days over the entire system. This allows <sup>83</sup> the purchaser (if he likes) to travel day and night by rail in any direction for the whole month. The Pass for the North Island now stands at £10 : if you wish to include the South Island as well it costs £5 more. Seeing that the ordinary return fare from Auckland to Wellington is £6, it will readily be seen what an immense saving the Pass System is. But for all that, travelling by rail is no luxurious comfort. I saw no Diner on any Express, the result being that at the Meal Stations there is a rush and a stampede to get a hasty meal, which is not conducive to good manners, an even temper or digestion. Anyone who has enjoyed the Pullman Sleeper of the American Continent is quite unfitted to comment on the apology for a sleeper as supplied in New Zealand. But these are a hardy people and seem quite resigned to a bed like a board and surroundings primitive. The day coaches have separate seats or rather chairs with a long back which are comfortable save for those who long legs who find the way ahead badly blocked for any hope of a good stretch out. So great is the passenger traffic on the Expresses that your seat must be reserved a couple of days prior to your start, for which you have to pay a nominal fee of ninepence or you are likely to have to stand for the journey.

## Waitomo

Wellington, the Capital, is over 400 miles from Auckland by rail, and on the way thither I stopped off to see one of the many wonders of the land, the Waitomo Limestone Caves. From Hangatiki, the jumping off place where the ubiquitous Ford Car was awaiting me, I was carried off to a Government Hostel six miles away, comfortably equipped for tourist travel and adjoining the entrance to this subterranean wonderland. The site is a picturesque one, among wild hills, in the heart of the King Country, a portion of the North Island long held fiercely by the Maoris against its settlement by white men, and getting its name from a feeble attempt on the part of some natives to emulate the white races in the selection of a King. Used immemorially to Chiefs, the new title failed as a rallying point, but the appointed one held firmly to his prerogative to the last, burying himself in the recesses of the country, and holding aloof from the newcomers. The movement was caused by the visit of a Maori Chief <sup>84</sup> to England a few years previously who was received by George IV with becoming dignity, and was captivated by the Title as well as its surroundings. The crafty Chieftain took the opportunity to purchase many rifles, and on his return armed his tribe; and easily, thus armed, cleaned up and ate his adversaries.

The Cave was long known to the Maoris, nor could it well be otherwise seeing that at the foot of the hill on which the higher entrance is situated, hidden in a thicket, a subterranean stream flows forth, its beginning and its course unknown. But nothing would induce the natives to enter, for to them the cave was the abode of ghosts and goblins, and certainly it would be an uncanny place to wander in, alone. It was under the tutelage of a government guide that I passed the portal, and with lamps in hand wandered through the gloomy chambers. Womenfolk have to put on special garb because of skirts, but men are only required to change their footgear for the mud is not conducive to clean boots. The ramifications are many, some parts so low that one has to bend almost double, others lofty, great

---

<sup>83</sup> WWB's typewritten text has *entacts*, but this word was not found in dictionaries, archaic or modern.

<sup>84</sup> [Hongi Hika \(ca. 1772–1828\)](#)

chambers and halls from the roofs of which hang stalactites in size from thin pencil lengths to those a foot and more through countless ages and at last joined with the parent above. Pure white is the prevailing colour, but in places this shades off to a delicate brown. There are marble looking pillars so clear as to be almost transparent; and striking them they give off different tones. Not a pick axe would make the slightest impression upon them, so hard are they. Strange formations are of course abundant, blankets and fleeces, pipe organ fronts and statuary. Concrete stairways with iron hand rails have been laid in places where heavy descent or ascent have to be made : and by degrees one works down at last to the river upon which you embark in a boat and are carried about in the bowels of the mountain with a myriad of glow worms overhead. Here no light is used but at length you come out into the bright sunshine where the stream breaks forth from the mountain side. It is all very weird, and save to a profound geologist quite incomprehensible. Never could such a cave be the home of either man or beast, it is damp and chilly and the moisture sparkles over you everywhere, like countless beads. There are other like caves in the neighbourhood, but nowhere else in the land.

### **Taumarunui**

Moving South again, I reached Taumarunui where two pretty streams, the Ongarue and the Whanganui, join and together make for the ocean, a three days trip by steamer. Here there is a large settlement, situated on a plain, with hills all round, but the land itself belongs still to the Maoris; the whites have built their homes on leased ground only. Very careful of Native Rights is the New Zealand Government today. There is no chance to filch the Maori. He has his Grand Council to protect him, his members of Parliament to speak for him, his native Minister in every Cabinet. The natural eloquence of the Maori which was noted from the very first contact with our pioneers has found both occasion and opportunity in Parliament to shine forth at its best, and some of the finest orators of the land today are college bred Natives. I wandered up the hillsides to gain the summits and a prospect, as well as a view of one of the snow capped peaks of the North Island — Ruapehu, a volcano that is not yet altogether quiescent. The other peak is the noble Mt. Egmont which rises close to the sea near the town of New Plymouth. It was the season for wild strawberries and I gathered many. The country from Taumarunui to Wellington I could not designate as picturesque. The hills are low, very irregular and covered with scrub. Such trees as there are had been wasted by fire. This portion of the island is no grain country but there are cattle, and sheep innumerable upon 1000 hills.

### **Wellington**

“Windy” Wellington lived up to its reputation. It is an incontrovertible fact, this breeze, which even the most ardent Wellingtonian is bound to admit, though he hedges the acknowledgement with every possible reservation. Into the great harbour sweep the winds from the Tasman Sea, and up the gullies and hillsides where the houses nestle, there is no escape from it. The city forms an arc, and like the galleries of a theatre, with the sea for a stage, rise tier on tier of red roofed buildings. Wellington is still much in the making stage. The Parliament Buildings have been eight years a-raising, and seemed far from completed; the Museum and the Art Gallery are but poorly housed. The former is rich in Maori Arts and Crafts but they are too crowded together to do them justice. But the City has no need to hurry. It is the natural Capital; it has the site, a noble harbour of 20,000 acres, a water front all deep water, and it will grow along with the country.

The first settlement of Wellington was made in 1840 by an English Company organized by a man far ahead of his age who had never seen New Zealand but who had the instincts of a Colonizer in him — Wakefield <sup>85</sup> by name — and possessed the ability to carry things through. The history of the effort is interesting if only for the huge claim made by the Directors as to land grants from the Maoris which proved illusionary and the government had eventually to take over the whole business.

By an endless cable car line which makes its way by tunnels to a summit of one of the hills immediately above the city, there is a fine panoramic view of both harbour and settlement. Hard by the summit is a Kiosk where that peculiar habit of the Australasian “Morning Tea” at 10 to 11 a.m. can be obtained : and then a down grade walk back of the city takes one into and through the Botanical Gardens. Here one sees New Zealand Fauna in abundance, as well as flowers and shrubs of the Old Land. In the Rosarium I found in full and splendid bloom such old friends as Betty and Herriot, Hugh Dixon and Irish Elegance. Nestling at the bottom of a valley and sheltered from the breeze, each bloom was perfect.

Another stroll was out to Newtown Park — one of the many open spaces which these Islanders so wisely love to create — here was the inevitable zoo with the Kangaroo and other Australian quadrupeds. Strange birds too : the wingless Kiwi which by ruthless slaughtering is fast becoming extinct : and the bird that has learned to love the fat of the kidneys of living sheep, and is the dread of the farmer. <sup>86</sup> It has the hooked bill of the parrot, and the docile sheep allows the attack, the while coolly grazing, until the wool and the flesh are torn asunder and the vitals reached : then it is too late to protest.

Yet other took me to a height of land whence I gazed far out across the Cook Straits which separate the North Island from the South. On the far side was the home of Pelorus Jack, <sup>87</sup> that far famed White Dolphin, who for years met the ships which make for Nelson through French Pass and piloted them regularly through. To save him from destruction the whole finny tribe of dolphin was, and still is, protected in New Zealand waters by special order. Jack’s actual cave home no man knew, but the Maoris have their theory and their legend : a grain of truth these same legends are, lost in a bushel of impossibilities.

## The Maoris

But the Bibliography of the natives, their history, their myths and all that concerns them is both extensive and interesting. Few native races have had such careful search bestowed upon their Past. And to their survival and the proper upbringing of their children the government is wonderfully solicitous and attentive. The native Schools are under a special Department and from the Reports, a splendid work is being done. There are 120 village native Schools with an attendance of 5000 children, whilst 10,000 others attend the general Schools of the Dominion. It is good to come across a Native Race which is not decaying.

Whilst of course the present number of Maoris is almost infinitesimal compared with the numbers Tradition says once inhabited these Islands yet there are today 50,000 Maoris in the land and they are

<sup>87</sup> [Pelorus Jack](#) was a [Risso’s dolphin](#) that was famous for meeting and escorting ships through a stretch of water in Cook Strait, New Zealand, between 1888 and 1912.

slightly on the increase according to the census. From whence they originally came is a point of much dispute. That it was from a country called Hawaiki is not to be doubted. Some say Tahiti, others Samoa, others Tonga, others far, far west of these, but anyway the migration was a wondrous thing, sailing at the least nigh 2000 miles in their double canoes. There is a striking picture of their arrival of one of these in the Auckland Picture Gallery — a picture to haunt one in its intensity of Suffering — the gaunt forms of man and women being huddled in the frail craft as it mounts a mighty wave, the mat sails blown to ribbons, yet one lonely figure, indomitable, unconquered, stands up and peers through the haze for the long hoped for land : and in the far distance it is there, the Coromandel coast not far from Auckland of today. The migration was made in Seven Canoes and each one has its name and proudly the Maoris even of today trace their genealogy back to one or the other of these. It seems that they found another race inhabiting the land but quickly clubbed them into submission, the more likely slew and ate them. The Urewera <sup>88</sup> at the very north of the North Island claim to be the only survivors of that still earlier race. Why set they out on that wild journey? Probably because of overcrowding. How guessed they of new lands? Probably by reason of the flight of birds which annually they saw flying south and west. When came they to these shores? There seems to be no reason to doubt that it was in the days when our King Edward Longshanks <sup>89</sup> was conquering Wales and failing to hold down Scotland. They are no race of yesterday.

Gone now however are the days of Tattooing at least in the case of the men. It was wondrous work while it lasted as both the painted portraits of famous chiefs taken from life, and the mummified heads in the museum clearly testify. But with the women it dies hard. In the days of old no maiden would look upon a man untattooed as a possible husband; he was not a man till the blue pigment had marked him for aye. Nor was a woman mete <sup>90</sup> for a husband who had nature's rosy lips. They must be lined with blue and the chin adorned with like — but downward — strokes. This is still common enough to see, and might possibly look well if the original dress was retained, but to see it in conjunction with modern attire is to make it abominably out of place and keeping. The old greeting is still in vogue. Were two of our race to attempt to rub noses, there would surely be a mix up and the whole thing look ridiculous; but with the Maoris, long practice has perfected it; and to witness it is to pronounce it very delicately and neatly carried through. There is not the slightest thought of a collision; a graceful bending forward, a slight turn of the head and the thing is done.

## Rotorua

In both the Heart and the centre of the North Island lies Wonderland. Rotorua is the Heart, and Lake Taupo is the Centre. They lie on a high Tableland surrounded on all sides by hills, and through the major part of it there winds a singularly picturesque river, the Waikato, the outlet of the above named lake, its colour ever the bluest of the blue, its banks ever shaded by the graceful willow, its trout fishing famous the world over. Rotorua is some 170 miles from Auckland and the journey by rail is a pleasant, even though a dusty one, running through a grazing country dotted here and there with settlements bearing such euphemistic names as Papatoetoe and Mamaku : next tackling the encircling range and creeping up through the heavy growth of jungle : then hurtling down to where a great lake lies on the plain, with a high hilled island <sup>91</sup> in the centre 300 acres in extent, a mass of ancient fortifications, the scene of terrific contests not so long ago, and yet again the scene of one of the great

<sup>89</sup> [Edward I \(1239–1307\)](#)

<sup>90</sup> Archaic: *measure*.

<sup>91</sup> [Mokoia Island](#).

Idylls of the Maoris, where Hinemoa landed and hid among the rushes after her brave swim from the far eastern shore to reach the arms of her Beloved, defying both the anger of her Chieftain father and the dangers of the waters.<sup>92</sup>

On the Southern shore of this lake there lies a small sized town neat and trim, broad avenued, well timbered, replete with hotels and boarding houses, well furnished shops, a City Hall with sweetly chiming clock, a Public Library, Schools and Churches, parks and shady groves. It is Rotorua, a government owned city, a thermal wonderland, one of the great Health Resorts of the world. Who could doubt either of these last assertions who has trod its streets. The smell of sulphur here rises to the heavens, and clouds of steam are seen on every side, rising from the ground. Among the trees you see the great Bath House towering high, and a Sanatorium where bath chairs abound. Here walk or hobble on crutches men in blue, the wrecks of the war, to whom one's heart goes out as they seek health once more in these healing waters. The gardens of the Bath House are a joy to see, they are laid out to perfection by a master hand. They are immense in extent, but every bed was full of gorgeous blooms, though to attempt the names would be to write out a gardener's catalogue. Then there are the lawns like velvet where men and women are engaged from morn till even playing tennis or croquet or bowls; a glorious sun over all, whilst seats are placed here and there in the shade of trees for the less active of the ever present crowd. Here you see in the midst of a wired off space, a geyser cheerfully at work and play, boiling water shooting into space, rising now high, now low, then resting for a space, as if to gather strength for another burst. A little way off and one looks down into a great pit where the water tumbles about in fury, and ever and anon the whole thing is lost to view, and huge clouds of steam rise up : and it is best to be on the leeward side. Rotorua offers you a mixed assortment of washings. You can have a Rachel Bath or a Priest Bath, a Blue Bath or a Postmaster, a Mud Bath whole or partial, a Duchess or an Electric. A Pack is extra, when you are rolled up hot and steaming and feel quite prepared to die : but all these cost money, you have to go further afield for Bathing of such queer kind free and gratis : even to Wairakei, of which more anon.

## Whaka

To my mind amazing Rotorua is outshone by neighbouring spots. There is Whaka<sup>93</sup> two miles off where Sulphur seems sole King. And Ohinemutu one mile the other side where one must likewise walk warily for there is not much that is solid between your feet and Fury. Rotorua is the White man's possession, the others are the Maoris. Yet at Whaka you can have, under white control, a specially refreshing Bath — The Spout. You descend by stone steps into a kind of Joseph's pit.<sup>94</sup> You lift a handle and out of the wall comes forth a gush of water that hits you fair and square whichever way you may hap to stand. It is warm and delicious and you leave that pit with regret. In the hallway a pair of crutches hang upon the wall and underneath one reads of how their owner came hobbling to these waters and in a few weeks left, walking firmly without the aid even of a stick, and notes that he doubts this miracle may apply to the one time owner for verification of what here is told. Then you wander forth amid the Maori village and watch your steps for there is boiling water and boiling mud on every hand. Fumes and steam rise all about you, and you make your way to a bridge where boys and girls of a darker race than you, with skins as of coffee mixed with cream, will dive for pennies into the warm stream below, and fast as they secure them, stow them in their cheeks and ask for more.

---

<sup>92</sup> [Hinemoa and Tutanekai](#).

<sup>93</sup> [Whakarewarewa](#).

<sup>94</sup> See the [plot against Joseph](#) by his brothers in the [Book of Genesis](#).

Hereabouts it is not healthy for aught of silver that is upon you — till you get out of this land of spouting waters you must leave all hope of watch or chain or change retaining its bright polish, far behind.

A little distance off you see on a rising ground a Pa or fortified village and because it is as it should be in fullest measure you go thither to study and to learn. It went well in days of spears and stones : it was but a house of cards when guns began to play. There is the outer stockade, a double row of upright stakes, with every few yards a post, with a hideous looking carving of a warrior surmounting it. There are the two corner watch towers each rising in three tiers all made of sticks tied together with fibre. These crossed you see the grass thatched houses : here for the Chief, there for the commoners, each with entrance like to a dog kennel : here is the Storehouse lifted high on posts to keep out dogs and other hungry wanderers. Of course there is the Speaking or Meeting House, the largest building of all with its wondrously carved porch posts and roof front, where oratory flowed and councils of war were held; and anon to one side the figures of their ancient gods horrible to look at in their gross fierceness. With the Maori, fierceness of face was one of their war weapons. They would rush upon the foe with great leaps, the while shooting out their tongues, rolling their eyes and uttering fearsome cries. But bullets soon taught them that steadiness was the all important matter. In strategy they were the white man's equal, at times his superior. They fell to trench work as if to the manner born : and their Pas gave evidence of a natural gift for Defence. Let us recall to their honour that though savage and cannibalistic they were honourable fighters. With them the Biblical order "If thine enemy hunger give him meat, if he thirst give him drink" was a natural instinct and many an instance of this occurred in our fierce struggles with them. Such is Whaka, yet not half told, for it is an eerie spot and the whole place seems ready to blow up at any moment.

### Ohinemutu

Ohinemutu is the site of many fissures where one can watch the Maoris do their cooking and their washing without ever the need of lighting fires. In the steam holes they place their potatoes in a sack and soon they are ready for the table, Their ablutions too are as often done in the open : here was a man sitting up to his neck in a hot water bath, and on the other side of the pool a woman indulging in a shampoo. Religions seem to clash in this small hamlet. Here is a Roman Church hard by a Sister's School for girls, and not far an English Church well worth a visit for its carved woodwork touched up with eyes of mother of pearl, and its wall designs of concentric designs, no one panel like another, akin to the Maori mats, each with a base of bamboo cane. Hard by is the cemetery where Chieftains lie under heavy tombs of stone; and close to them and all around pours up to heaven the steam, barricades warning you of new holes yesterday, and everywhere the ground warm beneath your feet. A row of the Lake was of course in order, which recalled a similar lonely one on the weird Salt Lake of Utah, but here 'twas easy going save for a brisk breeze which kindly tempered off the sun.

### Wairakei

But even if Rotorua and her twin handmaids be weird and wonderful there is a spot which rivals them. This is Wairakei, fifty miles further along the Tableland, some six miles from Lake Taupo. No railway runs here, it is by auto that one makes the journey, the road a fiercely dusty one winding through hills where prison labour has re-forested many thousands of acres, and forest fires were raging on Maori

lands just across the way. Now we are through the hills, and half way on our journey, a great plain stretching out before us, but even here we are not free from volcanic action being underneath us, for a great cloud of steam pours up continuously at a lonely hostel — Waiotapu, and sulphur again scents the air, there is boiling mud here too, yet for twenty miles on either side the land is as silent as the grave. You pass miles and miles where houses rise, and cattle graze, and everything looks normal, then suddenly in the midst of a green space there appears a Blow Hole which is working overtime and makes you feel that this whole tableland is naught but a crust over an eternal fire which may go off at any hour in rockets and you amongst them.

Coming down from the hills you could swear that there was a great sea ahead of you, so blue and so even is it to the very horizon, but not so, it is but miles upon miles of the Ti (tea) tree bush which hereabouts covers the land. It seems rank heresy of garden lore to call a tree a bush yet the Ti lends itself to such a mixture of terms. You see it in all stages of growth, from tiny shoots to fullest development which never however amounts to much for it does not grow singly but in groups of half a dozen or more, all from one and the same root, yet it is one of the most useful of the Dominion's trees for fuel. Cut young or old it dries out well, and helps Maori and white through the winter's cold. It is of a bluish colour, hence the illusion when seen from afar, and has tiny flowers upon it of pink and white. Once among it we saw its companions, the Turpentine bush and the Toot. The former is laden with the combustible fluid and a tiny fragment will set your fire going despite rain or wind : the latter is the deadly foe of the cattleman for it is rankest poison to his herd. It is an attractive bush of goodly size with leaves which look as if they had been highly polished, and catches the eye at once. Alas for the bovine which is drawn to it by its persuasive appearance. It is down in agony forthwith. The only road to salvation lies in bleeding : and the ears and tail are the parts mostly knifed : but if no herdsman be near then a carcass soon lies ready for burial, or for carrion bird.

Besides these there are cherry trees to be met with growing haphazard, wild and yet not wild, the reason not hard to find. One hears oft the Missionaries blamed; it is well to hear them given praise at times. To them three evils are openly laid, I know not with what justice, the introduction into the land of the Broom, the Blackberry and the Bunny (rabbit). But over against these, there is the everlasting credit to be set, of introducing fruit trees : the apple and the plum, the pear and the cherry. These they planted where e'er they worked among the native villages : but the fruits have spread far afield either by hand of Maori or by natural laws : and in the most out of the way places are to be seen trees laden with fruit only waiting the hand of the picker.

A few miles further, and still in the hills we turn off the road into a sylvan retreat, with tennis courts and lawn, baths and swimming tank, a spread out series of one story buildings with many tents; and have reached the Hostel of Wairakei, the true Wonderland of New Zealand, 1300 feet above sea level. To walk Wairakei's Valley of the Shadow of Death leaves lasting impression of the masterful side of Nature. The boiling cauldrons are so close together that there is but little room for the onlooker, and a false step means the End, or at least a scalding, its marks to be carried for the rest of one's days. Here is no place to wander in alone. A guide <sup>95</sup> trained to all the vagaries of the Inferno and who knows every footfall is essential. Yet despite guides some remain wilful. But a few weeks had passed

---

<sup>95</sup> Beatrice Grimshaw's guide at the Wairakei Geysers in about December 1904 was Ingle, "a very remarkable character, and second only to the geysers themselves, as a phenomenon of singular interest. He is one of the very few men in the world who know all about geysers, and quite the only one who can literally handle and work them. Ingle knows how to doctor a sick geyser as well as any stableman can doctor a horse; he can induce it to erupt, keep it from doing so, or make it erupt after his fashion, and not after its own. He is the author of at least two scientific discoveries of some importance, combining the effects of steam pressure on rocks and the incidence of volcanoes along certain thermal lines. In fact, what Ingle does not know about the interior of the earth, and the doings down there, is not worth knowing; and he tells us much of it as he takes us over the cañon." See [Grimshaw, \*In the Strange South Seas\* \(London, 1908\), page 322.](#)

since a party were gathered about one of the geysers waiting for its time to be up and the fountain to play. The guide had carefully placed them all on safe ground, and charged them not to move. But one fair maid saw within a yard of her some lovely moss. Surely she could reach it, 'twas but one short step. She took it and that unlucky foot and leg went through the seeming solid crust into the boiling mud. Nor is it a wise place for nervous folk to enter. The boiling spray falls oft only a few inches from your feet — you have to look down from uncomfortable height into cauldrons ready to boil you to a frazzle — you have to clamber over rocks where a slip would mean a slide with no intelligent end to it.

Yet there is no limit to the visitors, old and young, men and women, even babes in arms pass through from end to end. For this valley is not long, scarce half a mile, and as to width you could throw a stone across it. It is the very heart of an old volcano whose rugged rim you can discern in the hills around. Through it runs a stream; as it enters from the rim above it is cold and clear; when it rambles on at the end of the valley it is too hot for the hand and has gathered to itself all manner of chemicals so that it is no longer fair. Whence all the water comes from, which the geysers belch forth, no man knows. There must be millions of gallons daily discharged, yet never since the Maori has known it has there been lack. And fresh openings are constant. Where one stood yesterday, may today be a boiling fountain.

It is a mile and a half tramp from the Hostel to the Valley and everyone provides himself with stick or staff. You descend, and gaze first down into the boiling pit of Champagne Geyser. The best of the Valley's many fountains is that they are regular, they work like a clock. Some rest for four minutes, others seven : some for ten minutes and one indeed wants twenty minutes to get its breath again. Long experience has taught the guides certain signs of these demons in the between time stage, so they can tell just how long you have yet to wait as you come upon them. There is a fizz about this first fellow which gives the name, it is sizzling all over, the temperature over 270 degrees. There are two safety valves at different points in the pit, at the edge of which you stand though twenty feet above it. These valves are working overtime as the gases work up and out. But now it is too much for them, they cease, and the whole body of water writhes about as if tortured, then with a swirl rushes up and around, higher, higher, till nervous ones tremble and clouds of steam arise blotting the whole thing from view. This geyser is an angry fellow — but his anger is in degrees. Do you want to see him mad, just a little mad, then throw in a handful of small pebbles. You will soon see that he won't stand for it. Throw in a real boulder and you will have to run for your lives for he goes clear off his head and rushes up the whole twenty feet to get at his tormentor.

Best leave him alone and go on to the Helium Pool. Here if only it could be harnessed is Helium worth a King's ransom; whilst here in another pool is living water that would make the fortune of any seller of soda drinks who had it handy to his counter. But down into the rippling stream it goes and has gone for ages, so prodigal is Nature with her treasures. Shove your stick here into the bank and you draw out adhering to its end a lump of hot (red) putty, here put it in again and you draw out the same but purest white. This is finest paint and mixed with oil men use it to daub their houses hereabouts. Here is a bank of greyish matter, take it and rub your poor dulled silver with it, you find it the best Fuller's Earth <sup>96</sup> that ever was sold in market.

These things one sees as we pass on to other geysers. Here is the Dragon's Mouth, between whose pourings forth you are able (that is if you have the nerve) to go down into that same mouth. You step down from where sure safety lies, and gingerly place your steps from side to side of that cavernous

---

<sup>96</sup> [Fuller's earth](#) is usually highly plastic, sedimentary clays or clay-like earthy material used to decolorize, filter, and purify animal, mineral, and vegetable oils and greases.

opening. Below you can be seen the water in his gullet, not much of it but it looks very, very hot. Now you are in, and he has fairly swallowed you, but what if he went off before you had got out. The guide sees to that and has him in hand almost to a second. We come to a great basin of boiling mud. It fairly gapes with heat, little mouths opening everywhere as if looking for air, more air. Close by surely is a huge nest. Great sticks of wood, two inches through, lie interwoven round a centre, they are piled high as if for use by some titanic eagle who prepares to hatch its brood within. Look into the nest and you will see that it is but another geyser encircled with a wall of seeming stone : touch those sticks and you will find them petrified, cold to touch, encrusted with rime,<sup>97</sup> solid so that no axe could make impress on them.

No longer are there the famous Pink Terraces of Rotorua District; in a cataclysm of Nature but a few years back she hid them for aye; they lie buried beneath mountains of soil when the earth rent asunder and the hills fell like nine pins. There is now but one small fragment of that marvellous work of hers, and it is to be seen in this same valley. Very beautiful it is, when the geyser above the rock front begins to play and comes pouring down all sparkling, over a surface of rock, pink and white.

There are times when man can make Nature play tricks, and we now come to such a one. We see a boiling stream of water not six inches across, passing along the top of a level surfaced rock. Using some old cloths our guide dams up its usual course and turns its head another way. We are bid to descend some little distance and await results. We do so. It takes some little time, a full quarter of an hour, for there has to be a good mix up of certain ingredients which Nature never intended here to meet but which man says shall. Suddenly up into the clear space before you, all surrounded as it is by greenery, there spring not one but three geysers and take the shape of a perfectly formed Prince of Wales' feathers.<sup>98</sup> Who thought out this strange trick I wonder?

Hard by, below you, one hears the regular thump, thump of paddle wheels. You look into a cistern some twenty feet by six and to the right of you is water heaving up in perfect time, then ceases. Now you look to the left and perceive a rock a foot or so beneath the surface detached from the side : and soon several great balls of silver are seen rising from the depths. Now the great rock begins to move, to sway this way and that. It is then in order to step quickly back for now the whole pool goes mad and up into the air it shoots the water and the spray is hot and no one wants a bath at such a temperature.

## The Waikato

Surfeited with sight weeing, I betook me by devious path, well worn by feet of anglers, to the beautiful Waikato's edge where on a grassy knoll I sat, watching the joining of the stream which runs through the Wonder Valley with the main body of water. Here I could put my right hand into cold water and my left hand into hot; for the poor little bubbling stream never recovers from its passage through that valley of awesome sights, but hurries on to cool itself at last in the waters from Taupo Lake. All around spoke of peace. Not a sound save the rippling of the waters. Down stream there was a lone fisherman thrashing the river : long he worked but never a bite had he. A bird chirped now and again, and a grasshopper cricked. Here is the centre of New Zealand's North Island, and its greatest wonders which I had roamed far to see.

---

<sup>97</sup> [Rime](#) is a coating of ice.

<sup>98</sup> The [Prince of Wales' feathers](#) is the heraldic badge of the Heir Apparent to the Commonwealth realms thrones. It consists of three white feathers emerging from a gold coronet.

Three miles above are the Huka Falls. A river when overcoming difficulties is always a pretty sight. This is such a one. The Waikato hardly gets started on its way to the sea over 200 miles away when it becomes compressed in between two solid walls of rock. There is much broken water before these are reached, and across them a swinging suspension bridge has been erected solely for sightseers' use. From this vantage point one sees the seething torrent take its plunge downward, to mingle farther on with the still, flowing stream. Comparison with the many others which one knows is out of place. A fall is a fall the whole world over. But with the Aratiatia Rapids it is another matter. I have seen many, but few as fine. They lie four miles further down this same river. They are a glorious half mile of foaming water. A 200 foot drop in so short a distance means real business. Again the channel is narrowed by rocky sides and there is nothing for it but a tearing and a squeezing to get through. A guide leads you to special spots. It is not easy going for the jungle along the banks is thick. In some places roughly made ladders help. But each spot leaves you looking up the stream as it comes foaming along. Here a great green mass pours over a smooth rock; alongside is a white turmoil. They join but to part again, and take another leap onward. No living thing could last ten seconds in such a whirl. A boat would be smashed to atoms in a twinkling. At the end of this mad race there is a whirlpool and you climb up a difficult rock to look down and over it. Here everlastingly the remains of many a canoe move round and round. You count upon such and such a piece getting its release as it comes within touch of the water rushing down, but no! just as it appears to be free it is swirled in once more and joins its unlucky brothers in the endless circle. I bethought me of my passage through Miles Canyon<sup>99</sup> and its whirlpool on the mighty Yukon. It was child's play compared to this. That was feasible, this impossible.

A hot stream quite apart from that of the Wonder Valley flows past the hostel and fills a good sized swimming tank. The water contains alum and silica. There are set hours from early morn till near midnight for men and women to enjoy a swim : free gratis. Higher up there are pools, but these without restrictions.

## Taupo

Six miles past Wairakei is Taupo Lake. Twenty-five miles in length and sixteen broad, it is the largest lake in the Dominion. Its surface lay unruffled by any breeze and the waters were bluest of the blue. A bridge carries you across where the Waikato River begins, and looking down, you can see the big trout lazily wiggling their tails, with heads upstream, waiting for their dinner hour to come. There is talk of laying a huge conduit from the Lake to Auckland and letting those pure waters take the place of the present poor and far from healthy supply. It is no such stupendous task and it surely will in time be done, for Auckland grows apace. Meantime anglers come from far and near and try their luck in Taupo; and there are hostels to house them and hot springs wherein to bathe and a steamer service across the lake; and afar off rising up in majestic shape a snow capped peak, volcanic not only in name but in very deed as if to guard its end of that great tableland, which Rotorua sets her watch upon far away to the East from whence we came.

Here are to be seen the old time barracks of the Armed Constabulary when Taupo was a base of operations against the Maori. Into this wild region fled the Chieftain Tekooti, after his massacre of

---

<sup>99</sup> See Chapter II and III of *Alaska and the Yukon* in Part X, *Tales of Roaming*. WWB went down Miles Canyon, near Whitehorse, in a canoe with colleagues Robertson (a New Zealander) and Acland, in the summer of 1914.

white settlers at Poverty Bay; <sup>100</sup> and for six years outwitted and out-manoeuvred those who sought him. Five thousand pounds was placed upon his head but no one ever got it. The record of his fights and his escapes beats any dime novel ever published. Even Maoris joined in the manhunt, but all to no avail. At length, bereft of all his followers, his wife captured, driven from pillar to post, hard pressed, half starved, he escaped into the King Country, that space of hills and deep ravines, and there, rather than increase the toll of deaths already to his credit, we left him. Years passed and he was ready to make his peace. We forgave him.

### Cook's Nomenclature

Poverty Bay across from Taupo is itself historic, for here it was that Captain Cook first set foot on New Zealand soil. He hoped to get fresh water and fruit and vegetables, but all he got was a very hostile reception and a little wood gathered under difficulties. He resolved to give the place a lasting stigma, but today it is a Bay of Affluence : and the white settler smiles at the maligning name. A few miles northwards around a headland Cook made a second attempt, this time with such success of kindly reception and victuals that he named it the Bay of Plenty, and it is still that today. Through it, till the railway came, all white folk who sought Rotorua's healing fountains, passed, and stages bore them through the range by way of old time Maori trails to the land of their desire. Replenished Cook turned South and sailed into a noble bay which he named after one of his sea lords "Hawke". <sup>101</sup> As he left it he had a serious scrap with the natives. They appeared alongside in their canoes seemingly prepared to barter. But it was to turn out a very one sided affair. Holding up their skins and food they required that Cook should first hand down his beads and calico. Agreeing, the captain ordered some of his men to clamber down into the boats to lower the goods. Suddenly the canoes moved off in an effort to kidnap these newly found dainties. Into the sea sprang all the sailors save one boy who was too paralyzed with fear. Cook would stand for no nonsense and sent musket shot and cannon ball amongst them. In the wild excitement the lad gathered his senses together and likewise took to the water to be hauled back into the ship. That boy was the son of Tupaia, the Tahitian whom Cook, with his usual foresight, had brought along with him in hopes that he might haply become interpreter. And that he was, for though there was some small differences in dialect, yet he could understand and be understood by those whom he had no knowledge of before. That point of land on our maps is called "Cape Kidnappers". Sailing on, in a few days time he seems to have resolved to go no further south at that time and at "Cape Turnagain" he wheeled about and retraced his steps, then sailed further north till he rounded the cape which Tasman a century before had named "Maria van Dieman". Then south he went clear down to where Wellington now lies, and passed through those straits that will forever bear his name; then not content he made the circuit of the South Island till at its northernmost point he bade adieu to the future Dominion he outlined; and from "Cape Farewell" made sail for home. Tasman ne'er set foot upon the North Island. Some of his men set foot on the South Island, and "Massacre Bay" tells the story. It was enough for the Dutchman, he wanted naught of such inhospitable coasts. So can we learn history even from our maps, if we have a mind to.

## **An Insistent Call**

There was yet many spots in New Zealand that I would fain have visited : the Bay of Islands where whalers of old did congregate, Kaipara, one of the ancient cities of refuge, the towns of Wanganui, New Plymouth and of Napier, the Southern Alps, Wakatipu Lake, Milford Sound and the old time gold fields; but the Tropics called nor could they be denied.

I heard of the great need of Teachers for Native Schools which the New Zealand Government was keen to start on islands far out of the ordinary steamer routes. Here was opportunity both to learn and teach. Offering, I was gladly accepted. There was need on lonely Niue, a mere speck on the map of the South Seas. In the previous August <sup>102</sup> the taut little “Jubilee” with crew and passengers and cargo set out from Auckland Harbour for that same Island. She never arrived. Other Schooners, Steamers, even Men of War, have sought her high and low. She has not left a trace. Posted as missing, she adds one more to the mysteries of the sea. For that same coral Isle I sailed from Auckland, not direct (for no Schooner had taken the lost boat’s place) but by way of Tonga and Samoa, if haply I might find thereon some means of reaching my New Home. Those long months of waiting were full of interest as I roamed over fresh Island Groups.

## WHERE MONARCHY HOLDS SWAY : SOUTH SEA ISLANDS.

The Islands of the Pacific Tropics are of three kinds : Atolls, Coral and Mountainous. The first are bands of sand, built upon coral, which enclose a lagoon to which there is usually but a single entrance through the reef. The second are bands of coral which by volcanic action have been upheaved together with the encircled soil above the level of the sea; and these may, or may not, have a Fringing reef. The third are not the work of insects working upwards from a mountain top beneath the waves, but the summits of mountains whose bases lie miles below the surface of the sea; yet the coral insect has been busy, for most have Fringing reefs about them, many with Barrier reefs besides, some close to shore, others far out to sea.

Right across from Chile's coast to China there lies a mighty range beneath the sea, some of whose peaks the waters fail to cover, and which appear on our maps under many a name. Whilst "Canton" is an Atoll, and "Fiji" a mountainous, "Tonga-tabu" is a coral island. Canton lies on the route from Hawaii to New Zealand, but Atolls do not invite for residence : Fiji is on the same route and requires more than a passing visit to do it justice : Tonga is far off that route but more than repays its visitors for any little inconveniences of distance from the marts of white folk.

### Tonga-a Tabu

A week and more of sunshine, nights of comfortable warmth, with seas of glass, and in the early morning we were off Nukualofa on the island of Tong-a Tabu, where lies the capitol of the Tong-an Group, and where resides a Queen,<sup>103</sup> the last dark-skinned Royalty of all the Pacific Isles. This is a Coral island lying very low, but prolific in coconut and other fruits.

The Germans had cast greedy eyes upon this bountiful land, and would fain have added Tong-a to Samoa. Innocently the Native Government had become heavily indebted to German firms, and could not repay when demand was made. Then England stepped in, and to save the little kingdom, paid the debt and declared a Protectorate to keep others' hands off. Royalty still functions and Parliament meets, but the British Consul has the final say, though 'tis so tactfully done that the yoke (if yoke it be) is hardly felt and meanwhile the Tong-ans are secure. There are still large German-owned plantations here, and the natives would have sequestered them at the time of the Great War, but Great Britain's Government would not have it so. Yet in Samoa we did that very thing, and are paying dearly for it, as those who have taken their places have but slight knowledge of the business, and everything is running behind.

Mariners are shy at entering Nukualofa save in daylight, for here are reefs within reefs, and here and there a bar of Coral all by itself, as if to further bar the way. A grim reminder of the perils of this port of call is the wreck of an iron barque "The Knight of St. George" within sight of the town (or Village as a native told me they still prefer to call it, albeit 'tis the Capital). She lies clear on the reef and has thus lain for years. Now her back is broken and the stern has fallen to one side. She struck bow on, then she was lifted, and landed from bow to stern clear out of the deep upon that shelf, to reach her natural element no more.

## Tong-a

Tong-a really consists of three separate clusters of islands, Tong-a Tabu, Haapai, and Vavau <sup>104</sup> with long sea waste between. The first two are low and flat, their beauty not grasped till one is upon them : but Vavau is mountainous and appeals to the eye at once. The Dutch ships of Schouten <sup>105</sup> and Lemaire, <sup>106</sup> first of white men, saw them so far back as 1616. It was not the natives fault that there was a fight in the offing and that the Dutch put no foot ashore. Then Tasman came and found the people amicable. Over a century passed ere another ship came, this time from Tahiti which Wallis had just discovered, and going shore gave freely of his iron nails which were kept as treasures too sacred for use, and shown to Cook when he arrived in 1773.

So cordial (at least outwardly) a reception did he get that he forthwith dubbed them “The Friendly Isles” and under that name they still go, along with the native appellation, Tong-a. They were a Monarchy then, and they are a Monarchy now — her present Majesty Queen Salote (Charlotte), tracing back her royal lineage to times of which there is not record. Educated at a school for girls in Auckland she is now a matron of sons though but in early womanhood, her Consort a high Chief, next to her in the succession. But what confused Cook and caused him to report a dual kingship was his natural ignorance of the custom of the Tong-ans to have a clear cut division between things temporal and things divine. The Heads of each of these departments of the State were paid regal honours; the Spiritual whose supreme duty was to absolve from the penalties of Tabu (or handling of things forbidden), the Temporal who was absolute as any Czar, and held power of Life and Death. It was not till Xtianity triumphed that the former fell, and that not without a struggle and the cost of many lives — leaving the Temporal king alone supreme.

The Tong-ans are a proud race, prouder even than the Samoans (which is saying much), they have a way with them that has earned for them the title of the Aristocrats of the Pacific — yet other that they have earned is that of The Anglo-Saxons of these island tribes, which they have fairly won by their fervent zeal of pushing out and endeavoring to extend their boundaries. Fiji had a close call from being conquered and absorbed by them, only Xtianity saving it; so too had Samoa and little Niue. They are still a progressive people and well set up as to face and form. They did not fall to the teaching of the Xtians, nor leave off their savage ways without a struggle. Cook never knew how near he came to being slain — his crew massacred, his ship cut off. Invited to a dance when ten thousand natives gathered, he and his were in the midst of them, and only divided counsels saved him. They honour him now, and still there is shown Cook’s tree — albeit a hurricane fetched it mostly down awhile ago — where he first landed at Mua, then the Chief Village when Nukualofa was unknown. I have seen the offing where he cast anchor and sailed in the lagoon through which he reached the shore. It seems in the Long Ago, and yet there is a living creature today which Cook’s hands handled. In the Palace Gardens at Nukualofa there abides a land tortoise which Cook presented to the Temporal King. And I have held converse with a white-haired missionary who has passed four score years and ten, who knew George I <sup>107</sup> the king — the old monarch, who himself as a boy was one of those upon the beach when the great Navigator landed. <sup>108</sup>

<sup>104</sup> WWB has *Vavou* here and elsewhere, which was in common use at the time of his visit.

<sup>105</sup> [Willem Cornelisz Schouten \(ca. 1567–1625\)](#)

<sup>106</sup> [Jacob Le Maire \(ca. 1585–1616\)](#)

<sup>107</sup> [George Tupou I \(ca. 1797–1893\)](#)

<sup>108</sup> This is incorrect; Cook visited Tonga in 1773, 1774, and 1777, before George Tupou I was born.

## The Coming of Xtianity

Many missionaries met their death here, and some fell at the direct instigation of renegade white men, who had escaped from the whale ships or Australian Convict colonies, and whose hand was against all their fellows. It was Vason, one of these apostates, who led the natives in their attack upon the “Port au Prince” in 1806 when the crew were massacred and the ship seized, gutted and destroyed off the northern end of Haapai.<sup>109</sup> Only three survived, one the son of the owner — named “Mariner” — who lived for three full years amongst the savages, grew high in the favour of a usurping king, and escaped to tell the tale in a delightful book.<sup>110</sup> That usurper was named Finau and as long as he lived there was slaughter, and no rest for the Group.

But there was growing up a royal youth who was to bring peace to these distracted isles. None was taller than he, none a finer athlete, not could out-swim, out-box, out-wrestle him : for long, a heathen, he bore the mark thereof to his dying day, for his fourth finger had been sacrificed as was the heathen custom to the memory of a friend. Yet once a Xtian, he was a consistent one, and passed away when ninety-six years old, revered and honored as a real king and a man. He sailed afar, even to Sydney, where he saw a way out of the white man’s demands that he should sell them land. Returning, he explained to his people, the leasing of their soil : and to this day no white man owns an acre. Tong-a for the Tong-ans is still their cry; and though it is barred to us, yet it is seen to that every Tong-an male owns some. When sixteen years of age, half an acre in a village and eight acres in the country is given him — his taxes but 36/– a year. He cannot part with it : it is his for family use when he shall marry and have children to support.

The Wesleyans were the first to try their hand at conversion, and they made so great a success of it that the heathen party went to war : the climax being reached at the time of the visit of H.M.S. Favorite to Tong-a Tabu. The heathen were entrenched at Pea some few miles in the bush from Nukualofa; and appealed to by the missionaries to lend his aid, Captain Croker went to the seat of war. His intermeddling he paid for with his life<sup>111</sup> : and I stood by his grave, which is the only one on the only hill of Nukualofa, on the summit of which stands the Zion Church of the Methodists. This Church, like the homes of the Tong-ans, has a dome-like roof, oval in form. The interiors are well worth a visit for their intricate woodwork. Sometimes there are seats, oftenest not, the men on one side, the women on the other, sitting upon mats.

The heathen party beaten, the Wesleyan Missionaries would seem to have lost their heads, and started in to run King George and the Country. Amongst them was one, Shirley Baker,<sup>112</sup> who became the Pooh Bah of Tong-a : at one and the same time holding the posts of Premier, Minister of Foreign Affairs, President of the Court of Appeal, Auditor General, Minister of Lands, Agent General, Minister of Education, and Physician in Ordinary to the king. George’s o’er mastering fear was that his little kingdom might lose its independence : and Baker worked on this. He flattered the king by negotiating with one of the Great Powers, granting Germany a coaling station in the magnificent

---

<sup>109</sup> George Vason was a LMS missionary who went to Tonga on the *Duff* in 1797. He subsequently went native, taking a Tongan wife and getting tattooed; see [here](#). However, he returned to England on the *Royal Admiral* in 1801 and so could not have been involved in the [Port au Prince](#) massacre, which took place in November 1806. Vason published [An Authentic Narrative of Four Years’ Residence at Tongataboo](#) in 1810. See also [Life of the Late George Vason of Nottingham](#) (1840).

<sup>110</sup> See [An Account of the Natives of the Tonga Islands, in the South Pacific Ocean \(1818\), Volume I](#) and [Volume II](#), compiled by [William Mariner \(1791–1853\)](#).

<sup>111</sup> See [this article](#) in the *Australasian Chronicle*, Sydney, 28 July 1840, page 2.

<sup>112</sup> [Shirley Waldemar Baker \(1836–1903\)](#). See also *Ci Gît* in the chapter on *South Sea Curios* in Part XIII, *Roamings In the Great South Sea*.

harbour of Vavau. The king was pleased at his importance, Germany was satisfied, and Baker wore a Kaiser's decoration.

Then came The Great Schism : and with it Baker fell. For years the contributions to the Wesleyan Church had been sent to Headquarters in Australia. These contributions were not niggardly, but actually lavish, running in time into thousands of pounds. Many natives felt that Charity began at home, and Baker, to keep himself in power, broke with his Conference and started a Free Church. That led to Civil War, and things got to such a pass that England had to step in. A Man of War being off Nukualofa, and at last it being felt that the only solution and hope of settlement was the elimination of this aggressive Wesleyan Missionary, he was deported. Then Peace slowly came, but the Schism remained : and today it is the leading Communion, the Queen a part thereof.

Years after, Baker returned, but not to the Capital. Broken in health and wealth and spirits, he stepped ashore on Haapai, where he died. But History has two sides and Baker's side has yet to be told.<sup>113</sup>

## Nukualofa

Steamer Day is a gala day upon these islands : like Sunday, only work of real necessity is done. Everybody is at the wharf to greet you. Being Saturday at Nukualofa many heads were well limed, which is their way to have a clean head of hair for the approaching Sabbath. In addition to the usual loin cloth, many men had aprons of tapa cloth would round them, for it is forbidden and fineable to attend even a Town Council, let alone Court or Meeting House, without such addition to their toggery. Here, as in Suva, we had to pass Inspection for these people fall before our simple measles and whooping cough as if such were the Plague. The Influenza hit this cluster hard in 1918, carrying off over seventeen hundred, a terrible toll in a diminishing community. They strive to keep their numbers up : and to ensure a healthy birth rate, a girl who reached twenty summers unmarried had — at least till very lately — to have her hair cropped short and be classed and treated as an old woman.

Stepping ashore one was soon lost in a maze of gorgeous shrubbery and fruit trees : here were Hibiscus Trees (not bushes), some of scarlet flowers, others with a glorious yellow with a heart of maroon : crotons too — a laurel bush this, of infinite variety of colors, some leaves deep scarlet bordered with bright green, others deep green blotched with carmine and orange, yet others purest gold striped with vivid green : the Sensitive plant here too : breadfruit and Tongan oranges : a lovely land.

The first thing done was a motor drive of some eight miles out, on a good hard road, through many villages (with their conical shaped homes, some thatched, others alas! with galvanized iron roofs) to Houma clear across the island, to see the Blow Holes, where the mighty rollers dash themselves against the reef, and forcing themselves under the coral, find vent in holes up which they rush, shooting a feathery column as high as sixty feet into the air. To see a mile of these working at the same time is a weird sight. Some of the holes are but inches across, others several feet : and the water comes up with a swish and a roar. Houma Village has still its ancient fosse or earth works clear around it : poor protection against bullets, but very helpful in the days of spears and close-in fighting.

Then back to the Capital and a roam off to the Palace and the Chapel Royal, both buildings fitting well in with their surroundings of ironwood trees and waving coconuts. A broad avenue, grass

---

<sup>113</sup> See [Shirley Baker and the King of Tonga](#) by Noel Rutherford (1971).

covered, bordered all the way with heavy timber, leads up from the Palace to the tombs of the latterday kings.

They lie in the midst of a great green sward, which is evidently the golf course of the British residents — for the tees are railed off; though I saw none at play. Perhaps they were all rallying at the comfortable British Club, for 'twas Steamer Day and friends had come ashore.

High up those Tombs stand, reached by broad steps of coral. The central one is that of George I, inscribed in Tong-an Tioaji. The huge mound carries a monument of stone, the lower part some seven feet high, squared, and then rising upon it is a column, on the peak of which is a Dove — for he brought lasting Peace to the land. George II, his grandson lies nearby, with a life sized lion surmounting. His father, who never reigned, lies close by, but no monument; only the black pebbles which are greatly used for graves here, brought from far off Tofua — the only place where they are procurable. Here too lies Queen Lavinia whose good deeds have left a fragrant memory. Above her grave rises a life size figure of her in stone, with a babe at her feet, both hands to its eyes, having a lusty howl.

Then darkness fell, and it is to be remembered that there are no lamps in such a community; so we had to await another day ere we made journey to the chief wonders of the Tong-an Isles : the Langis or Tombs of the ancient kings, and the Haamonga or Trilithon,<sup>114</sup> that relic of a civilization and worship now unknown. Spread across the Pacific lie these archeological wonders : from Easter Island in the East they reach to Ponape in the Carolines in the West, jumping many a group upon the way, but here and there a remnant peeps up such as on Malden and on Tong-a Tabu.<sup>115</sup> The Tombs are at Mua twelve miles away, the Trilithon at Kolonga four miles further on.<sup>116</sup>

### Marvels in Stone

There had been rain, so the roads were not possible, but a party was made up and a launch hired. With lunch aboard we started, and had to make a long detour to get around that everlasting reef : into Cook's lagoon we headed, and twisted and turned where e'er the deeper channel lay, past fishing

<sup>114</sup> [Ha'amonga 'a Maui](#) (Burden of Maui) is a stone [trilithon](#) located on Tongatapu:

<sup>115</sup> See [Prehistoric ruins, Malden Island, Kiribati](#) and [Nan Madol, Pohnpei, Federated States of Micronesia](#).

<sup>116</sup> See also *Stone Masonry* in the chapter on *South Sea Curios* in Part XIII, *Roamings In the Great South Sea*.

traps and turtle snares, to the Village of Mua where we were landed (in the brawny arms of our native pilots) upon a coral shore. Here we lunched with a crowd of native youngsters looking on, who never left us till we set off home again. A walk through Mua brought us to a massive Roman Church, a splendid coral edifice : inside like a cathedral for its massiveness. Then half a mile brought us to the Tombs. Pity it is that they do not appeal to Tong-ans, for the wild shrubbery and trees almost hide them from view. We visited five of them, and there may be more, hidden away in that dense growth.<sup>117</sup> They are foursquare, some fifty yards by thirty each, rising in tiers, like a pyramid cut shore. Some have as many as five tiers, each faced with coral rock, blocks of the stone laid end to end, all accurately squared, and originally fitted close together, the corner mortised; but now creepers and roots have forced most of them apart, and they lie at every angle. One immense corner block we measured, twenty-one feet long, four feet through and five feet high. How they moved such stones passes comprehension. The summit of each pyramid was originally levelled off, and here Tong-a's Majesty was laid to rest.

The Haamonga is even more wonderful. Here standing alone on a promontory at the north eastern end of the island are two huge blocks of stone (not coral) each computed to weigh fifty tons, and across their top lies another block of equal weight, mortised in. The material of which this Stonehenge is made is only found on Wallis Island, two days steaming away. How they were brought that great distance in canoes : how raised when they arrived : what implements they had to face and square and fit them : are questions which none, so far, have found answer to. There is a cup like depression on the summit which is thought to be where the blood of victims was placed as an offering to some unknown god.

On our way back we were fed by natives on oranges and other luscious fruits, and were sorry indeed to have to go aboard and make once more for the Steamer, whose steam was up, and the Captain awaiting only our arrival to give the order to cast off and head to sea.

## Tofua

Now we passed Tofua,<sup>118</sup> off which Bligh was cast adrift by the mutineers of "The Bounty" in 1789, who had been sent by the Government to transplant Breadfruit from Tahiti to the West Indies. Adrift

---

<sup>117</sup> See [Burial tombs, Mu'a, Fiji](#), where 28 are listed, including Langi Tau'atonga:

<sup>118</sup> [Tofua, Tonga](#).

he sought to land, and landing lost his Quartermaster at the hands of the natives. Resolved to keep clear of other savages, he passed through the Fijian and New Hebrides groups in his cutter with eighteen men, till he and his men, mere skin and bone, brought up at Timor in the East Indies, after a voyage of three thousand miles and more. He it was who later became Governor of New South Wales in convict days, where men again rebelled under his rule and actually deposed and confined him. From off Tofua, Fletcher Christian and the rest of the Mutineers made back for Tahiti : and the long story of Pitcairn Island soon began.

## Haapai

Now we made due north for the Haapai Cluster, and early morn found us casting anchor off the Village of Pangai on the island of Lifuka. Its north-western point saw the tragedy of the “Port au Prince”. This is another group as flat lying as the last. No wharfage here, the reef making it impossible. The stay was but for a few hours, but I went ashore. Here it was that the Pooh Bah of Tong-a died and was buried. His grave has but the black pebbles upon it at present. Here was his last home, fringing on the beach where his daughters now live, one engaged on a book <sup>119</sup> vindicating her father’s memory — a noble task — and with the intention of (with the proceeds of the book) raising a monument <sup>120</sup> to the one time companion of a king. The Roman Church here in the making, this one not of coral but of concrete — not so noble in proportion as at Mua, yet promising a splendid edifice.

The other denominations but poorly housed and raised in the native style. We peeped in where scholars were at work : there was much noise, which seemed to us confusion. Anyway they were cheerful enough, and lessons seemed no bugbear. Their elders were loafing or pounding kava on the green; some prisoners were sadly working under guard, and this on Steamer Day. A walk of little over an hour takes one to the other side of the island and back : but though ’tis narrow, it is many miles long. Copra its chief industry. The drying coconuts are seen on every hand throughout these isles : they lie out on raised stands, cut into small slices. If a shower comes, tarpaulin is handy to throw over them. There are copra sheds on every wharf where, sacked, they await the special steamers of the trade.

## Vavau

Off once again : that same evening saw us entering the northernmost group, of Vavau <sup>121</sup> : and that night we tied up at the wharf of the Village of Neiafu.

What a harbour is that of Vavau, it could hold all the navies of the world. Its praises have been oft times sung and it is worthy of them. To be ranked with Rio and with Sydney is honor indeed — yet, far out of the track of trade its worth is thrown away.

---

<sup>119</sup> See [Memoirs of the Rev. Dr. Shirley Waldemar Baker, D.M., LL. D., Missionary and Prime Minister](#), by Beatrice Shirley Baker (1927).

<sup>120</sup> A photograph of the monument is shown in a footnote to *Ci Gît* in the chapter on *South Sea Curios* in Part XIII, *Roamings In the Great South Sea*.

<sup>121</sup> [Vavau, Tonga](#).

Vavau is a mountainous group and coral finds no place. We steamed in, past island after island rising sheer out of the deep, their rocky sides eaten underneath by the ceaseless beating of the waves, so that approach to many is impossible. But on some, the hills run gently down to the water's edge, there are beaches of golden sand, and all the hillsides are covered with coconut plantations. There are some large establishments fringing on the harbour sides, great store houses and drying sheds, many bungalows and wharves.

Behind Neiafu there rises a wooded hill named Olopeka, whence an early morning climb — and a stiff and testing one — opens up a magnificent view of the great land locked harbour. This is the place for oranges, for the village is set in an orange grove. Four pennies bought a dozen, and pineapples are as cheap. These oranges are not the yellow kind which grow on Tonga-tabu as large as one's two fists and uneatable, being naught but pulp, used by children for cricket and football; but an orange the common size, in colour like the breadfruit, vivid green, juicy and sweet : but beware of pressing the rind to your lips, for they will smart and sting for hours after the contact. Many white folk here reside, their bungalows rising tier on tier on the hillside, and the port has a wide awake look, though it was hot enough in all conscience, shut in and thus cut off from the steady trade wind.

### The Swallows' Cave <sup>122</sup>

Those who visit Vavau should not fail to enter the entrancing Swallows' Cave. No land cave this, hollowed out of mountain side, but a Sea Cave on one of those many islands which lie about within Vavau's mighty harbour. As stated, these are no coral islets but oft times volcanic rock rising sheer out of the deep, precipitous and crowned with richest verdure.

The time to enter is as the sun is slowly sinking in the Western sky, for then its rays reach within the narrow portal and play upon the sides, producing colours and shades over which even the satiated traveller grows eloquent, and leaving a picture which it will take long years to efface from the mind. It is within rowing distance of the Tong-an village and wharf where we lay overnight : but in this instance our genial Captain would fain have us wait, till he cast off his lines and headed out to sea to far Samoa.

A hundred yards away, the engines stopped, and boats were lowered from the davits, manned by dusky natives, an officer in each, into which we tumbled and cast off. The entrance is a fair way for even such good sized boats, with an arch above : then a great gap through which one sees the sky, silhouetted with heavy shrubbery and drooping trees. Peering down upon us as we entered this hallway were some native boys whose rich chocolate skins verily glistened in the light, and added further touch of colour to the scene.

Once within, we found a vast round chamber with vaulted roof, here and there great stalactites hanging down, an almost perfect circle with one or two deep recesses leading off. The roof seemed like to have been chiselled out by human hands, ending in a perfect dome where sea swallows had built their nests, and at our advent came sweeping down and round as if protesting at our invasion of their home.

---

<sup>122</sup> Regarding this and the following two stories, see also Tale #19, *The Swallows' Cave*, in Part IV, *Tales of a Roaming Grandfather*.

But the colours are the marvel. Here is a wall of sapphire, which shades off gently to a most tender green; in another quarter soft red glides off to cream and yellow : the water beneath the boat, like the dome above, a glorious Prussian blue, transparent to the very bottom which lies fathoms below. To heighten the effect, there entered with us a boatload of natives who had made the trip for the pure joy of the cool and the rest within. They seemed to fit the place and the place fit them, whilst we were but outsiders, only there on sufferance. Slowly we revolved around and watched the colours changing as the sun sank down in the heavens outside.

It is ironstone but not even at that impervious to the desecrator who conceives no such place as this to be perfect till he has inscribed his name, and the date of his immortal visit upon its should be sacred walls. So hard it is, that to strike upon the rock is to give forth a bell-like note which rings and rings again within the vaulted chamber, and sends the swallow owners fresh hurtling from their homes.

But the Steamer called, and we left the cave, with regret, for the world outside.<sup>123</sup>

### A Tragedy

Such is Vavau's cave but not the only one, for there is yet other further out to sea where only mermaids nowadays do visit : for to reach it one has to dive deep and long to find the entrance : then passing the rocky barrier beneath the waves, rise from the depths to enter Fairyland.

Here in the not so Long Ago a Tong-an youth brought a dusky maid to dwell, safe from parental wrath upon elopement. Large and roomy is the cave once gained : and the gallant bridegroom fed her with the best the land could give of fruits such as Tong-ans love. But Fate was against them, for ere long some of his companions wondering at his long absences, followed him by stealth and saw him take the plunge. They too dived, and the game was up.

Here a foolhardy white man came to his end : and since then none have stood within that cave. What natives could do, he could do, and Captain as he was, took along his men to see him do it. He plunged, and saw clear enough the entrance but misjudged the rising tide, crashing his poor body against the rocky bar, and came to the surface whence he had disappeared — a wreck, soon to die, the victim of over confidence.

### A Send Off

But what a send off did we have at Neiafu — this was the climax of all others en route : hitherto all the villages had come down, and mid shouting and waving of handkerchiefs had cheered us on our way : but now there came marching through the village to the wharf, a Band, khaki clad : two and two they marched in military step and bravely did they play. A white man, Bandmaster, this Mormon Band had eighteen pieces, piccolos and trumpets, trombones and drums, all handled by natives.

---

<sup>123</sup> William James Diaper (1820–1891), who visited [Fonualei](#) after its eruption on 11 June 1846, states in *Cannibal Jack* (1928), page 199, that “This Tounalei is the real island, whence originated that beautiful, romantic, traditionary story of the two lovers and their cave home, entered by diving under water from the sea, and mentioned by Mariner in his *Account of the Tonga Islands...*”

Arranging themselves in a circle, with stands for their music, they played us off : and far away we could still hear their melody come floating o'er the sea.

### **A Loss of Time**

And now we touched that strange line of longitude where a ship sails out of one day into the day before.<sup>124</sup> We had two Tuesdays together, and I was even once again.

---

<sup>124</sup> From 1892 to 2011, Samoa was to the east of the [International Date Line](#), whereas Tonga is to the west.

## BENEATH TROPIC SKIES (I)

### Apia Harbour

Once clear of the furthestmost isle of the Tongan group, two more nights and one more day and at the break of dawn we were nearing Apia. Imagine a half circle of hills, richly clothed, facing you as you gaze landwards, their slopes beautifully graded to the water's edge. In the very forefront one mountain keeping guard of Apia, lying at its base. That mountain Vaea stands out and apart from all else. On the summit of a spur thereof lies Stevenson — his home, Vailima, peeps out from among the trees to the left, it is now the Governor's residence. <sup>125</sup>

The Town lies along the Beach. A twin-towered church dazzlingly white is in the centre of the habitations — it is the Marist Father's and their school for boys is next thereto. Two streams pour down from the hills through the Town, into the bay — the Mulivai and the Vaisigano, bridged today; but a single generation back, having to be forded.

Now we head for the entrance through the outer reef. It is broad enough for comfort, but inside we can go no further. There is a second reef, and the entrance through that is at an angle and of insufficient depth. There is neither wharf nor pier, but all has to be lightered, and the work at times is very difficult for great waves sweep in and may crush or overturn the boats in a twinkling as they lie against the steamer. So we cast anchor, and to make doubly sure tie up to a buoy immediately in front of the wreck of the German Warship "Adler" which lies clear upon the inner reef, lifted there on that awful day five and thirty years ago, when the English man of war "The Calliope", fortunately in a position (though hazardous) so to do steamed out into the Fury beyond, amid the cheers of the doomed Americans and Germans, and saved herself. <sup>126</sup> A small portion of the Trenton is to be seen on the left, which was one of those beached, but the rest have disappeared, and lie so it is said, under the reef itself, drawn there and held for keeps. The "Adler" is a sorry sight, she has broken in two, nothing is left but her form. They tried to blow her up, but she is not one hundred yards from the houses, and Apia was likely to have gone up with her. On the outer reef on either side are other wrecks : but these of schooners.

<sup>125</sup> [Apia, Samoa.](#) [Mount Vaea.](#)

<sup>126</sup> The *Adler*, shown below, on the reef following the [cyclone of March 15, 1889](#):

## A Setback

At her anchorage lay “The Ajax” which ran at uncertain dates to Niue : but there’s many a slip at times. From the Harbourmaster I learned that she was so hopelessly out of repair that she was sailing on the morrow for the very place I had come from. She must have an overhauling at Auckland, and might be back in a couple of months.

But it was nothing to worry about. Time was of no great account. Something would eventually turn up. Luck was rather with me than against me. Here was Samoa, Stevenson’s Samoa; I would fain make it mine. Passing Inspection and handing in the special Measles Certificate I had had to secure in New Zealand which assured that I had not had that sickness “in the last three weeks”, I went ashore and finding no accomodation possible at the one and only hotel, found a friend who put me up : and started to get my bearings. Samoa is “dry” — not by plebiscite but by order of Government — and the white folk as a rule look weary. Most say that they are “fed up” with the place; its Glamour for them is a thing of the Past. There is a plethora of officials, one wonders what they can all find to do. Apia certainly looks “out at elbows” — it calls aloud for paint and brooms and an army of garbage men — but though outwardly unattractive it is redolent with memories, which make Apia a spot of abiding interest to many who may never see it. Here history was made and Stevenson noted it in his expressive way in his “Footnote to History” which awoke the Chancelleries of Europe. Here he lies, but far from forgotten by a world of readers.

## A Note of History

Of that chequered history in more modern times I would but touch upon the essentials so that one may better understand things Samoan which later will be dealt with. Both the Wars of the Roses <sup>127</sup> and the Fable of the Wolf and the Lamb <sup>128</sup> are to be read therein.

There was some measure of peace till the white man came, though there is but little Tradition of very early times. Savaii claims that it was from there, the largest island of this group, that the Maoris of New Zealand came : migrating in their canoes from an island always more or less subject to volcanic action, and possessing but narrow belts of fertile soil, to the larger islands in the South.

The Dutch <sup>129</sup> were the first of Europeans to see these islands, so far back as 1722. Then came the French, and a massacre on Tutuila (American Samoa today). It was of but a boat’s crew, not the seizure and destruction of the ill-fated Laperouse’s <sup>130</sup> ship itself. That tragedy was left for later years. Bougainville <sup>131</sup> had previously seen them and because of the skill the natives showed in handling their canoes far out at sea, called them “The Navigators’ Islands”.

---

<sup>127</sup> The [Wars of the Roses](#) were a series of dynastic wars fought between supporters of two rival branches of the royal [House of Plantagenet](#): the houses of [Lancaster](#) and [York](#) (whose heraldic symbols were the red and the white rose, respectively) for the throne of England. They were fought in several sporadic episodes between 1455 and 1485.

<sup>128</sup> [The Wolf and the Lamb](#) is a well known fable of [Aesop](#); it is a story of tyrannical injustice in which a victim is falsely accused and killed despite a reasonable defence.

<sup>129</sup> [Jacob Roggeveen \(1659–1729\)](#)

<sup>130</sup> [Jean François de Galaup, comte de Lapérouse \(1741–1788?\)](#) landed in 1787.

<sup>131</sup> [Louis-Antoine, Comte de Bougainville \(1729–1811\)](#) sighted Samoa, but did not land, in 1768.

The English H.M.S. Pandora came in 1791. That great organization, The London Missionary Society, whose teachings reaches from Tahiti to Papua today, heard the call, and working towards Samoa reached it in 1830.

America <sup>132</sup> now took a hand, but only as to surveying its uncharted waters. It was doubtless then that the fine harbour of Pago Pago (Pang-o Pang-o) on Tutuila was noted with its strategic position at the cross roads of the Pacific trade routes from America to Australia and from Panama to the Orient, which fact later became the starting point of all the trouble.

Now to Apia came commerce. England, America and Germany in addition, starting Trading Stations, acquired property, and their citizens settled down among the natives. In 1872 an American naval officer called at Pago Pago and arranged with the high Chief thereof to establish a Coaling Station, pledging his country's protection. But the Senate would not act up to the pledge, for they wanted no outside territory. Yet one, Steinberger, <sup>133</sup> was sent out to make further enquiries; and returning, was despatched a second time, bearing gifts in his hands : and this done, his mission was to end. But not so thought Steinberger. He proceeded with a high hand and a strong one, and formed the native chiefs into an organized government under their king, in which he became not merely Premier, but Dictator. He soon became at odds with the foreign residents, and finally his own countrymen had him deported on a British Gunboat. But not without a fight, for some Samoans were his friends.

Now went to Washington a high Chief (for it was not London nor Berlin to whom the Samoans then chiefly looked) and whilst the United States promised only its good offices to adjust future differences, Samoa handed over Pago Pago on Tutuila definitely. At once Germany demanded and got her own Coaling Station at Saleaula, <sup>134</sup> not far from Apia on Upolu : and England (in no hurry) was to have one later. This meant Consuls.

So far the kings of the land had not appeared to the front : they rested on their honors. In '85 the king was Malietoa, <sup>135</sup> a weak man, and the German Consul, Stübel, <sup>136</sup> a strong one. The latter, for some double dealing on Malietoa's part, caused through abject fear, took possession of Apia. America stepped in as she was bound to do, and a Conference at Washington decided that until London and Berlin had been heard from, Germany should keep its hands off. But that was not German policy. On a flimsy pretext it declared war upon poor Malietoa — the German Empire against a semi-civilized people on a tiny isle — he was forced to give himself up, and was deported, and one Tamasese <sup>137</sup> was made king. There was another high Chief Mataafa <sup>138</sup> on Samoa's isles. Him, poor Malietoa declared his Regent till his own return. Mataafa got his forces together, and proved too strong for Consul and Tamasese. The latter fled after a long drawn out struggle and soon after died.

There were then lying in Apia Harbour, British, American and German warships. One day they were there, the next all but the British ships were wrecks. Mataafa forgot his quarrel with the Germans, and he and his worked like Trojans to save the enemy's crews.

<sup>132</sup> The [United States Exploring Expedition](#), under [Charles Wilkes \(1798–1877\)](#) visited Samoa in October 1839.

<sup>133</sup> Colonel Albert Barnes Steinberger became Premier in 1875.

<sup>134</sup> [Saleaula](#) is on Savai'i. Perhaps WWB is referring to [Leauva'a](#) near Apia on Upolu, where some of the inhabitants of Saleaula were relocated after the volcanic eruptions of [Mount Matavanu](#), 1905–1911.

<sup>135</sup> [Susuga Malietoa Laupepa \(1841–1898\)](#)

<sup>136</sup> [Oskar Wilhelm Stübel \(1846–1921\)](#). WWB has *Steubel*.

<sup>137</sup> Tupua Tamasese Lealofi-o-a'ana I

<sup>138</sup> [Mata'afa Iosefo \(1832–1912\)](#)

The Washington Conference was now succeeded by the Berlin Conference which did justice to Malietoa and restored him. But the taste of power and the undoubted wish of the majority that he should be king had unsettled Mataafa and in '93 war broke out — a civil war <sup>139</sup> — between King Malietoa and his one time Regent Mataafa. Malietoa triumphed and the people's favorite was deported; both by the aid of foreign power.

In '98 Malietoa died and his son <sup>140</sup> of the same name succeeded. His almost dying request was that Mataafa, his one time friend, might return. He came and signed a promise to keep out of politics. But egged on by the Germans, who had formerly most stoutly opposed him, he broke his promise and proclaimed himself king.

To avoid further war, <sup>141</sup> Malietoa II was ignored for the time being by the Great Powers till another Conference was called; this time onboard ship in Apia harbour : and the men behind the guns decided, despite the refusal of the Germans to agree, to depose Mataafa and set up Malietoa II again. Urged by the Germans, Mataafa stood firm. Then shells once more began to fly, and British and American marines landed to enforce the decree. This force was ambushed back of the present straggling town, and officers and men fell in the unequal fight.

This was the beginning of the end. The Wars of the Roses was now followed by the Fable. The three Great Powers sent out a Commission. Both King Malietoa II and the would-be one, Mataafa, agreed to abide by the decision made as to their respective claims. Thereupon the three powers decided that the only way to govern the group was to divide it up amongst themselves. America took Tutuila and Manua : and Germany might have the rest provided that she gave up to England all claim to the Solomon group and threw in little Niue (which was never hers). Thus both the would-be kings were gobbled up and disappeared from view : and Germany proceeded to exploit her practically bloodless conquest, till fourteen years later, when in the month of August there sailed into Apia Harbour six ships of war and two Transports. It was the invading force of the New Zealand Government. The Governor and his little handful of officials were helpless. Quickly the whole body of troops was landed, the German flag came slowly down from above the offices of the German Administration Building; and as the British was run to the top of that same staff and fluttered out on the trade wind, the troops came to the Salute, the Band broke forth, three cheers were given for King George, and fair Samoa was ours.

### A Personal Note

From History to the everyday wants of Life may seem a sudden change but Man cannot live by Intellect alone, his daily needs force themselves to the front, and the pursuit thereof in unknown parts has an interest far in excess of the things themselves. Many a Stay-at-Home oft wants to know of Life; details in foreign parts of the world, wondering much how his fellows fare in the minor wants of Man. I aim to meet this want. My own first want was the need of a Hairdresser. I was told that the only ones were natives. I had a natural shrinking from their handling my locks, but necessity rises superior to foolish prejudice. When the German reign in Samoa ended, the high class German barber was deported. No white man came to take his place. The natives considered such a trade not too hard work for them, and also not beneath their dignity, and started business. My operator was a huge

---

<sup>139</sup> [First Samoan Civil War \(1886–1894\)](#)

<sup>140</sup> [Susuga Malietoa Tanumafili I \(1879–1939\)](#)

<sup>141</sup> [Second Samoan Civil War \(1888–1889\).](#)

fellow, robed only in a loin cloth. His shop a somewhat dilapidated shack, yet it was spotlessly clean and possessed a dentist's chair. I rather fancy that this was once owned by the efficient German. All went well, but the shampooing I preferred to do myself in my own sanctum.

As to washing of linen even in remotest spots I found no difficulty. The native women see to that. In Apia as to boot mending there was but one man in the business who by profession is a saddler, and does repairing as he can. He looked to have one hundred pairs of boots awaiting; he clearly was doing a rushing business with white folk. There is a watchmaker but he has no window dazzling the eye, and the same modesty seems to possess the only chemist. The only dentist went off for a year and men until lately had to grin and bear the pains and needs. There are Doctors now and a splendid hospital with a large staff of trained nurses. There is a weekly local paper which does its best to dispense news, and the Government which controls the Wireless strikes off typewritten form of what comes daily through and thoughtfully pins it up outside the Post Office. Here folk foregather and scan the lines with eagerness, and are grateful for these crumbs which come their way.

### **Native Homes**

There are charming walks leading out of Apia towards the hills. They are Nature at her best; the foliage is so rich and varied, large trees and small line all the way, grassy swards lie back of them with tall bushes spread about bearing many colored blooms : and the native houses complete the picture. These latter (fale's) are still much in use, and far surpass in artistic effect the bungalows of the whites. Oval in form, with a heavy thatch roof supported by poles all round some four feet apart, the sides are entirely open to the breeze, yet there are mats rolled up just under the eaves ready to be let down at night, or in case of rain. The flooring is of pebbles, and at any time of day you can see Samoans squatting therein, lazing the hours away in talk or rest.

### **A Fairy Scene**

As I wandered one afternoon along the road which leads up to Vailima, there came trooping down a band of young womanhood, fifty strong : walking two abreast, each couple exactly behind the one in front, for they were carrying on their shoulders baskets of copra between each two; these baskets (made of split leaves) slung upon a pole. They stepped bravely along, despite their heavy burden, chatting gaily as they went, sturdy and superbly formed, clad in loose cotton gowns of many hues.

I wondered not at Stevenson's choice of a home which lay not a mile beyond. Looking up I could see the mountain top where his ashes lie : but that was a walk that still awaited me.

## A Game of Cricket <sup>142</sup>

Apia's chief promenade was deserted, every shop tight closed, for it was Saturday afternoon, and everybody was off to games or picnics. There was to be a native Cricket Match in the Compound close to my residence, and keen was Apia's excitement over the coming struggle. Thither therefore I went, and found myself alone amid a wildly noisy native crowd. Not that there was any roped off arena round which the people gathered. Far otherwise. The pitch, if you could so call it, was set in the middle of the uneven sward round which Samoan houses ranged. Every seat in the Stands was occupied, which means that all the mats (or blinds as we should call them) were up, and people young and old squatted on the edge of the pebbled floor of the circular dwelling houses. They were going strong when I entered upon the scene. And what a scene! What a travesty of the solemn British Game. Here was noise enough for a Baseball diamond; and to add to the din there was a Band which never ceased : but of that Band anon. First of the Samoan game itself so far as I could interpret it.

There are two wickets set close together. The should-be third one is set apart, on a line with the others some two yards away. These are used by those who make the runs, for the batsman only bat. The runners carry wands, the batsmen use an implement which is a cross between a huge baseball bat and a club : its end is foursquared. It was certainly twenty a side, and may have been many more, the fielders seemed to be all over the place. There were umpires at each end, I fancy a couple worked the duty together. They were distinguished by an umbrella to keep off the sun : or a walking stick for those who did not mind the heat. The overs consisted of one ball each, and the batters idea was not to save his wicket, but to lift the ball to the sky. I noticed that the umpires gave to each new comer "mid wicket" or "off leg" but the batters once securing paid no more attention. The bowling was all overhand, and the catching good. At times the ball landed on a roof and slowly careened down. This seemed to count for nothing as the runners made no move, but when they did move they got on such a pace that they failed to stop till full ten yards past the post. I looked in vain for the scorer : I fancy that they carry all runs made in their heads. None kept to their positions in the field, and when a ball went up, at least three would collide to catch it. It seemed to be the order of things to clap when you felt like it. Of course when a batsman was out, the whole company started in; not with the rapid clap of the white but a measured beating of the half closed hands; but you are not tied down to that moment only if your enthusiasm carries you away.

But even if the game was interesting to watch, as indeed it was, for the intense excitement of the players and their antics : the Band was the thing that fascinated me. I counted sixty in it, and not an instrument among them. They were seated in rows on the open sward, and had at least four conductors who all worked overtime. They sang what I should call Samoan Shanties; never ceasing the clapping of the hands. There seemed to be a Programme, for the antics varied. At one time they all moved in perfect time as if rowing : at another time they lay flat on their backs : and at another six men stepped out and danced in front, the wildest, weirdest, most savage kind of dance I have as yet set eyes upon in any clime. All the while the conductors kept leading in song, to which the Band responded in short, snappy phrase; nor did those same conductors hesitate to use the stout sticks in their hands, stepping into the crowd and belabouring the backs right and left of any of the singers who grew slack. It is extraordinary the lung power these dark skinned races have. Hour after hour they sang and shouted, but the sounds were never hoarse.

Of a truth they were supplied with much Kava : for women kept bearing across the field of play (quite oblivious of the game) galvanized buckets slung on poles : and passed in and out amongst the Band,

---

<sup>142</sup> See also Tale #23, *A Cricket Match*, in Part IV, *Tales of a Roaming Grandfather*.

handing out the fluid. It was a fiercely hot day, yet how those dancers whirled and squirmed and twisted, flung arms and legs in air; each separate yet none moving out of a square yard space.

I passed on at length, to where white men played the game, on matted crease and concrete, with leg guards and wicket keeper's gloves, and a bunch of onlookers watching with serious countenance and whispered words. 'Twas a change indeed : but each to his liking. Alike they get exercise and pleasure from the game.

## Lodgings

I was fortunate indeed to find a roof over my head upon arrival : my host a leading merchant, an American who has spent long o'er thirty years in Apia, has amassed wealth, but still keeps his four and twenty Trading Stations going. Above the distributing one in Apia he has bedrooms for his white employees, with a common dining hall. As space permits, he is generous enough to extend board and residence to such as I.

The table, not sumptuous, was plain and good, the furnishings simple but adequate. There are showers provided and a delightful verandah fronting the sea which beats across the road not twenty yards away. The housemaids are Mission girls which means they are strict Sabbatarians, and left us severely alone on Sundays, when each man became his own valet, cleaned out his room and prepared his bed. Our chef a Samoan, our waiter a Chinaman. True, all dine in their shirt-sleeves as a rule, but the proprieties are observed. Bullermercow (native word for "Beef") is served three times a day every day of the week, but when the Auckland boat arrives, there is joy on every countenance for mutton appears for all too short a space. Apia is no place for a gourmand, but a vegetarian can feel perfectly at home. Nay, even his frugal diet was surpassed a few years back by a band of white enthusiasts gathered from many parts who dwelt up in the hills behind Vailima, were known as "The Grass Eaters" and lived up to it. They are all dead today.

## Teaching School <sup>143</sup>

Time was passing happily when the Government Authorities seized upon me. They were short of Teachers and sought my aid. I was offered the Headteachership of the Native school for boys and girls (with two native Teachers to assist) for as long as I felt inclined. Such an opportunity of getting close to the child mind of the Polynesian Race was not to be refused so I took the plunge. The work was a great pleasure. From eldest to youngest they were keen to learn and quick to grasp. My assistants were charming fellows, one some forty years of age, the other nearing thirty. They took all the hard work from my shoulders. They drilled, and lead the scholars in and out of the large airy building with fife and drum band going gaily (it is not only the boys who play those fifes). Forms I and II were in their hands, for the tiny tots knew but a few sounds of English. My own charges had some fair knowledge of the language. The range of studies was but the three R's — their writing would put white boys of their ages to utter rout — their arithmetic excellent — their reading very pretty to hear as they strove to give the English sounds, all touched by their soft Samoan. Much time

---

<sup>143</sup> Regarding teaching at Malifa in this story and the next, see also Tale #25, *Of Malifa (1)*, and Tale #30, *Of Malifa (2)*, in Part IV, *Tales of a Roaming Grandfather*.

has to be spent in explaining words as well as sounds : they know so little of Life and their orbit is so small that it kept me guessing how to explain at times, but we always got there in the end.

I found that the custom was the first thing of a day to take some object and tell them of it. A watch, a piece of money, my sunshade, anything would do. They gave profound attention but when I gave them dissertations on their bodies, they were enraptured. Samoans are strong on good manners and see to it that their children follow suite. Upon the Master's first entering the class room they rise and welcome you with a "Good Morning Mr. Bol-e-tone". But you are required by the same code to first say "Good Morning boys and girls". The boys raise their hand to the head, the girls bend slightly forward.

### A Tribute

And they are appreciative. One afternoon as I made ready to leave, a scholar slipped a note into my hand which (because I would have men know that it is better than fine gold to a Teacher to receive such reward for his labour — and that you may have despite sad mixing of his pronouns the thoughts of a Samoan lad in his own words) I here subscribe (but the original I could not part with at any price).

Malifa School

Dear Mr. Bol-e-ton,

Just a few lines I let you know how I please for your teaching me some new way for finding the British language. Please Mr. Bol-e-ton will you leave your work in Niue because we are very much please for your help in Samoan children, now we wanted you to stay in Samoa for long time and teach me in every way in English language. When you come here we know many things from you that's why we wanted you, because you are a wise man, and you are true teacher, that's all I want to let you know. I hope this letter is not say "Goodbye" but merely "Au revoir."

Fatuesi.

Who could want richer reward or higher praise than that?

Malifa School for Natives (Apia) is set in a Native Compound, and is attended by a representative number from many villages rather than all from one; which was the German method and is still in force. My two assistants live in the fales nearby : their names Tauaa and Maiuu. A little distance off through coconut groves is the White and Half Caste School of Ifi Ifi : for the two do not mix in lessons, save for singing which the Headmaster takes — a wonderful teacher of song. To that hour's exercise I got to look forward with avidity. I still fail to fathom how he has brought them — even with the aid of the Tonic Sol Fa System <sup>144</sup> — to such perfection. It is Part Singing de luxe. No one has a score in their hands, yet every note and word rang true. The elder boys have an astonishingly rich bass, the tenors are sweet and clear, the altos ring deep and true, the sopranos never overpowering. No accompaniment. They followed the baton for time and expression like veterans. "Hail Smiling Morn", "Little Boy Blue", "Sweet and Low" and a soft Samoan Song of Farewell

---

<sup>144</sup> [Tonic Sol Fa Method](#).

(which I still seem to hear) are only a few out of their extensive repertoire, but when one day they burst forth into Handel's Hallelujah Chorus I was astounded. Up, up they soared nor ever faltered. Back and forth went that wondrous song till when the last note rang out amid that tropic scene of palms and foliage, brown skins and blazing heat, it was hard to believe 'twas real. There is talk of taking them en tour, they would certainly surprise.

### Stevenson's Grave <sup>145</sup>

It was St. Patrick's Day. New Zealand recognizes in full measure her Irish citizens and proclaims a holiday for Banks and offices and schools. Her authority extending to distant Samoa, a holiday was mine. It was easier to declare to my scholars that the approaching day was free from lessons, than to explain the reason why, for the Good Saint took some careful handling. That day I made my Pilgrimage to the Grave of Stevenson <sup>146</sup> — Tusitala — The Teller of Tales. Ere the full heat should beat down upon me, I sallied forth alone, climbed the steep ascent and stood beside it.

The way was pleasant, and the going fairly good. Many white folk's bungalows on the road, set well back, and oft times hidden amongst the groves of coconuts and cocoa beans and breadfruit; past a village with its native church all too garish in its white daubing and formal style amid the grass roofed native homes; past plantations, some well kept, others run to seed; and so to Vailima, two miles and a half away — all up a gentle grade.

Since the days of its first owner, the Author's Pacific home has been in possession first of a wealthy retired German, then of the German Governor, and now is the official residence of His Excellency the Administrator. Heavy gates face you, hung to massive concrete posts, with sentry box nearby, and just inside there is a Lodge, once the temporary home of Stevenson (whilst Vailima was a-building) but not on its original site : and a large extent of open fields where cattle graze. A broad road leads straight on to other bungalows (once soldiers' quarters) and beyond, on a knoll, rises the old home, facing the sea, with its verandah looking out upon a spacious and well kept lawn, and its upstairs where the brain workshop lay. The new way is not the old way in. You turn down a shady lane and soon come to an unpretentious iron pipe gate which leads you into a grass covered way bordered on either side with shade trees. Those were planted by man, not nature : and the pretty roadway winds round and up till you are at the home in which Stevenson took so lively an interest in the building. It was a fine home for those days, other hands have made it even more so. At the old time gate there is a notice board which has lettering in Samoan. It refers to that grass covered roadway from the iron pipe to the house and is as follows:

#### The Road of the Loving Heart.

Mindful of the great kindness of Chief Tusitala during the time of our trouble when we were in gaol, we have made this road as a remembrance which shall not fade away, even forever.

<sup>145</sup> Regarding Stevenson's grave, see also Tale #27, *Saint Patrick's Day (1)*, and Tale #28, *Saint Patrick's Day (2)*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>146</sup> [Robert Louis Balfour Stevenson \(1850–1894\)](#)

(Here follow twelve names of chiefs, Mataafa the would-be King among them.)

On past that gate you go along a bridle path where mauve colored butterflies abound, to a pretty rushing stream coming down from the mountain, at the very base of which you stand, winding its way to the sea. A rustic bridge takes you over. The waters of Vailima tasted good to a thirsty soul.

Now started the ascent and so too does the undergrowth and forest. No wonder that the bearers had to struggle hard and fight their way with axe and rope and mattock to carry out the wishes of the dead that he should rest upon the summit. Deep shade prevailed as I made my way slowly up the slope; a heavy rain overnight had made both rocks and roots most slippery. Leaves lay thick : but the way was clear; for pilgrims to that shrine are never lacking. I met two coalpassers one day as I roamed around Apia. They had their work stamped upon them. They sought of me the way to that lonely grave. Their steamer lay in the offing : but ashore they told me that they must needs pay their tribute to him whose books had given them such unfeigned delight.

The trail twists and turns, at times almost perpendicular. You are alone indeed : the density of growth hides all of what's below, save that you hear the rushing of the stream and an axe or a hammer at work somewhere in the Beyond. Higher and higher you climb till at last thirteen hundred feet up, you suddenly step out of the dimness into light; a blue sky above you, where on the summit (surrounded with tall bushes of scarlet hibiscus and many a feathery drooping tree) lies...

### **The Grave.**

A massive concrete slab some fifteen feet by nine surmounts it : upon which rests a tomb plain as many a one beneath which kings do lie in Westminster's Valhalla : no column, fluted work or statue : impressive in its strength and its simplicity. Bronze inscriptions let in on three sides : one to Stevenson : one to his wife (whose ashes were brought from California in 1915 and laid beside her husband) : one from his wife (in Samoan) taken from Scripture.

The poetry of Stevenson's own making. Herewith I give all three as I copied them upon that mountain top.

To Stevenson.

Under the wide and starry sky  
Dig the grave and let me lie :  
Glad did I live and gladly die  
As I lay me down with a will.

This be the verse you grave for me :  
Here he lies where he longed to be :  
Home is the Sailor, home from the sea,  
And the hunter home from the hill.

To Mrs. R.L.S.

Teacher : tender Comrade : Wife :  
A fellow farer : true through Life :

Heart-whole and Soul-free :  
The August Father gave to me.

From Mrs. R.L.S.

Entreat me not to leave thee  
Or to return from following after thee :  
For whither thou goest, I will go  
And where thou lodgest, I will lodge.

Where thou diest, I will die  
And there will I be buried.  
The Lord do so to me, and more also  
If aught but Death part thee and me.

### **The Outlook.**

At one point on the knoll, nigh the head of the Grave, looking north, there is a glorious view of the sea : and another break in the trees and shrubbery to the East shows Vailima nestling at your feet, with a great vista of rugged, green covered mountains far as the eye can see. Thirty years have passed since the day when he was carried up and laid there, and few of the actors in that drama of deep devotion now survive : yet in the villages below, even the children prattle of him, and throughout all Samoa, he being dead, yet speaketh.

As I stood by that Grave far from his Home Country, and from mine, I felt grateful indeed that I was privileged to personally lay my little tribute of appreciation upon his Tomb — an hibiscus bloom, blood red.

### **Market Days**

Wednesday and Saturday evenings are the Market Days of Apia. The market itself was next door to my residence. But be not led away into imagining a fine building, well lit, with roomy stalls. The only thing in which it is like our market Places is the crowd, and the ceaseless jabber. Apia's is held under the open sky, with the sea dashing itself upon the beach not twenty yards away : the lights are hand lanterns : and the stalls empty cases procured from the Merchants. No butcher finds a place here : no farmer tempts you with fresh eggs and sweet cured hams : no florist shows potted plants and nosegays : the dusky sellers, both men, women and children are not in those lines of business. Here are huge "flapjacks" piled high : and many uncorked bottles of a liquid like diluted raspberry vinegar : here too are gigantic crabs for purchase, still alive and vigorously kicking : and fruits of many kinds. One fancies that this market must surely be for Lazy Ones in a country where every native woman is a cook, and where both fish and fruit are to be had freely for the gathering in a village communism. But perhaps it is a social gathering in the main : and certainly the din of talk and laughter leads one thus to think. There is a Brass Band too : to add éclat and more noise for the occasion.

It is a weird sight, with the dim lantern glow, and the white robed figures, with as many well nigh unrobed, flitting ceaselessly about. Order is kept by bare footed Police dressed in khaki colored cloth

(hot covering for such a climate, even at nightfall) with a silver star on their breast : but by ten p.m. all is over, and silence broods once more o'er Apia's Market Place.

## Easter Morn

The Roman Catholic Cathedral is a massive structure. Within, the wide and lofty nave is clear of pews, the space instead covered with tapa mats : the aisles and the transepts have the pews which are for the use of the white folk and the half caste. Behind is the organ and Choir Gallery, but unlike Honolulu's fame, they have not attained the former. So 'tis an harmonium set nigh the Altar rails, and the choir nearby.

Easter Morn broke fine : the heavy tropical rain had spent itself in the early hours, and by seven a.m. when High Mass was to be sung, the sun was already blazing. Troops upon troops were pouring along the Beach Road, white the all prevailing colour, though some few natives had gowns or lavalavas of gaudier hue : few heads covered. St. Paul's Dictum <sup>147</sup> seemingly does not hold good in these parts : nor if he had long hair in mind would there be any cause for it; since few of the native gentler sex have aught but close cropped hair like unto the men. Some came in rigs, but most on foot, old men and women, young men (and babes in arms), one and all with but one object in view, the Oblation of Thanksgiving for their risen Lord. I was early, yet already Litanies were being chanted, led by a Samoan native nun.

Big Ben rang out, and the great church quickly filled. That nave was a wonderful sight : from Altar rails to the main doors there were many hundreds : at one time kneeling, rigid and straight as arrows, upon the mats; at another time squatting on their haunches tailor fashion, their naked feet all evident. A woman nigh me had a great column in front of her, nor could she have seen one movement at the Altar, but she followed every part of the Service with deep devotion, nor stood at any time in need of book. The collection was made by two young girls for the pews : and by two solemn looking native men in cassocks (with Rosary and silver cross pendant from their necks) for those sitting on the mats. The men brought their offerings in the folds of their waist cloth : the women produced theirs from I know not where — they certainly never carry handbags and worship is no time to be inquisitive.

It was an early hour for Preaching, but sermon there was, short and delivered without heroics by a Marist Father with fast greying beard. Being in Samoan, I was unable to follow, but the sacred name was clear, and Alleluia has no native equivalent. Then came the Great Oblation : the grouping at the Altar of the superbly robed Celebrant, his Deacon and Subdeacon : the Master of Ceremonies : the Acolytes and Torchbearers (a great row of these, clad in scarlet cassocks, lace cottas and a sash of scarlet round their waists); the Thurifer, with odorous incense rising to the roof, and the tinkling bells.

Who of white folk partaking in such a scene could fail to be seized with the thought of the Attraction of the Cross. Samoa — far flung from all that Xtianity had meant for nigh twenty centuries to man — whose people but three generations back were steeped in heathenism, and its concomitants — now kneeling at the feet of The Crucified One — the white man's Gospel theirs : joining with the millions of the Church Catholic in Thanksgiving on that Day of Days in the Christian Calendar.

---

<sup>147</sup> [St Paul's dictum](#) was that "Women should remain silent in the churches."

## Vailima

A visit paid to His Excellency gave me, at the same time, the privilege of seeing Vailima at close range. Tea was dispensed in the Workshop upstairs, and dinner in the roomy quarters below. Here is the open fireplace, within it its andirons, which was determined upon, not for any possible use, but for old Home's sake : above it hangs a large oil painting of Bismarck <sup>148</sup> (a relic of German possession). Electric light is now being installed, but in the first days those great rooms must have had an eerie look of nights, unless lamps without stint were put in use. The aim throughout was roominess and all the air possible. Set as the house is on rising ground, it gets all the breeze there is. A splendid view is obtained : Apia itself lies hidden below you : but one catches a glimpse, over the tops of trees, of the outer reef with its white foam, and then comes the Ocean. On the left rises the mountain covered with foliage from top to bottom, on the summit of which is the Grave. We strolled down to the Bathing Pool, which needs no trained artistic eye to recognize its beauty. It lies but a little distance above that rustic bridge I passed over on my way above. You step from the open field in which scattered lemon trees flourish, into the shade of the banks of the stream. Making your way down by step of boulders you come to a pool fed by a waterfall above. It must be ever cool here, for the trees are all around, and their branches bend over, one and all, as if determined to protect the spot. Ferns are abundant upon both banks. It is a vision in green; and your eye follows the stream as it sparkles down over the rocks through an avenue of foliage with the trees still meeting overhead, till it takes a bend and is lost to view.

## Learning a Language

There is at all times here, a colony of Niue "boys", as well as of "Solomons" (the latter well nigh black as negroes), who are brought under contract by the Government to do laborer's work which the Samoan has no wish to. The Niuean Village was quite handy to my quarters. There were fifty then waiting to return to their home even as I was : and it struck me that I could well employ my time, if I went to school myself, and began to learn their A B C. My good friend Tauaa took me to the Settlement : and by appointment I visited the native pastor. For me he had spread the mats (which are rolled up during the day), had a folding chair ready, and fresh coconuts for refreshment. He himself, a dapper little man, keen of aspect, sat tailorwise whilst we discussed the matter. A young fellow named Ata, otherwise Archie Head — a half caste — also attended, who speaks English well : and he it was who stood prepared to hand out the instruction. Quickly the news spread that the new Teacher had come, himself, to be taught; and my daily walk through the Niue Village — after school hours — was made for a time at least, amid the scrutiny of many eyes peeping out of homes, which was somewhat embarrassing to a stranger. Niueans affect the closed-in house, and board up the sides with broken up cases. It certainly gives the appearance of very rough carpentering : and the entrance is decidedly limited as to height. Ata's lessons were given sitting on the edge of a board which cut off his sleeping mat from the rest of the room. I was provided with a chair and we generally had an audience of half naked, heavily tattooed men inside, keen to lend a hand, the while enjoying a game of cards. The women gathered outside, plaiting baskets. Happily a Grammar Book was dug up from somewhere, and there were Bibles and Hymn Books, all three of which were brought into play.

---

<sup>148</sup> [Otto Eduard Leopold, Prince of Bismarck, Duke of Lauenburg \(1815–1898\)](#)

There are only seventeen letters, as they have no B C D J Q W X Y or Z. It is somewhat disconcerting to be told that R has to be sounded “Low” and T as “See”, but there you are. In order to protect me from an outpouring of Niuean in my infant days, I soon learned how to stop it by saying “Ai iloa lahie au vagahau Niue” which being interpreted as “I can only speak a little Niuean”. For me, the Reading Lesson was like stepping on hot stones, but my Master was very patient. Here were a few more nasty jars for the Student. There are no less than four forms of our “The”. For plurals they merely put “Tau” in front of the word. Adjectives have plurals usually made by duplicating the first syllable; and they seem always to go about the long way to express themselves. “A mean man” is a man who is “Koe loto ke he tau mena he lalologi velevelekoloa ne atua kehe tau mena ia”. So I had something ahead of me. They simply adore the letters F and K, and I was secretly Fa-ing and K-ing all day long. The Niue language would not by a long way fill a Webster’s Dictionary. Their paucity of words is confusing. The same word has to do for a canoe and a root, whilst another means both to scold and to kill. One can imagine the horror of a schoolchild should his Master “I must scold you for this” if he interprets it as a threat of murder. They must be quick witted indeed to grasp which word is meant when “Mo” stands for “and — for — from — so as — or — with — as — in — nor” and “Fua” can be “Fruit — egg — to carry — to weigh — and to swell” as you please. Never before did I know that there was any connection between a mosquito and an odour, but “Namu” is the word for both. My Teacher allowed that half of the words used to make one only, are quite untranslatable; and we were sworn friends despite the load he put upon me. There is unfortunately everywhere on these Pacific Islands a Chief’s language and the People’s. Woe to him who uses mere common words when addressing those of high Birth, and even if white folk it is considered ill bred. My Grammar Book shows me that to him you must not use such plebeian term as “leg” for his means of movement, nor are his “face” or “hair” or even “eyelids” like unto ours; his “sickness” and “death” are things apart from us, and the last act of all still finds him and his Class alone in their glory.

## Health and a Story

A pleasing feature as one roamed amongst these people and their villages was the absence of deformity. I have no ground for thinking that they hide those thus afflicted from the gaze of their fellows : their fales are too open to attempt such a thing. They are simply a well formed race, carrying themselves erect, heavy weights always slung on a pole, the “pack” unknown. Yet they have their troubles. The blind in one eye are numerous, and elephantiasis is all too common. The reason of the former is (at least till lately) largely their own fault, for when the eye is troublesome for any cause, their method of relief has been to scrape the eye with a slither of wood, its uneven surface rasping across the delicate pupil, blindness generally ensuing. Elephantiasis is an ungainly sight, an ankle, a leg swollen enormously, yet not incapacitating from movement. It is a disputed point of the villainous mosquito should not have this debited to his account in addition to his already heavy list of crimes.<sup>149</sup> Anyway it is best in such a clime to leave no sore or bite uncovered, and one sees natives on every hand with rag tied round a leg, an arm, a foot : would that they did the same to the sores of the horses. These latter make one’s heart ache, for they are all too roughly handled, the native considering speed the all essential, and his beast looking as if he had not had a “square” meal for months. Seeing that the folk eschew boot leather and that their own soles are not even yet made of iron, it is not surprising to meet many with bandaged feet. They can tread on stones and rocks, even coral with impunity, but they are not proof against the perils of loose nails, tin cans and other accompaniments of an untidy

---

<sup>149</sup> [Elephantiasis](#) occurs in the presence of microscopic, thread-like parasitic worms, all of which are transmitted by mosquitoes.

civilization. Broken glass too has its victims but it also has its distinct advantages under certain conditions. It was the salvation of a certain skipper in these Southern Seas not so long back.

His crew massacred, he found himself alone onboard. Nothing daunted he sailed his sloop to safety, though to rest at night he must needs seek the shelter of bays where savages abode in hoards. His scheme was original and entirely effective. He did not lack for bottles, which he broke and ground to pieces. Before retiring to his bunk he covered his deck with the fragments. Knowing full well that he would be boarded ere the sun rose, he slept till the whispered jabber of voices alongside woke him, when he lay low and waited. Clambering up the sides, with a blood curdling yell they sprang aboard. Those yells in an instant were changed from triumph into pain. Pandemonium reigned, for those aboard sprang back, only to be met by others who were still thirsting to sack the ship. What those savages said, even the Captain failed to translate, for the volume was too fast and great. But his duty was plain : to have his sleep out, then rise, sweep the broken glass up ready for the next night, cook his breakfast and then proceed upon his way.

### Crying Needs

A “bird of passage” like myself is in no sense qualified to pass upon the politics and policies of the country he is merely passing through. He can but note what he observes. There are certain things that are patent to the dullest eye about Samoa. It wants labour badly. Plantations are going to ruin for lack of it. And the Samoans will not readily work. Why should they? Samoa did not ask the white race to come and try to make their fortunes out of its bountiful soil. Even if the Samoan did work, he is far above working for the wages of a “coolie”, and more than that wage the white man will not pay. He has not to work for his own living, except that light measure of daily toil which is good for every man. His is a Communism. The Jap is “tabu” to the white man in these parts, as elsewhere; the Chinese are being withdrawn by their own Home Government because dissatisfied at the treatment meted out to its people — being refused the right to settle — and the labourers brought from other groups are but transients, not always easy to be obtained.

Communication with the outside world is very limited. One steamer a month from New Zealand. Days and weeks pass and not another ship in the harbour save the little ketches that sail about the islands. Eighty miles away one hears of the American Liner about to pass through Pago Pago and send mail and maybe a trifle of goods to Australia by that means. The copra trade (such as it is) is now headed for the United States, and it is likely to get settled in that direction if no cargo boats come hither from British ports. The passenger steamers refuse to carry copra for fear of fire. New Zealand has accepted the Mandate and she has her work cut out. Her officials are working hard, with their eyes, in the main, upon the uplifting of the natives — as should be.

Labour and ships are the crying need and it is not easy to see how they are to be supplied. Federation is in some men’s minds as a solution of the difficulty : which means that these Groups should be allowed to cut away from their various mothers’ apron strings and stand on their own feet. The stronger then would help the weaker, there would be a community of interests and trade would be fostered by a fleet of merchant ships ever going the rounds. Whether the great distance lying between these islands would make it a practicable proposition is something for experts to decide. From the Cooks to the Solomons is a vast jump. But something will have to be done if things are not to fall behind, and if these fertile spots are to take their share in the output for the support of mankind in general.

## **The Losing Side**

My respect for the men of Niue has greatly increased. They know how to take defeat. No grumbling, no thought of trickery to make up for efficiency. I have learned that ever since the Niueans have been brought hither to work, they have tried to lower the colours of the Samoans in the national game of cricket. Week in, week out in this land of Perpetual Summer, they have played, and the superiority of Samoa is today overwhelming. A chance victory comes Niue way, and the Village is in transports, but it is but a fleeting joy. And the price of defeat is heavy : they play not alone for glory. The losers have to provide a feast for the visitors, and the wonder is that Apia has not long ago eaten up all the food resources of the Niueans. Off to their own Plantations the conquered needs must go, gather coconuts and yams, bananas and taro : and carry the spoils to the victorious Samoans.

## **The Beach Road**

The entire sweep of the coastline within the Bay is now called Apia, but 'twas not always so. In those times of stress we know of, there were four villages scattered along that mile or two of beach front. The Western point is still known as Mulinuu, then comes Matafele, then Apia, and at the Eastern point lies Matautu. The first named was the residence of the Samoan Kings, the second where the Germans ruled supreme, the third where British and Americans held sway, the last was no man's land in particular but here were the Consulates of Great Britain and The States.

Along that road which I took exercise upon, Kings and Consuls, Admirals and Captains have moved their men like pawns in a game of chess : plots and counterplots have come off or come to grief : bullets and shells have whistled across it : messengers have sped along it carrying notes of war or peace to the camps hidden in the bush at the back : but never a fairer sight, nor more stirring to look upon than when beneath darkening sky and howling wind, the crowds of whites and natives, great men and humble folk worked together, all feud forgotten, as they strove to drag their suffering fellows to it from the wrecks lying crushed upon the reef and shore on that March morn in '89.

## **Strong Arm Doctoring**

Belief in devil possession dieth hard. If some unfortunate party be seized with abdominal pains, as happened at a house I dined at, do his folk put hot fomentations thereon, and bathe his temples. Far from it. He hath a Devil inside him say they, and that Devil has got to be driven out. Forthwith they proceed to beat with thunderous blows that tender part of one's anatomy despite the shrieks of the sufferer, nor do they desist till he is in hysterics and is alternately laughing and crying like a madman. Then is that Devil on the run, and they cease their loving ministrations, and let the stricken one repair as best he may.

## Lochinvar <sup>150</sup>

Brides hereabouts are sometimes won in courtly fashion, sometimes far otherwise. The former requires a gathering in the fale, the Kava prepared, a call to order and the flowing bowl passed round, the would-be bridegroom makes his offer of marriage, and the matter is settled then and there. One of my girl scholars was asked but happily for me the offer was declined, for schooling was considered to be more important than Love at that time. She did not seem to be concerned about the matter. I saw no tears, nor did a single sigh escape her. She was my most studious one.

But there are rougher methods. A young man sets his fancy upon a maid, and calling to his aid a boon companion, they watch the habits of that maiden's village. Down by the stream or a pool in the bush the good girl is washing clothes : suddenly they spring out upon her, the swain declares his intentions, and willy nilly he carries her off. Depositing her with his parents they await developments. The girl is missed, is tracked, her fond parents descend upon the scene full of recriminations at her base behaviour, but having administered a wholesome whaling, kiss her, bless her and make friends. This the Tradition in such case and it must be followed to the letter. Then comes pig and taro and much Kava, and the matter ends.

## A Lover of Nuts

'Tis but a beetle, but the damage he does is well nigh incalculable. He has the strength of ten and is armed with an instrument of war, a horn (sprouting from his nose) of fearful power. Hence he is named The Rhinoceros Beetle. He was not always here, he came by reason of the ardour of a Scientist who brought wonderful plants and fruits from far off Malaya to test their ability to grow in Samoa. He was a Stowaway and though men curse him for his depredations, they can hardly blame the man of Science. Yet he might have searched his plants for eggs ere shipping them. This beetle goes for the young coconut when it is green and tender, and with his weapon, rips it open to feast upon its contents. If he stopped at the young fruit it would be bad enough, but if he cannot get that for his voracious appetite, he seizes upon the young leaves themselves, and rips and tears them so that shape and form are deformed and their usefulness is gone for aye. Men hunt them as others do wild game : but with the plantations only half tended, such search is largely futile. As is the rabbit to Australia, so is the Rhinoceros Beetle to Samoa.

## Tombs

The modes of sepulture are various on Upolu. There are formal graveyards but they look wholly modern : there are single graves set in the bush : there are mounds lying right against the fales — these latter by far the most common sight. Seeing that they still have the most deadly fear of ghosts and spirits, it is strange that they keep their dead so close at hand. So great is the fear that there is no

---

<sup>150</sup> Lochinvar is the fictional romantic hero of the ballad [Marmion](#) (1808) by [Sir Walter Scott](#). The brave knight arrives unannounced at the bridal feast of Ellen, his beloved, who is about to be married to "a laggard in love and a dastard in war." Lochinvar claims one dance with the bride and dances her out the door, swooping her up onto his horse, and they ride off together into the unknown.

need of any Curfew Law. You rarely see a native outside his home once darkness falls. It is only when the moon is full or when they move in company to the market that the roads and seashore are not deserted. A grave by the wayside would be an effectual bar to progress on a dark night, to most, alone. There seem to be no Langis as in Tonga, where royalty lies apart : yet in Mulinuu there is no doubt their dust lies within a bowshot of each other in the seat of the Kings, each under a circular tower, some twenty feet high, of cement and stone, with a dome on top, having the appearance of miniature observatories.

Here too as one heads back from Mulinuu for Apia, there are iron fenced enclosures where white men lay in groups. One is of those who perished in the hurricane of '89 : another of the men of H.M.N. and U.S.N. "Killed in action" as the great headstone says, but preferably ambushed and having no chance to put up a fight, in '99 : yet other, beneath which lie the Germans who fell in the defeat of Fagalil, miles down the coast, past Matautu, when Mataafa won out in '88.

Full many a grave of native warrior, if opened, would disclose the absence of the skull : for whilst Samoans were no head hunters and ever abhorred cannibalism, they considered it the proper thing to carry off in triumph the head of the enemy. Remonstrated about this practice by the Missionaries, they were quite unable to give any reason or tradition on the subject : but once familiar with our Holy Book, they were ready enough to quote the story of David and Goliath, and felt that they had now an argument quite unanswerable.

### **From the Verandah**

Two trees, acknowledged to be the largest and most umbrageous upon the Beach, raise themselves like sentinels across the way from where I oft times sat, to escape the heat, on a verandah, built up and out, above the narrow road beneath. There is a strip of grassland on which they grow, ere you reach the small boulders and the darksome sand. Their boughs bending over, meet in the middle of the space between, forming a perfect arch of greenery, through which one sees the view beyond, and all else hidden. 'Tis a picture indeed, in Nature's Frame.

The sky overhead to the horizon, where the ocean meets the skyline, is leaden gray : a storm is coming up. In the very centre lies a single steamer, stern on, its boats swung out on the davits, and its lights just lit, for evening is coming on, and here there is no twilight. To the right and left there are ketches at anchor, lying snug in the harbour, each with their twinkling lights fore and aft. The tide is coming in : and over the inner reef the waves break continuously, making a line of purest white, ever changing but ever there, the color standing out against the otherwise placid sea which takes its sombre hue from the sky above. That reef in front lies straight across the line of vision, but there are other shorter reefs which stretch away to right and left, each a step further out to sea, all ruled in perfect lines, as if laid there by human masonry. Over each the sea breaks as it lifts itself to surmount them, then rolls itself level again till the next barrier comes. Beyond is quiet water where lies the steamer and the ketches.

Then ahead, some half mile from the shore, leaving the harbour mouth clear and broad, stretch away as far as those bending boughs will allow the view — the outer reefs, two of them, to right and left, ruled again for perfect line. Here heavier combers break, and though far off, the great white line is seen to be ever lifting and falling, and one seems to hear the crash of waters. A leaden sea — white horses prancing towards you line upon line — clouds lowering and moving ever landwards : now they envelope outer reefs and steamer, now they reach the inner lines, the shore, those trees; the whole

scene blurred, now blotted out : the rain descends in torrents, and you haste for more perfect shelter. Would that I were an Artist. Words are but poor things at their best.

### A Coconut Plantation

Vailele covers nigh three thousand acres and was formerly one of the large coconut plantations owned by the German Company with an unpronounceable name, universally shortened to “the D.H. and P.G.”<sup>151</sup> Since the Occupation it is controlled by the Crown Estates Office in Apia and has a Manager, two White Overseers, and a small army of Solomon Island Boys and Chinamen to work it. By the kind invitation for the weekend of the Manager and his wife, I made my way some five miles out of town — all the way skirting the seashore, and passing many a village — to their charming bungalow set upon a high bank overlooking the Sea, and surrounded by all the outbuildings necessary to the proper conducting of the Copra business. Here were the splitting sheds, the drying kilns, donkeys with their ironwork panniers to bring in the nuts from the various sections of the estate, ox teams with lumbering wagons to do the same in larger bulk, motor lorries to carry in to Apia the finished and sacked article, ready for the steamers; community houses for the bachelors, wooden shacks for the married folk, blacksmith’s shop, and storehouse filled to the roof with supplies, which under the present contract with the laborers, has to be served out with a liberal hand. With a Plantation such as this, free from heavy bush and undergrowth, there is immense pasturage : and here horses and cattle roam, some of which are wholly wild. Fresh meat is always procurable, and there is an extensive dairy, whilst pigs, chickens and ducks all add to the sense of being once again amid the farms of old time civilization, not upon a small island in the Tropic Seas.

The Estate is in three divisions for more careful supervision, Vailele proper under the Manager direct : the other two under the White Overseers. Their work seems never done. It is early rising and a hot pace kept up till bedtime. That work has been increased tenfold by the Rhinoceros Beetle. It is a fierce fight for supremacy between man and an insect. Monday mornings are given entirely up, not only on this plantation, but by order of Government on every plantation, Samoan as well as White, to the hunting of this pest. All the workers set out with cans, and whilst some climb the trees in their extraordinarily nimble way, others stir up the heavy ground about the roots to find the loathsome looking grub. Here a tally is kept as to the result of each man’s search, and it runs into the thousands. At Vailele the pest is just kept under control. No more. Any relaxing of effort and the mastery would not be man’s. Seeing that there are possibly fifteen thousand folk out upon Upolu every Monday morning in search, it may be gathered what a plague has been introduced unwittingly.

The days passed pleasantly, there was boating and bathing, extensive rambles along all too muddy roads and trails : the evenings spent in long Deckchairs on a mosquito proof verandah, with the soft sea breeze blowing in to keep all cool.

---

<sup>151</sup> The headquarters of the *Deutschen Handels-und Plantagensellschaft der Südsee-Inseln zu Hamburg* (D.H. and P.G.) were in Apia, Samoa. For information on German firms in Apia, see Chapter 2, “The Elements of Discord: Foreign,” in [A Footnote to History: Eight Years of Trouble in Samoa](#), by Robert Louis Stevenson (1892).

## A Maiden's Glory

I was taken off to see the Tuing-a Luna or Headpiece of a Taupou or Village Virgin — a most important and well nigh sacred personage, the Head Lady of all Social Functions, who has her Duenna and attendants. The Party herself unfortunately was not at home, having gone off on a visit with her father, the Chief, but her fond mother showed me her photograph, and I should gather that she was well able to take care of herself; her upper frame and lower limbs of athletic proportions, and her face not of a character to easily move the susceptible heart.

Her crowning glory came from Fiji. A devoted brother had gone thither to procure this one that should make all other high Caste Virgins envious. It took six months in the making, for it is of the feathers of the parakeet, and the birds had first to be hunted down, and the number must have been great. Each feather — not wing feathers, but breast — one below the other, was separately attached to a tape line, some nine inches long; feathers brown, feathers green and feathers red : these lines all joined together at one end, thus forming a loose wig. Apart from this, but surmounting it, was an arrangement of looking-glass attached to three thin canes which spread out like Prince of Wales' feathers. The whole was carefully preserved in a wicker work parrot cage, well wrapped up, and hung from the centre of the Fale, from which the mother kindly lowered it by means of rope. We disturbed her at her afternoon nap. There seemed to be no one at home, but in the centre, upon the pebbles was what appeared to be a huge pile of mosquito netting. "Alofa" (good day) at once produced a movement of the mass, and out of it rose Milady, who despite the inopportune hour, and an entire lack of knowledge of our tongue, was most gracious — like all Samoans are invariably.

It was Sunday, and just then the Conch Bell went, summoning to worship. Out of the fales the congregation came, each with a Bible and a Hymn Book in hand. Here the rule is evidently that the ladies must be covered and some of the hats were quite attractive; others otherwise : but all seemed at a loss how to attach them properly; perhaps the present price of hatpins is prohibitive : but I would not have guaranteed any lasting connection had a breeze sprung up just then — but there was none : and it was therefore very, very hot.

With "Alofa" to one and all we left that Village to its Evensong.

## Of Cocoanuts

A cocoanut is good for drinking, and its flesh for eating there and then. It must be fetched down for you from on high by those who can. A cocoanut for Copra must be fully ripe, and generally falls of itself from the tree. Then it is of hard exterior and the fibre thick, ere the nut is reached. That exterior is of no use locally, and usually is piled together and consumed by fire, which seems a mighty waste of what would make countless door mats for that industry. Where drying kilns are used, it comes in handily for firing in lieu of wood, and cooking is done by it to some degree. The whole thing left alone upon the ground but a little space, a shoot springs forth, which would in time break its thick tough bonds, reach down into the soil, and become a tree.

I desired to see the workings within the nut, and for that reason, several at various stages were split open for me. How could a shoot get out of that hard central nut? We all know the three eyes as embellished for "Aunt Sally". It is through one of these, which Nature has left weak, that the shoot breaks forth, and then forces its way through fibre and outer shell to the light and air. In the very early

stage, the milk curdles in a measure, and just beneath the eye, forms a tiny, hard white ball. Out of this comes the shoot which breaks through, and forthwith sends out roots of purest white which cling to the nut lying within the outer husk, like our five fingers would if spread out. That is the first stage. Later, one sees that all the fluid milk is absorbed and becomes like sponge, filling up half the space within — the hard ball gone. That little ball is delicious eating, so too is the sponge which melts in the mouth. But now the green shoot is strong and vigorous, and needs full feeding, so draws the white of the nut which we know so well. It consumes the lot; and by that time the contact with Mother Earth has rotted outer shell and fibre; inner shell is weakened too : the bulb presses outwards and those finger roots press inwards, and the whole thing collapses : the shell is cast aside, and the shoot is wholly free. Then Nature comes and covers it in measure with soil, and the roots dig down, and the shoot mounts up inches daily (as I have watched it) till it becomes a sapling, then a tree, and bears its fruit : the babe has become a parent in its turn.

You rarely see a straight tree — it ever overgrows its strength — they take many shapes, some even weird. Many I have seen rose but four feet from the ground, then turned at right angles and stretched out their full long length so that I could gather the nuts which hung level with my arm. These the exception : but all do some amount of graceful bending. Then comes the wind, and those which are old and infirm find that their days are numbered, yet rarely measure their full length on the ground. They yield to the inevitable, but snap off at various heights. The woodsman has to do the rest, and in its place drop a spouting nut. Nature then quickly fills the gap made in the line of a Plantation's trees. The eye wearies at acres of sugarcane, so too of pineapple, but the coconut with its sinuous trunk and waving plumes was ever to me a charming sight.

## BENEATH TROPIC SKIES (II)

### A Malang-a <sup>152</sup>

There was to be a Native Reception to His Excellency <sup>153</sup> at Matafangatele, a village some three miles out of town along the eastward coast. He had, since arrival, visited each district on Upolu, where a Malang-a had been arranged to give him royal welcome. This was the last of the list, and not one village but many throughout this portion of the island were to foregather — to greet him — hear and offer words of wisdom — drink Kava — feast — and complete the great occasion with both Song and Dance. I was there. Others were there, Cinema folk, men in white duck and yachting cap, just arrived in port on a cruise of varied interests : amongst them — the photographing the customs on the South Seas natives. Their trim white craft lay in the harbour, the object of interest to all, for its was said to be by those who had gone aboard a very hive of industry, men of Science with the labelled bottles, students of ethnography with their ponderous note books, “Picture” men with their dark room and pungent smells, store rooms of gifts with which to entice folk lore and secrets from the aborigines. Americans all, as none could possibly deny.

The time was early afternoon, the village green the site for Feast and Dance, a brand new fale adjoining, where Speech was to be made and the all essential Kava to be drunk. Many flags were hung pendent from rope stretched on poles which reached round three sides of the square, flags of many nations, and some most certainly of none. But they helped to make things look brave and gay. Leading up to the Congress Fale was an avenue made of posts and joined across the top, on which had been laid the huge leaves of the coconut tree for shade, whilst similar leaves were tied round the posts themselves. Near the head, it branched out so as to form a T. This was not for His Honor’s perambulating, but the site of the coming Feast. I was early on the ground so as to miss nothing.

### The Laying of the Table

Mother Earth the table, coconut leaves the tablecloth, mats on either side for seats. Then came from all quarters, men and women, carrying the food in baskets of the same jack of all trades tree. Out poured baked taro, legs, wings and breasts of chicken, fish baked in leaves and oil, breadfruit and shrimp salad too. One lone thing yet was lacking. That was Pork. It came : a whole pig, roasted, carried by four braves. They laid it almost at my feet, and Ye Gods! what expert carvers. Those huge knives that cut grass, yet hew trees down, which are axe, saw and a whole carpenter’s tool chest in one, to the Samoans, got to work. The hams were gone in a trice, the head severed : now a knife ripped all along the backbone from that button of a crisp tail to the neck, the hands grabbed hold, and the whole carcass was displayed without an atom of flesh on it. That flesh was cut into thick strips, some six inches long, and distributed upon the table : it did not seem to matter where the pork fell. Thus was the Table — an immense one — spread.

<sup>152</sup> See also Tale #34, *A Native Feast*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>153</sup> Colonel Robert W. Tate was [Administrator of Samoa](#) from 1920 to 1923.

## In the Fale

Already grave faced men were squatting within the Speaking House, and women too. None but Chiefs could enter here, none but high browed females. It had but just passed out of the hands of the workmen and looked a creation of real beauty. The roof inside a perfect masterpiece of interwoven wood. Hanging from the double crossbeam in the centre were decorations, not such as white folk use, but banana leaves split into slim widths, which moved to and fro in the gentle breeze. Each post was entwined with either fern or coconut leaf. The floor of pebbles was completely covered with fine mats. At one end of the concave there were chairs, nine in all, the central one for His Excellency; a table in front held a vase of flowers, together with glasses each of which supported a young coconut split open, ready for use. Behind and above the chair of state hung portraits of King George and his Queen.

Courteous as ever, the Chiefs begged me to enter and sit down on my haunches, and entering handed me coconut milk to drink. To one side sat two Taupous with a Kava bowl in front, and one was already busy with her hands in the bowl kneading the root to and fro. It looks like soapy water and has the snap of ginger. Those Virgins were not willowy, neither were they of blithesome aspect. They both were buxom lassies, and the occasion seemed to lie heavily upon them. For dress, they wore a light corsage of tissue paper, and the same material for an abbreviated skirt. The colors deep blue and maroon. Two young men attended them, bringing water in coconut shell and steadily supplying fresh root. The ubiquitous kerosene can was in evidence, abominably out of place, a very outrage to the eye. But the Chiefs were already thirsty with much preparatory talking and oft drew upon the coal oil tin. Only one person speaks at a time in conversation in these parts, there is never any breaking in, and it is not etiquette to rise. With their back to one of the supporting posts (unless the fale be full) one will hold forth, all others silent and attentive. None interferes till he has surely done. How they tell that is somewhat beyond me, for the Speaker often stops for a considerable period — to us it would surely be taken that he had had his say — then breaks forth again. Here then were gathered the Chiefs of the District, all in sober dress — bare skin is for the Commoner.

And Malietoa was there, still Chief of Chiefs, a tall man of medium build, black moustached, not of commanding mien but yet distinguished. He was clad in spotless white coat, soft shirt and lavalava, and carried a crook handled stick, verily first cousin to my own. His Consort musty have been a beautiful girl in her youth : even now at forty or so she is apart from all of her sex whom I have seen on Upolu. She is natural, very graceful and looks a Queen. Natural! Yes! for later in the day when Dance was on, her native blood could withstand no longer, and leaving her chair nigh His Excellency, she stepped out amongst her people and herself joined in the wild movement of arms, hands and feet, yet never lost her grace.

## Speeches and Drink

Word was now passed that the Governor and his party were arriving through the Grove, from Apia. The fale was emptied, the band fell into place, the Chiefs gathered, and from the auto stepped His Excellency. At once a bar of the national anthem rang out, and all stood at the Salute. Then came introductions and hand shaking, and the whole company moved slowly off to the Talking. I found a place at the far end of the fale from the high table, and watched. Malietoa sat on the right hand of the Chair, his wife on the same side, white folk between — to the left of the Chair sat His Excellency's ever genial Aide de Camp, together with high placed white officials.

Now a portly Samoan, squatting in his place nigh me, began to read from a lengthy manuscript in the native tongue, and sentence by sentence this was translated into English by an Interpreter of most engaging face and manner. It took long, but the sentiments of loyalty to the Crown, goodwill towards the Governor, and a hope of progress for the land were forcibly expressed. One phrase that caught me, as it evidently did His Excellency, was the statement that “With Samoans in their dances, it is held that the first on the program and the last are always the best : we know that the first Malang-a Your Excellency attended was good, may this your last not fail to be the very best.” The long address over, a generous reply was given. It Likewise had to be interpreted, which of necessity takes some of “life” out of one’s words, and makes one feel the added power which knowledge of the native tongue of any country, gives. They were told that for their country to progress, they must work : that the hope was to fill offices with Samoans, when Samoans had fitted themselves for the posts : and many another useful point was pushed home.

The Speeches ended, forthwith things proceeded to the handing round of the Kava, that Wassail Cup<sup>154</sup> of our own wild time days, the seal of Friendship and of Peace. The bowl and the maidens had removed outside and sat close to me. Another Virgin, tall and really graceful, now appeared, and taking a coconut shell (black with age) in her hand, one maiden still seated lifted up the mass of roots in her hands and the soapy like fluid drained in. Then from the all powerful lungs of the Announcer came the news to all the Assembly both inside and out that the Kava was to be borne to His Excellency. His voice power was simply tremendous and I was not a yard from him. The girl bent as she entered the low side of the fale and bore the bowl direct to the Governor who bravely drained it to the dregs at one long draught. It is violence to all known etiquette to sip or drink it “piece meal”. Withdrawing, the maiden next bore the Cup to Malietoa, then her work was done. The others were served by a mere man, but one who most gracefully, with sweeping movement of the hand, fulfilled his trust. Each time the loud voiced Orator thundered out the name, till all those seated on the chairs — as also the Speakers who were upon the mats — had been supplied. Then all rose and filed out to the next stage.

## The Feast

I was pressingly invited to join in, and found a place upon the mats, directly opposite to the two solemn visaged tissue-paper Virgins, who fell to with a vengeance, without thought of Grace before meat. My appetite did not run to any brave attack of fat pork or oily fish, but when with a broad smile (at last) one of those high born Taupous broke a taro and offered me one square inch, adding thereto one shrimp, I could not well refuse. Fingers alone were brought into play. I saw His Excellency, who sat at the Head of the T (fanned by a couple of one-eyed women) bravely attacking the wing of a chicken with hand and teeth, and took courage accordingly with my shrimp. None but Chiefs could sit at that feast, the Commoners looked on from the fales around. Yet some Commoners of youthful age crept nigh, and I soon saw the reason why. If all of us thus seated had eaten till nightfall we could never have cleared that table groaning under its weight of delicacies. Yet it vanished marvellously quickly. My Taupous behaved abominably, they seized article after article before them, fat pork, taro, fish, and slipped them behind their portly backs whence boys with leaf baskets seized them and hied themselves off to the fales and the “tall timbers”. I willingly assisted, gladly giving all my share to

---

<sup>154</sup> [Wassail](#) (Old English *wæs hæl*, literally ‘be you healthy’) refers both to the salute ‘Waes Hail’ and to the drink of wassail, a hot mulled cider traditionally drunk as an integral part of wassailing, an ancient southern English drinking ritual.

those brazen faced thieves opposite. Then round came bowls of water and there was Washing Day. His Excellency, and Malietoa beside him, rose and so did all the Company. We adjourned, but only moved a dozen yards away to enable the table to be garnered up, the whole avenue to be ruthlessly pulled down and dragged away : and turned to find chairs placed where we had but just now sat on mats, and everything now ready for the Grand Finale.

### The Dance

Now all round the village green squatted the crowd, each village by itself, and weird calls began to arise from the coconut groves to our right and left. Out from one side would step a Taupou, at times a couple, accompanied by men, and move towards us in their strange, halting, mincing, dancing step. The men aimed at savagery both in their attire and their antics, brandishing, twirling, hurling in the air those fearsome knives, yelling and whooping the while : the maidens adorned with their wondrous headpiece — not these of parrot feathers, such as Vailele's absent Taupou owns — but of human hair, fair of colour, secured from the albinos of the race, those freaks of nature, of whom there have never been many, but whose golden locks seem greatly treasured. In their hands they carried saw-like knives with a hook at the extremity, once used to sever the head of the enemy and bear it, suspended to that horrid hook, triumphantly to camp.

Now from another quarter more Taupous would appear and dance up to the Governor and his Company, bow and dance away. There were clowns too : one at least had tried to blacken himself, but 'twas a hopeless failure as what with plenteous coconut oil and his untiring zeal, the perspiration had worn large streaks away — and still mostly chocolate was he. Now half a dozen Taupous (my Kava maids amongst them) took the floor with their men, and danced till some at least could dance no more. Each was a unit. I should doubt if any muscle in their body had rest in that mad time. They were in movement all over, and it was difficult to watch and fully appreciate so many moving figures at one time. The women were silent, but their men burst out into weird, unholy yells and calls. These were, though, but the preliminary canters. The more serious business was to come.

### Musical Drill

There was a sound of chanting male voices, and through a grove of coconut palms one could see a band of men, four abreast, clothed as to their loin cloth alike in deepish blue, their necks festooned with garlands, their skin shining with abundance of oil. They stepped in perfect time and slow : and marched to stop directly in front of us where lines of mats had now been strewn on which they proceeded to sit cross-legged. They looked a brave company of stalwarts, and to add to their general effect had black lines like moustache ends upon their cheeks. These turned up, fiercely, Kaiserlike, added much to their manly bearing. But the incongruous must ever be; for now a woman passed along the ranks with a whisky bottle of oil with which she rubbed the chests and backs of these already glistening heroes. Behind them, in a large group were women and children, these all of one village who came to make play for His Excellency. And wonderful play they made. One man led off in a falsetto, then the whole company broke in, and as they sang they moved their hands, their arms, their bodies. Every conceivable movement, thus seated, did they make, all in perfect time; upwards, outwards, this way, that; one arm, now both arms; slapped their knees, their thighs; it was the perfection of seated drill. They were not many but were one. Now these brown figures half rose,

kneeling on one knee, now they stood upright, and swayed together to the right, to the left; then half turning passed in and out between each other, the singing never ceasing both by themselves and their company behind.

### **A Wild Finale**

But they had to give place to others; and these, women in the main. Led by a Taupou, tall and best looking of the lot seen that day, they marched forward to their places; and again the background was a miscellaneous one. They took their seats and forthwith broke into a chant. They had movements of their own : they seemed at one time to be at sewing, then at cooking, cleaning up and washing clothes. Thus were they picturing to His Honor their daily toil. They too rose as they performed, and right gracefully they did it, despite their lack of flowing skirts, which prudishness would have demanded. All the time, moving about amongst them was a woman well advanced in years who seemed to be the clown of that company. She was but sparsely clad at the best of times but in her ever increasing excitement things became worse. She must have been a wondrous dancer in her youth for there was none I saw that day that could surpass her, in her sinuous movements. Yet it seemed incongruous, such fast play benefits youth not old age. Yet example is infectious and when at last she rushed in front and started dancing pure and simple, the other women rose and joined her; and once more, but never quite so madly, hands, arms, and feet worked overtime. It was a whirl of movement, their very bodies squirming like snakes on end. Their blood was up now with a vengeance.

'Twas then that the stately, graceful lady in her long, plain smock of faintest blue, felt too the Call of the Blood and stepped out to join her people — but with her it was all grace, and her very presence seemed to sooth : and fitly, as she ceased to dance as end came to the performance.

All the while one heard, even amid the ceaseless chant, the rattle of the Cinema man. He had made a haul indeed. If he wanted action, he certainly had got it. But he had not been content at that. He must needs secure the portraits of the Principals. To him, bravely stood up His Excellency and Malietoa : but when it came to Malietoa and his Queen, there was some pretty byplay. She was shy as any unsophisticated schoolgirl. Malietoa called her to him but she hung back, half turned to go away : again he called her, and his tall Consort came this time at his call, and half hid her handsome face upon his shoulder, ere she summoned up courage, and quietly faced the camera.

Now broke forth once again God Save the King, the company rose, His Excellency bade all good-day; and I, with many another on foot, wended my way back to Apia.

### **The Overseas Club**

The British heart beats true and strong amongst those who gravitate hither from every part of the Empire. They are far from insular. One can see by the papers in the hands of many, that they would keep abreast of the times. The Apia branch of the Overseas Club is a live concern; and to me, a stranger, its doors were promptly opened. The Club has its social side well developed : weekly there are Card evenings, dances, lectures and other entertainments.

It fell to me to return much kindness by some Travel Talks, but what I gave was more than repaid by what I learned. Amongst much, this of August 1914, that eventful month for Samoa and the Empire.

To hear from one, a long time resident, whose birthplace was London, how the Germans acted in Apia between the news received over their Wireless of the breaking out of the Great War and the arrival of the New Zealand Force, near a month later, was both interesting and instructive. Here were folk bottled up upon a German island. How fared they? During all the years of German occupation the utmost harmony had prevailed. Old intrigues and animosities had been forgotten. And throughout that month of suspense there was, at least, no outward sight of hard feeling, nor a single untoward incident. So much indeed did the British feel the kindness shown them, that before ever the General of the invading Force set foot on shore, a Statement signed by over one hundred of our people, expressing their warm appreciation of that fact, was taken aboard and laid before him. It was known that Von Spee's <sup>155</sup> ships, the Gneissenu and the Scharnhorst, were off the China Coast. Indeed a visit from them had for some time been expected and a considerable sum had been got together, to entertain the crews, but as the days passed and they did not appear, the British had to suppose that the visit was off. Certainly any entertainment was.

The Germans had their Wireless, but little or nothing was given out : nothing anyway that was likely to give our folk encouragement. But the case was given away when the Germans began to express the most fervent hope that it would be the British and not the French who would appear in the harbour. Money and documents they had sent on the last one for American Samoa. It was positive relief to them therefore when the little British Armada appeared; and the surrender was made. The Germans made light of it, openly expressing the opinion that their Country could not possibly be beaten, and that Samoa would be theirs again in a very short time. Therefore the only warlike act was in inflicting a trifling damage to the wireless, which was easily repaired.

And this same thought doubtless saved Apia from bombardment a few weeks later. The New Zealand ships had gone : the Force had settled down on shore, when one morning Von Spree and his ships sailed into the harbour. The Beach folk made haste for the Bush and the hills, the soldiers prepared for a fight and an attempt at landing. But after a stay of a few hours, without a boat being lowered or a shot fired, the ships turned and headed out to sea. They were not going to bombard and to destroy what would be theirs again so soon. Thus Apia was spared : but not so poor Tahiti, whither Von Spee went, and knocked the French Settlement about most ruthlessly, sinking a gunboat — and a steamer besides — in Papeete Harbour.

### Tit-for-Tat <sup>156</sup>

But not alone to mine own countrymen did I open up new lands. Once a week, at the close of lessons, the children of the two Government Schools gathered together to learn of me of that great outside world which to them is so much a mystery. It was their own wish, at their instigation : how then could I find heart to say them nay. And if they enjoyed those Travel Talks — as by their attendance, their eagerness, their smiles and laughter they seem indeed to have — I too enjoyed those hours. Who could find it difficult to talk with such a gathering before him and amid such surroundings. I liked best when it was not within, but under the open sky, palms and coconuts around, the dark skinned and the white skinned seated upon the sward, teachers and strangers too.

---

<sup>155</sup> [Maximilian von Spee \(1861–1914\)](#)

<sup>156</sup> Regarding WWB's Travel Talks in this story and the concert in the next, see also Tale #30, *Of Malifa (2)*, in Part IV, *Tales of a Roaming Grandfather*.

But the agreement was not all one sided. If he talked to them, they must sing for him : and so at the conclusion of a wander off into some strange land, the leading boy would rise and in his brave, quaint English thank me courteously on behalf of all, then came my reward. Those were happy hours for all of us I trow.

### Love's Offering

But the time of Parting came; for a fresh band of Teachers was arriving from New Zealand and I could then be freed; and in their dear way the children said, that as I so loved to hear them sing, they would give me a Concert all for myself. Thus would they part from me. A Concert for one! Whoever heard of such a thing. Nevertheless it was so, and that one can never be forgotten. Every possible scholar was there, and so too, for this occasion was the whole Staff, the Director of Samoan Education likewise. Ifi Ifi (white) and Malifa (native) were one school in that hour.

The Native Children opened the program with a samoan chorus "How can I bear to leave thee" : then came from the White and Half Caste English Part Songs — Little Biy Blue — Oft in the Stilly Night — Son of the Sea — with Rule Britannia as a sort of centre peice. Then came an Interlude, and there stpped forward Fatuesi who in easy style and graceful words asked me as a token of Ifi Ifi's love to accept from them a Samoan Paddle. He was forthwith followed by native girls and lads who in Malifa's name made further gifts. Five girls one after the other flung over my neck necklaces of shells and seeds — their treasured Ulas — the boys laid in my hand tortoise shell rings, embossed in silver, embossed in gold, and a sturdy fellow made his offering of a fan. And the Teachers one and all unselfishly acclaimed the gifts.

The Head Master afterwards informed me that he had had to restrict those native gifts to one from each Standard or I had been swamped beneath the load they craved to give. Then came two more Samoan Choruses : the first "Over the dark blue sea, we speed you"; the last "Good-bye dear Friend, we never will forget you" — and with "God Save the King" that wondrous concert ended.

## BENEATH TROPIC SKIES (III)

### Savaii's Tour

By the invitation of His Excellency I formed one of a party of five when he made his first official Tour of the whole island of Savaii which lies some thirty miles west of Apia on Upolu. His party consisted of The Commissioner of Native Affairs, the New Resident Commissioner of Savaii, the Governor's Aide de camp, a host in himself, "A High Chief of Niue" as I was dubbed at the first drinking of Kava and which remained with me to the end — and two native interpreters, Asiata and Iiga — all important these for the mission in view. Servants and police completed the party.

### The Itinerary

Starting from Fusi,<sup>157</sup> the intention of the Governor was to circle the entire Island, calling a meeting of the Chiefs in each district and important centre. Ten days was allotted as the time, boats and on foot the means of travel. Of hotels there is not one on Savaii. To have made that journey under such favourable conditions is to know Savaii and its people as is not given to the ordinary traveller.

### The Start

It was an early start in a gaily beflagged motor launch of thirty tons burthen, with the Samoan Standard flying from the stern, and bearing the euphonious name of Fealofani. Friends were present to see the party off — the natives in clusters — the lines were cast off — the little ship proudly ploughed the waves — passed the inner (fringing) reef and had just reached the outer (barrier) when something crashed. The engine stopped, a native plunged over the stern and could be seen like a great fish below the heaving swell, twisting and twirling as he made his study. His verdict — broken shaft. Then distress whistles were sent forth, sweeps were got hastily out, and the dingy too, to keep her off the reef : and it was a close shave : two launches were seen rushing to the rescue, lines were taken aboard, and the ship which had but half an hour before set out "when every heart beat high" came back to the wharf ignominiously, a broken and a useless thing. But the Company? Who said that we weren't cheerful? We took it as merely the Epilogue before the real Play began. Neither were we superstitious and hung back at a second try. Had it been even a Friday we would have made another start. Therefore all we thought of was our breakfast, and each one hastened to his domicile once again, to refresh the inner man. Meanwhile hands got busy, superintended by a big man in pyjamas and a helmet whose haste out of bed, to the rescue, caused his weird appearance, and another boat was beflagged, food transferred, bags and deck chairs : and the Siliafai waited, straining at her cables to be off. Now the company reassembled and goodbyes were said again and out we headed, gained the mouth and turned west to skirt along the outside of the reef in a glasslike but heaving sea, Upolu's mountains all along the way upon our left.

---

<sup>157</sup> Fusi is a village on the east coast of [Savai'i](#), up the coast from [Salelelolgo](#), what is now the main town.

## The Approach to Fusi

A fast run and we reached the Strait which runs between the islands of Upolu and Savaii with the two islands of Apolima and Manono guarding the pass — the one rising like a volcano crater with one side blown out, heavily timbered, the Place of Refuge in old days of the hunted and distressed — the other a larger and a lower land. Those eight miles were not placid, the launch acting as one who has drunk much Kava, clear of head but his legs all gone. It was a rollicking time but there were no casualties.

We were making for the Village of Fusi in the district of Faasaleleaga and at length passed into the quiet waters within the reef. It was a tortuous passage even then. A Fautasi was seen coming out to meet us : the long boat rowed by twenty natives using “sweeps” not paddles, its stern with awning over, and four short masts bedecked on summit with enormous croton bouquets.

The launch could go no further for lack of depth : so we transshipped and with their quick stroke, changed frequently to half a dozen long ones by the rhythm of their continuous song, drew nigh the shore but not clear to it. There was only one way left, on the shoulders of those huskies. His Excellency was an easy carriage; others not so. He of “Native Affairs” came hopelessly to grief. We heavy weights took warning. No “pig a back” for us : armchairs were required and we reached the shore of Fusi Village in perfect safety.

And it rained. Oh! how it rained. We saw it from afar as we drew nigh. It was waiting to welcome us and kept up steadily and relentlessly all day. No wind. As for the natives they are throughout all South Sea Islands as indifferent to rain as the ducks. The marvel is that they are not all dead long ago with rheumatism. They are not content with walking in the downpour but sit down in it and on it, not for a passing moment but by the hour.

As we stepped up the bank there stood awaiting us a double row of Chiefs — and past them Sisters with many young women (for the Roman Catholics are strong in that vicinity) — between whose ranks we passed, shaking hands with each and wishing mutual “Alofa”. Thus we were led to the Meeting House where a preliminary welcome was prepared. Seated on chairs, the Orator of the Day, after a short word of welcome to “His Excellency” whose title in Samoan means the poetic one of “The Overshadowing Presence”, called out each Visitor’s name; and each of us received from the Village Virgin by hand of man the bowl to drink from. We then adjourned to the Head Chief’s Fale, kindly put at our disposal. A large building in the best Samoan style with its inside roof of the usual beautiful workmanship. The frame on which the thatch is laid is stout and strong though it appears to be so fragile; its curved beams at each end made of the breadfruit tree, four inches only through, in separate portions none more than two yards in length, joined together to make one long beam by a mortice which only the closest scrutiny can find. Not a nail in the whole building. Everything is held by sinnet, the husk of coconut. Between the main beams of the roof are planks four inches across made of the coconut tree, which can only be an inch and a half in depth as the centre of that tree is pulp. These planks also are morticed together and the joint invisible. Then running vertically, resting upon these beams and planks, are laths of the breadfruit tree set two to three inches apart. The one tool is the knife and seeing that every curve and every lath is cut out of the square, the whole thing is a marvel of handicraft. At one end of our official Residence a portion was cut off by a huge piece of tapa cloth, the size of a goodly sized carpet, dyed in squares, half dark brown, the other half the normal yellow, the stain secured from a particular tree prevalent throughout the island. This end contained a real “four poster” bedstead. A large table was laid for lunch with white man’s accompaniments of knives, forks and spoons, napkins alone absent. Partaking of a quick lunch we went back for the further program.

## The Taalolo

First came the Taalolo or Presentation of gifts. Village after village of this District came forward in turn, some having walked full six miles to be present, and each came forward chanting their weird songs, led by dancing Taupous and their Manaia (Young Chiefs) in fancy costumes. Roast pig, whole of course, and live chickens were placed before the Governor, taro too and coconut; the while twenty Chiefs took up their place upon the sward opposite to us, some distance off, who sitting cross legged on the ground, each under his own umbrella, looked for all the world like human toad stools. Then an aged one arose and leaning on his staff — without which such orator never speaks outside the fales — began a long oration, offering these presents; the while some men were busy dividing them for the use of the many present and their followers.

When a tied chicken was laid at the Governor's feet and another at mine I wondered whether courtesy would permit me to escape the burden of carrying it alive around to all the villages ahead, but my difficulty was solved by a thief who boldly seized it from under my very eyes and bore it off. Never was a thief more welcome. There was still a possibility that the pigs might be divided amongst us whites, and I dreaded the possibility of having to carry half a pig in my valise or give offence. Seeing that ten thousand flies were busy at the carcasses, pork did not then at all appeal to me. But they did not come our way. They were carved up in the usual dexterous fashion and likewise disappeared. But one handsome present was made and not reclaimed — a piece of tapa cloth which a blushing Taupou (they blush perhaps as we do, though one cannot tell, but only detect it by their eyes) laid at the Governor's feet. It was worth having. Then four and twenty Mission Girls approached full soberly to take their places upon the grass before us and led by a native Nun made song and motions with their hands and arms till one began to wonder if there were any more conceivable. It was very pretty and graceful and as refined as was to be expected where a Sister ruled.

## In the Speaking House

Next came the Fono or Speeches proper, in the Speaking House. This the more modern way. The ancient was : that of the Toadstools we saw and had already heard (but without the umbrellas). A further word of welcome was now given and roots of Kava presented — a root to each with its two-foot stem laid on the ground pointing towards you — but which we never touched : then another round of Kava. One is expected to say as you raise the shell to your lips a Samoan "Bless You". It is not an easy word to catch the sound of, and when my turn came I unfortunately put the accent on the wrong syllable and loudly proclaimed "May you have abundant sorrow!" But then much may be forgiven to a High Chief of Niue, and as one of the Chiefs kindly excused the fault to the Company, it came appropriately enough from one who looks upon "Savage Island" as his official residence. Here with us sat Chiefs in lava lava only as well as those who were fully covered, seemingly clothing at Court is optional. It certainly adds picturesqueness to the scene. The Governor having addressed the Meeting, it was now the turn of the Assembly. Silence reigned : for Samoans take their time at everything. Then one well on years began to speak. He had finished his first sentence and the Interpreter was beginning to translate it into our tongue when a far younger man broke in. After a wrangle for some minutes, the Interpreter informed us that the younger man was asking the older by what authority did he speak for all. And he beat him out. This younger man was one of the unclothed and when he began, he put such fire in his words, and his eyes flashed so, that I for one felt sorry that the older had not won, for war seemed clear in that fast pouring torrent.

But appearances are often very deceptive, for when at last he stopped, we were informed by the Interpreter that the Orator in speaking for all desired to express their warm thanks for the Governor's kind words. Balaam<sup>158</sup> blessed instead of cursed. So everything was lovely, and though there was no Band to play, everybody wished everybody the best of good health and we parted — but only to meet again at once at the Taumafataga, or Feast, which was laid inside a Fale close by, instead of outside because of the everlasting rain : here we sat cross legged for but a short space and took a formal bite for sake of Courtesy, then left the Chiefs who were very busy and repaired to our own shelter where many waited upon us and fed us royally.

## Nighttime

Then talk ensued till 'twas time for turning in and all, save I, sought each their couch. The Governor of course had the four poster, the rest lay on mats upon the pebbly floor in the large dining room. And as I wrote, the lights went out one by one in the fales, the rain itself got tired at last and rested, and a bright full moon came out and threw its silvery light o'er everything. A great silence fell upon the Village, but now and again a child would wail and one could hear the muffled thunder of the waves upon the reef far off. At last I too sought rest. Men may say what they will about the mats and the spring mattress of the pebbles but I affirm there to be no difference between pebbles and boards. That couch was hard, and as I lay on into the early hours, I was afforded if not comfort, at least company, for one of my companions oft held rapid converse with ghosts who evidently wanted information, and another chanted (American wise) and dogs ambled in through the open sides and had to be "shood" or "shoed". Yes, pebbles are hard, and long ere break of day I stepped out and wandered about in the silent Village under the light of the moon. It is a very pretty site, made more so by the rich green of the large open spaces about it, and the lone palms, and the Pua trees, and the Mosooi (from which the natives gather a scent with which they perfume their coconut oil) and the fragrant Frangipani. So passed the first day and night for me upon Savaii and I saw a second at its birth. Early, ere parting with Fusi came, Asiata was the Principal in a charming little scene. This was his first visit since the death of a local chief whose friend he was. He had brought his gift, a handsome mat. It was not for him to place it over the grave but for mutual friend. Asiata sat upon the grass nearby — a woman with bowed head sat nigh the foot — the friend spread the mat, then he too squatted. The three remained some time motionless, then the woman rose and removed the mat, and they passed into the fale adjoining the grave where formal presentation of the mat was made. Again they adjourned; to the Speaking House this time, where Kava was drunk in solemn fashion and the Ceremony of Remembrance came to a close.

## On the Way to Fagamalo

Again it rained, but early we set out by way of the sea to Fagamalo, headquarters for the Administration of Savaii. The Siliafai had gone back, but in its place was a staunch Government boat, of lesser tonnage, with all the earmarks of a pleasure launch. Sending ahead a motor scow with the luggage, to make its way inside the reef to a break therein, miles on, thence to our trysting place by way of open sea, we headed out the way we had come in and met with squalls and again a choppy

---

<sup>158</sup> [Balaam](#) is a diviner in the Torah, his story occurring towards the end of the Book of Numbers. He is reviled as a "wicked man".

sea. Things grew not better but steadily worse and we rolled and plunged as we ploughed ahead, a safe distance (unless an engine broke down) from that foaming reef; Savaii's mountains hid from view by heavy rain clouds. Yet could be seen where the lava from its never quiescent volcano met the sea, forming a solid wall, parts so ancient that a rough covering of sod and wild grass now mantles it, other more recent and forbidding. Our scow had come to grief in the open sea, her engine dead and was wildly tossing on the waves, beating towards that roaring coast : to the rescue we went, and connecting with a hawser had a tow to handle now as well as ourselves, which made progress slow. Twice the stout hawser parted and we circled round in that wild sea to pick the distressed craft up again. That thirty miles took all morning to negotiate and none were sorry when drenched to the skin we made for the narrow break in the reef which led to Fagamalo. But just here, again the hawser parted, and 'twas risking too much to turn, so the scow had to set her little sail and take a chance. We saw her gamely try but she couldn't make the passage and landed on the reef. By this time we were well inside and jumping into the big fautasis sent out to bring us ashore, the launch went off to the rescue and happily made it ere a wreck occurred. Here no fale for a residence but the Resident's ample and well appointed abode. A quick change, a hasty lunch and the proceedings began. The same program, The Welcome and the Kava in the Speaking House, where forty chiefs had gathered, and white clothed and helmeted police stood guard around to keep off inquisitive young urchins, who here were very numerous and quite as much up to every devilment as their white confrères. The Orator of the Day was both eloquent and possessed a poetic mind. His language was flowery and he knew well his Holy Book. The hymn "Come ye Faithful raise the strain of triumphant gladness" was deftly turned to the present occasion whilst St. Paul's travels around, and his meeting with his various Officials, was impressed as a picture of the present journeying. After the Governor's Reply came the Presents, here led off by a group of native Pastors and their wives, approaching at the usual solemn gait, chanting as they came. Their spokesman was a big fellow immaculate in white, and he spoke seriously and with an easy grace. Then came more frivolous bands led by wild dancers.

The Taro-tasi <sup>159</sup> was here seen in use : as a special mark of esteem the gifts were brought in baskets of cocoanut or hidden in leaves. Others to show the special respect they felt, wore fine mats over their lavalavas as they approached with their gifts. Our own orator's turn then came as it is his duty to "proclaim" aloud each gift. Woe to him who has but little in his bag for the eagle eye of our stentorian orator discovers the shortage and the giver is the butt of his fellows for weeks. There followed a "Lance Dance" where forty men led by a gorgeously apparelled Taupou carried long wands with floating white streamers at the point and made perfect movement with them as they sang and stepped. The second day was over and we were glad to rest.

## Safotu

With Fagamalo as Headquarters we made for Safotu some four miles away and were taken thither in Taavales or Gigs, <sup>160</sup> along a road that badly needs attention, and across some streams where we took chances on never getting out. Here at the end of our drive lay a large village on a volcanic gravel plain : a broad avenue running through it bordered on each side by large breadfruit trees. From the entrance to the Village right up to the Speaking House cocoanut leaves had been placed upright in the ground, ten yards apart, the avenue effect of which was very pleasing. Up to noon it poured in torrents, then cleared happily for the outdoor program. The three Kava maids were wondrously

---

<sup>159</sup> Literally means *one taro*, but is applied to a small gift of any sort, a root of taro being a common present.

<sup>160</sup> A [gig](#) is a light, two-wheeled sprung cart pulled by one horse.

clothed in cerise, one went so far as to have black lace trimmings, another had epaulettes on her shoulders and many glistening buttons. All had elaborate combs in their abundant hair and looked prepared for a full day's work. And they had it for not only did they prepare the drink, but sat down to lunch with us at white man's table and then danced long and vigorously with their village brethren. They were very friendly Taupous, each a perfect hostess and very gracious. When at lunch it came to an offer of sharing a chair with one — whose name I think I caught from her Sister Virgin as Ophelia — I found that her bulk left little for me, but the honor was too great to refuse her gracious request. And the shock of the situation was increased when after lunch she "borrowed" a cigarette from the Aide de Camp and lit it from my pipe. The Speaker of the Day was in good shape but evidently a plain business man, who said how glad they were to set eyes on a Governor, and then got down to Safotu's wants. It was reserved to the Pastors to give a poetic touch, who came with seventeen eggs, one pig (dead), four fowls (very much alive) and taro. Said their leader, "As a spring of pure fresh water to a thirsty soul, so is Your Excellency's visit to us this day." The Governor's reply was of a kind to send them home happy and encouraged. Then off the Taupous led us to lunch and there were enough of them to give each of us a partner. The Governor had an unfair advantage as being at the head of the table he had one dusky maiden on each hand. The table was loaded with good things and even (I speak the truth) with real Plum Pudding and Cake.

There were ordinary maids standing at the four corners who did naught but fan us, yet were not averse to smoking at the same time. My special Taupou had a fine appetite — she ate my share of the good things as well as her own — and they all deserved praise for their handling of knife and fork, albeit they could be noted watching the white men's handling out of the corner of one eye. The time came however for the Presentation of gifts and our hostesses went off to dress, or undress for the Dance to come. An unprecedented number of pigs had evidently met their deaths for us. The Presenter of the gifts did not get started without a wrangle, but I found that it is often part of the Play. Here were four Villages come together, each one had its Speaker. Those four stood on their pins in front of their own bunch, each leaning on his long Speaking Staff which ever reaches to his chin. Give me a Speaking Staff and I can tell you the owner's height to an inch. The matter of who was to speak was then wrangled out. Here two old men and two middle aged debated the matter. Three got rid of one old one, then one of the middle aged was squelched. I laid my money on the oldest of the lot, he looked like Moses and had a determined jowl and eye. It was long in coming but he talked the other fellow down and won. What he said after all we never understood but doubtless it was very charming.

The Governor throughout his journey gave Presents himself — but did not (like the Samoans) take them back. We dragged around with us kegs of beef and huge tins of biscuits : and at each place gave out two of each kind. Here no sooner did they appear on the scene than husky young men bore down upon them, seized and carried them off. It looked as if they feared that the Governor might change his mind. Seventy-two men then came down the broad main way, four abreast and forming a solid phalanx before us as we sat on chairs in the fale, gave us a wonderfully clever "Axe and Knife Drill" led by two antic loving leaders who gave their commands in broken English and drilled their men like Sergeants. This Dance was followed by yet other wherein two of our hostesses appeared. There was a whirl of seated motion for a while, then all rose and for a time it was somewhat lively. A choir followed in which six and thirty men appeared, their leader a clown who conducted standing behind not in front of his singers, but he had them perfectly trained and they chanted delightfully.

Then goodbyes were said and we made our way back to Fagamalo where in the evening a real Samoan Play was promised us. It was given in honor of His Excellency's visit, but with an ulterior object too, the raising of funds for yet another Church.

## Royalty and a Bad Mix Up <sup>161</sup>

The entertainment duly came off in a Copra Shed kindly loaned for the occasion. There was a policeman at the door to see that no one got in free, and I saw one youngster dropping his one and only garment — a lavalava — in the hope that he would be charged less. Proceedings opened with an address read with extreme confidence by a Taupou supported by a phalanx of women and girls, who at its close broke out into a fine chorus. Band selections by guitars, ukeleles, violin and trumpet were played at the intervals; whilst an old lady, nearly square, very décolleté, furnished with a perpetual smile and a necklace of ivory toothpicks, introduced each portion. This was absolutely necessary in the second item on the programme which was the “hit” of the evening. It was really a misnomer to call the gathering a Concert for it was a Play which began well enough, developed into a roaring Farce despite the efforts of the players to make it serious, and if its conclusion had been reached we should have been there all night, but happily everybody in the Play got lost and ’twas therefore thought wisest by the Square Lady to draw the curtain and leave the conclusion to each one’s imagination. The plot was a Patriotic one, for it centered round King George, Queen Mary and a Rag Doll and though old Square Face forgot to announce the title, I think I have hit it fair and square in “Royalty and a Bad Mix-Up”. There was a beautiful (in the dim light) Princess Mary who, seeking her Lover, travelled from Samoa to Rome “across the mountains” and there was just going to be a terrible fight when the Square Lady cried out “Hold hard, this is getting too thick — we’ll change the subject” so we learned no more. The Play, thus coming to grief we saw through the curtain, shadows flitting, and there was hurrying and scurrying and enlarging of borders as side dressing rooms came down with a crash — then the curtain rose for a Siva (Dance) and every heart rejoiced. Four and twenty maidens sat upon that floor, their breasts and arms, their legs, their feet, glistening with oil (they must have upset the oil can in their hurry) and off they went with their chant and their body movements till their blood was up — and so were they upon their feet : and just as things got really lively — that abominable old Square Face dropped the Curtain, the Band broke out “God Save the King”, everyone rose, and that Concert over (at long last) we reeled home to sleep and to Forgetfulness.

## Things Sabbatarian

Sabbatarianism is no sinecure on Savaii : nothing doing for the natives but Church and sleep. We were informed when seeking some necessary repairs that “Samoan ladies do not work on Sundays” so had to be content. This dictum was issued by His Excellency’s Factotum, a really remarkable valet, pure Samoan, highly born, much travelled, speaking English and German, who can steer a ship, drive an auto, cook and run a house from garret to cellar, serve at table as to the manner born, save that his favorite expression when asked for something thereon or absent is a breezy “Right Ho!”, a truly valuable man, worth his weight in gold. He could supply anything and everything at command; seemed to have supplies up his sleeve, even fresh milk when search as we might we neither saw nor heard of a cow.

There is a Chief’s Curfew Law in Fagamalo which they see to is obeyed even though it grossly affects the liberty of the Subject and the real legality of the measure is far from sure. Nine p.m. is the last moment anyone may be outside their fale; and delightful strolls are too often brought to an abrupt conclusion to suit the rising generation.

---

<sup>161</sup> See also Tale #53, *A Native Play*, in Part IV, *Tales of a Roaming Grandfather*.

Things Sabbatarian were brightened however by a Love Episode. It was announced that one of the Body Guard had collapsed before a maiden's charms — a case of Love at first sight — and desired to add a bride to the Party. But hearts were hard, and the lovers had to be parted, the guardian of the Governor's person had still his one duty to perform, the weeping maid was ordered deported to Apia where upon the Malanga and a marriage should be celebrated, ourselves having a cordial invitation.

So Sunday was our Rest Day and yet not without its special interest. That day H.M.S. Veronica steamed in, ready to assist us on our way. There was Church in the morning conducted by native pastor with some fine hymn singing and in the afternoon a walk was taken to see a miracle of Nature and hear the story from Iiga (Eenga)'s lips.

### **The Taupou's Grave** <sup>162</sup>

She was the pride of the village of Saleaula which lies along this northern coast of the Island of Savaii. Was she not the High Chief's daughter : and herself most beautiful? Gentle and kind was she and pure of heart. When, arrayed in all her finery, she stepped forth from her falé to lead in the social round of feast and gaiety, then all the men acclaimed her, and the womenfolk were of one mind that she did great honor to her sex. But sickness came, and she drew nigh to death : and all made earnest prayer, day in, day out, that she might live : yet it was not to be. Then was there great grief in that village, for their Taupou lay dead. The young men mourned for her whom they had loved to serve; her maids of honor refused to be comforted.

The Grave was dug, not close to, but within sight of the House of God, for the High Chief would fain have his daughter lie against his falé, that he and his might tend it as long as life should last. Great was the sorrow that day in Saleaula as the Village Virgin was laid in her last Resting Place — and the earth was put back that hid from sight that form which all loved so well. In due time they raised a tomb above it — the flat slab of coral rock all plastered over with lime, then upon that a sarcophagus as if Tulua lay there robed in her Winding Sheet. That was in 1895 and she slept in peace as the years went on.

Ten times the Seasons had come round, and all was peace in Saleaula : yet all unknown a great and fearsome thing was close impending. Nature was at war with herself behind the Village, up in the mountains and valleys of their island of Savaii. No surface war when fierce winds blow, and the mighty sea rolls shoreward in tidal wave. Below and hidden from sight of man went on that titanic struggle. How long it had been fighting against itself no man could tell : but at last the muffled roar thereof reached the ears of the Village in tremblings and rumblings which made all hearts quail. They greatly feared, yet went their daily round. Then came the blow, so awful, so appalling which the Villagers still speak of with bated breath. Two miles back lay a deep ravine which cut off the mountains beyond from Saleaula : a broad ravine too : a labour to get down and up. Suddenly as that memorable afternoon wore on there was an unearthly noise, indescribable (for Nature's Voice is not as Man's though men try to give it name) and the Ravine came up, mounting to the sky. It was no longer a Ravine but a towering hill and from its summit there poured forth flames and smoke, and over its awesome lip poured rivers of molten lava, seawards : and Saleaula lay directly in its way. Slowly it came, not faster than half a mile a day but it was relentless.

---

<sup>162</sup> See also Tale #38, *The Taupou's Grave*, in Part IV, *Tales of a Roaming Grandfather*.

Ample was the time given to get human life away; but their Homes? and which way would it take? Men drew near and though the fierce heat hurt, they stood and — fascinated — watched. Eight miles of land it spread across and took down all that was in its path : the cocoanut trees fell one by one, sizzled in the flood, then lay still till utterly consumed; streams hissed and fought till they could fight no more, then they too died. Saleaula was now in real danger : slowly the living, creeping thing came on and gripped the back of it, the falés fell one by one, toppling over as if loath to surrender — graves so precious were wiped out, the taro patches disappeared. Saleaula was doomed.

But no! the lava turned, and the western half was safe. But the eastern! where Tulua lay, and the Church raised its roof : and the thickest settlement! there was no hope for them. The molten flood came slowly on towards the Taupou's Grave : there it lay, so peaceful, with the form in Winding Sheet above it. Men and women stood afar off and held their breath as that hallowed spot was about to be wiped out and buried six feet below.

When lo! some Hand Invisible stayed its direct course, some word seemed given forth to Nature in her madness : halt! it cried : and the flood stayed as it reached the spot — and swept around instead; then went forward wiping all out till it reached the sea. There today lies the Taupou's Grave — a Miracle of Nature — a thing inconceivable were it not true and to be seen by anyone — let him explain who can. We natives affirm that God, Almighty, knew her Purity and Gentleness, and saved her Resting Place, that men might learn what He thinks of such. And there it is, and you stand on the black, forbidding lava, and look down six feet into the circle, and there, exactly in the centre is the Grave — a clear space all around where flowers grew that day and still do grow; so peaceful when all else you see cries War. Who can account for it?

And that House of God nearby? It too was saved. The lava flowed directly towards its East end where the Table of Communion stood. Fifty yards back stood the Pastor's Falé and between home and church was a garden plot. The red hot flood brought down the falé and swallowed : but again the Command went forth "No further!" and no further did it go. But it swept around each side of the House of God, yet left a space between the walls and it : and then as if it had obeyed its Master and yet resented the command, the two waves met and forcing in the front door poured in to fill the Nave — filled up to the window-sills, yet stopped short before the Table!! Who can account for such happenings as these?

---

As one stands on that lava field of eight square miles and beholds the utter desolation, it is awe that fills the soul, but there is too a feeling of supreme content at the saving of God's Earthy House and the Taupou's lonely grave. <sup>163</sup>

## Sataua

H.M.S. Veronica lay away a mile, for depth, and to it early we made in fautasis rowed by a crew who badly needed music lessons (rare indeed in Samoa). Captain Lewin <sup>164</sup> and his officers received us with true naval cordiality : and the anchor weighed, we steamed along the coast to Sataua twenty miles away. Here again for half the distance all is desolation save that a light soil has gathered on the

---

<sup>163</sup> [Mt Matavanu](#) erupted from 1905 to 1911.

<sup>164</sup> Commander F. E. L. Lewin

lava with bushes and small trees thereon : for centuries have passed since that lava poured out from the mountain summit clearly seen five thousand feet up, against the sky line. All the land along our way slopes gently down to the water with an abrupt drop at the end; but once passed the lava, we saw villages again. As the Officers had not been on the coast before, it was not easy to distinguish where Sataua lay from well out to sea, but one of the native police knew the spot of old and taken to the Pilot-house, pointed out the way. The *Veronica* steamed slowly in and at last dropped anchor not two hundred yards from shore just outside the Fringing Reef, there being no Barrier Reef just there. Sataua is a cramped situation, blocked in by rocks and trees with no background, and the huddled village stands on a mixture of coral and lava, neither attractive to the eye nor easy on the feet.

Out came men in *fautasis* and boys in canoes. Our boat was manned by thirty-two oarsmen, and Captain Lewin joining us we made for shore. Here seventy chiefs and commoners were drawn up in single file and it took some handshaking to get through the list. Thence to the Speaking House where the Asau Band struck up the National Anthem. Their pirate-looking red turbans and broad blue sashes across their chests, with white coats and lavalavas, gave them a smart appearance. There was but one chair in the Village so despite long legs we all save the Governor had to make the best of it upon the mats. A clean shaved Orator gave the Welcome, a man who looked as if he had stepped out of one of Marryat's Stories,<sup>165</sup> all ready for a fight, for he had a savage face and was naked save his clout.<sup>166</sup> Yet his words were friendly. Again the terms were flowery, in fact his opening remarks might be interpreted as "May it please Your Overpowering Presence, everything is lovely in the Garden". Then his mind ran on the Drink he wanted badly and the Meal to follow which he evidently wanted even more. He told us that Drink was Emptiness without a good square meal and that both were ready. Then he spoke of mats and we thought that we were surely going to get some, but it was all talk, merely another poetic allusion : "This is a Day of Joy, as when people get presents of fine Mats". Next he gave forth a story with a sting in its tail. It was somewhat involved (like the Samoan Play previously) but the sting made the Governor sit up and think.

Ten boys there were, sons of one mother; and one girl, their sister. The latter went to sea in a canoe and did not return. All hope was given up but somehow or other she returned. Then did those ten rejoice. The girl's name was an anticipation : for it was Ma. Said he, "We the Villagers of Savaii are the ten boys and You, O Governor, the Girl. You were long lost to us but have at last got back (he had never been to Sataua before) and we rejoice because of all the nice things, like a true mother, you are going to give us." Whether it was that the Governor had not fully recovered the shock of having changed his sex or worry over his fast depleting store of gifts, when the Kava went round immediately after that affecting story, he dropped the bowl (but not before he had claimed the contents) : a strange thing for anyone to do. But it did not spell ill luck nor savage looks but the rather was at once aptly turned into a pleasantry. "This," said one aloud, "speaks plainly that our Governor is going to drop plenty of fat appointments in our District." Having all had a drink came Presents, amongst them chickens which Sataua's Pastors brought. Those serious men made offering of four eggs and the four hens which had laid them that very morning (we took those pastors' word for it at the time but later found it sadly lacking in truth) each hen attached by one leg to pieces of string of great length; and the antics of those four hens as they strove to get home to their henhouses as the meeting lengthened were diverting. One indeed did actually get away, string and all; there was an impromptu chicken hunt and at last one Satauan fell prone upon that hen — yet it lived and according to a tip I got from the Factotum will cackle some day at Vailima. And then it rained in torrents but after the Feast the Dance went through; one of women only, largely different from the previous ones seen, the dancers

<sup>165</sup> [Captain Frederick Marryat \(1792–1848\)](#) was an English Royal Navy officer, novelist, and a contemporary and acquaintance of [Charles Dickens](#), noted today as an early pioneer of the sea story.

<sup>166</sup> [Clout](#), in this context: a piece of cloth or leather, rag.

robed in girdles of green leaves and crowns of the same, who came with lances in their hands singing loudly “Welcome, Welcome,” and went thro’ their performance to the accompaniment of bamboo tom-toms, lead by a huge female who ought to have known better seeing her mighty rolls of adipose tissue (which she made no attempt to hide) and who by reason of her violent contortions and the pitiless rain was constantly wiping off the drops of rain and perspiration from her face. It may have been “The Old Women’s Dance” both by reason of her and that none therein were young. The girls were sitting with us in the fale upon the mats, out of the rain, smoking cigarettes until they cleared us out, whilst the only helmet they respected was the Governor’s. Conclusion was reached by the usual government largesse and the Speech of His Excellency, in which he showed by his promises of further gifts that the bowl incident was weighing on his mind. Then we sought our respective fales, the Resident Commissioner and I sharing a fine one, with each a bed on the floor the size of a four-poster with a thick mattress of banana leaves underneath the mats which was a vast improvement upon pebbles and to be noted for future use. The Warship had gone to safe anchorage along such wild, wild coast and would meet us later in the week.

### Falealupo

Sending our goods by native boat we made our way on foot to the next point, Falealupo. This was a tramp of seven miles made on a trail through the bush, high up at times and sloping down at others to the beach. The whole countryside hereabouts is of lava foundation but it must have been ages in the past when that flood spread over the land for it is now covered with rich soil, and flourishes abundantly. All along the way there was not one barren spot, there were plantations of bananas and many another fruit, with undergrowth of beautiful ferns; nutmegs <sup>167</sup> and oranges could be picked by the way : there were forests of young larch with here and there a hoary giant. The whole way was shade, though mostly on disjointed pieces of lava which made going none too easy. It was single file practically all the way, a tall policeman carried the furled Flag before the Governor who followed, then the line strung out : for besides our party there were carriers, whilst three Satauan Taupous kept us company as an act of Courtesy to their Stranger Visitors. The last half mile was a surprise, for in honor of the visit the Falealupoites had gravelled a neat path from the woods to the entrance of the village, a path on which three could walk abreast, and fringed on either side by lava boulders. This they had made that long distance with no tools save wooden crowbars and cocoanut shells for shovels. At the entrance to the Village they had erected an open roofed Rest Lodge, made of cocoanut leaves, and had adorned the sides with tapa cloth — a free gift to the Governor — there were seats too, and young cocoanuts for thirsty throats. Falealupo is a long straggling village covering a full mile : a sandy place : plenty of room. It is a rich district in food unlike Sataua. Just beyond the Lodge twenty chiefs — amongst them a tall priest with long beard and in cassock — stood in line to offer greeting; and beyond them, a line of just one hundred men stood at the Salute. The numbers given are correct throughout as I gravely announced the number as I shook hands with each man. As it was in a tongue that is dead they doubtless thought it a new way of saying “Alofa”, anyway they beamed most cordially at all times. The long line passed, all fell in behind and with the Flag Unfurled leading, we marched sedately the full length of the Village to the Speaking House. A long harangue followed from the Speaker of the Day but which could have been put in to four words, “Long life and prosperity”. Then the Kava and a white man’s lunch prepared if I mistake not by the German priest. They were a liberal lot in that Village for ere we sat down to our table they came with a sort of “bonne

---

<sup>167</sup> WWB’s typewritten text has *nutmets*, but he may be referring to *nutmeg melons*, the fruit of a variety of muskmelon vine.

bouche” thinking we might be short. It consisted of one whole roasted pig, and twenty baskets full of the produce of both land and sea. But we kept to our own bill of fare. Their Orator at the Presentation of Gifts asked for tools and dynamite with which to improve the roads; and needless to say the first the Governor in his Reply promised them, but not the dynamite save under strict Government direction. For be it known that if you would win your way to the heart of a Samoan, you have but to give him a stick of dynamite. It saves his fishing, for he blows them up and gathers boatloads at a time, whilst hundreds are left untouched.

The Entertainment following took the form of a “War Club Dance” and was very well done by a large body of men clad in ancient warrior garb and looking their part to the life. I was fortunate enough to secure one of the weapons as a gift. The Taupou of the Day was a buxom lass clad in light blue, edged with crimson. Here Iiga, our second Interpreter, received presents along with the Governor, for this was his home town and they had not seen him for a long time, gifts of food in plenty, which according to custom was at once distributed by him with a lavish hand. Only one gift was his to keep, an immense roll of tapa cloth. It will doubtless come in handy in his fale in Apia. We were now amongst the more primitive Samoans for Falealupo is at the extreme north-western point of Savaii and all the coast both here and to the south is rugged, where even small boats cannot easily make their way, and all steamers keep well out to sea for their own safety. Here there is ever a wild surf which lulls to sleep of nights despite hard beds, and kept out Artist busy at his easel. By our experience at Falealupo we came to the conclusion that the primitive Samoan had and still has a wondrous freedom of manners, children of nature pure and simple which to a stranger is oft both disconcerting and embarrassing. In Chief Iiga’s Home I wormed from him yet another tale.

### Chief Iiga’s Story <sup>168</sup>

It was in 1909 when Germans ruled the land : D<sup>r</sup> Solf <sup>169</sup> the Governor : and I lived in my home upon Savaii. We felt that as we had to pay taxes, we should have some knowledge as to where that money went, and though we had other grievances, this was the chief. We wanted and asked for a Balance Sheet and the Governor refused. We were angry. We are a proud race and our hearts were sore. Chief after Chief went over the water to Apia and came back with no kind answer : so we determined to go in force and have it out, even if it meant a fight with the Germans. We manned many large fautasis, stripped off even our lavalavas, putting leaves in place, painted and oiled ourselves, took spears and axes, and set out with shouts and songs of defiance for the seat of Government.

When off Mulinu Point at the turn into the harbour, the Governor came down to the beach and beckoned us to come ashore. We heard afterwards that we had been seen along our way and men had ridden posthaste in and told D<sup>r</sup> Solf : that his Counsellors had begged him to give us our rights : that he had hastened to the top of the Observatory to see for himself : that his heart quailed before us and he must stay our vengeance at any price, so he called us to him. He told us that we should not have come thus : that what we demanded should be given us, and that we should return with glad, not angry hearts. So we did not fight but instead went home. But we did not really know the Governor. What he did was to deceive us. He sent a letter quickly to Suva in Fiji and cabled from there for the German China Station Squadron, telling them to come quickly to Samoa. When the British mail steamer called

<sup>168</sup> See also Tale #66, *The Exile’s Return*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>169</sup> The division of the Samoan Islands as a result of the Tripartite Convention of 1899 assigned the western islands to Germany (now Samoa) and the eastern islands to the United States (now American Samoa). [Wilhelm Solf](#), at age 38, became the first Governor of German Samoa on 1 March 1900. WWB has *Self* here and elsewhere.

in, he had the mail put in the wrong bags, so that no news of the trouble should reach Sydney or Auckland. And then he waited. As soon as he had his Men of War, he sent word to us to give ourselves up, but we would not, till one of our old Missionaries talked with us and showed us that as we had failed as Heroes for our people, we should now be willing to be Martyrs for their Rights. When we saw that Light we surrendered, ten of us, all Chiefs. The Governor ordered us deported <sup>170</sup> and we were carried off to the Marianna Islands to the north which belongs to his nation.

There our hearts were sad, as the years passed, far from our homes, and nothing could be done to help us. Then the Great War came, and the Japanese one day appeared and seized those islands. Now I saw my chance. I had my Samoan-built canoe and I made up my mind that I would get away : for everybody said that Germany would surely win the War in the end and that those islands would be hers again. I knew that the nearest land for me was Guam which belonged to the Americans but it was one hundred and thirty-five miles away. So I set out alone, taking some food and water. I paddled by the guide of the sun and the stars. There was much wind and sea, but I know how to handle a canoe, and there was a strong current which happily ran my way. I thanked God for that current. Three days and three nights I spent on the sea : it was very lonely for I saw no sail, and at night I dared not sleep. When I had paddled ninety miles I was very weary and I sighted land. It was a little island <sup>171</sup> and I rested only a short time for I was afraid that only at Guam would I be safe. So again I went in my canoe and as I got near, I was at last quite exhausted and nigh death, but God saved me. If it had been only a little longer I should have died in my canoe. When I reached Guam I managed to make the shore where there is the Naval Station. The people came down to the beach and wondered when they saw me. They did not know where I came from. I was different from the Guam natives and my boat was strange to them. They helped me out of my canoe for I was near death, and gave me food, but no one understood my language though I spoke German as well as Samoan. Then the Governor <sup>172</sup> came and when he heard me speak the German he said to his people that I must be a spy and had come to them like this on purpose. But I showed him my papers which said that I had been five years in a German school at my home and that I was a good man and not bad. So as he could not read, he sent for an officer who could, and when the officer read them, the Governor was pleased and very good to me, and wondered much at my long journey. There was a German Man of War interned at Guam and the Governor saw the Captain and told him my story. The Captain said, "I knew *Iiga* very well when I was at Samoa. He is a good man." So I met him again and he too was kind to me. They put me in the Printing Office for I wanted to learn English, and as I set the type I learned very much. Then news came of the Influenza <sup>173</sup> breaking out in Samoa and that my friends were dying, and I longed to get home and see them, though I had been thinking that when the War was over I would visit America and learn of it, for those Americans were very kind to me. When they saw me sad, they said that they would send me to Honolulu to catch the mail boat for Samoa, and they paid my way. I was in the Hawaiian Islands for some months till money was sent me from Savaii to return. When I got back, I was glad to be home again, but very sad, for thousands had died and most of my dear friends, but God was good to me, and though I had been so far away and might have died in my canoe, He brought to my beloved land and here I have remained.

I thank you, O White Chief of Niue, for here listening to my story. <sup>174</sup>

<sup>174</sup> From [The Pacific Islands: an Encyclopedia](#), page 277: I'iga Pisa (1882–1965), a significant figure in Samoa prior to independence [in 1962], grew to fame as a composer of poetry and songs. Volatile and prone to enthusiasm, as a young [matai](#) [chief] in 1909 he acted as lieutenant to [Lauaki Namulau'ulu Mamoe](#), the orator chief from Safotulafai in Savai'i who challenged Germany's rule under Governor SOLF. Lauaki sent him to American Samoa to garner support, for which

## Neiafu

As no boating was possible, again we walked and added still more carriers. The journey of but five miles would have been delightful save for the rain which again set in. The road led out broad and white sanded in an endless grove of fruits. We could not see ten yards on either side for the density thereof. Here no lava seems ever to have come; the roadside marked off by “coral” rock instead. Half way we reached Tufu on the beach and the thoughtful folk had prepared a drink of Kava, wholly welcome. All the Chiefs had gone ahead to the meeting we were making for, save one who courteously awaited our arrival. Seated with his wholesome looking wife, two babes in her ample arms, he greeted us most kindly and never did we clap our hands more warmly (which is the custom) than when, his greeting finished, we saw the bowl approaching. We were here in the best of all the districts of Samoa for the making of those great bowls in which the drink is made, and this one was a beauty. By now I was quite at home with the soapy fluid — with a sting to it — and its many rites, but still held out against the touch of heathenism all else indulged in : for the Samoan ere he lifts cup to his lips first pours out a little, as a libation to the gods. Here a Petty Officer addition to our party was announced by the Orator as “The Man of War” yet had he no likeness either to a Prussian or a ship, whilst I received a new Degree attaining to the rank of “Doctor” and trembled for the consequences for there is much eye trouble and elephantiasis about and were I called upon I must needs keep up at any cost the reputation of the Governor’s party.

Now we struck the lava once again and though there was soil and a wonderful tropic scene all along the way, yet the road was all rocks and roots with tall ferns on either side and back of them a tangle. I used to have a tender spot for the huge Banyan tree with its mighty trunk and hanging limbs and far outspreading roots, but I have now lost all regard for it. Its special aim that day was to trip one up. We had to make round the shoulder of a mountain, and the climb — to say the least — was hard, but the Vi tree helped us greatly, not to grip but to consume, a kind of Cling Stone Peach and most refreshing. We could have had bananas without number once we got out of the larch forest, and a mummy apple too for this is a piece of richest land, but our one aim was to get out of the rain. Arriving at the Changing Lodge on the outskirts of Neiafu we were made right welcome by young Mrs. Tietie with one eye — her name tattooed on her arm — and soon were changed. Eight and twenty Chiefs and one Chieftainess here stood ready to greet us and then through an avenue of Palm leaves we led the way to the Speaking House which was also to be the Governor’s residence. This was really the Head Chief’s fale but he has forsaken it for a modern house close by, with verandahs on ground and upper floor, with iron roof and Union Jack a-flying. We found the Taupou ready at her bowl, garbed in a gamboge <sup>175</sup> blouse and pale green lavalava, a combination severe to the eyes. The Speaker of the Day was a man with a smashed in forehead as if by club in the Long Ago (and he was old), an attenuated face and aggressive elephantiasis in the right hand, but without a doubt he could orate. He gave the interpreter no chance, so they both talked together and the confusion of two voices made it hard to follow. His point seemed to be that this was “The Day of Light” to them — I recalled that another had already termed the Governor’s visit as “The Day of Joy”, another as “The Day of

---

he was imprisoned by Solf. When Lauaki was exiled to Saipan, I’iga Pisa went with him and settled down to learn German. Instead of returning with other exiles in 1914, Pisa made a dramatic lone canoe voyage to Guam where he worked for the American Navy, learned English and travelled to Hawai’i. Back in Samoa he served under a series of New Zealand secretaries of Native Affairs as translator and bureaucrat, becoming a particular friend of C.G.A. McKay, later Secretary of Island Affairs in Wellington. I’iga Pisa served on the Constitutional Convention of 1954, was a *faipule* [Representative] in the parliament, a member of the Board of Agriculture and recorder of Samoan histories. Last of the exiled *matai* left alive at Samoa’s independence, he dictated a history of Lauaki’s opposition movement which has been translated into English.

<sup>175</sup> [Gamboge](#) is a partially transparent deep saffron to mustard yellow pigment.

Importance” and wondered what other days were to be served up as we went our round. More Kava and off to the Feast.

Here is my own Bill of Fare and it was not the largest : two plantains (each the size of three bananas rolled into one), four Mamae bananas (pink in flesh), two cocoanuts, two fish in leaves, three huge taros (each the size of a two-quart Thermos bottle), two chickens, with enough ribs and lumps of half done pork for six. The table groaned and yet we were told that just at that moment there was a slight food shortage. The Governor was politeness itself for he ate, despite the fact that facing him was a roasted pig, not placed as usual, but stomachwise to the front with a great circling hole therein, out of which protruded stuffing of leaves, to me a gruesome and unappetizing sight, but seemingly not to him who bravely got down to business, though a white lunch awaited us close by.

The Samoans know good manners, for one, finding himself in the wrong place, did not leap the table which he could easily have done since it was the ground, but went all round the house instead. Yet at eating there is much left to be desired. A long grace was said by a Pastor : then the attack commenced. If I had survived the sight of that pig, yet did my appetite fly at what at that and every Feast I saw around me, and the same this day. I dare not dwell specifically upon the scene but I can truly say that that company was hungry and that they one and all must have the digestive powers of an ostrich as the food disappeared in chunks. Their and our lunch over came the usual gifts. Then more Speeches in the fale. I give the Leader's :

“We rejoice to see your face O Governor. O that we had tongues all over our bodies to express our joy. My single tongue fails utterly. My words are few (they weren't) but our thought are many. Good is God to have brought you safely amongst us. Be not angry O Father, take it in good part if we make one request — a little one — one only — this is our supreme desire O Overshadowing Presence — grant it to us and we shall ever bless you. We want not to share with our neighbors as we now have to, but we want all to ourselves a Beetle Inspector.”

It was but a case of pure selfishness, and this his peroration, “When O Governor you and we stand, as needs we must before the Judgement Throne of God, our prayer is that His presents may be equally divided on that Great Day amongst Your High Excellency and ourselves.” Neiafu's neighbors seemingly to have nothing. The matter was referred to Apia.

Forthwith a native, wreathed in girdle and crown of leaves, was seen outside busy making a Plate of Honor, breadfruit and cocoanut milk, which was handed round to us in plates, without a spoon (and milk all know is hard to hold, and the breadfruit dumplings like large marbles and all slippery) but for the Chiefs it was handed to them in leaves and Ye Gods! it was as a bunch of pigs in a trough, a fearsome sound, and the Speaker, the bashed in forehead man, who sat at my feet had two helpings and cried for more, but happily the bowl was empty.

In the evening we attended a Patriotic Concert in a fale. It was really a final rehearsal for the coming Celebration of the Birthday of King George, a great day now throughout Samoa. We had front seats — in fact the only chairs — the crowded audience upon the mats or outside in the dark. Dim light there was, as usual, which made things very weird. The floor, as usual, the Stage and the Company of forty were all men. But such singing! It was Samoan at its best. It was good to be there. The Conductor was a host in himself, Leader, Dancer, Clown and Speaker all in one. He glistened with oil; he was the oiliest of all. He held no baton, but a dinner bell in his hand which he grasped by the clapper and used freely when he would cry “Halt”, or they would have gone on forever. Both the music and the words of the entire program were of Neiafu's own composing. There were ten items covering many subjects in song — King George — The Prince of Wales — The Great War — The Missionaries — The Influenza — I tried but failed to get the full program, they were too excited. As

is their custom they sang sitting upon the mats, but here formed themselves into double rows like a choir, that Ever Restless One moving up and down the aisle thus formed. Time was kept by a man who made a sort of kettle drum noise upon the mats with two sticks, whilst the whole forty struck the mats with one hand in perfect keeping therewith. The basses were particularly rich and sonorous. There was plenty of action apart from the clown, and the whole thing was a finished performance. Outside Samoa such a concert would astonish — here it is taken as a matter of course.

That same Influenza caused a fearful slaughter on Savaii as we saw all along our way, by the graveyards. Every village also has its mausoleum, sometimes two of them, where the bones of the Great do lie. First the Chiefs are laid in Mother Earth. Later they are disinterred, the bones are gathered, and find final rest in the high raised tombs.

### **Faiaai**

For the walk to Faiaai, a distance of twelve miles, the day was perfect, and we headed out — a long procession — into the forest, along a broad grass-covered but muddy way — some twenty feet wide — made by the natives in a fashion that redounds vastly to their credit. The grass comes from the light traffic, heavier will doubtless come : the mud from lack of drainage.

A few miles and we were at Falelima (Five Houses) which has far outstretched its name. Here the Headman stood by the roadside to greet us passing : close by a very modern grave with granite headstone on which appeared in gilt the curious name of Loolooloo Pea whoever he or she might be. And there was near, the Village Bell, a twelve foot length of massive tree trunk, hollowed out like a horse trough without ends, which struck with a wooden mallet, gives forth a muffled, mournful but all penetrating sound. It ever has its own shed and roof.

Not once after Falelima did we actually touch the beach. All along we kept the Cliffs for this is a wild yet lovely coast, giant black rocks running out from shore. There is ever a roar and spray, and little or no passage for boats. Men take great chances here to land either themselves or cargo, and little fishing is done. Falelima passed a mile or more, we came to the end of the made road for a space of full four miles — and this greatly to our sorrow for in the forest there was now but a narrow trail of uneven boulders, large and slippery and the going was exceeding hard. Rests throughout were very welcome to which the Governor contributed fairly oft (yet not frequently enough for some) by his ardent pursuit of butterflies, hereabouts abundant, which gave him extra work, but ourselves a breathing space. His captures he kept within his helmet. Not being an Entomologist I cannot give the species. The rocky road once passed, we had young coconuts served out for thirsty ones at a Plantation where a lone white man's habitation stood untenanted, for its owner had died in the Influenza Epidemic. Now the road was once more broad and excellent and we tramped on to Fagafau which rests picturesquely on the summit of a two hundred foot cliff, a little hamlet of twelve fales, and a church, a sort of suburb to Samata a mile further on, the latter a lovely spot with large open space of grass, boasting two rival churches.

Next came Fogatuli and shortly after, our journey's end. Faiaai is high up like all the rest, nor can the sea at all be seen because of the abundance of trees between it and the cliff edge. There is little fishing done below, save for turtles : the special forte of the Faiaaians being "Land Fishing" as they call it, which means the hunting of wild pigs with dogs. Having changed in the Rest House provided, we went through the same old program, first met by nine and twenty Chiefs and fourteen Pastors who followed us to the Speaking House where we were most graciously received by a Taupou in pink, by

name “The Moon” who greeted each of us in turn with a sweet and clear “goot mornin” — though of a truth it was well on in the afternoon. There was a shortage of Kava in this village, so before ours could be made into a drink, the roots had to be formally presented, then at once taken back to be pounded on one side between the stones. The Welcome fell to the lot of “Dreamy Eyes”, a man well on in years and having a great reputation on Savaii as both a poet and a Teller of Tales. “This is a Day of Vision,” said he (so please add this to those already named). “We have long heard of you, O Governor, this day our eyes behold our Father. There is a Samoan saying ‘Mulinnu nigh Apia is sacred, for the King dwells there’ — this day Faiaai is sacred, for Your Excellency rests therein. No noise, no mischief may be permitted. Long have we looked forward to this day. We are content.” After the Governor had spoken, came the Gifts lead by a dancing Taupou, two men in wild headgear, and a clown. Another concert for us in the evening, again most excellent. Boys here with fine soprano, men with their deep bass. A couple of men danced everlastingly at either side of the chorus like the end men of a Minstrel Show : the Taupou “Not Likely to Rain” danced too, never wildly, and with downcast eyes, here was the most graceful of all the dancing we had seen : and older woman joined her, more aggressive. It was strange to hear a Penny Whistle in far away Samoa, but the Piper played jig after jig, and the dancers danced the tunes. At last even pretty “The Moon” could sit quietly by us no longer and in her pink blouse added her graceful movements to the scene.

### Salailua

Amid so much rain as had been our portion, another day of fine weather was very welcome. The distance to be covered on foot was a mere nothing, some three miles but in patches the mud fully made up for the lack of distance. It was Ancient Rights that required meetings to be held so close together : and Ancient Rights are never lightly to be trampled on. Starting out, we left the high cliff and worked our way to the shore (despite the bogs which lay in our path — and oft drove us into the bush to escape being mired) where shortly after, a bend in the road brought us to our journey’s end, a village beautifully situated on a wide bay; and outside the reef we saw once more the Man of War at anchor, ready to pick us up on the following morning. A cordial invitation from the Wesleyan Minister took us up a long flight of cement steps to a commanding site where his good wife welcomed us to their home, a good shower bath, and morning tea.

Thence we made our way along the beach for half a mile where eight and twenty Chiefs awaited us. Assembled in the Speaking House we were addresses forthwith by “The Demonstrative One”, who kept his fierce eyes upon the benign Governor and used his hands with dramatic effect. This his Speech : “Once upon Savaii there lived a king — Manua by name — whose son much desired to visit his mother who dwelt far away. The father granted the request provided that the son could be of real use to his mother : and as a sign that he would often times be thinking of him, he would oft times follow him with rain. O Governor listen! Manua to us this day is King George of Beretania, the Mother is our beloved Samoa, the Son Your Excellency, and the rain that has so persistently followed you is to us a sure sign that our common King is mindful of your labours.” A Taupou in green and pink then dispensed the drinks. But the Pastors had to have their turn. Their Orator opened out appropriately with a text (which Asiata whispered to me — thinking that I was weak anent the Holy Book — came out of Revelations!). “Jehovah hath done great things for us, whereof we are glad,” said he. “Right is it that we rejoice today, O! Father, for great gifts are ours both past and present received from the good Hand of God. Did He not send the Missionaries nigh a century ago who brought the glorious Light of the Gospel to us benighted ones? Hath He not given us, after so many trials, the sure protection of the all powerful British? Are we not debtors to the New Zealand people who have sent amongst us their trained officials to set all in order? Do we not this day have our heart’s

desire in beholding you, our Governor, face to face? We rejoice indeed and are glad." All in all it was an eloquent oration. The interpreters all the way O.K.'d my hasty notes and begged me to teach them the trick of summary but I was altogether too busy learning, to teach. A Dance, a Concert, in the evening; and then we found sleep upon the floor.

## Satupaitea

Going aboard H.M.S. Veronica at an early hour, we made a good run down thirty miles of rugged coast, dotted with blowholes like so many salvos going off, and anchored in the roadstead of Satupaitea. Lunch over, we started for the shore in a fautasi of thirty black paddles worked like a machine by thirty chocolate figures, and another statue-like man standing at prow and at stern. The one torrential downpour of a beautiful day took just that opportunity — when we were well away from the ship — to come down and we landed wet through. There was a hastening and a changing before proceedings began. Our fale was to be at one and the same time, Speaking House, Dining and Bedroom; being the Head Chief's house there was the usual big four-poster bed at one end curtained off, a three-quarter camp bed (mine) at the other end (uncurtained), three dining tables to one side over which were suspended a large fish (freshly caught) and two great bunches of bananas. The space left therefore was but limited. Yet in trailed fourteen Chiefs to greet us, one huge fellow nigh three hundred pounds in a tapa loin cloth, with a red hibiscus behind one ear and a flower necklace over his massive chest. The Speaker of the Day, "Old Blinking Eyes", opened out with two similes and a text. Said he, "As the wild pigeon in the wood, escaping from the snare spread for him in the forest, doth rejoice, so do we, O Governor, escaping from late anxieties which might well have overwhelmed us, of sickness and lack of food, likewise this day and hour rejoice." Then his mind ran on to Aunt Sally and we learned that Hit or Miss is not alone our cherished possession as we foolishly thought. "As one playing at the game of Throwing Coconut Shells on the long and narrow mat therewith to hit the mark, so is Your Excellency's visit this day, for it has hit the mark — ourselves." Then to Holy Writ he went and quoting impressively the text (which once again Asiata whispered to me came out of Jonah!). "When all the Stars of Heaven sang together, and all the Sons of God shouted for Joy" — he surpassed all former commentary thereon when he hesitated not to say — "this is that day of days to us, O Father, for who are the Stars of Heaven but you and your illustrious Party, and who the Sons of God but we the Chiefs of Satupaitea." This was certainly going very strong, and gave me — for one — a new light upon myself. A Star! "Old Blinking Eyes" was foxy. Those alluring compliments hid a deep design. "Well we know Your Excellency's kindness of heart and do not believe that you are aware of the trick played upon this people and district. Some months back, a heavy rain, continuous for one whole moon, brought floods which destroyed our fruit trees, and in our need we sought rice from the Government, else had we starved. That was good. Full well we know the Law of the Sea, when a ship is in distress, how all fly to the rescue, nor think of coin. So even were we in distress, and seeking aid, got rice. O Father, we got the rice, but soon after came a Bill for that rice! That broke us up. Such cold calculation should not in our eyes apply to Satupaitea." Thus "Old Blinking Eyes". The Governor promised nothing, only a careful inquiry.

At Gift time it appeared that this was Asiata's Family Seat and gifts to him came pouring in, beside those to the Governor. Yards of tapa cloth, piles of fish baked in leaves, porkers in abundance and the Orator of our party whose duty it had been all through, to call out the gifts, their number, the givers and the recipients, had here to drink "representative coconuts" enough to fill a beer barrel. Of course, Asiata had no say as to where the gifts went : Iga had the giving — but I fancy there is ever a secret agreement. For Asiata there was nothing, but to the surprise of us all there was something for me. I believe the two interpreters took compassion on my ignorance of the Bible and hoped to wheedle

me into more careful reading of it by a present. Anyway that Orator shouted out so that the very mountaintops might hear “A roll of tapa cloth for the High Chief of Niue” — and he took it.

Here was the only spot on the journey round Savaii where no Taupou appeared. Ordinary maidens alone appeared; for their Taupou had acted outrageously; she had eloped a short while before. Taupous altho’ they are such martyrs to high office, evidently have hearts, like the rest of us.

Satupaitea by the size of its church — one hundred and forty feet long by fifty-four wide — must have a considerable population. The building is a coral and lime edifice, with a sheet iron roof, plenty of windows, and thick mats covering the entire floor. Preaching the object in chief, for the only thing to break the internal monotony is a towering pulpit at the East End, and beneath it, a Font.

That evening was our last Concert which was an extra special one and may most correctly be called “The Whirlwind Entertainment”. There was, as usual, a crowded audience both inside and outside our fale where it was held. The first part of the program were Home Airs and a Clown, the Leader here sitting amongst his men, keeping his eyes closed throughout, with a most strained countenance as if the music hurt him. All the while a wild contortionist held the centre of the stage and to keep him supple, oil was poured over him whilst he capered and squirmed, though he already glistened as the sun. Part II consisted of Dances, the singers supplying the music. There was “The dance of the Five Maniacs”, men only : followed by “The Dance of the Décolleté”, all women. Things as usual were getting warm and the next became so exciting that even the Governor’s Factotum, despite a hard day’s work, felt the Call of the Blood and leaped up from my feet to take his place before the footlights — the usual two oil lamps — in that grand whirl, “The Dance of Ecstasy”. The finale came with “The Monkey Dance”, a clever piece of acting on the part of the Contortionist who both looked and acted the main part with skill quite above the average, yet had he never seen a monkey in the flesh.

A second Sunday was now spent at rest, this time at Satupaitea. There was church in the big auditorium in the morning with native preaching and a large congregation who sang with exceeding gusto, without books : a luncheon party in the fale to the Captain and Officers of the Veronica : and a desperate battle with the mosquitoes in the evening.

## Palauli

Again Ancient Rights required that though but three short miles divides Satupaitea from Palauli, it was necessary to hold special meeting in the latter place. The short walk was a pleasant one though ere we got through it, there was a torrent of rain as if to keep up the record of Palauli as the rainiest spot on Savaii. Its other unenviable record is as a special haunt of mosquitoes but as they are generally more aggressive of evenings we escaped, as we were aboard the Veronica ere that time arrived.

Out walk brought us to the local Curiosity — a bridge without approaches. For three years it has stood thus, the natives being unwilling to fulfil their part of the contract unless well paid, tho’ they had agreed to do it for nothing if the Government built the bridge. As there is a drop of four feet from the bridge floor to the ground, it is necessary to unharness steeds and lift traps on and off the structure. Tarvalles are having a rest these days, a horse however can jump with the aid behind of a stick. A little further on we came to a swift stream which in flood time had carried away the bridge and therefore necessitated our fording it on the backs of our sturdy police. My horse was our Orator. I chose him not for his voice but for his bulk.

On arrival we shook hands with two and thirty Chiefs and forthwith got to business. Two Taupous, one in cerise silk with trimmings of lace, and the other in peacock blue velveteen (the Interpreters didn't tell me this but my own hardly acquired millinery knowledge) here held the Kava bowl. The Speaker of the Day, "Sour Looks", had the misfortune to be the last of the many we had listened to and unconsciously repeated both similes and texts which had already been handed out to the Governor. But he got a new one in at the close of his oration, referring to His Excellency to the parting between David and Jonathan (again I was helped out by those compassionate Interpreters who told me on the quiet to read up St. Mark's Gospel!). That parting so touching was symbolical of the affection that the Speaker felt sure would be felt between the Governor and themselves as he left them, his short visit over.

Palauli was not backwards as to requests. They wanted no less than three Beetle Inspectors, two Lands Commissioners and a Mayor. But the best came last. "We are tired, O Father, of 'Presents' when we toil upon the roads. You give us barrels of beef, you give us tins on tins of biscuits, but we want them not : what we want, what we feel we can no longer work without is not presents but 'Cash down'." The Governor spread oil of coconut upon those troubled waters and there was a great calm and many "Ughs" at the close of his speech. Now came once more the Pastors with still more live chickens (the Factotum told me in a whisper that though we had eaten chicken every day, he had twenty-seven stored away for the henroost at Vailima), more talk and this the Head Pastor's story.

"Two brothers there were who had no protection above their heads save a tree which was but poor shelter in rain and burning sun. They determined therefore to go seeking something better. They travelled north, south, east and west, but met with no success. In despair they decided to seek the help of the Great Chief Tagaloa Lagi. To them he said, 'Why here?' Said they, 'We seek a sheltering cover for ourselves.' Said he, 'Take this one of reeds and gorgeous feathered roof, for such a house as I do give you is not only strong but the most beautiful of shelters.' They took it : dwelt beneath it and nor storm nor sun distressed them more. O Governor, this my story is a parable which I would here unfold to you. The Islands of Upolu and Savaii are those two brothers. In their ignorance they knew not how to protect themselves from many a trouble, so sought shelter at the hands of diverse nations, but one by one all failed them. They turned at last to the strong nation of the British and under Beretania they have dwelt in peace. And did not that nation give them, too, the Gospel of Jesus which is the most beautiful of all shades to rest beneath, and the surest of protections come what may." Deep clearly is the love of Samoa for Beretania.

On handing this interpretation in to Asiata and Iiga, they wanted there and then to make me a Samoan Chief : and once again asked me how many chickens and roast pigs I would take to teach them "Composition While You Wait". They are good fellows, those two : and ever speak gently and most courteously. Each have bluest of Samoan blood in them.

The Governor replied felicitously, then came the last Feast whereat my special Taupou tried hard to make me eat fat, half cooked pork. My salvation came in the gift of a whole packet of cigarettes. At our private lunch she fanned me for reward. The Gifts were led off by three Taupous (my own not among them, the Feast had been too much, I fancy), whose names according to my interpretation were "Stout", "Stouter" and "Stoutest", and their sad lack of apparel showed off their abundant forms with much *éclat*. Seven pigs were handed in that day and the Factotum danced with joy as he saw more chickens coming; and by careful count one hundred bronze figures sat across the way whilst the speeches of Offering and of Acceptance were delivered, both in the native tongue.

Now our thoughts all centered on getting home. Embarking in a sixteen-oar *fautasi*, and stepping from it aboard the Warship before nightfall as she swung outside the reef, we weighed anchor at midnight

: and entering Apia harbour as light was breaking, were soon ashore; His Excellency's Malanga of Savaii a delightful Memory of the Past.

### **In Luck**

It is not everyone who gets a lift in a Warship. The ordinary traveller may sigh in vain. But the shipwrecked and the stranded are ever the care of the First Service. I was not shipwrecked, yet was I without doubt fairly stranded — my goal still far off and not a ship on the horizon. My case was a pitiful one, therefore the Captain of H.M.S. Veronica kindly hastened to the rescue and offered his ship as my means of transport. Who would refuse such an offer? No stuffy schooner, no copra-filled hold. I took the rosy, not the thorny path, and thanked the Captain for his kindly thought.

Then I went off to break the news to my Niue boys! I did not want them to think that I had deserted them : but they refused to entertain so base a thought. It was “Go! O High Chief of Niue, we'll be there someday, and you'll be there to greet us. Only please carry our message to our home.” So I became postman outside of the King's Regulations : and looked forward to an interesting time when I should go my rounds delivering the missives.

### **Samoaan Impressions**

I left Samoa with full measure of regret after such months of enjoyable residence amongst its people. The impressions I gained are many; some that a passing stranger may set down, others which only long residence would sanction mentioning after having stood that test. But I realized in full that the natives are a proud people, proud of their Race, proud of their Past, proud of their sterling Manhood. The fact that the British are a mighty nation makes them content to be under our rule. Were it that New Zealand was an entity itself, and not part of a Greater Whole, I fear that they would resent the overlordship.

They do not take Life seriously, nor, as the Englishman, their pleasures sadly. They are children all, more or less. They can waste the precious hours in talk and laziness as I could not have conceived before. The Jap and the Chinese are ever busy, the Hawaiian and the Maori hardly less so, but the Samoan is a Past Master at the art of Doing Nothing : despite which, Time never seems to drag with him.

With the Samoans as a whole, both Religion and Civilization impressed me as not being very deep-rooted. This is evident in many a custom and many a practice, which — if such were realities — they would long ere this have obliterated from their code.

### **Pago Pago**

Weighing anchor at midnight we made for “American Samoa” : in chief the Island of Tutuila, only seventy square miles in extent but possessing the Naval Station of Pago Pago. His Excellency and his ever genial Aide de Camp accompanying us thus far on an official visit to his American brother

Governor, there was much booming of guns and ceremonial visits on the midday following, once we reached the wonderfully beautiful harbour, which nigh cuts the island in two. Leaving Apia we had run into a nasty sea and some of us were not sorry to get into a quiet haven.

Little wonder that the Americans much wanted such a halting place along their trade route. It is clearly an old volcanic crater, with its south side broken away and admitting the sea. The inside of the crater very rugged and steep : Matafao the highest peak — or edge — over two thousand feet above, sharp pointed and narrow. But all round there is nothing bare, every yard wooded, with here and there a Palm silhouetted against the skyline. A beauty spot indeed.

Approaching from the sea, the lava beds are first seen as they poured out from that now empty volcano's lips ages ago, and made for the water. They do not look inviting. The sea met the flow and fought it, cutting great tunnels through it which thus form Blow Holes. The harbour itself is like a foot. You enter down a short leg, then turn abruptly : and the Naval Station with its up-to-date appointments and great Wireless Plant is at the instep. The Native village with its Twin towered church — a pleasant ramble it was to go there — is at the toe. The Governor's house is perched up on the summit of the instep, so that it commands two views : but ships as they lie at the enormously deep anchorage — necessitating buoys to ease the anchor chains — cannot get a glimpse of the sea. No gales can ruffle Pago Pago's waters.

And it rained in that volcanic crater, rained relentlessly, rained in torrents : the great edge facing south-east, level as if planed, caught every rain cloud passing and poured its contents upon Pago Pago : correctly it was named "The Rain Maker".

Happily, like everywhere that is American in these seas, the Naval Station is up-to-date as to walks and roads; cement everywhere, cosy homes, all neat and clean and trim, the folk most hospitable from the Governor down. Dinners and dances, teas and card parties, with shows of an evening, made the short stay of four days a very pleasant one for all on board the Warship, despite the rain.

## The Palolo

Here is one of the few spots on the Pacific where a great delicacy, according to the native palate, is secured : the Palolo, a marine worm some five inches long, green of colour, looking akin to a piece of seaweed, and — so it is said — tasting similarly : which alone is found on coral reefs. Its peculiarity is its clock like regularity of appearance. Only once a year it comes, and therefore is there very much excitement. The date, the very hour, is well known. The night of the last quarter of the October moon. Yet hath this worm a fad. If that last quarter falls early in October, it says it is not ready to be eaten, that it is rushing things too much, so defers its annual visit to the last quarter of the November moon. This seems a very extraordinary proceeding, but the natives in these South Seas look upon such things as a matter of course. <sup>176</sup>

---

<sup>176</sup> [Palolo worm \(\*Palola viridis\*\)](#). See also *The Palolo* in Part XIII, *Roamings in the Great South Sea*.

## The Last Leg

And now we made the last leg — at least it was so for me who had been so long upon the way — and steamed out of that perfect harbour into the great ocean, direct for Niue three hundred and more miles away. It was a rough passage, the roughest I had met so far this wandering. We were driving into a strong headwind which whipped up the waves to every angle. The narrow ship with its sharp nose, its top hamper rising high with its howitzer above the bridge, and its Wireless towering loftily, swept in and forced its way. We rolled and we dived, stood on end, and at times shivered as the screw <sup>177</sup> came clear : but on deck and below everyone was cheerful : the duties went on with all that splendid discipline of the British Navy; the Captain ever mindful of his passenger, the Wardroom offering a taste of real Club life — for those two nights and days. We were forced to go at less than half speed, and saw no other vessel on the way.

## Niue

It was Sunday noon when I was called to the Bridge to get my first glimpse of my Island Home. Full twenty miles ahead it lay, a perfectly straight line upon the horizon. I saw it from end to end at one glance, for it is but seventeen miles long. Not a hill upon it, for it rises sheer out of the sea, a coral Isle, no beaches : two tiers of land, the first some ninety feet above the water, the topmost some two hundred. Then as we drew nearer, here and there could be seen a white man's residence amongst the rich foliage : then straight ahead a group of buildings, some bright red roofed, and a flagpole with the Flag out flying. This was Alofi, in the centre of a so-called bay — to the eye a misnomer — yet affording a real shelter. To the right, about a mile away, could be seen a cutting in the trees, and looking out to sea, two houses, red roofed too, most picturesque. All around rich green.

We put our glasses on them. One was a School House, the other the Master's residence. So that was where this Roamer would abide, and truly it looked entrancing, like a glimpse of Fairy Land. We had left the rain behind : 'twas a lovely day, the sun pouring down upon the land — under the shelter of this new land we now ran out of the Trade Wind, and the sea was calm as a mill pond.

## The Landing

We kept steadily on, the Captain scorning the usual schooner anchorage half a mile out to sea, and ran to within two hundred yards ere he gave the order, and down the anchor plunged. Now we saw the Niueans crowded at the little landing stage of concrete, and standing all along the front of the little village high up above us.

It was a great day for those people : "Sail Ho!" had been ringing over the island for hours already. Out shot a boat from the passage in the reef which here hugs the very shore, a passage made by man in the Long Ago, and increased in width by the aid of dynamite under the capable hands of H.M.S. Mildura. The Doctor and the Resident came aboard, and after greetings and the necessary papers were exchanged, we made for shore, some in one boat, some in other : I with the Captain in his little dingy,

---

<sup>177</sup> The propeller.

rowed by a stout sailorman with chest and arms all tattooed as Man of War's men love. It is but a narrow passageway, a long boat can but just turn round in it for width, but the sea was still — all the much talked of impossibility of landing a myth for that one day at least, yet without doubt it could easily be impossible.

Now we reached the steps, a welcoming hand of a native was held out to make my landing sure, and I stood at last upon the Isle of Niué.

*Note.*

<sup>178</sup> This note was handwritten by WWB under the typewritten text. See Part II, *The Chronicles of Savage Island*.

## THE LONELY ISLES : THE KERMADECS

### Britain and France

It was April.<sup>179</sup> Having loaded up with copra and bananas we left the coral isle of Niue, headed South West and made for the Land of the Maoris 1300 miles away. The going was easy, even for the poorest sailor aboard that fishing steamer of 600 tons, “The Roma” (once in the Long Ago, H.M. Gunboat Torch), though in the gently heaving swell she rolled true to her proud record as a champion roller of the South Seas. Three full days had passed, and now there came a gentle breeze, breaking up the even, undulating surface at long last, and causing the old boat to add Jazz time to her sideways flings. It was then that I first saw The Kermadecs — forty miles away upon the horizon. Suddenly the cry arose “Land ahead on the port bow”. It was a broken line; a peak, then an hiatus, a line of high land, then a commanding summit. We were gazing upon the northern-most of the group which lies in a stretch of 160 miles and which had taken some years in the finding as a whole. Not at first was this one — Sunday Isle<sup>180</sup> — discovered. Macaulay 60 miles south had been seen and noted with Curtis Island by Lieutenant Watts in a transport ship, The Lady Penrhyn, in 1788.<sup>181</sup> Then in 1793 there sailed through these south Seas that adventurous French Admiral, D’Entrecasteaux,<sup>182</sup> who has left his marks upon the map and his name among the Western Isles. It was he who gave the name of the Captain<sup>183</sup> of his consort ship to the group, and it has stuck. It was his sailing master whose eyes first descried the new land, and down in the chart room it was written Raoul Island, but those that came after, for some unknown reason, would not have it so and gave it the name of the day that the quick sighted sailing master cried out “Land ahead” and came so near to being numbered among the geographical Immortals. Now the Frenchmen made further search : they passed the isles that Watts had notched for Britain’s glory, and 100 miles further south they came upon a mighty rock, covering 12 acres, rising menacingly out of the deep, defying the tumult of waters that ever dash themselves against its rugged base, and called it L’Espérance after Kermadec’s ship.

These are The Kermadecs and could they speak, they have strange tales to tell. They are out of the beaten tracks that line the ocean, the nearest (that to Tonga) is 100 miles away. Mariners keep away from them, for they are none of them inviting. As a habitation for man, one only is the least bit feasible : that Sunday Island of 7000 acres which we were gazing at, and in the early afternoon were steaming close to. They are volcanic and there are signs that their activity as fire craters is far from wholly dead. I fancy that it was for old times’ sake that our Captain left the track and gave us the chance of seeing them. He had been on a Government Survey Ship that had worked there years ago, and had been capsized with his boat’s crew at the one and only landing on a so-called beach. He would impress upon us the forbidding nature of the land, which seems to spring, its whole coastline over, clear out of the sea, yet crowned with heaviest verdure.

---

<sup>179</sup> 1924.

<sup>180</sup> [Raoul Island](#) (Sunday Island) is the largest and northernmost of the main Kermadec Islands. The Kermadecs came under control of the Civil Aviation Administration of the New Zealand Government in 1939, when Sunday Island was renamed Raoul Island.

<sup>181</sup> Lieutenant John Watts, RN, was the first European to visit the [Macauley](#) and [Curtis Islands](#) — which he named after patrons George Mackenzie Macaulay and [William Curtis](#) — on the [Lady Penrhyn](#) in the late 1788. The Lady Penryn had carried 101 female convicts from Portsmouth to New South Wales and was proceeding to Macao.

<sup>182</sup> [Antoine Raymond Joseph de Bruni d’Entrecasteaux \(1739–1793\)](#)

<sup>183</sup> [Jean-Michel Huon de Kermadec \(1748–1792\)](#) died of tuberculosis on 6 May 1793 at Balade in New Caledonia.

## Sunday Island

And yet there have been men who dared it, one man in special. The first white man to live on Sunday was Baker who took up residence nigh ninety years ago. He was followed by Johnson who put in some years on the lonely spot. Wandering off to Samoa, he there met Bell to whom the man's account of the place appealed, and Bell went to have a look at the island. The sequel was his arrival there with his wife and six children in December 1878 to stay. Two years later he imported some Niueans to assist in clearing the forest to make room for grass. This done Bell visited New Zealand and brought back with him both cattle, sheep and pigs. His efforts to raise cereals and vegetables meant a ceaseless war with rats with which Sunday was and is overrun. But Bell was well content, he sent the natives away and settled down to provide for a family which in time increased to ten. In '87 a rude awakening came. Bell received a communication from the New Zealand Government that the island had been leased to three settlers in blocks of one thousand acres each as pastoral areas. He and his large family were portioned off with fifty acres. The settlers came, they did not last long. Again Bell ruled alone. Now he wanted both compensation and a legal title, and went to Auckland to fight for his rights. There were years of contention. He was told to keep away from Sunday. In the end he and his and all his belongings withdrew and the island saw him no more, nor any other in his place.<sup>184</sup>

There are lakes on the island, but they are the craters of extinct volcanoes, and hard to get at. One could see where clearing had been made, but ere long it will be entirely obliterated, for verdure grows rapidly in those parts. Sunday Island is left to the sea birds and the winds : and wise sailors keep away, for Sunday to L'Espérance is a stretch of sea best left alone by man.

With wise and humane forethought however, New Zealand has established two Food Depots for wrecked mariners, in the group. These are visited at stated intervals to see that all is ship shape, and if perchance some castaways be found. It was these same hoards that German raiders inhumanely despoiled when they were lurking round the South Seas for lonely and unprotected prey. Not content with taking the food, they made havoc of all the rest. What harm could have been wrought to them had they left something for fellow seamen in dire distress?

It was here that pirates who, a few years back, sailing off from Auckland with a goodly prize went a-hiding for a space, till the first hue and cry was over. Was there not food there, and who would think they would seek such dangerous waters? They were met with, but by a New Zealand Warship that knew nothing of their crime and who gave them cordial greeting and supplies. That pirate skipper took leave of the Kermadecs ere the man of war was over the horizon, for the group was no longer safe for him, and hied him across the Tasman Sea to Australia where his end duly came.

## Strange Tales

I was fortunate enough to have as one of my companions one of that same Bell family who had photographs with him to prove all his statements anent this Group, though some were strange enough for hesitation on my part.

---

<sup>184</sup> Regarding the Bell family's residence on Raoul Island from 1878 to 1914, see [Crusoes of Sunday Island](#) by Elsie Katherine Morton (1957); Elsie Morton is Thomas Bell's daughter and was nine years old when they landed on the island.

The two islands next to Sunday going south, Curtis and Macaulay, are widely different. The former is a mass of spouting funnels not high, but covering the whole acreage, small cones of sulphur dotting the landscape. On it nothing alive appears. But Macaulay is a land of goats. These were let loose both on Sunday and Macaulay from whaling ships. On the latter they are so dense in number that it is no sport to kill. You must needs drive them away from obstructing your path, with a handy stick. When the dry season comes and the herbage is all gone, the goats have learned to live on the seaweed which is cast up in great abundance the whole coast round.

Strange things occur among the Kermadecs which none wot <sup>185</sup> of, for wreckage is there which tells of tragedies from which none has escaped to tell the tale. Was it these isles that the Maoris in their huge canoes saw, when in the days of our Norman Conqueror <sup>186</sup> they set out from their mystic land to follow the course of the birds to some favoured isle where they might dwell? Exhausted, well nigh done, how their hearts must have lightened to see the first faint outline. And how fierce the disappointment. This was no land for them! Had the gods deserted them? And must they push on ever westwards, perhaps to perish one and all upon the way. That they halted here seems clear from the stone implements, vessels and other Maori articles found upon the island; that they pushed on we know; 600 more miles were traversed by half dead men and women till at last the highland of their future home loomed up, which when reached they could scarce climb to from their battered crafts. But those heroic bands are not forgotten. Maoris proudly claim descent from one or other of the Canoe Arrivals; he is a bastard who knows not in which halo of heroism his forefather appeared.

But we! with large measure of comfort and without effort on our part, steamed slowly by and on; as evening fell we saw the last of the Kermadecs; ploughed our way, now through a roughish sea, with a headwind to make things merrier, for full four more days, till we too saw the mighty barrier Nature has thrown up to guard Huaraki Gulf — Great Barrier Island — behind which now we passed, and so to shelter and smooth going, till with break of day we ranged alongside hoary old Rangitoto, a volcano of the Past, hove to in Auckland's harbor, passed Doctor and the Customs, hauled up alongside the wharf appointed, and stepped ashore — this Roamer the richer by far in experience, since he had sailed from that same port three <sup>187</sup> full years before. <sup>188</sup>

---

<sup>185</sup> Archaic: *know*.

<sup>186</sup> [William I \(ca. 1028–1087\)](#) launched the [Norman conquest of England](#) in 1066.

<sup>187</sup> WWB has *two full years before*, but we know from official documents that he was appointed teacher of Niue on January 21, 1921, whereupon he departed Auckland en route to Niue via Tonga and Samoa, and that he signed the Return of Attendance for the Hakupu school on March 31, 1924, and departed Niue in April 1924. See *From Victoria to Niue and Teaching on Niue* in Part I, *Notes on the Life of WWB*.

<sup>188</sup> In Tale #27, *Saint Patrick's Day (I)*, in Part IV, *Tales of a Roaming Grandfather*, he mentions that years after he had left Apia in 1921, he was in a hospital in Auckland "with a very bad knee. Some insect — maybe a cockroach — had had a nice meal off my right knee as I lay asleep in a schooner heading for that port."

## VAN DIEMAN'S ISLE (I)

### **Tasmania. An Appealing Isle.**

Those who would roam the South Seas from America's coastline should not fail to reach this delightful isle. It lies in the southernmost gateway from the Pacific to the Indian waters — alike to Tierra del Fuego, the gateway to the Atlantic. Australia guards the rest of the entrance well nigh up to the Equator line. It is far south : hence there is absence of the torrid heat, and many other inconveniences bound up with the far flung islands within the Tropic belt. It is a complete and invigorating change to the heat worn traveller, and to an English wanderer it appeals at once as a little piece of the Homeland transplanted to the other side of the world, well and timely met. Its people are very English; its town and country villages, its park lands and farms, its orchards and meadows, its woods and streams instill a feeling both of Home and Restfulness. It possesses no huge centres of Humanity, there is no Black Country with factories belching forth smoke and withering up the whole country side, no mixing of all the nations of the earth, no appearance — at least on the outside — of strife within its boundaries. It is England at her best. It cannot fail to appeal and create in the visitor a longing for a further stay, or for a return in which to search out and enjoy the bounteous gifts Nature has poured out upon it with so lavish a hand.

The first settlers clearly carried fond memories with them overseas; you can trace whence they came by the names they bestowed upon their new homes. I wandered through little hamlets bearing such familiar names as Brighton and Epsom, Melton-Mowbray and Cambridge, Somerset and Guildford, Derby and Ramsgate, with Epping Forest true to name — haunt of Bushrangers in the dark days of the Isle, even as Highwaymen made the Home forest renowned. Nor are Richmond and Bushby Parks without their devotees.

Within its heart shaped compass of 100 by 120 miles it has two Towns, Hobart in the South with 50,000 inhabitants, Launceston in the North with 27,000. The rest of the 200,000 Tasmanians are scattered over the land. It has many streams, but three stand out preeminent, the Derwent, the Tamar and the Gordon. It is a mountainous island, you can never escape from them in range or singly; the king of them all, Ben Lomond in the north east, with its 5160 feet, though others run it close. It is a land of Plenty; some over enthusiastic writers have called it "The Garden of the Pacific". If that be extravagant praise, there is no doubt as to its wonderful wealth in vegetable produce and orchard. Tasmanian potatoes and apples are known, at least, the Pacific over.

### **Its Past**

The land but awaited the coming of the white man. That coming had its bright and its dark pages. We would do well, in order to the better understanding of the Present to look — if not at the length it really demands — yet somewhat carefully into its essential facts.

In the 17<sup>th</sup> Century the predominant power both in naval power and commerce were the Dutch. The richest city on the globe, and the centre of the world's trade, was not London, but Amsterdam. With the Spaniards and Portuguese, Holland waged relentless war upon the high seas and their colonial possessions. Sir Walter Raleigh — himself a sailor — presented to his Sovereign, James I, in the year

1603, a statement “touching trade and commerce with the Hollanders” which gives remarkable evidence of the strength of the Dutch people. “They trade by force into the East and West Indies and in Africa, where they employ 180 ships and 8700 mariners. We send into Eastern Europe yearly but 100 ships, the Dutch 3,000. Having not one timber growing in their own country, they build yearly 1000 ships. They have 20,000 vessels and all employed.”

This vigorous nation started out in 1595 to oust Spain and Portugal from the rich East Indies. They began with Java, the most productive island of the whole Eastern Archipelago, founded the City of Batavia and installed a Governor General. The story of the Dutch East Indies is an Epic of Daring — but we have Tasmania alone to deal with. Among the many illustrious Governors who went out from the Homeland, the one who showed the greatest energy in searching for new lands and new markets was Anthony Van Diemen <sup>189</sup> (1636–1645), and sailing under his command was one Abel Janszoon Tasman. <sup>190</sup> The latter had long shown himself to be both an able commander and a capable and daring seaman. It was natural that he should be selected for the important voyage now in contemplation. It was not undertaken for the glory of Discovery, neither for Adventure’s sake nor Science. It was a business proposition : to find and open up for trade the Great South Land — that Terra Incognita — and a quicker route to the Spanish possessions in South America with a view to attack and plunder. New Holland, as West Australia was then called, was never supposed to be that same mysterious Land. There was in Batavia at that time another well known sailor by name Visscher, <sup>191</sup> who by reason of many voyages, and his careful chart-making, was the greatest Pilot of the East. Van Diemen consulted him and joined him with Tasman in the venture. Two ships were selected, the Heemskerck of 200 tons with a crew of 60, and the Zeehaen of still lighter draught with a crew of 50. Along with the Commander and the Pilot, there went a most important personage, the Supercargo or Merchant.

<sup>192</sup>

The instructions issued to Tasman are in print today. They make interesting reading. The eye to business is to be clearly seen. The ships were to be laden with articles of barter. Gold and silver were to be specifically sought for, but “Keep them ignorant of the value of the same; appear as if you were not greedy for them : and if gold and silver is offered in any barter, you must feign that you do not value these metals, showing them copper, zinc and lead, as if those minerals were of more value with us.” The expedition left Java in August 1642 and sailed southwest instead of east, making first clear across the Indian Ocean to Mauritius off the Coast of Africa. This really was making, not losing time, for they had the South East Trades with them and would have dropped south 1000 miles, leaving but a short distance to reach the region of the South West Winds, their one hope of success to sail Peruwards. Mauritius too, was a better place than Batavia at which to victual the ships. Sailing from thence in October they met the westerly winds in 32°S, and keeping south they met with indications of land being nigh in 43°S. Despite gales and fogs they kept going till 49°S was reached, when danger of striking land became a live issue. Visscher proposed working up to 40°S which was done, and they were shortly south of Nuyts Land, the furthest land south so far known — our present day Great Australian Bight. Heavy gales drove them south again to 42°S when on the 24<sup>th</sup> of November they sighted new land to which Tasman promptly gave the name of the Governor General who had sent them. He never knew that it was an island he had reached and added to the map — to him it was but another portion of New Holland. His anxiety was to find a way to the south of it, if haply he might strike the Lost Continent, and also that passageway to the riches of Chile and Peru. Therefore he still kept South. If only he had gone north again he would likely have found Bass Strait, a quicker passage

<sup>189</sup> [Anthony van Diemen \(1593–1645\)](#)

<sup>191</sup> Francois Jacobsz Visscher

<sup>192</sup> [Isaack Gilsemans \(ca. 1606–1646\)](#)

into the Pacific, and have solved a question long debated as to Tasmania's being a part of the Continent of Australia. His landfall is marked today by two mountains bearing the names of his ships — these bestowed by Flinders <sup>193</sup> long years after — and not far from Macquarie Harbor of convict infamy. Making South West Cape he sailed along the south coast, and made for a good sized bay which opened out, but a fierce north west gale sprang up which drove him out to sea, and he bestowed the name of Storm Bay which holds to the present time. Rounding Tasman's Peninsula — on which in later day Port Arthur of convict times arose — he came to anchor off another Peninsula (Forestier's) in a bay which he called after the Prince of the United Provinces at Home — Frederick Henry — but which, owing to a strange error of later cartographers, is dubbed on maps as Blackman's Bay, giving the Prince's name to a spot up Storm Bay which Tasman never was nigh. Tasman now made for shore, but the surf was too high for a landing. The ship's carpenter however swam through the surf, carrying the Dutch flag on a pole, which he planted on shore and got safely back. Thus strangely did the Dutch take formal possession of Tasmania. The ships tried to go north to follow the contour of the land but the wind was against them. Tasman however saw and named Maria Island — after the Governor's wife — and Schouten Island — after his friend upon the Dutch Council at Batavia — then stood away from "a high round Mountain" — thought to be St. Patrick's Head — to discover New Zealand and Tonga ere he reached Batavia again by way of the north of New Guinea, none the richer in spoils but having settled the essential point that a way to the coveted riches of Chile and Peru was possible to the south.

More than a century passed before other white men saw Van Diemen's Land. It was a Frenchman next (Marion du Fresne, <sup>194</sup> in 1772) who dropped anchor a little north of Tasman's landing. On North Bay the aborigines first appear to us. It was an ill day for them. They resisted the Frenchmen's coming, with spears and stones. The French used muskets, killing and wounding. A few weeks later, du Fresne himself was slain by the Maoris of New Zealand.

Next upon the scene came the British. Cook's ship, the *Resolution*, was separated in a storm from its consort, the *Adventure*, Captain Furneaux <sup>195</sup> in Command. Cook held his course for Australia, Furneaux, in want of water, made for Tasman's Van Diemen's Land. He struck it low down, his anchorage is known as Adventure Bay at the mouth of Storm Bay. Thence he worked back North East to a group of islands called by his name, and made a junction with his chief off the coast of New Zealand. That was in 1773, and in 1777 Cook himself cast anchor in Adventure Bay.

Next another Frenchman appears in the person of Admiral D'Entrecasteaux whose name is far scattered over the South Seas, and who was buried in them. He entered and charted the Channel that bears his name, leading into Storm Bay; his Christian name he gave to Bruni Island; his commander Huon de Kermadec — who also died in the South Seas — is commemorated by island, river and port, whilst Esperance Bay, with its three islands, Faith, Hope and Charity, bears the name of his consort ship. Tasmania was still thought to be a part of the mainland. Flinders and Bass <sup>196</sup> settled that point when in 1798 these two daring navigators circumnavigated the island in their tiny little sloop of 25 tons, the *Norfolk*, built of Norfolk Island pine in days of distress upon that island, and arriving at the mainland held up by Sydney's Governor — it being against the rules of that far off convict establishment to possess any such small craft.

## Britain Takes Possession

With the opening of the new century, matters began to take on concrete shape. The French forced our hand. We had headed them off on the mainland. Their ships were cruising around to the south. Governor King at Sydney grew anxious and determined to take action first, and report Home afterwards. The chief point of danger lay in the south of Van Diemen's Land, though the north held possibilities; the west and east were too rugged and inaccessible. Van Diemen's Land was considered by King as lying strictly within the limits of the territory of New South Wales — as the whole eastern side of the Continent was then called — and Holland was by this time in position to raise a protest. Lieutenant Bowen<sup>197</sup> was selected as Commandant of the new settlement, with instructions to fix his site at Risdon Cove on the Derwent River — both named in 1794 by Captain Hayes<sup>198</sup> of the British East India Company, who had been sent out to investigate and report on the possibilities of infraction of the rights of his company which then held, strangely enough, a strangle hold on the trade and commerce of New South Wales. A corporal and seven privates were his military force. His convict labourers consisted of 21 males and 3 females. In all there were 49 in the Company. The Birthday of Tasmania as a British Colony is September 7<sup>th</sup>, 1803, when, passing the present site of Hobart, all unconscious of its value, the ships Albion and Lady Nelson dropped anchor at Risdon Cove. Six months were sufficient to show that a mistake had been made, and when Lieutenant Governor Collins superseded Lieutenant Brown he promptly removed the settlement five miles to the south on the west side of the river, to a creek's mouth named by him — after his friend, the Under Secretary for the Colonies — Sullivan's Cove; and along with the people went the official title of Risdon Settlement — Hobart — under whose aegis as Secretary of State for the Colonies both King and he were working. At Risdon today there are to be seen the stone steps at the Landing Place laid by convict labourers under Bowen's orders, and a monument commemorates when — at least to Tasmanians — is an historic event.

On November 11<sup>th</sup>, 1804, a settlement at the North was effected under Lieutenant Governor Paterson, who made landing at the mouth of the Tamar, where George Town, within Port Dalrymple, now stands. This wide estuary had been first made known by Bass and Flinders who reporting to the then Governor at Sydney — Hunter — had given it the name of the Chief Hydrographer to the Admiralty. Here again, the first choice was the wrong one. The Governor not only heard of, but himself saw the splendid site 40 miles up the river where the North and the South Esk flow together to form the Tamar, and Launceston now stands. Yet after finding out the impossibility of George Town, Paterson crossed the river and selected a narrow strip of land to which he gave the name of York Town. He saw his mistake, and it was abandoned in 1806. A five mile bush track leads the curiously minded to the site from Beaconsfield, today a thriving mining town. Of ruins there are none : but a few mounds under the gum trees tell of those who played their part in what was to be the capital of Northern Tasmania. Van Diemen's Isle had now indeed become a British Colony.

## The Blacks

But what of the natives? That the land was inhabited we have seen. The story is interesting, though tragic in the end. Various estimates have been made of their numbers, but the most probable is that,

---

<sup>197</sup> [George Ferguson Bowen \(1821–1899\)](#)

<sup>198</sup> [John Hayes \(1768–1831\)](#)

not exceeding 2000. They were evidently, from what has been since learned, at the very bottom of the scale of civilization; they had advanced but little since the early Stone Age. There were four main tribes, each occupying a definite district in which they hunted, with their primitive weapons, the emu, the wallaby, the kangaroo and the opossum, whilst on its coast they sought the rich supplies of shell and crayfish. They moved over their territory in “mobs” — as many as 200 at a time were seen together. They were at war one with another at times, but when the fairly friendly feeling towards the colonists turned to hatred — owing in chief to the inhuman robbing of them of their children to become servants — they laid aside their differences and made common cause against the intruder. From 1820, things grew steadily worse till 1830, when Governor Arthur took action in his strange military operation known as the “Black Line”. He put 3000 men into the field to comb the island from north to south, converging at last upon Tasman’s Peninsula. The thing was impossible with the mountains and ravines ever breaking the line. It cost £30,000 and resulted in the capture of one male aboriginal and a boy of tender years. Later it was found that their numbers — owing to the war waged upon them by individual whites — had been reduced to but 150. What a Governor could not do by force, George Augustus Robinson, a Methodist brick layer, accomplished by persuasion. A reserve was selected for them, and after a change or two, Flinders Island was finally made their Home. By 1832 all the blacks had been gathered in, 140 the total : by 1847 there were but 44 : by 1854 Truganini, the last Tasmanian aboriginal, had passed away.

### Convictism

But if this was a dark page, there was as dark a one running concurrently. If black folk were suffering persecution so were our own white men, women, girls still in their teens, and boys. Tasmania was a Land of Terror not only to the hunted blacks, but to those confined in her penitentiaries at Port Macquarie at the West, Port Arthur at the South, Rocky Hills at the East — and alike to her peaceful citizens who were at the mercy of the savage escapees who ranged over the island as bushrangers, their hands against all.

Norfolk Island as a penal settlement had been officially closed in 1804, and the whole of its inhabitants ordered transferred to Van Diemen’s Land. These were, in the main, transportees who had been allowed land upon Norfolk and had thus helped to supply Sydney with needed food stuff. Van Diemen’s Land required farmers who had had experience of colonial conditions. The Norfolk Islanders were very reluctant as to going but the orders from Home were made imperative and two main districts were given over to them — one in the North at Norfolk Plains, since 1833 called Longford, hard by Governor Paterson’s Launceston, the other in the south well up the Derwent River at New Norfolk, a really lovely spot. In the south there were other scattered lands allotted — at Sorell and Sandy Bay.

New South Wales in 1821 needed some spot where its worst criminal characters could be gathered together and severely disciplined. Norfolk was closed. A spot was therefore found upon Tasmania’s wild west coast at Macquarie Harbor, inaccessible from the land side by mountains and bush, and scarcely less so by sea, with a bar at the entrance, aptly called Hell’s Gate. Within the bay is an island 20 miles up from its mouth whereon the convict establishment was raised. What went on from 1821 to 1833 upon that Isle of the Damned is a memory that will never die. When Colonel Arthur in 1824 became Lieutenant Governor he raised a new prison on Tasman’s Peninsula in 1830 and closed that of Macquarie Harbour. The new site was more readily accessible whilst the danger of escapes was lessened, as the only means of escape was across 100 yards stretch of land leading from Tasman’s to Forestier’s Peninsula, which was guarded by sentries and a chain of trained, ferocious dogs. Port

Arthur too has passed out whilst the ruins of the latter are numerous, Macquarie has been well nigh levelled to the ground.

It was not till 1853 that Tasmania was freed from convictism, and with it went Bushranging and the old Dutch name. Whilst the new name had for some years been freely used by the inhabitants, it was not till that year — when with the cessation of transportation the Home authorities granted more liberal self governing powers — that in the statute conferring these, the name Tasmania was officially used and has since remained. The Island could breathe freely again and from that year went forward to ever increasing prosperity.

With so interesting a history, I would fain see it myself.

## VAN DIEMEN'S ISLE (II)

### Launceston On the Tamar

Arriving at Melbourne, I crossed (in the well appointed S.S. Nairana) the 200 miles of Bass Straits — which ordinarily boisterous, was both going and returning as a mill pond for smoothness, and, working our way carefully up the sinuous Tamar, landed at the picturesque city of Launceston. Both these names have close connection with Governor King of the long ago, under whom the first Lieutenant Governor, Paterson, ruled, for King was born in Cornwall's chief town through which the river Tamar flows. Names had to be chosen by these pioneers; they wisely sought to associate places with those in Authority through whom the opening up of new lands was being effected. There is history in names, for those who seek. But surely the original Tamar cannot be like its namesake. The turbine Nairana is no flat bottomed boat — she is of 5000 tons — yet berthed at a wharf 40 miles up from the sea. That was the beginning of surprises. The next was the neatness, the cleanliness and the keen spirit in Launceston itself. The inhabitants know how to make use of their river for the head of it where the two forks — the North and the South Esk — join, was covered close with launches and small sailing crafts. The city is no rambling affair. There are parks tastefully laid out with well-kept lawns, and flower beds with lovely showing. I saw tennis, croquet and bowling in full swing, whilst notice of golf links' propinquity soon caught my eye, as it did in every other centre of importance. There is abundance of electric trams, whilst the further use of motor cars only added to my admiration of a city that I gladly lingered in. To have a real Cataract within ten minutes stroll from the centre of the city is something to boast of. It is not a Niagara but it is well above the average. The South Esk in its last mile to join the Tamar rushes headlong between high cliffs on a steep decline well lined with rocks. The City has made the most of it. A tarred path high up, has been cut along the northern side of the stream, bordered on the cliff side with tree ferns and shrubbery; a fairy suspension bridge leads you at length across the tumbling waters, so as to return by a zigzag path on the south side; and all this real enjoyment will mulct you but one penny.

### Through the Heart of Tasmania

But Launceston had to be left. Engaging a car and chauffeur who proved to be a real companion, I sallied forth to roam the Island, the centre and the south my first objective. We bowled over smooth convict built roads, over bridges too, made by the same forced labor, which call forth the admiration of present day constructors — that at Perth in special. Some have ornamented buttresses, that at Ross over the Macquarie River has fine carvings which are said to have won the freedom of the stonemason. We passed through Epping Forest on the same road that had been the scene of so many 'hold ups' in the Past, then through an open country where many sheep grazed, passed villages each with its spired or towered Church, made ascents which must have tested horses in the old coaching days, crossed and re-crossed ambling streams, saw grain fields a-plenty and trim kept orchards too, big mansions here and there whose owners or their forebears had made good money and would live in comfort — with the mountains never very far off, clothed to their summits with timber. Here 60 miles out, was a signboard proclaiming "Half Way Hotel", a changing post in the days of old. We were heading for Hobart, still 60 miles away, with 60 further miles beyond, before reaching one of my main objectives, Port Arthur's ruins. Now York Plains opened out an immensity of view, flat right up to the mountain ranges in the hazy distance, a great sheep grazing country; then Oatlands,

once a more flourishing town than the village of today, as evidenced by its numerous stone built homes, and the sombre looking jail — a convict centre here. Here nomenclature gets somewhat mixed, for dropping over the range into a lovely valley we lost touch with the Homeland and had Lake Tiberias on one side, the river Jordan on the other, whilst ahead lay the village of Bagdad. Some scriptural enthusiast may have been responsible for the former ones, but Bagdad puzzles unless visions appeared to the first arrivals similar to those granted to the immortal recounter of Eastern Fairy Tales. Its wealth lies in its fruit than which no part of Tasmania produces finer. A few miles more and we had reached the Derwent which we crossed by a causeway over a mile in length (with a drawbridge for vessels), swung round the base of Mount Wellington for a dozen miles, and drew up in Hobart, the Capital, 12 miles up from Storm Bay and the Ocean.

## Hobart

The harbour at once attracts, a noble sheet of placid water having such depth that at the wharfs one reads in large lettering “60 feet at Low Tide”. Back of the City which, with its suburbs, stretches away in all directions over the lower mountain spurs, lies the famous Mt. Wellington, the Mecca of all good Tasmanians. It is absolutely essential if you would be ‘in’ with the people of the land that you should climb to its summit even though it means an ascent of over 4000 feet, the last 2000 a good test of limbs and wind. To the Pinnacle is but three miles from Hobart as the crow flies, but it is ten miles by road and track. I was there, of course, covering the first eight miles by car, and being landed at an hotel 2000 feet up the hillside, looking from below as if impossible to be reached, peeping out as it does from densest bush and timber. Though the day was gloriously warm, there was snow to be gathered at the Pinnacle from which, under the clear blue sky, a magnificent view was obtained of practically all southern Tasmania whilst Ben Lomond, 90 miles to the north east lifted its proud head sufficiently to be known among the rest.

I found Hobart as spruce as Launceston. It has fine streets and massive buildings, open parks, and a Botanical Garden on a slope towards the harbor waters that is a delight to roam in. Close handy to that inviting spot is Government House, architecturally a gem, fit residence for the Representative of the King. The Library Building, the Art Gallery and the handsome Clubs speak of culture and society. I have met many Tasmanians in my wanderings. I no longer wonder at their love and enthusiasm for their Southern Home.

## New Norfolk

A comfortable little river steamer took me up the Derwent to have a peep at New Norfolk which lies 21 miles above Hobart. We called at historic Risdon, now faced by the huge works of the Electrolytic Zinc Company, and at many another landing stage to discharge or receive passengers, likewise milk cans and other dairy produce, passed Cadbury’s commanding Cocoa Factory with its model homes, twisted round sharp corners, hugged the shore occasionally, got in between steep cliffs, and emerged at last to tie up at the other historic spot. Above, no steamer can go, for the Derwent now becomes a series of rapids, but there are many reaches of still water where anglers find bravest sport. Here we were in a land of orchards and hop gardens, and the village itself was so Home-like that I hoped to see thatched cottages and smocked folk, but the Emancipated from the Isle of Despair had evidently broken thus far from tradition. Yet its hotel was in measure the Village Inn, low ceilinged, rambling,

with hunting scenes upon the walls. A few miles out there are the Salmon Ponds, the Mother Hatchery of the South Seas. Here were placed the first salmon ova ever successfully carried south of the Equator, and many another fish not indigenous to Tasmanian waters to be distributed throughout the State's streams and lakes. Yet still further on lies Tasmania's National Park — a wise provision and excellently chosen. 'Falls' become almost monotonous to the traveller and each one is stoutly proclaimed by the inhabitants of the place to be The Wonder. I have grown very cautious of that bold statement, having really giant Falls in remembrance, yet Russell Falls have their own beauty, with such rich fernery about them as must needs appeal. There are weird Caves too, but I had lately been exploring the Jenolan Caves in the Blue Mountains back of Sydney, and had had my fill, so turned and was carried back to Hobart.

## Port Arthur

The way to Port Arthur is the long way round : the short has passed with the convicts themselves. Nowadays one has to go first north, crossing the Derwent by ferry, and Pitt Water by long causeway, to Sorell, then turn east for many a mile, then south so as to cross by East Bay Neck to the first peninsula — Forestier's — then by Eagle Hawk Neck to the second — Tasman's — which still leaves a dozen miles before the ruined settlement is reached. It is certainly the best of going all the way, but the hills are steep and the forests thick and people few, after turning south.

The old way was mostly by water, and the land portion by the most weird of all tram lines. Storm Bay, the direct water route between Hobart and Port Arthur, was not inviting for small boats or sailing craft in those early days, but a smoother way was found. From the Capital the river was crossed to the head of Ralphs Bay where lies but a half mile of land cutting off the peninsula of South Arm from the mainland. Here a wooden tram line ran, on the trucks of which the rowboat was placed and, drawn by convicts as horses, reached the quiet waters of so-called Frederick Henry Bay, this leading into the, as placid, Norfolk Bay at the head of which lay Taranna where another tram line ran to Port Arthur. This line went straight at its task, following the natural levels of the ground, a hill was nothing to it, though a fearful toil to the human beasts of Traction. The present road is nigh 8 miles long, the tram line cut it down to 5. There is a straight shoot of a mile and a half leading to the convicts' centre; we took it with many curves — the convicts took it at 60 miles an hour, themselves on the trucks, with officials, passengers and baggage. If aught went wrong there was an almighty smash, but death was never uninviting to those 'without hope'. Remnants of that car line can still be seen.

That old time route from Hobart was probably some 30 miles, my route was overland and 60. The first half of the way was through agricultural and pastoral lands, and stock was much in evidence, then Dunalley where you cross the first neck. Here guards and dogs were placed as a second row of defence against escapees beyond. Now a canal has been cut to join the waters of Norfolk Bay with the Tasman Sea. A few miles to the East from Dunalley is Tasman's Anchorage and the spot where he caused his nation's flag to be raised in December 1642. Both peninsulas are heavily timbered and very hilly, but at last by a swift drop from Forestier's Heights we arrived at Eagle Hawk Neck, the scene from 1830 to 1877 of many desperate, but yet some successful attempts to escape from Port Arthur twelve miles away by road.

## Eagle Hawk Neck <sup>199</sup>

The Neck is a hummocky, sandy isthmus, a quarter mile in length, and 100 yards across at high water. A brick guard-room was situated in the middle of the Neck and a Post set of 1 Lieutenant, 1 Sergeant, 2 Corporals and 26 Privates. Two Sentries by day and four by night were on duty, and close to the guard-room was a line of 14 savage bull and mastiff dogs. Each dog could reach to within six inches of the other, right or left. Two hundred yards beyond towards Tasman Peninsula there was another line of small sharp tongued watch dogs, who, giving the alarm of anyone approaching, would bring out the whole guard. All these dogs were on the ration list of the commissariat. At night a row of lamps was lit, lighting up the whole Neck. On the water side, east and west of the Neck — on both sides — were stations at an equal distance apart, with two constables at each whilst a patrol moved along the lines both day and night. To escape through such a network called for both daring and cunning. The stories are to be had of some who did, and — but for their life in the bush — make telling reading.

Being in the hands of one who knew, I had to be switched off to see some remarkable works of Nature not far off. There is Tasman's Arch which from its immensity I doubt not but that it can be seen even as far out as Tasman was likely to be at sea, with its caves in which the hunted escapee has lain till danger passed : there is an acre of flat rock called Tessellated Pavement <sup>200</sup> with a topmost layer of squares, and oblongs, lozenges and triangles making it hard to believe that man's hand and chisel had no part therein, and a Blow Hole where you must walk warily and at a given moment step full lively. Then to the road again where we touched Taranna — today a busy spot with saw mills and scows awaiting — and so at last, with a final speeding downhill, to the old Penal Settlement, at the head of a lovely Bay. Here was Port Arthur, my Mecca.

## The Convict Settlement

The eye at once catches and rests upon the ruins of the Church which is the first object passed; just beyond are a row of well built and still inhabited houses — Quality Row — where the Doctor, the

<sup>199</sup> Regarding this section and the next, see also Tale #73, *Eagle Hawk Neck*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>200</sup> [Tessellated pavement](#) at Eagle Hawk Neck:

Chaplain and other high officials dwelt; then came the various buildings of the Penitentiary itself, in their ruins still massive, towering, refusing to be hidden; and at the far end the Commandant's house close to the soldiers' quarters; below it the landing stage and the bay. There are fine trees all about, some lovely avenues of fine old oak and elm, ferns grow thick where heavily shackled prisoners once trampled; Nature does her utmost to hide man's handiwork, covering the very House of God with a copious mantle of ivy. That Church was planned by one convict, and built by others, its stone quarried but a short distance off. It was spacious enough to hold 2000 persons, cruciform in shape, with pinnacled tower with spire surmounting and gables. It is roofless now, but once it rang with an unaccompanied convict choir, for there was for some time no organ, nor did the architect seemingly arrange for any chancel. It is said that he won his freedom by his work, but the building was never set solemnly apart for its purpose owing to man's blood being shed upon its scaffolding. Convicts had short tempers, long memories and bitter hatreds even towards one another. The guards could not be in every spot, though it must have struck visitors as strange to have military guard with loaded arms stationed at service time so as to command the entire building. The special guide who took me round knew personally the closing years of the regime, and there was not much he omitted. Occasionally he was weak on dates but his facts were facts.

The Prison Chapel and the Model Prison were, to me, the most interesting : their arrangement showed such infinite pains to make things barbarous. No one could see another at Chapel, the Preacher alone was visible. The Word of God could surely not have come with healing balm to those poor wretches; they may well have loathed the hour. The Model Prison had a central court from which rows of cells led off like spokes in a wheel. It was impossible for any prisoner to see another. Each corridor led off into a yard of its own, and into this tiny yard, one prisoner at a time was admitted for daily exercise. Nor could he here see any of his fellows, and the outer wall of the huge wheel-like structure was toweringly high. Close by were the dark cells. The huge door of one still stood; this passed, I stepped into a space of gloom some 7 feet by 4. The door of this hole was gone, but even with the one door closed and my guide outside I seemed actually to 'feel' the darkness. A minute sufficed me, yet both men and women had been sealed up there for days and weeks.

Well out in the bay there is an Islet where two thousand dead lie, convicts in chief who won liberty at last, but one notes others who served as guards, or as officials, their wives and children too, some soldiers of the various Regiments stationed there — the 21<sup>st</sup>, the 51<sup>st</sup> and the 63<sup>rd</sup> — besides a few sailors. It is called The Isle of the Dead, and is a mass of head-stones and shrubbery, hard to move about in. Across from the Isle, a promontory juts out from the western side of the harbor. Upon that site once rose Point Puer, the boy convicts' establishment. Long ere I had seen it I was told that when the record of those hapless children reached the old Land, the Queen herself was so horrified that she insisted upon orders being given to raze the buildings to the ground. There is of course the other side of the story, reports of would-be reformers, and zealous soul hunters. The Catechism and flogging went hand in hand. When boys of tender years commit suicide, there must needs have been something terribly wrong.

As to the numbers at Port Arthur during its 47 years existence I found no way of reaching the official figures save that 75,000 criminals were landed in Tasmania altogether, but that there were thousands packed together here at every stage may be gathered from a report for 1844 I came across. These figures read : Convicts 7,105 : Free officers 835 : Military 317 : Total 8,257.

In Hobart there is a remarkable museum owned by one of the storekeepers, a photographer of repute the South Seas over — Beattie <sup>201</sup> by name. Just how such a collection of relics of the pioneers was

---

<sup>201</sup> [John Watt Beattie \(1859–1930\)](#)

got together is beyond me, for whilst much could have been secured by a keen hunter of such things, those connected with the convicts were ‘taboo’ by official order. With the break up of the System, everything was to be destroyed, yet here are tomes of official records, entered up with meticulous care, besides a very Chamber of Horrors of all the Implements of Torture. To read and look upon such things is a revelation to the Britisher of today. They seem to belong to the Dark Ages — yet a little over 50 years ago, the System was still going strong. The details of that Chamber I will not dwell upon, but the records from the office of the Comptroller General of Convicts may be shortly quoted. Here are a few excerpts of what was meted out to a boy of 12 : Six days solitary : 12 stripes : 20 stripes : 5 days solitary : 20 stripes : 2 months labour in chains : 10 days solitary : 14 days solitary : 25 stripes — and bread and water his constant portion. The women’s records show special appliances. “Black cap and short sleeved jacket for 14 days”. “Punishment dress” and the *bête noir* of “The Washtub”. Of course it also is spread all over with the Dark Cell and light diet. The causes of offence are, at times, for such dire offences as “Wearing her shoes down at the heel” : “Combing her hair in the dormitory” : “Going to Protestant Prayers being a Roman Catholic” : and “Having two petticoats”. As to the men the reading grew monotonous of “100 lashes” and “Leg Irons” and the dragging about of the fearsome looking “Ball and Chains” which in that Chamber of Horrors I could barely lift.

And now I stood where these things happened. I had seen enough. I wanted to breathe less tainted air. I sped me back to Hobart, and sought fresh field of Roaming.

## VAN DIEMEN'S ISLE (III)

### Circling the Isle

Tasmania has over 700 miles of railway, the greater part owned by the Government but some side lines are of private enterprise. All the present essential parts of the island are served : clear down the centre, across the north, with branch lines (the Fingal and the Emu Bay) to the east and west.

There is great difference between these two last named coasts. The East is mild and cultivated, the West is wild both as to climate and scenery. Along its whole coast the waters of the Indian and Antarctic Oceans beat relentlessly. It is not agricultural as the East, but instead it has produced to date forty million pounds worth of minerals — gold, silver, tin, copper, iron, sulphur and that metal more precious than gold, osmiridium, used for certain mathematical instruments and the tips of fountain pens — besides countless millions of feet of lumber. You cannot reach it from the south; that way is impenetrable.

### The South

But the Huon District in the furthest south first calls for a special word. To reach it you have two courses : the waterway or a good plain road. By the latter you can get to wherever the boat reaches and much that it cannot. You pass through miles of orchards, whilst another side of activity are the many sawmills. You have typical Tasmanian scenery about you all the time, the mountains, the deep gullies, the bush with its tropic fernery, and glimpses of the sea ever and anon to give a change. Practically all the way you have Bruny Island paralleling you, with D'Entrecasteaux Channel in between, with ever varying width, dotted with small islands and reefs. North and South Bruny are joined by a narrow isthmus which forms part of Adventure Bay where Captain Cook anchored in '77. The Bay has a seven mile beach of purest sand, the land rising at the horns of the bay to sheer precipices of rock reaching to 900 feet. There are farms and orchards, no hotels as yet — though boarding houses give sign of hospitality — but Bruny is one of Hobart's summer resorts and the inevitable will happen.

Franklin is the chief town of the District, on the south bank of the beautiful Huon River. It is not generally known that the famous Arctic Explorer, Sir John Franklin,<sup>202</sup> was Governor of Tasmania from 1837 to 1843. He followed with his sailor's heart, the cold and callous Arthur,<sup>203</sup> and won the love of all. A life size statue of the navigator stands in the very centre of the heart of Hobart, as does his memory, as fragrant as ever, today. He first saw Tasmania as a middy, being commissioned, with Flinders as his captain, in the investigation to circumnavigate Australia.

Shipwright's Point, to the south still, was the scene, once, of much Huon shipbuilding, but the age of steam killed the business. The place now is the scene annually of the great Regatta of the State when as many as 5000 folk foregather to take active part in or to view the races. Even such minor Tasmanian

---

<sup>202</sup> [Sir John Franklin \(1786–1847\)](#)

<sup>203</sup> [Sir George Arthur \(1784–1854\)](#) was Lieutenant Governor of Van Dieman's Land from 1823 to 1837.

Regatta as I happened to see, under the most favorable conditions of wind and weather, was keen to seconds and showed the love of the Islanders for water sports.

Now ahead lay Dover, an angler's Mecca — Hastings beyond, and last of all Ramsgate <sup>204</sup> at the jumping off place. Dover lies in Esperance Bay, Hastings in South Port and Ramsgate in Recherche. Between the two last named is a cruel coast, the scene of many wrecks, but the breeding ground on its islands of various kinds of seabirds, who gather in their thousands, and whose eggs are mercilessly pilfered by the folk on the nearby mainland. Here furthest south is reached, there is naught but sea between you and the Antarctic.

## The East

Heading from Hobart, east by north, without railway to help you, one runs through a countryside glorious both in scenery and productiveness, with rivers to cross by handsome bridges, and the coastline close on your right hand to add to one's enjoyment. There is Buckland with its village Church hard by the roadside, with its pre-Reformation days' stained glass presented by the late Marquis of Salisbury <sup>205</sup> who once worked in his shirt sleeves in Australia and, though later, full of the cares of State, ever had a tender spot for the lands of the Kangaroo. There is Spring Bay where the largest orchard in the whole island is located, and out in the distance can be seen Tasman's Maria Island with its rugged outline and lofty hills. There is Rocky Hills with the residence of the convict settlement's Commandant still in good order, set in a charming garden. Nearby, still housed, is the tread-mill : and out to sea lies Schouten Island, the last spot named by Tasman ere he sailed for Maori Land.

Then Swansea, first settled in 1821, another Mecca of Tasmanians for the winter months, 87 miles from Hobart and the same to Launceston. It lies in Fleurieu Bay <sup>206</sup> and is a real seaside resort with a 9 mile beach, whereon cars speed furiously at low tide time. Handy too is the Swan River where, for 4 months in the year, black swan and wild duck may be shot, whilst black bream await the angler. By a beautiful Pass (St. Peter's), which is four miles of delight, working its way by sharp curves and steep declivities, all bordered with fernery, along the apex of a saddle mountain with at times an all too close proximity to a precipice, you drop to spin along for St. Mary's where you touch the Fingal Railway which serves the chief coal mines in the State. There is gold too, in the district — the Golden Gate mine at Mathinna has paid fortunes in dividends.

To reach Scamander — some Italian enthusiast surely first settled here <sup>207</sup> — the famous St. Mary's Pass has to be negotiated. Fire had largely destroyed its beauty but it still remains a spot to be remembered. The summit is 1000 feet above the sea, far glimpses of which are caught as one winds up and down. A dozen miles further on and St. Helen's is reached, the end of the East Coast run. Here another Falls — the Columbia — invite attention to those who must needs see everything en tour. Further north the coastline takes its western turn where Eddystone Lighthouse gives the warning to all mariners to note the Point.

---

<sup>204</sup> Now [Cockle Creek](#).

<sup>205</sup> [Robert Arthur Talbot Gascoyne-Cecil \(1830–1903\)](#)

<sup>206</sup> Now [Great Oyster Bay](#).

<sup>207</sup> Or perhaps Greek — in Greek mythology, [Scamander](#) was a river god.

## The West

The West Coast, as yet, is not made smooth going for wanderers. A railway transports you from the northern coast town, Burnie, to one small portion thereof, that of Macquarie Harbor, but once there you have to use your foot or boat or horse to get about. The rest is virgin ground uninhabited by man. You have scarce left Burnie before you begin to climb and at Guildford, but 40 miles by rail away, you are in the real mining district of Tasmania. At Waratah, 10 miles off to the west, lies what is said to be the richest tin mine in the world, Mount Bischoff, discovered in 1872. It has paid two and one-half million pounds in dividends. Nearby are silver mines and areas where osmiridium is found. You are now up 2000 feet and more, and begin dropping down through wildest scenery till the Pieman River is crossed and there is open country. You hear of more mines at Roseberry but push on to Zeehan — a real frontier mining town, one long main street with many hotels, and small streets, with shacks. Here more mines, some almost in the town, and five short railways radiating, to serve the neighboring mining centres.

The Port of all this produce is 30 miles further on at Strahan, at the head of the west arm of Macquarie Harbor. This sheet of water is more like a lake than an arm of the sea. Into it pour the waters of the Gordon River — which ranks third of Tasmania's streams — so great in volume that at times the harbor is brackish. The river is so broad and deep that for miles, up to the incoming waters of the Franklin, the current is barely perceptible. All the way the banks are densely forested and without a guide it is not wise to attempt to penetrate into the interior.

The Harbor has its chief attraction for most travellers — other than on business bent — in its Past. Here lies Settlement Island, and despite the wild scrub and vines now over running the place, those acquainted with Marcus Clark's "For the Term of His Natural Life" have but little difficulty in picking out the location of the cells, the various buildings and the shipways. Here too is the Isle of the Condemned, who waited, oft with pleasure, their end with the hangman's rope, and another spot which cannot be mistaken, the tall, solitary rock with a so-called cave, in front of which the lone, recalcitrant convict was chained to a ring. The memory will not die of such gross inhumanity. It was but twelve years in the doing, but nigh a century has not dimmed, much less effaced the remembrance. The traveller leaves Macquarie Harbor with a sense of relief that such things are not possible now under the British Flag. Botany Bay and Norfolk Island, Macquarie and Port Arthur were Britain's mistaken idea of the handling and the reformation of her condemned. That phase of a still difficult question has passed, but the localities themselves are well worth a personal visit for the better grasp of the folly of the method. Australia and Tasmania have risen clear above that dark blot imposed upon them and against which they so long protested. They offer so much of other interest that those outsiders who wander over them rise too, above all thought of slur, and leave their hospitable shores full of admiration for both land and people. It was certainly so in this Wanderer's case.

Back once again at Launceston, I took steamer and turned me to the North.

## THE LAND OF THE KANGAROO : WITHOUT

### A Finger Post To History

The coastline of Australia is redolent with incident and history. To follow round that huge continent is to see names that may convey nothing at first, but a little delving into the Past will bring forth a mass of both interesting and instructive matter. We of the present day are far too prone to say that we have not the time to spare to look back, and yet the Present can only really be understood and properly handled by a knowledge of the Past. It is possible that many hesitate to undertake the looking back for fear of the heaviness of the task and the volumes that call for inspection. To these, a succinct account is always welcome, and those who have the will be they known or unknown, should find real pleasure in the handling of the matter for their busier fellows.

Australia took long in the finding, and even then the errors of the earlier geographers, who noted in their maps what came to their ears, would be amusing did we not realize the difficulties under which they labored. The maps of Robert Thorne <sup>208</sup> (1527), of Plancius <sup>209</sup> (1594), of Hondius <sup>210</sup> (1595), to mention but a few are weird in the extreme : and for long (after Australia was definitely known to exist) it was firmly held that it consisted of two parts, a mighty strait running clear down what is known to us today as the centre of the vast continent. Prior to that contention, the name was given to land supposed to completely encircle the South Pole. The quest was persistent and we now know that some navigators did actually behold its coastline, yet knew not of their find. Portuguese, Spaniard and Dutch had seen and passed on. It was left to the British to definitely locate and circumnavigate. It was, for long, any man's land to take possession of. It is today part of the British Empire by a series of extraordinary happenings. Not willingly but of necessity the continent grew under our hands from a tiny settlement on the East coast, till control of the South, then North, then West had to be assumed : finally to be welded in our day into one whole, The Commonwealth of Australia.

### The First Glimpse

Leaving out of account vague rumours and travellers' tales that cannot be supported by any evidence, it was in 1606 that following close upon one another — though approaching from wholly different directions — Dutchman and Spaniard definitely saw the land. The Dutch Captain Jansz <sup>211</sup> in the Little Dove (Duyfken Point) had been sent out from Java to examine the south coast of New Guinea. Sailing straight ahead he ran into Cape York Peninsula which he took to block him going further east, and felt sure that it was part of New Guinea itself. Had he pushed up but a little north he would have found the Strait which would have settled the point, but already he had had enough. His provisions had run out; many of his crew had been killed by the natives where he landed. He turned home (Cape Turn Again or Keerweer). He had seen, had touched, but knew not.

---

<sup>208</sup> [Robert Thorne \(d. 1527\)](#)

<sup>209</sup> [Petrus Plancius \(1552–1622\)](#)

<sup>210</sup> [Jodocus Hondius \(Joost de Hondt\) \(1563–1612\)](#)

<sup>211</sup> [Willem Janszoon \(c. 1570–1630\)](#)

Scarcely had he turned, then from the East there came sailing a Spaniard named Torres.<sup>212</sup> He had come from far off Peru and had started as second in command to Quiros.<sup>213</sup> The latter had been sent out by King Philip of Spain to find the Continent and make settlement thereon. He had been with Mendana<sup>214</sup> who had years before (1567) discovered the Solomon Islands and who in 1595 had tried again to find them, but had failed. Instead he discovered the Santa Cruz Group a little to the south, and upon one of them he died. Quiros was certain that Australis — the South Land — was close to hand and in 1606 was back again from Peru, and sailing south of Santa Cruz struck the New Hebrides. He was confident that he had found his quest and grandiloquently called the landfall he had made “Austrialia del Espiritu Santo”. He did not stop to find out if it was mainland or an island. His crew were mutinous and without a word to Torres and his third consort, slipped at night out of the harbor of the isle and made back to Peru. Unabashed he made public a narrative of the voyage, and stoutly affirmed that he had made the great discovery, though he had not been within 500 miles of it. A courtier, he paid the compliment of saying he had selected the name of Austrialia (inserting an *i* into the old name) from its being His Majesty’s title, for Philip was a Hapsburg Sovereign and as such a member of the House of Austria though King of Spain. The compliment today is but a curiosity of the Past.

Torres was not going to turn back with nothing done, for he soon saw that what Quiros took to be a Continent was but an island, so sailed on West, reached New Guinea’s southern coast, and threaded his way through the treacherous waters (Torres Straits) that lay between that island and Australia. He took the mainland to be a series of scattered islands. He too was long gazing at the lost continent he had come to find, but did not know it. He passed on and worked his way north to the Philippines where he wrote of his travels. The North of Australia had been seen by Dutch and Spaniard. It was the turn of the West coast next.

### A Dutchman Lands

The Portuguese and the Dutch in their sailings to the Spice Islands had, after rounding the Cape of Good Hope, sailed north as far as Madagascar and then struck across the Indian Ocean. The length of this voyage was not satisfactory to the Dutch. There were calms, deterioration, scurvy, in that nine months’ journey. At times it covered a year — one way alone. Now came a Dutch Commander Brouwer,<sup>215</sup> who after leaving the Cape did not steer north but sailed due east for 3000 miles and then turned north for Java. He found favorable winds all the way and made the journey in record time. His route became the recognized one. Ignorant of the fact, he was heading straight for Australia and it could not be long now before some merchantman struck it. Fate fell upon one, Captain Dirk Hartog<sup>216</sup> (Dirk Hartog Island) whom strong winds kept sailing east till he saw land and stepped ashore. He raised a post and nailed a plate thereon, recording that (in 1616) his ship, the Eendragt, had arrived there and had thence turned north. Eighty years later, that plate was found by another Dutch Captain. The Post had fallen. Vlaming,<sup>217</sup> the Captain, raised another post and plate and sent the original one to Amsterdam. Vlaming’s plate was removed by a French Commander over 100 years later and taken

<sup>212</sup> [Luis Váez de Torres \(c. 1565 – fl. 1607\)](#)

<sup>213</sup> [Pedro Fernandes de Queirós \(1565–1614\)](#)

<sup>214</sup> [Álvaro de Mendaña y Neira \(1542–1595\)](#)

<sup>215</sup> [Hendrik Brouwer \(1581–1643\)](#)

<sup>216</sup> [Dirk Hartog \(baptized 1580 – 1621\)](#)

<sup>217</sup> [Willem Hesselsz de Vlamingh \(1640 – 1698 or later\)](#)

off to Paris. It was this same Vlaming who first saw and named Swan River, greatly admiring the black swans abounding on that broad stream.

There was a landmark now and sailing instructions read to sail east from the Cape for 4000 miles till “The Land of the Eendragt” was sighted. That was a comedown from Australis the Continent, but men were at sea as to the real conditions. Soon other portions of the west were discovered. Ships were blown out of the regular course. De Wit <sup>218</sup> (De Wit’s Land), sailing for Home from Batavia was driven ashore high up on that same coast and got far off only by throwing overboard much of his precious pepper and spices. Another merchantman, the Leeuwin (Cape Leeuwin), sighted the coast far to the South. That was in 1623. Four years later it was the South’s turn. The Golden Seepaart, carrying to Java a high official, Pieter Nuyts <sup>219</sup> (Nuyts’ Archipelago), got far too south but had its reward, even though it had half the Continent to sail around before its port was reached. But prior to both these latter, the name of Houtman <sup>220</sup> appeared upon the growing map (Houtman’s Abrolhos), who in 1595 led the first Dutch Squadron into the East Indies for Amsterdam merchants and had to face Portuguese opposition, even to fighting, but had triumphed. He is one of Holland’s heroes. In 1619 he took the Southern route from Home and made land north of the present site of Perth. “Abrolhos” is Portuguese for “open eyes” and here was a dangerous shoal that would ever need vigilant watch to detect and avoid. This strange mixture of Dutch and Portuguese remains to this day upon the map, nor, though she has cast out other of foreign tongue, would Australia have this otherwise. North, West and South were now no longer Terra Incognita : the East still lay unknown.

It was England’s turn now, but our first experience was disaster. In 1622 a reef to the north of Dirk Hartog’s Island brought about the wreck of the English ship, the Trial. Some of the crew were saved and made their way to Java; nigh one hundred perished. We hear no more of the English till Captain Cook entered the Pacific in 1770.

### Tasman Seeks the Continent

Now Abel Tasman appears upon the scene (Tasman Sea). He was to the Dutch as Cook was to the English. Yet he had not the golden chances that were his if it had not been that the government of the Dutch Indies was then in the hands of Anthony Van Dieman (Van Dieman’s Gulf). Here were two men built for co-operation : Van Dieman keen to find out about the undiscovered lands of the Southern Ocean, Tasman an intrepid sailor. Of Tasman’s voyage in 1642 we need not dwell at any length, wonderful as his discoveries were, for they do not affect our subject, Australia, save that after making his landfall from the coast of Africa on that favored island now bearing his name, and making across to New Zealand, he sailed over a tempestuous stretch of waters (the Tasman Sea), which he claimed to be simply a Strait between New Zealand and the rest of the Continent to which it was attached! He reached Batavia not through Torres Strait but by the North Coast of New Guinea. Two years later he set sail to make his way by the south of New Guinea, and if there was a strait, to sail through it, work down south to Tasmania, and thence home by the west coast. If he had done this, Australia would have been fully known, and his name on every tongue. But he failed. This was in 1644 and what he failed to do had to wait till 1803, when an English Naval Officer succeeded, whose name is scarcely known among us. Such is the irony of Fate.

---

<sup>218</sup> Gerrit Frederikszoon de Witt

<sup>219</sup> [Pieter Nuyts \(1598–1655\)](#)

<sup>220</sup> [Frederick de Houtman \(1571–1627\)](#)

Just as his Dutch predecessor Jansz had been baulked by the Cape York Peninsula, so was Tasman. He did not know of Torres who had made his way from the East to West some forty years before. Torres was a Spaniard and had not touched to report at Java, nor were his writings known. Tasman was baulked, so turned himself and made a careful voyage around the whole north coast from the great gulf which he named after a former Governor General of the Indies (Gulf of Carpenteria), Pieter Carpenter, to De Wit's Land. His own superior officer's name he gave to a smaller gulf he came to, then reached his base to explore no more. His good friend died the next year, he himself lived on for another twenty, but the Dutch East India Company was not keen upon discoveries : what it wanted was large profits. They were willing however to give a name to the Land of Eendragt. Tasman had given Zealand to his own new land, Holland was now placed upon the maps to cover all that was known. As to settling New Holland or making any attempt at sovereignty, such thought was madness. When the British stepped forth and raised their flag, at first in portions, later on over the whole, the Dutch were in no position to dispute nor thought the Continent worth the while.

### **Dampier Tries His Hand**

Ere King James II <sup>221</sup> fled from country and from throne, a disreputable company of his subjects made a further acquaintance with Australia. The Cygnet had been working the pirate game in Chinese waters until the region was too hot to hold them. They thought it best to sail for some quieter region, and selected New Holland as the most suitable. One of the Company was a wild fellow named Dampier <sup>222</sup> (Dampier Archipelago), who could use a pen as well as a cutlass. They seized the opportunity of cleaning the ship's keel, generally fixing things up, and getting water. Buccaneer Archipelago speaks clearly of this bunch of pirates. Dampier was a draughtsman in addition to his other accomplishments and made a map of the coast, but in capsizing of a boat he lost his papers. Nothing daunted by their murderous record, the ship now headed for England, and publishing the record of his visit to the embryo Continent, Dampier was taken up by many leading men and made a hero of. The Admiralty even were roused and gave him the ship Roebuck to make further discoveries. Had he but chosen to sail via the Horn, his might have been the high honor of putting Australia's East Coast upon the map, but the cold weather of that boisterous Cape deterred him, and he chose the old route which brought him where much was already known. He first made land at a spot (Shark's Bay) where the crew got a taste of shark's flesh and took care to waste none. He covered the coast for 1000 miles but found nothing that appealed : natives and supplies thoroughly disgusted him and his. After some months, he turned homewards, but was wrecked on the way, and got back to kill all hope of settlement on so seemingly sterile a land.

### **Cook's Instructions**

Full seventy years now passed before Australia once more appears as interesting the greater world. Then James Cook steps forth into the limelight, and from that first voyage of his into the Pacific, the Continent has definitely taken a place amid the fortunes of white men. Captain Cook had his orders from the Admiralty to sail to Tahiti for the observance of a Transit of Venus, then to proceed West to make discoveries. The Terra Incognita was his further goal. If he failed to locate it he was to

---

<sup>221</sup> [James II \(1633–1701\)](#)

<sup>222</sup> [William Dampier \(Baptised 1651 –1715\)](#)

thoroughly explore the coastline of New Zealand before returning “any way he chose”. But for that latter chance he too might have failed. He went to Tahiti, then sailed south : finding no land, he made for New Zealand, did full work there, and then proposed to visit New Holland. We have seen how well by now the West Coast was known. Cook would fain have a look at the East Coast which none so far had seen. That the two coasts, together with what was known of the north and south should be the long sought for Australis did not yet seem a possibility, but New Holland was worthwhile looking at. A settlement as to its exact configuration would be a good thing and might lead to something else.

### The Long Sought East Coast

It was in the month of April when Lieutenant Hicks, who was on watch, sighted the coast. They had sailed too low, and had passed the East coast and approached the South. Cook as usual gave the name of his landfall to the man who first beheld it but unfortunately in this case he laid down a position in his chart which was incorrect. He placed his Point Hicks where there is nothing but water, but from his careful description there is no doubt that the ‘Endeavour’ was in sight of Cape Everard. Hicks, Lieutenant, R.N., has therefore perforce to be eliminated from geographic immortality.<sup>223</sup>

Determined to lay bare the secrets of the East Coast first, Cook turned North and passing Cape Howe sailed steadily for nine days before he made a landing at Botany Bay. It was not given that name at first. The crew were taken up, not with the flowers, but with the curious inhabitants of the deep. Stingray Harbor was its baptismal name, but Cook took his friend’s — Joseph Banks, the naturalist of the expedition — enthusiasm over his finds as the better appellation, and so wrote it in his Journal. Cook’s Landing is now commemorated by a monument, even as is his death in far distant Hawaii. They stayed but a week then went still north, passing an opening to which Cook gave the name Port Jackson, after an Admiralty Official of the day.<sup>224</sup> It is but a few miles from Botany Bay : and within that wondrous harbor lies Sydney today, a city of one million souls. Cook was too busy over the coastline to enter through The Heads and look upon one of the three great harbors of the world. Up, up he sailed till at length he reached the Torres Straits and sailing through “Endeavour Strait” landed at “Possession Island” whence he took possession of the whole East Coast by the name of “New South Wales”. Thus was Australia split formally in twain — the Western half New Holland, the Eastern half New Wales, and between the two there was held to be a great waterway. Australis had not yet come into its own. Cook had happily settled one point upon his way; the Tasman Sea was no strait; New Zealand was no part of this Western Mainland. This was enough at that time, and Cook sailed Home to astonish a world with his tale of wonders and to show that the Southern Land, be it was it might — a Continent or not — was a place worth inhabiting, the Dutch and Dampier notwithstanding.

Once again Cook came out, and reaching New Zealand proposed to tackle the south coast from Point Hicks. Had he done so, his surely would have been the fame of settling the question of Australia, but it slipped him : for the Captain of his consort ship becoming detached by storms from himself, had been blown thitherwards and reported strongly, on his return, that there was no possible route that way. So Fate denied Cook a crowning triumph and reserved it once again for another who deserves a better fate than has been served out to him.

## Flinders and Bass

Thirty years had now to pass before further work was done upon the coast. During that period, the first settlement had been made, and that a penal colony. Governor Phillip<sup>225</sup> had come and gone, and Hunter,<sup>226</sup> another naval officer, held the post. Onboard the ship that carried him to Sydney was a midshipman, Matthew Flinders (Flinders Bay) and the ship's surgeon, George Bass (Bass Strait). They came from the same country, became bosom friends, and each was filled with an enthusiasm for exploration, especially by sea. Bass had with him aboard, a tiny boat which he appropriately enough called Tom Thumb. With this the two friends set out from Sydney Harbor soon after their arrival and began their self appointed task. They dared not go far in the open sea but crept in and out along the coastline to the south. Later on they had a larger Tom Thumb built for them in Sydney and made still more adventurous journeys along the coast.

The Governor now took notice of these daring men and encouraged them to even greater efforts. Flinders had duties aboard which prevented him from accompanying his friend the Doctor on two notable trips. On the first, he discovered coal along the shore (Coal Cliff), a promise to the early settlers of a mighty industry to come : on the second, in a whaleboat with six blue jackets, Bass rounded the Continent at Cape Howe, passed Cape Everard, entered the Strait that bears his name and reached "Western Port" where he met a southwesterly swell which convinced him that Tasmania was not part of the mainland, but an island. Here he turned. It was not till two years later that he and Flinders set out, this time in a ship, "The Norfolk", and proved the Strait to be the dividing line of Australia and Tasmania, clinching the matter by circumnavigating the later.

Bass and Flinders both returned to England in 1800; the former left the Navy and ceased to work as an explorer. Not so Flinders. Banks (Cape Banks) who had been with Cook and now — knighted — was high up in the regard of the Authorities, secured him the command of The Investigator (Investigator Island) and he was told to do just what suited him as to settling for good and all the configuration of New Holland and New South Wales. He sailed by way of Africa and arrived at the south west point of the land which Captain Vancouver (who had some ten years previously come upon the scene), in one of his world journeys, had named "King George's Sound" after his Sovereign. Flinders now went systematically along the whole south coast and in so doing disposed finally of the legend that New Holland and New South Wales were separate entities. There was no sheet of water dividing them. They were one. He was the first to go East through his friend's (Bass) Strait and so reached Sydney. But one had gone before him clear through the Strait westward. The Lady Nelson under Lieutenant Grant<sup>227</sup> had been despatched from Home a year before Flinders with instructions to help in exploration. He followed Cook's course across the Pacific and passing Western Port kept on going. He passed an opening (Port Phillip Bay) at the head of which Melbourne now lies, and reported thereon upon his making Sydney. Lieutenant Murray<sup>228</sup> now took command and first sending his mate in a small boat to see if entry could be safely made, himself followed into that great harbor, worthily carrying from that day forward the name of the first Governor of the land.

## The Real Discoverer

Finders now completed the work, for in 1803 he circumnavigated the entire Continent in the Investigator and mapped it, showing that it was one vast island, the long sought for Australia, the Great South Land. But even as he worked, others not of his race were busy too. Flinders knew that a French scientific expedition was setting out for Australia ere he left England. The ship, the *Géographe* (Geographe Bay), was met with by Flinders in the south (Encounter Bay) and though suspicious at first, the Englishman soon saw that there was no thought of land grabbing, at least in those scientific heads (Cape Naturaliste). Yet Captain Baudin <sup>229</sup> upon his return to France gave out his narrative and a map covered with French names, and capped the whole by dubbing a huge portion of the Southern Coastline “Napoleon’s Land”. It may have been enthusiasm for the land that sent them, it may have been admiration for their mighty Chief, but anyway the English Authorities took fright and piece by piece made certain of aught that looked likely as places of settlement, till finally in 1829 (scarce forty years since Sydney was founded) Captain Fremantle <sup>230</sup> in the *Challenger* raised the flag in what is now Western Australia and laid claim to all New Holland in the name of the King of Great Britain. Cook had already done this for New South Wales.

Thus did Australia pass, at last, from a wild and unknown mass of conjectures to a certainty : and in this great work Flinders played, as is to be seen, no small or insignificant part. Yet whilst the names of Cook, of Tasman, of Vancouver are upon a million lips, how few there are who have even heard of Flinders. To him however fell the honor sought eagerly by all the former. His word and gallant deed presented a new continent to the world, even as Columbus centuries before. His further history does not concern Australia, fascinating though it is in his strange experiences of brave journeyings, shipwrecks, long and unjust captivity, and as he lay dying in his Homeland, the appearance of his *Book of Travel*. “The Life of Flinders” <sup>231</sup> is a book well worth the reading. It was right that he who had found the lost Continent should have the naming. He declared, on reporting his discovery, for the name Australia. He pointed out that New Holland took no account of the Eastern side, and New South Wales took no account of the Western. They should be fused under one name. Australia was the ancient name for the Great South Land. Let it be continued. There was some opposition for awhile at Home, but when request came from New South Wales that the name should be used for the whole, Australia was accepted by the Authorities and will remain for aye.

There are many other names around the coastline that belong to history, but they are of more modern date and more fitly accompany the record of the discoveries and the developments Within the Land. Enough to have touched upon those of the Long Ago, and to have noted names and know the deeds of daring and of enterprise that stand for.

Should not we who know the facts, not only try to spread them, but endeavour to win our fellows to give Honor, fully, freely, where that Honor is most justly due, as in the case of the intrepid Flinders, a name today scarce known amongst us.

## THE LAND OF THE KANGAROO : WITHIN

### The Pathfinders

The Pathfinders of Australia were men well worthy of remembrance, alike with their fellows, the gallant coast finders in the days of Long Ago. Their Story is however also too little known. Yet were they the pioneers not only of the Continent they opened up but of the world encircling Empire of today. It is not only those who made clear the unknown interior, but those also who made the earliest individual settlements who are entitled to full honor. To both, the task was not easy; indeed the oft-times tragic tale has given color to a most erroneous view of the Continent as a whole. Today, to many, Australia conveys the idea of a great desert with a fringe of cultivation and civilization round its coast. It is, to these, mostly a waste land, and the possibility of its ever becoming a teeming mass of population is a phantasy of the brain. But a closer study will show how mistaken such notions are. Doubtless it has its Barren Lands, so too have other Continents, and awesome deserts too. True too it is that an immense area can never be inhabited by man, but the Continent as a whole is not therefore to be denied its wonderful and world helpful possibilities. Let us glance then as to how Australia was forced to give up its secrets and to become a home for millions, by the daring of men.

### The Founding of Sydney

When Captain Phillip, R.N., with his “First Fleet” of eleven ships, carrying 1007 souls, landed in 1788 in Botany Bay he did not take long to perceive that it was no place for a settlement. Cook’s report of the spaciousness of the Bay was indeed correct but the land around was uninviting. There are fine stretches of sand beaches but there are no deep approaches to the shore. So he bethought him of that other spot a little to the north and went prospecting to Port Jackson. Here he found a lordly harbor, not so wide, as long and deep. Its two hundred miles of shoreline is ever broken by long arms which run far into the land. Here were hills sheltering from winds, fair land ever for pasturage and tillage, and at the head there poured in a river, the Parramatta (scene in time to come of many a world’s sculling championship) with its still waters, breadth and noble curves. He had a plenitude of sites to choose from, and selected one deep down from the ocean which has never had cause for being considered aught but the best, and where Sydney stands today. He was that Lord Sydney,<sup>232</sup> Secretary of State, for the Home department, who had taken the leading part in founding this new penal settlement.

Here then was Phillip with his company, seven hundred convicts, and three hundred (including wives and children) free folk to guard them, camped down upon the edge of a Continent of nigh three million square miles — not then even known to be a Continent — and hemmed in at the back as well as both North and South by ranges of mountains. It soon became essential that what lay behind those yonder ridges should be made known. Phillip had begun a little settlement in the West up the Parramatta at what he called Rose Hill — but today takes as a whole its old time aboriginal name. Here farming was encouraged as also on the Hawkesbury River which lay a few miles to the North. But these were of little avail towards the feeding of his charges. There were always “short commons” in those days,

---

<sup>232</sup> [Thomas Townshend, 1st Viscount Sydney \(1733–1800\)](#)

and at times close to starvation. The Colony depended in the main on supplies sent out from far off England, and these were not always to hand on time. The livestock that had been landed found but poor pasture and increased but slowly; the seed corn was attacked by ants and mice. There must needs be found better pasturage and better soil for grain. Men's hearts failed them, but never was it so with the first Governor. He encouraged all, even placing convicts, who showed industry, on land, with the promise that if they behaved well, free grants should be made them. It was not however for Phillip to know what lay beyond those hemming mountains. His health broke down and he returned to England in 1792. His successor did not arrive till two years had passed, and the Colony was meanwhile ruled by officers in charge of the Corps raised at Home specially for the Settlement. It was during this interregnum that several attempts were made at conquering the heights. The difficulty lay, not in their great altitude, but in their chaotic formation. Indeed there is no formation : valleys lead nowhere, precipices are met with where slopes should be expected. To the eye it looked no great matter to scale those few thousand feet but to those who attempted there seemed no possible way through.

Though so seemingly impenetrable, they were easy to name. They were ever to the eye wrapped in an atmosphere of blue, soft in their haziness, fascinating, and inviting of approach. Behind those Blue Mountains men were determined to find out what lay : and a party of Scotch Highlanders led the way. They returned defeated. Then Hacking <sup>233</sup> made an attempt but was beaten back. Bass, the Surgeon, who explored so ably on the seacoast tried his hand and took rope ladders and grappling irons to assist. He too tasted defeat. Then Cayley, <sup>234</sup> of abnormal strength himself, accompanied by a band of the strongest of the colony tried, but returned a beaten man. Then came the victors. In 1813, twenty-five years after the founding of Sydney, three men, Blaxland, Lawson and Wentworth <sup>235</sup> set out to do or die. They cut piecemeal the scrub, they clambered and toiled for 15 days; then working round a high peak long their objective, they saw the great Bathurst Plains lying before and below them. Here was country indeed, here was pasture land, and tillage ground not for a thousand but for a million souls. They had triumphed. It was comparatively easy to follow.

### Discovering the Interior

From that date till 1896 the work of revealing the interior of Australia went steadily forward. Bit by bit the Continent was mastered. Some names in those eighty years stand out preeminent. Of these we would deal.

Surveyor Evans <sup>236</sup> now descended those mountains and discovering two rivers feeding those delectable plains named then after the full name of the then governor — the Lachlan and the Macquarie. <sup>237</sup> After him went settlement, and Bathurst, the first inland town of the Continent, came into being.

Now Oxley <sup>238</sup> came to the front : a naval officer who had turned Surveyor, young and keen. He sought to find out whither those two rivers ran. He followed the Lachlan for hundreds of miles only to find out that after running through a splendid tract of land, it finally disappeared. To him this was

<sup>236</sup> [George William Evans \(1780–1852\)](#)

<sup>237</sup> [Lachlan Macquarie \(1762–1824\)](#)

<sup>238</sup> [John Joseph William Molesworth Oxley \(1785–1828\)](#)

astonishing, but to us today, we know of many another country where rivers do the same. He then turned to the Macquarie. It promised gloriously, and leaving it to another year, returned to Sydney.

Again he set out, only to find a similar result : the river was, and then was not. He did not know that he was wandering in one of the great river systems of the world, known to us today as the Murray River, and that these waters all found their way eventually to the sea in the southwest at Encounter Bay. He now turned towards the coast but kept North, skirted the Liverpool Range, and found upon his way more rich plains and a dozen rivers each of which flowed inland. He reached the coast at Port Macquarie and so home.

Again he set out, this time in search of a new settlement along the coast for incorrigible convicts. He skirted the shore in the Mermaid and finally dropped anchor in Moreton Bay. There to his surprise he met two white men who had been wrecked — with others who had perished — and had been living among the aborigines. From them he learned of a noble stream which ran into the Bay. It proved to be the largest river on the East coast. Upon it now lies Brisbane twenty miles up from the Bay itself, yet ocean liners find no difficulty in tying up at the City's wharves. He returned, well satisfied.

Cunningham,<sup>239</sup> a botanist, keen to learn what lay hidden, pushed his way north from Sydney, crossed the Liverpool Range, found more rivers all flowing inland and the magnificent Darling Downs, and came out at the Brisbane.

### The Attack on the South

Now was the turn of the South. Two men, Hume and Hovell,<sup>240</sup> set out from the former's residence on Lake George, back from the east coast at Jervis Bay, and crossing the beginnings of many a stream running west, came out where Melbourne now lies. They did not know that one they crossed was the absorber of not only all the rest but also of those which both Evans and Oxley — far to the north — had seen and followed. They too reported fertile land in abundance.

In 1828 Sturt<sup>241</sup> took up the task. He had come out with his regiment and was seized with the fever of exploration. Where were all those rivers that had been seen and crossed making for? The theory was advanced that there might be a great inland Sea., and Sturt needs must find it. Over the Blue Mountains he went with his band, struck the Macquarie, used a boat, packed with them, as long as the depth of the water allowed, then took to their pack horses. Over a month they made painful way across barren, scorched up lands, keeping west and south, till they suddenly came upon a river, deep down between its banks. Sturt named it after the Governor, Darling,<sup>242</sup> who had sent him on his quest. He had struck it in a dry season, but those high banks bespoke a mighty stream in the wet. He could go no further at that time, so homeward went.

The next year he took a different line of attack. He would follow Hume and Hovell's track in the South. He struck one of their streams. Putting together a boat he had brought in sections with him, he and six of his party determined to take their chances and so set out to see whither they would wend. Their way covered 1750 miles. For a week they had all the excitement they needed, then their stream

<sup>239</sup> [Allan Cunningham \(1791–1839\)](#)

<sup>240</sup> [Hamilton Hume \(1797–1873\)](#). [William Hilton Hovell \(1786–1875\)](#).

<sup>241</sup> [Charles Napier Sturt \(1795–1869\)](#)

<sup>242</sup> [Ralph Darling \(1772–1858\)](#)

suddenly emptied itself into a broad and noble river. Keeping to it for a further nine days they beheld another river pouring in from the north. It was his own river, the Darling, which he had stood looking down upon three hundred miles above. Now the broad stream swept them on, till emptying itself into a great lake, the blue waters of the sea were seen ahead. Sturt had found the Murray. It was hard lines on Hume who had given his own name to one of its early feeders, and one who certainly deserved the lasting fame in preference to a Secretary of the Colonies at Home.<sup>243</sup>

The Surveyor General at Sydney was filled with envy at the success of this soldier. Mitchell<sup>244</sup> was not content till he too had done something. At first he went over Sturt's earlier trail slightly suspicious. He found all as Sturt had said. Later he too struck the Murray, ascended it, crossed to the south and made for the coast. He was now in what is known today as western Victoria and thought him and his the first white folk to behold the glorious land. But it was not so, for reaching the heights above Portland Harbor in the extreme south west corner of the Province of today, he saw buildings on the shore and a brig laying at anchor in the bay. These were the Henty brothers<sup>245</sup>: and not far off on that same coast, others, with Batman<sup>246</sup> as the chief, had sought a home and found it in Port Phillip on that site where Melbourne now stands. But of these, anon.

### Pathfinders Many

The East was now fairly well covered, and a portion of the South, but what of the West, of the Centre, of the vast stretch of the South, and the North, bitten deep in by its Gulf?

The commanding figure in New Zealand's history is Sir George Grey, but few outside of that Dominion know of the man. He was a great Pro Consul of the Empire, doing noble work as Leader not only in New Zealand but in South Africa and Australia. It was in the latter that he first won his laurels. A highly trained English Officer, he was sent out to Western Australia, and in the year of the accession of Queen Victoria explored from Shark's Bay to Perth so capably that the Governorship of South Australia was, later on, his reward. Eyre<sup>247</sup> now tackled the south coastline, but first made a brave attempt to reach the true centre of the land. He started from Adelaide, the chief town of South Australia, carrying with him a silken Union Jack worked by the young women of that city. He went up by Lake Torrens through the great basin which drains into the lake named after him, then reached an area of sand and swamp. From Mount Hopeless he looked North. It was his Pisgah,<sup>248</sup> for he was without water and adequate supplies. He turned back: but not to Adelaide. Striking the coast he determined to make along King George's Sound — a vast journey. Only a man of determined grit and iron will could have done it. He refused to take any with him save three aborigines. One man, like Ruth<sup>249</sup> of old, refused to leave him. For two months they struggled on, oft nigh perishing from thirst. Then Baxter<sup>250</sup> fell to the spears of two of the natives distraught with the strain. They decamped

<sup>247</sup> [Edward John Eyre \(1815–1901\)](#)

<sup>248</sup> In [Deuteronomy](#), God commanded Moses to climb up and view the Promised Land from Mount Nebo: "Then Moses climbed Mount Nebo from the plains of Moab to the top of [Pisgah](#), across from Jericho..."

<sup>249</sup> [Ruth](#) is the main character in the [Book of Ruth](#). She famously vowed to follow her Israelite mother-in-law, Naomi, from Moab to Bethlehem, saying, "Where you go I will go, and where you stay I will stay..."

<sup>250</sup> [John Baxter \(died 1841\)](#)

and Eyre and his lone follower <sup>251</sup> — with full five hundred miles yet to go — kept on for yet another two months, when he saw a French barque close in shore. From the Captain <sup>252</sup> he secured supplies. He had killed his packhorses long before, making pemmican of their flesh. Refreshed, he took to his trail again, and finally reached his goal. He had been tramping for an entire year.

Now Sturt once more got busy. He had been moved to Adelaide and Eyre's effort to reach the centre roused him to make the attempt. He did not follow the former's route up north, but for nigh two hundred miles kept to his old friend The Darling, then struck north. He escaped the swamps but not the sand nor the lack of water. Another barrier to advance, in addition, he found in a vast stony plain that today bears his name. From the very first as an explorer, he had taken note of the flight of birds. Whither they flew in their migrations was the course to follow north or south. He had followed but could do no more. He too turned and made painful way back, four hundred miles and more due south, to Adelaide. His health was now hopelessly undermined. He set out no more.

But one of his party, with youth and enthusiasm to his credit resolved to take up his chief's work. When the South Australian Government offered a prize of £2000 to the man who from Adelaide first crossed the Continent from South to North, Stuart <sup>253</sup> set out. Keeping to Eyre's route in the main, he reached the very centre of the Continent in 1860, where he built a cairn of stones and raised the Flag. There was no inland sea after all : neither was there desert, but instead a wide stretch of grass country. Pushing north he got beyond his resources and was forced back. The next year he started out again, got still further on his way, could make no headway with the dense scrub, and once again was forced back. Again he started, and this time (1862) got through, coming out near Port Darwin at the North, and returning reported a wonderful country, once the sand, the swamps, the stony waste and the scrub were passed.

Now come other tragedies. The East had got busy and would know still more of the North and the West. Leichhardt, <sup>254</sup> a Prussian Scientist, came out in the hope to join some exploring expedition. Instead, he went off on his own and worked across from the east coast to the Gulf of Carpentaria. He repeated this, and again brought back valuable data : the land was good. Then he proposed a much more difficult task. He would cross the continent from East to West. This was before it had been crossed from South to North. He and his party certainly got as far west as the Barcoo which runs into Lake Eyre, for their mark was found much later on a tree, but exactly where death overtook them no man knoweth to this day.

That same year another explorer, Kennedy, <sup>255</sup> venturing into the gulf country came to an untimely end. So loath were men to give up the Prussian Scientist that many sought long, and so extensively that ere they gave up the quest as hopeless, the eastern half of the Continent was completely bared to man.

Death stalked behind yet another expedition, this time setting out from Melbourne. Whilst Stuart was pushing North and reaching the centre from Adelaide, Burke and Wills <sup>256</sup> would do much the same for the Victorian Government. They were commissioned at great outlay to find out the nature of the central part of the Continent right up to the great Gulf in the North. They reached their objective a year or more before Stuart. It was mismanagement that caused the tragedy. Burke would not travel

---

<sup>251</sup> [Wylie \(born c. 1825\)](#)

<sup>252</sup> Captain Rossiter, of [Rossiter Bay](#).

<sup>253</sup> [John McDouall Stuart \(1815–1866\)](#)

<sup>254</sup> [Ludwig Leichhardt \(1813 – c.1848\)](#)

<sup>255</sup> [Edmund Besley Court Kennedy \(1818–1848\)](#)

<sup>256</sup> [Robert O'Hara Burke \(1820 or 1821 –1861\)](#). [William John Wills \(1834–1861\)](#).

slowly along with the abundant supplies. With Wills and two others, Gray and King,<sup>257</sup> he pushed on. Again even the one pack horse was too slow for the two leaders, so leaving Gray and King the two went forward. They reached almost to the sea, tasted the saltish water at the mouth of the Flinders River, but had not the strength to cover the short distance that remained. They must save that to get back to their supplies. As the reunited four made their slow way to the main caravan coming slowly up, Gray played out and died. Somehow the plans for meeting miscarried. King sought refuge amongst a tribe of aboriginals and was later rescued. Burke and Wills kept on south till thirst o'erpowered them. Then came the end.

The North itself had been well traversed and by none more persistently than A. C. Gregory.<sup>258</sup> From Rockhampton on the east coast of Queen's Channel and the Timor Sea : then, not content, he dropped south into Western Australia. He was tramping and opening up the unknown for full ten years.

The West holds in high esteem Warburton, Giles and Forrest, and Carnegie,<sup>259</sup> the last in time. Warburton opened up De Wit Land : Giles ranged round the South and centre of the West, making a circuit of five thousand miles : Forrest dealt in large measure with the south West, traversing land soon to be world famous for its gold : Carnegie crossed the lines of all three as he worked his way across stream and arid spot, good land and desert.

A gallant band the lot, from Blaxland to Carnegie. A Continent laid bare in eighty years.

## Settlers

Of the settlements, when governments brought these about, there is no romance, though naturally the first comers had a trying time. But where men individually pioneered, their record of daring and enterprise should be known. The Henty's of Portland Bay and Batman of Port Phillip were such, and cannot be ignored. Thomas Henty was a Sussex farmer blessed with seven sturdy sons. Attracted by notices of the settlement to be made by the Home Authorities on Swan River (Western Australia of today), he sold all his possessions and emigrated. But the reality fell far short of his expectations, and father, mother and three sons departed for Tasmania. Three still tried their fortunes around the Swan River, whilst a fourth, Edward, set out on a cruise along the southern coast to see what he might find. At Portland Bay he was well satisfied, and going across Bass Strait for his father, the old man approved the scheme. The three brothers still in the west joined Edward and started out in sheep farming and stock raising, adding whaling as a bye play. Those of the family who had migrated to Tasmania remained on the island. The mainland portion built their homes and settled down long before the authorities of New South Wales knew of their existence. For this they eventually had "to pay the piper" for the government greatly curtailed their land acquirement, giving them grudgingly a round but meagre sum by way of compensation.

Batman had a more strenuous experience as a pioneer. He and a companion, Gellibrand,<sup>260</sup> were residents of Launceston in the north of Tasmania, and determined to secure a cattle range on the mainland. Forming a syndicate, the two crossed Bass Strait and entered the great bay of Port Phillip.

---

<sup>257</sup> [John King \(1838–1872\)](#)

<sup>258</sup> [Augustus Charles Gregory \(1819–1905\)](#)

<sup>259</sup> [Peter Egerton-Warburton \(1813–1889\)](#). [William Ernest Powell Giles \(1835–1897\)](#). [John Forrest \(1847–1918\)](#). [David Wynford Carnegie \(1871–1900\)](#).

<sup>260</sup> [Joseph Tice Gellibrand \(1786–1837\)](#)

They were amazed at the magnificence of the country and making their way up the river Yarra, which flows into the bay, Batman selected a site for his settlement. He chose the spot whereon Melbourne now stands. Meeting a party of aborigines he proceeded, like Penn of old, to make a treaty with them, and drew up a formal parchment, to which he declared he had secured their chiefs' marks, for a tract of 600,000 acres in exchange for some knives and blankets. Returning to Tasmania, the two reported their success. Others were but waiting. One, Fawkner, <sup>261</sup> also had formed a syndicate and their representatives were hurried across, and despite Batman's Treaty, squatted on the same river and site. Before either party had time to bring their sheep and cattle across, one Aitken <sup>262</sup> beat the lot, and he too camped on Batman's land grab. News reaching Sydney, the whole lot were warned off as trespassers on Crown property, but proclamations were of no avail. Batman's Treaty was treated as a 'scrap of paper' despite the protests which he made for years. There was but one thing for New South Wales and the Home Authorities to do, and that was to turn the whole district south of the Murray River into a Government Settlement. The site of the future great city Melbourne (named after the then Prime Minister <sup>263</sup>) was declared a Government Reserve; the squatters were driven out, and only after much haggling was Batman and his syndicate allowed a grant of 9,500 acres near Geelong — a safe distance off — as a recompense for his pioneering work. That was in 1838. A year later he died. This then of those who would fain own land.

## Early Governors

Nor must we forget to pay honor to the Governors in those early days. Upon them lay heavy responsibilities, and to their leadership much of what was accomplished was due. They had their trials, too, not only in the waywardness of men, but in carrying on. Such sterling types as Phillip, Hunter and King, <sup>264</sup> Macquarie, Brisbane <sup>265</sup> and Darling, each in his way are worthy of remembrance. When territorial division came, financial difficulties seemingly increased. Hindmarch, <sup>266</sup> Governor of South Australia, had but one shilling and sixpence in the Government Safe, and Gawler, <sup>267</sup> who succeeded him, in his desperate need, had to take upon himself to issue bills. He had a starving multitude to deal with. Work must be found and the laborers fed. Gawler plunged into the public works and tooted up the tidy sum of £300,000 in bills, which were, to his horror, dishonored in London. George Grey, who succeeded him, forced the Home Government at last to meet them, but by that time they had passed £400,000.

Bowen, the first Governor of Queensland, was even worse off as a start. Here are his own words, "As to money where with to carry on the Government, I started with just seven pence halfpenny in the Treasury. A thief — supposing, I fancy, that I should have been furnished with some funds — broke into the Treasury a few nights after my arrival and carried off the 7½d." But Bowen made a success of things. Of such right good stuff were the pioneers of Australia made.

Here then is some slight record attempted, of gallant men and gallant deeds : Explorers, Settlers, Leaders. They have passed, but their works, without doubt, do follow them; and it is for us, and for all to come, to have them in remembrance.

## THE LAND OF THE KANGAROO : A PHASE OF THE PAST

### Transportation

The successful revolt of the American Colonies brought amongst its many difficulties to the Old Country, the question of what was to be done with her convicts. For long years these had been shipped across the Atlantic, and that without expense to the Home Government, for contractors were ready to take any number at Twenty Pounds a head, and landing them, dispose of them at a good profit, to the planters, practically as slaves. But now that this course of getting rid of the convicts was closed, it was for some years an ever present worry to the Authorities. Their numbers steadily increased, the jails were full to overflowing, hulks were improvised as receptacles for the condemned. Transportation for seven, for fourteen years as for life was still meted out by the Judges without thought of congestion. Theirs it was to administer the Law : if the Law was inhuman, as we of today consider it to have been in the majority of causes calling for transportation, it was for Parliament to alter, not for them to go behind the Law laid down. Something had to be done. A trial was made in West Africa, but that was quickly found to be practically a sentence of death, and the inhuman thing could not be done.

In 1779, Banks,<sup>268</sup> who had been Botanist in Cook's voyage in the "Endeavour" — now Sir Joseph Banks, Baronet, G.C.B., President of the Royal Society, and other high offices — and who was well in with the Government of the day, bethought him of that far off country which had so vastly pleased him, as a solution of what many minds were sore perplexed at, and made the suggestion. But other as seemingly grave matters were pressing hard upon Pitt<sup>269</sup> and his Cabinet, and the unfortunate convicts were still shelved. Four years had still to pass before action was taken. This time it was done owing to another of Cook's ships' company, a Corsican, Maria Matra, who wrote to Lord Sydney, Secretary of the Home Department, calling his attention to the same part of the world. This time the matter was taken up seriously and the Cabinet determined upon action.

In the King's Speech at the opening of Parliament in January 1787, it was announced that a plan had been prepared to send criminals under sentence of transportation to New South Wales : and following quickly upon the announcement, the "First Fleet" set sail from the Isle of Wight in the following May. It took till January 1788 to reach the selected site. Captain Phillip of the Navy was in command, and appointed the first Governor. With him went the Sirius (two years later to be wrecked at Norfolk island), the Supply, three Store ships and six Transports, the latter carrying the first contingent of the condemned, 717 in number, 520 men and 197 women. Making his landfall at Botany Bay, Phillip quickly saw that a better site must be chosen and selected Port Jackson, close adjoining, for his colony. At first all lived of necessity under canvas. The convicts were not penned but made to work. There was land to be cleared and public buildings to be erected. But to get many to work was Phillip's difficulty. They had not been brought up to such manual labour. They had taken life easily, hence their fall. They were not only constitutionally lazy but incompetent. Yet with such poor means the Governor got things going. He was not a hard or harsh taskmaster. Neither under him nor any of the succeeding Governors was there on the mainland of the Continent that appalling brutality displayed upon the unfortunates that occurred on the islands of Tasmania and Norfolk.

---

<sup>268</sup> [Joseph Banks \(1743–1820\)](#)

<sup>269</sup> [William Pitt \(1708–1778\)](#)

But what was fearsome in Phillip's day was a thing over which he had no control. The horrors of the hired transports afford gruesome reading. At £20 a head delivered at Sydney, it was with these ship contractors a case of more the better. They took chances on their human cargoes. Though their losses in life are appalling as the records show, they made big money. At last the abuse cried to heaven. England was roused and in 1802 a Transport Board was formed, and convicts sent out twice a year, with Naval Officers in command. But there had been fourteen years of needless torture for the condemned. Once on land the records of Sydney and those other penal sites in Australia to be mentioned, are not harrowing; they have their lively and their sometimes harsh phases, but they can be written throughout as stern but humane. For long there was but a log built prison in Sydney. Jail was only for the local offender. In a sense all were free. When criminals appeared to be indifferent to discipline and reckless in behaviour, they were shipped out of the settlement to those islands which soon were dreaded as worse than death. But with those establishments we are not now dealing.

### **Governor Phillip**

Phillip had little fear of his felons escaping. Where could they go, anyway. By land hemmed in by mountains, to flee to them was to starve : by sea for many years there were no boats in the harbour capable of facing the Tasman Sea. When later, some did attempt, but few landed safe on other shores. Fiji saw some, far off Tonga too, the nearer group of the New Hebrides and the Solomons were havens to a few, and being desperate men, lived desperate lives among the natives. Their record was drink and murder throughout. Phillip's was a motley crowd, a weird mixture of humanity. They came from all classes. Australia got the worse end of the deal in England's criminals; the better were kept at Home. He appealed constantly that not the riff raff and the incapable, wholly, might be sent, but a contingent of the lesser villains and the capable. And as time went on, convicts came out of a less gross type. Such men were not bad and unfit to associate with their fellows who suffered drastic treatment for such venial faults as the damaging of property, carrying on a business without securing a license, or contempt of court.

Amongst the crowd gathered within Sydney's confines there were many who were not "Lifers". Probably even the majority had but to serve their time, seven or fourteen years, and they were free to return Home. Few had to put in the fullness of the years as convicts, though all had to remain in the Colony till their time expired. Long ere that, they could be working for themselves. By good conduct or worthy deed they could be freed, and with land freely given to them could settle down and made a competency. These were known as Emancipists.

### **A Motley Crowd**

It did not take many years before out of the thousands dumped down in Port Jackson there were capable men, free to carry on their former professions — men who for some trivial offence, or the machinations of their envious fellows, had been forced to cry halt to their training — doctors, teachers, clerics, lawyers, bankers and merchants. Here was the beginning of a settled Community, and the promise of a well found colony. Here were trained hands to meet growing needs. When a man's term expired, even if he had had to fully serve it, and he chose to remain, he took up land and he was known as a Expiree. Many, both men and women, became wealthy with such golden opportunities of land and business to their hand.

Settlers, free men, from the very first had drifted in, and these had acquired goodly tracts of land requiring more labor than they had “hands” to give it. It was to assist these, and to thus help open up the country, that the Assignment System was evolved. A convict was assigned to work for a settler. This man was his master. He paid the individual no wage but nevertheless gave a nominal return in things that the rations of a convict did not allow for. Rules were laid down as to the rights of master and servant, but many doubtless abused them. The lash was used without doubt, though the master ran the risk of losing his servant. But there were so many convicts that it was the policy to get rid of as many as possible under the system, and there was a readiness to overlook all but the grossest cases of ill treatment. Such convicts were known as Assignees.

### A Greedy Corps

The Government had at first sent out a body of Marines to guard the prisoners and protect the colony, but the officers soon objected to such service, and in place of these the New South Wales Corps was raised at Home for special service. It was no credit to the Colony. From start to finish it gave trouble to the various governors. The officers as a whole seemed possessed with a mania to make their fortunes and at the same time pass their days in ease. For money and for rum they fleeced convicts and settlers alike. With such officers, the ranks were no whit behind. Protests rained in at Home and the Corps was put an end to in 1810, when British Regulars took its place. It was Governor Macquarie (who came out with his Highlanders) who disbanded the greedy Corps. He did so by absorbing some, retiring others whence they came, and allowing a hundred to become settlers. It was he who raised the question of the social status of the Emancipist which Time alone had gradually settled. Despite all his traditions of race and high place, he had the big heart to reach out and give his hand to his once fallen fellow. When a man had purged his fault, he should be taken back by his fellows. So said this Governor and acted it out. But not so others; even his officers refused and long and bitter was the controversy, nor did he nor any of that generation see it through. Things had to settle themselves. It could not be commandeered. A colonial spirit had to evolve, which alone could appraise the situation correctly. It is over now, but there were lively times in Sydney for many a year in the circles of Society.

### Grades in Transportees

It was a topsy turvy place in some respects. Convicts were allowed to marry, and many an old time lover came out with the express purpose of marrying her convict; getting him assigned to her as a servant thus freeing from all authority but her own. Then did husbands have to walk warily, for if they chose, the wives could hand their men back for punishment and servitude till they reached a more contented and obedient mind. Those who have chanced to read Marcus Clark’s “For the Term of His Natural Life” will recall Sarah Purfoy and her husband Rex, with her Sydney shop, and ranch and wealth, the latter the proceeds of robbery at Home, brought out and cheerfully invested. Such was not fancy, but a reality in those early days.

Besides the Emancipist, the Expiree and the Assigned, there were the Specials or Gentlemen Convicts. These covered political offences which were seemingly considered more weighty in those times than mortal ones, for their lot was hard, even in Sydney. They could not be freed in any sense till their full time had run. It was evidently feared that they would get busy among the settlers and

upset the growing colony. But if Home was anxious to get rid of these, Australia did not want them at any price. Such political agitators were constitutionally bent on fomenting trouble wherever they were, and the Governors had enough already on their hands without politics being included. When two thousand of the Irish Patriots were sent out in 1798, there was certain to be trouble. They hated England and all her works, their very breath of life was conspiracy against the established order of things. It ended in open mutiny, in 1803. None before had thought of rebelling. But these rose and suffered. It had to be, for the free were still outnumbered by the sentenced. Death was meted out relentlessly. That was the harshest time in Sydney. The life of the young colony was at stake.

The Gentlemen Convicts of the intermediate years were of different mould. The Scottish Martyrs were but few, but their coming far from being a hindrance was of real importance in unlooked for ways. It helped, not lightly, to bring about the abolition of the whole system for the Continent. Their crime was but a desire for certain parliamentary reforms. Of the unfortunate quartet who fell under the displeasure of the Powers, one <sup>270</sup> was a Unitarian Minister who served his full time and died on his way home; one <sup>271</sup> was a lawyer whom bonds could not hold for he managed to get away in an American vessel that called at Sydney, escaping to Europe where he died in Paris; another <sup>272</sup> served out his time and remained content; another <sup>273</sup> did the former but lived not only to see his home again, but to make his voice heard on the conditions of the Colony. <sup>274</sup> He did not mince matters, nor did others who as time went on returned. A veritable war of words went on from 1837 to 1840. Then the House of Commons set up a Committee of Inquiry, and such revelations were made by men — not convicts — incapable of twisting facts, men who knew not only of Sydney's modest tyrannies but of Tasmania's and Norfolk Island's horrors, that some action was forced upon the Authorities. An Order in Council stopped convict transportation to the Mainland, but would permit it, under better conditions, to still exist upon the Islands.

### A Fine Drawn Difference

This half-hearted action was not in itself sincere. There was something behind it, as soon appeared. Whilst convicts for Life were not to be transported, nor the ordinary "Termers", those condemned at Home were still to be got rid of overseas by a subtle difference of nomenclature. Thus came about the Pentonvillers. These took their title from a prison of that name (still used) wherein a new scheme was tried. Transportees were sent there to undergo a course of moral as well as practical training, for eighteen months or more as the case might be. Whilst the discipline was strict, it was humane, useful trades were taught and uplifting influences brought to bear upon the individual. Such as seemed improved to the satisfaction of the Prison Commissioners were then given Conditional Pardons, which meant that on landing in the penal settlement they were free to go where they pleased therein, so long as they did not return home till the expiration of their original term of sentence. Such a party was far better off than Assignees for the latter were under discipline, whilst he or she was free. These were the folk Lord Grey proposed now to send out to Australia, and did so despite all protests, from 1844 till 1849. There was however this excuse for his action. The Colony of Port Phillip, where these Pentonvillers were landed, was not at one on the question, and the Home Authorities knew it. Laborers were badly needed. The wealthy cared not from what source that help came. It was the poorer man

<sup>274</sup> There was a fifth [Scottish Martyr](#) — [Joseph Gerrald \(1763–1796\)](#).

who was willing to deny himself in order to keep the tainted thing away. By '49 it was clearly seen not be a success : many had feigned reform in order to get out, then lived their old lives again, nay worse, for they were free from oversight in that vast country. But before it came to an end, what is now the Province of Victoria received nigh two thousand of such folk. Sydney had held out and escaped the plague.

It must here be noted that back in 1824 another penal colony had been formed at Moreton Bay at the mouth of the river — five hundred miles north of Sydney — whereon Brisbane lies. This was not so much for newcomers as for the worser element of those already sent. It lasted for fifteen years and during that period settlers were not allowed within fifty miles of it. There was no Assignment here, for they were of a class not to be subdued. But though it closed, the North was not thus to escape.

Strange as it may sound in the case of such a man as W. E. Gladstone, it was nevertheless owing to his order whilst Secretary of State for the Colonies that a new penal settlement, despite the Order in Council of 1840, was founded three hundred and fifty miles further north of Brisbane in 1844. Those transported were however not to be called Convicts, but “Exiles”, and if they had not wives to follow, or vice versa, there was to be a culling of the Poorhouses of England for that purpose. Thus strangely do men salve their consciences. But though it started, it came almost immediately to an end, for Gladstone’s Party went out of power, and Lord Grey would have naught of Port Curtis. He was set on the south portion of the Continent. The Pentonvillers not being a success, he now determined upon another scheme, the issuing of Tickets of Leave whereby a convicted person was not, as in the former system, allowed to go where he pleased once he was landed, but had to report to the police at regular intervals. He refused to listen to warnings at Home and sent out two shiploads following within a few months of one another. These were to be discharged at Melbourne. But Melbourne had had enough. The whole population rose against the attempt. They would not allow the discharge. The only thing to be done was to sail round to Sydney. Here again feeling ran so high that it was seen by the Governor that trouble would surely ensue, so the ships, each in turn, were sent forth again, this time to Moreton Bay far to the north, once (as we have seen) a penal colony but now a scattered one of settlers. Here, out of sight and out of mind they would be practically free men. And here we leave them. This was the end so far as Eastern Australia was concerned. Lord Grey at last learned his lesson. No more were sent. That too was in 1849 : an eventful year.

### **The Last of Convictism**

But the evil was not absolutely dead : and this last phase was due, not to Howe, but to settlers themselves. The scene passes to the West, to the Swan River Settlement struggling for existence. The shortage of labor was acute. Long did the pioneers strive; but at last, in public meeting assembled, they decided to ask that the Western Settlement should be made a Penal one. That too was in 1849. The only stipulation the colony made was that an equal number of free immigrants should come out. These terms the Home Government agreed to and faithfully carried out for sixteen years. Ten thousand convicts were landed in those years. But this did not go on with the approval of the rest of Australia’s folk. Long and loudly they protested. The shame of the thing done for whatever reason disgraced the whole land. The protests won out. Western Australia agreed. The Home Government fell in with views so unanimous, and so forcibly expressed, and convictism ceased upon the whole Continent in 1867.

“TRANSPORTATION”

“Born at Sydney 1788 — Died at Perth 1867”

“Aged 89 years.”

“Unhonored throughout Life — at Death regretted by none.”

Which recalls an Epitaph read by the writer long years ago in a Churchyard in North Staffordshire, England:—

“Beneath this stone John Burnet lies.

“There’s no man weeps nor no man cries.

“Where he’s gone or how he fares

“There’s no man knows, nor no man cares.

“ ’tis TRUE.”

## THE ISLE OF PALMS : LORD HOWE ISLAND

### A Lonely Isle

Four hundred miles and over, straight east from Sydney Heads (Australia) out in the South Pacific there rise twin mountain tops, one lopped off at the summit, a valley lying between. Such is the first view the voyager gets of Lord Howe Island. There is much that is fascinating awaiting him as he draws nearer and finally lands upon that favoured isle. The first thought is its loneliness. Look at the map and there can be no disagreement on that point. Nothing to the southward till the Antarctic Continent : eastward four hundred miles to the North Cape of New Zealand : tiny Norfolk six hundred miles away, the first spot northward : little wonder that not only the white pioneers of the South Pacific but the canoes of the dark skinned races which roamed over those vast waters failed to see it as century after century rolled by.

When Captain Phillip set sail for Australia in 1787 from England to found a penal settlement in New South Wales, his instructions were to occupy with the same intent an island that Captain Cook had discovered and reported on, and named Norfolk of his fancy. Phillip lost no time in carrying out his orders, for landing in Botany Bay in January 1788, he despatched Lieutenant Ball <sup>275</sup> in H.M.S. Supply the very next month, to found the second settlement. It was on his way thither that by good fortune Ball saw what had been missed by others, and from that day in the summer of the Southern Hemisphere, Lord Howe Island has been part of the British Empire. <sup>276</sup>

It is of volcanic origin and crescent shaped, about seven miles in length and from half a mile to nigh two miles in width. Far from flat, it rises and falls its whole length over, but its commanding heights stand out preeminent. It was the Lieutenant's right to name. Mount Gower he listed as one, which towers 2,800 feet sheer out of the ocean; his own Christian name he bestowed upon the other, Mount Lidgbird, 2,500 feet, and practically unscaleable, save to experts at the game. The former has a summit comparatively flat covering several hundred acres, the latter's summit is a razor back. Though both are so steep, they are covered with the richest foliage. Below on the southern side of the isle there is a reef, the most southerly in the world, fringing the shore at either end but forming within, a lagoon brimful of wonders to the naturalist. Here a rift in the coral allows entry for boats and is the usual landing place, but when the wind is strong and the surf raging, then one has to go to the other side of the island where a beach of golden sand gives charming and comparatively easy approach. It was at the latter that I landed.

Besides the isle itself there is other land in sight : one group of islets called the Admiralties, not half a mile away, rugged, very difficult of approach save in calmest weather, of many curious shapes, a great cavern penetrating the largest of the Admiralties clear through from side to side. Here is the breeding ground of myriads of sea birds, the Wide-awake, the lordly Gannet, the beautiful Bos'un bird with its flaring tail feathers, Blue-bills, Noddies and Mutton-birds.

And then far off, some eighteen miles to the southward, there rises out of the sea what one takes at first for Neptune's Cathedral, for there is the Nave and the Spire clear cut to the eye. This is Ball's Pyramid which rises 1,800 feet into the sky. None has ever scaled it, but few have managed to land

---

<sup>275</sup> [Henry Lidgbird Ball \(1756–1818\)](#)

<sup>276</sup> Ball named the island after Admiral of the Fleet [Richard Howe \(1726–1799\)](#).

upon its rocky base. Only birds know what its Nave-like roof holds. Someday an aeroplane may hover over and tell us what the Islanders and others fain would know.

As we approached Lord Howe we saw high up on the rugged mountainsides small specks of gleaming white. These are the wild goats of the Island, brought by man and got clear of all possible control. But the islanders have no need of them; there is abundance without need of going a-gunning. It is quickly evident to the newcomer that life on Lord Howe means a rich and bountiful table. Fish in plenty, meat in abundance, milk and cream to spare, poultry of many kinds, with vegetables and fruit for every taste.

### The Kentia Palm

But what distinguishes this island from all others is that here and here alone the wide world over, grows naturally the beautiful Kentia Palm. In the world we meet with them where'er we go; in pots we see them adorning hallways and tables : graceful things, they delight the eye in ballrooms and on platforms. Lord Howe is their native home and on Lord Howe they are to be seen in all their fullness of growth. To the world they are known as small and dainty; in their true home they tower forty feet high. Here they seed; outside, even if they reach that strength, the seed is valueless. Here is the nursery of the Kentia Palm and from here go the seeds all over the world. It is the *raison d'être* of those living on the island. It is the one business of the six score folk who dwell and work thereon. They have to be climbed for do those seeds, hanging high up on a long stem, half a dozen slender strings together. From these the seeds are stripped into sacks, each holding about two bushels. Then to the water's edge where sheds are raised wherein the packing is done. The quotation given me was forty dollars a bushel in London where the best price is given. Sydney is a large centre of distribution also, but lately a large area has been set aside as a nursery where the palms are started and when well developed, the dainty Thatch Palm — to give its correct botanical title — is shipped to the nearby continent. To walk in the groves is a delight. Above one's head they wave gracefully in the wild, the undergrowth is palms again, of every size. They are so close together that the light is largely cut off, but up they shoot to reach the all needful sunlight. The soil is sandy loam, not deep I fancy, but constant showers help rapid growth.

But though Nature tends and cares, another side of Nature works havoc and hugely menaces the industry. Some few years back, the little steamer that plies to and from Australia ran upon the rocks that encircle the island, and the rats, ever keen of life, thought discretion required prompt desertion. They landed : and from that unfortunate day have wrought destruction all around. At first they started on the abundant birdlife. These birds of the main island had had no enemy before. They had no fear of man. Fantails and Silver-Eyes, Magpies and Kingfishers, and a dozen others were everywhere, the insect life their food, the hills and vales redolent with song. Today they are almost extinct. Not content with the toothless birds themselves, those savage rodents also attacked the nests. Egg diet was a find indeed, nor was any nest outside their furtive reach. Fortunately those Admiralties have escaped. The Strait between means safety for the seabirds : and sharks, both "School" and "Tiger", lie ever ready to snap up aught that comes their way. And thus, the birdlife and the eggs a minor quantity, those rats sought other provender and found it in the Palm seeds. They have turned into pure vegetarians. They do not trouble to climb the stems, but so closely hang the Kentia together, that the rodents run from tree top to tree top, finding all the food they require within easy reach.

The islanders in their desperate need have tried many means to rid them of the pest; shooting is slow work with such a horde; poison is dangerous with cattle everywhere. Of late they have tried owls,

importing them from Queensland, not large, a reddish brown, good hunters of vermin. We brought a dozen more along with us. The few birds remaining must protect themselves from those sharp eyes and fearsome talons; the rats are the main thing. The rodent has not tamely succumbed. He is still full of fight. He has attacked his enemies' nests and robbed parents of their coming brood. Till the rats are largely reduced, the full-fledged bird must be brought and loosed. The islanders are hopeful, and all lovers of the Kentia Palm must needs wish them well. Those seeds develop quickly; there are two crops a year, but it means a livelihood gone unless the scourge is mastered.

There is menace besides from the insect life. The birds gone, Nature has become lopsided. The injurious insects are unchecked in their ravages. The beautiful and well-tended gardens of the little isle are attacked. Therein one sees roses and balsam, arum lilies and long hedges of oleander. Here is fine field for pestiferous insect. The isle is also an orchard. Here grows peaches and pomegranates, lemons and oranges in profusion. Never have I tasted more luscious mandarin oranges than on Lord Howe. Where'er one turned there were trees laden with the golden fruit. They could be had for the picking. But here again insect life has its innings unchecked. Besides which those audacious rats have found out the value of bananas and acquired a taste for the pulp; like man, refusing the skin. The groves are no freer than the nests from that steamer's furry host.

Turn we now to more pleasant subject. The Kentia is not the only palm on Lord Howe, though it naturally lords itself over the rest in the eyes of man. There is the Mountain Palm, both big and little which cover, together with ferns and lichens, the face of those towering hills : and closer to the level area are the Curly Palms. The seeds of these are in clusters, a slight distance below the great waving leaves. There is real grass too, fine meadows whereon cattle graze. There seems not to be such a thing on Lord Howe as lean horse or kine.<sup>277</sup> They are full rounded, neither rib nor bone a-showing. Happy creatures these, yet know not their good luck.

## Settlement

It was not at once upon discovery that this palm business began. The first settler, one Andrews, reached the isle in 1838.<sup>278</sup> I wandered over the old homestead; it lies back from the sea, sheltered from the winds by palm groves and lofty trees, the chief of these the banyan. These grow to immense size, throwing down their roots from the extended branches till they cover an amazing space of ground. Andrews knew that whalers called for water, and bethought him to make a sufficiency by supplying them with meat and vegetables. From the appearance of the place, its neat old home and out-buildings, he evidently succeeded. That he and his were the first inhabitants seems certain. There has been naught discovered that speaks of natives. True there have been human bones occasionally dug up close to shore, but these were in all likelihood the remains of some whaler whose companions preferred to bury him ashore, than to cast him into the deep.

The present residents have charming homes : no mere shacks, but bungalows with wide verandahs, each in its own paddock with grassland all around. They lie scattered, delightful roadways through

---

<sup>277</sup> Kine: an archaic plural for cow.

<sup>278</sup> From *Pinetrees Lord Howe Island 1842–1992: A brief history of the Andrews-Nichols-Kirby families* (2006): The first habitation of Lord Howe was in 1833 or '34 when 3 New Zealand men — Ashdown, Bishop and Chapman with their Maori wives and 2 boys lived at Old Settlement... The 48' cutter Rover's Bride was a trading vessel of 49 tons, built in 1838... On 2nd July 1842 she left Sydney with Margaret and Thomas Andrews... They anchored in the roadstead off Neds Beach a few days later.

the palm forest leading from one the other. They have however three common meeting grounds. A Bowling Green which they claim to be the equal of any in their homeland, and certainly it is a pleasure to look upon and test thereon one's ability at the ancient game : a Tennis Court, not grass but hard, ready for all seasons : and a Church. They have neither doctor, nurse nor hospital. They do not have illness on Lord Howe; they go forward till old age claims them, then they are lain away amid the ferns and palms. Of course there is a school, and I was shown a no less imposing structure than a Government House, but there is no Governor, nor ever has been. The whole business is a community affair, tended and fathered from Sydney : for Lord Howe is electorally in New South Wales. It is a close corporation, outsiders stand no show. To get within the charmed circle calls for a ten years' residence as an outsider, but, even so, ever welcome, for hospitality is a feature of those open-hearted, open-handed folk.

So important was the Kentia Palm seed industry considered, that a Royal Commission was appointed in 1912 to look into the matter and a Board of Control appointed. This looks after the Company, which means the Islanders. Lads born on the island acquire so many shares on attaining their majority, and girls are dowered upon their marriage. It is to the interest of all to work, and work they do with a will. A school provides local training, so that there is no need to get away to the continent. Young and old, everyone appears busy during the working hours of the days. Sledges are much in use; they are preferable to carts, gliding over the smooth sandy soil in rain or sunshine. Carts are for heavier goods than the sacks of seeds. Some have attained to the splendor of a trap. But this must be for Sundays, not such day as most good Christians keep, for Lord Howe is a stronghold of the Seventh Day Adventists. But they do not force the point with the stranger that is in their midst. He comes and goes as he wills. They are glad to receive you on their shores; they seem loath to part with you.

But the world outside calls; one may not linger over long when one is the only drone. The steamer calls, strong arms carry you to the waiting whale boat, and strong arms ply you over the dancing waves to the ship in the offing. Up goes the gangway, the whistle blows, and Lord Howe Island with its Kentia Palms becomes but a memory of the past.

## THE ISLAND OF DESPAIR (I) : NORFOLK

### A Beauty Spot

Not now. But once it was, nor can any newcomer escape wholly from the remembrance of those tragic days just a century ago; thirty years of inhuman work wrought upon man by his fellows, from 1825 to 1855. Now all is peace. That better day broke when the Pitcairn Islanders arrived, who beholding the lovely land after their largely forbidding one in so far as sustenance was concerned, forthwith named it Paradise, nor have had cause to change the name. To “Pitcairners” as those born on Pitcairn are designated (and there are still today a full dozen or more who have right to name) and to “Norfolkers” as their descendants are called, they can think of naught better in this life, nor desire otherwise, than to live out their allocated span on this fair islet in the Southern Sea.

For Nature has not spared herself upon it, she has been prodigal of gift, nor has ever native race added their wild, uncouth presence to her perfect handiwork.<sup>279</sup> It was virgin ground for man when Captain Cook, on 9<sup>th</sup> October 1774, and his crews, first set eyes upon it.<sup>280</sup> Like Lord Howe six hundred miles to the southward, it had failed of discovery through all the long centuries. To the British it has and always will belong till stronger arm shall seize it. It is but five miles long and three miles in width, an area of 8,500 acres, but there are no barren spots therein, the deep red soil of decomposed volcanic rock reaching down two hundred feet and more, carrying either forest, fruit or field. That soil is porous, which means that wells are no difficulty the whole island over. Alone in a sense it is. Sydney to the West is nine hundred miles away, Lord Howe is five hundred, naught but New Zealand four hundred miles off between it and the Antarctic, New Caledonia to the North rises six hundred miles away, and the Kermadecs to the East are distant a full eight hundred. And yet, though so cut off, it throbs night and day continuously with the heartbeats of the world. For here is to be found one of the Cable Stations of the All Red Route. At Anson Bay three great cables come ashore : from far off Bamfield on Canadian soil, from Brisbane in Australia, from Auckland in New Zealand. Who could feel alone, cut off, with such connections, conscious that a continuous stream of the sayings and doings of the world is passing through the isle. To know and be known is easy upon Norfolk, be the distance ever so great. At the Cable Station the news of the daily world is yours, an hour will put you in touch with your own flesh and blood be they where they may.

It has some small dependencies, most not worthy of a name, but two stand out preeminent upon the south coast; first Nepean, of coral sandstone, a few acres in extent, seemingly an original part of the reef nearby and but a quarter mile from shore; Phillip (of Basalt) nigh three miles in the offing. The latter rises nine hundred feet above the sea, and is one and one-half miles long, with a width of three-quarters of a mile. Its colors are many and vivid, made up as it is with brilliantly colored blue, red, yellow, and brown volcanic rock, but its surface is bare of foliage. Man placed goats, pigs and rabbits thereon and these have long since cleared the land. It is the home, in their nesting season, of countless seabirds, gannet, bos’n birds, and wide-awakes; their eggs pilfered by the islanders, their screeching pandemonium.

---

<sup>279</sup> According to Wikipedia, [Norfolk Island](#) was first settled by East Polynesian seafarers either from the Kermadec Islands north of New Zealand or from the North Island of New Zealand. They arrived in the fourteenth or fifteenth century, and survived for several generations before disappearing.

<sup>280</sup> Cook named the island after [Mary Howard, Duchess of Norfolk \(c. 1712 - 1773\)](#).

## Its Coastline

The coastline of Norfolk is forbidding, only a few breaks in the cliff which runs from two hundred to four hundred feet in height, and these breaks affording but poorest approach. Herein lies the chief difficulty of the Islanders. To get on and off the island is always more or less a risk. It is impossible at times to either land or receive cargo. It has been and may yet again be so that the steamer with passengers and mail has to pass on to the New Hebrides, to hope for a more favorable opportunity upon return. There are no harbors. The wind decides where the ship must lie at anchor, a safe and oft long distance, even two miles, from the shore. Whale boats, locally built, with Norfolkers at the oars and stern, must carry passengers to the landings. There is no possible spot on the north coast. When Kingston in the South cannot serve, then Cascade on the East must be used; when neither are available through stress of weather, they have of late made use of Headstone on the West, but here there are only steps leading down the cliff, with but a bridle path thereto; general cargo is hopeless at present, and must wait for a crane to haul goods up the cliff face from the landing. A tiny jetty has been made at both the former places, but real protection thereby is a stretch of the imagination, save in the calmest weather.

## Its People

Kingston is the metropolis, a wreck of its original high estate, ruins everywhere : but it still has Government House and the Post Office, the Doctor and the various officers of administration. Stores — these, half a dozen in number, are scattered about the island. For visitors there is no hotel; accommodation has to be found in various farm houses who welcome paying guests. But these are not a dozen in number, and at summer seasons, new arrivals, unless they have taken time by the forelock, <sup>281</sup> have to take their chance at finding a bed and seat at table.

The population is seven hundred, of which four hundred are descendants of the Pitcairners. There are no natives, and English, slow and deliberate, is the common language, though a weird mixture of Tahitian and our tongue is heard from some. It is far from pretty to the ear, and profusely ungrammatical.

## A Bird's Eye View

The island is a mass of rolling hills and vales. Where clearing has not been made, and rich green pasture appear with cattle browsing, or the maize and sweet potato growing, there is forest with the stately Norfolk Pine preeminent. Cook's use for it as masts was not found feasible, but for shingles and palings it is excellent. It makes fine studs and rafters and comes in handily for both boat planking and scantling. It was of Norfolk Island pine that the sloop "The Norfolk", in which Bass and Flinders made their adventurous trip in 1798, was built at Kingston. In it they settled the status of Van Diemen's Land as an Island and not, as was supposed, a part of the Southern Continent.

---

<sup>281</sup> Take time by the forelock: act quickly and decisively; not let slip an opportunity.

For a bird's eye view I climbed Mount Pitt, the only true hill on the island. It is but 1040 feet high but quite sufficient for the purpose. All around, the sea; how clearly then does one realize the solitariness of this pinnacle of land rising out of the deep. Below, the scattered farm houses, each in their own picturesque setting of open field and coppice. Parts still of pure forest, white oak and maple, with pines of Noah's Ark predominant. The banyan also finds a home here and the health-giving eucalyptus. The forty miles of red roads laid out by the Royal Engineers, and made mostly by forced convict labour, winding in and out among the vales or climbing hills. The horses, never shod, need to be sturdy beasts, for their work seems largely on the collar. Giant ferns and palms grow thick in the untamed valleys, down which rivulets trickle, making their way to the sea. There is no room for rivers. And everywhere one sees and comes across boulders of all sizes. They lie scattered on the hillsides, in the vales and by the roadside. They are the cores of the mighty rocks upheaved by volcanic action, the rest of the huge mass has decomposed and become rich soil. These have defied Time, and most of them look good for Eternity. You pass up and down through the wild tobacco plant, oft rising to ten feet and more, with sturdy stem and branches. It is everywhere, the whole land over, a weed which in convict days was attempted to be cut down, thus to deny even this poor privilege of an apology for the real article to the tobacco hungering Prisoners of the Crown. Here too is seen the coffee plant, much of it running wild, but some still under cultivation, spoken of as every whit, when cared for, as good as Javan. It was a real industry once, but energy has slackened. Lemon and orange trees stud the land, their golden fruit in season. Of other fruits, Norfolk sees full prodigal limes, peaches, mummy apple, figs, and grapes, guava and pomegranate tree, pineapple and banana groves, passion fruit and strawberries.

And bird life everywhere. The parrot with its flaming red and richest purple; the guava bird with neck and skull of deep cream; the brilliant kingfisher; bronze-winged doves; a wee robin, red breasted of course, but with snow white skull cap; the starling ever ready of theft; silver eyes; and wrens most trustful; fantails dancing round one's feet and inviting friendship; quail and pheasant; with snipe and mutton birds as periodical visitors to give variety to epicures.

And best of finds to those who have endured on other South Sea Isles, few flies, mosquitos rarer, no snakes or reptiles or poisonous insect, and malaria unknown. True, there are other weeds at that, many of them introduced by well-meaning folk ignorant of the danger. There is the water hyacinth brought for its beauty by garden lovers, placed in a rivulet and run wild from that day; the locally called Cascade onion is deadly poison to cattle; the acacia; the red salvia, which is known as wild mint; the poison berry; the lantana, also introduced for garden beautification, this one from New Caledonia, as bad and gross a weed as any; an innocent clover too, brought in along with horse feed in the Long Ago, which runs rampant in the paddocks, fair feed at one season, but later developing a prickly surface which works havoc with throats and lays out many a chicken; and the curse of present day Australia, the prickly pear. Luckily its continental companions, the Scotch thistle and the rabbit, have not accompanied it, save the latter on Phillip Island, safe always and now well-nigh extinct of inanition.<sup>282</sup> The latter two's introduction into Australia has been traced to their source; the prickly pear's beginner is not so well known and as a specimen of mistaken energy may be profitable to contemplate as I did upon that mountain top.

Nearly a century ago, the first holder of a big Station on the Gwydir in New South Wales brought a pear plant from Scone, his birthplace in fair Scotland, where he had noted the plant on a visit Home. It took his fancy either as an improvement to the scenery or a useful and cheap fence for paddocks. The first plant brought to Keera Station, despite every care, curled up and died. But such pioneers as he were used to setbacks. Another plant was sent for and this time it thrived exceedingly and spread.

---

<sup>282</sup> Inanition: the exhausted condition that results from lack of food and water.

The Station owner now began to suspect danger and ordered the pear to be dug up and destroyed. Those who dug the weed up threw all into the Gwydir River. That set up the pear for life. It spread along the river flats and laid hold of the district far wide. It swarmed over pastoral lands, good country and poor alike, it climbed mountains and defied man to uproot it. Over seven million acres of New South Wales alone have been subjugated, and it is still spreading at the rate of a million acres a year throughout the land. The guilty party upon Norfolk is unknown and happily, for some unexplainable reason, it is infinitely less aggressive, but it is a source of danger for all that.

Wild flowers are few, but this is made up by the residents whose gardens are filled with the flowers of their Homeland, the rose preeminent.

Such is Norfolk Island, and despite the weeds (ominous for its future welfare unless the Islanders bestir themselves far more earnestly than at present), with never biting cold, nor tropic blistering heat, can it be wondered at that those who dwell thereon are well content. Their wants are few, and constitutionally they lack ambition, for which their Tahitian blood accounts for much. Their forefathers of that ilk passed their days in feasts and dancing. Norfolkers take delight in picnics, socials, dances and “the pictures”. Rawson Hill, an old time convict storehouse at Longridge, on the road from Kingston to The Cable Station, is the scene of all indoor revelry. The name is that of one whom they would keep in lasting memory, Admiral Sir Harry Rawson,<sup>283</sup> Governor of New South Wales, who took throughout his term of office, a deep and lively interest in their affairs. There are football teams and cricket clubs, a Rifle Club and annual athletic sports, tennis grounds and croquet lawns and a ten hole golf links. Community labour lately laid out the Recreation Park at Kingston. Willows and wattle trees were obtained from the distant Commonwealth nurseries at Canberra, the future capital of Australia, now slowly rising; the stately Norfolk Pines completing the arboreal fence. Each tree has its individual owner, who is responsible for its growth and welfare, a nameplate ensuring his lasting remembrance. They are simple folk, these gentle spoken islanders, and have much time on their hands for details.

### Internal Affairs

Their road work, too, is a call on every man. From the ages of twenty-one to fifty-five, every male islander, be he Norfolker or settler or even visitor of six months’ standing, has to give fifteen days labour in repairing the roads and cutting brush. He must work or he must pay for substitute. The Executive Council settles what has to be done, and a Notice Board on the old convict Barracks wall tells off each man to his job, he bringing his own tools.

Prohibition rules, though as elsewhere, one cannot fail to see that there is leakage somewhere. Strictly speaking, liquor is not permitted to enter the island save for medicinal purposes, which means a permit from the doctor. But men’s ailments are strangely many and varied under such circumstances. Before a doctor came on the scene, the Chaplain was the all important party; he must have been a hard one to circumvent by thirsty souls.

The revenue is but slight, the outlay considerable, met by the taxpayers of Australia. Small though the island is, and inhabitants but few, yet there has to be Administrator and Secretary, Registrar, Auditor and Postmaster, Medical Officer, School Teachers, and the well nigh sinecure of Constable. The latter is today a fine specimen of Australian manhood, booted and spurred, who looks very far

---

<sup>283</sup> [Harry Holdsworth Rawson \(1843 –1910\)](#)

from being overworked and well worthy of the higher title, Chief of Police, but alas! it cannot be, for he is The Force. The Customs, too, call for gold buttons and a salary. There is Forest Ranger and an official who bears the curious title of Tidewaiter and who comes into play when ships call. The Administrator is now also Chief Magistrate, and there is Court Room with Jury Box and Prisoner's dock, but from the yearly returns he seems to get dead rusty in his law : if there are two dozen Blue Papers in a year the whole island sits up, takes due notice, and asks why this wickedness abroad. For Religion has a mighty hold. From Adams' day in far off Pitcairn, with his Bible and his Prayer Book, it has become engrained. All seems done "in prayer", as the old folks quaintly tell you. Does death come to any, such visitation silences the whole community for days. It is a community affair. Some make the coffin, others dig the grave, all possible attend the funeral. The Norfolkers are but one family, and others who have settled among them fall to the same feeling. Yet the divisions of Christendom are here as elsewhere. There are ardent Anglicans and Methodists, Seventh Day Adventists and a peculiar sect called Evangelist. The Roman finds no place here. The man who professes nothing has to walk right warily.

The cost of living is in keeping with all else. Very little money circulates. It comes chiefly from the visitors of whom the five weekly steamer from Sydney brings a dozen to twenty at each call. They come for rest or from curiosity and liven things up considerably during their stay. Accommodation is provided, lodging and sound board, at thirty shillings a week. You may be so extravagant as to stay where forty shillings is charged. That means that for under one hundred pounds you can be well housed and fed for a full year. Do you desire to rent a home, you can have a charming one, a farm house built of Norfolk pine, from four to six rooms, with cooking range in kitchen, of ample size the whole place, a lovely garden and acreage full of fruit thrown in, for fifteen shillings a week. Furnished and use of linen is a few shillings more. They run as low as twelve and sixpence a week. Little wonder that the island attracts the moderately endowed who form the major portion of the 'outlander' permanents. The wonder is that the island has not been swamped.

They speak of it upon the Southern Continent as a Health Resort, and given better shipping facilities, it doubtless would be a Mecca for the invalid. Its vital statistics are so eloquent of health that neither Cottage Hospital nor trained nurse is found thereon. For serious operation there is nothing ready. It is Sydney for these, or chance of local recovery. Looking up a chance Annual Report, I read of Births 21, Deaths 6, and a Medical Officer's Report of but three lines. Happy official he who had but to write : (a) The health of the people is remarkably good. (b) One lady had an attack of mumps. (c) Colds were fewer than in previous years. A full year's work thus summarized. He may well be the envy of his hard worked profession.

The climate is all that is to be desired. In the month of September it may reach its lowest temperature, 47 degrees, and in January it may touch 89 degrees. The winds blow steadily and the rainfall may reach 47 inches or a little more. Droughts have been known, and sometimes the outside edge of a cyclone strikes the isle. There was one of the latter as lately as February 1923 which did much damage to both homes and the aged stately pine. The community's Playhouse got it hard, the iron roof and many a sturdy rafter went hurtling far. But such visitations are rare.

### Place Names

The place names have their tale. It was Lieutenant King who brought the first contingent of convicts. King's Town was the site he chose, and Kingston it will be for aye. The apology for bay and harbour he named after that magnificent and safe one he had sailed from — Sydney. The large island in the

offing he named after his superior officer — Phillip. He who had piloted that convict ship of his H.M.S. Supply, and had discovered Lord Howe upon the way, his name here, too, in another so-called bay, but Ball Bay like the rest of them offers no real protection from the sea. The great navigators and fighting heroes of that day are commemorated in Point Vincent,<sup>284</sup> Point Howe and Anson Bay.<sup>285</sup> Its discoverer finds his memorial in a rock off the northern coast; Cook's and Crown seal rock, the former of which whale boats with full sail on can easily sail through. Within the isle but one name was bestowed, a name that in those far off days dominated the Empire that then was, even as the rising mound dominates the little isle itself, Mount Pitt, than which there seemed to be naught more fitting.

Then it was all virgin ground, now every acre has its owner. But the changes have been various since 1788; perhaps no part of the Empire has had quite so unique an experience. They call for separate treatment, and will have it, but here they are :

1788 to 1814	First Convict Settlement
1814 to 1825	Island uninhabited
1825 to 1855	Second Convict Settlement
1856	Coming of the Pitcairners

And the administration is as variable :

1788 to 1844	Under control of New South Wales
1844 to 1856	Under control of Tasmania
1856 to 1914	Crown colony under the Governor of New South Wales
1914	Under control of the Commonwealth of Australia

The real history of Norfolk Island has yet to be written; from reform to solitude; from solitude to despair; from despair to Paradise; then the long rule of an unsophisticated people; today a Tourist Resort, and this Writer one of them.

## THE ISLAND OF DESPAIR (II) : THE CONVICT

### The First Settlement

It is a long cry back to 1788 when Lieutenant King in H.M.S. Supply brought the first batch of the condemned from Sydney, and landed upon Norfolk Island. The whole party were but twenty-one in number, of which fifteen were convicts, both men and women. Captain Phillip in distant Sydney had an eye to the future of his own large family in thus starting a settlement; this beyond the explicit instructions he had been given at Home to occupy the isle as well as the mainland for fear of its being occupied by the subjects of any other European Power. How close to losing it we were, is to be seen in the fact that whilst Phillip's ships were riding at anchor in Botany Bay after their long sail from Home, the French navigator Laperouse sailed in. He innocently told of his having cast anchor off the strange isle a few weeks previously but had been unable to land owing to the heavy surf. Phillip was quick to perceive that the land round the Parramatta could never support such a crowd as were on his hands. Captain Cook who first saw Norfolk (1774) had reported on the great possibilities of the island, with its rich soil and wild verdure, and naturally Phillip was keen to get things underway and thus supplement the meagre food supplies at Port Jackson. These convicts therefore were not to be mere jailbirds kept behind iron bars; they were to be farmers with largest possible measure of freedom, even as was proposed to be done in New South Wales where by worthy conduct a convict was to be freed, and land given him where he could settle down and work out his Term, known throughout the period of convictism as Emancipists and right well did this little band fall to.

In the man set over them they found one, humane but firm, a leader and an inspirer to effort. No easy task lay ahead, for the island was as Cook stated, a thicket, and clearing was no easy task with its precipitous hillsides and deep narrow vales. But the soil was there, and the climate too. And King was an enthusiast on fruits and flowers. There is still a portion of his Cascade Reserve called The Small Garden, where are to be seen the ruins of the homes of the freed convicts he set there to watch and tend his experiments with orchard and garden. There is yet other in the centre known as Roger's Farm, and other behind Ball Bay. These were real botanical areas set aside by men keen in the pursuit of what the island could produce and what exotic trees and shrubs could be acclimatized. The result of their painstaking intelligence is to be seen today, and all possible credit is surely due them. Rough roads were made to the clearings. The lowest acreage allotted to the convicts was ten, some ran to thirty. Soon the farmer began to see results. Farm and garden each yielded up its toll. There was enough and to spare for the pioneers. Then Phillip sent further batches, and bore off on the ship's return of the super-abundance, to eke out the shortness at his base. Animals too were landed on the isle, and finding abundant pasture increased amazingly. Pigs too were many, the maize their food; salted down, they were a godsend to Sydney's crowd.

Ere six years had passed there were over one thousand men and women upon Norfolk, whose clearings and stone houses studded the land. There were setbacks. Caterpillars appeared and threatened the harvests; blight attacked the fruit trees; a drought occurred and men had to dig deep for water to save their cattle and themselves. A fierce hurricane swept the little isle and left its mark, the bird life was not always a blessing. And there was the sea, ever greedy for its toll. The landing at Kingston was ever dangerous. No pier then as later. Boats upset and many a convict ne'er set his foot on the shore he had been forced to come so far to reach. The good ship "Sirius", which had been the flagship of the gallant Phillip from Home, ended its career on Kingston's rock-bound bay in 1790. It had aboard nigh three hundred convict settlers; the surf this time however missed its quota.

The good work done by King won rightly his promotion, and after a spell at Home whilst Major Ross<sup>286</sup> ruled the island, he was appointed the first Lieutenant Governor of Norfolk. The lines on which he had worked had been a great success. His, like his Superior's, was the policy of Reform. Among so many, there must needs be a few black sheep develop on the isle. Some rebelled, there was one attempt at open mutiny, but King was the master when he wished to be. Those years as they glided busily by were as memorable in the history of Norfolk for Content and Hope as the later stage of convictism was to be for Tragedy and Despair. The Governor, the Chaplain, the Surgeon and the Staff were located in Kingston, but the great penal barracks were non-existent; the island itself with its rock-bound coast was the jail yard, its inmates busy on the bountiful soil within.

King's useful term of service ended in 1800 when Major Foveaux<sup>287</sup> took over the reins, who was succeeded four years later by Captain Piper,<sup>288</sup> when suddenly the end came. Tasmania had become a penal settlement and the authorities wanted farmers used to far-from-Home conditions to open up that island to feed its new population. Their greedy eyes had noted King's wonderful success. They would remove his trained workers *en bloc* to repeat the work in the far south. They bolstered up their order by saying that Norfolk's harborage was impossible, that the island had served its day : Sydney was on its feet and Tasmania was not. That was in 1804. It took ten full years to carry out that order. From the very first it was stoutly opposed, and King, who was now at Sydney as Governor of New South Wales, led the protest. He had been throughout an ardent believer in the great future awaiting the island. He affirmed that not one but six thousand souls could be easily supported upon it. Now all was to be abandoned. At first it was not so much an order as a tempting offer to the emancipated Norfolk. They were not to suffer in any way by the change. But they had learned to love their island home. Suggestion fell flat. Then at last came the compulsory order and the ships to carry them off, from Governor to infant. Everything movable went, only livestock that had gone wild escaped. There was no intention however to relinquish Britain's rights on the island; its future was in abeyance.

### An Interregnum

For full ten years Norfolk was silent save for screech of seabirds, as it had been for untold centuries ere Cook set foot upon it. But the forest grew again, the weeds got a fresh start, and untold tons of fruit fell and went to rot. Occasionally a whaling ship would call for water and to hunt the wild pigs and goats for fresh meat as a change in diet. Today there are to be seen relics of those Reforming days. Here is a chimney of stone, covered with clinging ivy, standing alone in the paddock of some Norfolk today. It was a convict's home. Here is a ruin of another cosy home; you can walk in and trace the rooms now open to the sky. They built stolidly in those days; the reef supplied them, even as it was to supply a later stage with rock for a far deadlier purpose.

The first convict phase was ended. King especially deserves our praise. Nature was not defiled by man's presence as later 'twas to be.

## Dark Days

Now come we to dark times, to Despair so deep and loud that it re-echoed o'er sea and land till the old Home itself heard it at long last, and hearing had to heed and put an end thereto. It saved some, but what of those who had endured and at length passed miserably, yet counting death a joy, so to escape their agony. They were of the scum of the earth of their day, 'tis true; they had to be broken or they would break, this also is true, but inhumanity should have had no place. The fiendish delight of inflicting torture which filled the hearts of so many in authority from the highest grades to the lowest is a blot that not even Time can righteously eliminate. Their name goes down the ages of infamy, and justly so. The Commandants during that reign of terror are amongst those to be read by all on a tablet within the government offices at Kingston. The list gives those at the head of affairs from 1825 to 1855 in the following order : Captains Turton, Donaldson, Wright, Hunt, Wakefield, Lieutenant Colonel Morisset, Majors Anderson and Ryan.<sup>289</sup> The latter half were responsible for the worst phases of that dark period.

To stand amid the ruins and walk the quads where the leg-ironed convicts dragged out their wretched lives is to create a longing that Justice may yet have avenged itself upon those cruel hands. Those crumbled cells, those lofty loop-holed walls, those barracks where the lesser criminals were herded seem to cry out to you. They heard the groans and saw the agonies of men for thirty years; if only they could speak we should know the truths and facts which Parliamentary Papers can never give, nor Commissions get at. You can read books thereon, you can hear tales spun far away, but to wander alone amid the ruins is to know. Perhaps it were best to pull those ruins down, to leave not one Stone of remembrance, and yet they have their use. They are a silent witness to the abuse of Power, a warning to him who looks thereon of what man, free or captive — without balance — is capable of, and bring home to him the fact, as nothing as well else can, that out of such appalling misery came victory at last. Transportation and its elder sister Slavery, each in turn have been banished forever from the Empire. Men saw at last the wickedness of each, and seeing, acted.

The isle had rested from man's handiwork since 1814, when in 1825 it was decided to use it once again for its former purpose. But with a difference. The original convicts were as we have seen, practically free. Now the scum of the other penal settlements in New South Wales and Tasmania were to be herded upon Norfolk : Class 3 "Incorrigibles", with whom ordinary treatment had failed. The discipline was to be severe, and it had need to be. For a time there was no brutality. There was much to be done. It was under the supervision of a detachment of the Royal Engineers that the many buildings rose. There is still to be seen their office. It is still inhabited, and over its portal is cut deep in stone "Office of the Royal Engineers". Now rose close to the sea the three great stockades with walls twelve and, in portions, sixteen feet in height, the jails proper, within which were the cells, all radiating from a centre as spokes from a hub. Back from the sea, close under the rising ground, the Barracks were erected, three storied buildings enclosed with like high and massive walls, round towers at the corners and the gates, loop-holed for rifle fire in emergency. Two of these, between them capable of holding a thousand convicts. Soldiers' quarters within those walls.

Close to, yet other high-walled square held store houses, Church and offices. In line with these, each in its own little plot, the quarters of the officials were erected, ten of them, where the surgeon, the chaplain and others in high command were housed. This bore and bears today the name of "Quality Row". The common herd were kept at respectful distance from the Quality; they passed it only for

<sup>289</sup> [Richard Turton](#). [Vance Young Donaldson \(born 1791\)](#). [Thomas Edward Wright](#). [Robert Hunt](#). [Joseph Wakefield](#). [James Thomas Morisset \(1780–1852\)](#). [Joseph Anderson \(1790–1877\)](#). [Thomas Ryan \(1790-1846\)](#).

road work beyond, or in their last journey when ready to be cast into a nameless grave. Today that Row still has some habitable houses. The Doctor and the Chaplain still find their homes there, but most are roofless or in even worse ruin. They came in very handily when the Pitcairners arrived.

Government House was erected on a knoll nearer the sea, overlooking the whole settlement. It still has many a barred window, as did all the homes in those days, and round the double court at the rear were the quarters for the military guard, with walls loop-holed for gun fire. Close to the jail yards and the sea was the main hospital, and in front of it the jetty was built. It has had fierce buffeting since that day, but the Royal Engineers knew their business and the labour of the convicts was not in vain. Close to was the treadmill, its site one of the whale companies' boat sheds today. The gallows too faced the pier, a gruesome welcome and a warning to every new arrival. Lumber yards and workshops, lime kilns and salt works, flour mills and granaries also rose. The windmill proper has disappeared, its solid base alone remaining, its upper works made a bonfire of by young Pitcairners to see at least one healthy blaze in their lives. The mill worked by water power is a ruin, but the reservoir behind, and the little stream, still do their part, ready as ever, but man's need of them has passed.

Those granaries on the summit of a hill behind the Barracks, and well worth the climb to see (by reason of a glorious view of the ruined township below, with the reef beyond and pink clad Phillip Island), have defied Time and negligence. There are nine of them, pits lined with rock and cement twenty feet deep, eleven feet in diameter, dug deep in a small level space upon the top; their bottle-shaped necks four feet across lead up to the surface where a concrete dome rises gently above ground. Easy of ingress or egress, these necks remind one of manholes in a city's sewer. All this work, the whole flat over, was of limestone rock, and the coppings, the arches, and all entrances were faced with well-worked stone. You can see much of it today.

### **A Famous Son of Norfolk**

High up on a knoll back of the ruins of the hospital and overlooking the jail stockades is a house, still inhabited, where a great Australian<sup>290</sup> was born. His infant and childhood days spent where men were as slaves, his life was spent in the unceasing struggle for the full liberty of his fellow free citizens in the fast developing Southern Continent. Dr. Wentworth<sup>291</sup> was one of the colonial assistant surgeons out from Home to tend convict and free. His post for some years was on Norfolk Island where he added to his duties that of Superintendent of convicts. Here his famous son, William Charles Wentworth, was born. His father, recalled to Sydney, the son (after forming one of the famous party who first mastered the Blue Mountains) went Home for his education, and after a course at Cambridge University was called to the Bar, with a view to practising that profession in Sydney. But reform consumed him. Before he left England he struck hard. Upon his return he quickly took a lead in public affairs and for over thirty years was a great power in the land. He was the first Australian politician of distinction. He fought for Representative Government, for Trial by Jury, and for the Freedom of the Press. He conducted his own newspaper through which he taught the people and wielded an immense influence. A University man himself, he was the initiator of the movement for the founding of Sydney University, from which those at Melbourne, Adelaide, Tasmania, Brisbane and Perth have

---

<sup>290</sup> [William Charles Wentworth \(1790–1872\)](#)

<sup>291</sup> [D'Arcy Wentworth \(1762–1827\)](#)

sprung. His home <sup>292</sup> across the Bay at Sydney with its lovely gardens is an heirloom for the people, a Mecca to which all good Australians sometime or other wend their way to pay their mead of tribute.

### The Three Stations

Kingston was not the only hive of work. The number of convicts called for other housings and two spots were chosen, Longridge on the top of the ridge running east, an easy distance from the main base, and Cascade, well across the island to the north. In both places much of what was at Kingston was repeated, the ruins of which, in lesser measure, remain. There is today a pretty cottage still inhabited, hard by the ruins of Longridge, wherein one of the nobility of the British Isles long dwelt. It was pointed out to me as the residence of the Earl of Limerick, <sup>293</sup> grandfather of the present Earl, <sup>294</sup> who was of those Irish Patriots transported to New South Wales for rebellion in the closing years of the 18<sup>th</sup> Century and who, largely free of movement as ‘a gentleman convict’ in that far off penal settlement, was (because of his social status) allowed to select his dwelling place, and joined those on Norfolk Island, a far more picturesque spot than Sydney. His Countess followed him into exile and her body lies in the little cemetery hard by Kingston. Their heir <sup>295</sup> was left at Home under guardians, but others of the family were born here.

Now more roads were made opening up the whole land and none have bettered the choice in any instance. The main road leading up to Longridge and far beyond was the only one attempted on Macadam’s <sup>296</sup> lines with the result that it is the best of all today, the rest after heavy rain leaving much to be desired. For in truth it must be said that one faces miry <sup>297</sup> mud in winter and choking dust in summer. It was from Longridge onward that convict labour set out what is the Great Show of the isle, an avenue of Norfolk Pines, near one and a half miles long, the trees set thirty feet apart on either side of the road, every one today a noble specimen, their average height one hundred and thirty feet. They were planted by forced labour close on a century ago; they look set for Eternity, their symmetry perfect, the long avenue a perpetual delight to roam along.

Whilst all this building was going on, and even beautification thought of, agriculture was pursued with grim determination. There were many mouths to feed, and the whole matter was placed under the care of a specially assigned officer, the Superintendent of Agriculture, to whom the present day Norfolk owes much.

### The Darkest Days

This then was Norfolk Island from 1825 to 1855 : and at the height of things, there were nigh three times its present population. At Kingston there were nine hundred convicts, at Longridge three hundred and fifty, at Cascade six hundred, besides the officials and detachments of soldiers required to control and guard. It took more than one of the Commandants to see all this work through, rigid

discipline the rule, the convicts working in gangs, oft leg-ironed, the lash for the disobedient, the dungeon for the refractory and the mutinous. The work finished, there came a weak hand at the helm. Then pandemonium reigned. Things were not going well on Norfolk. The men were out of hand. The Authorities on the Southern Continent saw that something had to be done. It certainly needed a strong hand, but not a band of brutes as now ensued. Discipline was restored, none can find fault with that, but repression was fortified with premeditated cruelty. The ingenuity displayed in discovering new forms of torture for even trivial offences gives one the impression that fiends, not human beings ruled. There is plenty of evidence for those who would seek to know. One does not have to go to Fiction. There is the Report of a Select Committee on Transportation (1838) printed by order of the House of Commons : the Report of the House of Lords (1847) : the Report from R. P. Stewart specially sent in 1846 to report on Norfolk Island : and the weighty evidence in the correspondence relating to the dismissal of Rev. T. Rogers <sup>298</sup> from his Chaplaincy at the Island. This latter was for private circulation only. It were well had he made it public. I would fain see a book, but well nigh unattainable, “Tales of the Isle of Death” by Price Warung <sup>299</sup> : and I have heard much on the Island of another book with the title “Twenty Straws” <sup>300</sup> written by one who was amongst the victims, but which was suppressed. What tends to confirm one’s belief in the iniquity of things here perpetrated is the fact that all official records were ordered to be burned before final evacuation. We really know but the fringe of things, yet such is enough to disgust.

Lest some should think this denunciation of the Past to be far fetched, and that things were not so fiendish after all, let us take but one instance referred to in the witness of the Chaplain. Leaving out such tortures as “the spread-eagle” and “the stretcher”, to which the well-known treadmill was but play time, consider what “the bit and bridle” meant. It was a miniature of that used for the horse. In place of the steel bit was a piece of wood of the same length, but near two inches broad. In the centre there was a small hole. The wood was made fast by leather straps and buckled to the side lines of the head harness. To breathe through this small aperture was an effort at every in and out take, the compression of the lungs an agony, the sound resembling a feeble whistle, the man struggling for breath, half strangled. Just before it would be too late, the victim was released.

Such deeds would not “down”. At last, let us give credit where credit is due; the reports of inhuman treatment reached sympathetic ears, and the Roman Catholic Bishop of Tasmania <sup>301</sup> led the van in a determined attack. His was firsthand information for there had been priests from his diocese stationed on the island. A book from the pen of one of them appeared later, but, like “Twenty Straws”, is not nowadays to be easily lighted upon. The island had been transferred in 1844 from New South Wales to Tasmania, and the Authorities there were responsible. Such an outcry was raised that something had to be done. Bad as things were at Port Arthur in Tasmania, they were infinitely worse on Norfolk. Convicts had murdered one another by consent that the murderer might follow his glad victim, and win his reprieve by death. Those ordered thither begged hard to be hanged rather than be sent. There was but one thing to be done, to wipe Norfolk Island as a penal settlement off the map. In 1855 it was abandoned, but by that time there were but three hundred convicts left. Of this small company a corporal’s guard of ten were left to watch over the many buildings, the stores, the cattle and the farms,

till again some definite conclusion as to these should be come to. It is pleasing to be told that so well did these acquit themselves that when, their service ended, they reached Tasmania, they were freed, all but one who doubting the possible good fortune that might await them, decamped on landing, was recaptured and had to serve out his full term, with additional for his break for liberty.

Norfolk once more lay dormant, the blight had passed. The lovely isle awaited its next phase which was The Coming of the Pitcairners.

## THE ISLAND OF DESPAIR (III) : THE COMING OF THE PITCAIRNERS <sup>302</sup>

It was in 1856 that the Pitcairners landed upon Norfolk Island. It is necessary to glance back some years to understand the title and the reason of their coming. Those Pitcairners were and are the descendants of certain men who took part in the famous mutiny of *The Bounty*. The mutiny itself I have already slightly touched upon, somewhat imperfectly, in dealing with “White Autocrats” of the South Seas, and to those who read more fully as has been my privilege since reaching cultured parts once more, there is nothing better than Judge McFarland’s book <sup>303</sup> thereon; a book, however, difficult to lay one’s hands on, which summarized the many previous ones by Lieutenant Bligh himself, Sir John Barrow, Lady Belcher, Mr. Brodie and the Rev. T. B. Murray. But there are certain matters leading up to, and affecting, Norfolk Island which must needs be dealt with. Those of the twenty-five involved in the mutiny, some of them innocently, who, after returning to Tahiti, elected to seek safety upon Pitcairn’s Island were nine in number. Their names : Christian, Adams, Young, McCoy, Quintal, Mills, Williams, Martin and Brown. They took with them four Tahitian men. Their names : Talolo, Niau, Manari and Timua : also from one of the Austral group of islands south of Tahiti, where they had made effort of settlement prior to their return to Tahiti, three Tubuaians; their names : Oohu, Titahiti and a young Chief Taroa Meiva. Tahitian women accompanied them to the number of twelve. Their names : Mauatua, Mataoha, Wahinetua, Te Walua, Opuille, Fahutu, Te Lahu, Tohimata, Tohaiti, Malewa, Tohalomate and Te’o with her infant, later called Sarah. The *Bounty* therefore bore off to Pitcairn twenty-nine souls. <sup>304</sup>

Of the white men, though Young was the only Naval officer, being one of the midshipmen, it was Christian who was the acknowledged leader and who, till his death (or disappearance), commanded the respect and ready obedience of all. His post on the *Bounty* had been Master’s mate, the Master being the second in command. He had a tall, commanding figure and was of unusual strength. He was born in Cumberland and was an adept in all many exercises. He affirmed from first to last that he alone was responsible for the Mutiny and that none should be condemned for it but he. His brother, who was a professor at Cambridge University and a legal writer of eminence, stood up to the last for Fletcher Christian’s action, pointing out tyranny and constant abuse of power of Bligh. Adams, whose name on the books was Alexander Smith, but who for some unknown reason chose to change his name in 1814, twenty-three years after his fatal step, was the son of a Thames lighterman and had taught himself to read and write before entering the Navy. On the *Bounty* he was one of the seamen. Young, as a midshipman, was far above the rest in education and ranked amongst the band after the above two forceful characters. He was a devoted admirer of Christian from the *Bounty*’s first setting out, and threw in his lot with the mutineer. McCoy, Quintal, Martin and Williams were seamen, Mills was gunner’s mate, and Brown, the gardener, who was to tend the breadfruit trees to be carried from Tahiti to the West Indies.

### Pitcairn As a Refuge

Christian knew of the book being onboard wherein was described the “Swallow’s” (Captain Carteret) voyage in the South Seas a few years previously, and noted Pitcairn’s isolation. He steered for it, but

<sup>302</sup> See also *Pitcairn Island II* and *Pitcairn Island III* in Part XIII, *Roamings in the Great South Sea*.

<sup>303</sup> [Mutiny in the "Bounty!" and Story of the Pitcairn Islanders](#) by Alfred McFarland (J.J. Moore, Sydney, 1884, 240 pp.)

<sup>304</sup> If Titahiti and Taroa Meiva are the same person, then there were 28 souls. The spelling of the Tahitian and Tubuaian names differs considerably among sources.

failed to find it for several days owing to its longitude being wrongly noted in the book. They well nigh gave up, when at last that twin pinnacle of rock, verdure covered, appeared on the horizon. After stripping the *Bounty*, they first burned, then sunk the ship, and with it the guns.

Christian divided the island into nine portions and the native men had to work under their orders. The fatal quarrels began by Williams seizing a native's wife upon the death of his own by her falling off the cliff. Williams and Martin, Mills and Brown were killed by the natives, leaving no issue. Christian was the next victim, killed, so Adams said, while working in his plantation, yet always hesitated when pressed for details. It was said by the first generation that growing desperate upon fully realizing what his act had cost him and others, he cast himself off the rocks. Others said that he fell in a struggle with Adams, who sought to restrain him from giving himself up to a vessel seen on the horizon, which veered off and was seen no more. Again it is stoutly affirmed that he got away from the island unbeknown to his fellows (though possibly not Adams) and was seen both in the south of England and in Cumberland. But he left children; his eldest, a son, the first babe born on Pitcairn, he named "Thursday October" to keep in remembrance both day and month.

Now the women who had been widowed turned upon the native men and slew them, all but one whom Young shot. These newly made widows in their turn sought to leave an island running with blood. They tried to get away in the *Bounty's* best boat, but it was in too poor a condition. Death, not violent, released three of them, however, ere long. McCoy, who had been employed in a distillery at Home, made a concoction from the *Ti* plant, and with it both he and Quintal went wild, McCoy in his delirium throwing himself over the cliff. Quintal became morose and so dangerous to the few left that Young or Adams shot him. In 1800 Young died of asthma, which left Adams alone, with eight women and nineteen children. These bore the following names — Christian, Adams, Young, McCoy, Quintal.

### Isolation Ends

In 1823 the ship *Cyprus* of London called in for water and two of its seamen were allowed to remain by their Captain. Their names : Buffett and Evans. The former was fairly well educated, and the islanders, with Adams at their head, being keen to have their children taught beyond Adams' ability now that Young had died, begged him to become Teacher, and besought the Captain to grant leave. These two then were received into the little community. Buffett married a Young, Evans an Adams. The former was Schoolmaster till 1828, when another came upon the scene in the person of Nobbs. Buffett had somewhat eased the situation ecclesiastically, for both Adams and Young in their days of reform had made sad muddle of the Prayer Book. Desiring to follow the Book's orders to the very letter, they held that as Ash Wednesday and Good Friday were Fasting Days, it followed that every Wednesday and Friday were the same for it says that they too are to be Days of Abstinence. The fine difference between Fasting and Abstinence was quite beyond them. Buffett was intelligent enough to show Adams his error. He remitted the Wednesdays but held on to the Fridays till his death. It was a real hardship but the people bore it uncomplainingly. Nobbs was of still superior education and became not only Schoolmaster, Buffett willingly retiring, but physician and surgeon, and added a lay Chaplaincy to his many duties. He married a Christian and was also taken into the community. As he played an important part in the life of that community both on Pitcairn and on Norfolk, the story of his life is worth noting.

**Parson Nobbs** <sup>305</sup>

Born in Ireland, not without some mystery as to his parentage, he was entered as a boy on the books of H.M.S. Roebuck. Transferred to the “Indefatigable”, he visited Cape Horn, New South Wales, Tasmania, the Cape of Good Hope, and St. Helena. Having circumnavigated the globe, he left the navy, still a young man, and was offered a berth on a ship of 18 guns which went from England to assist the patriots in their struggle for liberty on South America’s west coast. Arriving at Valparaiso, he found exciting times. He received a commission as a Sub under Lord Cochrane <sup>306</sup> in the Chilean service. A Lieutenancy followed for gallantry in cutting out a Spanish ship from under the batteries of Callao. In a severe fight with another Spanish brig, in which he lost forty-eight out of sixty-four men, he and the rest were made prisoners. All but four of these prisoners of war were shot, Nobbs and three seamen being fortunately exchanged for four officers, prisoners in the opposing forces. Leaving the Chilean service he reached Naples on his way home. Making for Messina, his ship foundered, but he was amongst the saved in one of its boats.

Reaching England, he sailed as Chief Mate on a voyage to Sierra Leone, where fever claimed all but the Captain, himself and two negroes. Working their passage Home thus crippled, he, now in command, took the same ship back to the fever coast, this time to be attacked himself, and for many weeks hovered nigh death. Having heard much talk of Pitcairn Island from one of those he had served under, he became much attracted to it and resolved during his sickness that if spared, he would make his way thither. Returning to England, he sailed to the Cape hoping to catch some whaler which might call in at the isle during its cruise in Southern waters. Failing this, he made his way to Calcutta, thence across the Pacific to his old haunt of Valparaiso, and thence to Callao, where he chanced to meet one, Bunker, formerly master of a merchantman but who had fallen upon evil times and was endeavouring to fit out an eighteen ton launch to make for other parts. Nobbs agreed to finance the needful repairs with all his remaining savings, provided that he became co-proprietor and that the two should sail for Pitcairn. This being agreed to, the two set out and in six weeks’ time reached the island. But the exposure and want of sleep had told heavily on the older man, and Bunker died on the island a few weeks later.

Nobbs used the launch’s timbers to erect a modest home for himself, and thus commenced a connection with the islanders that lasted until 1884, a period of fifty-five years and a few months. In Adams he found a true friend for the short time before the mutineer died, and was a faithful friend himself to that strange community, till his own end came upon Norfolk Island, where his body lies. Born 1799. Died aged 85. Adams died in 1829, aged beyond his years in appearance, for he was but 65.

The “Pitcairner” therefore must bear the name of one of the above eight names. He or she must be either a Christian, Adams, Young, McCoy, Quintal, Buffett, Evans or Nobbs. When — to anticipate the story — the 194 souls were transferred from Pitcairn to Norfolk in 1856, or sixty-nine years back, <sup>307</sup> every one of them bore one of those names. Not one “mutineer” was amongst the band, but Buffett, Evans and Nobbs, the contemporaries of Adams, lived to take part in the removal. Of that band there still are found upon the island twenty men and women, their average age 75. Most were children, but some had reached early man and womanhood; for those of ninety years today had already had a good measure of life upon Pitcairn and can tell at first hand of much that deeply

<sup>305</sup> [George Hunn Nobbs \(1799–1884\)](#)

<sup>307</sup> Thus WWB wrote this in 1925.

interests. This tiny remnant of the 194 are today “Pitcairners”, their descendants are but “Norfolkers”. It cannot be long now ere the last of the “Pitcairners” is gathered to their fathers.

### The Change to Other Isle

The reason of their coming must now be considered. Let us glance again down the years that preceded.

It was in January 1790 that the *Bounty* dropped anchor off the island of Pitcairn and the band of fugitives from *Justice* landed. They lived in absolute seclusion till 1808, when the American whaling ship, the “*Topaz*” (Captain Folger, <sup>308</sup> the Master), called when in need of water. To his surprise he saw smoke rising from amongst the trees and, later, habitations. A canoe came out and its occupant hailed the vessel in English, offering to land any who desired. The Captain hesitated, but one of the crew, an Englishman, offered to go provided the *Topaz* stood on near, to which he could swim if attacked. He soon returned in a canoe to tell what he had seen and learned, and the Captain promptly landed. He found a community grown now to thirty-five. Adams was keen to learn the news of the outside world, and in return he made presents to the master of both the chronometer and the azimuth compass of the *Bounty*. The former had been used by Cook in two of his voyages, and had been handed to Bligh (once a midshipman under Cook) for use on the *Bounty*. Captain Folger had it forcibly taken from him by the Spanish Governor of Juan Fernandez, <sup>309</sup> but eventually it was recovered and, reaching England, now rests in the United Services Museum in London. <sup>310</sup> The *Topaz*’s discovery was reported to Admiral Hotham, then on the American coast, who transmitted Folger’s letter to the Admiralty, but the war with France occupied the time and attention of all, though the strange news spread over the land through newspapers and periodicals.

It was in 1814 that the next visit was paid, though passing vessels had been seen, and one boat party at least must have landed unperceived, for a clasp knife was found lying on the beach beside some coconut shells broken open. Now there anchored two British frigates, the *Briton* and the *Tagus*, which were in search of an American ship which had been holding up the English whalers in the South Seas. Both Captains (Sir Thomas Staines <sup>311</sup> and Pipon) went ashore and were greatly interested, as their reports Home show, in all they saw. The community had now grown to forty. They called on Adams in his home, where he spoke respectfully to them, hat in hand and smoothing his scanty locks, the old training once asserting itself, and he expressed a willingness to return to the land of his birth and take his chance. But despite the fact that the Captains pledged their word for his perfect safety, the entire community raised such a weeping and wailing that he had to fall in with their wishes. Everything around and in the various homes was ship shape, neat and spotlessly clean. The clothing of all was made from the bark of the paper mulberry tree. Whilst men and women eat apart, the South Sea native custom now slowly dying out, the latter always had a vote on all community matters, alike with the men.

The reports of these Captains reaching England, a great interest was taken in the island, both by individuals and the Church Societies for the Propagation of the Gospel and for Promoting Christian Knowledge, who by Whalers and Trading Ships managed to send books. But the Authorities left their health condition, and needs, if any, to be learned from such passing vessels.

<sup>310</sup> It is currently in the collection of the [National Maritime Museum](#), Greenwich, London, England.

<sup>311</sup> [Thomas Staines \(1776–1830\)](#)

Ten years thus passed. In 1825 the Blossom, under Captain Beechey, R.N.,<sup>312</sup> fitted out for a voyage of discovery, stayed at Pitcairn for three weeks and reported on the community as had those before him. Five years now passed. In 1830 H.M.S. Seringapatam reached the island and her Captain (Waldegrave<sup>313</sup>) brought the first direct gift from the British Government to its smallest Colony. Those gifts of agricultural tools and of clothing were very welcome. The numbers had grown to eighty-one.

To none of these visitors had the Islanders expressed any wish to move. They were content. Though they came of stock who had broken the law, they were one and all enthusiastic Britishers, devoted subjects of their Queen, and profoundly conscious of their duty to obey Authority. It was this latter feeling that brought about two strange episodes in their history that must next be touched upon, their removal to Tahiti and “Lord” Hill’s governorship.

### **Tahiti a Failure**

In 1830 certain ignorant but officious inter-meddlers at Home represented to the British Government that there would soon be insufficient room for the then eighty odd inhabitants of Pitcairn. They pressed the matter with such vigour that in February of the following year, H.M.S. Comet arrived off the island and its Captain dropped a bombshell upon the contented community with the news that he had orders to carry the whole lot off to Tahiti. Those busy-bodies had gone very systematically to work. King Pomare and his chiefs had been approached and had promised both land, assistance and protection. The British Government had provided for a six months’ supply of food. Though the king had died, his Queen Consort had re-affirmed his pledge. Following closely upon the warship there came the Lucy Ann from Sydney to receive them and their belongings. This schooner had been called into service from Norfolk Island and doubtless the Pitcairners first heard from the crew news of a spot which in the future was to be their home. The unhappy community, whose numbers now had reached eighty-seven, were faced with a dilemma. They had no wish to go, but it was an order from Home. They could not give offence to the Mother Country, and therefore, without any heart in the matter, consented.

Pitcairn was deserted save for some animals which had run wild. Tahiti was reached in March. Before one month was up they had had enough. The morals of the Tahitians were not to the taste of the reformed Pitcairners. The elders saw their younger ones sore tempted and getting out of hand. The change took heavy toll. They were dying fast. Half of them hired a small schooner and fled ere the month of April was out. The British Consul took pity on the rest, and, chartering an American brig, sent the rest home in September. But thirteen had died and four were dying. That little trip by officious meddlers cost seventeen out of eighty-seven lives. Those who had first fled did not arrive much sooner than their fellows, for the wind was contrary and they were blown to the Western Pacific Isles, where a French brig came to their rescue and carried them back to their Home.

## “Lord” Hill

There was one man upon Tahiti who had watched all these proceedings and saw his opportunity. Joshua Hill <sup>314</sup> was a man of close on seventy years when he followed up the return of the exiles by landing himself, upon Pitcairn. Then things happened. He gave himself out to be a nobleman from Home, sent out by the government to take over the “governorship” of the island, and that the men of war in those parts had been placed under his direction. The simple islanders were over-powered by these high claims, but Nobbs, Buffett and Evans, who knew the outside world, made light of his pretensions. Then “Lord” Hill declared war to the death against the three ‘foreigners’ as he termed them. Despite the warnings by the three of the imposture being practised, the fear that in opposing “Lord” Hill they might be defying the Mother Land forced them to submit, and they obeyed, though most reluctantly, his orders. In one matter, and one only, did the elders have cause for gratitude to the grey-haired ‘noble’. Some of the younger men, through the looseness of life they had seen in Tahiti, determined to seek out McCoy’s secret, and the Ti root was ground once more. This action was stoutly opposed by Nobbs, but he was told to mind his own business. The noble “Lord” upon arrival quickly settled the matter. He smashed their stills and everything connected with the business, and threatened heavy penalties if the craze for strong drink did not at once abate. He formed the whole island into a Temperance Society and coconut milk and water were once again the drinks of all. Nobbs was dismissed as Schoolmaster and Hill took his place.

In the heyday of his power he sought to win the folk from the Church of England to Methodism, but in this they stood firm. But in all else for five years they blindly followed him because he represented Authority. No vessel that could contradict his claims called to relieve the situation so Hill had full swing. He gave out that he had written to the British Consul at Valparaiso to get the Admiral on the Pacific Station to call and remove the three foreigners. If he did, along with it went some other letters. Nobbs wrote that the man had ordered the three foreigners and their families to be turned out of their homes. Their muskets were taken from them by order of “The Governor of the Commonwealth”, and, loaded by him, were kept in his own bedroom for the use of the “magistracy” of the island. Every Sunday he had a loaded musket placed near him in Church to awe the people. He threatened, when protests were humbly raised, to have a Military Governor with a band of soldiers sent out to put them in subjection. In every way possible, he made the place too hot for the three foreigners and they were glad to escape on a passing ship to Tahiti. From thence, Buffett wrote to the Admiral, giving further information. Hill had appointed two “Privy Councillors”, had made laws of his own, built a prison, proposed to send to England for wives for the young men, and because Buffett had decided to take away his wife and children, he had undergone trial, Hill being the Judge, the Jury and the Executioner. He was flogged, beaten over the head, his finger broken, and had been suspended by his good hand in the church. No man dare defy the Governor and when women assembled and cried shame, he read The Riot Act (his own) and said that “the Authorities” would be justified in shooting them. Buffett’s sentence by this imposter as taken from the Island Register, kept ever since Adams’ day, is worth quotation :

Pitcairn Island, 5<sup>th</sup> August 1833.

... It only remains with us to declare the sentence of the law which is, and the Court doth accordingly adjudge, that you receive forthwith 3 dozen lashes with a cat upon the bare back and breech, together with a fine of three barrels of yam or potatoes to be paid within

---

<sup>314</sup> [Joshua Hill \(1773–1844?\)](#)

one month : or in default an extra barrel will be required for this reiterated Contempt of Court.

Evans got much the same. Hill enacted a law of High Treason and Evans humbly requested a copy as a guide to his future conduct. Hill ordered him to be dragged to the church; there Hill tried the case, and himself administered the lash.

Those were high times for “Lord” Hill, and the islanders dared not oppose his will for had not the Home Government sent him? But the end was now not far off. The unhappy Nobbs, with Evans, sought distraction by going as Missionaries to the Gambier Islands. Buffett kept close at Tahiti. Their complaints reached the Admiral and were sent Home. In 1837 H.M.S. *Actaeon* called, with Lord Edward Russell<sup>315</sup> in command. Hill had unfortunately given out that he was a near relative to the Duke of Bedford,<sup>316</sup> the Commander’s father. The imposter was unmasked, Russell promptly reported to his Admiral, who sent H.M.S. *Imogene* to Pitcairn, secured the fraud and carried him off to Valparaiso. Neither his past nor his future were ever known. The three “foreigners” returned. Peace ruled once more. Obedience to Authority had cost them dear. In a letter written a while later by the Community, Hill is let down gently. Their patient souls describe him as “a partially deranged imposter”.

### The Need of Change Increases

In 1838 H.M.S. *Fly* (Captain Elliot)<sup>317</sup> looked in. It was then that Pitcairn’s Island was taken formal possession of for Great Britain. Previously none had thought the act necessary, but the Islanders complained to Elliot that lawless whalers had called and had said that they would do as they liked with people and possessions, for the community could show neither Flag nor written authority for their claim as a British dependency. Forthwith the Union Jack was formally hoisted and saluted, and the Island became part of the growing Empire. Their number had now reached one hundred and two, an exact proportion of the sexes : fifty-one of each.

Now first we begin to hear of the health of the people giving way, and rumours as to the need of change, actions too in keeping. In ’41 fevers and influenza were very prevalent, dry weather brought the one, heavy rains and wind the other. Deaths were still rare, but they became too weak to labour in the plantations, and weeds overran the land. It was this year that Captain Jones of H.M.S. *Curaçao* raised the charred hull of the old *Bounty* to find its heart of oak still sound. In ’43 Elizabeth Island, one hundred and twenty miles off, was visited by some of the Islanders, but they brought back a wholly unfavorable report.

In ’45 half of the population, which had now reached one hundred and twenty-two, were down with added troubles of asthma, rheumatism, consumption and skin diseases : and in addition a cyclone had destroyed their boats; a plantation of two hundred cocoanut trees had been swept into the sea; another holding one thousand yams had been washed out; and plantain trees destroyed. That same year saw the recovery of two of the *Bounty*’s guns after a fifty-five years’ burial in the deep. One was found spiked, the other was mounted for use on festal occasions which even the cyclone could not wholly banish from the mind. That unspiked gun, eight years later, was to claim the life of the Island’s Chief

<sup>315</sup> [Edward Russell \(1805–1887\)](#)

<sup>316</sup> [John Russell, 6th Duke of Bedford \(1766–1839\)](#)

<sup>317</sup> Russell Elliot

Magistrate McCoy, who inadvertently using a ramrod made of a house rafter with a nail at the end, the friction of the latter caused a premature explosion. He would fain send a parting salute to the good ship H.M.S. Virago. The Captain and the Surgeon hastened ashore on hearing the cries of the people. To make sure of no further such tragedy, the Captain spiked that gun also. The Bounty's last voice had spoken. One of the two guns is to be seen today on Norfolk.

In '49 the Record is again of sickness. Two men of war called. The Daphne brought a bull and a cow and rabbits. The Home Government was not contemplating a removal. The Pandora's Captain reported Home that the small area of the Island was calling the attention of the islanders to the need of change. The same year the folk were in correspondence with Consul General Miller <sup>318</sup> of Tahiti, but they stipulated that no move should be arranged to Tahiti itself. In '50 the islanders opened up with Hawaii to the far north, but wanted an unoccupied island where there were no natives to interfere with them. Mr. Brodie, a traveller, and four friends were this year marooned upon the island, their ship being blown out to sea. He spent a full fortnight there before another passing vessel was hailed and their journey was continued. Brodie took letters Home from both Nobbs and Buffett to the Government admitting the need of removal and that the people dreaded the inevitable. If an uninhabited island could be found, they would like the change, all but a few who would never move. Though all did move eventually, we shall see that these latter kept to their resolve by returning, and their descendants are at Pitcairn today. Brodie, on reaching England in '51, started a Pitcairn Island Fund to get necessities for the people, and published his book in which is the first mention of Norfolk as a possible island. He wrote "Should the Home Authorities finally decide upon abandoning Norfolk Island as a penal settlement, which report says there is a chance of, then a more beautiful or suitable location could scarcely be found."

### The Laws of Pitcairn

It is through the visit of Brodie that we learn of The Laws of Pitcairn. The quaintness of some of them merit passing on.

A Public Journal shall be kept by the Magistrate and shall from time to time be read out so that none shall make excuse through ignorance.

If a dog kill a goat, the owner of the dog must pay the damage, but should suspicion rest on no particular dog, the owners of dogs generally must pay the damage.

If a fowl be trespassing in a garden, the proprietor of the garden is allowed to shoot and keep it, while the owner of the fowl be obliged to return the charge of powder and shot expended in killing the bird.

If any person under the age of ten shall kill a cat, he or she shall receive corporal punishment : if anyone between the ages of ten and fifteen shall kill a cat, he or she shall pay a fine of twenty-five dollars : any master of a family killing a cat shall be fined fifty dollars. (There seems to have been no danger of slaughter by the mistress.)

Carving upon trees is forbidden. (Alas! poor school boys.)

---

<sup>318</sup> [William Miller \(1795–1861\)](#). See Part IX, *Old Time Tahiti*, Chapter 10, Note #3.

No females are allowed to go onboard a vessel without permission of the Magistrate. If he does not go onboard the boat himself, he is to appoint four men to look after them. (They surely had sturdy chaperones.) Perhaps they had learned a lesson from two maidens, who alone in all the years out of their small community, had been won by handsome, rollicking Jack Tars.<sup>319</sup> Away back in '17, Jenny had been wooed and won by a member of an American boat, The Sultan : and in '26, Jane had departed in The Lovely for London. They ne'er returned.

### Nobbs' Luck

The year '52 was an eventful one for Nobbs. Rear Admiral Moresby<sup>320</sup> called in his Flagship. He was a man of deep religious fervor and was most anxious that the islanders should have the full privileges of Holy Church, which they could not do, Nobbs being but a layman. The Admiral offered not only to pay Nobbs' passage Home, with £100 to help him upon arrival, but to carry his daughter to Valparaiso, there to be educated in sewing and domestic duties at his expense. His son Reuben was also to be taken there to be employed as his health would permit, he having accidentally shot himself through the groin whilst hunting wild goats. This generous offer of the old sailor was accepted with unbounded joy by the whole community. That the people should not suffer during his absence, the Admiral left his ship's Chaplain, Mr. Holman,<sup>321</sup> on the island. Nobbs therefore went off, amazed at his good fortune. Poor Lay Chaplain! His Sunday Bests had long felt the effect of constant service since landing in '28. Years before this offer came, he had written "My one remaining black coat has to be reserved for marriages and burials." Even that had gone, and now he was to be a real Parson. He reached Home; was ordained readily by the Bishop of London; made much of; presented to Queen Victoria; preached in many pulpits; much money was raised; a Committee was formed to control the Pitcairn Island Fund of Brodie's; the most pressing wants of the islanders were purchased and £500 reserved.

Nobbs, now a Parson, set out on his return to be picked up with son and daughter at Valparaiso by the good Admiral. And the Bishop of London had added Pitcairn to his Diocesan duties for Colonies without Bishops that were in his charge. He had placed Nobbs on the S.P.G.<sup>322</sup> list of Missionaries and as "Chaplain of Pitcairn's Island" was assigned the princely salary of £50 a year.

### Norfolk a Possible Site

The year '53 saw much of moment to the island, and very hard times too. In January, Nicolas,<sup>323</sup> the British Consul at Tahiti, visited the island in H.M.S. Virago and Chief Magistrate McCoy (to meet his death as the ship left) told him distinctly that the wish of the people was for removal to Norfolk Island. He took action thereon upon his return, as will be seen.

---

<sup>319</sup> [Jack Tar](#) was a common English term originally used to refer to seamen of the Merchant or Royal Navy, particularly during the period of the British Empire.

<sup>320</sup> [Fairfax Moresby \(1786–1877\)](#)

<sup>321</sup> William Henry Holman

<sup>322</sup> [Society for the Propagation of the Gospel in Foreign Parts](#), founded in 1701.

<sup>323</sup> Busvargus Toup Nicolas (1819–1859), son of [John Toup Nicolas \(1788–1851\)](#).

As the full-fledged Chaplain left England for his flock, a despatch went at the same time from the Secretary of State for the Colonies to Governor Denison <sup>324</sup> of New South Wales referring to that Governor's proposal to evacuate Norfolk Island. "This place has been suggested as fit for the reception of the small body of settlers now existing on Pitcairn's Island" and asks : (a) How soon Norfolk Island would be empty? (b) What buildings and land would be available? (c) What arrangements were possible at his end for transfer, if such was approved?

Captain Prevost <sup>325</sup> of H.M.S. *Virago* had brought gifts. He had with him cages containing songsters to make up for lack of them on the island, and Lord Palmerston had been thinking of them for he had sent out both roses, myrtles and fig trees. With him as Head of the Government, the matter of removal was still uncertain. The kindly Captain had also presented them with all the provisions he could spare. These many gifts heartened the islanders.

The good Admiral also appeared upon the scene, bringing back the Rev. George Hunn Nobbs, his daughter who had greatly profited by her opportunities and the son whose health was waning fast. The new arrivals found things in a very bad way since the *Virago* left. For months past the islanders had been forced to live on berries, pumpkins, cocoanuts and beans. Their pastor records that "hunger had nearly worn them to the bone". To the Admiral they handed a statement (agreed to by all this time) as follows : "As regards the necessity of removing to some other island or place, it is very evident that the time is not far distant when Pitcairn Island will be altogether inadequate to the rapidly increasing population : and the inhabitants do unanimously agree in soliciting the aid of the British Government in transferring them to Norfolk Island or some other appropriate place."

With the Admiral went his Chaplain, and Nobbs now took up his old duties, with added spiritual powers. He and his flock had to wait in patience and on terribly 'short commons' for what might happen.

## THE ISLAND OF DESPAIR (IV)

The decision to accede to their own wishes and move the Pitcairners was sent to them from Tahiti by Mr. Nicolas, the Consul. It may interest to quote the letter.

To the Pitcairn Islanders.

Raiatea, July 5<sup>th</sup>, 1854.

My dear Friends,

In accordance with your wishes conveyed to me through your late lamented Chief Magistrate McCoy, I addressed the Earl of Malmesbury <sup>326</sup> on the subject of your removal, either wholly or in part, to Norfolk Island, provided the Government would consent to cede it to you. Norfolk Island will be available for settlement of the Pitcairn Islanders, or as many as will remove thither, by the end of the year 1854. Her Majesty's Government will also take measures to provide a vessel which shall call off Pitcairn's Island towards the close of that year for the purpose of removing the people to Norfolk Island.

While communicating this intelligence to you, I am at the same time to acquaint you that you must be pleased to understand that Norfolk Island cannot be ceded to the Pitcairn Islanders, but that grants of allotments of land will be made to the different families. And I am desired to further let you know that it is not intended at present to allow any other class to settle or reside or occupy land upon the Island.

But '54 passed and no ship appeared. Officialdom moved slowly in New South Wales from whence the transfer brig would come. Governor Denison wanted to be sure of his ground.

In April '55 Captain Fremantle <sup>327</sup> in H.M.S. Juno arrived, sent by Denison to find out if the islanders were really willing. Some had evidently gone back to their first resolve, for a vote being taken, one hundred and fifty-three were for removing and thirty-four against. These latter wanted to know what protection and help would be given those who preferred to remain. The Captain could promise nothing. They weakened and appeared to fall in with the rest. Reporting back, the Governor now hired the Morayshire at a cost of £4500 to effect the transfer and in it went Lieutenant Gregorie of the Juno to supervise, and help the waverers. Denison wrote that should any refuse, they must do so in the face of a warning that such a step would isolate them more than ever.

### The Removal

In April '56 the Morayshire (Captain Mathers) dropped anchor off Pitcairn and on the 3<sup>rd</sup> of May all were embarked, with their possessions and livestock. The parting was a wrench. Here is what Nobbs wrote in his diary : "May 3<sup>rd</sup>. Breakfast eaten with heavy hearts. My family being amongst those appointed to embark first, Mrs. Nobbs and I went previously to the graveyard where lie the remains

---

<sup>326</sup> [James Howard Harris, 3rd Earl of Malmesbury \(1807–1889\)](#)

<sup>327</sup> [Charles Howe Fremantle \(1800–1869\)](#)

of our first born,” (the Reuben aforementioned). And as writes another, every family had a like visit to pay as they parted from a home where nearly all of them had been born, where many of them had been married, and where each was leaving amid the peaceful dead, a father, a mother, a brother or sister, child or sweetheart. The community now consisted of forty adult males, forty-seven adult females, fifty-four boys and fifty-three girls, a total of one hundred and ninety-four.

That was no pleasant journey. There was 2200 miles to traverse over what proved a boisterous sea. It took a full month, and despite the fact that all had lived their life in canoes and were half fish in their dexterity in the water, the women and children and most of the men were desperately seasick. There was no surgeon aboard, neither were there attendants for those in need, save a kindly disposed crew. Here Parson Nobbs was in his element, a good sailor, a bit of a doctor, and a cheery soul. At last the new home hove in sight, and with the usual big heartedness of a sailor, Captain Denham<sup>328</sup> of H.M.S. Herald, on hydrographic work in Norfolk waters, had delayed his departure to lend a helping hand and cheer them with the sight of their beloved men of war. Captain Fremantle of H.M.S. Juno also appeared on the scene with like kindly intent.
